In 1900 the diocese had the following religious orders, *Men*: Capuchins, Eudists, and Marianists at Besançon, and Trappists at Notre Dame de la Grâce de Dieu. *Women* (purely local orders): Sisters of Charity of Besançon, nursing and teaching, founded in 1799; Sisters of the Divine Providence of Frasne-le-Chateau, teaching, founded in 1780; the Daughters of St. James, nursing sisters with a mother-house at Besançon. At the close of 1905 the Archdiocese of Besançon had 657,773 inhabitants, 60 parishes, 814 succursal parishes (mission churches), and 97 curacies.

GEORGES GOYAU.

**Besange, JEROME LAMY, O.S.B.**, b. at Linz, 1726; d. 1781. For twenty-four years he taught Scripture at Salzburg. He published the following works: "Introductio in Vetus Testamentum" (2 vols., Steyr, 1765); "Introductio in sancta quatuor Evangelia" (Venice, 1775); "Introductio in Acta Apostolorum" (Pavia, 1782); "Fasciculus Myrrhæ", a commentary on the Passion (Steyr, 1766); "Die sieben Busspsalmen" (Salzburg, 1776).

PARIBOT in *Vig.*, *Dict. de la Bible*.

JOHN CORBETT.

**Beschefer, THEODORE**, Jesuit missionary in Canada, b. at Châlons-sur-Marne, 25 May, 1630; d. at Reims, 4 February, 1711. He entered the Society of Jesus at Nancy, 24 May, 1647, studied philosophy and theology at Pont-à-Mousson, taught humanities and rhetoric for seven years in various colleges in France, and after his third year of probation came to Canada in 1665. From Quebec, where he was stationed for three years after his arrival, he set out on an embassy to the Mohawks, and to the Dutch at Albany, but a sudden outbreak of Indian hostilities compelled him to turn back. In 1670-71, however, he was a missionary among the Iroquois. In 1672, he returned to Quebec, becoming superior of the Canadian missions in 1680, and retaining that office until at least 1687. A year later he was prefect of classes in the College of Quebec and in 1689 returned to France, where he acted as procurator of the missions. During his stay in Canada he was for sixteen years the spiritual director of the Ursulines at Quebec, and their annals describe him as "a man of distinguished merit and a director of great wisdom and experience".

EDWARD P. SPILLANE.

**Beschi, COSTANZO GIUSEPPE**, b. at Castiglione in the Venetian Republic, 1680; d. at Manapar c. 1746. He entered the Society of Jesus in 1698, and went to the Madura mission in 1710, during nearly forty years of apostolic life proving himself a worthy successor of the founder of the Madura Mission, the celebrated Roberto de' Nobili. Once he barely escaped suffering death for the Christian religion. Though primarily a missionary and always at the head of a district, he is better known as one of the classical writers of Tamil literature. No sooner had he arrived in India than he began the study of Sanskrit, Telugu, and especially of Tamil. Thanks to his genius and indefatigable industry, he mastered

the Tamil grammar in five years, and for the next twenty years made so thorough a study of the whole field of Tamil literature that the native men of letters bowed to him as their master. He composed a grammar of High Tamil, and was the first to write a grammar of Low Tamil (the common dialect) which still remains the foundation of scientific Tamil philology. He is also the compiler of several Tamil dictionaries, among them the quadruple lexicon containing words, synonyms, categories of words and rhymes; a Tamil-Latin and a Tamil-Latin-Portuguese dictionary. He wrote several ascetical books in Tamil, especially doctrinal instructions for the use of the native catechists; also controversial tracts against the Danish Lutheran missionaries who sought to gain a foothold in the Madura Mission. Beschi is, however, best known as a Tamil poet. In a poem of 1100 stanzas, "Kittéri ammal saritiram", he sings the praises of the martyr St. Quiteria (not St. Catherine, as some writers have mistakenly asserted). His greatest poetical work is the "Têmbâvani" (The Unfading Garland), one of the Tamil classics. This Tamil "Divina Commedia" is divided into thirty-six cantos, containing 3,615 stanzas. "It is", says Baumgartner, "the noblest epic poem in honour of St. Joseph written in any literature, East or West. In one of the most difficult languages of Southern India Beschi produced a poem which for richness and beauty of language, for easy elegance of metre, popular treatment, and true poetical conception and execution, is the peer of the native classics; in nobility of thought and subject-matter, it is as superior to them as the harmonious civilization of Christianity rises above the confused philosophical dreams and ridiculous fables of idolatry." Another poem "Paramartaguru Kadey" (the adventures of the Guru Paramarta), in which he delightfully satirizes the foibles and conceited ignorance of the native *gurus* (heathen teachers), is the most entertaining book in Tamil literature, bubbling over with wit and humour. Beschi himself translated it into Latin. It has also been translated into English, French, German, Italian, and Canarese. Grasse and Babington, editors respectively of the German and English translations, seem to be ignorant both of Beschi's authorship of the book and of his great importance in the literature of Southern India, for they make no mention of his name. The tradition that he was at one time prime minister to a native raja is not sufficiently authenticated. In 1744 he was rector of the Mission of Manapar, where he died. His memory lives to this day in Southern India.

SOMMERVOGEL, *Bibliothèque de la c. de J.*, I, col. 1402-09, s. v.; BERTRAND, *La Mission du Maduré*, IV, 342-375; JEAN, *Le Maduré* (Tournai, 1894), I, 152-163; in particular BAUMGARTNER, *Geschichte der Weltliteratur* (Freiburg im Br., 1897), II, 345-354.

B. GULDNER.

**Beseleel**, (Beçâl'el, in the shadow of God). I. The son of Uri and grandson of Hur of the tribe of Juda (Ex., xxxi, 2; xxxv, 30; I Paral., ii, 20; II Paral., i, 5). Being naturally endowed with a certain originality of invention, he was expressly called by God to be the chief architect of the tabernacle and its many appurtenances (Ex., xxxi, 2 sqq.). To him were entrusted the preparation of the holy oils, the incense, the priestly vestments, and finally the building of the ark and of the furniture for court and tabernacle. Special Divine gifts were also given to him and his assistants, especially Ooliab, for the proper execution of their office (Ex., xxxi, 3-6; xxxv, 34-35; xxxvi, 1).

II. One of the sons of Phahath-Moab who married a foreigner in the days of Esdras (I Esdras, x, 30).

F. X. E. ALBERT.

**Besoigne, JÉRÔME**, a Jansenist writer, b. at Paris,

1686; d. 1763. Ordained in 1715, he received the doctorate of the Sorbonne three years later. He was also assistant principal of the College of Plessis, but his defence of Jansenism and his opposition to the Bull "Unigenitus" obliged him to resign the post. In 1729, the Sorbonne erased him from the list of Doctors and, in 1731, he was exiled from Paris. During the following year he was allowed to return. He wrote a "History of the Abbey of Port Royal" (6 vols.), and "Lives of the Four Bishops engaged in the case of Port Royal". We have also from his pen two works on Scripture: "Concorde des livres de la Sagesse" (Paris, 1737), reprinted in Migne's "Cursus Completus" (XVIII) and "Morale des Apôtres ou concorde des épîtres de saint Paul et des épîtres canoniques du N. T." (Paris, 1747).

*Mémoire sur la vie et les ouvrages de Jérôme Besoldus* (Paris, 1763); QUÉRARD, *La France littéraire* (Paris, 1827), I, 315-316; HEURTEBIZE in *Dict. de théol. cath.*, with a list of his Jansenistic writings; REY in *Dict. de la Bible*.

JOHN CORBETT.

**Besoldus, CHRISTOPHER**, a German jurist and publicist, b. of Protestant parents in 1577 at Tübingen, Würtemberg; d. 15 September, 1638 at Ingolstadt, Bavaria. He studied jurisprudence and graduated as Doctor of Law in 1598; and in 1610 became professor of law at Tübingen. He was held in high regard as a teacher, and his counsel was frequently sought in juridical questions by the civil administration. His studies extended beyond his specialty; he acquired the knowledge of nine languages; perused the Scriptures, the writings of the Fathers, and of the mediæval mystics. His inclination towards the Catholic religion grew with his knowledge of it. He was publicly converted at Heilbronn in 1635. Two years later, he accepted the chair of Roman Law at the University of Ingolstadt. He was considering the offer of a professorship at the University of Bologna, tendered him by Pope Urban VIII, when he died. On his death-bed he conjured his wife to embrace the Catholic faith; three months later she was received into the Church with her eight-year old daughter. The nobleness of character and erudition of Besoldus have been recognized even by his opponents, although an attempt was made to ascribe his conversion to interested motives. His works are very numerous. His publication of three volumes of documents from the Stuttgart archives gave offence because their contents tended to prove that the immediate dependency of the Würtemberg monasteries on the Empire (*Reichsunmittelbarkeit*) implied for the local dukes the obligation of restoring the confiscated religious property. His writings are important for the history of the causes of the Thirty Years War.

N. A. WEBER.

**Bessarion, JOHANNES** (or BASILIUS), Cardinal, b. at Trebizond, 1389, or according to others, 1395, but most probably in 1403; d. at Ravenna 18 November, 1472. Some claim illustrious parentage for him, but as to this nothing certain is known. In 1413, while still very young, he was sent to Constantinople, where he devoted himself to study, achieving great success in the field of letters. In 1423 he entered the Order of St. Basil and in the same year was sent to the Peloponnesus to study philosophy under Gemistus Pletho. It is known that Pletho was a bitter opponent of Aristotle, against whom he championed with immoderate zeal the doctrines of Plato, without, however, distinguishing between genuine Platonism and neo-Platonism. The lessons of Pletho, though making Bessarion a follower of Plato, did not prevent him from perceiving the many points of contact between the two philosophers, and, during

the revival of ancient learning, constantly defending the harmonizing of the two systems; he criticized the unrestrained partisanship of his master quite as much as that of Michael Apostolius. His learning and eloquence soon excited the admiration and respect of all and brought him, within a short space of time, various ecclesiastical dignities. In 1436 he was made Bishop of Nicæa, but was not destined to see his diocese, however, as the emperor, John VIII Palæologus, had him accompany him to the Council of Ferrara, which they reached 4 March, 1438. Here his dignity and touching eloquence, as well as his vast theological erudition, gave him such great authority among the Greek bishops that the happy issue of the council—the reunion with the Latin Church—may be attributed in great part to him. This was fully recognized, as on 6 July, 1439, in the cathedral of Florence, to which the council had been transferred, he was commissioned to read the Greek redaction of the Act of Union.

JOHANNES, CARDINAL BESSARION

Bessarion returned to Greece, but during the same year is found once more at Florence with Eugenius IV, who, in the consistory of 18 December, 1439 (according to others 8 January, 1440), created him cardinal of the title of the Twelve Holy Apostles. At the same time another Greek, Archbishop Isidore, received the sacred purple. The brief duration of the union of the churches is well known. Bessarion himself, having changed to the Latin Rite was cordially hated by the schismatic Greeks. This notwithstanding, Bessarion continued to work zealously for the union of the other Oriental schismatic churches, the Jacobites and Ethiopians (1442), the Syrians (1444), the Chaldeans and Maronites (1445). At this time, also, to refute the accusations of Marcus of Ephesus, against the council, he wrote the book: "De successu synodi florentinæ".

Nicholas V, like Eugenius IV, gave evidence of the great regard in which he held the Greek scholar. In 1449 he made him Bishop of Ulazzara and in the same year conferred on him the suburbicarian See of Sabina, for which that of Frascati was shortly after substituted. In the following year he was sent as papal legate to Bologna, a city torn by constant factional quarrels. In the Brief of appointment of 26 February, 1450, the pope says he is sending Bessarion *tamquam angelum pacis*, and expresses the hope that with his experience and prudence he may be able to govern the city in peace.

Bessarion continued as governor of Bologna for five years, achieving complete success in calming the internal discord. Not satisfied with that, he introduced wise reforms into the city government and in the administration of justice. Above all he lavished all his attention and generosity on the university, Bologna's greatest glory, restoring the building which threatened to fall into ruins. He gathered there as teachers the most famous professors of the time, supplying at his own expense the deficiencies in their honoraria, and encouraging with munificence particularly the study of the classics. Thus, he gathered about him a court of poets and men of letters. He was cordial to all, even the lowliest; by

stringent legislation he sought to curb immoderate luxury; and he rebuilt and adorned many churches of the city, among them that of San Luca. By his prudent and far-seeing administration and his absolute impartiality he won the confidence of the citizens of Bologna, so that on his departure they honoured his memory in an inscription; and ever afterwards, in all their necessities and in all transactions with the Holy See, they had recourse to his intervention.

While Bessarion was legate in Bologna, Cardinal Stefano Porcario was in banishment in that city, being assigned one hundred ducats in addition to the annual pension of three hundred granted him by the pope. Porcario succeeded in eluding Bessarion's vigilance and escaping to Rome. Bessarion did not delay in apprising the pope of his flight. The rest is well known. In 1453 Nicholas V died; and in the conclave following his death, Bessarion was all but chosen to succeed him; however, Calixtus III was finally elected. Constantinople had just fallen into the hands of the Turks and the Byzantine Empire had been destroyed. Thereupon Bessarion used all his influence with Francesco Foscari, the Doge of Venice, as well as with the new pope to persuade them to take up the offensive against the invading barbarians. Not confining his efforts to words, at the cost of heavy pecuniary sacrifices he furthered the cause of the crusade. His zeal was still more pronounced under Pius II, whose election was due in a special manner to him. In the congress of Mantua, convened by the pope in 1459 for the purpose of forming a league of all Christian princes against the Turks, Bessarion took a most active part, not justified, however, by results. The love of his native land impelled him to accept the commission given him by the pope to attend two German diets held the following year, one on the 2nd of March at Nuremberg, the other on the 25th of the same month at Worms. Neither, however, had any practical results. At the command of the pope he went to Vienna to induce the emperor to assist with arms and supplies Matthias Corvinus, the young King of Hungary. After a long wait the German leaders, 17 September, asked for another delay, and only the express wish of Pius II kept Bessarion in Germany for a whole year, pleading the cause of the Christians of the Orient. Internal discord among the German leaders prevented them from reaching any decision concerning the crusade, and Bessarion returned to Rome disillusioned and discouraged. As a reward for his labours the pope bestowed on him the commendatory Abbey of Grotta-Ferrata of Greek Basilians, which became a centre of learned pursuits. Shortly afterwards, on the death of Cardinal Isidore, metropolitan of Kiev and Patriarch of Constantinople, Bessarion received the patriarchal title.

In 1463 Pius II once more sent him to Venice to win that republic over to the cause of the crusade which the pope, on his own initiative, wished to organize. Long, serious discussions ensued, and at last, in September of the same year, the republic signed a treaty of alliance with Matthias Corvinus, and on 20 October the crusade was solemnly proclaimed. The results hoped for, however, were not entirely achieved. During the pontificate of Paul II who continued the crusade, Bessarion withdrew from active affairs and devoted himself entirely to study, cultivating the friendship of many Greek and Italian scientists then in Rome, and engaging in learned discussions with them. Thus he won the title of *Litterarum patronus*. In his house the first *Accademia* was founded. In 1470 when Paul II desired to organize a new crusade, Bessarion wrote the letter "*De Bello Turcis inferendo*". Sixtus IV, who approved the plans of his predecessor, sent Bessarion once more as legate to the King of France, the Duke of Burgundy, and the King of England to settle the dis-

cords which had arisen between the first two, and to induce the last-mentioned to join in the great expedition against the enemy of Christianity. On 20 April, 1472, he left Rome—but was received in an unfriendly manner both in Burgundy and at Paris so that he was forced to return to report the complete failure of his mission. The disappointment, the discomforts of travelling, and his great age made sad havoc on his strength. At Ravenna he was obliged to interrupt his journey; there his death occurred at the Abbey of St. John the Evangelist, 18 November, 1472. His body was taken to Rome and interred in a tomb which had been erected in the portico of the convent of the Conventual Minorites, close by the Basilica of the Twelve Holy Apostles. A simple sarcophagus, on which is inscribed a Greek distich of his own composition, contains his remains.

All the aspirations of Bessarion, which, more than great, were unique, were absorbed by three ideas: the union of the Oriental Church with the Latin, the rescue of Greek lands from the Mussulman yoke, and the triumph of classic literature and philosophy, especially the Greek. If the realization of the first two was only partial or, in a way, temporary, the third was certainly fulfilled to a more complete degree than perhaps Bessarion himself had dared hope. His labours in that direction had lasting success. By his translations of Xenophon's "*Memorabilia*", Aristotle's "*Metaphysics*", etc., he paved the way for a more exact knowledge of the real thought of the Stagyrte. His part in the reconciliation of Platonism and Aristoteleanism has already been mentioned. In this contest of intelligence, he wrote the works "*In calumniatorem Platonis*" against George of Trebizond, who in his translation of the Laws of Plato had sharply criticized their author, exalting Aristotle instead. In the fifth book of his work, Bessarion, in turn, enumerates the faults of translation and the errors in the commentary of George. At a tremendous outlay, he gathered together a library of eight hundred codices of Greek MSS., and still at his own expense had many others copied by men of letters. After 1464 he gave these treasures to the Republic of Venice with which he had always been in the greatest sympathy. These codices formed the nucleus of the famous "*Bibliotheca Sancti Marci*".

The greater part of BESSARION'S works are to be found in P. L., CLXI. Concerning Bessarion: AL. BLANDINUS, *De vita et rebus gestis Bessarionis* (Rome, 1777); WOLFG. V. GOETZE, *Studien und Forschungen über das Leben und Zeit des Card. B.* (Jena, 1874); VAST, *Le Card. B.* (Paris, 1878); SADOV, *Bessarion de nicée son rôle au concile de Ferrare* (Florence and St. Petersburg, 1883); ROCHOLL, *Bessarion* (Leipzig, 1904).

U. BENIGNI.

Bessel, JOHANN FRANZ (in religion GOTTFRIED), Benedictine, abbot, and historian, b. 5 September, 1672, at Buchen, in the Grand-duchy of Baden; d. at Göttweig, 22 January, 1749. He made his course in the humanities at Aschaffenburg, Würzburg, and Bamberg, and in 1690 entered the University of Salzburg, conducted by the Benedictines, where he specialized in philosophy, also attending lectures on theology and jurisprudence. Attracted by the learning and piety of his teachers, he resolved to become a religious and entered the Benedictine Order at Göttweig on the Danube, Lower Austria, 15 June, 1692. After making his vows (21 June, 1693), he completed his theological course at Vienna, was ordained (21 March, 1696), and on 23 May was granted the degree of Doctor of Theology, being shortly afterwards appointed Lector in philosophy and theology in the monastery of Seligenstadt on the Main. In 1699 he was summoned to the electoral court of Mainz by Archbishop Lothar Franz von Schönborn, who immediately sent him to Rome to study the curial practice of the Rota Romana. Having completed a two years' course in law, he obtained the degree

of *Doctor Juris Utriusque*, and on his return to Mains (1703) he was appointed vicar-general and supreme judge of the whole archdiocese by his benefactor. He was also employed on various diplomatic missions, as, for instance, to the court of Brunswick-Wolfenbützel in connexion with the conversion of Duke Anton Ulrich and his granddaughter, the Princess Elisabeth Christine, later the wife of Emperor Charles VI. He made three journeys to Rome to settle differences between the pope and the emperor concerning the limits of the province of Comacchio. On 7 February, 1714, he was elected Abbot of Göttweig, and from that time forward was commissioned by the emperor to conduct diplomatic negotiations, in addition to being made imperial theologian and serving twice as honorary rector of the University of Vienna.

Abbot Bessel was the second founder of Göttweig, which became, under his rule of thirty-five years, a centre of learning. He added to the rare Hebrew, Greek, and Roman coins and bracteates collections of copper-plate engravings (over 20,000), minerals, shells, and paintings. By the expenditure of princely sums he enriched the library with thousands of volumes, chiefly on historical subjects, as well as *incunabula* and MSS. Himself a thorough scholar, he encouraged among his religious all undertakings of a scientific or artistic nature. When the abbey was almost totally destroyed by fire, he gathered, by judicious management, means sufficient to rebuild it on a more splendid scale.

Personally, Abbot Bessel was a retiring religious, presenting to all a shining example of monastic piety and virtue. Besides several comparatively unimportant works, such as "*Margarita pretiosa*," "*Curia Romanæ praxis*," and "*Austriæ ritus*," he published (Vienna, 1732) two letters of St. Augustine to Optatus, Bishop of Mileve, which had been until then unknown. He is erroneously credited with the authorship of "*Quinquaginta Romano-catholicam fidem omnibus aliis præferendi motiva*" (Mains, 1708), a controversial work written originally in Latin, but translated into almost every European tongue. The work which brought him lasting renown and a place in the records of the science of history is entitled "*Chronicon Gottwicense, tomus prodromus*" (Tegernsee, 1732). Not, as might be thought, a history of the abbey, this single volume is a comprehensive work on German diplomatics, treating of manuscripts found in registers and archives, original documentary evidence, diplomas of German emperors and kings, and inscriptions and seals, illustrated with maps and engravings on copper. The author also discusses mediæval geography, as well as the royal palace-domains (*Pfalzen*) and the various districts of Germany. Great learning and clear critical acumen distinguish this work, which marked an epoch in the history of German diplomatics, and has served as the basis of all later works on the same subject.

ALBERT, *Gottfried Bessel und das Chronicon Gottwicense in Freiburger Diöcesan-Archiv*. (1899) XXVII, 217-250.  
PATRICIUS SCHLAGER.

**Beste**, HENRY DIGBY, miscellaneous author, b. at Lincoln, England; 21 October, 1768; d. at Brighton, 28 May, 1836. He was the son of the Rev. Henry Beste, D.D., prebendary of Lincoln Cathedral. His mother, Magdalen, daughter and heiress of Kenelm Digby, Esq., of North Luffenham in Rutland, claimed to be the representative of the extinct male line of the historic Sir Everard and Sir Kenelm Digby. His father dying in 1782, Henry was sent two years later by his mother to Oxford. He became a commoner of Magdalen College, where he took his B.A. degree in 1788 and his M.A. in 1781. He was afterwards elected to a fellowship, which he resigned when the family estates came to him on the death of his mother. In September, 1791, he took deacon's

orders in the Anglican Church, and a little later retired to Lincoln, displaying great activity there as a preacher. Doubts about the spiritual authority of the Established Church sprang up in his mind, which were strengthened by intercourse with the Abbé Beaumont, then in charge of the small Catholic chapel at Lincoln. The result was that he was received into the Catholic Church by Rev. Mr. Hodgson, Vicar-General of the London district, 26 May, 1798. In 1800, he married Sarah, daughter of Edward Sealy, Esq., and was the father of the well-known author, John Richard Digby Beste. His first works were a treatise entitled "*The Christian Religion briefly defended against the Philosophers and Republicans of France*" (octavo, 1793), and in the same year a discourse on "*Priestly Absolution*" which was republished in 1874. It is interesting that this latter work anticipated some of the Tractarian arguments and met with the warm commendation of the chief members of the University of Oxford in 1794. After his conversion Beste was an occasional contributor to Catholic periodicals. He also travelled abroad and spent several years in France and Italy. Cardinal Wiseman met him at Rome in the Jubilee of 1825, and mentions him in his "*Last Four Popes*" (Boston, 1858, p. 245). In 1826 Beste published "*Four Years in France, or Narrative of an English Family's Residence there during that period, preceded by some account of the Conversion of the Author to the Catholic Faith*" (octavo). Two years later he wrote a similar book on his stay in Italy. Ten years after his death appeared his last work, called "*Poverty and the Baronet's Family, a Catholic Story*" (12mo, 1846).

GILLOW, *Bibl. Dict. Eng. Cath.*, s. v.; KENT in *Dict. Nat. Biog.*, IV, 416.

EDWARD P. SPILLANE.

**Bestiaries**, mediæval books on animals, in which the real or fabulous characteristics of actually existent or imaginary animals (such as the griffin, dragon, siren, unicorn, etc.) were figuratively treated as religious symbols of Christ, the devil, the virtues and vices. The origins of a symbolism of this character, taken from nature, are to be sought in antiquity and above all in the ancient East. Eastern literature, as well as the Greco-Roman literature dependent on it, ascribed to certain animals, whether fabulous or real (the lion, the tiger, the snake, the eagle), a certain connexion with the life and actions of man and the gods, and made a corresponding religious use of them. This is exemplified in the Oriental and especially Egyptian worship of animals. Many reminiscences of this animal symbolism are encountered in the Old Testament. From the earliest period Christian fancy interpreted these animals according to the symbolism of the Old Testament, and so depicted them in Christian art. Thus, for example, in the Catacombs some are symbolic of what is good, e. g. the lamb or sheep representing the soul or the believer, the dove the soul, the phoenix Christ or immortality, and the peacock immortality; others symbolic of what is bad, e. g. the serpent representing the devil; still others, especially in later times, are to be interpreted in various senses; thus the lion may symbolise either Christ or the devil. An early compilation of such allegorical interpretations of the nature of plants and animals, made up partly from antique materials, is still extant in the "*Physiologus*," the much copied and much used "natural history" of the Middle Ages, and the basis of all later bestiaries. Similar compilations are the "*Liber formularum*" of Eucherius, some parts of the "*Libri originum*" of Isidore, parts of the writings of Bede and Rabanus, and the treatise long ascribed to the second-century Melito of Sardes, and known as "*Clavis*" or "*The Key*," which appeared in its present form towards the eleventh century. Later

bestiaries obtained much valuable material from the "Libri moralium" of Gregory the Great. The mediæval bestiaries are more or less exact translations or imitations of the "Physiologus"; e. g. the bestiary of Philippe de Thaum, about 1121, edited by Thomas Wright (London, 1841), and two bestiaries of the thirteenth century, one by Pierre of Picardy, the other by Guillaume of Normandy published by Hippeau (Caen, 1852). The bestiary appears in its complete development in Richard de Fournival's "Bestiaire d'Amour", written in the fourteenth century and published by Hippeau (Paris, 1860), in the treatise "De animalibus" attributed to Bl. Albertus Magnus, in the "Tractatus de bestiis et aliis rebus" supposed to have been written by Hugo of St. Victor, above all in the "Speculum naturale" of Vincent of Beauvais.

The influence of the symbolism of the bestiaries is plainly seen in the various forms of mediæval intellectual life. It was evident in the sermon and also in the liturgy as shown by the symbolic use of the bee in the blessing of Easter candles and the blessing of wine on the feast of St. John as a preventive of poisoning from snake-bites. The metrical animal fables, particularly, exhibit the widespread taste for this form of allegory. The influence of the symbolism of the bestiaries is still more manifest in mediæval sculpture, both Romanesque and Gothic. Though the use of animal subjects in the oldest Irish and Merovingian art has apparently no deeper aim than the enjoyment of grotesque forms, yet animal symbolism appears from the earliest date as an element of Romanesque art, especially in miniature and sculpture, in both of which it often exhibits a close dependence on the bestiaries. (See ANIMALS IN CHRISTIAN ART; SYMBOLISM.)

JOSEPH SAUER.

**Betanzos, FRAY DOMINGO**, a Dominican missionary, d. at Valladolid, Sept., 1549. One of the most illustrious Dominicans of the sixteenth century in America. A native of Leon in Spain, he first studied jurisprudence at Salamanca, then became a Benedictine and lived as a hermit on the Island of Ponza for five years. He then joined the Dominicans, who had established themselves on the Island of Hispaniola (Santo Domingo) in 1410. Betanzos went there four years later. In 1516 he, with several other Dominicans, wrote a violent letter to Las Casas on the rapid disappearance of the Indians of the Antilles, indulging in the grossest exaggerations about the numbers of the aboriginal population (which they had no means of knowing, even approximately), and the excesses purported to have been committed by the Spaniards. In 1526, Betanzos went to Mexico and founded the Dominican province of Santiago de México. Hardly had it been established when Fray Tomás de Berlanga set forth a claim that it belonged to his newly founded province of Santa Cruz with the provincial seat at Santo Domingo. Betanzos went to Spain in 1531 and obtained from the Holy See the independence of his foundation. He also established the Dominican Province of Guatemala. As Provincial of Mexico in 1535, he at once organized missions among three Indian linguistic stocks: Nahuatl (Aztec, or Mexican), Mixteco, and Tzapoteco. He returned to Spain in 1549, and died in September of the same year at Valladolid. The Bishopric of Guatemala was tendered to Betanzos, but he declined it. While, in his letter of 1516, he acquiesced in the extreme views of his brethren of the order on the question of Indian policy, in the "Opinion" (*Parecer*) given by

him in 1541, and approximately repeated in 1543, just as the unfortunate "New Laws" regarding the Indies were to be promulgated under the influence of Las Casas, he assumed an entirely different attitude. Free from all controversial spirit, he quietly gave his opinion in a sense diametrically opposed to the measures Las Casas pressed upon the Government. This is significant, coming from a member of the same order and of almost equal rank. Betanzos was an intimate friend of the most distinguished Franciscans of Mexico—Archbishop Zumárraga, Motolinia, and others, who did not harmonize with Las Casas in his extreme tendencies. He is credited with the authorship of an addition to the "Doctrina" of Fray Pedro de Córdova which appeared in 1544, and possibly in 1550, but this is not yet fully established.

AD. F. BANDELIER.

**Betanzos, FRAY PEDRO DE**, a Franciscan missionary, b. at Betanzos in Galicia; d. at Chomez, Nicaragua, 1570. He was one of the earliest Franciscan missionaries to Guatemala, and founder of the Church in Nicaragua. He is said to have acquired, in eight years, the use of fourteen Indian languages, including the Nahuatl. It is certain that he possessed an extraordinary gift for linguistics since in one year he mastered the three principal idioms of Guatemala: Quiché, Kakchiquel, and Zutuhil, speaking them as perfectly as the Indians themselves. It was during this time, and on account of his writings, that the controversy began between the Franciscans and Dominicans over the use of the Indian term "Cabovil" as a synonym for God. Betanzos insisted that they were not synonymous and always wrote "Dios", even in Indian idioms. The Dominicans on the other hand kept up the native term "Cabovil". The Franciscans were right, since the aborigines had no conception of monotheism, and "Cabovil" means, not a personal supreme Deity, but the spiritual essence which all Indians believe to pervade the world, localizing and individualizing at will; an animistic idea underlying Indian fetishism. Betanzos was one of the authors of a work published at Mexico and entitled, "Arte, Vocabulario y Doctrina Christiana en Lengua de Guatemala". It is probably the book printed in Mexico previous to 1553 and ascribed to the "Franciscan Fathers", and also to Bishop Marroquin of Guatemala. No copy of it, however, is known to exist. It is the earliest work printed in any of the languages of Guatemala.

Casual mention of Fray Pedro de Betanzos is found in YCAZBALCETA, *Bibliografía mexicana*, etc. (Mexico, 1886), in which an edition of the *Catecismo y Doctrina* is mentioned (Mexico, 1556), and a reimpression (Guatemala, 1724). The title of the 1556 edition is *Catecismo y Doctrina Cristiana en idioma Utlateco*; of the 1724 print, *Doctrina Cristiana en lengua Guatemalteca*, and while the former is attributed to Bishop Marroquin, the latter has for its authors FRAY JUAN DE TORRES and FRAY PEDRO DE BETANZOS. The biographic data are found in BÉRISTAIN, *Bibliot. hispano-americana set. México*, 1816), I, who in turn obtained them from VAZQUEZ, *Crónica de la Provincia del Ilmo. Nombre de Jesús, del Orden de San Francisco de Guatemala* (Guatemala, 1714-16). SQUIER, *Monograph of Authors*, etc. (New York, 1861), copies BÉRISTAIN. See also LUDEWIG, *Literature of American Aboriginal Languages* (London, 1858). On the controversy over the use of the words "Dios" and "Cabovil" see REMESAL, *Historia de la provincia de San Vicente de Chyapa y Guatemala* (Madrid, 1619).

AD. F. BANDELIER.

**Betanzos, JUAN DE**.—Unfortunately very little is

known as yet of this official, who has left such valuable works on the Indian traditions and language of Peru. He was a Spaniard by birth and came to Peru at an early day. Whether or not he was still on the Island of Santo Domingo in 1539, as notary or scribe, is uncertain. He was at Cuzco in 1542 and officiated as quasi-interpreter at the investigation of Indian historical traditions ordered by Vaca de Castro. (See PERU.) Even then he had acquired a solid acquaintance with the Quichua idiom. He married an Indian girl of the Inca tribe and composed the first catechism known to us in the Quichua language. The manuscript is now in the National Archives at Lima. In 1551 he finished his book entitled "*Suma y Narración de los Incas &c*" (dedicating it to the viceroy Antonio de Mendoza), one of the most important sources for ancient Peruvian history. Unfortunately only a part of this work is still known to

of the Mount of Olives. It is not mentioned in the Old Testament; in the New Testament it comes into prominence as the Village of Mary, Martha, and Lazarus, and as the scene of the great miracle of the raising of Lazarus to life by Jesus. Here Jesus often received hospitality in the house of his friends, Mary, Martha, and Lazarus; and near this village Jesus ascended into Heaven. The most accepted etymology of the name is Beit-'Ania', "House of Misery". The Talmud derives the name from Beit-Hinë, or Bêt'uni, "House of Dates". The modern name of the village is el-'Azariye, so called from the memory of Lazarus. The initial letter of the name Lazarus is elided in Arabic after the / of the article.

Some believe that the present village of Bethany does not occupy the site of the ancient village; but that it grew up around the traditional cave

THE VILLAGE OF BETHANY

exist. It embodies the earliest accounts of Indian traditions from Bolivia and extreme southern Peru, and as they were gathered by Betanzos within less than fifteen years after the landing of Pizarro, they can hardly be much tainted by contact with Europeans. Of the life of Betanzos, after 1551, practically nothing is known.

BETANZOS, *Suma y Narración de los Incas que los Indios Llamaron Capaccuna* (1551, published by Jiménez de la Espada, Madrid, 1880); ESPADA, *Tres Relaciones de Antigüedades peruanas* (Madrid, 1878, Introduction); GARCÍA, *El Origen de los Indios* (Father García owned the complete manuscript of Betanzos as late as 1607); ESPADA, *Una Antigualla peruana* (Madrid, 1892). The report on the Incas bears the title *Discurso sobre la Descendencia y Gobierno de los Incas*, and is dated 1542; BANDELIER, *Aboriginal Myths and Traditions concerning the Island of Titiaca* (1904, *Am. Anthropologist*, VI, No. 2); *Idem*, *The Cross of Carabuco* (*ibid.*, VI, No. 5); MENDIBURÚ, *Diccionario*, etc. (Lima, 1876), II.

**Bethabara.** See BETHANY BEYOND THE JORDAN.

**Bethany** (Βηθανία), a village of Palestine, fifteen furlongs, or one mile and three-quarters, east of Jerusalem, at the base of the south-eastern slope

which they suppose to have been at some distance from the house of Martha and Mary in the village. Zanechia (La Palestine d'aujourd'hui, 1899, I, 445 sq.) places the site of the ancient village of Bethany higher up on the south-eastern slope of the Mount of Olives, not far from the accepted site of Bethphage, and near that of the Ascension. It is quite certain that the present village formed about the traditional tomb of Lazarus, which is in a cave in the village. The identification of this cave as the tomb of Lazarus is merely possible; it has no strong intrinsic or extrinsic authority. The site of the ancient village may not precisely coincide with the present one, but there is every reason to believe that it was in this general location. St. Jerome testifies: "Bethany is a village at the second milestone from Aelia [Jerusalem], on the slope of the Mount of Olives, where the Saviour raised Lazarus to life, to which event the church now built there bears witness" (Onom. ed. Lagarde, 108, 3).

In the early ages this church was called the "La

zarium" and held in great veneration. Towards the close of the fourth century St. Silvia declares that on the Saturday before Palm Sunday the clergy of Jerusalem and the people go out to the Lazarium at Bethany, so that not only the place itself but the fields round about are full of people. In memory of this ancient custom the Franciscan Fathers of the Holy Land and the pilgrims go out and worship at the tomb of Lazarus on Friday of Passion Week. There is no Catholic chapel at Bethany. The Schismatic Greeks have a monastery and chapel there. The land about Bethany is largely a desert of stone, and from the elevated ground north of the village, the eye sweeps over an undulating desert even to the valley of the Jordan. The present village is made up of about forty wretched Moslem houses; there is not a Christian in the village. The only notable ruin at Bethany is that of a tower, a few paces south-east of the tomb of Lazarus. The massive stones yet remaining in portions of the walls indicate that it is older than the Crusades; it may date from the fourth or fifth century. In 1138 Melisenda, wife of King Fulke I, of Jerusalem, founded a cloister of nuns at Bethany; but the ruins of this cloister have not been identified. The sites of the house of Martha and Mary, and of that of Simon the leper are shown at Bethany; but it is evident that these localizations are purely imaginary.

A. E. BREEN.

**Bethany Beyond the Jordan** (βηθανία πέραν τοῦ Ἰορδάνου).—In the text of St. John's Gospel, i, 28, the author locates the event of Our Lord's baptism by St. John the Baptist at Bethany across the Jordan and there is herein a celebrated variant. The greatest number of the ancient codices, and those of greatest authority, have βηθανία, "Bethany". This reading is approved by Lachmann, Tischendorf, Westcott-Hort, and others. The uncial codices, C<sup>2</sup>, K, T, U, A, II, many minuscule codices, the Sinaitic Syriac, and Cureton's Syriac text have βηθαβάρη, "Bethabara". This reading was approved by Origen, Jerome, Eusebius, and Chrysostom. Origen, in his commentary on this place of St. John's Gospel, declares as follows: "We are not ignorant that in nearly all codices Bethany is the reading. But we were persuaded that not Bethany, but Bethabara should be read, when we came to the places that we might observe the footprints of the Lord, of His disciples, and of the prophets. For, as the Evangelist relates, Bethany the home of Lazarus, Mary, and Martha, is distant from Jerusalem fifteen furlongs, while the Jordan is distant one hundred and eighty furlongs. Neither is there a place along the Jordan which has anything in common with the name Bethany. But some say that among the mounds by the Jordan Bethabara is pointed out, where history relates that John baptized".

Archæological research has failed to identify either Bethany or Bethabara beyond the Jordan; the conjectures range from the ruins on the bank of the Jordan opposite Mahâdet Hadschle, less than two miles north of the mouth of the Jordan, even to Mahâdet 'Abâra, a ford of the Jordan near Bethshean. All things considered, the most probable opinion is that there was a Bethany fifteen furlongs from Jerusalem, and another across the Jordan. The name of this latter may have been a transliteration of בית אֲנִיָּה, "the place of the ship". Bethany across the Jordan has shared the fate of many other Biblical sites which have disappeared from the earth.

The reading "Bethabara" came into the codices on the authority of Origen. A. E. BREEN.

**Betharan**, a city of the Amorrites in the valley-plain east of the Jordan, about twelve miles from Jericho (Num., xxxii, 36; Jos., xiii, 27). It was rebuilt by the tribe of Gad and later fortified by Herod Antipas, who named it Livias in honour of the wife of Augustus. As she was later called Julia, Josephus speaks of the city as Julia. Having been burnt at the fall of Jerusalem, it was restored by the Christians and became a bishopric. The site is identified by some with Tell el Rameh, six miles east of the Jordan, by others with Beit Harran.

JOHN CORBETT.

**Bethdagon**, name of two cities in Palestine. (1) A city (Jos., xv, 41) of the tribe of Juda "in the plains", that is, the territory below Joppa between the mountains and the Mediterranean. Its site is uncertain. (2) A city (Jos., xix, 27) of Aser near Zabulon, supposed to be Tell Da'ouk, south-east of Akka.

For references and conjectures see HAGEN, *Lex. Biblicum*, s. v.

JOHN CORBETT.

**Bethel** (בֵּית־אֵל, "house of God"), an ancient Canaanitish town, twelve miles north of Jerusalem, not far from Silo on the way to Sichem. The primitive name was LUZA. Abram twice offered sacrifice east of Bethel (Gen., xii, 8; xiii, 3). In these passages the name of Bethel is used by anticipation, as it was given to the town by Jacob after his vision (Gen., xxviii, 19). When the Israelites entered the promised land, Bethel was allotted to the tribe of Benjamin, but it was taken and occupied by the Ephraimites (Judges, i, 22-26). It was a place of importance in the subsequent history. Here the Israelites in the days of the Judges were wont to consult the Lord (Judges, xx, 18, 26; xxi, 2; the phrase "in Silo" added in these texts by the Vulgate is a mistake) and the Ark of the Covenant was probably here for a time. Samuel was wont to judge in Bethel every year. After the division of the kingdoms Jeroboam desecrated the place by erecting a golden calf and introducing the Egyptian worship of Apis. This continued until Israel was led captive to Assyria (IV K., x, 29) and was frequently denounced by the prophets Osee and Amos. Shortly before his assumption, Elias visited Bethel, where there was a school of prophets (IV K., ii, 2, 3); the boys from the town mocked Eliseus on his return and were destroyed by bears (ibid., 23). One of the priests who had been carried away captive was allowed to return somewhat later and dwelt in Bethel to teach the people (IV K., xvii, 28). Great confusion of idolatrous worship sprang up, until Josias finally destroyed the altar and the high place there (IV K., xxiii, 15). After the Captivity, the Benjaminites returned to Bethel. In the time of the Maccabees, it was fortified by Bacchides. There is no mention of Bethel in the New Testament, but Josephus records that it was taken by Vespasian (Bell. Jud., IV, ix, 9). Eusebius mentions the place as a village. It is commonly identified nowadays with Beitin. The ruins of several Christian churches on the spot would indicate that in the Middle Ages it had again grown to some importance. The name "Bethel" is also read in Jos., xii, 16 and I K., xxx, 27; it is probably another name for Bethul (Jos., xix, 4), a city of the tribe of Simeon, the site of which is uncertain.

JOHN CORBETT.

**Bethlehem**, a titular see of Palestine. The early name of the city was Ephrata; afterwards Bethlehem,

VIEW OF BETHLEHEM  
INTERIOR OF THE CHURCH OF THE NATIVITY, BETHLEHEM

"House of Bread"; to-day Beith-Lahm, "House of Flesh". There died Rachel, Jacob's wife (Gen., xxxv, 19); David was born there (I Kings, xvii, 12), and many other Biblical personages. There was enacted the gracious idyll of Ruth and Booz. There, above all, the Saviour was born, a descendant of David, and from this fact the humble village has acquired unparalleled glory. It was at Bethlehem, also, that in the fourth century St. Jerome, St. Paula, and St. Eustochium fixed their residence. According to John Cassian, it was in a monastery of Bethlehem that the office of Prime was instituted. As early as the second century it was indicated by St. Justin Martyr, a native of Neapolis (Náblous), as the place of the Nativity. About A. D. 330 Constantine the Great built a basilica on this site. The present church appears to date from a later time—either the fifth or the sixth century—and has been repaired at still later periods. The Frankish kings were wont to come from Jerusalem to be crowned at Bethlehem, in memory of the coronation of David by Samuel. The greater part of the church is now shared by various communions; while the choir belongs to the Greeks alone, the Grotto of the Nativity is open to the Latins, the Greeks, and the Armenians, who hold services there each in turn.

The first Bishop of Bethlehem, Arnolfo (1099–1103), was appointed by the Crusaders. The see was not canonically erected until 1109, when the title was united with that of Ascalon, till then a Greek diocese (*Revue de l'Orient latin*, I, 141). The Diocese of Bethlehem-Ascalon existed from 1109–1378, but since the middle of the thirteenth century its bishops resided at Clamecy in France. The Diocese of Bethlehem-Clamecy was created in 1378, and suppressed by the Concordat between Napoleon and Pius VII, in 1801. The titular Bishops of Bethlehem and Ascalon, however, had existed separately from 1378 to 1803, when they were suppressed. From 1801 to 1840 both residential and titular sees, either of Bethlehem or Ascalon, were extinct. In 1840, Gregory XVI reunited the title of Bethlehem *in perpetuum* to the independent Abbey of St. Maurice d'Againe in Switzerland. In 1867 the titular See of Ascalon was also re-established.

Bethlehem is to-day a little town with about 10,000 inhabitants, exclusive of foreigners (5,000 Latins, 100 Catholic, or Melchite, Greeks, 4,000 Greeks, a few Armenians and Mussulmans). The inhabitants are very active and industrious. Besides agriculture, they are engaged in the fabrication of wooden, mother-of-pearl, and bituminous limestone objects, such as beads, crosses, etc. The women are remarkably beautiful and wear a peculiar costume which is very rich and of ancient pattern. The Franciscans govern the Latin parish, a scholasticate, a primary school, and an asylum; the Christian Brothers have a novitiate for native young men; the Fathers of the Sacred Heart, or Betharramites, have a scholasticate for their missions in South America; the Salesians conduct an industrial school with an orphanage and an elementary school; the Sisters of St. Joseph of the Apparition have two convents, a school, an orphanage, and an infant school; the Sisters of Charity have a hospital and an orphanage; the Carmelite nuns, a monastery. The Greek Catholic parish lately established has not yet a church. There are also Greek and Armenian monasteries, and schools conducted by Greeks, Armenians, and Protestants.

S. VAILLÉ.

**Bethlehem.**—The old Hebrew name *bêth lehem*, meaning "house of bread", has survived till the present day. In its Arabic form, however, *bêth lahm*, it means "house of meat". Several scholars (Smith, *Hist. Geog. of the Holy Land*, 1906, 318, n. 2) hold that the name is connected with Lakhmu, one of the divinities in the Babylonian Creation myth and that Bethlehem was a sacred shrine of that god in ancient times. This is possible, but there is no actual evidence in favour of the conjecture. Two cities of the name are known from Sacred Scripture: I. BETHLEHEM is mentioned in Jos., xix, 15, as one of the twelve cities belonging to the tribe of Zabulon. It is but a small town, poorly built, and of no great importance (Buhl, *Geog. des alten Palästina*, 1896, 215), a little less than seven miles south-west of Sapphoris (Saffūrieh) and seven miles north-west of Nazareth, the home of Our Lord. Critics do not agree among themselves whether the Bethlehem described in Judges, xii, 8, 10, as the home of Abesan (Ibzan), one of the minor judges, is the same as that of Jos., xix, 15, or Bethlehem of Juda. A large number if not the majority of modern commentators, are in favour of Bethlehem of Zabulon. But ancient tradition (Josephus, *Antiq.*, V, vii, 13; cf. also Moore, *Judges*, *Int. Crit. Com.*) made Abesan spring from Bethlehem of Juda and the view is ably defended by Father Lagrange in his commentary (Smith, *op. cit.*; Hogg, *Encyc. Bib.*, IV, 5389). In any case

GENERAL VIEW OF BETHLEHEM

the importance of that city was never great. But the efforts of some modern critics have made it more famous. Unable to accept as historical the narratives of Our Lord's birth in Bethlehem of Juda, these scholars would place the Nativity in Bethlehem of Zabulon, referred to in the Talmud (*Megilla*, 70, a) as Bethlehem *seriyah*, which is regarded as equivalent to *nōsēryyah*, i. e. Bethlehem of Nazareth (of Galilee), a certainly remarkable combination of two names so well known from the Gospels (Réville, *Jésus de Nazareth*, 2nd ed., Paris, 1906, I, 360).

II. BETHLEHEM OF JUDEA [so the Greek text of Matt., ii, 1, erroneously corrected by St. Jerome to Bethlehem of Juda, thinking that the Evangelist had in his original text conformed to the Old Testament usage (Judges, xvii, 7, xix, 1; I Kings (Sam.), xvii, 12)], is much more celebrated than its northern namesake as the birthplace of David, and above all, of Our Lord. The city, which numbers now about 10,000 inhabitants, almost exclusively Christians, is situated five miles south of Jerusalem at a very short distance from the highroad from Jerusalem to Hebron, in the midst of a most beautiful country (Buhl, *op. cit.*, 19), which contrasts favourably with the neighbourhood of

Jerusalem. At an altitude of 2,350 feet it spreads out between the Wadi el Hrobbie in the North and the Wadi er-Rāhib in the south; the land of Moab is visible in the south-east, a detail to be remembered in reading the beautiful story of Ruth the Moabitess, the scene of which is Bethlehem (Smith, op. cit.). The main resources of Bethlehem are agriculture and the sale of religious articles; the city is also the market-place of the peasants and bedouins of the neighbourhood.

According to Gen., xxxv, 16, 19; xlviii, 7, Bethlehem was associated with the patriarchal history. The sepulchre of Rachel, or Qubbet Rāhil (Rachel's dome) as it is called now, about one mile north of Bethlehem, still shown to the pilgrim and venerated by Christians, Mohammedans, and Jews, is referred to again in I Kings (Sam.), x, 2, and Matt., ii, 16-18; cf. Jer., xxxi, 15. As an examination of these passages shows, the tradition presents some obscurities, and critics question the correctness of the gloss (Gen., xxxv, 19) which identifies Ephrata with Bethlehem, supposing it the result of a confusion between Bethlehem-Ephrata [Ruth, iv, 11; Mich., v, 2 (1)], i. e. our Bethlehem, and another Ephrata in the north, otherwise unknown, or assume two different traditions regarding Rachel's sepulchre. (Cf. commentaries: Driver in Hast., "Dict. of the Bible", IV, 193, a; Buhl, op. cit., 156, 159; Bäckker-Benzinger, "Palästina und Syrien", 1904, 91.) Bethlehem is mentioned also in Judges as the home of the young Levite who went to Michas (xvii, 7 sqq.) and of the young woman (xix, 1 sqq.) whose death caused the expedition against the tribe of Benjamin. In the Old Testament, however, it is connected especially with the great King David (I Kings, xvi, 1 and *passim*), whose name is given to the three cisterns (Bi 'ār Dā 'ūd), found north-west of the town, not far from the tomb of Rachel. A tradition not older than the end of the fifteenth century, according to Bäckker-Benzinger (p. 91), sees therein the cistern referred to in II Kings, xxiii, 14 sqq. and I Par. (Chron.), xi, 16 sqq. Later the city was fortified by Roboam (II Par., xi, 6), and I Esd. (Ezrah), ii, 21 sqq. [cf. II Esd. (Nehem.), vii, 26] informs us of the return of 123 Bethlehemites from the Captivity.

In the New Testament, we have, with the exception of John, vii, 42, references to Bethlehem only in Matt., ii, and Luke, ii, whose narratives of the birth of the Saviour in the city of David have rendered it most dear to Christians. Many modern critics, however, are making Bethlehem again "little among the thousands of Judah" (Schmidt, *The Prophet of Nazareth*, 1905, 246) by attacking the historical value of the Gospel narratives. Some place Our Lord's birth at Nazareth, called *His carps* in the Gospels (Mark, vi, 1, and *parall.*; cf. i, 9; i, 24, etc.); this is done by almost all those who deny the historicity of the Infancy, endeavouring to explain our narratives as a legend arisen from the Jewish tradition that the Messiah had to be born in Bethlehem, occasioned by Micah, v, 2 (1). (Cf. Targum; also John, vii, 42; Strauss, *Life of Christ*, tr. Eliot, from the 4th Germ. edit., 1840, § 32, end, § 39; Usener in "Encyc. Bib.", III, 3346-47; Schmidt, op. cit., 243, 246; Weiss in "Die Schriften des N. T.", Göttingen, 1906, I, 1, pp. 46, 221-223, 393-395.) Others more seldom give the explanation already mentioned.

This question, which is part of the larger problems connected with cc. i-ii of Matt. and Luke, cannot be discussed here. [See besides the lives of Jesus and commentaries; Ramsay, "Was Christ born at Bethlehem?", 1898, and QUIRINIUS, *CENSUS OF*.] Suffice it to remark here that if the second explanation removes some difficulties, it requires us to go entirely behind the narratives of both Matt. and Luke, who most clearly mean only Bethlehem of Judah (see Knowing "Dictionary of Christ and the Gospels",

New York, 1906, I, 204). Against the first explanation it may be noted with many critics that Matt. and Luke agree independently in placing the birth at Bethlehem without, in St. Luke's case, any sign of influence of Micah's prophecy (Knowing, op. cit.; Nichol, "Dictionary of Christ", I, 195, a; Jacquier, "Hist. des livres du N. T.", Paris, 1905, II, 209). We must not, however, exaggerate the value of that argument. (Cf. *Revue d'histoire et de littérature religieuses*, Jan.-Feb., 1906, 62 sqq.) These difficulties were unknown to the ancient writers, who reproduce simply the Gospel narratives with additions, in some cases possibly historical. About 150 we find St. Justin Martyr referring (Dial., lxxviii) to the Saviour's birth as having taken place in a cave near the village of Bethlehem; such cave stables are not rare in Palestine. (Cf. Massie in Hast., *Dict. of the Bible*, III, 234; *Expository Times*, May, 1903, 384; Bonaccorsi, "Il Natale", Rome, 1903, 16-20.) The tradition of the birth in a cave was widely accepted, as we see from Origen's words about a century later: "In Bethlehem the cave is pointed out where He was born, and the manger in the cave where He was wrapped in swaddling clothes, and the rumour is in those places and among foreigners of the Faith that indeed Jesus was born in this cave". (Contra Celsum, I, li.) It is reproduced also in the apocryphal gospels (Pseudo-Matt., xiii, ap. Bonaccorsi, op. cit., 159-163; Protevang. of James, xvii sqq.; Bonaccorsi, 155-159; Gospel of the Infancy, II-IV, Bonaccorsi, 163-164). Over the traditional spot of the Nativity stands a church (St. Mary of the Nativity), surrounded on the north-west and south-west by the convents of the Latins (Franciscans), Greeks, and Armenians, respectively. The building is, apart from additions and modifications made by Justinian (527-565), substantially the work of Constantine (about 330). Underneath that most ancient and venerable monument of Christianity, a favourite resort of pilgrims throughout the centuries, is the grotto of the Nativity. The Nativity chapel, running in the same general direction as the church (east to west), is situated under the choir; at the eastern end is a silver star with the inscription: *Hic de Virgine Maria Jesus Christus natus est*, and near the chapel of the Crib (see Bonaccorsi, op. cit., 77-113). Other grottoes to the north and north-west connected with that of the Nativity are associated, mostly by recent traditions (c. fifteenth century), with the narratives of Matt., ii, mainly, and with the memory of the great scholar St. Jerome and his company of pious and learned friends (Sanders, *Etudes sur S. Jérôme*, Paris, 1903, 29 sqq.).

EDWARD ARBEZ.

**Bethlehem**, an architectural term used in the Ethiopic Church for the oven or bakehouse for baking the Korbān or Eucharistic bread. It is a usual attachment to Coptic churches and is generally situated somewhere within the enclosure of the church. It is shown in the plan of Māri Mīna and the adjoining church of Māri Banai. The four walls of Dair Abu Makar enclose one principal and one or two smaller court-yards around which stand the cells of the monks, domestic buildings, such as the milkroom, the oven (Bethlehem), the refectory and the like.

BUTLER, *The Ancient Coptic Churches of Egypt*, I, 48.

THOMAS H. POOLE.

**Bethlehem, COUNCILS OF.** See JERUSALEM, SYNOD OF.

**Bethlehemites.**—I. Military order; II. Hospitallers. I. There were two military orders dedicated to Our Lady of Bethlehem and known under the name of Bethlehemites. Matthew Paris calls attention to the former in his "Grande Chronique" (tr. Huillard-Bréholles, Paris, 1840, 8vo, III, 300) where he mentions that Henry III of England

authorized them to open a house in a suburb of Cambridge (1257); but he leaves us in complete ignorance as to their founder, where they originated, and their history. We only know that their habit was similar to that of the Dominicans and that a red star, whose five rays emanated from an azure centre, decorated the breast of their cape. This was in commemoration of the star that appeared to the Magi and led them to Bethlehem. Nothing further is known of this military order. There was an order of knights whose members wore a red star on their costume and who might have been called Bethlehemites because of having a house in Bethlehem at the time of the Crusades; this was the Military Order of Crusaders of the Red Star (*Ordo militaris crucigerorum cum rubra stella*). They came from Palestine to Bohemia in 1217, and Blessed Agnes of Bohemia confided two hospitals to their charge. They have since remained in that country where they devote themselves to the care of the sick, to education, and to the various works of the ecclesiastical ministry.

After the taking of Constantinople by the Turks (1453), Pius II founded under the patronage of Our Lady of Bethlehem an order of knights for the defence of the Island of Lemnos which Cardinal Louis, Patriarch of Aquileia, had recaptured from Mohammed II. The island was to be their headquarters whence they were to oppose the attacks of the Moslems by way of the Ægean Sea and the Hellespont. The order was composed of brother-knights and priests governed by an elective grand-master. The white costume worn by the members was decorated with a red cross and the rule prescribed for them was very similar to that of the Knights of St. John of Jerusalem. The pope installed this community 18 January, 1459, and, that their needs might be supplied, turned over to them the property and revenues of the orders of St. Lazarus, of Sainte-Marie du Château des Bretons, of Bologna, of the Holy Sepulchre, of Santo Spirito in Sassia, of St. Mary of the Crossed Friars, and of St. James of Lucca, all of which were suppressed for this purpose. Pius II alluded in a Bull to this foundation and the bravery of its knights, but the second capture of Lemnos by the Turks rendered the institution useless. Thus the order of Our Lady of Bethlehem was suppressed almost as soon as founded and those orders whose goods the pope had transmitted to it were re-established.

II. The hospitaler Bethlehemites, or Belemites, were founded by the Ven. Pedro de Betancourt, a descendant of the celebrated Juan de Betancourt, who, early in the fifteenth century, achieved the conquest of the Canary Islands for Henry III of Spain. Pedro was born at Villafiora on the Island of Tenerife in 1619. From childhood he led a pious, austere life and in 1650 left family and country, thus carrying out his desire of going to the West Indies. During the following year he reached Guatemala, the capital of New Spain, where he intended to prepare for the priesthood that later he might go forth and evangelize Japan. However, three years of unsuccessful study at a Jesuit college led him to abandon this idea and, after holding the position of sacristan for a while in a church dedicated to the Blessed Virgin, he rented a house in a suburb of the city called Calvary, and there taught reading and catechism to poor children. But this charitable work did not furnish sufficient outlet for his zeal. The condition of the sick poor excited his compassion and he sheltered them in his home which he converted into a hospital. His zeal elicited benefactions from those around him and the bishop and governor supplied him with all the conveniences he required. Several individuals provided for the purchase of the houses surrounding the one he then occupied and on their site was erected a hospital in which this servant

of God could labour to better advantage. He himself worked with the masons. The hospital was thoroughly equipped and stocked and even offered an opportunity for the religious installment of those who tended the sick. The institution was placed under the patronage of Our Lady of Bethlehem.

Helpers soon joined Pedro de Betancourt and at length was formed a congregation of brothers generally known as Bethlehemites and so called on account of their house. But the care of the sick did not totally absorb their attention; they likewise lent their assistance in the two other hospitals of the city and Pedro continued to befriend poor children. The prisoners also excited his compassion. Every Thursday he begged for them through the city and visited them in their cells. The neglected souls in purgatory were also the objects of his solicitude and at the principal gates of the city he founded two hermitages, or chapels, wherein religious of his community begged, so that masses might be celebrated for the souls of the deceased. He himself would travel the streets at night ringing a bell and recommending these souls to be prayed for. His devotion to the Blessed Virgin was inspiring and during a novena of preparation for the feast of the Purification his religious, with arms extended in the form of a cross, recited the rosary in their chapel at midnight in the midst of a great throng. In 1654 he made a vow to defend the Immaculate Conception even at the peril of his life. He died, exhausted by labour and penance, 25 April, 1667, at the age of forty-eight. His funeral was impressive and at the request of the Capuchin Fathers he was buried in their church where, for a long time, his remains were held in veneration.

Before establishing his Guatemala hospital Pedro de Betancourt had become affiliated with the Third Order of St. Francis, adopting its religious garb which he still retained after founding his congregation. He personally trained his first disciples and had no wish to organize a community, but simply to establish his hospital. He sent Brother Anthony of the Cross to Spain to solicit the king's approbation of the work. The favour was granted, but Pedro died before the messenger's return. From that time the community prospered, beginning with the extension of the hospital and the erection of a beautiful church. Brother Anthony, who assumed the government, drew up constitutions which he submitted to the bishop of the diocese for approval and it was at this juncture that the Capuchins requested him to make some alterations in the habit worn by his religious. A free school for poor children was always connected with the Bethlehem hospital, a feature of all new foundations. One of these was soon undertaken by Brother Anthony of the Cross who sent two of his community to Peru where they were very favourably received by the viceroy to whom he had recommended them. Doctor Antoine d'Avila gave them the Hospital of Notre Dame du Carmel which he was then establishing at Lima and afterwards solicited admission among them. In 1672 Brother Roderick of the Cross obtained the confirmation of this establishment by the King of Spain and it was also through his efforts that Pope Clement X confirmed the congregation and its constitutions (1673). After his return to America this religious founded the Hospital of St. Francis Xavier in Mexico and those of Chachapoyas, Cajamarca, and Trujillo, going back to Spain in 1681 to secure the confirmation of these new institutions. The Council of the Indies assigned the hospital of Lima an income of 3,000 crowns. The Bethlehemites, because of making only simple vows, remained under diocesan jurisdiction from which they wished, however, to be freed so that their congregation might be converted into a regular religious order bound by solemn vows. The Spanish court did not approve this plan and at first the Holy See was not

favourable to it, but due chiefly to the influence of Cardinal Mellini, former nuncio at Madrid, Roderick of the Cross at length overcame all difficulties and in the Bull of 26 March, 1687, Innocent XI authorized these religious to make the three solemn vows according to the rule of St. Augustine and to have a superior-general, and granted them all the privileges of the Augustinian friars and convents. Later, Clement XI renewed this authorization and these favours, adding thereunto the privileges of the mendicant orders, of the Regular Clerks, of the Ministers of the Sick, and of the Hospitallers of Charity of St. Hippolytus (1707).

Meanwhile the order was multiplying its foundations in Latin America and was established in Arequipa, Cuzco, Santiago de Cuba, Puebla, Guadalajara, Guanajuato, Dajaka, Vera Cruz, Havana, Santiago de Chile, Buenos Ayres, and Guatemala la Nueva. A school for poor children was connected with every hospital and the pious, devoted lives of these religious won them esteem and gratitude. They were especially admired during the plague of 1736, a fact unanimously acknowledged by the writers who describe the condition of Latin America in the eighteenth century. But this did not prevent their suppression, as well as that of all other religious, in 1820. At that time their superior-general resided in Mexico and the Bethlehemites were scattered throughout two provinces, that of Peru including twenty-two houses and that of New Spain, eleven. To the ordinary religious vows they added that of caring for the sick even at the risk of their own lives. In 1688 Brother Anthony of the Cross, with the help of a pious woman, Marie Anne del Gualdo, founded at Guatemala a community of Bethlehemite nuns and a hospital exclusively for women. These nuns were cloistered and observed the same rule as the men and they, too, were suppressed in 1820.

J. M. BESSE.

**Bethsaida.**—I. A CITY, or perhaps two cities, on the shore of the Lake of Genesareth, the frequent scene of Christ's preaching and miracles (Matt., xi, 21; Luke, x, 13).—II., in the Vulgate, a Pool in Jerusalem, also called Bethesda (John, v, 2).—III. A TITULAR SEE.

I. THE CITY. (Gr. *Βηθσαιδα*; Aram. *בֵּית צִידָא*, "house, or place, of fishing.") The old writers, up to the sixteenth century, knew of but one Bethsaida, though they do not seem to have always indicated the same site. Since then it has been a much debated question whether there were not two places of this name: one east of the Jordan; the other west, near Capernaum. A Bethsaida, which the Tetrarch Philip enlarged into a city and named Julius, after the daughter of Augustus, existed east of the river, near where it enters the lake (Josephus, Ant., XVIII, ii, 1; Bell. Jud., II, ix, 1; III, x, 7; Vita, 72). Near this Bethsaida took place the feeding of the five thousand (Luke, ix, 10) and the healing of the blind man (Mark, viii, 22). Whether another is to be admitted, depends on two questions on which the controversy mainly turns: whether Julius, though belonging politically to Gaulonitis, was comprised within the limits of Galilee (John, xii, 21) and whether, in Mark, vi, 45, and John, vi, 17, a direct crossing from the eastern to the western shore is intended. The negative view seems to be gaining ground. In the supposition of two Bethsaidas, the western would be the home of Peter, Andrew, and Philip (John, i, 44; xii, 21), and the Bethsaida of Matt., xi, 21 and Luke, x, 13. Julius is identified by many with et-Tell; but, as this is

somewhat too far up the river to answer Josephus's description, others prefer El-Araj, close to the shore, or Mes'adyeh farther east. The partisans of a western Bethsaida are much divided on its site. 'Ainet-Tâbigha and Khân Minyeh are most favoured.

II. THE POOL. [Gr. *βηθεσδα*, *βηθεσδά*, *βηθαδα*.—Bethesda is supported by most Gr. MSS., still Bethzatha may be the true reading and Bethesda a corruption, as Bethsaida most probably is. Bethesda probably = בית חסדא (House of Mercy). The etymology of Bethzatha is uncertain.] This pool had five porches in which the sick lay "waiting for the moving of the waters" (John, v, 3) and most likely steps led down to it. Here the Saviour cured a man "that had been eight and thirty years under his infirmity". The Vulgate and most of the Fathers call it a "sheep pool" (*προβατικῆ*, *probatica*), but the Greek text of John, v, 2, is commonly un-

THE POOL OF BETHSAIDA

derstood to mean that it was situated near the sheep gate. This would place it north of the temple area. The early writers speak of it as a double pool, the fifth portico running between the two basins, but give no details as to its location. From the sixth to the thirteenth century, it is mentioned as being near the present church of St. Anne. Just west of this church an old double pool was discovered some years ago, which is, there is little doubt, the pool spoken of by medieval writers, and probably the old pool of Bethesda. Since the fourteenth century Birket Isrâ'în, north-east of the temple area, is pointed out as Bethesda. Others prefer the Fountain of the Virgin ('Ain Sitti Mariam, or 'Ain Umm ed-Derej) because of its intermittent flow; or the pool of Siloe, which, being fed by the preceding, shares its intermittence. Lastly, some advocate Hammâm esh-Shifâ (Bath of Health), west of the temple area, because of its name.

III. THE TITULAR SEE.—It is uncertain at what period Bethsaida, the former of the two cities (Julius) mentioned under I, became a titular see depending on Scythopolis. There was in the region of Nineveh another Bethsaida, with a Jacobite titular bishop in 1278.

F. BECHTEL.

**Bethsan** (Heb. בית-שאן, Bêth Shān, or בית-שאן, Bêth Shān, "place of rest"), a city within Issachar, but assigned to Manasses (Jos., xvii, 11; I Par., vii, 29); later Scythopolis, now the village Beisan, three miles west of the Jordan. Because of its strength the Israelites could not take it at the time of the conquest (Jos., xvii, 16; Judges, i, 27), and when the Philistines hung up the bodies of Saul and his three sons on its walls after the battle of Gelboe (II Kings, xxi, 12), it was probably still in the hands of the Chanaanites. Under Solomon it was the centre of an administrative district (II Kings, iv, 12). About the beginning of the third century B. C. it was named Scythopolis, probably because Scythians had settled there. After paying tribute to the Ptolemies, it passed under Syrian rule in 198 B. C., and in 107 fell into the hands of John Hyrcanus. Pompey took it from the Jews, and thenceforth it was a free city and one of the chief towns of Decapolis. In Christian times it became an episcopal and later a metropolitan see.

F. BECHTEL.

**Bethulia** (Gr., *Βεθουλα*), the city whose deliverance by Judith, when besieged by Holofernes, forms the subject of the Book of Judith. The view that Bethulia is merely a symbolic name for Jerusalem or a fictitious town, has met with little favour, even among those who deny the historical character of the book. Bethulia is clearly distinguished from Jerusalem (iv, 6; xi, 14, 19; xv, 5, 8; the references throughout the act being to the fuller Greek text), and the topographical details leave no doubt that the story, even if it be only a pious romance, is connected with a definite place. Its site, however, is in dispute. Beside Sānūr, Mithilyeh, or Misilyeh, Tell Kheibar and Beit-Ilfa, which have divided opinion for some time, Haraïq el-Mallah, Khirbet Sheikh Shibel, el-Bārid and Sichem (Bethulia being considered a pseudonym) have recently been proposed as sites of Bethulia.

The city was situated on a mountain overlooking the plain of Jezrael, or Esdrelon, and commanding narrow passes to the south (iv, 6, 7; vi, 11-13); at the foot of the mountain there was an important spring, and other springs were in the neighbourhood (vi, 11; vii, 3, 7, 12). Moreover it lay within investing lines which ran through Dothain, or Dothan, now Tell Dothān, to Belthem, or Belma, no doubt the same as the Belamon of viii, 3, and thence to Kyamon, or Chelmon, "which lies over against Esdrelon" (vii, 3). These data point to a site on the heights west of Jenin (Engannim), between the plains of Esdrelon and Dothan, where Haraïq, Kh. Sheikh Shibel, and el-Bārid lie close together. Such a site best fulfils all requirements. It lies between lines drawn from Tell Dothān to Bel'ema, probably Belma, or Belamon, and from the latter to el-Yāmūn, probably Kyamon; there are a number of springs and wells in the neighbourhood, and near by are the two passes of Keir Adān and Burqīn, so narrow

in places that two horsemen cannot ride abreast. One of the three above-named places is in all probability the site of ancient Bethulia. The other sites are all deficient in some essential requirement.

F. BECHTEL.

**Bethune, JAMES.** See BEATON, JAMES.

**Betrothal** (Lat. *sponsalia*), the giving of one's troth—that is, one's true faith or promise. Betrothal, in the Catholic Church, is a deliberate and free, mutual, true promise, externally expressed, of future marriage between determinate and fit persons. It is a promise, compact, or agreement—not merely an intention; and, like all contracts, it must be entered into with deliberation proportionate to the obligation which it begets; it must be free from force, substantial error, and grave fear. The promise given must be mutual; a promise on the part of one only, with acceptance by the other, does not constitute a betrothal. The consent, of course, as in all contracts, must be true, or sincere, not feigned; it must be given with the intention of binding oneself, and this intention must be expressed verbally, by writing, or by action, in person or by proxy. Lastly, this contract, like matrimony, can exist only between two definite persons whose capacity is recognized by the Church; that is, between whom there is no matrimonial impediment, either as regards the licitness or validity of the contract. The betrothal is a promise of future marriage, and hence it differs from the marriage contract itself, which deals with that state as in the present.

**FORMALITIES.**—Formal betrothal is not customary in the United States, or in English-speaking countries generally, as it is among certain nations, where the ceremony is sometimes solemn (before ecclesiastical witnesses) and sometimes private (made at home before the family or friends as witnesses). Among English-speaking peoples the betrothal, if it occurs, is generally without the presence of a third party. In Spain (S. C. C., 31 January, 1880; 11 April, 1891) and in Latin America (Acta et Decreta Conc. Pl. Amer. Lat., p. 259, in note 1) a betrothal compact is considered invalid by the Church unless written documents pass between the contracting parties. This practice obtains in other countries also, but its observance is not necessary to validate the agreement.

**EFFECTS.**—A valid betrothal begets chiefly two effects. There arises first an obligation in justice, binding the contracting parties to keep their agreement; viz. to marry at the time specified; or, when the date of marriage is not agreed upon, whenever the second party to the compact reasonably demands the fulfilment of the marriage-promise. Marriage, consequently, with a third party is forbidden, though not invalid. There arises, secondly, owing to an ecclesiastical law, a diriment impediment, known as "public decency", extending to relatives in the first degree of the parties betrothed. Hence, a marriage contracted between the male party to a betrothal and the mother, sister, or daughter of the other party; and, vice versa, between the woman and the father, brother, or son of the man, would be null and void. This impediment continues to exist in all its force, even after the betrothal has been legitimately dissolved. The first of these effects, an obligation of justice, may arise, it will be seen, from a betrothal compact which has not all the essentials of the definition given above; not so, however,

of the second effect. It is sometimes stated that a betrothal does not bind in English-speaking countries. This is inexact, to say the least. There is no exception at any time, or in any country, to the binding force arising from a valid betrothal, even though it be not public (S. C. S. Off., 11 Aug., 1852), or to the impediment begotten thereby. Engagements very frequently, though not always, are rather proposals of matrimony than promises as explained above, and in them an essential element of the betrothal is wanting (Sabetti, Theol. Mor., n. 838, qu. 30; Kenrick, Theol. Mor., nos. 23, 37).

**DISSOLUTION.**—A betrothal may be dissolved: (1) By the mutual and free consent of the contracting parties. (2) By a diriment impediment, which subsequently arises between said parties. In this case the innocent party is released from his or her obligation, but not the one through whose fault the impediment arose. The latter may be held to the contract, if the impediment be such that the Church can dispense from it. (3) By a valid marriage entered into with a third person. (4) By protracted delay on the part of either of the contracting parties in fulfilling the agreement to marry, in which case the innocent party is released from obligation. (5) By one of the contracting parties choosing a higher state of perfection, as for example by solemn profession in a religious order, by the reception of major orders, etc. (6) By any notable change in body or soul or worldly state of one of the parties—any grave circumstance which if it had happened or been known before the betrothal would have prevented it. To these may be added the impossibility of contracting matrimony, and a dispensation granted by the pope for just causes.

**PROCEDURE FOR BREACH OF PROMISE.**—In case of refusal to complete the contract by marriage an action before the diocesan court is permissible. Bishops, however, are counseled not ordinarily to enforce marriage in such cases, as generally it would prove unhappy. In English-speaking countries these matters are, as a rule, taken into the civil courts, where the only remedy is a breach-of-promise suit, the penalty being a fine. In the United States, before the civil law, betrothal has only the moral force of a mutual promise. Betrothal in England was once a legal bar to matrimony with another; at present the only legal remedy for the violation of the betrothal is an action for breach of promise.

**HISTORY.**—Jewish and Roman laws and customs must have influenced the early practice of the Church anent betrothal. The Jewish laws of marriage, and consequently of betrothal, were based in a great measure on the supposition that it was a purchase. In the law of Moses there are certain provisions respecting the state of the virgin who is betrothed, but nothing particularly referring to the act of betrothal. Selden's "Uxor Hebraica" gives the schedule of later Hebrew contracts of betrothal. Where the contract was in writing, it was written out by the man before witnesses and delivered to the woman, who must know its import. Rome, on the other hand, at the beginning of the Christian Era, had ceased to consider marriage as a wife-purchase. Marriage, and still more betrothal, was a purely civil compact, verbally concluded. Under later Roman law, which constituted a basis for our ecclesiastical legislation, betrothal was looked upon simply as a contract of future marriage, stronger indeed than the engagement, since to enter into a second betrothal compact was held to be as infamous as bigamy itself. No legal forms were prescribed for the early Roman betrothal, but the compact was generally accompanied by the man's sending to the woman the iron betrothal ring (*annulus pronubus*). As the Empire grew in importance, so did the betrothal contract, while at the same time its obliga-

tions were more frequently disregarded. Hence the practice of giving earnest-money, or pledges of fidelity (*arrhae*), came into prominence; another step led to gifts being bestowed by the parties, one upon the other. The kiss, the joining of hands, and the attestation of witnesses were other elements introduced. Even in England formal engagements of this kind were common down to the time of the Reformation. As barbarian influence, however, began to affect the Empire, the betrothal took on more the semblance of wife-purchase.

The Church, at the beginning of the third century at the latest, recognized betrothal as a perfectly valid and lawful contract. In the fourth century, in Africa at least, according to the testimony of St. Augustine (Sermo viii, 18; Sermo xxxvii, 7; Sermo cccxxxii, 4, etc.), espousals were contracted in writing, the instrument (*tabulae*), signed by the bishop, being publicly read. At the same time the dowry, if any, was given, or nuptial gifts were exchanged. Pope Benedict I (573-577), writing to the Patriarch of Gran, declares that it is connubial intercourse that makes two one, that mere betrothal would not prevent a man from entering into wedlock with the sister of his betrothed. The question of relationship, then, arising from the betrothal contract was mooted even at that early period. Gregory the Great (590-603) allowed a woman who was betrothed to dissolve her engagement in order to enter a convent (Bk. VI, Ep. xx).

At the end of the ninth century betrothal had become a very frequent subject of Church legislation. From a reply of Pope Nicholas to the Bulgarians in 860 (Responsa ad Consulta Bulgarorum, c. iii) it is apparent that the preliminaries leading up to a marriage in the Church were: (1) The betrothal or espousal; the expression of consent by the contracting parties, and the consent also of their parents, or guardians, to the projected marriage. (2) The *subarrhatio*, or delivery of the ring by the man to the woman by way of an earnest, or pledge. (3) The documentary transfer, by the man to the woman, of the dowry, in the presence of witnesses. The marriage was to follow immediately, or after an interval more or less protracted. These rites are still recognized in modern uses. The ceremony of betrothal is found in a measure in the present nuptial service. There is a declaration of consent, which, since the marriage follows immediately after, is *de presenti*. The placing of the ring on the finger of the bride by the bridegroom constitutes the *subarrhatio*, while in many places transferring of the dowry is represented by a medal or coin—a relic of Salic law and of wife-purchase. (See Martène, De Antiq. Ecc. Ritibus, I, ix, a. 3, n. 4, speaking of a ritual of the Church of Reims.)

**Betrothal Ring.** See RING.

**Bettiah**, PREFECTURE APOSTOLIC OF, in northern India, includes as part of its jurisdiction the entire native state of Nepal, which has an area of more than 59,000 square miles and a population of nearly 3,000,000. The prefecture is bounded on the north by Tibet; on the east, by the Ghagra; on the south, by the Ganges; and on the west, approximately, by the Kusi.

In 1738 Father Joseph of Carignano, a Capuchin, on his way to the missions of Nepal and Tibet, arrived at Bettiah, not far from the southern boundary of the former kingdom. The Queen of Bettiah, being grievously sick, was cured by him; in return, she allowed him to preach the Gospel. The Nepal war of 1769 obliged the Christians to retire southwards.

to the neighbourhood of Bettiah. In 1883 Father Alexander of Albano opened an orphanage at Chaknee; but, as the number of Italian missionaries was falling off, this district, then a portion of the Allahabad mission, was turned over (29 October, 1889) to the Capuchins of the Province of Northern Tyrol. By a decree of 20 April, 1892, this country was made an independent prefecture, suffragan to the See of Agra; the districts of Bettiah, Champaru, Sarun, Tiroot, Mazuffarpore, Dharbanga, and part of those of Bhagalpur and Monghyr were assigned to it. Propaganda added, 19 May, 1893, the whole of Nepal, a territory wider than the whole of the original prefecture, and which extends to the borders of Tibet. Nepal thus became separated from the Diocese of Allahabad; it can scarcely be said, however, to have ever been evangelized, seeing that within its 59,000 square miles Rampur is the only station.

Generally speaking, missionary activity in this prefecture has been concentrated in the Bettiah district. According to the latest statistics of the Capuchin missions, the prefecture numbers 13,000,000 inhabitants, of whom only 3,633 are Catholics. Nearly all the Europeans (220) are Anglicans. In 1889 the mission had only three stations; there are now 12 stations and 11 churches or chapels. The principal stations are Bettiah (the residence of the Prefect Apostolic, Ilarione da Abtei), Chohoree, Chaknee, Latonah, Somastipore, Dharbanga, Somesar, Rampur (in Nepal), and Ramnagar. The minor stations are Mazuffarpore, Sonapore, Chapra, and Hipore. The mission is administered by 14 Capuchin priests, aided by 8 lay brothers. There are also 20 Sisters of the Holy Cross (*Kreuzschwwestern*) from Switzerland; 35 schools, with 854 pupils; and 10 orphanages, with 403 orphans.

*Status Missionum Ord. Min. Cap.* (1906).

ALBERT BATTANDIER.

**Betting.**—A bet may be defined as the backing of an affirmation or forecast by offering to forfeit, in case of an adverse issue, a sum of money or article of value to one who, by accepting, maintains the opposite and backs his opinion by a corresponding stipulation. Although there are no Federal statutes in the United States on this matter, many of the States make it a penal offence when the bet is upon a horse-race, or an election, or a game of hazard. Betting contracts are also frequently made void. Similarly in Great Britain betting in streets and public places, and the keeping of betting houses are forbidden by law, and wagering contracts are null and void. Such laws are just and useful, inasmuch as they serve to keep within the bounds of decency the dangerous habit of gambling, and the many evils which are usually associated with it. Although betting is to be discouraged as being fraught with danger, and although it may be morally wrong, still in particular cases it is not necessarily so. As I may give the money of which I have the free disposal to another, so there is nothing in sound morals to prevent me from entering into a contract with another to hand over to him a sum of money if an assertion be found to be true, or if a certain event come to pass, with the stipulation that he is to do the same in my favour if the event be otherwise.

This may be an innocent form of recreation, or a ready way of settling a dispute. However, the practice is very liable to abuse, and that it may be morally justifiable theologians require the following conditions: The parties must have the free disposal of what they stake, and both must bind themselves to stand by the event and pay in case of loss. Wagering is wrong in morals as it is in law. Both must understand the matter of the bet in the same sense, and it must be uncertain for them both. If, however, one has absolutely certain evidence of the truth of his contention, and says so to the other party, he is

not precluded from betting if the latter remains obstinate. If a bet fulfils these conditions and the object of it is honest, so that the bet is not an incentive to sin, it will be a valid contract, and therefore obligatory in conscience. Debts of honour then are also debts that we are bound in conscience to pay if they fulfil the conditions just laid down. It follows that the avocation of the professional bookmaker need not be morally wrong. It is quite possible to keep the moral law and at the same time so to arrange one's bets with different people that, though in all probability there will be some loss, still there will be gain on the whole. (See GAMBLING.)

T. SLATER.

**Beugnot**, AUGUSTE-ARTHUR, COUNT, French historian and statesman, b. at Bar-sur-Aube, 25 March, 1797; d. at Paris, 15 March, 1865. He was a son of Jacques-Claude Beugnot, who was a Deputy in the Legislative Body of 1791, Minister of Finance to Jerome, King of Westphalia in 1807, Minister of the Interior under the Provisional Government of 1814, and Postmaster General in 1815. At the age of twenty-one Auguste-Arthur Beugnot made known his ability as an historical writer by dividing with Mignet the prize of the Académie des Inscriptions (1818) for the best essay on the institutions of St. Louis. The competitions of 1822 and 1831 led to his work on "The Jews of the West" and his "History of the Destruction of Paganism in the West", in consequence of which he was elected to the Académie des Inscriptions. To the general public the latter of these two works was more especially known; it was placed on the Index, and has lost its vogue since the appearance of Seeck's treatise on the same subject. The learned, however, attach a higher value to the works of Beugnot on the Middle Ages; his editions of the "Assizes of Jerusalem" (1841-43), of Beaumanoir's book of the "Customs of Beauvais" (1842), and of the "Olim", or ancient registers of the Parliament of Paris (1839-48). These editions are of great value for the history of feudal and customary law, and of juridical procedure. The name of Beugnot, lastly, is associated with the voluminous publication of the "Historians of the Crusades", which began in a memoir written by him in 1834. Beugnot entered politics in 1841 as a Peer of France, was Deputy for Haute-Marne in the Chamber of 1849, and under the Empire went into a retirement which lasted until his death.

The Villemain educational plan of 1844, to subject the heads of independent institutions to the jurisdiction of the university, and to impose upon their pupils the obligation of making their studies in rhetoric and philosophy in certain prescribed establishments, was opposed by Beugnot on liberal principles, whilst others opposed it on religious grounds. This project was withdrawn in January, 1845, its author having become demented. Beugnot, who had destroyed the draft of a speech in support of the Villemain programme, was welcomed by the Catholics as a labourer entering the vineyard at the eleventh hour. In 1845 he advocated the claim of the bishops, as of all other citizens, to the right of petition. In his pamphlet, "L'état théologique", he made it clear that the attacks on the Jesuits were neither more nor less than attempts to destroy the liberty of association, and the Jesuits empowered him to treat with Guizot in their name at the time of the negotiations between France and the Holy See in regard to the dispersion of the Society. As drafter of the Law of 1850 on Liberty of Teaching, he vainly endeavoured to prevent the return of the bill to the Council of State, 7 November, 1849, and in the decisive debate (14 January to 15 March, 1850) he vigorously seconded the efforts of Montalembert, Parieu, and

Thiers which resulted in victory for the Church and liberty.

WALLON, *Eloges académiques* (Paris, 1882), I.

GEORGES GOTAU.

**Beuno**, SAINT, Abbot of Clynnog, d. 660(?), was, according to the "Bucched Beuno", born in Powis-land and, after education and ordination in the monastery of Bangor, in North Wales, became an active missionary, Cadvan, King of Gwynedd, being his generous benefactor. Cadwallon, Cadvan's son and successor, deceived Beuno about some land, and on the saint demanding justice proved obdurate. Thereupon, Cadwallon's cousin Gweddeint, in reparation, "gave to God and Beuno forever his township", where the saint (c. 616) founded the Abbey of Clynnog Fawr (Carnarvonshire).

Beuno became the guardian and restorer to life of his niece, the virgin St. Winefride, whose clients still obtain marvellous favours at Holywell (Flintshire). He was relentless with hardened sinners, but full of compassion to those in distress. Before his death "on the seventh day after Easter" he had a wondrous vision. Eleven churches bearing St. Beuno's name, with various relics and local usages, witness to his far-reaching missionary zeal. He is commemorated on the 21st of April.

REESE, *Lives of Cambro-British Saints* (1853); the *Bucched Beuno* found in this work gives a secure basis of names and dedications; cf. POLLEN in *The Month*, February, 1894, 235; STRUBBS, *Councils*, I, 160; *Dict. Nat. Biog.*, IV, 444.

PATRICK RYAN.

**Beverley Minster**, a collegiate church at Beverley, capital of the East Riding of Yorkshire, served by a chapter of secular canons until the Reformation. The foundation owes its origin to St. John of Beverley early in the eighth century, when the locality was a clearing in the forest of Deira (Indrawood), afterwards known as Beverlac (A. S. *Beoferlic*), a name possibly due to the colonies of beavers in the river Hull. St. John here founded a community of monks and another of nuns, but traditions as to the existence of an earlier church are legendary and untrustworthy. Later the saint, having resigned his See of York, retired here and died (721), his shrine being in the minster. After the destruction of the monastery by the Danes, a chapter of secular canons was founded by King Athelstan in gratitude for his victory at Brunanburh (937), as he had visited the shrine on his march north. It remained a popular place of pilgrimage throughout the vicissitudes of the Danish and Norman invasions. Few particulars about the early history of the church are known, but a fire in 1188 destroyed the greater part of it, and the present Gothic minster, rivalling the great cathedrals in beauty, dates from that time. The west front in particular is unsurpassed as a specimen of the Perpendicular style. The choir and double transepts were built early in the thirteenth century, while the present nave replaced the Norman nave a century later. Throughout the Middle Ages the shrine was frequented by pilgrims, and the charters of its liberties were renewed by successive monarchs. Its banner was placed on the standard at the "battle of the Standard" (1138), and it was further honoured after the victory of Agincourt, which was won on the feast of the translation of St. John (25 October, 1415), and was attributed by Henry V to that saint's intercession (Lyndwode, "Provinciale", II, "Anglicanae"). The minster was originally served by a chancellor, precentor, sacrist, nine canons, nine vicars-choral and seven *berefellarii* or clerks, but in time several chantry priests and minor officials were added. The temporalities were administered by a provost, who was not necessarily a member of the chapter. The former office was held by many noted Englishmen, including St. Thomas Becket and John de Thoresby, afterwards Cardinal. Blessed John

Fisher is believed to have received his first education at the grammar school attached to the minster. The chapter being secular, the minster escaped the ruin that fell on the monasteries under Henry VIII, but was dissolved in 1547 under the "Colleges and Chantries Act" of Edward VI. The seventy-seven collegiate officers thus dispossessed were replaced by a vicar and three assistants reduced, under Elizabeth, to a vicar and one curate. Gradually the minster fell into decay until, in 1713, a restoration became necessary to save it from ruin. This was successfully executed, and as a result of further work in 1866 and subsequent years it still remains one of the most remarkable Gothic churches in England.

EDWIN BURTON.

**Beyerlinck**, LAWRENCE, Belgian theologian and ecclesiastical writer, b. at Antwerp, April, 1578; d. at the same place, 22 June, 1627. The son of a noted pharmacist, he prepared at Louvain for the same profession but, deciding to enter the priesthood, he was ordained June, 1602. While a theological student he taught poetry and rhetoric at the college of Vaulx and as pastor of Herent was professor of philosophy at a nearby seminary of canons regular. In 1605 he came to the ecclesiastical seminary of Antwerp, taught philosophy and theology and later became superior. In 1608 he was canon, censor, and theologian of the church of Antwerp; in 1614 he was made protonotary. Beyerlinck was an exemplary priest, a gifted rhetorician, orator, and administrator, and an indefatigable worker. Besides seminary and diocesan work he was engaged continually in preaching and writing. Compilation was his bent. His works are mainly encyclopedic; his knowledge more extensive than profound. He wrote, e. g. a second volume (Antwerp, 1611) of the "Opus Chronographicum orbis universi a mundi exordio usque ad annum MDCXI" (first volume to year 1572 by Opmeer), a collection of lives of popes, rulers, and illustrious men; and the "Magnum Theatrum Vitæ Humanæ, hoc est Rerum Divinarum Humanarumque syntagma Catholicum Philosophicum Historicum Dogmaticum", etc. (Cologne, 1631, 7 vols.; Venice, 1707, 8 vols.), an encyclopedia of information on diverse subjects arranged in alphabetical order. Its scope ranges from profound theological dissertations to merest trivialities. Much of its vast material was gathered by others, but to Beyerlinck belongs the credit of giving the work its final form. His numerous other publications are listed in the works referred to in the appended bibliography.

**Bianchi**, GIOVANNI ANTONIO, Friar Minor and theologian, b. at Lucca, 2 October, 1686; d. at Rome, 18 January, 1768. At the age of seventeen he entered the Franciscan Order. He was once elected to the office of Provincial of the Roman Province, and for a number of years was professor of philosophy and theology. During these years of professorship, he no doubt acquired much of the extensive and accurate acquaintance with ecclesiastical subjects displayed in the productions of his later life. He possessed a memory of such range and tenacity that he was considered a prodigy by the many students and scholars who came to visit him in his convent cell. Bianchi was held in high esteem by the Roman Curia and by Clement XII, whose successor, Bene-

dict XIV, appointed him consultor of the Holy Office.

It was perhaps at the instance of Clement XII that Bianchi composed his scholarly and exhaustive defence of the rights and privileges of the Roman Pontiff, which had been attacked by the Neapolitan lawyer, Pietro Giannone, in the latter's "Storia civile del regno di Napoli". Bianchi's work which was entitled "Della podestà e della polizia della chiesa, trattati due contro le nuove opinioni di Pietro Giannone" appeared in Rome in six volumes between the years 1745 and 1751. In the first treatise (2 vols.) Bianchi defends the indirect power of the Roman Pontiff over temporal sovereigns; while he lucidly and forcibly defends the rights of the pope as regards the external laws and government of the Church, in the second treatise, which comprises the remaining four volumes. Amid the storm of controversial literature provoked by the treatise of the Dominican theologian, Daniele Concina, "De Spectaculis theatralibus", Bianchi's "Sui vizii e sui difetti del moderno teatro e sul modo di correggerli ed emendarli" appeared at Rome in 1753. In this he contends with Scipio Maffei against Concina for the lawfulness, within certain limits, of modern theatrical displays. Notwithstanding these graver preoccupations, Bianchi found time to indulge his predilection for poetry and tragic writing, and his compositions in this field, though of minor importance, show him to be an accomplished master of his own native Tuscan.

STEPHEN M. DONOVAN.

**Bianchini, FRANCESCO**, a student of the natural sciences, and an historian, b. at Verona, Northern Italy, 13 December, 1662; d. at Rome, 2 March, 1729. At first he devoted himself to the study of mathematics, physics, and astronomy; later he also took a course in theology. In 1699 he was advanced to deaconship, but never became a priest. In 1684 he transferred his residence to Rome, where he found at once a protector in Cardinal Pietro Ottoboni, of whose library he became custodian. When the cardinal became Pope Alexander VIII (1689-91) he still extended his favours to Bianchini; after Alexander's death, his nephew, also Cardinal Pietro Ottoboni, lodged the scholar in his own palace. Bianchini received also many honours and commissions of trust from succeeding popes. In 1703 he was elected president of the society devoted to the study of historical antiquities; he was made secretary of the commission for the reform of the calendar and he was sent to Paris with the cardinal's hat destined for Rohan Soubise. During this journey he was received everywhere with consideration by the learned. The University of Oxford furnished the expenses of his sojourn in England. Benedict XIII (1724-30) appointed him historiographer of the synod held at the Lateran, Rome (1725). He was a member of many learned academies in Italy and elsewhere. He was distinguished for "a great purity of life and an exceeding modesty of mind", as the canons of St. Mary Major expressed it in his epitaph. His chief works are: "Two Dissertations on the Calendar and the Cycle of Julius Cæsar, and the Paschal Canon of St. Hippolytus" (Rome, 1703); "A Solution of the Paschal Problem" (Rome, 1703); one volume of "A Universal History" (Rome, 1697); an edition of the "Liber Pontificalis" in four volumes, three of which were edited by himself (Rome, 1718-28), and the fourth by his nephew, Giuseppe Bianchini (Rome, 1735). Besides the text of the lives of the popes the work contains learned introductions, various readings of the manuscripts,

copious notes by himself and others, and several documents relative to the history of the popes. It was republished in Migne, P. L., CXXVII-CXXVIII.

FRANCIS J. SCHAEFER.

**Bianchini (BLANCHINI), GIUSEPPE**, Italian Oratorian, Biblical, historical, and liturgical scholar, b. at Verona, 1704; d. in Rome, 1764. Clement XII and Benedict XIV, who highly appreciated his learning, entrusted him with several scientific labours. Bianchini had contemplated a large work on the texts of the Sacred Scriptures, "Vindiciæ Canoniarum Scripturarum Vulgatæ latinæ editionis", which was to comprise several volumes, but only the first, in which, among other things, are to be found fragments of the "Hexapla" (cod. Chisianus), was published (Rome, 1740). Much more important is his "Evangeliarium quadruplex latinæ versionis antiquæ", etc., 2 vols. (Rome, 1749). Among his historical labours may be mentioned the fourth volume which Bianchini added to the publication of his uncle, Francesco Bianchini, "Anastasio bibliothecarii Vitæ Rom. Pontif." (Rome, 1735); he also published the "Demonstratio historię ecclesiasticę quadripartitę" (Rome, 1752-54). The chief liturgical work of Bianchini is "Liturgia antiqua hispanica, gothica, isidoriana, mozarabica, toletana mixta" (Rome, 1746). He also undertook the edition of the works of Bl. Thomasius (Tomasii), but only one volume was issued (Rome, 1741).

R. BUTIN.

**Bianconi, CHARLES**, merchant and philanthropist, b. 26 September, 1785, in the duchy of Milan; d. near Clonmel, Ireland, 22 September, 1875. At an early age he was sent to Ireland, as apprentice to an Italian printseller, became a distinguished and wealthy merchant, and was the first to establish (1815-58) throughout the island a system of rapid and cheap transportation of persons and of government mail. He was an intimate friend of O'Connell, a promoter of Catholic Emancipation, a benefactor of many Catholic charities, and a practical friend of the Catholic University at Dublin. The English postmaster general in his Report for 1857 said that "no living man has ever done more than he for the benefit of the sister kingdom". In the development of his vast transportation system he displayed extraordinary energy and ingenuity, and did much to increase the resources of his adopted country, while he promoted in a remarkable way its social relations. His residence at Longfield, near Clonmel, was a centre of hospitality, and a source of much practical activity for the general welfare of his country.

O'RYAN, *Charles Bianconi* (Dublin, 1905), and Bianconi's life by his daughter, Mrs. Morgan John O'Connell (Dublin, 1885).

THOMAS J. SHAHAN.

**Biard, PIERRE**, Jesuit missionary, b. at Grenoble, France, 1567; d. at Avignon, 17 November, 1622. In 1608 he was called from a chair of Scholastic theology and Hebrew at Lyons by Father Cotton, the king's confessor and preacher, to take charge of the Jesuit mission in Acadia. As de Monte, the founder of Acadia, was a Calvinist, and a considerable number of the colonists were also of that religion, vehement opposition was made to the appointment of Biard and his companion, Edmond Masse, as missionaries. Through the interposition of the Marquise de Guercheville, who purchased the vessel that was bringing out supplies, the Jesuits, after three years of waiting, were enabled to obtain passage by becoming part owners of the ship and cargo. They left France, 21 January, 1611, and arrived on Pentecost Day,

22 May, at Port Royal. They met with but little success. The predecessor of the missionaries, a secular priest named Josue Flesche, had baptized indiscriminately. This the Jesuits refused to do. The colonists, moreover, remained hostile, and viewed as a business speculation, the enterprise was a failure. Madame de Guercheville, who had succeeded de Monts as proprietor, finally sent out another vessel under La Saussaye, and ordered him to stop at Port Royal, and, taking the two Jesuits, found a colony elsewhere. Obeying instructions, La Saussaye sailed over to what is now Bar Harbor. The new establishment was called Saint Sauveur. This was in 1613. It was hardly begun when Samuel Argall came up from Virginia, plundered the colony, and took Biard and another Jesuit with four colonists to Jamestown where only the authority of Argall prevented them from being hanged. Another expedition was fitted out to complete the destruction of Saint Sauveur and Port Royal, and the two Jesuits were compelled to accompany the marauders.

Everything was ruined and Biard and his companion were made to appear as if they had instigated the attack. They sailed off with the attacking party who intended to return with them to the English colony, where they would probably have been executed, but the vessel on which they were held as prisoners was driven by storms across the ocean. Frequently they were on the point of being thrown overboard, but when the ship was compelled to enter the Port of Fayal in the Azores, Biard and his companions consented to remain in the hold lest their discovery should entail the death of their captor. A second time, upon entering Milford Haven, in Wales, the captain having no papers, and being in a French ship, was on the point of being hanged as a pirate. But Father Biard saved him by explaining the situation to the authorities. The missionary was then sent to France, where he had to meet a storm of abuse because of the suspicion that he had helped in the destruction of Port Royal. Champlain, however, vindicated him. He never returned to Canada, but resumed his work as professor of theology, and afterwards became famous as a missionary in the south of France, and towards the end of his life was made military chaplain in the armies of the king. Lescarbot, who was unfriendly to the Jesuit missionaries, speaks of Biard in flattering terms.

T. J. CAMPBELL.

**Bibbiena** (BERNARDO DOVIZI) an Italian Cardinal and comedy-writer, known best by the name of the town Bibbiena, where he was born 4 Aug., 1470; d. at Rome, 9 Nov., 1520. His obscure parentage did not prevent him from securing a literary training at the hands of the best scholars and from associating with the most conspicuous men that Florence could boast. A jovial temper and racy Tuscan wit enhancing the charm of good looks and courtly manners soon made him the preceptor as well as the boon companion of Giovanni dei Medici's merry hours. When the Medici were banished and sorrow followed mirth (Nov., 1494) it was seen that a gay man of the world could become a brave and steadfast friend. Not long after, the protection of Julius II and many honours at the Roman court were to be his reward. In 1513 his strenuous exertions on behalf of his lifelong patron secured the election of Giovanni dei Medici to the pontifical throne. Such services Leo X repaid by bestowing on him the purple robe, appointing him his treasurer and entrusting him with many important missions, among them a legation to France (1518). Later on, the cardinal's

strong sympathies for France lost him Leo's confidence. The story, however, that he was poisoned, in spite of Giovio and Grassi's reports, has absolutely no foundation. (Pastor, *Geschichte der Papste*, IV, Part I, Leo X.) As cardinal he steadily extended a generous patronage to art. From Raphael, whose devotion he won, we have his best likeness. His literary fame is mainly connected with the first good comedy written in Italian prose, "*La Calandra*" (also, known as "*Il Calandro*" and "*La Calandria*"), a distinctly juvenile production, probably given for the first time at Urbino, about 1507, and very elaborately performed at Rome, seven years later, in the presence of Leo X and Isabella Gonzaga d'Este, Marchioness of Mantua. Though marred by many scenes glaringly immoral, and though built upon the plot of Plautus's "*Menæchmi*", it possessed the features of modern comedy and won plaudits for its sparkling wit and fine characterization. Ariosto and Machiavelli imitated him in their plays. The latest edition of "*La Calandra*" is in the "*Teatro Italiano Antico*" (Florence, 1888).

EDOARDO SAN GIOVANNI.

**Bibiana, SAINT.**—The earliest mention in an authentic historical authority of St. Bibiana (Vibiana), a Roman female martyr, occurs in the "*Liber Pontificalis*" where in the biography of Pope Simplicius (468–483) it is stated that this pope "consecrated a basilica of the holy martyr Bibiana, which contained her body, near the 'palatium Licinianum'" (ed. Duchesne, I, 249). This basilica still exists. In the fifth century, therefore, the bodily remains of St. Bibiana rested within the city walls. We have no further historical particulars concerning the martyr or the circumstances of her death; neither do we know why she was buried in the city itself. In later times a legend sprang up concerning her, connected with the Acts of the martyrdom of Sts. John and Paul and has no historical claim to belief. According to this legend, Bibiana was the daughter of a former prefect, Flavianus, who was banished by Julian the Apostate. Dafrosa, the wife of Flavianus, and his two daughters, Demetria and Bibiana, were also persecuted by Julian. Dafrosa and Demetria died a natural death and were buried by Bibiana in their own house; but Bibiana was tortured and died as the result of her sufferings. Two days after her death a priest named John buried Bibiana near her mother and sister in her home, the house being later turned into a church. It is evident that the legend seeks to explain in this way the origin of the church and the presence in it of the bodies of the above mentioned confessors. The account contained in the martyrologies of the ninth century is drawn from the legend.

J. P. KIRSCH.

**Bible**, THE, a collection of writings which the Church of God has solemnly recognized as inspired. The name is derived from the Greek expression *τὰ βιβλία* (the books), which came into use in the early centuries of Christianity to designate the whole sacred volume. In the Latin of the Middle Ages, the neuter plural form *Biblia* (gen. *bibliorum*) gradually came to be regarded as a feminine singular noun (*biblia*, gen. *bibliæ*), in which singular form the word has passed into the languages of the Western world. It means "The Book", by way of eminence, and therefore well sets forth the sacred character of our inspired literature. Its most important equivalents are: "the Divine Library" (*Bibliotheca Divina*), which was employed by St. Jerome in the fourth century; "the Scriptures" "the Holy Scriptures"—terms which are derived from expressions found in the Bible itself; and "the Old and New Testament", in which collective title, "the Old Testament" designates the sacred books written before the coming of Our Lord, and "the New Testament" denotes the inspired writings composed since the coming of Christ.

It is a fact of history that in the time of Christ the Jews were in possession of sacred books, which differed widely from one another in subject, style, origin and scope, and it is also a fact that they regarded all such writings as invested with a character which distinguished them from all other books. This was the Divine authority of every one of these books and of every part of each book. This belief of the Jews was confirmed by Our Lord and His Apostles; for they supposed its truth in their teaching, used it as a foundation of their doctrine, and intimately connected with it the religious system of which they were the founders. The books thus approved were handed down to the Christian Church as the written record of Divine revelation before the coming of Christ. The truths of Christian revelation were made known to the Apostles either by Christ Himself or by the Holy Ghost. They constitute what is called the Deposit of Faith, to which nothing has been added since the Apostolic Age. Some of the truths were committed to writing under the inspiration of the Holy Ghost and have been handed down to us in the books of the New Testament. Written originally to individual Churches or persons, to meet particular necessities, and accommodated as they all were to particular and existing circumstances, these books were gradually received by the universal Church as inspired, and with the sacred books of the Jews constitute the Bible.

In one respect, therefore, the Bible is a twofold literature, made up of two distinct collections which correspond with two successive and unequal periods of time in the history of man. The older of these collections, mostly written in Hebrew, corresponds with the many centuries during which the Jewish people enjoyed a national existence, and forms the Hebrew, or Old Testament, literature; the more recent collection, begun not long after Our Lord's ascension, and made up of Greek writings, is the Early Christian, or New Testament, literature. Yet, in another and deeper respect, the Biblical literature is pre-eminently one. Its two sets of writings are most closely connected with regard to doctrines revealed, facts recorded, customs described, and even expressions used. Above all, both collections have one and the same religious purpose, one and the same inspired char-

acter. They form the two parts of a great organic whole the centre of which is the person and mission of Christ. The same Spirit exercised His mysterious hidden influence on the writings of both Testaments, and made of the works of those who lived before Our Lord an active and steady preparation for the New Testament dispensation which He was to introduce, and of the works of those who wrote after Him a real continuation and striking fulfilment of the old Covenant.

The Bible, as the inspired record of revelation, contains the word of God; that is, it contains those revealed truths which the Holy Ghost wishes to be transmitted in writing. However, all revealed truths are not contained in the Bible (see TRADITION); neither is every truth in the Bible revealed, if by revelation is meant the manifestation of hidden truths which could not otherwise be known. Much of the Scripture came to its writers through the channels of ordinary knowledge, but its sacred character and Divine authority are not limited to those parts which contain revelation strictly so termed. The Bible not only contains the word of God; it is the word of God. The primary author is the Holy Ghost, or, as it is commonly expressed, the human authors wrote under the influence of Divine inspiration. It was declared by the Vatican Council (Sess. III, c. ii) that the sacred and canonical character of Scripture would not be sufficiently explained by saying that the books were composed by human diligence and then approved by the Church, or that they contained revelation without error. They are sacred and canonical "because, having been written by inspiration of the Holy Ghost, they have God for their author, and as such have been handed down to the Church". The inerrancy of the Bible follows as a consequence of this Divine authorship. Whenever the sacred writer makes a statement as his own, that statement is the word of God and infallibly true, whatever be the subject-matter of the statement.

It will be seen, therefore, that though the inspiration of any writer and the sacred character of his work be antecedent to its recognition by the Church yet we are dependent upon the Church for our knowledge of the existence of this inspiration. She is the appointed witness and guardian of revelation. From her alone we know what books belong to the Bible. At the Council of Trent she enumerated the books which must be considered "as sacred and canonical". They are the seventy-two books found in Catholic editions, forty-five in the Old Testament and twenty-seven in the New. Protestant copies usually lack the seven books (viz: Tobias, Judith, Wisdom, Ecclesiasticus, Baruch, and I, II Machabees) and parts of books (viz: Esther, x, 4-xvi, 24, and Daniel iii, 24-90; xiii, 1-xiv, 42) which are not found in the Jewish editions of the Old Testament.

The Bible is plainly a literature, that is, an important collection of writings which were not composed at once and did not proceed from one hand, but rather were spread over a considerable period of time and are traceable to different authors of varying literary excellence. As a literature, too, the Bible bears throughout the distinct impress of the circumstances of place and time, methods of composition, etc., in which its various parts came into existence, and of these circumstances careful account must be taken, in the interests of accurate scriptural interpretation. As a literature, our sacred books have been transcribed during many centuries by all manner of copyists to the ignorance and carelessness of many of whom they still bear witness in the shape of numerous textual errors, which, however, but seldom interfere seriously with the primitive reading of any important dogmatic or moral passage of Holy Writ.

In respect of antiquity, the Biblical literature belongs to the same group of ancient literature as the

literary collections of Greece, Rome, China, Persia, and India. Its second part, the New Testament, completed about A. D. 100, is indeed far more recent than the four last named literatures, and is somewhat posterior to the Augustan age of the Latin language, but it is older by ten centuries than our earliest modern literature. As regards the Old Testament, most of its contents were gradually written within the nine centuries which preceded the Christian era, so that its composition is generally regarded as contemporary with that of the great literary works of Greece, China, Persia, and India. The Bible resembles these various ancient literatures in another respect. Like them it is fragmentary, i. e. made up of the remains of a larger literature. Of this we have abundant proofs concerning the books of the Old Testament, since the Hebrew Scriptures themselves repeatedly refer us to more ancient and complete works as composed by Jewish annalists, prophets, wise men, poets, and so on (cf. Numbers, xxi, 14; Josue, x, 13; II Kings, i, 18; I Paralip., xxix, 29; I Mach., xvi, 24; etc.). Statements tending to prove the same fragmentary character of the early Christian literature which has come down to us are indeed much less numerous, but not altogether wanting (cf. Luke, i, 1-3; Colossians, iv, 16; I Corinthians, v, 9). But, however ancient and fragmentary, it is not to be supposed that the Biblical literature contains only few, and these rather imperfect, literary forms. In point of fact its contents exhibit nearly all the literary forms met with in our Western literatures together with others peculiarly Eastern, but none the less beautiful. It is also a well-known fact that the Bible is so replete with pieces of transcendent literary beauty that the greatest orators and writers of the last four centuries have most willingly turned to our sacred books as pre-eminently worthy of admiration, study, and imitation. Of course the widest and deepest influence that has ever been, and ever will be, exercised upon the minds and hearts of men remains due to the fact that, while all the other literatures are but man's productions, the Bible is indeed "inspired of God" and, as such, especially "profitable to teach, to reprove, to correct, to instruct in justice" (II Timothy, iii, 16).

**Bible Societies.**—Protestant Bible Societies, established for the purpose of publishing and propagating the Bible in all parts of the world, are the logical outcome of the principle: "The Bible, and the Bible alone is the religion of Protestants." Precisely to what extent that theological formula is held true even by the staunchest evangelicals, may be a matter of dispute, but the consistent and heroic efforts of the Bible societies to provide a version of the sacred text in every tongue and to supply the ends of the earth with Bibles, can scarcely be explained unless Chillingworth's famous formula be taken to mean literally that the possession of a copy of the Bible is an indispensable means of salvation. Nevertheless, it is remarkable that the societies for the world-wide propagation of the Bible, like the Protestant missionary societies, are a late outgrowth of Protestantism. It is well known that the sects did not seriously bestir themselves about mission work

until two hundred years after the Reformation, and historically the Bible societies are an appendage and a consequence of the missionary organizations. Some efforts were made to provide a systematic dissemination of Bibles as early as the time of Charles I of England, and before the formation of Bible societies on a scale of world-wide activity, there existed a number of organizations which made Bible distribution a feature of their work. Among them were, (1) The Society for Promoting Christian Knowledge (1698), which spread copies of Holy Writ in England, Wales, India, and Arabia; (2) The Society for the Propagation of the Gospel in Wales (1662); (3) The Society for Sending Missionaries to India, founded in 1705 by King Frederick of Denmark; (4) The Society for the Propagation of the Gospel in Foreign Parts (1701), which devoted a large share of its attention to the American Colonies; (5) The Scottish Society for Propagating Christian Knowledge among the Poor (1750); (6) The Naval and Military Bible Society (1780). The foundation of these and similar societies was but an indication of the vast work that was to come. The great reaction against the religious apathy, and, indeed, infidelity of the English people in the eighteenth century brought with it the foundation of numerous missionary societies, and this new enthusiasm for Christianity resulted in the foundation of the most famous and the most effective of all Bible societies, The British and Foreign Bible Society, 7 March, 1804. The first impulse to the formation of this organization was given by a group of Nonconformist ministers and laymen, but when completely formed, the society included an equal number of members of the Established Church and of the various sects. Its avowed purpose was "to encourage the wider circulation of the Bible without note or comment".

At present, the British and Foreign Society is governed by an executive committee of 36 laymen, 15 from the Church of England, 15 dissenters, and 6 foreign members who must reside in or near London. The growth and work of this society have been extraordinary. It controls, according to the latest statistics (1906) almost 8,000 auxiliary societies; 5,729 in Great Britain and 2,224 abroad. Its translations of the sacred text number about 380. Its operations in India have been particularly thorough, but in every country where its agencies are established, its work can only be measured in vast figures. It disposes annually of about 5,190,000 copies of the Scriptures (whole Bibles, New Testaments and other portions), and spends each year £250,000 (\$1,210,000). In the hundred years of its existence, this society has distributed 186,680,000 volumes at an expenditure of £14,194,000 (\$68,699,000). There have been numerous offshoots, some in the nature of developments, others schisms, but the size, wealth, and prestige of the parent society have always overshadowed those of its children and its rivals. Mention must also be made of the Hibernian Bible Society, and the National Bible Society of Scotland, the names of which sufficiently designate their field of labour.

On the Continent, Count Canstein founded a German Bible Society in 1710. Others were established at Nuremberg (1804), Berlin (1806), Saxony (1813), and Schleswig-Holstein (1826). The Berlin society was united with the Prussian Bible Society in 1814. The Danish Bible Society dates from 1814, the Russian from 1812; a Bible society was founded in Finland in 1812, one in Norway in 1815, one in the Netherlands 1813, one in Malta in 1817, and one in Paris 1818.

In America, we find the Continental Congress so impressed with the scarcity of Bibles that in 1777 it passed a resolution calling for the printing of 20,000 copies. Facilities were not at hand for the

fulfilment of such a work, and it was not done. But in 1782, Congress commended the publication of the Bible which had just been made in Philadelphia. There had been local Bible societies in the Colonies, but these were not united with the American Bible Society until 1816. This society has become next in size and in importance to its counterpart, the British and Foreign Bible Society and in 1907 controlled 620 auxiliary societies in the United States and 11 agencies in the Latin-American countries and elsewhere. The Society has no established agency in Europe, but maintains correspondents in Norway, Sweden, Russian Finland, Germany, Switzerland, France, Spain, Italy, and Austria. In these countries it either co-operates with the National Bible societies, or lends assistance to the local Protestant churches. For example, the American Bible Society has been co-operating closely for the last fifty years with the Methodist Episcopal Church in Bremen, Germany, and in that time and place has assisted in the publication of over a million volumes of Scripture. The American Society has extended its efforts into the Levant, a regular agency being established in Constantinople. It works in conjunction with the Protestant missionaries in Bulgaria, Turkey, Asia Minor, Mesopotamia, Syria, Egypt, and the Sudan. In these countries alone, it has distributed over 3,000,000 volumes during the past half-century. All told, the copies of the Bible, or parts of the Bible distributed by the American Bible Society for one year, ending 31 March, 1906, were 2,236,755, and during the ninety years of its work it has disposed of 78,509,529 volumes.

After being duly impressed by these figures and those of the still more prolific British Society, the Catholic reader naturally questions whether the amount of good done is, after all, to be measured by the number of volumes distributed. A considerable number of Protestant missionaries have already answered the question negatively, and if we may judge from many letters from ministers in the mission field, there is a growing feeling among thinking Protestants that the promiscuous distribution of the Bible "without note or comment" is a doubtful means of propagating Christian doctrine. Even as a means of proselytism, the scattering of Bibles seems not to produce the expected results. A missionary on the Malay peninsula, among others, complains that although thousands of Bibles were distributed, it was, so far as he could learn, "with scarcely any perceptible benefit". He "did not hear of a single Malay convert on the whole peninsula". The natives of the missionary countries are, according to reports, eager to obtain books from the societies, but agents and missionaries and bishops have reported that in many cases the volumes were used for vulgar and profane purposes. Indeed, the reckless distribution of the Scriptures in too many cases becomes an occasion for the profanation of the written Word, rather than for the growth of religion. Instances of abuse of the Bible could be collected freely from the letters of missionaries, Catholic and non-Catholic alike.

But for deeper reasons than this, the attitude of the Church toward the Bible societies is one of unmistakable opposition. Believing herself to be the divinely appointed custodian and interpreter of Holy Writ, she cannot without turning traitor to herself, approve the distribution of Scripture "without note or comment". The fundamental fallacy of private interpretation of the Scriptures is presupposed by the Bible societies. It is the impelling motive of their work. But it would be likewise the violation of one of the first principles of the Catholic Faith—a principle arrived at through observation as well as by revelation—the insufficiency of the Scriptures alone to convey to the general reader a sure

knowledge of faith and morals. Consequently, the Council of Trent, in its fourth session, after expressly condemning all interpretations of the sacred text which contradict the past and present interpretation of the Church, orders all Catholic publishers to see to it that their editions of the Bible have the approval of the bishop. Besides this and other regulations concerning Bible-reading in general, we have several acts of the popes directed explicitly against the Bible societies. Perhaps the most notable of these are contained in the Encyclical "Ubi Primum" of Leo XII, dated 5 May, 1824, and Pius IX's Encyclical "Qui Pluribus", of 9 November, 1846. Pius VIII in 1829 and Gregory XVI in 1844, spoke to similar effect. It may be well to give the most striking words on the subject from Leo XII and Pius IX. To quote the former (*loc. cit.*): "You are aware, venerable brothers, that a certain Bible Society is impudently spreading throughout the world, which, despising the traditions of the holy Fathers and the decree of the Council of Trent, is endeavouring to translate, or rather to pervert the Scriptures into the vernacular of all nations. . . . It is to be feared that by false interpretation, the Gospel of Christ will become the gospel of men, or still worse, the gospel of the devil." The pope then urges the bishops to admonish their flocks that owing to human temerity, more harm than good may come from indiscriminate Bible-reading. Pius IX says (*loc. cit.*): "These crafty Bible Societies, which renew the ancient guile of heretics, cease not to thrust their Bibles upon all men, even the unlearned,—their Bibles, which have been translated against the laws of the Church, and often contain false explanations of the text. Thus, the divine traditions, the teaching of the fathers, and the authority of the Catholic Church are rejected, and everyone in his own way interprets the words of the Lord, and distorts their meaning, thereby falling into miserable errors".

Thus are given the chief reasons of the opposition of the Church. Furthermore, it can scarcely be denied that the Bible societies, by invading the Catholic countries and endeavouring to foist the Protestant versions upon a Catholic people, have stirred up much discord, and have laid themselves open to the charge of degrading the Sacred Book by using it as an instrument of proselytism. Still in almost all the books and pamphlets which are written to show the results of Bible propagandism, naïve complaints are made by the writers that the Catholic priests forbid the dissemination of the Scriptures among their people. The societies do not offer to supply Catholics with Catholic Bibles, fortified with the ecclesiastical Imprimatur, and supplied with the necessary notes of explanation. If such an offer were refused, there might be some pretext for the complaints of the societies, but so long as they follow their present course, it must be evident that they have small ground for wonder if the authorities of the Church oppose them. The true attitude of the Church towards the popular use of the Scriptures is shown by the establishment of the Società di San Geronimo, for the translation and diffusion of the Gospels and other parts of the Bible among the Italian peoples.

There have been many dissensions and some schisms among the members of the Bible societies themselves. At the very foundation of the British and Foreign Bible Society Bishop Marsh, consistently with the principles of the Church of England, objected to the printing of the text, "without note or comment", and recommended the addition of the Book of Common Prayer. The objection was, of course, overruled. In 1831, the British and Foreign Bible Society decided to demand belief in the Trinity as a requisite to membership. This led to a schism

and the foundation of the Trinitarian Bible Society. Another schismatic society, originating from a doctrinal difference, is the Bible Translation Society, a body composed of Baptists who were dissatisfied because the original society's Bibles did not translate the texts which relate to baptism by words that would signify immersion. Again, from the American Bible Society, there has been a schism of Baptists, originating, as in England, over the translation of *παρτίται*. This dissident body, founded in 1837, is called The American and Foreign Bible Society. This organization in turn experienced a secession, the recalcitrants forming the American Bible Union, in 1850.

JAMES M. GILLIS.

#### Bible Versions. See VERSIONS OF THE BIBLE.

**Bibles, PICTURE.**—In the Middle Ages the Church made use of pictures as a means of instruction, to supplement the knowledge acquired by reading or oral teaching. For books only existed in manuscript form and, being costly, were beyond the means of most people. Besides, had it been possible for the multitude to come into the possession of books, they could not have read them, since in those rude times, education was the privilege of few. In fact, hardly anyone could read, outside the ranks of the clergy and the monks. So frescoes of scenes from the Old and New Testaments, stained-glass windows, and the like were set up in the churches, because, as the Synod of Arras (1025) said: "The illiterate contemplated in the lineaments of painting what they, having never learnt to read, could not discern in writing". Especially did the Church make use of pictures to spread abroad a knowledge of the events recorded in the Bible and of the mutual connexion between the leading facts of the Old and New Testaments, whether as type and antitype, or as prophecy and fulfilment. For this purpose the picture Bibles of the Middle Ages were copied and put in circulation. The most important of the picture Bibles of the Middle Ages which have survived is that variously styled the "Bible Moralisée", the "Bible Historiée", the "Bible Allégorisée" and sometimes "Emblèmes Bibliques". It is a work of the thirteenth century, and from the copies that still survive there is no doubt that it existed in at least two editions, like to one another in the choice and order of the Biblical texts used, but differing in the allegorical and moral deductions drawn from these passages. The few remarks to be made here about the "Bible Moralisée" will be made in connexion with copies of the first and second redactions which have come down to us.

The copy of the first edition, to which reference has been made, is one of the most sumptuous illustrated MSS. preserved to us from the Middle Ages. Unfortunately, it no longer exists in the form of a single volume, nor is it kept in one place. It has been split up into three separate parts kept in three distinct libraries. The first part, consisting of 224 leaves, is in the Bodleian Library at Oxford. The second part of 222 leaves is in the National Library in Paris; and the third part, made up of 178 leaves, is kept in the library of the British Museum. Six leaves of the third part are missing, so that it ought to contain 184 leaves. When complete and bound together, therefore, the whole volume consisted of 630 leaves, written and illustrated on one side only. This Bible, as indeed all the picture Bibles of the

Middle Ages, did not contain the full text of the Bible. Short passages only were cited, and these not so as to give any continuous sense or line of thought. But the object of the writer seems to have been chiefly to make the texts cited the basis of moral and allegorical teaching, in the manner so common in those days. In the Psalter he was content with copying out the first verse of each psalm; whilst when dealing with the Gospels he did not quote from each evangelist separately, but made use of a kind of confused diatessaron of all four combined. An attempt was made to establish a connexion between the events recorded in the Old Testament and those recorded in the New, even when there does not seem to be any very obvious connexion between them. Thus the sleep of Adam, recorded in the beginning of Genesis, is said to prefigure the death of Christ; and Abraham sending his servant with rich presents to seek a wife for his son is a type of the Eternal Father giving the Gospels to the Apostles to prepare the union of His Son with the Church.

The entire work contains about 5,000 illustrations. The pictures are arranged in two parallel columns on each page, each column having four medallions with pictures. Parallel to the pictures and alternating with them are two other narrower columns, with four legends each, one legend to each picture; the legends consisting alternatively of Biblical texts and moral or allegorical applications; whilst the pictures represent the subjects of the Biblical texts or of the applications of them. In the MS. copy of the "Bible Moralisée", now under consideration, the illustrations are executed with the greatest skill. The painting is said to be one of the best specimens of thirteenth-century work, and the MS. was in all probability prepared for someone in the highest rank of life. A specimen of the second edition of the "Bible Moralisée" is to be found in the National Library in Paris (MS. Français No. 167). Whilst it is identical with the copy which has just been examined in the selection and order of the Biblical passages, it differs from it in the greater simplicity and brevity of the moral and allegorical teaching based on them. Another important Bible, intended to instruct by means of pictures, was that which has been called the "Bible Historiée toute figurée". It was a work of the end of the thirteenth or the beginning of the fourteenth century. In general outline and plan it resembles the class of Bible which has gone before, but it differs from it in the selection of Bible passages and in the allegorical explanations derived from them. Coming to the life of Our Lord, the author of the "Bible Historiée toute figurée" dispensed with a written text altogether, and contented himself with writing over the pictures depicting scenes of Our Saviour's life, a brief explanatory legend. Many specimens of this Bible have come down to us, but we select part of one preserved in the National Library in Paris (MS. Français No. 9561) for a brief description. In this MS. 129 pages are taken up with the Old Testament. Of these the earlier ones are divided horizontally in the centre, and it is the upper part of the page that contains the picture illustrative of some Old Testament event. The lower part represents a corresponding scene from the New Testament. Further on in the volume, three pictures appear in the upper part of the page, and three below. Seventy-six pages at the end of the volume are devoted to depicting the lives of Jesus Christ and the Blessed Virgin.

It must not be supposed that these were the only Bibles of this class that existed in the Middle Ages. On the contrary, from the great number of copies that have survived to our own day we may guess how wide their circulation must have been. We have a MS. existing in the British Museum (addit. 1577) entitled "Figures de la Bible" consisting of

pictures illustrating events in the Bible with short descriptive text. This is of the end of the thirteenth, or the beginning of the fourteenth, century. Of the same date is the "Historia Biblicæ metricæ" which is preserved in the same library and, as the name implies, has a metrical text. But we have specimens of manuscript illustrated Bibles of earlier date. Such is the Bible preserved in the library of St. Paul's, outside the walls of Rome; that of the Amiens Library (MS. 108), and that of the Royal Library of The Hague (MS. 69). So numerous are the surviving relics of such Bibles, back even so far as the eleventh and twelfth centuries, that it may be safely said that the Church made a systematic effort to teach the Scriptures in those days by means of illustrated Bibles.

**SINGLE ILLUSTRATED BOOKS OF THE BIBLE.**—The Bibles that have come under notice so far illustrate the entire Scriptures. But what was done for the Bible in full was also done for its various parts. Numerous beautifully illustrated psalters have come down to us, some of them going as far back as the ninth century, as, for instance, the Psalter of the University of Utrecht. One thing that comes out clearly from a study of the contents and character of these psalters is that a very large proportion of them were executed by artists working in England. So, too, the book of Job and the Apocalypse were copied separately and adorned with numerous illustrations. But, as we should have expected, the Gospels were a specially favourite field for the medieval artists who devoted their time to picture-painting.

**BIBLIA PAUPERUM.**—A class of illustrated Bibles to which no allusion has been made, but which had a wide circulation especially in the fifteenth century was the "Biblia Pauperum". As its name indicates, it was especially intended for the poor and ignorant, and some say that it was used for purposes of preaching by the mendicant orders. It existed at first in manuscript (indeed a manuscript copy is still in existence in the library of the British Museum); but at a very early period it was reproduced by xylography, then coming into use in Europe. As a consequence the "Biblia Pauperum" was published and sold at a much cheaper rate than the older manuscript picture Bibles. The general characteristics of this Bible are the same as those of the earlier picture Bibles. The pictures are generally placed only on one side of the page, and are framed in a kind of triptych of architectural design. In the centre is a scene from the New Testament, and on either side of it typical events from the Old Testament. Above and below the central picture are busts of four noted prophets or other famous characters of the Old Testament. In the corners of the picture are the legends. The number of these pictures in the "Biblia Pauperum" was usually from forty to fifty.

Picture Bibles of the Middle Ages did not exhaust the resources of Christians in illustration of the Bible. Since the fifteenth century a host of artistic geniuses have contributed to make the events of Scripture live in colour before our eyes. Most noted amongst them were Michelangelo and Raphael; the former chiefly famous for his Pietà and the frescoes in the Sistine Chapel; the latter for the fifty-two pictures adorning the Vatican and known as "Raphael's Bible", and still more for the seven cartoons illustrating events in the New Testament. Perhaps no sacred picture has been so often copied as "The Last Supper" of Leonardo da Vinci painted in the refectory of the Dominican convent in Milan. Well known, too, are Fra Bartolomeo's "Presentation in the Temple" in Vienna, and Rubens's numerous Bible pictures, to be found in the Louvre, Brussels, Vienna, Munich, and London, but chiefly at Antwerp, where are his "Descent from the Cross", "Crucifix-

ion", and "Adoration of the Magi", the most famous of his works. These are but a few out of a number of illustrious names too numerous to mention here and including Botticelli, Carrucci, Holman Hunt, Leighton, Murillo, Veronese, Tintoretto, and Watts.

To study the works of the great Bible-illustrators is not so difficult as might be supposed. For of late years a great number of collections of Bible prints have been made, some containing engravings of the most famous paintings. In the first half of last century Julius Schnorr collected together 180 designs called his "Bible Pictures, or Scripture History"; and another series of 240 pictures was published in 1860 by George Wigand; whilst later in the century appeared Dalziel's "Bible Gallery". Hodder and Stoughton have published excellent volumes reproducing some of the pictures of the greatest masters. Such are "The Old Testament in Art" (2 parts); "The Gospels in Art", "The Apostles in Art", and "Bethlehem to Olivet", this latter being made up of modern pictures. The Society for the Promotion of Christian Knowledge has not been behindhand, but has issued amongst other publications a volume on "Art Pictures from the Old Testament" with ninety illustrations, and another on the Gospels with 350 illustrations from the works of the great masters of the fourteenth, fifteenth, and sixteenth centuries.

HORNE, *Introduction to the Holy Scriptures* (London, 1822), II, 3d ed.; HUMPHREY, *History of the Art of Printing* (London, 1868); LEVESQUE in *Vig., Dict. de la Bible* (Paris, 1894), s. v. *Bible en image*; DELIBLE, *Hist. littéraire de la France* (Paris, 1893), XXXI, 213-285; BERJEAU, *Biblia Pauperum*, reproduced in facsimile from one of the copies in the British Museum, with an historical and bibliographical introduction (London, 1859).

**Biblia Magna.** See LA HAYE.

**Biblia Maxima.** See LA HAYE.

**Biblia Pauperum** (BIBLE OF THE POOR) a collection of pictures representing scenes from Our Lord's life with the corresponding prophetic types. The series commonly consists of forty or fifty pages. The page is divided into nine sections. The four corners are used for explanatory texts. The central pictures represent scenes from Our Lord's life, arranged chronologically. Above and below these are pictures of prophets and on each side are scenes from the Old Testament. It is thus a concordance of the Old and the New Testaments in which is gathered together the common tradition of the Church on the types and figures of the Old Testament, as taught by the liturgy and the Fathers. Hence they were called sometimes "Figure typicæ Veteris Testamenti atque antitypicæ Novi Testamenti" or "Historia Christi in Figuris". An interesting reproduction and description of a page on the Blessed Sacrament is given in Vigouroux, "Dictionnaire de la Bible", s. v.

The invention of these picture-books is ascribed to St. Ansgar, Bishop of Bremen. This is stated in a note added to a copy at Hanover and in the cathedral at Bremen there are remains of pictures, corresponding to this copy. The name, however, of "Biblia Pauperum" does not seem to have been primitive. It was added by a later hand to a MS. in the Wolfenbüttel library; the MS. was thus catalogued, and the name became common. It is uncertain why they were so called. Perhaps it was because of the ancient saying that pictures were the Bible of the poor, that is, of the uneducated. Some think that the name came from their use by the mendicant orders as books of instruction. Others suppose that the term means inexpensive; manuscripts had been beyond the means of most people; when the art of printing from engraved blocks was introduced these picture-books were among the first printed and gained a wide circulation. We have no definite information as to the purpose for which

these books were intended. Probably it was for religious instruction; perhaps also to serve as models for artists. It is certain that they exercised a great influence in spreading a knowledge of the mysteries of Faith, affording themes for preachers and artists. At Hirschau in Swabia, the entire series of pictures is reproduced in stained glass.

Only a few manuscript copies of the "*Biblia Pauperum*" are extant; they come from the school of John van Eyck (1366-1466). The block-book, or xylographic process, appeared early in the fifteenth century, and Sotheby counts seven editions made from these wooden slabs. Only one side of the paper was printed, two sheets being pasted together to make a leaf. Five copies are in the *Bibliothèque Nationale*: four have forty plates; one copy is coloured by hand; the fifth has fifty plates. The first edition from movable types was printed by Pfister at Bamberg in 1462. The earlier editions have Latin texts; later they were printed in the vernacular. A German "*Armenbibel*" was published in 1470, and at Paris in 1503, A. Vérard published "*Les Figures du Vieil Testament et du Nouveau*". In some of the printed editions the original arrangement of pictures and texts was modified. In the latter half of the fifteenth century these books were very popular. As improved methods made it possible to issue the whole Bible with illustrations, the "*Biblia*" fell into disuse and disappeared. Several facsimile reproductions have appeared with historical and bibliographical introductions notably by Berjeau (1859); Camesina and Heider (Vienna, 1863); Unwin (London, 1884), with introduction by Dean Stanley; Einsle (Vienna, 1890); Laib and Schwarz (1892) and P. Heitz (1902).

JOHN CORBETT.

**Biblical Antiquities.**—This department of archaeology has been variously defined and classified. Some scholars have included in it even Biblical chronology, geography, and natural history, but wrongly so, as these three branches of Biblical science belong rather to the external environment of history proper. Archaeology, properly speaking, is the science of antiquities, and of those antiquities only which belong more closely to the inner life and environment of a nation, such as their monumental records, the sources of their history, their domestic, social, religious, and political life, as well as their manners and customs. Hence, history proper, geography, and natural history must be excluded from the domain of archaeology. So also the study of monumental records and inscriptions and of their historical interpretation must be left either to the historian, or to the sciences of epigraphy and numismatics. Accordingly, Biblical Archaeology may be appropriately defined as: the science of I. DOMESTIC, or SOCIAL, II. POLITICAL, and III. SACRED, ANTIQUITIES of the Hebrew nation.

Our principal sources of information are: (a) The Old Testament writings; (b) the archaeological discoveries made in Syria and Palestine; (c) the Assyro-Babylonian, Egyptian, and Canaanitish monuments; (d) the New Testament writings; (e) the writings of the Jewish historian Josephus, and of the Babylonian and Jerusalem Talmuds; (f) comparative study of Semitic religions, customs, and institutions.

I. DOMESTIC ANTIQUITIES.—(1) *Family and clan.*—The Old Testament books present us the Hebrews as having passed through two stages of social development: the pastoral and the agricultural. The stories of the Patriarchs, Abraham, Isaac, and Jacob, picture

them as dwelling in tents and constantly moving from one pasture-ground to another. In course of time tents merged into huts, huts into houses, and these into settlements, villages, and cities, surrounded by cornfields, vineyards, oliveyards, and gardens. Flocks and herds became rarer and rarer till the time of the early monarchy and afterwards, when, with few exceptions, they gave way to commerce and trade. As among all nations of antiquity, a coalition of various members, or branches, of the same family constituted a clan which, as an organization, seems to have antedated the family. A coalition of clans formed a tribe which was governed by its own chiefs or leaders. Some of the Hebrew clans at the time of the settlement in Canaan seem to have been organized, some to have been broken up and wholly or partially incorporated with other clans. A man's standing in his clan was so important that if he was cast out he became *ipso facto* an outlaw, unless, indeed, some other clan could be found to receive him. After the settlement, the Hebrew clan-system changed somewhat and slowly degenerated till the time of the monarchy, when it fell into the background and became absorbed by the more complicated system of national and monarchical government.

(2) *Marriage and the constitution of the family.*—In ancient Hebrew times the family, as a social organization, and as compared with the clan, must have held a secondary place. Comparative Semitic analogy and Biblical evidences seem to indicate that among the early Hebrews, as among other early Semitic nations, man lived under a matriarchate system, i. e. kinship was constituted by uterine ties, and descent was reckoned through female lines; the father's relation to his children being, if not ignored, certainly of little or no importance. Hence a man's kin were the relatives of his mother, not those of his father; and consequently all hereditary property descended in the female line. The position of woman during the early Hebrew period, although inferior to what it became later, was not as low and insignificant as many are inclined to believe. Many episodes in the lives of women like Sarah, Rebecca, Rachel, Deborah, Mary the sister of Moses, Delilah, Jephthah's daughter, and others are sufficient evidences. The duties of a woman, as such and as a wife and mother, were heavy both physically and morally. The work in and about the home devolved upon her, even to the pitching of the tent, as also the work of the field with the men at certain seasons. The position of the man as father and as the head of the household was of course superior to that of the wife; upon him devolved the duty and care of the training of the children, when they had reached a certain age, as also the offering of sacrifices, which necessarily included the slaughtering of domestic animals, and the conduct of all devotional and ritualistic services. To these must be added the duty of maintaining the family, which presupposes a multitude of physical and moral obligations and hardships.

Polygamy was an acknowledged form of marriage in the patriarchal and post-patriarchal periods, although in later times it was considerably restricted. The Mosaic law everywhere requires a distinction to be made between the first wife and those taken in addition to her. Marriage between near relatives was common, owing to a desire to preserve, as far as possible, the family bond intact. As the family was subordinate to the clan, the whole social life of the people, marriage, and even property rights were under the surveillance of the same. Hence a woman was to marry within the same clan; but if she chose to marry without the clan, she should do so only upon such terms as the clan might permit by its customs or by its action in a particular case. So,

also, a woman might be allowed, where compensation was made, to marry and leave her clan, or she might contract through her father or other male relative with a man of another clan provided she remained with her people and bore children for her clan. This marriage-form, known to scholars under the term of *Sadiga-marriage*, was undoubtedly practised by the ancient Hebrews, as positive indications of its existence are found in the Book of Judges and particularly in the cases of Jerubbaal, Samson, and others. The fact itself that Hebrew harlots who received into their tents or dwellings men of other clans, and who bore children to their own clan, were not looked upon with much disfavour is a sure indication of the existence of the *Sadiga-marriage* type among the Hebrews. One thing is certain, however, that no matter how similar the marriage customs of the ancient Hebrews may have been to those of the early Arabs, the marriage tie among the former was much stronger than, and never as loose as, among the latter. Another form of Hebrew marriage was the so-called levirate type (from the Lat. *levir*, i. e. brother-in-law), i. e. the marriage between a widow, whose husband had died childless, and her brother-in-law. She was, in fact, not permitted to marry a stranger, unless the surviving brother-in-law formally refused to marry her. The levirate marriage was intended, first, to prevent the extinction of the name of the deceased childless brother; and secondly, to retain the property within the same tribe and family. The first-born son of such a union took the name of the deceased uncle instead of that of his father, and succeeded to his estate. If there were no brother of the deceased husband alive, then the next of kin was supposed to marry the widow, as we find in the case of Ruth's relative who yielded his right to Boaz. According to the laws of Moses, a man was forbidden to remarry a divorced wife, if she had married again and become a widow, or had been divorced from her second husband. Israelites were not forbidden to intermarry with any foreigners except the seven Canaanitish nations; hence Moses' marriage to a Midianite, and afterwards to a Cushite, woman and that of David to a princess of Geshur were not against the Mosaic law. The high-priest was to marry a virgin of his own people, and in the time of Ezekiel even an ordinary priest could not marry a widow, unless she were the widow of a priest.

Betrothal was mostly a matter of business to be transacted by the parents and near family friends. A distinction between betrothal and marriage is made even in the Mosaic law, where betrothal is looked upon as more than a promise to marry; it was in fact its initial act, and created a bond which could be dissolved only by death or by legal divorce. Faithlessness to this vow of marriage was regarded and punished as adultery. Betrothal actually took place after a dowry had been agreed upon. As a rule, it was given to the parents of the bride, though sometimes to an elder brother. Marriage contracts appear to have been mostly oral, and made in the presence of witnesses. The earliest account of a written one is found in the Book of Tobit (D. V. Tobias). The wedding festivities lasted ordinarily seven days, and on the day of the wedding the bridegroom, richly dressed and crowned, went in procession to the bride's house to take her away from her father. The bride, deeply veiled, was led away amid the blessings of her parents and friends. The bridal procession not infrequently took place at night, in the blaze of torches and with the accompaniment of songs, dancing, and the highest expressions of joy.

Adultery was punished by death, through stoning of both participants. A man suspecting his wife of unfaithfulness might subject her to a terrible

ordeal which, it was thought, no guilty wife could well pass through without betraying her guilt. Divorce among the ancient Hebrews was as frequent as among any other civilized nation of antiquity. Mosaic laws attempted only to restrict and to regulate it. Any "unseemly thing" was sufficient ground for divorce, as also was barrenness. The wife, however, was not allowed to separate herself from her husband for any reason; in the case of her husband's adultery, he as well as the other guilty party, as we have seen, would be punished with death.

Concubinage, which differs widely from polygamy, was also extensively practised by the Hebrews. A concubine was less than a wife, but more than an ordinary mistress, and her rights were jealously guarded in the Mosaic Code. The children born of such a union were in no case considered as illegitimate. The principal distinction between a legal wife and a concubine consisted in the latter's social and domestic inferiority. Concubines were not infrequently either handmaids of the wife, or captives taken in war or purchased of their fathers. Canaanitish and other foreign women or slaves could in no case be taken as concubines. The seducer of an unbetrothed maiden was compelled either to marry her or to pay her father a heavy fine. In later times, ordinary harlotry was punished, and if the harlot was the daughter of a priest she was burnt. Idolatrous harlotry and sodomy were severely punished.

The domestic and social life of the Hebrews was frugal and simple. They indulged very little in public games and diversions. Hunting and fishing were looked upon as necessities of life. Slavery was extensively practised, and slaves were either Hebrews or foreigners. The Mosaic law is against any kind of involuntary slavery, and no Hebrew slave was allowed to be sold to foreigners. An Israelitish slave was to be set free after five or six years servitude and not without some compensation, unless he were willing to serve another term. As was natural, Hebrew slaves were more kindly treated by their Hebrew masters than were foreign ones, who were either captives in war or purchased.

(3) *Death and burial*.—The principal sicknesses and diseases mentioned in the Old Testament are: intermittent, bilious, and inflammatory fevers, dysentery produced by sunstroke, inflammation of the head, fits, apoplectic paralysis, blindness, inflammation of the eyes, hæmorrhages, epilepsy, diarrhoea, dropsy, various kinds of skin eruptions, scabies, and the various forms of leprosy. To these must be added some psychical diseases, such as madness, melancholy, etc., and also various forms of demoniacal possession. No explicit mention of professional physicians and surgeons is made in the Old Testament.

In case of death, the body was washed and wrapped in a linen cloth and, if financial circumstances allowed, anointed with sweet-smelling spices and ointments. Embalming was neither a general nor a common practice. Burial took place, usually, on the day of the person's death. The dead body was never burnt, but interred, unless for some particular reason, as in the case of Saul and his sons. Mourning customs were various, such as wearing sackcloths, scattering dust and ashes on the head, beating the breast, plucking and pulling out the hair and the beard, throwing oneself upon the earth; rending the garments, going about barefooted, veiling the face, and in some cases abstaining from eating and drinking for a short time. The usual period of mourning lasted seven days. With few exceptions the bodies were interred outside of the town, either in caves or in public cemeteries. Persons of high social and financial standing were publicly mourned, and their bodies placed in sepulchres hewn in rock.

(4) *Food and meals.*—The principal articles of food among the ancient Hebrews can be easily summarized from the interesting description of the land of Canaan occurring in the Book of Deuteronomy, where it is said to be "a land of wheat, and barley, and vines, and fig trees, and pomegranates; a land of oil olive, and honey; a land wherein thou shalt eat bread without scarceness, thou shalt not lack any thing in it" (Deut., viii, 8, 9). Their meals were undoubtedly of the simplest description, and their table was more rich with fish, milk, fruit, and vegetables than with meat. Animal food in general was in favour with the people at large, but the Mosaic law restricted its use to almost the minimum. Animals or parts of animals designated for sacrifice or other holy uses could only be eaten under specific conditions. In the eleventh chapter of Leviticus and the fourteenth of Deuteronomy, a list is given of a large class of animals which were looked upon as ceremonially unfit to be eaten. Animals, furthermore, were classified as pure and impure, or clean and unclean, and the complicated legislation of the Pentateuch concerning the use of these is partly based on sanitary, partly fanciful, and partly ceremonial grounds. The evening meal was the principal meal of the day, and if knives, forks, spoons, and other like instruments were used in the preparation of the meals, they were not used at the table. Hands were washed before and after meals. Neither prayer, nor grace, nor blessing seems to have been proffered before or after the repast. In other particulars the table usages and customs of the ancient Hebrews may reasonably be supposed to have been like those of modern Palestine.

(5) *Dress and ornaments.*—The materials for clothing were principally cotton, linen, and wool; silk is once, or never, mentioned in the Old Testament. The wearing of a mixed fabric of wool and linen was forbidden by the Mosaic law. So, also, either sex was forbidden to wear the garments proper to the opposite sex. The outer garment of men consisted of loose, flowing robes, which were of various types and forms. On the four corners of this outer robe a fringe, or tassel, was attached. The undergarment, which was the same for both sexes, consisted, generally, of a sleeveless tunic or frock of any material desired, and reached to the knees or ankles. That of the woman was longer and of richer material. The tunic was fastened at the waist with a girdle. The fold made by the girdle served at the same time as a pocket. A second tunic and the shawl, which was long and of fine material, were also in use. The outer garment of the Hebrew women differed slightly from that of the men, and no detailed description of it is found in the Bible. It was undoubtedly richer and more ornamented than that of the other sex. The most accepted colour for ordinary garments was white, and the art of bleaching cloth was from very early times known and practised by the Hebrews. In later times, the purple, scarlet, and vermilion colours were extensively used, as well as the black, red, yellow, and green. Girdles were worn by both sexes, and golden girdles were not unknown. Men covered the head with some kind of a turban, or cap, although it is doubtful whether its use was universal in pre-Mosaic and Mosaic times. In ancient times women did not wear veils, but probably covered their heads with kerchiefs, mufflers, or mantles. Sandals were in general use, but not among the poorer classes, or among the farmers and shepherds. Worthy of notice is the ceremony mentioned in Deut., xxv, 9, according to which if a man refuses to marry the wife of his brother, who had died childless, "Then shall his brother's wife come unto him in the presence of the elders, and loose his shoe from off his foot, and spit in [or before] his face, and she shall answer and say, So shall it be done unto the

man that will not build up his brother's house". The drawing off of the shoe evidently indicated the surrender of the rights which the law gave the man to marry his brother's widow. Likewise the modern custom of throwing a slipper sportively after a newly wedded pair leaving the parental house appears to have a like symbolical significance; the parents and family friends thereby symbolically renounce their right to the daughter or son in favour of the husband or wife. Finger-rings, ear-rings, and bracelets were extensively used by both men and women, but more so by the latter. Prosperous men always carried a staff and a seal. All these ornamental articles, however, were more indulged in by the Egyptians, Assyrians, and other Oriental nations than by the Hebrews. Hebrew women wore also cauls, anklets, and ankle-chains, scent-bottles, and decorated purses, or satchels. Perfumery was also indulged in; and extensive use was made of pigments as applied to the eyelids and eyebrows by women. Tattooing on the face, arms, chest, and hands was in all probability practised by the Hebrews, although it was to a certain extent incompatible with certain Mosaic prescriptions.

(6) *Pastoral and agricultural life.*—According to the Biblical records, tilling the ground and the rearing of cattle and sheep were the first and earliest occupations of men. In Patriarchal times the latter was in greater favour, while in the later Hebrew period the first prevailed over the second. This transition from the pastoral, or nomadic, to the agricultural, or settled, life was a natural consequence of the settlement in Canaan, but at no time did the two occupations exclude each other. Both, in fact, were important, indispensable, and necessary. The sheep was, of course, the principal animal both as an article of food and as wool-producer, besides its constant use as a sacrificial animal. Sheep's milk was also a favourite article. Rams also, with from two to as many as eight horns, are not infrequently mentioned. Goats are frequently mentioned, and cows and oxen were utilized for milk and butter and for tilling the ground. Horses and camels were imported from Arabia. Poultry and hens are not once mentioned in the Old Testament. The ass was a common and useful animal for transportation, but the mule is not mentioned in the Bible prior to the time of the monarchy. The life of the Hebrew and Eastern shepherds in general was by no means easy or uneventful. Jacob, in fact, in reproaching his father-in-law, Laban, says: "Thus I was: in the day the drought consumed me, and the frost by night; and my sleep fled from mine eyes" (Gen., xxxi, 40); and of his own pastoral life and its perils David tells us that "there came a lion, and a bear, and took a lamb out of the flock: and I went out after him, and smote him, and delivered it out of his mouth" [I Sam. (D. V. I Kings), xvii, 34, 35]. The shepherd's duties were to lead out the flock to pasture, watch them, supply them with water, go after the straying ones, and bring them all safely back to the fold at night. These formed his riches, trade, occupation, and sustenance.

Agriculture is the natural product of settled life. Nevertheless we read of Isaac that during the prevalence of a famine in Palestine he cultivated land in the vicinity of Gerar, which produced a hundredfold (Gen., xxvi, 12). The Mosaic law recognizes land as the principal possession of the Hebrews, and its cultivation as their chief business. Hence every Hebrew family was to have its own piece of ground, which could not be alienated, except for limited periods. Such family estates were carefully surveyed; and it was regarded as one of the most flagrant of crimes to remove a neighbour's landmark. Estates were divided into so many yokes, that is, such portions as a yoke of oxen could plough in a single day. The value of the land was according to its yield in grain

Irrigation was practised to a certain extent in Palestine, though not carried to the same extent as in Assyria, Babylonia, and Egypt. The chief dependence for moisture was on the dew and the drenching rains of the rainy season. The climate of Palestine was, as a whole, favourable to agriculture, although in modern times the valleys and the plains have greatly deteriorated in fertility. The ground was ordinarily fertilized by the ashes of burnt straw and stubble, the chaff left after threshing, and the direct application of dung. According to the Mosaic law, every tillable land should enjoy on each seventh year a *sabbath*, or a rest. The year in question is called the Sabbath Year, in which the field was not to be tilled. The object of this prescription was to heighten the natural fertility of the soil. What grew spontaneously in that year was to be not alone for the owner, but, on equal terms, for the poor, for strangers and for cattle. It is doubtful, however, whether this law was scrupulously observed in later Hebrew times. The most widely cultivated grains were wheat and barley, as well as spelt and millet. Of plants and vegetables the principal were grape-vines, olive-trees, nuts, apples, figs, pomegranates, beans, lentils, onions, melons, cucumbers, etc. The season for ploughing and cultivating the ground extended from October to March; that of gathering the crops from April or May to September. The plough was similar to our modern one. It was ordinarily drawn by two oxen, cows or asses, never, however, by an ass and an ox together. It was also forbidden under penalty of confiscation to sow the same field with two kinds of seeds. The beginning of the harvest was signalized by bringing a sheaf of new grain (presumably barley) into the sanctuary and waving it before the Lord. The grain was generally cut with the sickle, and sometimes pulled up by the roots. Fields and fruit-orchards were not to be gleaned by their owners, as this privilege was given to the poor and strangers, as in the case of Ruth. The threshing and winnowing were performed in the open field, the first by means of cattle yoked together, the other by shovels and fans.

(7) *Commerce*.—The Hebrew people of olden times were not inclined towards commerce and did not indulge in it. This is probably due partly to the geographical position of Palestine and partly to its physical features. For although, geographically, Palestine would seem to have offered the most natural highway to connect the opulent commercial nations of Egypt, Syria, Phœnicia, Assyria, and Babylonia, nevertheless, it lacked a sea-coast. Hence the Israelites remained essentially agriculturists. The trade of the Israelites consisted chiefly in the mutual exchange of products among themselves. At the time of David and Solomon, caravans from Egypt, Arabia, and Syria were not infrequently sent to Palestine and vice versa. The ships which Solomon is said to have sent to remote lands were built and manned by the Phœnicians. But even this revival of commercial spirit among the Hebrews was short-lived, for it ended with the life of Solomon. Solomon's commercial activities have been also greatly misunderstood and exaggerated. A faint revival of the Solomonic commercial spirit was inaugurated by King Jehoshaphat, of whom we read that he made "ships of Tharshish to go to Ophir for gold: but they went not; for the ships were broken at Eziongeber" [1 (D. V. III) Kings, xxii, 48]. During and after the Babylonian Captivity, the Hebrews were compelled by circumstances to resort to trade and commerce, as they had come into constant contact with their Babylonian brethren and with the numerous Syro-Phœnician and Aramæan tribes and colonies. The historian Josephus well summarizes this whole matter when, in his work against Apion, he says: "We neither inhabit a maritime country, nor do we

delight in merchandise, nor in such a mixture with other men as arises from it."

Previous to the Babylonian Captivity, coined money does not seem to have circulated among the Hebrews, although a few references in Isaiah and other prophets seem to indicate its existence. Silver and gold were bought and exchanged by weight and value. The talent, the shekel, the *kesitah*, and the *maneh* (*mina*) are late Hebrew terms and of Babylonian origin. After the Exile, and especially during the Persian, Greek, and Roman dominations, coined money became quite common in Palestine, such as the *quadrans*, the *assarion*, the *denarius*, the *drachma*, the *stater*, the *didrachma*, etc.

During the time of the monarchy and afterwards, such trades and occupations as woodworking, metalworking, stoneworking, tanning, and weaving were thoroughly in evidence among the most industrious class of the Israelites, but the Chosen People cannot be said to have attained considerable skill and success in these directions.

(8) *Science, arts, etc.*—At no time can the Hebrews be said to have developed a liking for the study of history, astronomy, astrology, geometry, arithmetic, grammar, and physical science in general. The Book of Job, Proverbs, and the many parables which Solomon is said to have written contain but meagre and popular notions, mostly drawn from observations of everyday life and happenings, while others are, to a great extent, due to the Babylonian influence and civilization which, from very early times, and especially during and after the Captivity, seem to have invaded the entire literary and social life of the Hebrews. Hence the Hebrew astronomical system, their calendar, constellations, sacred numbers, names of the months, solar and lunar months, etc., are of Babylonian origin. The Book of Job no less than the early chapters of Genesis show the traces of this same Babylonian influence.

As the Tell-el-Amarna letters have conclusively shown, the art of writing must have been known in Canaan and among the ancient Hebrews as early as the Mosaic age, and even earlier. Whether, however, this art was utilized by them to any great extent, is another question. Hebrew literature is one of the most venerable and valuable literary productions of the ancient East; and, although in respect of quantity and variety far inferior to that of the Assyro-Babylonians and Egyptians, nevertheless, in loftiness of ideals, sublimity of thoughts, and standard of morals and ethics, it is infinitely superior to them.

The art of music, both vocal and instrumental, occupies a high position in the Bible. Previous to the time of David, the music of the Hebrews seems to have been of the simplest character, as direct efforts to cultivate music among them appear first in connexion with the schools of the prophets, founded by Samuel. Under David's direction not less than four thousand musicians, i. e. more than the tenth part of the tribe of Levi, praised the Lord with "instruments" in the service of the temple. A select body of two hundred and eighty-eight trained musicians led this chorus of voices, one person being placed as leader over a section consisting of twelve singers. Heman, Asaph, and Ethan were among the most famous of these leaders. Men and women were associated together in the choir. In later Hebrew times the art of music developed still further till it reached its acme under Hezekiah and Josiah. The Hebrew musical instruments were, like those of other nations of antiquity, chiefly of three kinds, viz: stringed instruments, wind instruments, and such as were beaten or shaken to produce sound. To the first class belong the harp, the psaltery (also rendered "viol", "dulcimer", etc.), the sackbut (Lat. *Sambuca*). To the second belong

the flute, the pipe (Lat. *fistula*), and the trumpet. To the last belong the tabret, or timbrel, the castanets, and the cymbals.

In mechanical arts, the Israelites were far behind their Egyptian and Assyro-Babylonian neighbours. The author of I Samuel (D. V. I Kings) gives a sorry but true picture of the times preceding the activity of Samuel as follows: "Now there was no smith found throughout all the land of Israel . . . but all the Israelites went down to the Philistines, to sharpen every man his share, and his coulter, and his axe, and his mattock." In the times of Solomon, however, as it appears in connexion with the building of the temple, conditions materially improved. Of the artisan classes, those working in wood and metals were always, perhaps, the most numerous in Israel. Among the former were carpenters, cabinet-makers, wood-carvers, manufacturers of wagons, of baskets, of various household utensils, including the distaff and the loom, and of the tools used in agriculture, such as ploughs, yokes, threshing-machines, goads, and winnowing-shovels. Workers in metals mentioned in the Bible are gold- and silversmiths and workers in brass and iron. Some of the tools of which they made use were the anvil, the bellows, the smelting-furnace, the fining-pot, the hammer, and the tongs. Among the various products of these Hebrew metal-workers are settings for precious stones, gilding, axes, saws, sickles, knives, swords, spear-heads, fetters, chains, bolts, nails, hooks, penstocks, pans for cooking purposes, ploughshares, and the wheels of threshing-instruments. Copper or bronze was also used in manufacturing some of these articles. Other artisans mentioned in the Bible are: stone-masons, brick- and tile-makers, engravers, apothecaries, perfumers, bakers, tanners, fullers, spinners, weavers, and potters. Most of these trades and mechanical arts, however, came into prominence during the reign of Solomon and his successors.

II. POLITICAL ANTIQUITIES.—(1) *Civil administration*.—It has been truly said that law as law was unknown in early Israel. The customs of the clans and the conduct of the elders or of the most influential members of the tribe were looked upon as the standards of law and morality. Lawfulness was a matter of custom more or less ancient and more or less approved; and penalty was equally a matter of custom. When custom failed in a specific case, judgment could be rendered and new precedents might be made which in process of time would crystallize into customs. Hence the old tribal system among primitive Semitic clans, and especially in early Israel and Arabia, knew no legislative authority; and no single person or group of persons was ever acknowledged as having power to make laws or to render judgment. Of course prominent individuals or families within the tribe enjoyed certain privileges in acknowledgment of which they performed certain duties. In many cases they were called upon to settle differences, but they had no judicial powers and, if their decision did not satisfy the litigants, they had neither the right nor the power to enforce obedience, much less to inflict punishment. Within the tribe all men are on a footing of equality, and under a communistic system petty offences are unreasonable. Serious misdemeanour is punished by expulsion; the offender is excluded from the protection of his kinsmen, and the penalty is sufficiently severe to prevent it being a common occurrence. The man who is wronged must take the first step in gaining redress; and when it happens that the whole tribe is aroused by the perpetration of any exceptionally serious crime, the offence is fundamentally regarded as a violation of the tribe's honour, rather than as a personal injury to the family of the sufferer. This condition of

affairs, however, does not necessarily imply a condition of utter lawlessness. On the contrary, tribal customs formed practically a law of binding character, although they were not regarded as law in the proper sense of the term.

That such was the prevalent social condition of the ancient Hebrews in the patriarchal period is quite certain. The few recorded incidents in the lives of Abraham, Isaac, and Jacob furnish ample illustration of it. The long sojourn of the Hebrews in Egypt and the comparatively advanced civilization with which they there came in contact, as well as their settlement in Canaan, might be expected to have influenced their old tribal system of law and justice. Nevertheless, the authentic historical records of Israel's national formation and even the legislation of the Book of the Covenant, which is undoubtedly the oldest Hebrew code of laws, when carefully examined, utterly fail to show any such remarkable advance in the administration of law and justice over the old nomadic tribal system. It is true, that as Dr. Benzinger remarks, "before the monarchy Israel had attained a certain degree of unity in matters of law; not in the sense that it possessed a written law common to all the tribes, or as a uniform organization for the pronouncing of legal judgments, but in the sense that along with a common God it had a community of custom and of feeling in matters of law, which community of feeling can be traced back very far. 'It is not so done in Israel' and 'Folly in Israel, which ought not to be done' are proverbial expressions reaching back to quite early times". Nevertheless, law as law, with legislative power and authority, or a uniform system of legal procedure with courts and professional judges, were unknown in the earlier period of Israelitish history.

A study of the different Hebrew terms for *judge* clearly shows that a professional class of judges and, consequently, duly constituted courts did not exist in Israel till the first period of the monarchy, and even later. The *Shoterim* were primarily subordinate military officials, who were employed partly in the maintenance of civil order and military discipline. It was not until post-Exilic times that the term was applied to one with judicial power. *Me-hokek* (primarily from *hakak*, "to cut in", "to inscribe", "to decide", etc., and subsequently, as in Arabic, "to be just", "right", etc.) meant originally commander or ruler. The *shophetim* (Lat. *sufetes*; Assyrian *sapatu*), from which the "Book of Judges" takes its title, were not judges, but champions and deliverers. Hence, in Hosea (D. V. Osee), vii, 7, and Ps., ii, 10, *shophetim* is a synonym of "kings" and "rulers", and the *sufetes* of the Phœnician cities and colonies were called "kings" by the Greeks. Other terms, such as *pahil*, *quasin*, the meaning of which is rather obscure, primarily mean "umpire", in general, "chief", and "petty ruler". The only Hebrew word which, properly speaking, means "judge", in its etymology and historical significance, is *dayyan* (found in all Semitic languages: Arab. *dayyān*; Aramaic *dayyāna*; Assyrian *da-a-nu* or *da-ia-nu*, etc.). Although the stem meant originally "to require", "to compensate", "to govern", and "to rule", we have sufficient warrant to believe that it meant, from the very earliest times, "to decide", and "to render decision". In the Old Testament, however, the word rarely occurs. In I Sam. (D. V., I Kings), xxiv, 15, it is even questionable whether it belongs to the original text, and it is only in post-Exilic times that the word meant "professional judge".

What was the polity of the Hebrew tribes prior to the time of Moses is not difficult to describe.

Abraham, Isaac, and Jacob governed their families with an authority well nigh unlimited. Their power over their households was little short of a sovereign dominion. They were independent

princes. They acknowledged no subjection, and owed no allegiance to any sovereign. They formed alliances with other princes. They treated with kings on a footing of equality. They maintained a body of servants, trained to the use of arms; were the chiefs who led them in war, and repelled force by force. They were the priests who appointed festivals, and offered sacrifices. They had the power of disinheriting their children, of sending them away from home without assigning any reason, and even of punishing them capitally.

"The twelve sons of Jacob ruled their respective families with the same authority. But when their descendants had become numerous enough to form tribes, each tribe acknowledged a prince as its ruler. This office, it is likely, was at first hereditary in the oldest son, but afterwards became elective. When the tribes increased to such an extent as to embrace a great number of separate households, the less powerful ones united with their stronger relatives, and acknowledged them as their superiors. In this way, there arose a sub-division of the tribes into collections of households. Such a collection was technically called a family, a clan, a house of fathers, or a thousand. This last appellation was not given because each of these sub-divisions contained just a thousand persons, or a thousand households; for in the nature of things, the number must have varied, and in point of fact, it is manifest from the history, that it did. As the tribes had their princes, so these clans, families, or thousands had their respective chiefs, who were called heads of houses of fathers, heads of thousands, and sometimes simply heads. Harrington denominates these two classes of officers phylarchs, or governors of tribes, and patriarchs, or governors of families. Both, while the Israelites were yet in Egypt, were comprehended under the general title of elders. Whether this name was a title of honour, like that of *sheikh* (the aged) among the Arabs, and that of *senator* among the Romans, or whether it is to be understood, according to its etymology, as denoting persons actually advanced in years, is uncertain. These princes of tribes and heads of thousands, the elders of Israel, were the rulers of the people, while they remained still subject to the power of the Pharaohs, and constituted a kind of 'imperium in imperio'. Of course they had no written constitution, nor any formal code of laws, but governed by custom, reason, and the principles of natural justice. They watched over and provided for the general good of the community, while the affairs of each individual household continued under the control of its own father. For the most part, it may be supposed, only those cases which concerned the fathers of families themselves would come under the cognizance and supervision of the elders."

During their wanderings through the Desert the Hebrew tribes had no occasion to introduce any radical change in this form of government, for they had to contend with continuous difficulties of a social, moral, and religious character. And, although numerically superior to many Canaanitish tribes, they were, nevertheless, lacking in military discipline and were constantly moving from place to place. Realizing the necessity of defending themselves against the predatory tribes and rivals for the possession of fertile lands and oases, they soon developed a military spirit, which is the strongest external principle of cohesion in nomadic life.

The administration of justice in Israel in the Mosaic age, and for a long time after, was in the hands of the elders, the local judges, and, somewhat later, the priests and the Levites, joined afterwards by the prophets. The elders, who represented the former heads of the families and clans under the tribal system, had undoubtedly ample jurisdiction concerning family affairs, disputes about conjugal

relations, inheritances, the division of property, the appointment of the *goel* or upholder of the family, and the settlement of blood-revenge. The local judges, as we have remarked, were not what this technical title ordinarily means. They were merely arbitrators and advisers in settling disputes which could not be settled by the elders, and very often they had to decide cases of appeal from the ordinary bench of elders at the city gates. They were, as a rule, taken from the body of the elders of the city, and later on from the princes, chiefs, and military officers of the army. The third class consisted of priests, and later on of prophets. They were appealed to in all difficult cases, their authority and influence being undoubtedly very strong. To appeal to a priest was to appeal to God Himself, for the priest was universally acknowledged as the official representative of Yahweh. His decisions were regarded as "directions", and as such they were of an advisory character, thus constituting the "oracle" of the Hebrews. As originally each family group had its own priest, resort was naturally had to him for light on practical difficulties, not so much the settling of disputes as pointing out the safe, judicious, or righteous way for the individuals of the household in embarrassment. The prophets were also, in course of time, appealed to, not so much as official representatives of Yahweh as from the fact that they were regarded as men eminent in wisdom and spiritual authority. From the eighth century downwards the authority of the priests was greatly overshadowed by that of the prophets, who managed the destinies of the whole nation with an almost unlimited authority and assertiveness, proclaiming themselves as the messengers of Yahweh and the mouthpieces of His orders. A single judicial centre for the whole nation was never attained till the period of the monarchy. During the period of the Judges several leading judicial centres existed, such as Shiloh, Beth-el, Gilgal, Mizpah, Ramah, etc.

Whether Hebrew judges held their office for life is not altogether certain, although the presumption is that they did. It is likewise uncertain whether any salary or compensation was attached to the office. In the case of the Ten Judges, no revenues were appropriated for them, except, perhaps, a larger share of the spoils taken in war; and in case of the ordinary local judges or elders the offering of presents was quite common. This at first may have been a kind of testimonial of gratitude and respect, but it afterwards degenerated into mere bribery and corruption.

Whether the office of princes of tribes, chiefs, military officers, elders, and judges was hereditary or elective, is not easy to determine. Both systems may have been according to the different circumstances; but that in the majority of cases it was hereditary, admits of no doubt, for such was the prevailing custom in the ancient East and, to a certain extent, is so even in our own days.

No external sign of honour seems to have been attached to the dignity of judges and elders in Israel. They were without pomp, retinue, or equipage, although the passage in the Song of Deborah relating to those "who ride on white asses and sit in judgment" probably refers to the princes of the tribes, chiefs, elders, and judges in their respective capacities of military commanders, magistrates, and moral advisers and arbiters. In the East, even at the present day, the *quadis*, or chief judges and magistrates, have the distinctive privilege of riding either on mules or white asses, as against the military officers and civil governors who must ride on horses.

That the office of chief magistrate was unknown in ancient Israel is quite certain. In the whole Pentateuchal legislation allusion to such an institution is absolutely wanting. The supreme authority

of the Hebrew community was in Yahweh. Moses, strictly speaking, was but the viceroy of Yahweh; and the same, to a certain extent, may also be said of Joshua. Their successors, the judges, were rather military commanders than judges or magistrates in the strict sense. With the beginning of the monarchy, the civil as well as the military power began to be concentrated, as far as possible, in the person of the king. But the Pentateuchal legislation as a whole is decidedly adverse to the idea of concentrating all power in the person of the king, or in that of any individual, and it is not improbable that the writer of Deut., xvii, was influenced by Israel's historical experience under the monarchy.

Allusions to the administration of law and justice in the old Book of the Covenant are extremely meagre and utterly fail to give us any clear (or even vague) reference to legal procedure, judges, courts, or to any system of administration of justice. It is true that the Book of the Covenant contains statutes and judgments, apparently enacted by some authoritative power; for such an authority must be assumed, otherwise there would be no meaning in the precise fixing of punishment, etc., such as the punishment of death, seven times prescribed, and the avenging on the body of the guilty person the wrong he had done. Still, as Kautzsch rightly remarks, "we are wholly in the dark as to the circle from which all the statutes and judgments proceeded, and, above all, as to the public authority by which scrupulous obedience was ensured. And, emphatically as justice and impartiality in legal cases is insisted on (xxiii, ff.), there is not a single indication as to who is authorized to pronounce sentence or to supervise the execution of the verdict." In two cases, however, viz., in Exodus, xxi, 6 and xxii, 8, in which the case is complicated and the law doubtful, the Book of the Covenant insists that the parties should present themselves "before God" (*Elohim*): in the first case probably to perform a symbolic act which will have legal effect, and in the second probably to obtain an oracle. The Septuagint seems to have understood the sense of the phrase *before God* in its most obvious meaning, rendering it "before the tribunal of God", i. e. that the matter is to be referred to the judgment of God, presumably in the sanctuary or before the priest. Rabbinical tradition, however, as early as the time of St. Jerome, took the word *Elohim* (God) as a plural, i. e. "gods", arguing that the word here means simply "judges", from the fact that, on account of the sacredness of their office, and the place where their decisions were rendered (often in the temple or at some sacred shrine) the judges were called "gods". The rabbinical interpretation which has been followed by the majority of ancient and modern commentators, ingenious though it be, is nevertheless erroneous; for, considering the fact that the two cases referred to were such as no judge could decide with any certainty or probability, and in which only a divine intervention could bring about a satisfactory solution, we may assume that the rabbinical interpretation is untenable. This conclusion has been admirably vindicated by the Code of Hammurabi, where, in several cases in which the doubt is such as to make any human wisdom of no avail, and any judicial decision untrustworthy, the decision is left to God Himself. Hence, in all such cases Hammurabi decrees that the litigants should present themselves "before God", and swear by His name, i. e. take an oath. The expression used by Hammurabi is exactly the same as that used in the two passages of Exodus referred to, and the cases in which the expression is applied are analogous. But in the Code of Hammurabi "to appear before God" is the same as "to swear by the name of God", or "to take a solemn oath"; hence, in the two passages of Exodus, to

appear before *Elohim* does not mean to appear before the judges, but to take a solemn oath at some holy place or sanctuary where the presence of the deity was more sensibly felt. By taking an oath the man in question constitutes God as the judge before whom he protests his innocence and affirms his rights. God is thereby called upon to avenge Himself upon the perjurers. And this God is neither Bel, nor Marduk, nor any other particular god, but is the Deity in its almost abstract form—He who is considered to be everywhere and to know everything. Hence the rabbinical interpretation, followed, till the discovery of the Code of Hammurabi, by the majority of commentators, may be confidently dismissed.

The legislation of Deuteronomy, on the other hand, which is in the main considerably later than that of the Book of the Covenant, furnishes us with more abundant details concerning the administration of law and justice in Israel. These are contained mainly in xvi, 18-20; xvii, 8-13, and 14-20; xix, 15-20, and xxv, 1-4. From II Chronicles (D. V. Paralipomenon) we learn that King Jehoshaphat established in Jerusalem a supreme tribunal, or court of justice, where priests and lay judges participated in the administration of justice each in their own sphere, and that he appointed judges in all cities of Judah. Details are lacking, but in its broader features the judicature thus established by Jehoshaphat agrees remarkably with the system prescribed in Deuteronomy, xvii, 8-13. Even in this case it is doubtful whether these judges and tribunals could in any satisfactory measure compare with the Babylonian legal system of the time of Hammurabi. In Ezechiel's time (and this brings us down to the sixth century B. C.) the priests seem to have absorbed all administrative power, while the author of I Chronicles, evidently influenced by Ezechiel or Deuteronomy, tells us that David had appointed 6,000 Levites as judges, which is quite inadmissible. In the post-Exilic times, and during the Greek and Roman periods, reference is made to professional judges, local courts, and tribunals in all the cities of Israel, which was undoubtedly due to Babylonian, Persian, Greek, and Roman influences.

Judicial or legal procedure was very simple in early Israel. In Exodus, xviii, 22, we are told that the elders appointed by Moses at Horeb were to judge the people "at all seasons"; and in Numbers, xxvii, 2 (cf. Exodus, xviii, 19 sqq.), we read that Moses rendered judgments before the tabernacle of Yahweh, where he sat with Aaron and the princes or elders of the congregation to teach statutes and give judgments. According to Deuteronomy, xxi, 19; xxii, 15; and xxv, 7 (cf. Prov., xxii, 22; Amos, v, 11, 15; and Ruth, iv, 1, etc.), the judges in the cities had their seat at the gate, which was the thoroughfare of the public, or in the public squares of the city, where the markets were held, or in some other open place. Even the supreme judges administered justice in public; Deborah, for instance, under a palm-tree, and the kings at the gate, or in the court, of the royal palace. Solomon is said to have erected a porch, or hall of judgment, in Jerusalem, for his own royal court of justice, and from Jeremiah we learn that in later times the princes of Judah exercised judgment in a chamber of the royal palace. Jeremiah himself, when accused by the priests and false prophets, was judged by the princes of the people, who are said to have come out of the king's house into the temple to judge at the entrance of the new gate before the assembled people. The litigants, viz., the plaintiff and the defendant, appeared personally before the elders, and presented their complaints orally. The accused, if not present, could be summoned to appear. Advocates are

unknown in the Old Testament, for the plaintiff was supposed to look after his own case if he desired satisfactory judgment. Litigants were also at liberty to settle their differences personally, without appealing to the judge. The judge was held bound to hear and examine the case closely and conscientiously, his chief method of inquiry being the examination of the testimony of the witnesses. The accusations of the father against his rebellious child needed no support of witness. In other cases, however, especially criminal cases, not fewer than two or three witnesses were absolutely required. In all probability the testimony of slaves, children under age, and women was not accepted, as is expressly stated by Josephus and the Talmud, although not mentioned in the Old Testament. Witnesses were thoroughly examined, and, as in the Code of Hammurabi, false witnesses were punished according to the *lex talionis*, viz., by inflicting the precise kind of punishment the false witness had intended to bring upon his victim by his falsehood. Witnesses do not seem to have been put on oath, but when the nature of the case was such as to make it impossible to have or to produce witnesses, as in a case of theft, the oath was then administered to the accused, and the case decided. When the discovery of the crime and of the guilty party was a practical impossibility, Yahweh was looked to for the accomplishment of the task.

The Law affixes no civil punishment for perjury; it forbids it as a profanation of Yahweh's name and threatens it with divine punishment. It must be noted, however, that in all cases in which an oath was taken before a judgment-seat it consisted merely of an adjuration addressed by the judge and responded to by the person sworn with an *Amen*. "Only in common life did the person swearing himself utter the oath, either: 'So Yahweh do to me, and more also', or 'God [*Elohim*] do so to me', etc., or 'as Yahweh liveth'. But in such cases the name of Yahweh was probably avoided, and the oath was taken by the life (soul) of the man, to whom one wished to protest by oath. In later times, it became common, especially among the Pharisees, to swear by heaven, by the earth, by the temple, the holy city, and by one's own head."

The verdict, or the sentence, was pronounced orally, although from Job, xiii, 16; and Isaiah, x, 1, it appears that in some cases the sentence may have been given in written form. The sentence was to be executed without delay. Punishment was administered before the eyes of the judge, and that of stoning by the whole congregation or the people of the city, the witnesses being required to put their hands first to the execution of the guilty.

The practice of ordeals as means for ascertaining the truth, or obtaining a confession of guilt, was by no means unknown in Israel, although Josephus expressly tells us that torture and the bastinado for this purpose were first introduced into Israel by the Herodians. The most important one is the so-called "ordeal of jealousy", prescribed in Numbers, v, 11-31, in the case of a woman suspected of adultery which cannot be legally proved. For this purpose the husband of the suspected woman would bring her to the priest; he must also bring with him an offering of barley meal, which is called "a meal-offering of jealousy, a meal-offering of memorial bringing guilt to remembrance". The priest brings the woman before Yahweh, makes her take an oath of purgation, and then gives her to drink a potion described as "the water of bitterness that causeth the cure", consisting of "holy water" with which dust from the floor of the tabernacle has been mingled, and into which the written words of the oath have been washed. If the woman be guilty the potion proves harmful; if innocent,

harmless; in the latter case, moreover, the woman becomes fruitful.

The existence, at least at certain periods, of corruption and dishonesty in the administration of justice in Israel, and especially among the priests, need hardly be insisted on. The example of the two sons of Eli, notorious for their greed, is well known. Micah, Isaiah, Hosea, Zephaniah, Jeremiah, and Malachi freely and vehemently accuse the Hebrew judges of unfairness, injustice, respect of persons, bribery, and dishonesty in their legal decisions.

(2) *The army*.—While in Egypt, the Hebrews lived a peaceful pastoral life under the supreme control of the Pharaohs. During their forty-years wandering in the desert, they had no enemy to fight, and no land to conquer; but when the time of their entering Canaan approached, the situation was completely changed. Here they were face to face with old settled Canaanitish tribes and nations, such as the Philistines, the Ammonites, the Moabites, the Amorites, the Jebusites, the Hivites, the Perizzites, and many others, whom they had to attack, defeat, and exterminate. "Ye shall utterly destroy", was the command of Yahweh, "all the places, wherein the nations which ye shall possess served their gods, upon the high mountains, and upon the hills, and under every green tree: and ye shall overthrow their altars, and break their pillars, and burn their groves with fire; and ye shall hew down the graven images of their gods, and destroy the names of them out of that place" (Deut., xii, 2, 3). Hence the creation and organization of an army became a necessity, and it is morally certain that in their first wars every available Hebrew fighter took part. From the time of David down to the late monarchical period a regular army was selected and organized. From Num., i, 3, it appears that the whole male population over twenty years of age, if capable of bearing arms, were liable to military duty. At the time of the Judges, it is certain that the Israelitish army was composed wholly of infantry, as David was the first to use horses and chariots for military purposes, and it was Solomon who first established a distinct cavalry army. In the middle days of the monarchy the Hebrews could raise an army of one hundred and eighty thousand men [I Kings (D. V. III Kings), xii, 21], and on some occasions twice and even three times as many [see II Chronicles (D. V. Paralip.), xiii, 3, and xiv, 8]. These figures, however, need be greatly lowered, as they are due probably to a copyist's error. The army was divided into hundreds and thousands, with their appropriate leaders, captains of hundreds and captains of thousands, if on their arrival by septs or clans they were not thus organized. It is certain, however, that in point of armament and military organization and discipline the Hebrew army was greatly inferior to either the Egyptian or the Assyrian. Before undertaking any military operation, Yahweh was consulted through a prophet or through the Urim and Thummim, and sacrifices were offered just as in Homer's times. This custom, however, was practised by all nations of antiquity. From many Biblical passages [such as Judges, vii, 16; I Sam. (D. V. Kings), xi, 11; II Sam. (D. V. Kings), xviii, 2; I Kings (D. V. III Kings), xx, 27; and II Macc., viii, 22, etc.] it clearly appears that the attacking Israelitish army was usually divided into three divisions, one in the centre and two on the flanks. Isaiah refers even to the "wings" of the army (viii, 8). A column advancing to conflict was preceded by two ranks of spearmen; next to these was a rank of bowmen, and behind them came the slingers. Spies were often sent out in advance to learn the position and the strength of the enemy, while night-attacks, with skillfully divided forces, were not infrequent. The beginning of the battle was signaled by the blast of a trumpet,

accompanied by the shouts of the combatants. The Ark with its *ephod* was considered indispensable. It was borne before the army, who, as it was taken up, cried out, "Arise, O Yahweh, and let Thine enemies be scattered, and let them that hate Thee flee before Thee". The principal equipment for war was the helmet, shield, and other defensive armour, the bow, the sling, the sword, the spear, the javelin, and other instruments which must have been common to all Oriental nations, although not explicitly mentioned in the Bible.

III. SACRED ANTIQUITIES.—Some of the Hebrew festivals are originally of historical character, i. e. are commemorative of some great historical event in the life of the Hebrew nation; while others are primarily religious, or of ethico-religious significance. To the first category belong the Feast of Passover, the Feast of Pentecost, and the Feast of Tabernacles, and other minor ones mentioned below, such as the Feast of Purim, etc. To the second class belong the Sabbath, the New Moon, the Feast of Trumpets, the Sabbatical Year and the Year of Jubilee. The former were more properly called *festivals*; the latter, *sacred seasons*. The latter are lunar; the former are solar—based on the lunar and solar systems respectively. The principal features of the three great historical festivals consisted in making a pilgrimage, or a visit, to the Temple, as prescribed in Exodus, xxiii, 14, 17: "Three times in the year shalt thou hold pilgrimage unto me, three times in the year shall all thy men appear before Yahweh, the God of Israel."

The *Passover* (whence our *Pascha*), with which the Feast of the Unleavened Bread is closely connected and almost identified, although originally distinct from it, constituted the opening festival of the Jewish ecclesiastical year, and was celebrated on the 14th of Nisan (Abib), which month approximately corresponds to our April. It was instituted in commemoration of the Exodus from Egypt, when the Angel of Death went forth to destroy the first-born of the Egyptians, passing over (whence *Passover*), however, the houses of the Hebrews, on the lintels of whose doors the blood of a lamb had been sprinkled. The Passover Festival was celebrated as follows: An unblemished male lamb a year old (called the paschal lamb) was to be selected by each family in Israel. It was to be killed on the evening of the fourteenth day and consumed the same night. The flesh was to be roasted, not eaten raw, or boiled, and not a bone of the animal was to be broken. Along with it, unleavened bread and bitter herbs might be used, but nothing more; and whatever portions were not needed for food were to be destroyed the same night by burning. Hence, on the evening of the thirteenth day of Nisan, all leaven was scrupulously removed from the Jewish homes. The fourteenth day was thus regarded as a holiday, on which all servile work was suspended. In later Hebrew times, however, the Passover Festival was somewhat modified.

The *Feast of the Pentecost*, also called the Feast of Weeks, Feast of Harvest, Day of Firstfruits, etc., was celebrated on the fiftieth day after the Passover, i. e. on or about the 8th of Siwan, the third month of the Jewish ecclesiastical year. It lasted a single day, and it marked the completion of the corn harvest. According to later Jewish traditions, the Feast of Pentecost was also instituted in commemoration of the giving of the Law to Moses. It is mentioned in the Bible for the first time in the second Book of Maccabees. With the Feast of Pentecost the New Year holiday season closed. The characteristic ritual of this feast consisted in offering and waving to Yahweh in his Temple two leavened loaves of wheat flour, together with a sin offering, burnt offering, and peace offering, and its object

was to offer to Yahweh the firstfruits of the harvest, and to thank Him for it.

The *Feast of Tabernacles*, or *Booths*, was observed for seven days, i. e. from the 15th to the 22nd of Tisri (the seventh month of the Jewish year, approximately corresponding to our October), following closely upon the Day of Atonement. It marked the completion of the fruit-harvest (which included the oil- and wine-harvest), and, historically, it commemorated the forty-years wandering in the wilderness, when all the Hebrew tribes and families, for lack of houses and buildings, lived in tents and booths. "The sacrifices at this feast were far more numerous than at any other. On each of the seven days one kid of the goats was offered as a sin offering, and two rams and fourteen lambs as a burnt-offering. Also seventy bullocks were offered on the seven days, beginning with thirteen on the first day and diminishing by one each day, until on the seventh day seven were offered. After the seven days a solemn day of 'holy convocation' was observed which marked the conclusion, not only of the feast of Tabernacles, but of the whole cycle of the festival year. On this day one bullock, one ram, and seven lambs were offered as a burnt offering, and one goat for a sin offering." The earliest Biblical allusion to this feast is found in I (D. V. III) Kings, viii, 2, and xii, 32.

Besides these three great festivals, certain minor ones were observed by the Hebrews: The word *Purim* is probably of Persian origin (*Furdigan*, *Pordigan*, or *Pardigan*), and the feast so named was instituted to commemorate the overthrow of Haman, the triumph of Mordecai, and the escape of the Jews from utter destruction in the time of Esther. It was celebrated in the 14th and 15th day of Adar (the twelfth and last month of the Jewish Year).—The *Feast of the Dedication of the Temple* was instituted in 164 B. C. by Judas Maccabæus, when the Temple, which had been desecrated by Antiochus Epiphanes, was once more purified and rededicated to the service of Yahweh. It commenced on the 25th of Chislew, the ninth month of the Jewish year (corresponding to our December), and lasted for eight days. It was a feast of universal and unbounded joy, delight, and happiness, as was that of Purim. Other minor feasts were the *Feast of the Wood Offering*; the *Reading of the Law*; *Feast of Nicanor*; of the *Captured Fortress*; of *Baskets*, etc.

The sacred seasons, or religious festivals, are primarily a development of the institution of the Sabbath and based on the lunar system of the Calendar. It has been often remarked, and with good reason, that in all the Hebrew Religious Festivals the sacred number seven is the dominating factor. "Every 7th day was a Sabbath. Every seventh month was a sacred month. Every seventh year was a Sabbatical year. Seven times seven was the year of Jubilee. The Feast of the Passover, with the Feast of the Unleavened Bread, began fourteen days (2x7) after the beginning of the month, and lasted seven days. The Feast of Pentecost was seven times seven days after the Feast of the Passover. The Feast of Tabernacles began fourteen days (2x7) after the beginning of the month and lasted seven days. The seventh month was marked by (1) the Feast of Trumpets on the first day, (2) the Feast of Atonement on the tenth day, (3) Feast of Tabernacles from the fifteenth day to the twenty-first. The days of the 'Holy Convocation' were seven in number—two at the Passover, one at Pentecost, one at the Feast of Trumpets, one at the Day of Atonement, and one at the Feast of Tabernacles, and one on the day following, the eighth day."

The institution of the Hebrew Sabbath may be traced in its origin to the early Babylonians who, according to the majority of Assyriologists, seem

to have been its originators, although among the Hebrews it developed on altogether different lines. It was celebrated on the 7th, 14th, 21st, and 28th day of the lunar month. It is doubtful whether it was known and observed in patriarchal and pre-Mosaic times. Moses, in instituting—or rather in modifying—the old institution of the Sabbath, connects it with the seventh day of the Creation period, on which God is said to have rested. By the ancient Babylonians it was looked upon as an unlucky day, on which it was unlucky to do any public work, and consequently was a day of rest.

The *New Moon Festival* consisted in celebrating the reappearance of the moon, and as such it was universally practised by all Semitic nations. Hence, in all probability, it was an acknowledged pre-Mosaic Hebrew institution. On this day the law enjoined only the offering of special sacrifices and the blowing of trumpets. Abstinence from work was not obligatory. On the day of the new moon of the seventh month the festival in question was more solemnly and more elaborately celebrated. After the Babylonian exile, however, the festival assumed a new character, similar to that of the New Year Celebration.

The *Fest of Trumpets* is the New Moon Festival of the seventh, or Sabbatical, month of the year.

The *Sabbatical Year* occurred every seventh year, and in it fields were not to be tilled.

The *Year of Jubilee* occurred every fifty years, i. e. at the end of seven Sabbatical years, just as Pentecost occurred on the fiftieth day after the Passover Festival. Its principal features were the emancipation of the Hebrew slaves and the return of mortgaged property to its hereditary owners.

The great Hebrew *Fast Festival* was the "Day of Atonement", or Yom Kippur. It was celebrated on the tenth day of the seventh month, on which day atoning sacrifices were offered for the sins and uncleannesses of the people of Israel as a whole, and for the purification of the temple in all its parts and appurtenances. It is significant that the earliest mention of it in the Bible occurs in such post-Exilic writings as Zech. (D. V. Zach.), iii, 9; Nehemiah, vii, 73; ix, 38; and Sirach, i, 5 sqq. A ceremony connected with the Day of Atonement is the so-called *For Azazel*. It consisted in sending into the wilderness the remaining goat (the "emissary goat"), the sins of the people of Israel having first been placed symbolically upon its head.

Treatises on *Biblical Archaeology* by JAHN (Vienna, 1817); ROSENMÜLLER (Leipzig, 1823-31); DE WETTE (Leipzig, 1864); EWALD (Göttingen, 1866); HANBERG (Munich, 1869); ROEKEFF (Vienna, 1857); KINZLER (Stuttgart, 1884); SCHROG (Freiburg, 1886). For English readers the best and most available works are KEIL, *Manual of Biblical Archaeology* (tr., 2 vols., Edinburgh, 1887); BISSELL, *Biblical Antiquities* (Philadelphia, 1888); FENTON, *Early Hebrew Life* (London, 1880); DAY, *The Social Life of the Hebrews in the Semitic Series* (New York, 1901); TRUMBULL, *The Blood Covenant*; Id., *The Threshold Covenant*; Id., *The Salt Covenant*; various articles in SMITH, *Dictionary of the Bible*; KITTO, *Biblical Cyclopedia*; VIGOUROUX, *Dict. de la Bible*; HASTINGS, *Dict. of the Bible*; and *Jewish Encyclopedia*. The most recent and authoritative works on the subject, however, are BENIGER, *Hebräische Archäologie* (Freiburg im Br., 1894); NOWACK, *Lehrbuch der jehrischen Archäologie* (Freiburg im Br., 1894); BUHL, *Die sozialen Verhältnisse der Israeliten* (Berlin, 1890), tr. into French by CENTRE (Paris, 1904); LEVY, *La famille dans l'antiquité Israélite* (Paris, 1905). Of great value, especially for later Old Testament times, are also the classical works of SCHÜRER, *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* (3 vols., 1898-1901), tr. from the 2nd ed. (5 vols., London and New York); EDERHEIM, *The Rites and Worship of the Jews* (New York, 1891); Id., *The Temple, its Ministry and Service* (London, 1874); Id., *Life and Times of Jesus the Messiah* (London and New York).

GABRIEL OUSSANI.

**Biblical Commission, THE**, a committee of cardinals at Rome who, with the assistance of consultors, have to secure the observance of the prescriptions contained in the Encyclical "Providentissimus Deus" for the proper interpretation and defence of Sacred Scripture. Its official name is "Commissio Pontificia de re biblica". It was formally established by the

Apostolic letter of Leo XIII, "Vigilantiæ", 30 October, 1902.

**Constitution.**—The Commission was first appointed in August, 1901, with three cardinal members and twelve consultors. After the formal establishment two cardinals and twenty-eight consultors from various parts of the world were added to the first list. There is no limitation to the number of consultors. In June, 1907, the Commission was made up of five cardinals, Rampolla, Satolli, Merry del Val, Segna, and Vives y Tuto. The consultors were forty-three: Amelli, O.S.B. (Rome), Balestri, O.S.A. (Rome), Bardenhewer (Munich), Cereseto, Cong. Orat. (Genoa), Ceriani (Milan), Chauvin (Laval), Cornely, S.J. (Rome), Delattre, S.J. (Tronchiennes), Düsterwald (Cologne), Esser, O.P. (Rome), Fillion, P.S.S. (Paris), Fleming, O.F.M. (England), Fracassini (Perugia), Genocchi, M.S.C. (Rome), Giamondi, S.J. (Rome), Gonfalonieri (Florence), Grannan (Washington), Gutberlet (Fulda), Hoberg (Freiburg im Br.), Höpfl (Rome), van Hoonacker (Louvain), von Hummelauer, S.J. (Valkenburg), Janssens, O.S.B., Second Secretary (Rome), Torio (Palencia), Kaulen (Bonn), Lagrange, O.P. (Jerusalem), Lamy (Louvain), Legendre (Angers), Lépicié, S.M. (Rome), Lepidi, O.P. (Rome), Lesêtre (Paris), Manganot (Paris), Méchineau, S.J. (Rome), Mercati (Rome), Molini, O.F.M. (Rome), Nikel (Breslau), Poels (Washington), Prat, S.J. (Rome), B. Schaefer (Vienna), Scheil, O.P. (Paris), Talamo (Rome), Vigouroux, P.S.S., First Secretary (Rome), and Weiss (Braunsberg).

**Method of Procedure.**—The Commission is constituted on the lines of an ordinary Roman Congregation. The consultors in Rome hold meetings twice a month, at which the secretaries preside. The results of their deliberations are presented by the secretaries to the cardinals, who also meet twice a month, on the second and fourth Sundays. It belongs to the cardinals to propose the questions for the study of the Commission and they alone have a vote in determining the answers. They may sanction or modify the judgments of the consultors, or send back the entire question for further study, or may commission one or other consultor to make a special report. After the meeting, the secretaries report to the Holy Father, who may ratify the decision or remand the question for further consideration. Papers sent by consultors who live at a distance from Rome are read at the meetings of the consultors, when relevant to the subject under discussion.

**Scope of the Commission.**—It is the duty of the Commission: (1) to protect and defend the integrity of the Catholic Faith in Biblical matters; (2) to further the progress of exposition of the Sacred Books, taking account of all recent discoveries; (3) to decide controversies on grave questions which may arise among Catholic scholars; (4) to give answers to Catholics throughout the world who may consult the Commission; (5) to see that the Vatican Library is properly furnished with codices and necessary books; (6) to publish studies on Scripture as occasion may demand. It was the wish of Leo XIII that a periodical bulletin of Biblical studies should be published at Rome, and a special Institute for higher Biblical studies established. Lack of funds has made such an establishment impossible for the present, but the idea has not been abandoned. To the Commission has been entrusted the awarding of an annual prize, founded by Lord Braye, for the best essay on a Biblical topic. In April, 1907, the Commission, with the approval of the sovereign pontiff, invited the Benedictine Order to undertake a collection of the variant readings of the Latin Vulgate as a remote preparation for a thoroughly amended edition.

**Degrees in Sacred Scripture.**—On 23 February, 1904, Pius X empowered the Commission to confer the degrees of Licentiate and Doctor in the faculty of

Sacred Scripture on priests who, having previously attained the doctorate in theology, should pass successful examinations, oral and written, in matter defined by the Commission. The judges must be at least five consultors. Examinations have since been held twice a year, in June and November. The official announcements of the Commission are communicated to the "Revue Biblique", which is not, however, the official organ of the Commission. (See "Revue Biblique", 1905, p. 448.)

*Decisions of the Commission.*—Four important decisions on disputed Biblical questions have been issued by the Commission: (1) On the occurrence in Scripture of "implicit citations", i. e. quotations from uninspired documents which the sacred writer does not vouch for, though he does not expressly acknowledge them as quotations. These may not be admitted unless proved by solid arguments (13 February, 1905). (2) On the historical character of certain narratives. It is not lawful to question the historical character of books hitherto regarded as historical, unless in a case where the sense of the Church is not opposed and where, subject to her judgment, it is proved by solid arguments that the sacred writer did not intend to write history (23 June, 1905). (3) On the Mosaic authorship of the Pentateuch. This has not been disproved by critical arguments. Mosaic authorship, however, need not imply that Moses wrote with his own hand or dictated all of it; the books may have been composed by secretaries to whom he suggested the thoughts and whose work he approved as principal and inspired author. It is consistent also with the use by Moses of documents, oral or written, and does not exclude the presence of such additions or imperfections in the present text as would leave it substantially and integrally the work of Moses (27 June, 1906). (4) On the authorship and historical character of the Fourth Gospel. It is historically certain that St. John wrote it. The Gospel is an historical document, narrating the actual facts and speeches of Our Lord's life (29 May, 1907).

*Authority of its Decisions.*—The Commission though formed like a Congregation is not a Congregation but seemingly of lower rank. Its decisions are approved by the pope and published by his command. Such approval, when given in *formâ communi*, does not change the nature of the decisions as emanating from a Congregation or Commission, nor does it make them specifically pontifical acts; much less does it imply an exercise of the pope's personal prerogative of infallibility. Hence they are not infallible or unchangeable, though they must be received with obedience and interior assent, by which we judge that the doctrine proposed is safe and to be accepted because of the authority by which it is presented. These decisions are not the opinions of a private assembly, but an official directive norm; to question them publicly would be lacking in respect and obedience to legitimate authority. We are not hindered from private study of the reasons on which they are based, and if some scholar should find solid arguments against a decision they should be set before the Commission.

For details about the Commission consult the Roman correspondence of *The Tablet* (London), 11 January, 15 November, 22 November, 1902; 7 February, 23 May, 1903; 12 March, 2 July, 19 November, 1904; for the documents, *Revue biblique* (1903 and later); for the English translation of the Letter *Vigilantie*, *The Great Encyclical Letters of Pope Leo XIII* (New York, 1903), 537; for the authority of decisions, *Nouvelle revue théol.* (Tournai), May, 1907; CHOUFIN, *Valeur des décisions doctrinales et disciplinaires du S.-Siège* (Paris, 1907).

JOHN CORBETT.

**Bibliotheca Veterum Patrum.** See FATHERS OF THE CHURCH.

**Bickerdike, ROBERT, VENERABLE, martyr, a** Yorkshire layman, b. at Low Hall, near Knares-

borough (date unknown), but residing at York; d. 5 August (or 8 October), 1585. Arrested for giving a priest, Ven. John Boste, a glass of ale, he was also accused at his trial of using treasonable words. He was acquitted, but Judge Rhodes, determined to have his blood, had him removed from the city gaol to the Castle and tried once more at the Lammass Assizes on the same charge. He was then condemned. One of his offences was that, when Ven. Francis Ingleby was being dragged on the hurdle to execution, hearing a minister's wife say, "Let us go into the Tolbooth and we shall see the traitorly thief come over on the hurdle," he said, "No; no thief, but as true as thou art". These words were supposed to be the cause of his death. He suffered at York.

**Bicknor, ALEXANDER, Archbishop of Dublin,** date of birth unknown; d. 1349. As his surname suggests he came from a family of Kent, England. He was elected Archbishop of Dublin in 1310, being at that time Prebendary of Maynooth and Treasurer of Ireland. This selection was, however, set aside by Edward II in favour of Lech who soon died; after this, in May, 1314, Edward petitioned Pope Clement V to confirm Bicknor's appointment. The request was earnestly repeated in 1317, and he was finally consecrated in Rome, 22 July of this year. In 1318 he was appointed Lord Justice of Ireland. On some unrecorded ground his name appears as attending the English Parliament, and he took part on 24 September, 1318, in promulgating at St. Paul's the excommunication of Robert Bruce. Even though, as a diplomatist, he was frequently absent from his diocese, he showed his interest in it by building an episcopal residence, and he endeavoured, unsuccessfully, to attach a college to St. Patrick's Cathedral. In 1323 he was in France on an embassy, in 1324 he was engaged in negotiating peace with France and in arranging a Spanish match for Edward, Prince of Wales. In this he failed; and on his return Edward II charged him with the loss of La Rozelle. About this time he joined with Queen Isabella in concerting the overthrow of the Despencers, then the royal favourites. On 28 May, 1325, Edward II asked the pope to remove Bicknor from the kingdom, accusing him of the surrender of La Rozelle, of defaming Hugh Despenser, of improperly excommunicating Robert Pinchbeck, and of not accounting for sums received while Treasurer of Ireland. Bicknor joined Queen Isabella and others in declaring Prince Edward guardian of the kingdom, at an assembly at Bristol; later, in 1327, he swore publicly at the London Guildhall to maintain the queen's cause as against the king. In 1329 Edward seized his diocesan revenues as a set-off to the sums unaccounted for by Bicknor as Treasurer of Ireland. In 1330 Bicknor became papal collector. He quarrelled with the Bishop of Ossory, who, on appeal to Edward II, was banished for nine years, during which period Bicknor, as metropolitan, visited the See of Ossory and seized the revenues. In 1348 Bicknor held a synod at Dublin at which useful disciplinary decrees were passed. He engaged in a dispute with the Archbishop of Armagh about the right to the primacy of Ireland.

HENRY NORBERT BIRT.

**Bidermann, JAMES, a poet and theologian of great learning and sanctity.** b. at Ehingen, Germany, in 1578; d. at Rome, 20 August, 1639. He entered the Society of Jesus at Lansberg in 1594, and after the usual preliminary training he taught rhetoric in Munich from 1606 to 1615, and later spent eight years teaching philosophy and theology at Dillingen. In

1624, he was called to Rome where he fulfilled the duties of theologian and censor of books till his death. From an early age Bidermann distinguished himself in many branches of learning. Such was his reputation for scholarship, that the famous Matthew Rader, a professor of Dillingen, celebrated his fame in a Latin poem, in which he spoke of him as another Aquinas, Aristotle, Cicero, and Maro. Besides numerous volumes of dramas, epigrams, biographical sketches, etc., Bidermann wrote many books on philosophy and theology. Amongst the best-known of these are: "Theses Theologicae" (1620), "Sponsalia" (1621); "Poenitentiae Sacramentum" (1621); "Matrimonii Impedimenta" (1621); "Censurae" (1622); "Irregularitas" (1622); "Sufragia" (1623); "Jesu Christi Status Triplex, Mortalis, Immortalis, Sacramentalis" (1623); "Conscientia" (1624); "Prolusiones Theologicae quibus Pontificis Rom. dignitas adversus haeresim propugnata est" (1624); "Eleemosyna" (1625); "Gratia" (1625); "Agnosticon libri tres pro miraculis" (1626).

R. H. TIERNEY.

**Biel**, GABRIEL, called "the last of the Scholastics", b. at Speyer, Germany, c. 1425; d. at Tübingen, 1495. His studies were pursued at Heidelberg and Erfurt. While still a young man, he was noted as a preacher in the cathedral of Mainz, of which he was vicar. Later he became superior of the "Clerics of the Common Life" at Bützbach, and in 1479 was appointed provost of the church in Urach. At this period he co-operated with Count Eberhard of Württemberg in founding the University of Tübingen. Appointed in 1484 the first professor of theology in the new institution, he continued the most celebrated member of its faculty until his death. Though he was almost sixty years of age when he began to teach, Biel's work, both as professor and as writer, reflected the highest honour on the young university. His first publication, on the Canon of the Mass, is of permanent interest and value. His second and most important work is a commentary on the "Sentences" of Peter Lombard. In this he calls Occam his master, but the last three books show him more Scotist than Nominalist. Scheeben describes him as "one of the best of the Nominalists, clear, exact, and more positive as well as more loyal to the Church than any of the others" (*Dogmatik*, no. 1073). The historian Janssen declares that he was one of the few Nominalists who erected a theological system without incurring the charge of unorthodoxy. (Cf. *Geschichte des deutschen Volkes*, I, 127, 15th ed.) He was neither narrow nor excessively speculative. Though a Nominalist, he was tolerant of Realism, which also flourished at Tübingen under the leadership of Konrad Summenhart. A Scholastic, he was, to quote Janssen, "free from empty speculations and ingenious intellectual juggling, being concerned with questions and needs of actual life" (*ibidem*), was interested in the social movements of his time, and maintained friendly relations with the Humanists. One of the latter, Heinrich Bebel, gave him the title of "monarch among theologians". His theological writings were repeatedly brought into the discussions of the Council of Trent.

Living as he did in a transition period, Biel exhibits characteristics of two intellectual eras. According to some, he was a Scholastic who expounded Aristotle rather than the Scriptures; according to others, he defended freer theological teaching, and opposed the ancient constitution of the Church and the authority of the pope. As a matter of fact, he acknowledged the primacy and supreme power of the Roman Pontiff, but, in common with many other theologians of his time, maintained the superiority of general councils, at least to the extent that

they could compel the pope's resignation. And he displayed no more theological freedom than has been claimed and exercised by some of the strictest theologians. Among the opinions defended by Biel concerning matters controverted in his day, the following are worthy of mention: (a) That all ecclesiastical jurisdiction, even that of bishops, is derived either immediately or mediately from the pope. In this connexion it is to be noted that his defence of the episcopal claims of Diether von Ysenburg won him the thanks of Pius II. (b) That the power of absolving is inherent in sacerdotal orders, and that only the matter, i. e. the persons to be absolved, can be conceded or withheld by the ordinary. (c) That the minister of baptism need have no more specific intention than that of doing what the faithful, that is, the Church, intends. (d) That the State may not compel Jews, or heathens, or their children to receive baptism. (e) And that the *Contractus Trinus* is morally lawful. All of these opinions have since become the prevailing theological doctrine.

The subject on which Biel held the most progressive views is political economy. Roscher, who with Schmoller introduced him to modern students of economics, declares that Biel's grasp of economics enabled him not only to understand the work of his predecessors, but to advance beyond them. (Cf. *Geschichte der Nationalökonomik in Deutschland*, 21 sqq.) According to Biel, the just price of a commodity is determined chiefly by human needs, by its scarcity, and by the difficulty of producing it. His enumeration includes all the factors that govern market price, and is more complete and reasonable than any made by his predecessors. (Cf. Garnier, *L'idée du juste prix*, 77.) The same author maintains that concerning the occupation of the merchant or trader, Biel is more advanced than St. Thomas, since he attaches no stigma to it, but holds it to be good in itself, and the merchant entitled to remuneration because of his labour, risks, and expenses. Biel's discussion of these subjects is contained in book IV of his commentary on the "Sentences". He wrote a special work on currency, *ein wahrhaft goldenes Buch*, in which he stigmatizes the debasing of coinage by princes as dishonest exploitation of the people. In the same work he severely condemns those rulers who curtailed the popular rights of forest, meadow, and water, and who imposed arbitrary burdens of taxation, as well as the rich sportsmen who encroached upon the lands of the peasantry. His works are: "Sacri canonis Missae expositio resolutissima literalis et mystica" (Brixen, 1576); an abridgment of this work, entitled "Epitome expositionis canonis Missae" (Antwerp, 1565); "Sermones" (Brixen, 1583), on the Sundays and festivals of the Christian year, with a disquisition on the plague and a defence of the authority of the pope; "Collectorium sive epitome in magistri sententiarum libros IV" (Brixen, 1574); "Tractatus de potestate et utilitate monetarum".

JOHN A. RYAN.

**Biella**, DIOCESE OF.—The city of Biella, the see of the diocese of that name, is an important industrial centre (anciently called Bugella) of Piedmont, Italy, in the province of Novara. The diocese contains about 200,000 inhabitants, and is a suffragan of the Archdiocese of Vercelli. Until 1772 Biella had no bishop, but was under the jurisdiction of the Archdiocese of Vercelli. In that year

Clement XI, yielding to the desire of King Charles Emmanuel III of Sardinia, established the Diocese of Biella by the Bull "Præcipua". The first bishop was Giulio Cesare Viancino, formerly Archbishop of Sassari in Sardinia. In 1803 Napoleon suppressed the diocese, which again fell under the jurisdiction of Vercelli, but was re-established in 1817 by Pius VII who appointed as bishop the Minor Observantine, Bernardino Ballato. It is difficult to determine when the Gospel was first preached at Biella; certainly not before it reached Vercelli. According to the opinion of Fedele Savio, S.J., the latter city received the Faith in the second half of the third century from Milan.

In the shrine of Maria Santissima d'Oropa, situated on a lofty mountain near Biella, the diocese preserves a memorial of St. Eusebius, the great Bishop of Vercelli, who was banished to the Orient by Emperor Constantius for his courageous defence of Catholic truth against Arianism. St. Eusebius, according to tradition, upon his return from the East, is said to have brought three pictures of the Madonna painted on cedar wood, one of which, the image of Oropa, he placed in a small oratory he had built. In the tenth century the chapel was placed in charge of the Benedictines. The latter having abandoned the place, Pius II, in 1459, made over the shrine to the chapter of the collegiate church, now the Cathedral of Biella, to which it has since belonged. In the sixteenth century, the inhabitants of Biella, in thanksgiving for their deliverance from the plague, built a stately church over the chapel. Even to-day the shrine of Oropa draws many devout pilgrims.

Among the religious edifices of the city of Biella, the most notable is the Gothic cathedral, built in 1402. Its beautiful choir is by Galliari. The baptistry, in the form of a small temple, is said to be an ancient Roman edifice.

CAPPELLETTI, *Le chiese d'Italia* (Venice, 1844), XIV, 649.

U. BENIGNI.

**Bielski** (or **Wolski**), MARCIN, a Polish chronicler, b. of noble parentage on the patrimonial estate of Biala (whence the family name), in the province of Sieradz, Poland, in 1495; d. there, 1575; the name Wolski is derived from his estate at Wola. One of two Polish writers, of the same name, he was the first to use the Polish language, hence his designation as the father of Polish prose. He was educated in the University of Cracow, founded by Casimir the Great in 1364, and spent some time with the military governor of that city. He served in the army in the wars against the Wallachians and Tatars, and participated in the battle of Obertyn (Galicia), 1531. He ranks among Poland's most prolific writers, and the development of historical studies in that country is due to his extensive writings. He is the author of numerous works: "Żywoty Filozofów" (Lives of the Philosophers, 1535); "Kronika Swiata" (Universal Chronicle, 1550-64), from the earliest time down to his day, divided into six periods, was the first important universal history published in the national idiom, and the first attempt at a comprehensive history of Poland, from 550 to 1580; in the second edition (1554) there is a reference to America; after the author's death the work was continued, rearranged, and brought down to the year 1597, under the title of "Kronika Polska" (Chronicle of Poland) by his son Joachim (b. 1540; d. 1599), secretary to King Sigismund III; "Sprawa Rycerskiego", a treatise on military art (1569), according to the Greek science of warfare, in eight parts, contains valuable data about the Polish army, and kindred subjects. After the demise of Bielski several satirical poems were published: "Seym Majowy", (The May Diet, 1590), descriptive of the degradation of Hungary, and an appeal to his countrymen to emulate a higher standard of life:

"Seym Niewieści", (Woman's Council, 1586-95), analytical of the then existing political conditions in Poland: "Sen Maiowy" (Dream of a Hermit, 1586); "Komedia Justina y Konstanczy" (Comedy of Justinian and Constantia, 1557).

**Bienville**, JEAN-BAPTISTE LE MOYNE, SIEUR DE, French Governor of Louisiana and founder of New Orleans, b. in Montreal, Canada, 24 February, 1680; d. in Paris, 7 March, 1767. His father, Charles le Moyne de Bienville, settled in Canada in 1640; his three brothers, Iberville, Serigny, and Châteauguay, likewise distinguished themselves in the early history of Louisiana. In 1698-1699, Bienville accompanied his brother Iberville in an expedition despatched from France to explore the territory near the mouth of the Mississippi. They founded a settlement at old Biloxi, where in 1700 Bienville became commandant, and, after Iberville's death in 1706, governor of the colony.

It was believed in France that Louisiana presented a rich field for enterprise and speculation and a grant with exclusive privileges was obtained by Antoine Crozat for fifteen years. In 1712 Crozat appointed M. la Mothe Cadillac, governor, and M. de Bienville lieutenant-governor. But Cadillac dying in 1715, Bienville once more assumed the reins of government. In 1716, he conducted an expedition against the Natchez Indians, and having brought them to terms, finished the fort "Rosalie" which had been commenced by his brother, Iberville, sixteen years before. In 1717, Epinay, a new governor, arrived in the colony, bringing with him the decoration of the Cross of St. Louis for Bienville. In the meantime, Crozat, failing to realize the great profits he had expected, abandoned the whole enterprise and surrendered his charter to the king in 1717. Another company was at once formed and Bienville received a new commission as governor of the province. He now resolved to remove the headquarters from Biloxi, Mobile, and St. Louis Bay to the more fertile region of the Mississippi River, and in 1718 he selected the site for a new settlement, which he called New Orleans. He left fifty persons there to clear the land and build some houses, but it was not till 1722 that it became the seat of government.

Experience had shown Bienville that the fertile soil of the lower Mississippi, as well as the climate, was well adapted to the cultivation of sugar, cotton, tobacco, and rice, and that Europeans were not fitted for field-work in the burning suns of Louisiana, for they sickened and died. The first plantation of any extent was therefore commenced with negroes imported from Guinea. In 1719, the province became involved in hostilities with the Spaniards in consequence of the war with France and Spain. The governor twice reduced the town of Pensacola and sent detachments to prevent the Spaniards from making inroads into upper Louisiana, and the country bordering on the Rio Grande.

When peace was restored, immigrants began to arrive in great numbers from France and Germany. In the autumn of 1726, the Government of Louisiana passed out of the hands of Bienville and he retired to France to recruit his health. In 1734, the king reappointed him Governor and Commandant-General of Louisiana, and early in the autumn he arrived at New Orleans and entered upon the duties of his office. An expedition against the Chickasaw Indians in the spring of 1736 resulted in disaster, but another

expedition in 1739 met with better success. This campaign closed his military and official career in the colony. He returned to France under a cloud of censure from the Government, after having faithfully served his country for more than forty years. He was buried with military honours in the cemetery of Montmartre.

E. P. SPILLANE.

**Bigamy** (IN CANON LAW).—According to the strict meaning, the word should signify the marrying of a second after the death of the first wife, in contradistinction to polygamy, which is having two simultaneous wives. The present usage in criminal law of applying the term *bigamy* to that which is more strictly called polygamy is, according to Blackstone (Lib. IV, n. 163), a corruption of the true meaning of bigamy. Canonically viewed, bigamy denotes (a) the condition of a man married to two real or interpretative wives in succession, and as a consequence (b) his unfitness to receive, or exercise after reception, tonsure, minor and sacred orders. This unfitness gives rise to an irregularity which is an impediment impedient and not diriment, hence orders conferred in violation of it are valid but illicit. This irregularity is not a punishment, medicinal nor punitive, as there is no sin nor fault of any kind in a man marrying a second wife after the death of his first, or a third after the death of his second; it is a bar against his receiving or exercising any ecclesiastical order or dignity.

ORIGIN.—This irregularity is not affixed to bigamy by either the natural or Mosaic law. It has its true origin in the apostolic injunction of St. Paul: "It behoveth, therefore, a bishop to be blameless, the husband of one wife" (1 Tim., iii, 2); "Let deacons be the husbands of one wife" (loc. cit., 12) and, "... the husband of one wife" (Tit., i, 6). By these words the Apostle does not enjoin marriage on bishops and deacons [Sts. Paul, Titus, and Timothy were celibates as were, according to Tertullian ("Monogamy", iv, in "Ante Nicene Fathers", Amer. Edit.) all the Apostles with exception of St. Peter], but he forbids bigamists to be admitted to Sacred orders. Owing to the small number of those who practised celibacy at the coming of Christ, the Apostles found it impossible to supply celibates for bishops, priests, and deacons and were forced to admit married men to Sacred orders. Blamelessness of life, however, was required, and since iteration of marriage was considered by the Apostles and the people as a strong presumption of incontinency it was decreed that should the bishop-elect (priest- or deacon-elect) be a married man, he must have had only one wife, and further, that after his ordination he should live apart from her. St. Epiphanius (Hær. lxi, 4) and St. Jerome (Epist. Contra Vigilantium, I) assert that such was the general custom of the Church. This practice of celibacy before or after ordination was universal in all the Churches of the East as well as of the West until about the year A. D. 700 when in the Synod of Trullo concession was made to Greek priests to cohabit with the wives they had married before ordination. They were forbidden, however, to marry again under penalty of absolute deposition from the ministry. In the Pauline injunction no mention is made of subdeacons or clerics in minor orders, for the simple reason that those orders were not then instituted. The Apostolic Canons (fourth century), which extended the Pauline prohibition to all grades of the sacrament of orders, were not universally observed. Vestiges of a lax discipline on this point are to be met with in France (I Council of Orange, c. xxv) and in Spain (Counc. of Toledo, cc. iii and iv). The Church

of Rome, on the contrary, strictly followed the Apostolic canons. This is evident from the decrees of the Sovereign Pontiffs Innocent I (401-417), Hilary (461-468), Gregory I (590-604), Celestine III (1191-98), and Innocent III (1198-1216). Gregory IX (1227-41) and Gregory X (1271-76) further decreed that bigamists should be deprived of every clerical privilege and the right to wear the clerical garb and tonsure under penalty of excommunication. The Council of Trent finally forbade bigamists to exercise functions attached to minor orders, even though these functions were, on account of the necessity of the times, allowed to be performed by laymen (Sess. XXIII, c. xvii, de Reform.). The reason for the existence of this irregularity is twofold: moral and mystical. The moral reason, which was that of the Orientals and some Latin Fathers, is the presumed incontinency on the part of the bigamist and his consequent unfitness to discharge efficiently the office of the priesthood among a people who looked with great suspicion upon a bigamist and held him in little or no esteem. The mystical reason, which was and is the primary reason of the Western Church (it admits the moral reason, but as secondary to the mystical) is the defect in the perfect resemblance of the second marriage to the great type of Christian marriage—the mystical union of Christ with the Church. This union is the union of one husband (Christ) with one spouse (the Church) without spot or blemish. Second marriages destroy the unity of one husband with one virgin wife, and cause a dividing of one flesh with two bodies, instead of cementing the union of two bodies in one, according to Genesis, ii, 24, "They shall be two [one husband, one wife] in one flesh". This division of one body with two, instead of union with one body, is the bed-rock of this irregularity. This defect in the perfect resemblance of the second marriage (real or interpretative) to the great type of marriage gives rise to the irregularity, and to the name by which it is known, "*ex defectu sacramenti*". It is not proper that one who has received a sacrament defective in its resemblance to its exemplar should become a dispenser of sacraments to others.

DIVISION.—In the first centuries there was only one kind of bigamy called true, or real, or proper. A second kind, called interpretative or fictitious, was afterwards added. In the Middle Ages a third kind, called *similar*, was introduced by the scholastics (Devoti, can. univ., II, p. 206). Durandus was the first to use the term *similitudinaria* (Specul., pars. I, de dispens. Juxta. n. 6). Since then the traditional division has been and is threefold, viz. real, interpretative, and similar. Many canonists of this century and last hold that similar bigamy should not be included under the irregularity *ex bigamia*. Another division is made, but there is no unanimity concerning it, i. e. bigamy *ex defectu sacramenti* (by reason of defective sacrament) and bigamy *ex delicto* (by reason of guilt). D'Annibale (Summul. Theol., Pars. I, n. 417 and 418, note 11 fourth edit.) holds that similar bigamists and not a few interpretative bigamists are irregular *ex delicto*, and not *ex defectu sacramenti*. St. Alphonsus (lib. VII, de Irregul., n. 436) and very many others, as well as the National Synods of the Syrians (an. 1888, p. 173. edit. 1899) and of the Copts (Cairo, an. 1898, p. 142), class all three kinds of bigamists as irregular *ex defectu sacramenti*. Bigamy in general is the state of a man who has really or interpretatively contracted and consummated two valid or two invalid marriages, or one valid and the other invalid, or one real, and the other a spiritual, marriage. Two things are essential to every kind of bigamy: (1) a marriage valid or invalid—adulterous connexions or concubinage do not enter into the question at all; (2) a carnal knowledge by which the parties legally

married become one flesh, and without which there is neither bigamy nor irregularity.

*Real bigamy* demands two valid and legal and consummated marriages with virgins; therefore, two real wives one after the other. It is indifferent whether or not the marriages took place before or after baptism, or one before and the other after; the second successive marriage imperfectly symbolizes "the great Sacrament of Christ in the Church" (Ephes., v. 32), and the irregularity is present (Pope Innocent I, Decret., can. 13, dist. 34). There is, therefore, no real bigamy (a) if either or both marriages are invalid, (b) if either or both have not been consummated, (c) if either or both women have not been virgins, (d) if one of the two ceremonies was a valid, consummated marriage, and the other a mere betrothal followed by carnal union.

*Interpretative bigamy* is the state of a man who has not as a matter of fact had two legal wives in succession, but whose matrimonial ventures—whether one or two—are accompanied with such circumstances as to warrant the law by a legal fiction to hold him as a bigamist and irregular. It is to be remembered that the laws which govern fictitious (similar and interpretative) bigamy must be strictly construed, for two reasons: (1) because there is question of an irregularity—something odious; and (2) it is a fiction of law and therefore does not hold unless in those cases expressly mentioned in the law (Fagnanus, cap. In Præsen., n. 23, de Probat.). Pope Benedict XIV wisely remarks (Ad audientiam, 15 February, 1753, par. 15), "It is the sole right of the legislator, and beyond the power of any private author or doctor, to draw legal conclusion from a fiction of law. Many, therefore, of the ablest canonists of recent years (v. g. D'Annibale, Gaspari, Icard, Wernz, Lombardi, Ballerini-Palmieri), as also the national synods of the Copts and Syrians, restrict real and interpretative bigamies to the case where a man marries either two valid and legal wives, or a widow, or a corrupt woman, or knows his wife carnally after she has been corrupted by a third party.

Interpretative bigamy is threefold:—

(1) When a man contracts and consummates only one, and that a valid marriage, or weds one wife to whom he is united in one flesh, yet the circumstances are such that the law considers two marriages and two wives. Of this class there are three cases: (a) When a single man marries a widow already made one flesh with a former husband (Decretal Greg., Lib. I, Tit. xxi, Cap. iii). Here the woman has had two husbands and has divided her flesh with two instead of being cemented to only one. Her marriage to the second husband is defective in its resemblance to the marriage symbol—union of Christ with the Church; the second husband is not the only husband of the one wife who herself should have been the wife of only one husband. As the wife in this case has had two real husbands, so, by fiction of law, her husband is considered to have had two interpretative wives. (b) When he marries an unmarried woman, already by a third party corrupted (Pope Hilary, Synod. Rom. Cap. ii, Dist. XXXIV, c. ix, Decret.). Here again is a division of flesh with two instead of union with one, and hence the defect, and, as a consequence, the irregularity. (c) When he carnally knows his own wife after she has committed adultery or has been forcibly oppressed (Decretum, c. xi; c. xii). The husband in this case is not barred from orders unless the adultery of the wife whom he as a layman has married was conclusively proved; nevertheless, in this case, as in cases (a) and (b), ignorance on the part of the husband (*sc.* of the widowhood or corruption or adultery or rape of his wife) would not except him from bigamy and irregularity, since there is here question of an irregularity *ex defectu sacramenti* and

not *ex delicto*. The defect is present irrespective of his knowledge.

(2) When he marries once, but the marriage is invalid. (a) The one in Sacred orders who marries a widow—marriage invalid on account of diriment impediment of S. Orders—and is carnally joined to her, is an interpretative bigamist and irregular (Cap. VII, Tit. XXI, De. Big.). Pope Innocent (*loc. cit.*) says that although this cleric is not a real bigamist, yet with him, as with a real bigamist, it was not lawful to dispense as the husband of a widow, not because of the defect in the sacrament, but on account of the marital intention joined with carnal union. Although not expressed in the above canon, yet it is the common opinion that the cleric in major order who marries a woman corrupted by a third party is a bigamist and irregular. He would not be irregular if he married a woman seduced by himself and known by no other man (Schmalz., Tit. XXI, De Bigam., n. 6). Civil marriage will suffice in this case, even where the Tridentine law is published (S. U. I., December 22, 1880). (b) Invalid by reason of a pre-existing marriage bond (*ligamen*), as, for instance, where the man marries a woman who has been divorced, repudiated, or rejected by a former husband, or who has divorced or left him. In this case the marriage is defective, the woman having shared her body with two, and hence he who married her is irregular for the above-mentioned reason (Lib. I, Tit. XXI, C. I; Dist. XXXIV, Can. xv). (c) If the marriage was invalid by reason of a diriment impediment other than order and *ligamen*, the more prominent opinion holds that the irregularity is incurred. Fagnanus (Comment., Cap. iv, De Big., n. 45) asserts that the prelates of the Rota, to whom the case was specially referred by the pope, decided that a cleric in minor orders who contracted and consummated an invalid marriage with a widow was an interpretative bigamist and irregular and stood in need of dispensation, and that Pope Urban, upon the strength of that decision, granted dispensation. Many of the best canonists of to-day (v. g. D'Annibale and Gaspari) hold the contrary. The case is not expressed in law, they say, and is a legal fiction which at all times is dangerous and is totally unwarranted if the two cases differ in every respect, as do these—the one being in major, and the other in minor orders; the one in bad faith and the other in good faith. Yet, after all is said *pro* and *con*, it still remains true that the proximate cause of the irregularity in the law cited is identical with that of the second case, to wit, marital intent with carnal consummation.

(3) When a man marries twice and either or both marriages are invalid, as (a) he who having contracted and consummated a marriage with a virgin, upon her death received Sacred orders, and afterwards, without any deception on his part, contracts and consummates a sacrilegious and invalid marriage with a virgin or widow, becomes an interpretative bigamist and irregular, not because of any defect in the sacrament in the second marriage, which is no marriage and no sacrament, but because of the marital intent followed by consummation by means of which the necessary division of his body with two has been effected (Innocent III, cap. iii, iv, De Big.). Should the cleric feign, rather than honestly intend, the second marriage, in order to accomplish the carnal union, some are of the opinion that he does not incur the irregularity, the marital intent required by the Innocentian law not being verified; others more commonly affirm that irregularity is contracted. The reason given by the affirmants is that the Innocentian marital intent is not so much the intention to contract a valid marriage, as to externally contract and consummate, an intention that is always presumed to be present in such cases. External marriages are always supposed to be free and voluntary.

Simulation is never presumed, but must, on the contrary, be demonstrated. (b) Should the first marriage before receiving Sacred orders be invalid on account of any diriment impediment (v. g., consanguinity or the like), although the case is not expressly stated in the law, the general opinion, with a few exceptions, is that he is an interpretative bigamist and irregular. In answer to their opponents, the affirmants say that the marriage mentioned (Cap. iv, De Big.) may have been invalid, as there is no certainty that it was valid, in which case the argument from one species to another would be legitimate. (c) Should both marriages be invalid, some assert there is no interpretative bigamy or irregularity. Certainly there is no law for it. Others, as St. Alphonsus (Vol. VII, n. 455; Suarez., Disp. XLIX, Sect. II, n. 11) teach as the most common and notable opinion that there is present the marital intent with the carnal consummation which alone suffices to induce the irregularity. Canonists differ in opinion as to the case where two invalid marriages were contracted and consummated in good faith. The most common and probable opinion is that irregularity is contracted, for the reason that it is not the guilt of the desire, but the intention to contract and consummate the two marriages which is the reason of the irregularity as laid down by Innocent III (Cap. 4, De Big.). By almost common consent the irregularity is said to be contracted by the cleric tonsured or in minor orders or layman who, after having contracted and consummated a marriage invalid on account of a known impediment and afterwards, whether his wife be living or dead, contracts and consummates another marriage even with a virgin. There is present in the case a division of flesh and the marital intent necessary to produce irregularity.

*Similar Bigamy* is nowhere clearly and expressly stated in the law. It owes its existence to the almost universal and constant teaching of canonists and theologians since the time of Durandus. Similar bigamy is twofold: (1) When a religious who has been solemnly professed in a religious order approved by the Church marries a virgin and carnally knows her as such. (2) When a cleric in Sacred orders, in violation of the law of celibacy, contracts and consummates a marriage with a virgin. This form of bigamy presupposes only one carnal marriage and a spiritual marriage, which are interpretatively considered two marriages, and each putative husband is considered to have two interpretative wives. The carnal marriages are invalid by reason of the diriment impediment of solemn religious profession and of orders respectively; but because of the marital intent followed by carnal consummation, some claim that similar bigamy and irregularity are incurred by reason of the defective signification of the sacrilegious marriage to the symbol of matrimony; some admit that there is no bigamy, but an irregularity arising from the sacrilegious marriage; others again insist that there is an irregularity on account of some kind of a defect in the sacrament, but there is no law declaring it to be bigamous and irregular. Gaspari (De Sacra Ordin., nn. 393 sqq.) and others reject the first opinion altogether and very conclusively show that the canons of common law and the canons of Gratian upon which the first opinion is grounded are not to the point. Gaspari shows that the decrees (Decretales—Lib. IV, Tit. 6, Cap. i, 2 and 4) of Pope Alexander III do not refer to bigamy or irregularity, but speak of suspensions and excommunications; that the Gratian canons treat of religious men and women who have broken their vows and are to be removed from their grade, and subjected to the same penances as were at that period imposed upon bigamists. Pope Clement, in his decree (Lib. 4, Tit. Unicus de Cons. et aff. Clem.) also speaks of excom-

munication and not irregularity. The constitution of Pius IX, "Apostolicæ Sedis" imposes upon similar bigamists excommunication reserved to the ordinaries, and nothing more. It is evident, therefore, that the law affixes no note of irregularity to a so-called similar bigamist. Practically speaking, however, there is little difference, as the so-called similar bigamists are prevented, on account of the censure and the infamy of their act, from receiving higher orders or exercising those already received; and should they solemnly exercise the functions of their grade, they would become irregular on account of the violated censure. The bishop can, when they have put away the woman, done penance, and led edifying lives, absolve them from the censure and dispense them from any irregularity, if any has been incurred, and promote them to higher orders. It is certain, however, that religious, not in Sacred orders, with simple vows, who contract and consummate marriage with a virgin or with a renegade nun who has broken her solemn vows, is neither a bigamist nor irregular. No such case is found in the canon.

**EFFECTS.**—Bigamy begets irregularity, the principal effect of which is to entirely exclude from the reception and use and exercise of any ecclesiastical order and benefice attached to any order. Pope Gregory X (Lib. I, Tit. XII, Cap. Unic. in Sexto) further declared that bigamists should be stripped of every clerical privilege, removed from the protection of the ecclesiastical, and subjected to civil jurisdiction, deprived of the canon safeguarding their person from personal attack, and forbidden to wear the tonsure and clerical garb, under penalty of excommunication to be incurred at the moment of their attempted marriage. The Council of Trent also forbids to bigamists the exercise of any office or function of minor orders, even of such functions as are usually, by permission, allowed to married laymen on account of scarcity of celibate clerics (Sess. XXIII, C. 17, De Reform.). Clerics in minor orders whose marriages were invalid are not comprehended under the Tridentine law. Clerics in Sacred orders and religious clerics, who, by virtue of the law of celibacy and religious profession, are spiritually wedded to the clerical and religious states respectively, are not comprehended under the law stripping them of every clerical privilege, and the use of tonsure and clerical garb, and this out of respect to their sacred character. Clerics on the other hand, in minor orders are not wedded to the clerical state; hence they come under the law. Bishops who knowingly and without permission confer Sacred orders on a bigamist are by the Third Council of Arles (Dist. LV, Can. 2) suspended from saying Mass for one year, and by the decretal law (Lib. I, Tit. 21, Cap. ii) were deprived of the power of giving to others the orders they had conferred on a bigamist. Since the constitution "Apostolicæ Sedis", the only punishment is that which the Holy Father may deem fit to impose upon the bishop violating the canons.

**DISPENSATION.**—This irregularity is removed neither by baptism nor religious solemn profession, but by dispensation. The pope, and he alone, can dispense with this prohibition to receive orders. He can dispense with a mere ecclesiastical law, such as is the Pauline injunction, although it is of Apostolic origin. Pope Lucius III, whilst urging the unlawfulness of granting a dispensation in face of St. Paul's prohibition, did, however, grant it to Nicholas de Tudeschis, a celebrated canonist, better known as Abbas Panormitanus (Glossa, ad verb. *Fiat*, C. Lector, XVIII, Dist. XXXIV). Dispensations in cases of one who marries two real wives or a widow are exceedingly difficult to obtain (Lib. I, Tit. 9, De Renunt. Sec. Personæ). Worthy of note is the fact that the dispensation does not efface the defect in

the sacrament, but the unfitness arising therefrom is removed. It is the universal opinion of to-day, whatever may have been the opinion of canonists in the past, that the pope alone can dispense all bigamists, real and interpretative, as regards minor as well as Sacred orders, and the collation and use of the simple, as of great, benefices. The reason is evident: bishops cannot dispense in the laws of their superiors, to wit, the pope or General Council. Some canonists claim that bishops, by virtue of the Council of Trent (Sess. XXIV, C. 6, De Ref), can dispense with interpretative bigamy arising from occult guilt. D'Annibale (loc. cit.) on this point well remarks that it is exceedingly difficult for such acts to be private. Sanchez asserts that it is of little moment whether or not the fact is private or public, since the irregularity is not *ex delicto*, but *ex defectu sacramenti*. It is certain that bishops, where there is a grave and positive doubt about the existence of interpretative bigamy and its consequent irregularity, can grant dispensation. Bishops can dispense with all similar bigamists as above defined after they have left their putative wives, done penance, and led edifying lives, and can admit them to the exercise of all ecclesiastical functions (Lib. IV, Tit. VI, Cap. i, Qui Clerici et Vov.; Lib. III, Tit. III, Cap. Sane 4). Regular prelates, i. e. generals, provincials, abbots, priors, guardians, having quasi-episcopal jurisdiction, cannot, in virtue of the common law and apart from special privileges, dispense their own subjects with real or interpretative bigamy, even as regards minor as well as major orders. No such power has been given them by pope or general council. By virtue of privilege of Pius V (Constit. "Rom. Pont. Circumspecta", June 21, 1571, Sec. 3), joined with that of the Council of Trent (Sess. XXIV, Cap. vi, etc.) power to dispense in irregularities on account of occult guilt, given to bishops, was extended to regular prelates. By virtue of the privilege of Sixtus IV, regular prelates cannot dispense with real, interpretative, and public similar bigamists (P. Venantius, O. F. M., Compend. Privil. Regularium, ed. 1906; Piat, Vol. II, p. 577, 2). As a matter of fact, the Sixtine constitution (Reg. Univ. Eccles., August 31, 1474) makes a special exception in the case of bigamy. The general opinion, that they cannot grant dispensation to their subjects who are real or interpretative bigamists, is evident from the fact that the decretal law (C. Altercationis in 6°) has reserved that faculty to the pope; second, Tridentine law is against such faculty; third, declaration of s. c. c. (3 January, 1589) has so decided; fourth, present practice of granting privileges and faculties to religious orders as a rule makes an exception of bigamy v. g., constit. of Leo XII, 1826, "Plura Intra", directed to the Society of Jesus, withholds the faculty of dispensing with bigamists. If religious prelates do possess the faculty of dispensing in such cases, it must be by virtue of some special privilege of recent date. Bishops of the United States and of England, and vicars Apostolic subject to the Propaganda (these latter only *in foro interno*) have special faculties (Formula I, II, and IV respectively) to dispense interpretative bigamists; and in cases of paramount importance, on account of great scarcity of priests, bishops in the United States can dispense also with real bigamists. According to general opinion, the multiplication of marriages does not increase the number of irregularities contracted; so the bigamist and trigamist equally incur only one irregularity. In applications for dispensations mention of only two out of the many marriages is sufficient, and that whether they are all real or interpretative or mixed bigamies. In the opinion, however, of those who divide interpretative bigamies into *ex defectu sacramenti* and *ex delicto* bigamies, it is necessary, in the case where

a grave sin is the cause of the irregularity, to name both the irregularity *ex delicto* (with sin) and the irregularity *ex defectu sacramenti* (without sin).

**Bigamy** (Fr. *bigamie*, from Lat. *bis*, twice, and Gr. *γάμος*, marriage) IN CIVIL JURISPRUDENCE, and especially in criminal law, is "a formal entering into of a marriage while a former one remains undissolved" (Bishop, Commentaries on the Law of Statutory Crimes, § 577), "the crime of having two wives or husbands at once" (Murray, New Dict., s. v.) or two or more wives or husbands (Century Dict., s. v.). Bigamy, being "a species of polygamy" (Stephen, New Commentaries, IV, 83), may be designated by the latter word (Bishop, op. cit.); for Sir Edward Coke defines "polygamus" to be one "qui duas vel plures duxit uxores" (3d Instit., XXVII). But its very general use in English statutes and authorities renders *bigamy* in many instances the word of more ready reference (Russell, A Treatise on Crimes, 659).

Bigamy as defined is classed by jurists among those acts injurious to public morality by which the State or community generally is injured, and which may therefore properly be made criminal. The crime consists, according to French law (Carpentier, Codes et lois; Code pénal, 340, note) "in the fact of the celebration of the second marriage before dissolution of the first", or, to quote an American authority, in "the prostitution of a solemn ceremony which the law allows to be applied only to a legitimate union", involving "an outrage on public decency and morals" and "a public scandal" (Bishop, op. cit.). And so Boswell quotes Dr. Samuel Johnson, commenting on Luther's allowing the Landgrave of Hesse two wives with the consent of the wife to whom he was first married, thus: "There was no harm in this, so far as she was only concerned, because *volenti non fit injuria*. But it was an offence against the general order of society, and against the law of the Gospel, by which one man and one woman are to be united."

Although among many nations plurality of wives or polygamy has been legally recognized, yet the fact has been observed "that among not a few uncivilized people polygamy is almost unknown or even prohibited" (Westermarck, The History of Human Marriage, 435), and where tolerated, bigamy is its usual form, as was the case among the Hebrews (op. cit., 430). In the earlier days of Babylon, bigamy is said to have been the exception and monogamy the prevailing practice (Johns, Babylonian and Assyrian Laws, 134). The Assyrian kings appear to have been monogamists, the kings of ancient Egypt seem to have had only one wife, and the same remark may be made of their subjects (Westermarck, 432, 442, 447). The law of China prohibits taking of a second wife during lifetime of the first (Westermarck, 445). Mohammed, when allowing his followers four wives, is said to have sought to restrict what he felt himself unable to abolish. And he is said to have been of opinion that, although an unlimited number of wives might live together in harmony, this among so few as four would be impossible. Events seem to have proved the correctness of his judgment, for "the quarrels, jealousies and expenditure of four wives vying with each other" (Colquhoun, Summary etc., § 575) are said to have brought about the monogamy usual among modern Mohammedans. Of those in India ninety-five per cent are monogamists, and it is said that in Persia

two per cent only have a plurality of wives (Westermarck, 439). "Tis true", writes Lady Mary Wortley Montagu from Adrianople, in 1717, concerning the Turks, "their law permits them four wives; but there is no instance of a man of quality that makes use of his liberty or of a woman of rank that would suffer it" (Works, II, 190). The ancient Romans were monogamists (Westermarck, 433). And in the time of the Emperor Justinian (527-565) the illegality of bigamy was firmly established: "Duas uxores eodem tempore habere non licet" and "eadem duobus nupta esse non potest" are the expressions of the Institutes (Lib. I, tit. x, vv. 6, 7).

The law of England is thus laid down by an authority supposed to be of the time of Edward I (1272-1307), the king, "who", remarks Sir William Blackstone, "hath justly been styled our English Justinian" (Commentaries, IV, 425): "It has sometimes been that a man from wickedness has married several women, all living at the same time; but Holy Church says that of such women none but the first is his lawful wife; wherefore, the law regards the others only as false wives" (Britton, Lib. V, 11). While the first marriage continues undissolved by death, or by judgment of a court of competent jurisdiction, a subsequent marriage is, by English common law, a mere nullity and void (Kent, Commentaries on American Law, Part IV, 80; Bishop, New Commentaries on Marriage, etc., 1, § 717). No length of absence and no error as to survival of the absent can render valid the second ceremony. But in defining bigamy as a crime, statutes have been more indulgent. Notwithstanding what we have quoted from the authority of the thirteenth century, there seems to have been no English statute defining and punishing bigamy as a crime until the year 1604, English law being in this respect more backward than the law of Scotland, which so early as 1551 pronounced bigamy a crime punishable with the pains of perjury, these being confiscation of goods, imprisonment, and infamy (Bell, Dict. and Digest of the Laws of Scotland, s. v.). By an English statute of 1604, upon which later English laws and laws in the United States have been modelled, any married person who should marry within England or Wales, the former husband or wife being living, became guilty of felony. But the statute did not extend to persons whose husband or wife remained continually "beyond the seas by the space of seven years", nor to a person "whose husband or wife shall absent him or herself the one from the other by the space of seven years together in any parts within his majesty's dominions, the one of them not knowing the other to be living within that time". The statute thus established an arbitrary period of absence as exempting from criminality a second marriage. That absence within England should justify the second marriage, the one marrying was required to be ignorant of the survival of the absent husband or wife; but respecting absence "beyond the seas" we are told by Blackstone, "Where either party hath been continually abroad for seven years whether the party in England hath notice of the other's being living or no" (Commentaries, Bk. IV, 164), there can be no felony under the statute. The statute, not otherwise providing, and its violation being made a felony, men prosecuted thereunder were, according to the general law of the period, entitled to "benefit of clergy" (Coke, sup.), subject to which, conviction under the statute was punishable with death. The English statute of 1861, now in force, exempts from punishment a second marriage only where there has been continual absence of seven years, and the person marrying shall not know the absent husband or wife "to be living within that time". Those guilty under the statute are liable to penal servitude of not more

than seven nor less than three years or to imprisonment of not more than two years. Bigamy is a crime within the statute, if committed by a British subject, wherever the offence may be committed. The French "Code pénal" provides the punishment of "travaux forcés à temps" for a person who, being married, shall contract another marriage before dissolution of the former marriage.

A United States Statute declares guilty of polygamy every person, having a husband or wife living, who "in a territory or other place over which the United States have exclusive jurisdiction", marries another, unless there shall have been absence of five years, the absent husband or wife "not known to be living and believed to be dead", or unless there shall have been a divorce or judicial annulment of the previous marriage. The punishment provided is a fine of not more than five hundred dollars and not more than five years' imprisonment. The Constitution of the United States declares that "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof" (Constitution, Amendments, Art. 1). The question has accordingly been raised whether legislation such as has just been quoted may not violate the Constitution in the instance of an adherent to a religion of which bigamy is claimed to be a tenet. But the Supreme Court of the United States, speaking by Mr. Justice Field, held that "however free the exercise of religion may be, it must be subordinate to the criminal laws of the country, passed with reference to actions regarded by general consent as properly the subject of punitive legislation", that "bigamy and polygamy are crimes by the laws of all civilized and Christian countries", few crimes being "more pernicious to the best interests of society", and therefore that "to call their advocacy a tenet of religion is to offend the common sense of mankind". Free exercise of religion ought not, in the opinion of the Court, to be construed to mean toleration of crime (Davis v. Reason, United States Reports, CXXXIII, 333, 341, 342, 345). Alien polygamists are, by a United States Statute excluded from admission to the United States. The statute books of various States of the Union contain laws modelled upon, and with provisions more or less similar to, those of the English law of 1604, and defining bigamy, or in the statutes of some States, polygamy, as a crime. Formerly, by the Virginia law (United States Reports, XCVIII, 165) and by the law of North Carolina (Kent, Commentaries, Part IV, 79, note d), bigamy was punished by death. Now its punishment in Virginia is imprisonment of not more than eight nor less than three years (Code, § 3781), and in North Carolina of not more than ten years nor less than four months (Revisal, § 3361). In the State of New York the punishment is not more than five years' imprisonment, and the period of absence excusing second marriage is fixed at five years, the former husband or wife having been absent from the one remarrying "without being known by him or her within that time to be living and believed by him or her to be dead" (Birdseye, Revised Statutes, 306). Divorce (unless for fault of the party remarrying), due permission of Court, or annulment of the previous marriage, or sentence to life imprisonment of the former husband or wife also excuses the remarriage. Absence, therefore, not dissolving a previous marriage, on proof that a husband or wife who had been supposed to be dead is in fact living, the second marriage may be adjudged to be a nullity. The law will not sanction bigamy by recognizing the two marriages to be simultaneously valid. According to the law of New York, the earlier marriage ceases to be binding until one of the three parties to the two marriages procures a judgment pronouncing the second marriage void (New York Court

of Appeals Reports, CXIV, 120; Birdseye, op. cit., 1042; cf. Bishop, *New Commentaries*).

The recently recovered Code of the Babylonian King Hammurabi (about 2250 B. C.), in its regulations respecting bigamy affords some interesting comparisons with modern legislation on the same subject. By that ancient statute a wife "has no blame" who remarries after her husband has been taken captive, "if there was not maintenance in his house" (§ 134). But "if there was maintenance in his house", the captive's wife who remarries "shall be prosecuted and shall be drowned" (§ 133). Another section resembles a provision of an existing New York statute. By this statute, if the second marriage be annulled because the former husband or wife is living, children of this marriage are deemed to be "legitimate children of the parent who at the time of the marriage was competent to contract" (Birdseye, *Revised Statutes*, 993). In like manner this code of four thousand years ago ordains that if, in the instance of the woman who "has no blame", there be children of her second marriage, she shall return to her first husband if "he return and regain his city", "but the children shall follow their own father". As if to rebuke want of patriotism or love of home, the wife of a man who "has left his city and fled" might remarry and "because he hated his city and fled" the fugitive returning was not allowed to reclaim his wife (§ 136).

Tennyson has made double marriage the subject of his poem "Enoch Arden". We may notice how carefully the poet causes a period to elapse longer than the seven years mentioned in the English Statute:—

. . . . . ten years  
Since Enoch left his hearth and native land  
Fled forward, and no news of Enoch came,

before his wife listens to the argument, which, however, the poet is not so unpoetical as to reinforce by quoting the statute:—

It is beyond all hope, against all chance,  
That he who left you ten long years ago  
Should still be living.

—And, like the woman pronounced blameless by the old Babylonian Code, for whom "there was not maintenance", Enoch's wife was "poor and wanting help" when she consented to the remarriage which Enoch, returning contrary to all seeming hope and chance, after having been so long "cast away and lost", ratified in his self-effacing prayer for strength "not to tell her, never to let her know"—cf. Hammurabi, Code, § 135.

CHARLES W. SLOANE.

**Bigne** (BINIUS, BIGNÆUS), MARGUERIN DE LA, French theologian and patrologist, b. about 1546

at Bernières-le-Patry, Normandy; d. about 1596. He studied at the College of Caen, and at the Sorbonne in Paris where he received the doctorate. He was named canon of his native Diocese of Bayeux and, later, dean of the church of Mans: At the Provincial Council of Rouen, in 1581, he sustained the rights of his cathedral chapter against Bernadin de St. François, Bishop of Bayeux, and provoked an unfortunate conflict with the latter which ended in de la Bigne's resignation from his canonry. He resumed, then, at the Sorbonne the patristic studies in which he had been long engaged. He had early perceived that Protestant misquotation and misinterpretation of patristic texts was a menace to Catholic interests and resolved to collect and edit the available documents of the Fathers. He published in 1575 his "Sacra Bibliotheca Sanctorum Patrum" (Paris, 8 vols.; additional volume in 1579; later editions, Paris, 1589; Lyons, 27 vols., 1677; Cologne, 1694). It contains the writings, some complete, some fragmentary, of our two hundred Fathers, many published for the first time. Particular care was given to the elucidation of texts corrupted by heretics. This work was the pioneer in the field of critical patristics. He published, also, "Statuta Synodalia Parisiensium Episcoporum, Galonis Adonis et Willielmi; item Decreta Petri et Galteri, Senonensium Episcoporum" (Paris, 1578); and an edition of St. Isidore of Seville (Paris, 1580), in which for the first time the latter's works were gathered in one work.

MIGNÉ, P. L., LXXXI, 209-212.

JOHN B. PETERSON.

**Billiard, Marie-Rose-Julie.** See JULIE BILLIART, BLESSED.

**Billick** (STEINBERGER, Lat. *Latomus, Lapidica*), EBERHARD, German theologian, opponent of the Reformation, b. 1499 or 1500 at Cologne; d. there, 12 January, 1557. Of a family which gave a number of prominent men to the Carmelites of Cologne, Eberhard entered the Carmelite Order in 1513, took his vows in 1514, became priest and master of students in 1525, and reader of divinity in 1526; he matriculated at the University of Cologne in 1528, was made Prior of Cassel, 1531, Prior of Cologne, 1536-42, received his licentiate and doctorate of divinity, 1540 and in 1542 was appointed Provincial of the province of Lower Germany. He retained this dignity until his death, for, although nominated auxiliary Bishop of Cologne, he did not live to be consecrated. Billick's activity on behalf of his order was successful; he enrolled numerous candidates, improved the plan of studies, saved several monasteries from destruction, re-established others, and reformed both his own province and that of Upper Germany. His chief importance, however, lies in his dealings with the Archbishop of Cologne. If Cologne remained true to the Catholic cause the merit is principally due to the provincial of the Carmelites. As the leader of the lower clergy he protested against the heretical tendencies of Archbishop Hermann von Wied, who since 1536 had favoured the Reformers. Von Wied was excommunicated in 1546, gave up the archbishopric in 1547, and died in 1552. It was Billick's exposure of the archbishop's breach of faith that led to the latter's deposition. Writing against Bucer, Billick drew upon himself the ire of Luther and Melancthon. He took part in the disputations of Worms, 1540, Ratisbon, 1541 and 1546, and Augsburg, 1547, and as theologian accompanied the new Archbishop of Cologne to the Council of Trent, 1551.

POSTNA, *Der Karmelit Eberhard Billick* (Freiburg im Br., 1901), contains his life, a complete bibliography, list of his writings and a calendar of his correspondence.

B. ZIMMERMAN.

**Billuart**, CHARLES-RENÉ, Dominican preacher, controversialist, and theologian, b. at Revin, a small town of the Ardennes on the Meuse, Belgium, 28 January, 1685; d. there 20 January, 1757. He completed his classics at the Jesuit college of Charleville and soon after entered the Dominican convent in his native town. He was sent to the novitiate at Lille, whence he returned a year later for profession, 7 November, 1702. He followed the regular courses, receiving ordination in 1708. The two following years he spent at Liège, pursuing higher studies, and in 1710 was appointed professor of philosophy at Douai. The next year he was transferred to Revin, but was speedily promoted to a chair of theology which he held until 1715, when he was appointed master of students at Douai. Here, in 1718, he became second regent of studies and was also designated to preach the Advent and Lenten courses at Liège. Invited to Maastricht by Count Tilly, the famous Catholic governor of the city and Commander-in-Chief of the armies in Holland, he preached on the Real Presence during the Corpus Christi celebration and later defended the doctrine at a public discussion in the town hall. All this had been arranged by the count, who had the satisfaction of seeing the ministers reduced to silence by Billuart's incisive logic and irresistible learning. After three years as Prior of Revin, Billuart was called to the regency of Douai and three years later, 15 October, 1728, he was elected provincial. The honours of the doctorate were conferred upon him in 1729. In 1732 he again preached a course at Liège, adding to his fame as a preacher. He next held the office of Prior of Revin for three successive terms until, in 1741, he was re-elected provincial. In 1746 he began and in five years completed his celebrated and monumental work, the "Summa S. Thomæ hodiernis Academicarum moribus accommodata" (19 vols. Liège, 1746-51). This work had been entrusted to him by the master general of the order nearly fourteen years before. It was a fitting response to a petition of his former colleagues at Douai, and it answered a general demand, as is evidenced by its publication in thirteen standard editions. In 1754, while serving a third term as provincial, Billuart published a compendium, also well known to the scholastic world, in six editions, the "Summa Summæ S. Thomæ, sive compendium theologiæ" (Liège, 1754).

Billuart's work is characterized by a facile style, copious treatment, and fearless exposition; by well planned logical divisions and precise, clear-cut distinctions. It ranks among the leading commentaries on St. Thomas. It is esteemed for its annexed historical essays, the materials for which are drawn largely from the ecclesiastical history of Natalis Alexander, O. P. In his moral science Billuart favours a moderate probabiliorism, in which position, however, he no longer commands a very great following outside of his own school. Generally speaking, Billuart stands forth as a theologian of authority. He is one of the foremost writers who have shed lustre on the school of the Angelic Doctor. In his polemical writings, Billuart was a devoted member of his order and a keen disciple of St. Thomas, zealous for the integrity of the saint's accepted teachings. Dignified in bearing, he was gentle to those around him. He was unremitting in his labours and a man of prayer withal, much given to devotion to the Blessed Sacrament.

His principal works, besides those mentioned, are the following: "Supplementum cursus theologiæ" (Liège, 1759); "De mente ecclesiæ catholicæ circa accidentia eucharistiæ" (Liège, 1715); "Le thomisme vengé de sa prétendue condamnation par la constitution Unigenitus" (Brussels, 1720); "Lettre à MM. les docteurs de la faculté de théologie de l'université de Douai" (1723); "Examen critique des réflexions sur le bref de notre S. Père le pape Benoît XIII" (1725); "Le thomisme triomphant par le bref Demissas preces

de Benoît XIII"; "Réponse . . . à M. Stiévenard. Chanoine de Cambrai, au sujet de son Apologie pour feu Mgr. de Fénelon"; "Avis à M. Stiévenard sur la seconde Apologie pour Mgr. Fénelon"; "Justification de l'avis"; "Apologie du thomisme triomphant" (Liège, 1731); "Réponse à l'auteur d'un libelle" (1734); "Apologie . . . contre l'Histoire du baianisme composée par le Père Duchesne" (Avignon, 1738); "Sermons du R. P. C. R. Billuart", edited by Abbé Lelièvre (2 vols., Paris, 1846).

J. R. VOLZ.

**Billy**, (BILLI) JACQUES DE, a French patristic scholar, theologian, jurist, linguist, and Benedictine abbot, b. 1535 at Guise in Picardy; d. 25 December, 1581 at Paris. He began his studies at Paris, completed a course of philosophy and theology before he was eighteen years of age, and then, at the request of his parents went to Orléans and later to Poitiers to study jurisprudence. But having no inclination for law, he devoted most of his time to literature. The early death of his parents (Louis de Billy, of an old French family originally from Ile-de-France, and Marie de Bricheateau) gave him the opportunity he desired of pursuing unhindered his favourite study of letters. Quietly withdrawing to Lyons and later to Avignon, de Billy devoted himself, for a period, entirely to the study of Greek and Hebrew. He already held in *commendam* the Abbey of St.-Léonard of Ferrières in Anjou, and the Priory of Taussigny in Touraine, when his older brother Jean, who had hitherto led a very worldly life, suddenly announced his intention of becoming a Carthusian, and resigned in favour of Jacques his two abbeys, Notre-Dame des Châtelliers and St.-Michel-en-l'Herme. After some hesitation de Billy accepted them, then entered the Order of St. Benedict, and later was made a regular abbot. Thenceforth he led a very ascetic life and governed his monasteries with great prudence. He was especially solicitous for the proper observance of monastic discipline and with that object in view renewed, in 1566, the statutes of his predecessor, Abbot Bertrand de Moussy. During the civil wars that devastated France at this period the monastery of St.-Michel-en-l'Herme was wholly destroyed. The abbot himself was frequently obliged to seek refuge from the ravages of war, and resided, for short periods, at Laon, Nantes, Paris, and in the Priory of Taussigny. The hardships he had to undergo in his journeyings, his incessant toil and study, and his ascetic observances gradually shattered his health, and while staying in Paris with his friend Gilbert Génébrard, he died at the comparatively early age of forty-six. He was buried in the choir of the church of Saint-Séverin.

From the day on which he entered the novitiate, de Billy set aside all profane studies and devoted himself exclusively to the study of the Fathers. His critical abilities and exceptional linguistic attainments (he wrote Greek and Latin with singular purity and precision) enabled him to do much for the emendation of the text and the correct interpretation of many obscure passages in the Church Fathers. His favourite among the Fathers was St. Gregory Nazianzen. His principal works are: (1) "S. Gregorii Nazianzeni opera omnia latine" (Paris, 1569); a second and better edition appeared in 1583. (2) "Consolations et instructions" (Paris, 1570). (3) "Récréations spirituelles" (Paris, 1573). (4) "S. Gregorii Nazianzeni opuscula" (Paris, 1575). (5) "Interpretatio Latina xviii priorum capitulum S. Irenæi" (Paris, 1575). (6) "Anthologia sacra" (Paris, 1576). (7) "Joannis Damasceni opera"

(Paris, 1577). (8) "Locutiones Græcæ" (Paris, 1578). (9) "Opuscula aliqua S. Joannis Chrysostomi" (Paris, 1581). (10) "S. Isidori Pelusiotæ epis. libri tres" (Paris, 1585). (11) "S. Epiphaniî opera" (Paris, 1612).

THOMAS OESTREICH.

### Bilocation (Latin *bis*, twice, and *locatio*, place).

I. The question whether the same finite being (especially a body) can be at once in two (bilocation) or more (replication, multilocation) totally different places grew out of the Catholic doctrine on the Eucharist. According to this Christ is truly, really, and substantially present in every consecrated Host wheresoever located. In the endeavour to connect this fact of faith with the other conceptions of the Catholic mind theologians make the following distinctions: (1) The place of a body is the surface of the body or bodies immediately surrounding and in contact with the located body. (2) A physical body is in place commensurably (circumscriptively) inasmuch as the individual portions of its exterior surfaces answer singly to the corresponding portions of the immediately environing surfaces of the body or bodies that constitute its place. (3) A being is definitively in place when it is entire in every portion of the space it occupies. This is the mode of location proper to unembodied spirits and to the human soul in the organism whereof it is the "substantial form", i. e. the actuating and vitalizing principle. A spirit cannot, of course, be *in loco* circumscriptively since, having no integrant parts, it cannot be in extensional contact with the surrounding dimensions. It may be said, therefore, to locate itself by its spiritual activity (will) and rather to occupy than to be occupied by place, and consequently to be virtually rather than formally *in loco*. Such a mode of location cannot be natural to a physical body. Whether it can be so absolutely, supernaturally, miraculously, by an interference on the part of Omnipotence will be considered below. (4) A mixed mode of location would be that of a being which is circumscriptively in one place (as is Christ in heaven), and definitively (sacramentally) elsewhere (as is Christ in the consecrated Host).

II. That bilocation (multilocation) is physically impossible, that is, contrary to all the conditions of matter at present known to us, is the practically unanimous teaching of Catholic philosophers in accordance with universal experience and natural science. As to the absolute or metaphysical impossibility, that is, whether bilocation involves an intrinsic contradiction, so that by no exertion even of Omnipotence could the same body be at once in wholly different places—to this question the foregoing distinctions are pertinent. (1) Catholic philosophers maintain that there is no absolute impossibility in the same body being at once circumscriptively in one place and definitively elsewhere (mixed mode of location). The basis of this opinion is that local extension is not essential to material substance. The latter is and remains what it is wheresoever located. Local extension is consequent on a naturally universal, but still not essentially necessary, property of material substance. It is the immediate resultant of the "quantity" inherent in a body's material composition and consists in a contactual relation of the body with the circumambient surfaces. Being a resultant or quasi effect of quantity it may be suspended in its actualization; at least such suspension involves no absolute impossibility and may therefore be effected by Omnipotent agency. Should, therefore, God choose to deprive a body of its extensional

relation to its place and thus, so to speak, delocalize the material substance, the latter would be quasi spiritualized and would thus, besides its natural circumscriptive location, be capable of receiving definitive and consequently multiple location; for in this case the obstacle to bilocation, viz., actual local extension, would have been removed. Replication does not involve multiplication of the body's substance but only the multiplication of its local relations to other bodies. The existence of its substance in one place is contradicted only by non-existence in that same place, but says nothing *per se* about existence or non-existence elsewhere. (2) If mixed replication involves no absolute contradiction, definitive replication a fortiori does not. (3) Regarding the absolute possibility of a body being present circumscriptively in more than one place, St. Thomas, Vasquez, Silv. Maurus, and many others deny such possibility. The instances of bilocation narrated in lives of the saints can be explained, they hold, by phantasmal replications or by aerial materializations. Scotus, Bellarmine, Suarez, DeLugo, Franzelin, and many others defend the possibility of circumscriptive replication. Their arguments as well as the various subtle questions and difficulties pertinent to the whole subject will be found in works cited below.

F. P. SIEGFRIED.

### Bination, the offering up of the Holy Sacrifice of the Mass twice on the same day by the same celebrant.

It is believed by some (Magani, *L'Antica Liturgia Romana*, Pt. I, p. 296, Pt. II, p. 187) that even from Apostolic times private Masses were celebrated whenever convenient. Be this as it may, it is certain that in the first years of Christianity public Masses were offered on Sundays only; later, on Wednesdays and Fridays also (Tertullian, *De Oratione*, xiv). To these three days Saturday was added, especially in the East (St. Basil, Ep., cclxxxix). St. Augustine, who died in 430, assures us (Ep. liv.) that while, in his time, Mass was celebrated only on Sundays in some places, in others on Saturdays and Sundays, it was nevertheless in many places customary to have the Holy Sacrifice daily (St. August., *Sermo lviij*, *De Orat. Domin.*), as in Africa (St. August., op. cit.), in Spain (Council of Toledo, year 400), in Northern Italy (St. Ambrose, *Sermo xxv*), in Constantinople (St. John Chrysos. in Ep. ad Ephesios), as well as elsewhere. The daily Mass became universal about the close of the sixth century. Nay more, it was not long before priests began to celebrate the Holy Sacrifice two, three, or more times daily, according to their own desire, till the sacred canons (Gratian, *De Consecr.*, dist. i, can. liii) put a limit to their devotion in this regard, and Alexander II (d. 1073) decreed that a priest should be content with saying Mass once a day, unless it should be necessary to offer a second—never more—for the dead. Notwithstanding this legislation, the practice continued of celebrating oftener on some of the greater feasts: thus on the first of January one Mass was said of the Octave of the Nativity of Christ, another in honour of the Blessed Virgin; three Masses were said by bishops on Holy Thursday, in one of which sinners were reconciled to the Church, a second for the Consecration of the Oils, and a third in keeping with the feast; two Masses were said on the Vigil of the Ascension, as well as on the feast itself; three Masses were celebrated on Easter, and three also on the Nativity of St. John Baptist. On the feast of Sta. Peter and Paul the pope said one Mass in the basilica of St. Peter and a second in that of St. Paul. Finally,

abolishing all these customs, Pope Innocent III (d. 1216) prescribed that a simple priest should say but one Mass daily, except on Christmas, when he might offer the Holy Sacrifice three times; while Honorius III (d. 1227) extended this legislation to all dignitaries. This then is the discipline of both the Eastern and Western Church, from which no one may recede without grave sin.

It must be noted, nevertheless, that the Church has found it advisable under certain conditions to modify her discipline in this regard. Thus moral theology permits a priest to say two Masses on Sundays and Holy Days of obligation, in case of necessity, when, namely, a number of the faithful would otherwise be deprived of the opportunity of hearing Mass. This would be verified, for example, were a priest in charge of two parishes or missions with no other celebrant available, or were the church too small to accommodate at one time all the parishioners (See Bull, "Declarasti", of Benedict XIV, Bullarium IV, 32 sqq., 16 March, 1746; Leo XIII, Litt. Apost. "Trans Oceanum", 18 April, 1897). The ordinary of the diocese, however, is to judge, in these and similar cases, of the necessity of binating. For similar causes, the gravity of which is not quite so apparent, Rome grants to priests of missionary countries the privilege of saying two Masses (three in Mexico, according to an indult of Pope Leo XIII, Acta S. Sedis, XIII, 340, XXIX, 96) on Sundays and Holy Days of obligation, under conditions practically the same as stated above (See Bull "Apostolicum ministerium", of Benedict XIV, for the Anglican Missions, 30 May, 1753, Bullarium, X, 197 sqq.; Conc. Plen. Balt. III, Tit. iii, cap. i; Acta et Decreta Conc. Plen. Americæ Latinæ, no. 348 sqq.; Putzer, "Commentarium in Facultates Apost.", no. 159 sqq.). As regards permission to binate, theologians are agreed that it should not be given unless about thirty persons would otherwise be put to notable inconvenience to avoid missing Mass. In certain extraordinary cases this number is reduced to twenty, while, if there is question of those detained in prison or bound by the laws of the papal cloister, from ten to fifteen inmates will suffice to permit bination. It must be borne in mind that even in such cases a priest is permitted to say a second (never a third) Mass only in case another celebrant may not be had; that a stipend may not be accepted for the second Mass; that the ablutions are not to be taken at the first Mass, as this would break the fast prescribed. A celebrant who is to say two Masses in the same church uses the same chalice for both, not purifying it at the first Mass. If the second Mass is to be said in a different church, the celebrant immediately after the last Gospel of the first Mass returns to the centre of the altar, consumes whatever drops of the Precious Blood may still remain in the chalice, and then purifies the chalice with water only. This water, which is poured from the chalice into a glass on the altar, is consumed together with the second ablution of a subsequent Mass, or emptied into the sacrarium. It might even be given to a lay person who is in the state of grace and fasting, as is done with the water in which the priest's fingers are cleansed, when Holy Communion is given to the sick. The chalice thus purified at the end of the first Mass may be used for the second Mass or not, as the celebrant may see fit.

Pope Benedict XIV (d. 1758) conceded to all priests, secular and regular, of the kingdoms of Spain and Portugal the privilege of saying three Masses on All Souls' Day (2 November). This privilege still holds for all places which belonged to one or other of these kingdoms at the time when it was granted. The ordinary stipend is allowed for one only of these Masses; while the other two must be offered for all the souls of purgatory.

HIERGENROTHER in *Kirchenlex.*, s. v. *Bination*; BAMBERGER, *Pastoralblatt*, 1878, N. 46-48; NEHER, *Die Bination* (RATSBON, 1874); *Instructio S. C. de Propag. Fide*, 24, May 1870. ANDREW B. MEEHAN.

**Biner**, JOSEPH, canonist, historian, and theologian, b. at Glüringen, Switzerland, 1697; d. at Rottenburg, Germany, 24 March, 1766. His fame rests principally on a truly amazing erudition. He entered the Society of Jesus in 1715, received the usual training of its members and was later professor of canon law in the universities of Ingolstadt, Dillingen, and Innsbruck. He entered zealously into all the controversies with the sectaries of his time, especially with the Swiss heretics. As a consequence, all his works have a polemical tinge.

In 1739 appeared his "Catholische Anmerkung über die neueste uncatolische Controvers-Schreiber", directed against certain opponents in Zurich. This was followed in 1744 by "Indifferentismus", a treatise on religious indifference and liberalism in dogmatic teaching. Biner published "Heiligkeit der Kirche" in 1750, discussing the marks of the true Church and giving sketches of eminent Catholics. The best of his polemical works, one of enduring merit, is "De Summâ Trinitate, Fide Catholica et Hierarchiâ Ecclesiasticâ". It appeared in 1765 and shows him at his best as a theologian and canonist. His last controversial treatise, which appeared the same year and was published like all the others at Vienna, is entitled: "Kurzer Begriff der heutigen Glaubensstreitigkeiten". It is an examination and refutation of various Protestant confessions of faith.

Biner's chief work of a purely canonical character is "Dissertationes juridicæ de beneficiis ecclesiasticis" (Innsbruck, 1746). His masterpiece is the "Apparatus eruditionis ad jurisprudentiam ecclesiasticam". The work, despite its title, is not restricted to canon law, but is also historical, polemical, and theological. It was published at Vienna, 1754-66 in eight quarto volumes. It is a work of vast erudition and a veritable storehouse of history and canon law. Dividing his material by centuries, Biner treats of the various species of law, of the history of the church councils, of the political and religious vicissitudes of the various nations, of treaties and concordats, etc. Interspersed in the work are many valuable excursions on Jansenism, Probabilism, Public Penance, Origin of Imperial Electors, etc. It is to be regretted, however, that a work displaying such stupendous industry and erudition should be rendered less valuable for students by an unscientific arrangement of material and the want of an index. The vastness of the knowledge which Biner displays, however, has received its meed of praise even from his opponents. He wrote many other works besides those mentioned in the text, which may be found in De Backer and Sommervogel.

HURTER, *Nomenclator* (Innsbruck, 1895), III; DE BACKER, *Bibl. des Écrivains*, S. J. (Lige, 1853); SOMMERVOGEL, *Bibl. de la C. de J.* (Brussels, 1890).

WILLIAM H. W. FANNING.

**Binet**, ETIENNE, Jesuit author, b. at Dijon, France, 1569; d. at Paris, 1639. He entered the Society of Jesus in 1590 and was rector of the colleges at Rouen and Paris, and provincial of Paris, Lyons, and Champagne. He was the author of forty-five published works, the first of which, on devotion to the Blessed Virgin, passed through eleven editions. His "Flowers from the Psalms" (Rouen, 1615) was translated into Italian and Latin; "Consolation and Joy for the Sick and the Afflicted" (Rouen, 1616) was republished fourteen times in eight years; an "Essay on Nature's Wonders" (Rouen, 1621) was one of the most popular scientific works of the century; it passed through twenty-four editions before 1658. Father Binet published a "Life of St. Ignatius" and a "Life of St. Francis Xavier", in 1622, when these saints were canonized. His "Vies des SS. Elzéar et Dauphine"

was translated into English (London, 1638); "Vie de Ste. Aldegonde" was published in English at Paris (1632); "Purgatory Surveyed," a translation by Father Ashby (London, 1663), was brought out again by Father Anderdon (London, 1874); "The Rich Man Saved by the Golden Gate of Heaven; Motives and Power of Almsgiving" (Paris, 1627) is dedicated to his mother, who was still living at the age of eighty-five (Latin, Italian, and German translations of this work were published); "Mary, God's Masterpiece" (Paris, 1634) had six editions. Two years later, he published a work which was received with the greatest enthusiasm: "How Should Religious Superiors Govern?" Twelve editions of this were published in French, three in Latin, three in Italian, and one in German. "Divine Favours Granted to St. Joseph" (Paris, 1639) was translated into English (London, 1890). Father Binet's works are marked by a clear, graceful style and quite an original turn of thought; they abound in apt quotations from Scripture and the Fathers; although written 250 years ago they still furnish both pleasant and profitable spiritual reading. Father Binet was the school-fellow and lifelong friend of St. Francis de Sales, whose cheerful spirituality his own so much resembles.

SOUTHWELL, *Bibl.*; PAPILLON, *Bibl. des auteurs de Bourgoigne*; SOMMERVOGEL, *Bibl.*, I, 1487-1506; BUTENSCHOEN in *Archiv. für die Europe*, III, 316-325; HAMY, *Notice biographique*, prefixed to his edition of FATHER BINET'S *Des attributs . . . de l'amour de Jésus Christ* (Paris, 1900).

PATRICK H. KELLY.

**Binet, Jacques-Philippe-Marie**, French mathematician and astronomer, b. at Rennes, in Brittany, 2 February, 1786; d. in Paris, 12 May, 1856. After two years of study at the Ecole Polytechnique, he was appointed, in 1806, student-engineer in the government department of bridges and roads. Teaching, however, soon attracted him. For some time, he was professor of mathematics at the Lycée Napoléon. He then became, at the Ecole Polytechnique, successively, *répétiteur* of descriptive geometry, examiner, professor of mechanics, and *inspecteur-général* of studies. In 1823, he succeeded Delambre in the chair of astronomy at the Collège de France. Because of his intense devotion to the cause of Charles X, the Government of July, 1830, removed him from the Ecole Polytechnique, although it allowed him to retain his professorship at the Collège de France. He had been made a member of the Société Philomathique, in 1812. In 1843, he was elected to succeed Lacroix in the Académie des Sciences, of which he was a most active member and had become president at the time of his death. Binet was a man of modest manner and a devout Catholic.

To mathematics, mechanics, and astronomy, Binet contributed many valuable articles on a great variety of topics. These articles were published in the "Bulletins de la Société philomathique", in the "Comptes rendus de l'Académie des sciences", in the "Journal des Mathématiques" (Liouville) and, chiefly, in the "Journal de l'Ecole polytechnique." He also rewrote, to a large extent, the second volume of the "Mécanique analytique" of Lagrange for the edition of 1816. A few of his principal articles are: "Mémoire sur la théorie des axes conjugués et des moments d'inertie des corps", enunciating the principle sometimes called Binet's Theorem (*Journ. de l'Ec. pol.*, IX, 1813; "Mémoire sur la détermination analytique d'une sphère tangente à quatre autres sphères" (*ibid.*, X, 1815); "Mémoire sur la détermination des orbites des planètes et des comètes" (*ibid.*, XIII, 1831); "Mémoire sur les intégrales définies eulériennes et sur leur application à la théorie des suites ainsi qu'à l'évaluation des fonctions des grands nombres" (*ibid.*, XVI, 1839; Paris, 1840); "Mémoire sur les inégalités séculaires du mouvement des planètes"

(*Journal de Math.*, V, 1840); "Mémoire sur la formation d'une classe très étendue d'équations réciproques renfermant un nombre quelconque de variables" (Paris, 1843).

*Comptes rendus de l'Académie des sciences; Journal de l'Ecole polytechnique.*

PAUL H. LINEHAN.

**Binus, Severin**, historian and critic, b. in 1573 in the village of Randerath, Western Germany; d. 14 February, 1641. He made his studies at the gymnasium of St. Lawrence, in Cologne, and later taught in the same school for several years. After his ordination to the priesthood he obtained the degree of Doctor of Divinity from the University of Cologne, where he taught general ecclesiastical history and ecclesiastical discipline, eventually becoming (1627-30) Rector Magnificus of the university. Binus was successively canon in two chapter-churches of Cologne and finally in the cathedral. In 1631 he was made counsellor and vicar-general of the archdiocese, a promotion due to his learning and one which was amply justified by his ability in managing the affairs of the archdiocese. Besides his many ordinary occupations he was active in the ecclesiastical ministry; he was also very charitable towards the poor, especially to needy students.

The reputation of Binus is owing chiefly to his edition of the Councils of the Church. The previous collections by Jacques Merlin, Peter Crabbe, and Lorenzo Surius appeared incomplete to him, lacking as they did explanatory notes. With the help of other scholars he prepared a new edition of the councils in four volumes (Cologne, 1606) under the title "Concilia generalia et provincialia". It gives only the Latin text, and contains the acts of the councils, the decretal letters, and the lives of the popes. Binus added copious explanatory notes, drawn largely from the "Ecclesiastical Annals" of Baronius. A second edition, considerably enlarged and containing also the Greek text, appeared at Cologne in 1618. In 1639 a third edition in nine volumes appeared at Paris, in preparation for which extensive use was made of the collection of councils published at Rome from 1608 to 1612. Binus also prepared an edition of the ecclesiastical histories of Eusebius, Socrates, Theodoret, Sozomen, and Evaristus.

FRANCIS J. SCHAEFER.

**Binterim, Anton Joseph**, b. at Düsseldorf, 19 September, 1779; d. at Bilk, 17 May, 1855; a theologian of repute and for fifty years parish-priest of Bilk. He attended the Jesuit school in his native town, and then entered the Franciscan Order at Düsseldorf, 8 May, 1796. After his studies at Düren and Aachen (Aix-la-Chapelle), he was ordained priest at Cologne, 19 September, 1802. On the suppression (1803) of the Franciscan monastery to which he was attached, he was forced to retire from the religious life; after the usual examinations, he was appointed pastor of Bilk, 21 June, 1805, and administered the parish until his death. Father Binterim was the author of numerous theological treatises in defence of the Church against the attacks of the rationalists of the day, drawing his material from ancient ecclesiastical and literary sources. His many successes in controversy gained him numerous enemies and particularly the hatred of the partisans of Hermes who accused him of unlawful intrigue with Rome, evil transactions with the Jesuits, and treasonable practices against the Government. At one period, he suffered imprisonment for six months in the citadel of Wesel. Father Binterim wrote indefatigably against the existing evil of mixed marriages and

the Prussian legislation of 17 August, 1825, on such marriages, depriving the mother of all rights in the education of her child; he advised the formation of societies to protest against such abuses, and urged on pastors the duty of warning the young of the evils following upon marriages with Protestants. Resisting all offers of preferment, he remained in his parish until his death. He left his large library to the people of his parish.

Binterim's writings are chiefly remarkable for their depth of research into the sources of ecclesiastical history and literature. In particular his principal work, "Die vorzüglichsten Denkwürdigkeiten der christkatholischen Kirche mit besonderer Berücksichtigung der Disciplin derselben in Deutschland, frei bearbeitet nach der Schrift des Neapolitaners Pelliccia (de christianâ ecclesiæ primæ mediæ et novissimæ ætatis politiâ)" (7 vols., 17 parts, Mainz, 1825-41), is illustrative of many points of Christian Archaeology. In addition to this mention may be made of: "Pragmatische Geschichte der deutschen Concilien" (7 vols., Mainz, 1835-49); and "Die alte und neue Erzdiocese Köln" (Mainz, 1828-30), a treatise on the geography, statistics, and history of the Archdiocese of Cologne. He also wrote a large number of smaller works on theological, historical, controversial, and apologetic subjects, such as matrimonial questions; the use of Latin in the church ritual; the discussion as to whether St. Peter was ever in Rome, or was Bishop of Rome; the *Monita Secreta* of the Jesuits (Düsseldorf, 1853), an old myth revamped in Northern Germany; the sale of Hosts in Germany and France (2d ed., Düsseldorf, 1852).

Kesszl in *Kirchenlex.*, II, 848.

WILLIAM DEVLIN.

**Biogenesis and Abiogenesis.**—According to their Greek derivation these two terms refer to the origin of life. Biogenesis is the theory that life originates only from pre-existing life; whilst the theory of abiogenesis implies that life may also spring from inorganic matter as such.

Some philosophers maintain that life existed prior to inorganic matter. Thus Fechner considers the stars and the universe as conscious organic beings of a higher order, which in the course of time differentiated themselves to organisms of an inferior kind. W. Preyer imagines the present world of organisms as a last remnant of gigantic primeval organisms, whose breath, perchance, was luminous iron-vapour, whose blood was liquid metal, and whose food meteorites—a fantastic conception which offers no solution of the problem. Others, again, as Liebig, Helmholtz, W. Thompson, E. Dubois-Reymond, assume the transference of small living germs from other cosmic globes to our cooling earth by means of meteorites—an evasion of the question at issue, with the additional difficulties arising from the nature of meteorites. Lastly, others admit that life must have originated somewhere and at some time, since our earth and all the celestial spheres were once in a state of fusion, incapable of sustaining living germs. But here opinions diverge. Those who deny a special directive principle assert that matter and energy as such are sufficient to account for the origin of life. Vitalists, on the other hand, maintain that life is generated from living beings only; its origin must ultimately be sought in a creative act of God, who endowed matter with a force *sui generis* that directed the material energies towards the formation and development of the first organisms. Hence the distinction between abiogenesis and biogenesis. Let us examine which view harmonizes best with the facts actually observed.

A most careful and universal research has proved beyond prudent doubt that all visible organisms arise only from germs of the same kind and never

from inorganic matter. *Omne vivum ex vivo*. However the conditions of the experiment be varied, provided the receptacles and materials are free from living germs, results always verify Pasteur's well-known aphorism: *La génération spontanée est une chimère*. The attempts of J. B. Burke to produce small living cells from inorganic matter by means of radium were unsuccessful; the radiobes produced were merely bursting gas bubbles of microscopic size. Similarly, Pflüger's cyanic acid, which he compared to half-living molecules, is but a dead chemical compound. The formation of cells by a process of crystallization, as was assumed by the founders of the cell-theory, has likewise proved unfounded. In short, Virchow's statement, *Omnis cellula ex cellula*, has become an axiom of biology. Now, it is a principle universally acknowledged that the laws derived from present observations of nature are applicable also to past phenomena. How, then, can the defenders of abiogenesis uphold their theory in the face of contrary facts?—Two explanations are offered. Many authors, such as Halliburton, Verworn, Rosenthal, assume that the conditions of the earth during earlier periods were perhaps more favourable for the origin of life than those which come under our experience. Others call the spontaneous origin of life from inorganic matter a logical necessity, and add as explanation that the cell must consist of more primitive units of life, which will ever remain invisible, and whose spontaneous origin from matter is thus withdrawn from observation. These units of life have received various names; Weismann, for instance, calls them "biophorids".

But these assumptions are arbitrary. Scientific research has established the cell as the simplest and lowest unit of visible independent life. No living organism has as yet been discovered that did not contain at least two essential elements of great complexity: a granule of chromatin and some amount of cytoplasmic substance. Deprived of these constituents no cell continues to live. Hence, if life ever originated from inorganic matter, it had to appear in the form of an organized cell. Invisible biophorids are no more capable of life than the visible chromatin granules, whose parts they are supposed to be. Even if such entities as biophorids could live independently, they could not have originated spontaneously; for however primitive an organism be imagined, it must at least be capable of nourishing itself, of propagating its kind, and of evolving into higher specific forms. But such a diversity of function supposes a differentiation of structure, made up of different chemical compounds of high tension and continuously unstable equilibrium. Besides, there must be in the most primitive biophorids a perfect correlation of parts and a purposeful anticipation of future ends, tending towards the gradual perfection of individual and species. But crystals, as well as all chemical combinations and physical mixtures, show clearly that inorganic matter as such tends toward stability of equilibrium and homogeneity of structure. How, then, did those complicated chemical compounds of unstable equilibrium which composed the first organisms originate, especially since, at the beginning, the crust of the earth, totally burnt, was in the desolate condition of perfect oxidation? Besides, it is hard to see how the energy of the sun could serve to reduce the ashes, since to-day that action depends on the presence of chlorophyll and similar substances, which again are products of cells. Even if some form of energy would all at once commence continually to unite the atoms to such unstable and complicated bodies as the phosphoric proteids, there is still wanting a directive to build up, by means of existing matter and energy, the chemical

compounds into correlated structures, and to make them active organisms.

Matter, then, can never, not even under the most favourable circumstances, produce either living cells or living biophorids, and hence we conclude that life owes its origin to God, the Creator of matter and energy.

H. MUCKERMANN.

**Biology** (from *βίος*, life, and *λόγος*, reason, account, reasoning) may be defined as the science on life and living organisms. It is essentially a science of observation and experiment and comprises the study of the structure, origin, development, functions, and relation to environment of plants and animals, discussing at the same time the causes of these phenomena. Biology is obviously divided into zoology (*ζῷον*, "animal") and botany (*βοτάνη*, "herb"), according as the organism is either an animal or a plant. The biology of man is called anthropology (*ἀνθρώπος*, "man") which, as far as it concerns man's body, is a subdivision of zoology. The science of insects is called entomology (*ἐντομολογία*, "insect"). Biology is not a science of yesterday, but is as old as the human race. Its main development, however, took place during the last centuries. As a result of this development a great number of daughter-sciences have sprung into existence, each commanding its own more or less distinct field of research, and all united again to approach more and more the nature of life and to give us a clearer and more comprehensive idea of the variety and causes of vital phenomena.

An organism, be it plant or animal, may be considered under a threefold aspect: either in its *structure*, or in its *functions*, or in its *development*. And the science of biology is divided, correspondingly.

**I. BRANCHES AND SUBDIVISIONS.**—The science which describes the *structure* of organisms is called *morphology* (*μορφή*, "shape"). This may be either external or internal, and either simply descriptive or comparative. But in every case morphology concerns itself only with structure, in so far as this is a definite arrangement of matter.

*External morphology* treats of the size and shape of external parts and organs. Its chief purposes are, first, the identification of plants and animals according to certain systems of classification and, secondly, to facilitate the study of the functions of the various organs which it describes. It is practically the same as systematic biology, which treats of the kingdoms, classes, orders, families, genera, species, and varieties of organisms.

*Internal morphology* studies the interior structure of organisms and their parts; that is, organs, tissues, and cells. Accordingly it is subdivided into *anatomy* (*ἀνατομία*, "cut up"), dealing with the gross structure of organisms, *histology* (*ἱστός*, "web"), with the minute structure of the tissues, and *cytology* (*κύτος*, "cell"), with that of the cells, which are the ultimate structural and functional units of life.

Secondly, there are two sciences which refer to the *functions*, or activities, of organisms, according as these are performed by the single parts of the organism or by the organism as a whole. The latter science is called *bionomics*; the former *physiology*. Both physiology and bionomics not only describe and compare, but also inquire into the proximate causes of the various activities, and are thus intimately related to physics and chemistry, and at the same time are of paramount importance for the philosophy of life and of plant and animal activity. *Bionomics*

(sometimes called *oecology*) observes how an organism acts with regard to its environment; that is, it describes the mode of nutrition, dwelling-place (*οἶκος*), propagation, care of offspring, peculiar relation to certain classes of other organisms (symbiosis), geographical and geological distribution, and so forth. *Physiology* explains in detail how the single organs, tissues, and cells discharge their manifold functions, how a muscle contracts, how a gland pours out its secretion, and whether such functions are due to physical and chemical forces, whether and how far they are subject to a special directive.

Thirdly, the several biological sciences which describe the *development* of organisms are comprised under the general name of *morphogeny* (*μορφή* and *γενέσθαι*, "origin"), or *biogeny*. The two branches of morphogeny are *ontogeny* (*ὄντις*, "participial stem, 'being'") and *phylogeny* (*φύλον*, "race", "stock"). The former traces the gradual development of a single individual from the egg to the perfect being; the latter, that of the so-called "systematic species" from its ultimate ancestor, from which it is supposed to have been derived by evolution. *Embryology* is a special branch of ontogeny, and describes the gradual differentiation of the fertilized ovum until it has attained the structure peculiar to the particular organism.

Supplementary to the biological sciences above enumerated is the science of *palæontology*, which describes the fossil forms of plants and animals buried and petrified in the strata of the earth. The sciences of pathology, teratology, and numerous others, which pertain rather to medicine, cannot be considered here.

**II. THE HISTORICAL DEVELOPMENT** of the biological sciences may aptly be divided into four great periods: the first centring around Aristotle, Galen, and Albertus Magnus; the second commencing with Vesalius; the third, with Linnæus; the last with the theory of the cell, established by Schwann.

*First period.*—Aristotle (384–322 B. C.) laid the foundations upon which the magnificent edifice of biology has been constructed. His works, "*De historia animalium*", "*De partibus animalium*", and "*De generatione animalium*", contain the first scientific attempt to classify animals and to explain their various biological and physiological functions. Aristotle enumerates in his works about 500 kinds of animals. He distinguished groups (*γέννη*) from species (*εἶδη*), divided all animals into animals with blood (*ἔσθια*) and animals without blood (*ἀσθια*), and again into eight principal groups, and thus established a system of classification which is still maintained, at least in a corresponding form, in our own days. He also knew many physiological facts, and made several discoveries in bionomics which were rediscovered only in the nineteenth century. The influence of the great Stagirite upon posterity was very great, and for nearly 2,000 years most students of biology were more or less satisfied, like the younger Pliny, to study and commentate the works of Aristotle. In morphology and physiology, however, a considerable advancement was made by Claudius Galen, who was born in A. D. 131. Galen was a Greek by birth and later on a well-known physician in Rome. He was the first to define physiology as the science which explains the functions of the single parts (*usus partium*) of an organism.

Together with Aristotle's works Galen's morphological and physiological teachings reigned supreme in all the schools of the Middle Ages till the time of Vesalius. Only among the princes of Scholastic philosophy were there any who stepped out of the narrow circle of Aristotelean biology and commenced to study and interpret anew the living book of nature. We refer here mainly to the Dominican, Blessed Albertus Magnus (1193–1280) and to his pupils,

Thomas of Chatimpré and Vincent of Beauvais. Blessed Albertus wrote seven books on plants and twenty-six books on animals. Of the latter works, some are based on original research, while others contain many new and accurate observations which to-day are becoming more and more highly appreciated by scientists.

The second period began with the Belgian anatomist Andreas Vesalius, b. at Brussels, 1 January, 1515. Vesalius was the first who dared to oppose energetically the authority of Galen in certain anatomical questions and to insist that in such matters not the method of interpretation, but that of dissection and of personal observation alone could lead to truth and progress. In 1537 Vesalius was made Doctor of Medicine in the University of Padua, where, during the following five years he conducted the public dissections. At the end of this time he published an illustrated folio on the structure of the human body, "*Fabrica humani corporis*", which appeared at Basle in 1543. In this famous volume Vesalius corrected many errors of Galen, introduced his new method of dissection and experiment in the study of anatomy, and thus became the founder of modern anatomy. The attempt of Vesalius to overthrow traditional methods met with much encouragement, but much more opposition, apparently, for a year after the publication of his "*Fabrica*", he accepted the post of court physician offered to him by Charles V. In 1563 he made a pilgrimage to Jerusalem, and on his way back, in 1564, died on the island of Zante.

One of the greatest successors of Vesalius was William Harvey, b. at Folkestone, England, in 1578. Harvey studied medicine at Padua at the time when the Tuscan Fabricius ab Aquapendente (1537-1619) held the chair of anatomy and wrote his exposition of the Galenic doctrine concerning the circulation of the blood. In 1604 he joined the Royal College of Physicians in London. Later on he became physician to Charles I, and died 3 June, 1667. The importance of Harvey's work for biology consists in the demonstration of the true circulation of the blood through the arteries and veins. This demonstration, which he developed for the first time in his anatomical lectures at the Royal College in the year 1615, was published in 1628 under the title of "*Exercitatio de cordis motu*". Together with the discovery of the lymphatics by Aselli (1623), to which it gave rise, it constitutes the beginning of modern physiology whose existence and development is in no small degree due to the purely experimental method definitely introduced by Harvey.

Meanwhile Galileo Galilei had made his discoveries in physics, and it was not long before these discoveries began to exercise their influence upon biological studies. It was especially Giovanni Alphonso Borelli, b. at Naples, 28 January, 1608, who successfully attacked the mechanical problems suggested by muscular movement. When professor of mathematics at the University of Pisa he became acquainted with Marcello Malpighi, of Bologna, through whom he became interested in anatomical studies, and soon set about preparing a treatise on animal motion, "*De motu animalium*", which was the first of the great contributions to physical physiology. This influential work appeared in 1680, shortly after the death of its author. While Borelli was still at work on his "*De motu*", another anatomist, Nicolaus Stenson, or Steno (1638-86) developed in the same line, together with his friend Malpighi, the special physiology of glands and tissues. Steno, a convert from Lutheranism to Catholicism, was professor of anatomy in Copenhagen, his native city, and afterwards a priest and bishop in Hanover. He was one of the first to recognize the importance of the rising science of chemistry, although his at-

tention was too much occupied with the new science of geology, which he had founded, to leave him much time for other investigations. The introduction of chemical methods in biological studies had already been accomplished by Jan Baptista van Helmont, b. at Brussels in 1577, who in his turn was greatly influenced by the fantastic pilgrim Paracelsus (Theophrastus Bombast von Hohenheim), and through him by the Benedictine monk Basil Valentine. The latter lived about the time of Johannes Gutenberg and is known as the last alchemist and the first chemist.

Van Helmont's important work, "*Ortus medicinae*" appeared four years after his death, but it was the first of its kind and, like Borelli's book, exercised an important influence on future investigations. The most valuable idea of the "*Ortus medicinae*" is the explanation of digestion by fermentative processes. Perhaps the most influential of van Helmont's intellectual descendants was Franz de la Boe, or Franciscus Sylvius, professor of medicine at Leyden from 1658 till his death in 1672. Sylvius was the teacher of such brilliant men as Steno and Regner de Graaf, to whom we owe several important biological discoveries. Without making any great discoveries himself he succeeded in directing the attention of physiologists, much more than van Helmont had done, to the importance of chemistry for the solution of biological problems. Thus he became the founder of the iatro-chemical school which, in opposition to the iatro-physical school of Borelli's followers, attempted to explain all vital processes by mere chemistry.

The work of Malpighi both closes this second period in the history of biology and reaches far out into modern times. Marcello Malpighi was born at Crevalcore near Bologna, in 1628, the year in which Harvey published his essay on the circulation of the blood. He did more for the general advancement of biology than any other scientist since the days of Vesalius. With the Englishman Nehemiah Grew, he laid the foundation of vegetable morphology. His work on the silkworm argues him a remarkable anatomist, and his description of the development of the hen's egg entitles him to be considered the first embryologist. But his most important work consists in the discovery of the capillaries and the air-sacs in the lungs, and of the structure of glands and glandular organs. During the greater part of his splendid career Malpighi was professor of medicine at Bologna. In 1691 Pope Innocent XII called him to Rome to be the papal physician; Malpighi complied with the invitation, and died at Rome, 28 November, 1694. A great part of Malpighi's success was due to the fact that the microscope, one of the most important scientific instruments of modern times, had just been invented.

It is noteworthy that nearly all the great pioneers of biological progress during this second period were devoted Catholics. The Church never hampered these great scientists, so long as they proceeded by way of exact demonstration, and kept within their own province, but left them perfectly free in their investigations. The exceptional ecclesiastics who assumed an unfriendly attitude towards scientific enlightenment may well be excused when we consider, as a mere physiological fact, how deeply inherited conceptions take root in the individual mind, and, moreover, how easily any novel idea may be misinterpreted as conflicting with religious truth. But the most determined opponents of biological innovations were indeed not ecclesiastics at all, but professors of biology who found it hard to give up the ancient traditions of their lifelong study.

*Third period.*—Of Linnæus (Karl von Linné) it has been said that he found natural science a chaos and left it a cosmos. The son of a Protestant minis-

ter, he was b. 23 May, 1707, at Rashult in the south of Sweden; d. 1778. In 1741 he was made professor of medicine, and a little later of botany, in the University of Upsala, of which he was an alumnus. His main work, "*Systema naturæ*", was published for the first time in 1735. Its most complete edition is the 17th, which appeared ten years after the author's death. As its title indicates, the work is essentially a system of classification, comprising all the minerals, plants, and animals known in Linnæus' time, arranged according to classes, genera, and species. The value of this classification is mainly due to the precision of its new nomenclature. According to this "binomial" nomenclature each plant or animal received a generic and a specific name, as, for instance, *Felis catus* and *Felis leo*, indicating at once the systematic relation of the organism. Linnæus exercised a vast influence upon the biologists of his time and considerably furthered the collection of numerous morphological facts which served the great scientists of the following century as the foundation of their various theories.

To the Frenchman, Marie-François-Xavier Bichat (1771-1802), morphology owes its position as a logically co-ordinated science. Bichat was the first to introduce into biology the distinction between systems composed of heterogeneous organs and systems composed of homogeneous tissues. In a system of the former class all the organs serve some particular group of vital functions, as, for instance, the digestive system. The latter class of systems comprises all tissues which have an identical structure, as, for instance, the system of secretion. To the scientific principle established by Bichat two others were soon added which are of still greater importance in morphology. These are the laws of correlation and of homology of organs. According to the law of correlation there is a certain interdependence of all the organs of an animal, so that from the peculiar structure of one organ we may conclude as to the structure of most other organs. The law of the homology of organs maintains that all organs constructed according to the same pattern must have similar functions. But, as the same function is not necessarily bound to the same structure (e. g., the function of breathing, which may be accomplished by gills as well as by lungs), the law was complemented by the principle of the analogy of organs.

These highly suggestive laws were chiefly established by George Dagobert Cuvier—like Linnæus, a devout Protestant—who was b. in 1769 at Mömpelgardt, Würtemberg, and died, a peer of France, in 1832. His chief works were written when he was professor of comparative anatomy at the Jardin des Plantes in Paris. In Cuvier's mind originated the celebrated theory of types, which was established in the year 1812. Taking the principle for the new division of the animal kingdom from the peculiar organization of the animal, Cuvier comprises the classes of mammals, birds, and reptiles under the name of *vertebrates*, which had shortly before been introduced by Lamarck. The other classes of animals were divided into three provinces (*embranchements*), the molluscs, the articulate, and the radiates. As the doctrine of the constancy of species, Cuvier's system was opposed by Etienne-Geoffroy Saint-Hilaire (1722-1844), who emphasized the universal plan of the plan of structure pervading the animal kingdom. Cuvier also made an extensive study of the petrified organisms of prehistoric ages, and thus became the founder of the science of palæontology. Cuvier's system was further developed by C. E. von Baer (1792-1876), who discovered the mammalian ovum, and through his studies of the development of the chick laid the foundations to the science of comparative morphogeny.

During the same period of the eighteenth century the science of physiology made considerable progress through the work of Boerhaave, Stahl, and Haller. Hermann Boerhaave (1668-1738) was for a long time professor of medicine at Leyden. He was an adherent neither of the extreme chemical nor of the extreme physical school, but tried to reconcile both doctrines. His main work, "*Institutiones medicæ*", was published in 1708. A similar position as to the causes of physiological phenomena was assumed by George Ernest von Stahl (1660-1734), famous in the annals of chemistry for his *phlogiston* theory. Stahl's views were embraced by a pupil of Boerhaave, Albrecht von Haller (1708-77), who united in his voluminous work, "*Elementa Physiologiæ corporis humani*", all the theories and discoveries known to his time, and grouped them in a new manner, so that his book may be called the first modern textbook of physiology. About the time when Haller died Antoine-Laurent Lavoisier (who was guillotined by the Convention in 1794) added to the sum of physiological knowledge by solving the problem of oxidation and respiration.

*Fourth period.*—Meanwhile another important discovery had been made which gradually inaugurated the fourth and most splendid period of biology, the chief activities of which centre about the structure and functions of the cell, and about individual and specific evolution. During the same period immense progress has been made in bionomics, palæontology, morphology, physiology, and, indeed, all biological sciences. The fact has already been alluded to that, towards the close of the sixteenth century, a native of Holland, Zachary Janssen, had invented the microscope, which, after it had been considerably improved by Francesco Fontana, of Naples, and Cornelis van Drebbel, of Holland, was used by Malpighi, Jan Swammerdam (1627-80) of Amsterdam, the Englishmen Hooke and Grew, and by Antonius von Leeuwenhoek (1632-1723), the famous discoverer of the infusorians. Robert Hooke (1635-1702) was the first to represent in his "*Micrographia*" a group of cells which he had discovered with his microscope in plants; but Malpighi and Grew are generally credited with having discovered the cell. About a century later Kaspar Friedrich Wolff published his important "*Theoria generationis*" (1759), which clearly shows that he must have observed cells in plants as well as in animals. All this, however, was but preliminary; the new era in biology was fairly opened only when, in the years 1838 and 1839, the botanist Schleiden and, especially, the zoologist Schwann, established the first theory of the cell: that the cell is the ultimate structural and functional unit of life. Theodor Schwann was b. at Neuss, near Cologne, in 1810 and became professor of anatomy at Louvain in 1839, and at Liège in 1848, and died in 1882. He was a faithful Catholic throughout his life. Schwann's theory was further developed by F. Leydig (1857), by M. Schultze (1861), and by a host of such eminent scientists of the present generation, as J. Reinke, O. Hertwig, Waldeyer, Edmund B. Wilson, and many others. The name *histology* (see definitions at beginning of this article) was introduced by K. Meyer in 1819, whilst John B. Carney, who died in 1899 as a Catholic priest and professor at Louvain, is the acknowledged author and able promoter of *cytology*.

Together with cytology there came into prominence the science of ontogeny which has led many biologists of to-day back to a vitalistic conception of the phenomena of life. This science it was that suggested E. Hæckel's biogenetic law, to which it also gave the deathblow. According to Hæckel's theory, ontogeny is said to be a short and rapid repetition of phylogeny. The first to trace the entire development of all the tissues from the germ cells was Schwann.

The question: whether the embryo was preformed in the egg and originated by a simple evolution; or whether it had to be developed by an entirely new formation, or epigenesis; was mainly solved by the theory of epigenetic evolution established by Driesch and numerous collaborators. The science of phylogeny began when Lamarck, the founder of the modern theory of descent, controverted the immutability of species on scientific grounds.

The Chevalier de Lamarck (Jean-Baptiste-Pierre-Antoine de Monet de Lamarck) was born in 1744. At the age of forty-nine he became professor of the zoology of invertebrates in the Jardin des Plantes at Paris. His theory of evolution was fully explained for the first time in his "Philosophie zoologique" and later in his "Histoire naturelle des animaux sans vertèbres". During the last seventeen years of his life Lamarck was blind and lived in extreme poverty. The last two volumes of his "Histoire naturelle" he dictated to an affectionate daughter, who remained at her father's side till his death in 1829. During its first period of energetic development the theory of evolution, as proposed by Lamarck and, in a modified form, by Saint-Hilaire, failed to supersede the theory of the constancy of species, which was defended by such influential men as Cuvier; nor, indeed, were the facts known at that time in any way sufficient to ensure its acceptance. However, after Charles Darwin had published his "Origin of Species", in 1859, the new science progressed with the greatest rapidity, and at the present day there are but few prominent naturalists who do not contribute their share to phylogeny. At the same time it has gone through a considerable intrinsic development, mainly with respect to the rise and decline of the theory of natural selection as the chief factor in the development of species. Charles Darwin was born at Shrewsbury in 1809. He studied at the universities of Edinburgh and Cambridge, from 1831 to 1836 accompanied an English scientific expedition on board the "Beagle", and passed the rest of his life in the village of Downe, Kent, where he produced the numerous works which had such an incalculable influence on his age. Among Darwin's fellow-workers Alfred Russel Wallace (b. 1822) occupies the first place, since he was the co-discoverer of the principle of natural selection. Other distinguished men who took part in the development of this branch of biology were Huxley, Lyell, Nägeli, Weismann, Asa Gray. Probably the most important discoveries were those made by Hugo De Vries and by Gregor Johann Mendel, Abbot of the Augustinian Monastery at Altrbrunn, where he died in 1884. Mendel's laws of heredity, based as they are on a splendid array of facts, will be of especial influence upon future theories of heredity and development.

Together with phylogeny the science of palaeontology, founded by Cuvier, developed mainly through the influence and personal activity of such men as Joachim Barrande (1799-1833), Jean-Baptiste-Julien d'Omalius d'Halloy (1783-1875), James Dwight Dana (1813-95), Oswald Heer (1809-83), and many more. These giants in the natural sciences were at the same time faithful Christians, the first two being Catholics. Still more impressive than the progress of palaeontology is that of systematic biology and bionomics, branches to which a thousand modern scientists have devoted the entire energy of their lives. The result of all this scientific activity is apparent in the immense collections preserved in the museums of Washington, London, New York, and other large cities, and in the simple fact that the systematic species scientifically described amount to no fewer than 500,000 animals and 200,000 plants. The Linnæan system of classification was perfected in many ways, especially by the botanists A. L. von Jussieu (1789), A. P. Decandelle (1813), and by the

zoologists Cuvier, C. T. E. von Siebold (1848), and R. Leuckart (1847). The greatest of modern morphologists since the time of Albrecht von Haller are Richard Owen (1870-92), the comparative anatomist, Johann Müller, the father of German medicine, and Claude Bernard, the prince of physiologists. Müller was b. 14 July, 1801, at Coblenz, and d. 28 April, 1858, as professor of anatomy and physiology in the University of Berlin. He was the teacher of such well-known men as Virchow, Emil Dubois-Reymond, Helmholtz, Schwann, Lieberkühn, M. Schultze, Remak, Reichert, all of whom have done magnificent work in various departments of biology. Müller was chiefly an experimental physiologist, and established a vast number of facts which he described with great accuracy. At the same time he defended with energy the existence of a special vital force, which directs the various physical and chemical forces for the attainment of specific structures and functions. In the present generation biologists are gradually returning to Müller's views, which for a time they had more or less completely abandoned. The great physiologist lived all his life, as he died, a faithful Catholic. The same may almost be said of his contemporary in France, Claude Bernard, b. in 1813, at St-Julien, not far from Lyons, and d. in 1880. Bernard's main discoveries refer to the phenomena of nervous inhibition and internal glandular secretion. For a time he yielded to the materialistic philosophy of his age, but he soon abandoned it, perhaps through the influence of his friend Pasteur.

Louis Pasteur (d. 28 September, 1895), the father of preventive medicine, was probably the most gifted and influential biologist of the nineteenth century. His discoveries, which are inscribed on his tomb, in the Institut Pasteur, at Paris, extend from 1848 to 1885, and relate to the nature of fermentations, to the minutest organisms and the question of abiogenesis, to the diseases of silkworms, to the propagation of diseases by microbes, and above all to the supremely important principle of experimental immunity to pathogenic bacteria. Pasteur was a model Catholic, the most ideal scientist known in the history of biology.

Many more prominent biologists, such as Ramon y Cajal, Wundt, Brooks, Strassburger, Wasmann, have done and are still doing admirable work in the interest of biological sciences.

H. MUCKERMANN.

**Biondo, FLAVIO**, a distinguished Italian archaeologist and historian, b. at Forlì in 1388; d. at Rome in 1463. He was the founder of the science of archaeology and of Christian and medieval topography. He studied under Ballistario of Cremona and was remarkable for learning even in his youth. He lived for some time at Milan, where he discovered and copied the only manuscript of Cicero's dialogue "Brutus". In 1432 he became secretary to Pope Eugenius IV, who was afterwards driven out of Rome. Biondo accompanied the pope in his exile, was his secretary at Ferrara and Florence, and returned to Rome with him. Later he served in the same capacity under Popes Nicholas V, Calixtus III, and Pius II. An earnest student of antiquities and a man of wonderful erudition, he applied himself with indefatigable industry to the task of collecting materials for his historical, archaeological, and topographical works. He gathered his materials from original sources. Biondo was the author of three encyclopedias, which have formed the basis

of all subsequent dictionaries of Roman archaeology and antiquities. His works, which were edited after his death by his sons, include: "*Romæ Instauratæ Libri Tres*" (1482), dedicated to Pope Eugenius IV, a valuable study of the ancient monuments of Rome, the first attempt at a topographical description of the city, giving also a complete list of the principal Christian churches and chapels, when and by whom built, etc.; "*Romæ Triumphantis Libri Decem*" (1482), dedicated to Pius II, a study of the institutions and customs of the ancient Romans; "*Italia Illustrata*" (1474), a description of Italy in fourteen regions, with an accurate list of the cities, etc. Biondo's historical researches bore fruit in a great work entitled "*Historiarum ab Inclinatione Romanorum Imperii, Decades III, Libri XXXI*" (Venice, 1483), covering the period from the fall of the Roman Empire to the author's own time (1440). The work was divided into decades, but Biondo's death prevented him from completing the vast undertaking after he had written three decades and the first book of the fourth.

EDMUND BURKE.

**Biot, JEAN-BAPTISTE**, physicist and mathematician, b. at Paris, France, 21 April, 1774; d. there, 3 February, 1862. He studied at first at the College of Louis-le-Grand; in 1793 he joined the artillery of the Army of the North, but soon left the service to enter the École Polytechnique. After going to Beauvais as a professor in the central school of that city, he returned to Paris, in 1800, to occupy, at the age of 26, the chair of mathematical physics in the Collège de France. He had the distinction of ultimately belonging to three of the classes of the Institute; in 1803 he was admitted to the Academy of Sciences; in 1841, to the Academy of Inscriptions and Belles-Lettres; and in 1856, to the French Academy. After beginning his career as a mathematician and astronomer, he was assigned to the section of geometry in the Academy of Sciences. Among the interesting incidents in his career may be cited his ascension in a balloon with Gay-Lussac in 1804. They rose to a height of 13,000 feet for the purpose of studying the magnetic, electrical, and chemical condition of the atmosphere at various elevations.

Biot was actively engaged in the various branches of the geodetic work involved in the famous measurement of the quadrant of a meridian, for the purpose of standardizing the length of the new unit, the meter. As a member of the Bureau of Longitudes he went, in 1806, with young Arago, to Formentera, in the Balearic Islands, to resume the measurement of a degree of the meridian, interrupted by the death of Mechain. In 1808 he determined, with Mathieu, the length of the seconds pendulum at Bordeaux and Dunkirk. In 1817 he went to Scotland and the Shetland Islands to verify the geodetic operations of the English under Colonel Mudge. In 1824 he returned to Italy, Sicily, and Spain, in order to correct some of the observations of the year 1808. He contributed more than 250 memoirs to various societies and periodicals. This enormous work covers the entire field of experimental and mathematical physics, as well as ancient and modern astronomy. He was the champion of the corpuscular theory of light which he extended to some most ingenious explanations of the very complex phenomena of polarization. Biot discovered the laws of rotary polarization by crystalline bodies and applied these laws to the analysis of saccharine solutions. His fame rests chiefly on his work in polarization and double refraction of light.

Regular habits of study and recreation kept him

in good health and led to a ripe old age. His mental attitude may be indicated by his opposition to the open meetings of the Academy; he feared the influence of the vulgar public upon the scientific tone of the Institute. Since he was brought up in the turbulent times of the Revolution, it is not surprising to find him among the insurgents, in 1795, attempting to overthrow the Convention. Again, in 1804, he succeeded at first in prevailing on the Institute not to vote for Bonaparte's elevation to the throne. He protested against the introduction of purely political matters into the deliberations of a scientific body. His religious views became more pronounced towards the end of his life. He is said to have received the Sacrament of Confirmation at the hands of his own grandson.

The more elaborate works of Biot are: "*Traité de géométrie analytique*", 1802 (8th ed., 1834); "*Traité de physique expérimentale et mathématique*", 4 vols., 1816; "*Précis de physique*", 2 vols., 1817; "*Traité d'astronomie physique*", 6 vols. with atlas, 1850; "*Mélanges scientifiques et littéraires*", 3 vols., 1858. The last is a compilation of a great many of his critiques, biographies, and accounts of voyages. *Proc., Am. Ass'n of Arts and Sciences*, 1862, VI; *SAINT-BEUVE, Nouveaux Lundis* (Paris, 1879), II.

WILLIAM FOX.

**Birds (IN SYMBOLISM).**—Many kinds of birds are used in Christian symbolism. The first to be so employed was the *Dove*; it stood for the Third Person of the Blessed Trinity, for when Jesus was baptized the Holy Ghost descended in bodily shape as a dove upon Him (Luke, iii, 22). It was also used as a symbol of peace, because a dove brought to Noe a bough of an olive-tree as a sign that the deluge of wrath was at an end. In early Christian art the Apostles and the faithful were generally represented as doves, the first because they were the instruments of the Holy Ghost, carrying peace to the world; the second because in their baptism they received the gift of reconciliation, entering with the dove (the Holy Ghost) into the Ark of God, the Church. Sometimes in symbolical writing it stands for rest: Who will give me wings like a dove, and I will be at rest?—(Ps., liv, 7); often for simplicity, innocence, and love: Be ye therefore wise as serpents and simple as doves (Matt., x, 16); Open to me, my sister, my love, my dove, my undefiled; One is my dove, my perfect one. (Cant., v, 2; vi, 8.) The *Eagle* is a symbol of Christ and His Divine nature, of regeneration by baptism; it is also an emblem of St. John the Evangelist. As the eagle can gaze upon the shining orb of the sun with steadfast eyes, so can Christ gaze undazzled upon the refulgent glory of God the Father. Dante refers to the strong eye of the eagle (Parad., i, 47, 48):—

I saw Beatrice turn'd, and on the sun  
Gazing, as never eagle fix'd his ken.

—It was a popular delusion among the ancients that the eagle could renew its youth by plunging three times into a spring of pure water, a belief alluded to by David: Thy youth shall be renewed like the eagle's (Ps., cii, 5), hence the primitive Christians, and later the medieval symbolizers, used the eagle as a sign of baptism, the well-spring of salvation, in whose water the neophyte was dipped three times, in the name of the Father, the Son, and the Holy Ghost, in order to wash from his soul the old man of sin and put on the youth of a child of light. This bird was used as the emblem of St. John, because in his Gospel St. John dwells particularly upon the Divinity of the Redeemer and contemplates with the unflinching eye of an eagle the highest truths.

The *Pelican* is a symbol of the atonement and the Redeemer. It was supposed to wound itself in order to feed its young with its blood and to bring to life those who were dead—the "pelican who stricketh

blood out of its owne bodye to do others good" (Lyly, *Euphues*). Allusion is made to this belief in "Hamlet" (act iv):—

To his good friend thus wide I'll ope my arms  
And, like the kind, life-rendering pelican,  
Repast them with my blood.

Therefore it was deemed a fitting symbol of the Saviour, the *nostro pelicano* of Dante, Who shed His blood in order to give eternal life to the children of men. Skelton in his "Armorie of Birds" says:—

Then sayd the Pellycan:  
When my Byrds be alayne  
With my bloude I them revyve.  
Scripture doth record  
The same dyd our Lord  
And rose from deth to lyve.

The *Phoenix* is a symbol of the Resurrection and of eternity. According to legend this mythical bird could never die; on attaining its five-hundredth year it committed itself to the flames of a funeral pyre, only to rise reborn from its own ashes. Dante used it as a symbol of the souls of the damned (*Inf.*, xxiv, 197–208).

The *Peacock* in Byzantine and early Romanesque art was used to signify the Resurrection, because its flesh was thought to be incorruptible. (St. Augustine, *City of God*, xxi, c. iv.) It was also a symbol of pride. The *Raven* is a symbol of the Jews, of confession and penance. The *Cock* is a symbol of vigilance, and also an emblem of St. Peter. The *Vulture* has always typified greed. Many other birds were used during the Middle Ages for symbolic and ecclesiastical purposes; while the preachers of these centuries developed the symbolism of each one of these emblems to a degree that now seems far-fetched and often obscure, nevertheless, they made it clear that religious instruction can be gained from birds and even from the common things of life.

CARYL COLEMAN.

**Biretta**, a square cap with three ridges or peaks on its upper surface, now commonly worn by clerics of all grades from cardinals downwards. The use of such a cap is prescribed by the rubrics both at solemn Mass and in other ecclesiastical functions. Etymologically, the word *biretta* is Italian in origin and would more correctly be written *beretta* (cf. however the French *barette* and the Spanish *bireta*). It probably comes from *birrus*, a rough cloak with a hood, from the Greek *ῥυπῆς*, flame-coloured, and the *birretum* may originally have meant the hood. We hear of the *birretum* in the tenth century, but, like most other questions of costume, the history is extremely perplexed. The wearing of any head-covering, other than hood or cowl, on state occasions within doors seems to have originally been a distinction reserved for the privileged few. The constitutions of Cardinal Ottoboni issued by him for England in 1268 forbid the wearing of caps vulgarly called "coyphæ" (cf. the coif of the serjeant-at-law) to clerics, except when on journeys. In church and when in the presence of their superiors their heads are to remain uncovered. From this law the higher graduates of the universities were excepted, thus Giovanni d'Andrea, in his gloss on the Clementine Decretals, declares (c. 1320) that at Bologna the insignia of the Doctorate were the *cathedra* (chair) and the *birretum*.

At first the *birretum* was a kind of skull cap with a small tuft, but it developed into a soft round cap easily indented by the fingers in putting it on and off, and it acquired in this way the rudimentary

outline of its present three peaks. We may find such a cap delineated in many drawings of the fifteenth century, one of which, representing university dignitaries at the Council of Constance, who are described in the accompanying text as *birrectati*, is here reproduced.

The same kind of cap is worn by the cardinals sitting in conclave and depicted in the same contemporary series of drawings, as also by preachers addressing the assembly. The privilege of wearing some such head-dress was extended in the course of the sixteenth century to the lower grades of the clergy, and after a while the chief distinction became one of colour, the cardinals always wearing red birettas, and bishops violet. The shape during the sixteenth

MONUMENT REPRESENTING DOCTOR OF LAWS WEARING BIRETTA, A.D. 1352

centuries was everywhere considerably modified, and, though the question is very complicated, there seems no good reason to reject the identification, proposed by several modern writers, of the old doctor's *birretum* with the square college cap, popularly known as the "mortar-board", of the modern English universities.

The college cap and ecclesiastical biretta have probably developed from the same original, but along different lines. Even at the present day birettas vary considerably in shape. Those worn by the French, German, and Spanish clergy as a rule have four peaks instead of three; while Roman custom prescribes that a cardinal's biretta should have no tassel. As regards usage in wearing the biretta, the reader must be referred for details to some of the works mentioned in the bibliography. It may be said in general that the biretta is worn in processions and when seated, as also when the priest is performing any act of jurisdiction, e. g. reconciling a convert. It was formerly the rule that a priest should always wear it in giving absolution in confession, and it is probable that the ancient usage which requires an English judge

DRAWING, A. D. 1414, DIGNITARIES AT COUNCIL OF CONSTANCE

As regards usage in wearing the biretta, the reader must be referred for details to some of the works mentioned in the bibliography. It may be said in general that the biretta is worn in processions and when seated, as also when the priest is performing any act of jurisdiction, e. g. reconciling a convert. It was formerly the rule that a priest should always wear it in giving absolution in confession, and it is probable that the ancient usage which requires an English judge

to assume the "black cap" in pronouncing sentence of death is identical in origin.

**HERBERT THURSTON.**

**Birgida, Birgit, Birgitta.** See **BRIDGET, SAINT.**

**Birinus (BERIN), SAINT, Confessor**, first Bishop of Dorchester (in what is now the County of Oxford, not Dorchester, the capital of Dorsetshire), and Apostle of Wessex; date of birth unknown; d. 3 December, 650, at his see and was buried in his own church there. Later (680) his remains were deposited by Bishop Headda in the cathedral at Winchester, where finally (4 September, 972) Bishop Ethelwold enshrined them in silver and gold. According to Bede, Birinus came to Britain on the advice of Pope Honorius I (625-638), having been consecrated bishop by Asterius at Genoa. He promised "to sow the seed of the holy faith in the inner parts beyond the English", but on his arrival (634) found the West Saxons so pagan that he decided to devote his ministry to them. God blessed his zeal by the conversion of their king, Cynegils (635), of his son Cwichelm (636), and of Cwichelm's son Cuthred (639). Cynegils' daughter (Cyneburga?) was also baptized, and Oswald, the holy King of Northumbria, who had come to Cynegils in suit of her hand, was sponsor to her father and wedded her. Doubtless his presence helped Birinus much in his first spiritual conquests. Immediately after this, Oswald and Cynegils gave him Dorcic, or Dorchester, the capital of Wessex, for his see, where "he built and consecrated many churches and by his labours called many to the Lord".

Birinus had great devotion for the Body of Our Lord, as is shown in the account of his walking on the sea to procure the corporal given him by Pope Honorius, wherein he ever carried the Blessed Eucharist. Field strangely disposes of this miracle and others as allegorical or fabricated, after allowing, however, that their chroniclers had some common source of information lost to us now. Many miracles took place at the discovery of Birinus's relics, and Huntingdon among others speaks of "the great miracles of Birin". At present, there is a growing devotion to him in the Established Church, due probably to the connexion of the royal family with Cerdic, a side branch of whose stock was Cynegils. Field enumerates many modern Protestant memorials. The Catholics of Dorchester honoured their patron, in 1849, with a beautiful chapel.

**CHARLES L. KIMBALL.**

**Birkowski, FABIAN**, Polish preacher, b. at Lemberg, 1586; d. at Cracow, 1636. He completed his studies at the University of Cracow, where he also began to teach philosophy in 1587. After having taught there for five years he entered the Dominican Order (1592), and devoted himself for some time to a deeper study of theology. Thereupon he began his career as a preacher in the church of the Holy Trinity at Cracow where the king attended Divine worship. During fourteen years his fame as a preacher drew immense crowds. Sigismund III was much attached to him and often consulted him on matters temporal

and spiritual. He induced Birkowski to follow the court when it was transferred to Warsaw. He also appointed him court-preacher to his son Wladislaw. In the crusades of 1617 and 1618 against Turkey, Russia, and Walachia, the friar took no small part, and some of his best sermons were delivered to the soldiers. Two years before his death he retired to his monastery and never left it save to preach on some great occasion or in behalf of charity. Birkowski is considered one of the greatest orators of Poland. His contemporaries spoke of him as the "Sarmatian Chrysologus", and posterity has not found anyone superior to him in purity of diction in the sixteenth century. He uses Scripture quotations very often, though he also refers frequently to Virgil, Horace, and Homer, and among later writers to Justus Lipsius. He has no respect for the learning and temper of Erasmus. Of his sermons only a few have been published. There are three volumes of sermons for Sundays and Holy Days, besides panegyrics on St. Josaphat, Sigismund III, his wife Constantia, and sermons on the Blessed Virgin delivered in camp.

**THOS. M. SCHWERTNER.**

**Birmingham, DIOCESE OF (BIRMINGHAMIA, BIRMINGHAMIENSIS).**—One of the thirteen dioceses erected by the Apostolic Letter of Pius IX, 27 September, 1850, which restored a hierarchy to the Catholic Church in England. It comprises the counties of Oxford, Stafford, Warwick, and Worcester. It takes its name from the municipal city of Birmingham in Warwickshire, the largest town of the four counties. Previous to 1850, these same four counties were included, first in the Midland, then in the Central, District or Vicariate, which had been governed by vicars-Apostolic since 1688, of whom by far the most illustrious was Bishop Milner (1803-26)—a man equally learned in polemics, ecclesiastical history, and sacred archæology. To his untiring energies and undaunted front against a strongly organized schismatical opposition, the Church in England owes its present stability and its solid ecclesiastical unity. Under Milner, whose episcopal residence was at Wolverhampton (Staffordshire), this vicariate became the starting-point and then the centre of the Catholic Movement, or Revival, in the last century (1800-50). Its prominence as well as its lustre was due not merely to its central position, but chiefly to Milner's brilliant talents, his magnetic influence, and clear foresight. Its two educational establishments—Sedgley Park School, Wolverhampton, and St. Mary's College, Oscott, Birmingham—presided over and staffed by exceptionally able men, lent their aid also to this great movement by supplying a zealous body of clergy and a laity thoroughly grounded in Catholic principles. When, later on, the Oxford movement led to so many conversions, Oscott College became the rallying point for the Catholic forces, inasmuch as its then president, Bishop Wiseman (1840-17), was the acknowledged leader and interpreter. To Oscott John Henry Newman had come from Littlemore after his reception into the Church, and many other distinguished converts besides.

The last vicar-Apostolic of this henceforth historic vicariate was William Bernard Ullathorne, O.S.B., who was consecrated 21 June, 1846. After ruling the Western Vicariate for a short time he was translated to the Central District, to become the first Bishop of the newly created See of Birmingham. Next to Wiseman, he had done most to promote the restoration of the hierarchy. On 27 October, 1850, Bishop Ullathorne was enthroned in St. Chad's Cathedral, Birmingham, when Dr. Newman preached his celebrated sermon "Christ on the Waters", second only to the "Second Spring" delivered at the First Provincial Synod of Westminster at Oscott

(July, 1852). The cathedral and bishop's house had been erected in Bishop Walsh's vicariate (21 June, 1840) from designs drawn by Augustus Welby Pugin, the foremost promoter of the revival of Gothic architecture, who, through the munificence of John, 16th Earl of Shrewsbury, adorned the diocese with many ecclesiastical buildings. Over the high altar of St. Chad's Cathedral rest the relics of its patron which had been enshrined till the Reformation in Lichfield Cathedral. On 24 June, 1852, the cathedral chapter, consisting of a provost and ten canons, was duly erected, to which three honorary canons have since been added. The first and third provosts, respectively, were Mgr. Weedall, D.D., and Dr. Northcote, both presidents of Oscott. The first diocesan synod was held 9 and 10 November, 1853, since which time there have been thirteen other synods (1853-1906). In 1873, owing to refusal to renew the lease, Sedgley Park School was transferred to St. Wilfrid's, Cotton, Staffordshire, formerly the residence of Father Faber and the Oratorians. In the October of the same year St. Bernard's Diocesan Seminary was opened at Olton, Warwickshire, of which the first rector was the Rev. Edward Ilsley, successively canon and bishop-auxiliary (December 4, 1879).

In July, 1887, Bishop Ullathorne resigned, becoming Titular Archbishop of Cabasa. He retired to Oscott, where he died 21 March, 1889. Two persons stand forth conspicuous in the history of the Birmingham diocese whose relations with Bishop Ullathorne were exceptionally close, Cardinal Newman and Mother Margaret Hallahan. The former lived and died at the oratory, Edgbaston, Birmingham, and the new basilica opened 9 October, 1906, will perpetuate his memory. The latter was the foundress of the English Congregation of Nuns of the Third Order of St. Dominic, who have convents and hospitals at Stoke on Trent and Stone. The latter is the burying place both of Archbishop Ullathorne and Mother Margaret. The large number of communities of women who have found a home in this diocese attracted by the personality of Bishop Ullathorne include Benedictines (2 abbeys, 3 priories), Poor Clares, Little Sisters of the Poor, Sisters of Mercy and of St. Paul—the latter introduced from Chartres by Mother Geneviève Dupuis. Another religious force, specially characteristic of the diocese, has been the annual reunions in the Town Hall, Birmingham, which, begun in 1855, have been presided over by eminent Catholics, and have tended to keep the clergy and laity in touch with one another. Mention, too, must be made of John Hardman of Birmingham, whose firm has done so much in promoting ecclesiastical art, notably stained-glass and metal work, and whose benefactions to the cathedral choir have enabled it to reach a standard of excellence in church music which places it first among Catholic choirs. On 17 February, 1888, Dr. Ilsley became the second Bishop of Birmingham, and at once took in hand the difficult task of protecting and rescuing the destitute Catholic children of the diocese. St. Edward's Home for homeless boys was opened at Coleshill (Warwickshire), 6 November, 1906, with branch houses for boys and girls, similarly situated, in various centres, besides a Home for Working Boys and a Night Refuge, both in Birmingham. In July, 1889, Oscott College was closed to lay students and reopened as a Central Seminary for ecclesiastics only. The progress of Catholicism since 1850 is gauged by a comparison of a few statistics for the years 1851 and 1906, respectively: clergy, 124 and 297; churches, 82 and 189; religious communities, 19 and 97.

JOHN CASWELL.

**Birnbaum**, HEINRICH (also known as DE PIRO, the latinized form of his German name), a pious and learned Carthusian monk, b. in 1403; d. 19 February, 1473. Little is known of him before his entrance into the Carthusian monastery at Cologne on 14 March, 1435, at the age of 32 years. On account of his edifying example in the observance of the rule and his extensive scriptural and theological learning he was highly esteemed by his confrères, and as early as 1438, only three years after his entrance into the order, he became prior of the monastery of Mont Saint André at Tournai (Doornik) in Belgium. The desire for a reform of the religious orders, which animated many great men of the fifteenth century, had also penetrated the soul of Birnbaum. Being a true reformer, he soon succeeded, by the irresistible force of his own pious example, in abolishing the few abuses that had found admittance into the various monasteries over which he became prior, and in restoring the austere monastic discipline established by the founder St. Bruno. After holding the position of prior at Mont Saint André for eleven years, he was active in the same office successively at Wesel in Rhenish Prussia, until 1457; at Rettel in Lorraine, until 1459; at Trier, until 1461; and at Diest in Belgium, until 1463. In 1463 he was appointed prior at Liège, but ill health forced him to resign this position and retire to the Carthusian monastery at Cologne, where he had spent the first days of his monastic life. The remaining ten years of his life Birnbaum spent in writing several ascetic works and in preparing for a happy death. There were with him at that time in the Carthusian monastery of Cologne some of the most learned and saintly men of Germany, such as Hermann Appeldorn (d. 1472), Hermann Greffen (d. 1480), Heinrich von Disen (d. 1484), and Werner Rolewink (d. 1502). Birnbaum wrote for the instruction and direction of the members of his order a number of works, many of which, however, have not yet been put in print, also: "Defensio pro Immaculato Conceptu B. M. V.", and "Excerpta ex malo granato cum nonnullis conjunctis". He has often been confounded with his uncle of the same name, one of the most learned jurists of the fifteenth century, who was for some time provost of St. Kunibert's at Cologne, and who died in 1439. See "Le Grand Dictionnaire Historique" (Amsterdam, 1698), III, 138; also Jöcher, "Gelehrten Lexicon", III, 1589.

MICHAEL OTT.

**Birth**, THE DEFECT OF (ILLEGITIMACY), a canonical impediment to ordination. When used in this connexion, the word *illegitimate* has, in canon law, a well-defined meaning, which is: "born out of lawful wedlock". Illegitimate birth is an impediment to the reception of orders, and inhibits the exercise of the functions of orders already received. It is a canonical impediment, because established and laid down in the canon law as a hindrance to entering the clerical state. This prohibition does not touch the validity of orders, but makes the reception of them

illicit. It extends to first tonsure. The inhibition that is set up is restricted to the functions that belong exclusively to the clergy. In the early ages of the Church no law prevented the ordination of illegitimates. They were then, sometimes, debarred from ordination, but only because of a real or supposed depravity of life. Pope Urban II (1088-99) prohibited the ordination of the illegitimate offspring of clerics, unless they became members of approved religious orders. The Council of Poitiers, under Paschal II (1099-1118), extended this prohibition to all persons of illegitimate birth. These regulations were later approved by other popes and councils.

The law as laid down in the Decretals of Gregory IX (I, X) mentions only the offspring of clerics and those begotten in fornication. But in the sixth book of the Decretals all persons of illegitimate birth are expressly included. These may be ranged in the following classes: (1) Natural illegitimates, or the offspring of parents who at the time of the birth or conception of such offspring, were capable of contracting Christian marriage. (2) Spurious illegitimates, or those born of a known mother and an unknown father—unknown because the mother had carnal relations with several men. (3) Adulterine illegitimates, those begotten of parents, one or both of whom, at the time of the conception and birth of such offspring, were lawfully married to a third person. (4) Incestuous illegitimates, or persons whose parents could not marry because of an invalidating impediment of consanguinity or affinity. (5) Sacrilegious illegitimates, or the offspring of parents who are restrained from marriage because of the impediment of Holy orders or solemn religious vows. The practice of the present day also holds as illegitimates abandoned children of unknown parentage. Legitimacy may not be presumed nor established by negative proof. Positive documentary evidence must be adduced.

The law of illegitimacy directly debars all the foregoing classes of persons from promotion to orders, and the exercise of the functions proper to the orders already received; and it indirectly prevents such persons from obtaining a benefice. Directly, also, it prevents them from obtaining certain benefices, for the Council of Trent (Sess. 25, c. 15 de ref.) decreed that the illegitimate children of clerics should be incapacitated from obtaining any kind of a benefice in the Church where their fathers held one; from rendering any service in said church; and from receiving any pensions on the revenues of the paternal benefice. This law is not established and laid down as a punishment for the person to whom it is applied. It safeguards the honour and dignity of Holy orders. The clerical state which has the dispensing of the mysteries of God must be beyond reproach. No stain should be upon it, no blame possible. Therefore the Church raises the barrier of illegitimacy before the entrance to the priesthood. Thus the crime of the parents is held up to just reprobation, and is condemned even in the lives of their offspring. The danger of the father's incontinence being continued in the life of the son is greatly lessened, for strong indications of purity of life must be given before the door of God's ministry can be opened.

The defect of illegitimate birth may be cured in four ways: (1) By the subsequent marriage of the parents; (2) By a rescript of the pope; (3) By religious profession; (4) By a dispensation. (1) The subsequent marriage of the parents of an illegitimate has, by a fiction of law, a retroactive power which carries the marriage back to the time of the birth of the offspring and covers it with lawful wedlock. In order that the fiction of law may produce this effect, the parents, at the time of the conception or, at least, at the birth of such offspring, must have been capable of contracting lawful marriage. Therefore, this mode

of legitimation is applicable only to natural illegitimates. And these, though legitimized by the subsequent marriage of the parents, or even by an Apostolic dispensation, are forever excluded from the dignity of the cardinalate. (2) A rescript of the pope confers legitimacy in so far as it is required for spiritual affairs throughout the universal Church. (3) Religious profession in an approved order cures the defect of illegitimacy. Religious profession is the taking of the solemn religious vows; but the simple vows taken after the novitiate in some orders produce a like effect. This mode of legitimation only renders illegitimates capable of ordination. It cannot be extended to dignities or even to regular prelacies. Hence, illegitimates thus legitimized are still debarred from the position of abbot; and women of illegitimate birth, for like reasons, cannot hold the position of abbess or prioress. (4) A dispensation granted by a lawful superior removes the defect of illegitimate birth, but only for some express purpose. It is not a mode of absolute legitimation. The purposes for which it is granted must be specified; as for promotion to minor orders, to major orders, to a specified benefice.

A dispensation of this kind runs counter to the common law. It is of strict interpretation, and therefore cannot be extended from like to like or from greater to less, unless the one is included in, and presupposes, the other. Such is the case when a dispensation is conceded to an illegitimate to receive Holy orders. Such orders require a title, and this title is, in canon law, a benefice. The pope is the lawful superior for the universal Church, and as such he can dispense in all cases where a dispensation is possible. Bishops and other prelates having quasi-episcopal jurisdiction can dispense their own subjects, in this matter, for first tonsure, minor orders, or a simple benefice; but not for major orders, even though the illegitimacy be occult. This episcopal, or quasi-episcopal, jurisdiction does not extend to a benefice which was immediately possessed by the father of the person seeking the dispensation, nor to a benefice which by custom or privilege requires its possessor to be in major orders.

JAMES H. DRISCOLL.

**Birtha**, a titular see of Orshaene, probably identical with Birejik (Zegma) on the left bank of the Euphrates, c. 62 miles west of Orfa (Edessa), and 95 miles north of Aleppo. Birtha (Aramæan, *Birṯā* "castle") is spoken of as a castle by ancient authors (Hierocles, 715, 2). There was also a see called by the Greeks Macedonopolis, the foundation of the city being attributed by legend to Alexander the Great (Amm. Marcell., XX, vii, 17). That Macedonopolis and Birtha are one see is proved by the subscriptions at the Council of Nicæa, where we see that *Birt'* in both Syriac and Arabic lists corresponds with Macedonopolis in Greek and Latin lists (Gelzer, *Patrum Nicænorum nomina*, 242). The true name of the bishop present at the council is Mareas, not Marcus. Daniel, Bishop of Macedonopolis, is said to have been present at the Council of Chalcedon (451). From the sixth century only the name Birtha survives (Georgius Cypricus, n. 899). Emperor Anastasius, after his victories over the Persians in 505, entrusted Sergius, Bishop of Birtha, with the work of repairing the city (Wright, ed., *The Chronicle of Joshua the Stylite*, XCI, lxxi), an undertaking that was completed by Justinian (Procop., *De ædific. Just.*, II, 4). The oldest "Tacticon" of the Patriarchate of Antioch, issued under Anastasius I (599) places Birtha first among the suffragan

sees of Edessa (Kerameus, ed., *'Αντίστοιχα Ἑλληνικά*, lxxv); the name is written *Βύρπη* in a later redaction (ibid., lxxix), and *Virehi* in an old Latin translation (Tobler and Molinier, *Itinera Hierosolymitana*, I, 322). BIRTHA was destroyed by Timour-Leng in the fourteenth century. Birejik is to-day the chief town of a *caza* in the vilayet of Aleppo with 10,000 inhabitants, including 1,500 Christians, all Armenians, one-half of whom are Catholics.

Ptolemy (V, xviii, xix) speaks of a fortress BIRTHA on the Tigris in Southern Mesopotamia and of another in Arabia on the Euphrates below Thapsacus. The site of the first is unknown, the latter is at Ed-Deir (Ritter, *Erdkunde*, XI, 691), but perhaps both are the same as BIRTHA or Macedonopolis.

LEQUIEN, *Oriens Christ.*, II, 986; CUNET, *La Turquie d'Asie*, II, 265-269; GEORGIUS CYPRIUS, ed. GELEZER, 164; GAMS, *Series Episcoporum*, 437.

L. PETIT.

**Bisaccia.** See SANT' ANGELO DE' LOMBARDI.

**Bisarchio**, DIOCESE OF, situated in Sardinia, in the province of Sassari, district of Nuoro, and suffragan to the Archdiocese of Sassari. The episcopal residence, however, is at Ozieri. Nothing is known as to the early history of Christianity in either the city or Diocese of Bisarchio. The first bishop mentioned is Costantino Madrone (c. 1102), who was succeeded in 1116 by Bishop Pietro. The bishop's residence was changed several times, once to Giracle, and again to Ardera. In 1503, at the death of Fra Calcerando, bishop of this see, Bisarchio was incorporated into the Diocese of Alghero. The diocese was re-established by Pius VII in his Bull of 9 March, 1803, and bestowed upon Giannantioco Azzei, who in 1819 was promoted to the archiepiscopal See of Oristano, his native place. The episcopal residence was then definitely transferred to Ozieri. The cathedral, built in 1153, is well planned.

The Diocese of Bisarchio contains 24 parishes, 116 churches, chapels, and oratories, 78 secular priests, 25 seminarists, and a population of 40,000.

CAPPELLETTI, *Le chiese d'Italia* (Venice, 1844); *Annuario ecc.* (Rome, 1906).

U. BENIGNI.

**Bisceglie.** See TRANI AND BARLETTA.

**Bishop** (A. S. *Biscop*, *Biscep*, Ger. *Bischof*; from Gr. *ἐπίσκοπος*, an overseer, through Lat. *episcopus*; It. *vescovo*; O. Fr. *vesque*; Fr. *évêque*. See Murray, "New Eng. Dict.," Oxford, 1888, I, 878), the title of an ecclesiastical dignitary who possesses the fullness of the priesthood to rule a diocese as its chief pastor, in due submission to the primacy of the pope. It is of Catholic faith that bishops are of Divine institution. In the hierarchy of order they possess powers superior to those of priests and deacons; in the hierarchy of jurisdiction, by Christ's will, they are appointed for the government of one portion of the faithful of the Church, under the direction and authority of the sovereign pontiff, who can determine and restrain their powers, but not annihilate them. They are the successors of the Apostles, though they do not possess all the prerogatives of the latter. (Council of Trent, Sess. XXIII, ch. iv; can. vi, vii. See COLLEGE, APOSTOLIC.) The episcopate is monarchical. By the will of Christ, the supreme authority in a diocese does not belong to a college of priests or of bishops, but it resides in the single personality of the chief. The subject will be treated under five heads: I. Historical Origin; II. Present Legislation; III. Rights and Powers of the Bishop; IV. Obligations of the Bishop; V. Non-Catholic use.

I. HISTORICAL ORIGIN.—The historical origin of the episcopate is much controverted; very diverse hypotheses have been proposed to explain the texts of the inspired writings and of the Apostolic Fathers

relating to the primitive ecclesiastical hierarchy. They are most easily found in the work of von Dunin-Borkowski, on the latest researches concerning the origin of the episcopate (*Die neueren Forschungen über die Anfänge des Episkopats*, Freiburg, 1900). The Apostolic and consequently the Divine origin of the monarchical episcopate has always been contested but especially so since Protestantism put forward the doctrine of a universal Christian priesthood. At the present day, rationalistic and Protestant writers, even those who belong to the Anglican Church, reject the Apostolic institution of the episcopate; many of them relegate its origin to the second century. Löning attempts to prove that originally there were several different organizations, that some Christian communities were administered by a body of presbyters, others by a college of bishops, others again by a single bishop. It is the last named form of organization, he declares, which has prevailed (*Gemeindeverfassung des Urchristentums*, Halle, 1889). Holtzmann thinks that the primitive organization of the churches was that of the Jewish synagogue; that a college of presbyters or bishops (synonymous words) governed the Judæo-Christian communities; that later this organization was adopted by the Gentile churches. In the second century one of these presbyter-bishops became the ruling bishop. The cause of this lay in the need of unity, which manifested itself when in the second century heresies began to appear. (Pastoralbriefe, Leipzig, 1880.) Hatch, on the contrary, finds the origin of the episcopate in the organization of certain Greek religious associations, in which one meets with *ἐπισκοποι* (superintendents) charged with the financial administration. The primitive Christian communities were administered by a college of presbyters; those of the presbyters who administered the finances were called bishops. In the large towns, the whole financial administration was centralized in the hands of one such officer, who soon became the ruling bishop (*The Organization of the Early Christian Churches*, Oxford, 1881). According to Harnack (whose theory has varied several times), it was those who had received the special gifts known as the *charismata* (*χαρίσματα*), above all the gift of public speech, who possessed all authority in the primitive community. In addition to these we find bishops and deacons who possess neither authority nor disciplinary power, who were charged solely with certain functions relative to administration and Divine worship. The members of the community itself were divided into two classes: the elders (*πρεσβύτεροι*) and the youths (*νεώτεροι*). A college of presbyters was established at an early date at Jerusalem and in Palestine, but elsewhere not before the second century; its members were chosen from among the *πρεσβύτεροι*, and in its hands lay all authority and disciplinary power. Once established, it was from this college of presbyters that deacons and bishops were chosen. When those officials who had been endowed with the charismatic gifts had passed away, the community delegated several bishops to replace them. At a later date, the Christians realized the advantages to be derived from entrusting the supreme direction to a single bishop. However, as late as the year 140, the organization of the various communities was still widely divergent. The monarchical episcopate owes its origin to the need of doctrinal unity, which made itself felt at the time of the crisis caused by the Gnostic heresies. (Von Dunin-Borkowski, 100-101.)

J. B. Lightfoot, who may be regarded as an authoritative representative of the Anglican Church, holds a less radical system. The Primitive Church, he says, had no organization, but was very soon conscious of the necessity of organizing. At first the apostles appointed deacons; later, in imitation

of the organization of the synagogue, they appointed presbyters, sometimes called bishops in the Gentile churches. The duties of the presbyters were twofold: they were both rulers and instructors of the congregation. In the Apostolic age, however, traces of the highest order, the episcopate properly so called, are few and indistinct. The episcopate was not formed from the Apostolic order through the localization of the universal authority of the Apostles, but from the presbyteral (by elevation). The title of bishop originally common to all came at length to be appropriated to the chief among them. Within the period compassed by the Apostolic writings, James, the brother of the Lord, can alone claim to be regarded as a bishop in the later and more special sense of the term. On the other hand, though especially prominent in the Church of Jerusalem, he appears in the Acts as a member of a body. As late as the year 70, no distinct signs of episcopal government had yet appeared in Gentile Christendom. During the last three decades of the first century, however, during the lifetime of the latest surviving Apostle, St. John, the episcopal office was established in Asia Minor. St. John was cognizant of the position of St. James at Jerusalem. When, therefore, he found in Asia Minor manifold irregularities and threatening symptoms of disruption, he not unnaturally encouraged in these Gentile churches an approach to the organization, which had been signally blessed and had proved effectual in holding together the mother-church of Jerusalem amid dangers no less serious. The existence of a council or college necessarily supposes a presidency of some kind, whether this presidency be assumed by each member in turn, or lodged in the hands of a single person. It was only necessary, therefore, to give permanence, definiteness, stability to an office the germ of which already existed. There is no reason, however, for supposing that any direct ordinance was issued to the churches by St. John. The evident utility and even pressing need of such an office, sanctioned by the most venerated name in Christendom, would be sufficient to secure its wide though gradual reception. The earliest bishops, however, did not hold the position of independent supremacy which was and is occupied by their later representatives. This development is most conveniently grasped in connexion with three great names: Ignatius, Irenæus, and Cyprian, who represent as many successive advances towards the supremacy ultimately attained. By Ignatius the bishop is regarded as the centre of unity; to Irenæus he is the depositary of primitive truth; to Cyprian, he is the absolute vicegerent of Christ in things spiritual (Lightfoot, *The Christian Ministry*, 181-269, in his commentary on St. Paul's Epistle to the Philippians, London, 1896).

Catholic writers agree in recognizing the Apostolic origin of the episcopate, but are much divided as to the meaning of the terms which designate the hierarchy in the New Testament writings and the Apostolic Fathers. One may even ask if originally these terms had a clearly defined significance (Bruders, *Die Verfassung der Kirche bis zum Jahre 175*, Mainz, 1904). Nor is there greater unanimity when an attempt is made to explain why some churches are found without presbyters, others without bishops, others again where the heads of the community are called sometimes bishops, sometimes presbyters. This disagreement increases when the question comes up as to the interpretation of the terms which designate other personages exercising a certain fixed authority in the early Christian communities. The following facts may be regarded as fully established: (1) To some extent, in this early period, the words bishop and priest (*ἐπίσκοπος* and *πρεσβύτερος*) are synonymous. (See the principal interpretations in the article: COLLEGE, APOSTOLIC.) (2) These terms

may designate either simple priests (A. Michiels, *Les origines de l'épiscopat*, Louvain, 1900, 218 sqq.) or bishops possessing the full powers of their order. (Batiffol, *Études d'histoire et de théologie positive*, Paris, 1902, 266 sqq.; Duchesne, *Histoire ancienne de l'église*, Paris, 1906, 94.) (3) In each community the authority may originally have belonged to a college of presbyter-bishops. This does not mean that the episcopate, in the actual sense of the term, may have been plural, because in each church the college of presbyter-bishops did not exercise an independent supreme power; it was subject to the Apostles or to their delegates. The latter were bishops in the actual sense of the term, but they did not possess fixed sees nor had they a special title (Batiffol, 270). Since they were essentially itinerant, they confided to the care of some of the better educated and highly respected neophytes the fixed necessary functions relating to the daily life of the community. (4) Sooner or later the missionaries had to leave the young communities to themselves, whereupon their direction fell entirely upon these local authorities who thus received the Apostolic succession. (5) This local superior authority, which was of Apostolic origin, was conferred by the Apostles upon a monarchic bishop, such as is understood by the term to-day. This is proved first by the example of Jerusalem, where James, who was not one of the Twelve Apostles, held the first place, and afterwards by those communities in Asia Minor of which Ignatius speaks, and where, at the beginning of the second century the monarchic episcopate existed, for Ignatius does not write as though the institution were a new one. (6) In other communities, it is true, no mention is made of a monarchic episcopate until the middle of the second century. We do not wish to reject the opinion of those who believe that there are in several documents of the second century traces of the monarchic episcopate, that is to say, of an authority superior to that of the college of the presbyter-bishops. The reasons which some writers allege, in order to explain why, for example, in the Epistle of Polycarp no mention is made of a bishop, are very plausible. The best evidence, however, for the existence at this early date of a monarchic episcopate is the fact that nowhere in the latter half of the second century is the least trace to be found of a change of organization. Such a change would have robbed the supposed college of presbyter-bishops of their sovereign authority, and it is almost impossible to comprehend how this body would have allowed itself to be everywhere despoiled of its supreme authority, without leaving in the contemporary documents the least trace of a protest against so important a change. If the monarchic episcopate began only in the middle of the second century, it is impossible to comprehend how at the end of the second century the episcopal lists of several important bishoprics giving the succession of monarchic bishops as far back as the first century were generally known and admitted. Such, for instance, was the case at Rome. (7) This theory, it must be carefully noted, does not contradict the historical texts. According to these documents, there was a college of presbyters or of bishops which administered several churches, but which had a president who was none other than the monarchic bishop. Although the power of the latter had existed from the beginning it became gradually more conspicuous. The part played by the *presbyterium*, or body of priests, was a very important one in the earlier days of the Christian Church; nevertheless it did not exclude the existence of a monarchic episcopate (Duchesne, 89-95).

During the first three centuries, the entire religious life of the diocese centred around the person of the bishop. The priests and deacons were his auxiliaries, but they worked under the immediate direction of

the bishop. In large cities, however, like Rome, it was soon found necessary to hand over permanently to the priests and deacons certain definite functions. Moreover, as a result of the spread of Christianity outside the great centres of population, the bishop gradually left to other ecclesiastics the administration of a fixed portion of the diocesan territory. In the East, at first bishoprics were created in all districts where there was a considerable number of Christians. But this system presented great inconveniences. To distant or rural localities, therefore, the Church sent bishops, who were only the delegates of the bishop of the city, and who did not possess the right of exercising the most important powers of a bishop. Such bishops were known as *Chorepiscopi* or rural bishops. Later on, they were replaced by priests (Gillman, *Das Institut der Chorbischöfe im Orient*, Munich, 1903). The establishment of parishes from the fourth and the fifth century on gradually freed the bishops from many of their original charges; they reserved to themselves only the most important affairs, i. e. those which concerned the whole diocese and those which belonged to the cathedral church. However, above all other affairs the bishops retained the right of supervision and supreme direction. While this change was taking place, the Roman Empire, now Christian, granted bishops other powers. They were exclusively empowered to take cognizance of the misdemeanours of clerics, and every lawsuit entered into against the latter had to be brought before the bishop's court. The Emperor Constantine even permitted all Christians to carry their lawsuits before the bishop, but this right was withdrawn at the end of the fourth century. Nevertheless, they continued to act as arbitrators, which office the earliest Christians had committed to them. More important, perhaps, is the part which the Roman law assigns to the bishops as protectors of the weak and oppressed. The master was permitted to legally emancipate his slave in the bishop's presence; the latter had also the power to remove young girls from immoral houses where their parents or masters had placed them, and to restore them to liberty. Newly born infants abandoned by their parents were legally adjudged to those who sheltered them, but to avoid abuses it was required that the bishop should certify that the child was a foundling. The Roman law allowed the bishops the right to visit prisons at their discretion for the purpose of improving the condition of prisoners and of ascertaining whether the rules in favour of the latter were observed. The bishops possessed great influence over the Christian emperors, and though in the Eastern Church these intimate relations between Church and State led to Cæsaropapism, the bishops of the West preserved in a great measure their independence of the Empire (Löning, *Geschichte des deutschen Kirchenrechts*, Strasburg, 1878, I, 314-331; Troplong, *De l'influence du christianisme sur le droit civil des Romains*, Paris, 1842, new ed., 1902).

The authority of the bishop was even greater after the barbarian invasions; among the Germanic peoples he soon became an influential and powerful personage. He inspired confidence and commanded respect. He was beloved, for he protected the young and the weak, he was the friend of the poor, was accustomed to intercede on behalf of the victims of injustice, and especially on behalf of orphans and women. Through his influence, in many spheres, the bishop became the real master of the episcopal city. The only functionaries whose authority was comparable with that of the bishop were the dukes and counts, representatives of the king. In certain districts the pre-eminence showed itself clearly in favour of the bishop; in some cities the bishop became also count. In France, as a general rule, this state of affairs did not continue. But in Germany many bishops became temporal lords or princes. Finally, the bishop ac-

quired an extensive civil jurisdiction not only over his clergy but also over the laity of his diocese (Viollet, *Histoire des institutions politiques de la France*, Paris, 1890, I, 380-409). Such an exalted position was not without its difficulties. One of the gravest was the interference of the lay authority in the election of bishops. Until the sixth century, the clergy and the people elected the bishop on condition that the election should be approved by the neighbouring bishops. Undoubtedly, the Christian Roman emperors sometimes intervened in these elections, but outside the imperial cities only, and generally in the case of disagreement as to the proper person.

As a rule they contented themselves with exercising an influence on the electors. But from the beginning of the sixth century, this attitude was modified. In the East, the clergy and the *primates*, or chief citizens, nominated three candidates from whom the metropolitan chose the bishop. At a later date, the bishops of the ecclesiastical province assumed the exclusive right of nominating the candidates. In the West, the kings intervened in these elections, notably in Spain and Gaul, and sometimes assumed the right of direct nomination (Funk, "Die Bischofswahl im christlichen Altertum und im Anfang des Mittelalters" in *Kirchengeschichtliche Abhandlungen und Untersuchungen*", Paderborn, 1897, I, 23-39; Imbart de la Tour, "Les élections épiscopales dans l'ancienne France", Paris, 1890). This interference of princes and emperors lasted until the quarrel about Investitures, which was especially violent in Germany, where from the ninth to the eleventh centuries abbots and bishops had become real temporal princes. (See INVESTITURE.) The Second Lateran Council (1139) handed over to the chapter of the cathedral church the sole right of choosing the bishop, and this legislation was sanctioned by the Decretals (Decretum Gratiani, P. I., Dist. lxiii, ch. xxxv; ch. iii, De causâ possessionis et proprietatis, X, II, xii; ch. liv, De electione et electi potestate, X, I, vi; Friedberg, *Corpus Juris Canonici*, Leipzig, 1879-81, I, 247, II, 95, 276). The bishops of the Middle Ages acquired much temporal power, but this was accompanied by a corresponding diminution of their spiritual authority. By the exercise of the prerogative of the primacy the Holy See reserved to itself all the most important affairs, the so-called *causæ majores*, as for instance the canonization of saints (ch. i, De reliquiis, X, III, xlv; Friedberg, II, 650); the permission to venerate publicly newly discovered relics, the absolution of certain grave sins, etc. Appeals to the pope against the judicial decisions of the bishops became more and more frequent. The religious orders and the chapters of cathedral and collegiate churches obtained exemption from episcopal authority. The cathedral chapter obtained a very considerable influence in the administration of the diocese. The pope reserved also to himself the nomination to many ecclesiastical benefices (C. Lux, *Constitutionum apostolicarum de generali beneficiorum reservatione collectio et interpretatio*, Breslau, 1904). He also claimed the right to nominate the bishops, but in the German Concordat of 1448 he granted to the chapters the right of electing them, while in that of 1516 he permitted the King of France to nominate the bishops of that nation. Subsequently the Council of Trent defined the rights of the bishop and remedied the abuses which had slipped into the administration of dioceses and the conduct of bishops. The council granted them the exclusive right of publishing indulgences; it also impressed upon them the obligation of residence in their dioceses, the duty of receiving consecration within three months after their elevation to the episcopate, of erecting seminaries, of convoking annual diocesan synods, of assisting at provincial synods, and of visiting their dioceses. It also forbade them to cumulate benefices, etc. The same council

diminished exemptions from episcopal authority, and delegated to the bishops some of the rights which in the past the Holy See had reserved to itself. Subsequent pontifical acts completed the Tridentine legislation, which is still valid. Protestantism and at a later date the French Revolution destroyed all temporal power of the bishops; thenceforth they were free to consecrate themselves with greater earnestness to the duties of their spiritual ministry.

II. PRESENT LEGISLATION.—Two classes of bishops must be distinguished, not with regard to the power of order, for all bishops receive the fullness of the priesthood, but with regard to the power of jurisdiction: the diocesan bishop and the titular bishop or, as he was called before 1882 the *episcopus in partibus infidelium*. The former is here considered. Those belonging to the second class cannot perform any episcopal function without the authorization of the diocesan bishop; for as titular bishops they have no ordinary jurisdiction. They can, however, act as auxiliary bishops, i. e. they may be appointed by the pope to assist a diocesan bishop in the exercise of duties arising from the episcopal order but entailing no power of jurisdiction. (See AUXILIARY BISHOP.) Such a bishop is also called *vicarius in pontificalibus*, i. e. a representative in certain ceremonial acts proper to the diocesan bishop, sometimes suffragan bishop, *episcopus suffraganeus*. In the proper sense of the term, however, the suffragan bishop is the diocesan bishop in his relations with the metropolitan of the ecclesiastical province to which he belongs, while the bishop who is independent of any metropolitan is called an exempt bishop, *episcopus exemptus*. The titular bishop may also be coadjutor bishop when he is appointed to assist an ordinary bishop in the administration of the diocese. Sometimes he is incorrectly called auxiliary bishop. He possesses some powers of jurisdiction determined by the letters Apostolic appointing him. Often also, notably in missionary countries, the coadjutor bishop is named *cum jure successionis*, i. e. with the right of succession; on the death of the diocesan bishop he enters on the ordinary administration of the diocese (Taunton, *The Law of the Church*, London, 1906, 55, 204, 617).

The Council of Trent determined the conditions to be fulfilled by candidates for the episcopate, of which the following are the principal: birth in lawful wedlock, freedom from censure and irregularity or any defect in mind, purity of personal morals, and good reputation. The candidate must also be fully thirty years of age and have been not less than six months in Holy orders. He ought also to have the theological degree of Doctor or at least be a licentiate in theology or canon law or else have the testimony of a public academy or seat of learning (or, if he be a religious, of the highest authority of his order) that he is fit to teach others (c. vii, De electione et electi potestate, X, I, vi; Friedberg, II, 51. Council of Trent, Sess. XXII, De ref., ch. ii). The Holy Office is charged with the examination of persons called to the episcopate, with the exception of the territories subject to the Congregation of the Propaganda or to the Congregation of Extraordinary Ecclesiastical Affairs, or of those countries where the nomination of bishops is governed by special laws and concordats ("Motu proprio" of Pope Pius X, 17 December, 1903; "Acta sanctæ Sedis, 1904, XXXVI, 385). We have said that the Decretals recognize the right of the cathedral chapters to elect the bishop. This right has been long withdrawn and is no longer in force. In virtue of the second rule of the Papal Chancery the choice of bishops belongs exclusively to the pope (Walter, *Fontes juris ecclesiastici antiqui et hodierni*, Bonn, 1861, 483). Exceptions to this rule, however, are numerous. In Austria (with the exception of some episcopal sees), in Bavaria, in

Spain, in Portugal and in Peru, the Government presents to the sovereign pontiff the candidates for the episcopate. It was so in France, and in several South American Republics before the rupture or denunciation of the concordats between these states and the Apostolic See. By the cessation of these concordats such states lost all right of intervention in the nomination of bishops; this does not, however, prevent the Government in several South American Republics from recommending candidates to the sovereign pontiff. The cathedral chapter is authorized to elect the bishop in several dioceses of Austria, Switzerland, Prussia, and in some States of Germany, notably in the ecclesiastical province of the Upper Rhine. The action of the electors, however, is not entirely free. For example, they may not choose persons distasteful to the Government (Letter of the Cardinal Secretary of State to the Chapters of Germany, 20 July, 1900; Canoniste Contemporain, 1901, XXIV, 727). Elsewhere the pope himself nominates bishops, but in Italy the Government insists that they obtain the royal exequatur before taking possession of the episcopal see. In missionary countries the pope generally permits the "recommendation" of candidates, but this does not juridically bind the sovereign pontiff, who has the power to choose the new bishop from persons not included in the list of recommended candidates. In England the canons of the cathedral select by a majority of votes, at three successive ballots, three candidates for the vacant episcopal see. Their names, arranged in alphabetical order, are transmitted to the Propaganda and to the archbishop of the province, or to the senior suffragan of the province, if the question is one of the election of an archbishop. The bishops of the province discuss the merits of the candidates and transmit their observations to the Propaganda. Since 1874 the bishops are empowered, if they so desire, to propose other names for the choice of the Holy See, and a decision of the Propaganda (25 April, 3 May, 1904) confirms this practice (Instruction of Propaganda, 21 April, 1852; "Collectanea S. C. de Propaganda Fide", Rome, 1893, no. 42; Taunton, 87-88). Analogous enactments are in force in Ireland. The canons of the cathedral and all the parish priests free from censure and in actual and peaceful possession of their parish or united parishes, choose in a single ballot three ecclesiastics. The names of the three candidates who have obtained the greatest number of votes are announced and forwarded to the Propaganda and to the archbishop of the province. The archbishop and the bishops of the province give the Holy See their opinion on the candidates. If they judge that none of the candidates is capable of fulfilling the episcopal functions no second recommendation is to be made. If it is a question of the nomination of a coadjutor bishop with the right of succession the same rules are followed, but the presidency of the electoral meeting, instead of being given to the metropolitan, his delegate, or the senior bishop of the province, belongs to the bishop who asks for the coadjutor (Instruction of Propaganda, 17 September, 1829, and 25 April, 1835; "Collectanea," nos. 40 and 41). In Scotland, when there is a chapter of canons, they follow the same rules as in England; and when there is no chapter, the bishops of Scotland and the archbishops of Edinburgh and Glasgow choose by a triple ballot the three candidates. The names of these latter are communicated to the Holy See together with the votes which each candidate has obtained. At the same time is transmitted useful information about each of them according to the questions determined by the Propaganda (Instruction of the Propaganda, 25 July, 1883; "Collectanea," no. 45). In the United States of America the diocesan consultors and the irremovable rectors of the diocese assemble under the presidency of the

archbishop or the senior bishop of the province, and choose three candidates, the first *dignissimus*, the second *dignior*, and the third *dignus*. Their names are sent to the Propaganda and to the archbishop of the province; the archbishop and the bishops of the province examine the merits of the candidates proposed by the clergy and in their turn, by a secret ballot propose three candidates. If they choose other candidates than those designated by the clergy, they indicate their reasons to the Propaganda. In the case of the nomination of a coadjutor with right of succession, the meeting of the clergy is presided over by the bishop who demands a coadjutor. If it concerns a newly created diocese, the consultors of all the dioceses from whose territory the new diocese was formed and all the irremovable rectors of the new diocese choose the three candidates of the clergy. Finally, if it is a matter of replacing an archbishop or of giving him a coadjutor with right of succession, all the metropolitans of the United States are consulted by the Propaganda (Decree of Propaganda, 21 January, 1861, modified by that of 21 September, 1885; *Collectanea*, no. 43). In Canada by a decree of 2 December, 1862, the Church still follows the rules laid down by the Propaganda on 21 January, 1861, for the United States (*Collectanea*, no. 43; *Collectio Lacensis*, Freiburg, 1875, III, 684, 688). Every three years the bishops must communicate to the Propaganda and to the metropolitan the names of the priests they think worthy of episcopal functions. In addition, each bishop must designate in a secret letter three ecclesiastics whom he believes worthy to succeed him. When a vacancy occurs, all the bishops of the province indicate to the archbishop or to the senior bishop the priests whom they consider recommendable. The bishops then discuss in a meeting the merits of each of the priests recommended, and proceed to the nomination of the candidates by secret vote. The acts of the assembly are transmitted to the Propaganda. In Australia, a method similar to that in use in the United States is followed. Two differences, however, are to be noted: first, the bishops still signify, every three years, to the metropolitan and to the Propaganda the names of the priests whom they consider worthy of the episcopal office. Second, when the nomination of a coadjutor bishop is in question, the presidency over the assembly of consultors and irremovable rectors belongs not to the bishop who demands a coadjutor, but to the metropolitan or to the bishop delegated by him (*Instruction of Propaganda*, 19 May, 1866, modified by the decree of 1 May, 1887; *Collectanea*, no. 44).

Whatever the manner of his nomination, the bishop possesses no power until his nomination has been confirmed by the Holy See, whether in consistory or by pontifical letters. Moreover, he is forbidden to enter on the administration of his diocese before taking possession of his see by communicating to the cathedral chapter the letters Apostolic of his nomination (Const. "Apostolica Sedes", 12 October, 1869, V, i; "Collectanea", no. 1002). From this moment, even before his consecration, the new bishop is entitled in his diocese to all rights of jurisdiction. He is required to make the prescribed profession of faith in the first provincial synod held after his elevation (Council of Trent, Sess. XXV, De ref., ch. ii). Finally, he is obliged within the space of three months to receive episcopal consecration. The right of consecrating a bishop belongs to the sovereign pontiff, who generally permits the newly elected to be consecrated by three bishops of his own choice. However, if the consecration takes place in Rome, he must select a cardinal or one of the major patriarchs residing at Rome. If, however, his own metropolitan is at that time in Rome, he would be obliged to choose him. The consecration ought to take place on a

Sunday or on the feast of an Apostle, by preference in the cathedral church of the diocese or at least within the ecclesiastical province (Council of Trent, Sess., XXIII, De ref., ch. ii). Before consecration, the bishop must take an oath of fidelity to the Holy See. (For the formula of this oath for the bishops of the United States of America see "Acta et Decreta conc. Plen. Balt., III", Baltimore, 1886, Appendix, 202.) Consecration by a single bishop would not be invalid but would be illicit. However, the bishops of South America have the privilege of being consecrated by one bishop assisted by two or three priests, if it prove difficult for them to obtain three bishops (Letters Apostolic of Leo XIII, "Trans Oceanum", 18 April, 1897; "Acta Sanctæ Sedis", 1896-97, XXIX, 659). Episcopal consecration has the effect of giving to the bishop the full powers of Order. (See HOLY ORDERS.)

III. RIGHTS AND POWERS OF THE BISHOP.—The bishop possesses, as already stated, the powers of order and jurisdiction. The power of order comes to him through episcopal consecration, but the exercise of this right depends on his power of jurisdiction. The sacerdotal ordination performed by every duly consecrated bishop is undoubtedly valid, yet the bishop can ordain only in conformity with the enactments of canon law. Only the bishop can confer major orders. The question has been discussed, as to whether the pope could delegate to a priest, for example the abbot of a monastery, the power to ordain a deacon. The bishop is the only ordinary minister of the Sacrament of Confirmation (Council of Trent, Sess. XXIII, can. vii). Ecclesiastical law has reserved certain benedictions and consecrations to him, viz., those which are performed with holy oil. The following functions are reserved to the bishop: the dedication of a church, the consecration of an altar, of chalices and patens, and generally of the articles serving for the celebration of Holy Mass, the reconciliation of a desecrated church, the benediction of bells, the benediction of an abbot, the benediction of the holy oils, etc. A bishop is forbidden to exercise the *Pontificalia*, i. e. to perform episcopal functions in another diocese without the consent of the ordinary, i. e. the proper bishop (Council of Trent, Sess. VI, De ref., ch. v).

Besides the power of order, bishops possess that of jurisdiction; they have the right to prescribe for the faithful the rules which the latter must follow in order to obtain eternal salvation. The power of jurisdiction is of Divine origin, in the sense that the pope is held to establish in the Church bishops whose mission it is to direct the faithful in the way of salvation. The bishops have then in their dioceses an ordinary jurisdiction, limited, however, by the rights that the pope can reserve to himself in virtue of his primacy. But this jurisdiction is independent of the will and consent of the faithful, and even of the clergy. In certain important matters, however, the bishop must at times seek the advice, at other times the consent, of the cathedral chapter. In certain countries, where chapters are not established, the bishop is bound to consult in some specified cases the *consultores cleri diocesan*, or diocesan consultors (Third Council of Baltimore, nos. 17-22, 33, 179). On the other hand, certain classes of persons, especially the regulars properly so called, are exempt from episcopal authority, and certain matters are removed from the bishop's jurisdiction. Moreover, he has no power against the will of a superior authority, i. e. the pope, the councils, whether general, plenary, or provincial. The bishop possesses also other important powers through "delegated" jurisdiction which is accorded to him either by law, whether written or established by custom, or by grant of the sovereign pontiff through the Roman Congregations. The last named jurisdiction he exercises in the name of the Apostolic

See (see below). Certain writers attribute to the bishop a third kind of jurisdiction which they call "quasi-ordinary" jurisdiction, but there are wide differences as to the definition of this kind of jurisdiction. Several writers (such as Wernz, II, 10; Bargilliat, "Prælect. jur. can.", Paris, 1900, I, 164; and among the older canonists, Bouix, "De princip. juris canonici", Paris, 1852, 530) think that this distinction is useless; the jurisdiction known as quasi-ordinary is nothing else than an ordinary or delegated jurisdiction granted by written law or by custom.

It is a controverted question whether the bishops hold their jurisdiction directly from God or from the sovereign pontiff. The latter opinion, however, is almost generally admitted at the present day, for it is more in conformity with the monarchical constitution of the Church, which seems to demand that there should be no power in the Church not emanating immediately from the sovereign pontiff. Authors who hold the contrary opinion say that it is during the episcopal consecration that bishops receive from God their power of jurisdiction. But habitually before their consecration the bishops have already all powers of jurisdiction over their dioceses (Bargilliat, I, 442-445). Another question also discussed is whether the *potestas magisterii*, or teaching authority, is a consequence of the power of order or of jurisdiction (Sägmüller, Lehrbuch des katholischen Kirchenrechts, Freiburg, 1900-04, 24-25). Whatever the conclusion, teaching authority will here be ranked among the powers of jurisdiction. The teaching authority of the bishop and his governing authority (*potestas regiminis*) will now be successively considered, the latter comprising the legislative, dispensative, judicial, coercive, and administrative powers.

**A. Teaching Authority.**—By Divine law bishops have the right to teach Christian doctrine (Matt., xxviii, 19; Council of Trent, Sess. XXIV, De ref., ch. iv; Encyclical of Leo XIII, "Sapientia christianæ", 10 January, 1890; "Acta Sanctæ Sedis", 1890, XXII, 385). At the same time, the obligation of instructing the faithful either personally or, if hindered, through other ecclesiastics is incumbent upon them. They are bound also to see that in the parish churches the parish priests fulfil the requirements of preaching and teaching which the Council of Trent imposes upon them (Sess. V, De ref., ch. ii; Sess. XXIV, De ref., ch. iv). The bishop must also supervise the teaching of Christian doctrine in the seminaries, as well as in secondary and primary schools (Conc. Balt. III, nos. 194 sqq.; Const. "Romanos pontifices", 8 May, 1881; op. cit., Appendix, 212). In virtue of this right of superintendence, and because of the intimate relations which exist between instruction and education, the bishop is empowered to forbid attendance at undenominational schools, at least in those districts where Catholic schools exist, and where attendance at the former schools is dangerous. In virtue of the same right he will very often be bound to erect Catholic schools or favour their establishment (Third Council of Baltimore, nos. 194-213). No one is allowed to preach Christian doctrine without the consent of the bishop, or at least without his knowledge if it is a question of exempt religious preaching in their own churches (Council of Trent, Sess. V, De ref., ch. ii; Sess. XXIV, De ref., ch. iv). The bishop has power to supervise writings published or read in his diocese; works regarding the sacred sciences are subject to his approbation; he may forbid the reading of dangerous books and newspapers. He exercises a special control over the publications of the secular clergy, who are bound to consult him before undertaking the direction of newspapers or of publishing works even upon profane matters (Const. of Leo XIII, "Officiorum et munerum", 25 January, 1897; Vermeersch, "De prohibitionem et censurâ librorum", 4th ed., Rome, 1906). He has the right

of special supervision over the manuals used in educational establishments, and as far as possible he will encourage the publication of good books and good newspapers (Third Council of Baltimore, nos. 201, 220, 221, 225, 226). The bishop is the *Inquisitor natus* or protector of the faith for his diocese. He has not, it is true, the right to define, outside an oecumenical council, controverted questions with regard to faith and morals, but when a heated discussion arises in his diocese, he can impose silence upon the parties concerned while awaiting a decision from the Holy See. If anyone, however, denies a point of doctrine defined by the Church, even though it be an exempt religious, the bishop will have the power to punish him (Council of Trent, Sess. V, De ref., ch. ii; Sess. XXIV, De ref., ch. iii). He must likewise guard the faithful of his diocese against dangerous societies condemned by the Holy See (Third Council of Baltimore, nos. 244-255).

**B. Governing Authority.**—(1) *Legislative Power.*—The bishop can enact for his diocese those laws which he considers conducive to the general good. Though he is not bound to convoke a synod for this purpose his legislative power is not absolute. He cannot legislate *contra jus commune*, i. e. enact a law contrary to the general law of the Church, written or established by custom, or to the decisions of general, plenary, or provincial councils. This is on the principle that an inferior cannot act contrary to the will of his superiors (ch. ii, De electione et electi potestate", I, iii, in the Clementines; Friedberg, II, 1135). He can, however, enact laws *juxta jus commune*, i. e. he can urge the observance of provisions of the common ecclesiastical law by penalizing the violation of the same (ch. ii, De constitutionibus, VI, I, ii; Friedberg, II, 937). He can determine the common ecclesiastical law, i. e. he can permit or forbid that which the common law neither forbids nor permits with certitude, and can apply to the particular needs of his diocese the general enactments of the pontifical laws. Many writers say that the bishop has also the power to enact laws *præter jus commune*, i. e. to regulate those matters concerning which the common ecclesiastical law is silent, or at least particular points unforeseen by the common law. In any case, if the bishop wishes to add to the enactments of the common law (and the same principle is valid when it is a question of applying to the needs of his own diocese a general law of the Church), he must take care to make no enactments on matters which the common law, in the intention of the supreme legislator, has completely regulated. The common law implicitly forbids any episcopal action in such matters. Thus, e. g., the bishop cannot introduce new irregularities. In his diocesan legislation the bishop must not go beyond the purpose intended by the common ecclesiastical law. Thus, the latter forbids the clergy to take part in games of chance (*ludi aleatorii*), the aim of the law being to condemn the love of lucre and to avoid scandal; at the same time the bishop cannot forbid in private houses other games, which are not games of chance. On the other hand, if it be a matter concerning which the common law is silent, the bishop may take all necessary measures to prevent and put an end to abuses and to maintain ecclesiastical discipline. He must abstain, however, from imposing on his clergy extraordinary charges and obligations, and from unusual innovations. The legislative power of the bishop *præter jus commune*, is, therefore, far from being absolute (Claeys-Bouuaert, De canonicis cleri sæcularis obedientiâ, Louvain, 1904, 69-77). Canonical writers discuss the right of the bishop to abrogate a local custom contrary to the enactments of the common ecclesiastical law. He probably has not the right, provided that the custom be juridical, i. e. a reasonable one and legitimately prescribed. As this custom obtains only because of pontifical con-

sent, it does not belong to the bishop to act contrary to the will of the pope. The power of granting dispensations is correlative to the legislative power. The bishop may, therefore, dispense with regard to all diocesan laws. He may also dispense, in particular cases only, from the laws of provincial and plenary synods; any dispensation from these laws would be next to impossible, if it were necessary on all such occasions to convoke a fresh provincial or plenary synod. The bishop, however, cannot dispense from enactments that relate directly to himself, and impose obligations upon him, or from enactments that accord rights to a third party. The bishop cannot dispense from laws made by the sovereign pontiff. To this there are, however, some exceptions. In certain matters, the written law or custom has granted this right to the bishop. He may also dispense from such laws in virtue of an expressly delegated power, or even sometimes in virtue of the consent, presumed or tacit, of the sovereign pontiff. These cases in reality are determined by custom. Canonical writers also admit that a bishop may grant a dispensation, when there is a doubt whether a dispensation is required, though in such a case it may be a question whether any dispensation at all is requisite (Bargiliat, I, 483-491).

(2) *Judicial Power*.—This power is exercised in two ways: without legal apparatus (*extra judicialiter*) or in a judicial process (*judicialiter*). In his diocese the bishop is judge in the first instance in all trials, civil and criminal, that pertain to the ecclesiastical tribunal, unless the persons be exempt from his authority, or the matters reserved for other judges; such, e. g., are the process of canonization reserved to the pope or the misdemeanours of a vicar-general, which fall under the cognizance of the archbishop. (Ch. vii, *De officio judicis ordinarii*, VI, I, xvi; Friedberg, II, 988; Council of Trent, Sess. XXIV, De ref., ch. xx.) In ecclesiastical trials he must conform to the general or special provisions of the law. (For matrimonial trials see "*Instructio de judiciis ecclesiasticis circa causas matrimoniales*" in "*Acta et decreta Concilii Plenarii Baltimorensis III*", Appendix, 262; for trials of ecclesiastics see the Instruction of the Propaganda, "*Cum Magnopere*", which reproduces substantially the Instruction of the Congregation of Bishops and Regulars of 11 June, 1880, op. cit., 287; see also S. Smith, "*New procedure in criminal and disciplinary causes of ecclesiastics*", 3d ed., New York, 1898.) The bishop has also judicial power which he exercises *extra judicialiter* both *in foro externo* (publicly) and *in foro interno* (in conscience). He has the power to absolve his subjects from all sins and censures not reserved to the Holy See. Moreover, the absolution from a censure inflicted by an ecclesiastical judge is always reserved to the latter or to his superiors (Bull, "*Sacramentum Pœnitentiæ*", 1 June, 1741 in "*Benedicti XIV, Bularium*", Venice, 1778, I, 22; Const. "*Apostolicæ Sedis*", "*Collectanea S. C. P.*", 1002). On the other hand, the bishop may reserve to himself absolution from certain sins (Council of Trent, Sess. XIV, "*De pœnit.*", ch. vii; Third Plenary Council of Baltimore, nos. 124, 127).

(3) *Coercive Power*.—The right to punish is a necessary consequence of the right to judge. Formerly the bishop could and did inflict even corporal punishments and fines. These are no longer customary, even for ecclesiastics. The usual penalties for the laity are censures; for ecclesiastics, religious exercises, confinement for a time in a monastery (Third Plenary Council of Baltimore, nos. 72-73), degradation to an office of less importance (*privatio officii ecclesiastici*), and censures, especially suspension. The bishop may inflict suspension *ex informata conscientia*, i. e. on his personal responsibility, and without observing any legal formality, but in cases

foreseen by the law (Instruction of Propaganda, 20 October, 1884; Conc. Balt. III, Appendix, 298). To the coercive power of the bishop belongs also the right of issuing certain commands (*præcepta*), i. e. of imposing on a particular ecclesiastic special obligations sanctioned by certain penalties (Constitution, "*Cum Magnopere*" nos. 4 and 8). He has also the lawful power to remove the penalties inflicted by him. Bishops can also grant indulgences: cardinals 200, archbishops 100, and bishops, 50 days' indulgence (Decree of Congregation of Indulgences, 28 August, 1903; *Acta Sanctæ Sedis*, XXXVI, 318).

(4) *Administrative Power*.—The matters to which the administrative power of the bishop extends can only be briefly indicated here: (a) The foremost is the supreme direction of the clergy. At the present day, generally speaking, it might be said that the bishop has the right to retain in his diocese a priest to whom he has entrusted ecclesiastical functions and given the means of subsistence (Claeys-Bouuaert, 200-244). In case of necessity or great utility, e. g. given a scarcity of priests, the bishop may compel an ecclesiastic to accept ecclesiastical functions, but he will require a pontifical indult to impose upon him the *cura animarum*, or cure of souls. Ecclesiastics ordained *titulo missionis* (see HOLY ORDERS, MISSIONS) take upon themselves special obligations in this matter. (See Instruction of Propaganda, 27 April, 1871, and the Reply of 4 February, 1873; Conc. Plen. Balt. III, Appendix, 204-211; decree "*De seminariorum alumnis*", 22 December, 1905; "*Acta Sanctæ Sedis*", 1905, XXXVIII, 407.) The bishop may also nominate to the benefices and ecclesiastical functions of his own diocese. Certain nominations, however, are reserved to the Holy See, and in several countries the right of patronage still exists. (b) The bishop, moreover, intervenes in the administration of ecclesiastical property. No alienation whatever of ecclesiastical goods is possible without his consent, and he exercises supreme supervision over their administration. (c) He has a special right of intervention in all matters relating to Divine worship and to the sacraments; he authorizes and supervises the printing of liturgical books, regulates public worship, processions, exposition of the Blessed Sacrament, celebration of the Holy Mass, celebration of Mass twice on the same day by the same priest (see BINATION), and exorcisms; his consent is required for the erection of churches and oratories; he authorizes the public veneration of the relics of saints and of those who have been beatified; he exercises supervision over statues and images exposed for the veneration of the faithful; he publishes indulgences, etc. But in all these matters his power is not unlimited; he must conform to the enactments of the canon law.

Bishops have also a "delegated jurisdiction", which they exercise in the name of the Holy See; this power is granted to them *a jure* or *ab homine*. Ecclesiastical law frequently accords to bishops delegated powers; but it would be wrong to say, for instance, that every power of dispensation granted by a general law of the Church is a delegated one. Such power is perhaps quite as often an ordinary power. But when the law accords a power of jurisdiction to the bishop, *tantum Sedis apostolicæ delegatus*, it is a delegated power that he receives. (See, for example, Council of Trent, Sess. V, De ref., ch. i, ii; Sess. VI, De ref., ch. iii; Sess. VII, De ref., ch. vi, viii, xiv, etc.) Writers do not agree as to the nature of the power accorded to the bishop also as delegate of the Apostolic See, *etiam tantum sedis apostolicæ delegatus*. Some maintain that in this case the bishop has at the same time both ordinary and delegated power, but only relative to such persons as are subject to his jurisdiction (Reiffenstuel, *Jus canonicum universum*, Paris, 1864, tit. xxix, 37); others contend

that in this case the bishop has ordinary jurisdiction with regard to his subjects, and only a delegated one with regard to those who are exempt (Hinschius, *System des katholischen Kirchenrechts*, Berlin, 1869, I, 178; Scherer, *Handbuch des Kirchenrechtes*, Graz, 1886, I, 421, note 36); others again maintain that the bishop has at the same time both an ordinary and a delegated power over his subjects, and a delegated power over those who are exempt (Wernz, II, 816); finally, others see in this formula only a means of removing any obstacles which might prevent the bishop from using the power accorded to him (Santi, *Prælect. jur. can.*, New York, 1898, I, 259). The delegated powers *ab homine* are at the present of very great importance, especially in missionary countries. The Apostolic Penitentiary grants those which are only concerned with the forum of conscience. The others are granted by the Congregation of the Propaganda. They are called *facultates habituales*, because not granted for a determined individual case. These faculties are no longer accorded only to the bishop in his own person but to the ordinaries, that is to say, to the bishop, to his successor, to the administrator *pro tem.* of the diocese, and to the vicar-general, to vicars Apostolic, prefects, etc. (Declaration of the Holy Office, 26 November, 1897, 22 April, 1898, 25 June, 1898, 5 September, 1900; Acta Sanctæ Sedis, 1897-98, XXX, 627, 702; 1898-99, XXXI, 120; 1900-01, XXXIII, 225). As a general rule the bishop can subdelegate these powers, provided that the faculties do not forbid it (Holy Office, 16 December, 1898; Acta Sanctæ Sedis, 1898-99, XXXI, 635). For further information see Putzer-Konings, "*Commentarium in facultates apostolicas*" (5th ed., New York, 1898). On the other hand, the bishop can always ask the Holy See for such delegated powers as are necessary in the administration of his diocese. The bishop is also the ordinary and habitual executor of the dispensations which the Holy See grants *in foro externo*, i. e. for public use or application.

IV. OBLIGATIONS OF THE BISHOP.—In describing the rights of bishops we have already in great measure indicated what their obligations are. All their efforts must aim at preserving the true faith and a high moral tone among the people; they attain this end by good example, by preaching, by daily solicitude for the good administration of the diocese, and by prayer. Bishops, in effect, are bound by the Divine law to implore the help of God for the faithful committed to their care. Canon law has determined more fully this obligation, and imposes upon the bishops the obligation of celebrating Mass for the faithful of their dioceses (*missa pro grege*) every Sunday, on the feast days of obligation and on the abrogated feast days (Const. Leo XIII "In supremâ", 10 June, 1882; "Collectanea, S. C. P.", no. 112). The bishop is bound to take special care of the education of youth and of the training of his clergy; he must exercise continual vigilance over the latter and assist them with his counsels. The Church has imposed as special obligations upon bishops the canonical visitation of the diocese and the holding of an annual diocesan synod. The bishop is bound to visit each year the greater part of his diocese, either personally or, if prevented, through his delegates. This visit will permit him to administer the Sacrament of Confirmation (Council of Trent, Sess. XXIV, De ref., ch. iii). The Third Plenary Council of Baltimore grants the bishop three years for making this visitation (Acta et decreta, no. 14). The Council of Trent ordered that an annual diocesan synod should be held (Sess. XXIV, De ref., ch. ii). At present, the Holy See no longer urges the strict observation of this legislation (Santi, *Prælect. Jur. can.*, I, 360). The Third Council of Baltimore decreed that the bishop should take counsel with the

diocesan consultors whenever he wished to convoke a synod (Acta et decreta, no. 20). It is then unnecessary for the synod to assemble every year. However in missionary countries the Holy See desires that these synods should be rather frequent and dispenses the bishop from the observation of the formalities difficult to fulfil, e. g. the convoking of all ecclesiastics who ought to be present at the synod (Letter of Propaganda to the Bishop of Milwaukee, 29 July, 1889, "Collectanea, S. C. P.", no. 117). It is evident, finally, that the bishop cannot fulfil the duties of his office unless he observes the law of residence. The bishop is obliged to reside in his diocese and it is proper that he should be in the episcopal city on the principal feast days of the year. He cannot be absent from his diocese for more than three months, except for grave reason approved of by the Holy See (Council of Trent, Sess. VI, De ref., ch. i; Sess. XXIII, De ref., ch. i; Benedict XIV, "Ad universæ christianæ", 3 September, 1746; Letters of Propaganda, 24 April and 24 August, 1861; "Collectanea, S. C. P.", nos. 103, 105).

The bishop has also obligations regarding the Holy See. Throughout his entire administration he must conform to the general legislation of the Church and the directions of the pope. In this respect two special obligations are incumbent upon him: he must pay the *Visitatio ad limina Apostolorum*, and present the *Relatio de statu diocesis*, i. e. he must visit the shrines of Sts. Peter and Paul at Rome and present a report on the condition of his diocese. In the time of Paschal II (1099-1118), only metropolitans were bound to pay this visit. The Decretals imposed this obligation upon bishops whose consecration the pope reserved to himself (C. iv, "De electione et electi potestate"; X, I, vi; c. xiii, "De majoritate et obedientiâ", X, I, xxxiii; c. iv, "De jurejurando", X, II, xxiv; Friedberg, II, 49, 201, 360). It has become general since the fifteenth century, and Sixtus definitely ruled in favour of this obligation (Bull, "Romanus Pontifex", 20 December, 1585; "Bullarium amplissima collectio", ed. Cocquelines, Rome, 1747, IV, iv, 173). According to this Bull the bishops of Italy and the neighbouring islands, of Dalmatia and Greece, must make the visit *ad limina* every three years; those of Germany, France, Spain, England, Portugal, Belgium, Bohemia, Hungary, Poland, and the islands of the Mediterranean Sea every four years; those of other parts of Europe, of North Africa, and the isles of the Atlantic Ocean situated to the east of the New World, every five years; those of other parts of the world every ten years. The bishops of Ireland, in virtue of a privilege of 10 May, 1631, are bound to pay this visit only every ten years. Even in the case of more recently erected sees the years are counted from 20 December, 1585, date of the aforesaid Bull (Instruction of Propaganda, 1 June, 1877; "Collectanea, S. C. P.", no. 110). The bishops must pay this visit personally and for this purpose are allowed to absent themselves from their dioceses the bishops of Italy for four months, other bishops for seven months. The Holy See sometimes dispenses a bishop from the obligation of paying this visit personally, and permits him to send, as his delegate, a priest of his diocese, especially one of those who have been promoted to a high office (*dignitates*), or a priest of the diocese sojourning at Rome, or even the agent of the bishop in that city, if an ecclesiastic. While this visit, as stated above, ought to be paid the third, fourth, fifth, or tenth year, the rule suffers frequent exceptions in practice (Wernz, II, 914). The *Visitatio Liminum* includes a visit to the tombs of St. Peter and St. Paul, an audience with the Holy Father, and a written report which the bishop ought to present to the Congregation of the Council (*Congregatio specialis super statu ecclesiarum* also called *Conciliello*) according to the formula of

Benedict XIII. in 1725 (A. Lucidi, *De Visitatione sacrorum Liminum*, 5th ed., Rome, 1883).

Bishops subject to the Propaganda present this statement to the latter congregation (the proper formula is in "Acta Sanctæ Sedis", 1891-92; XXIV, 382, "Collectanea", no. 104). In addition they ought also to send, every five years, a report to the Propaganda according to the formulary drawn up by this congregation, 24 April, 1861 (Collectanea, no. 104). This obligation had formerly been an annual one (Decrees of Propaganda, 31 October, 1838, 27 September, 1843, and 23 March, 1844; Collectanea, nos. 97-99; Third Council of Baltimore, no. 14).

Finally, mention may be made of certain privileges enjoyed by bishops. They do not fall under suspensions and interdicts, *lata sententia*, i. e. incurred *ipso facto*, unless express mention of them is therein made; those who are guilty of assaults upon them are punished with an excommunication reserved *speciali modo* to the sovereign pontiff; they possess the right of having a domestic chapel and enjoy the privilege of the *altare portatile*, or portable altar, etc.

V. NON-CATHOLIC USE.—The title of bishop is still retained in certain Protestant churches. For its use in the Anglican Church see Sir R. Phillimore, "Ecclesiastical Law in the Church of England" (new ed., 1895); F. Makower, "Verfassung der Kirche von England" (1894), and the "Encycl. Britannica" (9th ed.), III, 788-789; cf., also, O. J. Reichel, "A Short Manual of Canon Law" (The Sacraments), London, 1896, 283-298. For its use in the national Protestant Churches of Denmark and Sweden, see articles treating of those countries, and for its history and use in the Evangelical churches of Prussia and the European continent, Jacobson-Friedberg in "Real-Encycl. f. prot. Theol. und Kirche" (3d ed., 1897), III, 246-247. For its use in Protestant churches of the United States see BAPTISTS, METHODISTS, MORMONS. The antiquities and constitution of the Greek episcopate are treated by J. M. Heinecius in "Abbildung der alten und neuen griechischen Kirche" (Leipzig, 1711), and in Milasch-Pessič, "Das Kirchenrecht der morgenländischen Kirche" (Germ. tr. of 2nd ed., Mostar, 1905); the actual conditions of the Greek episcopate, Catholic and Orthodox (Schismatic), are described in Silbernagl-Schnitzer, *Verfassung und gegenwärtiger Bestand sämtlicher Kirchen des Orients* (2nd ed., Ratisbon, 1904), *passim*.

**Bishop, AUXILIARY.** See AUXILIARY BISHOP.

**Bishop, COADJUTOR.** See AUXILIARY BISHOP.

**Bishop, WILLIAM,** the first superior in England in episcopal orders since the old hierarchy died out in the reign of Elizabeth, born c. 1553 at Brailles, in Warwickshire, where his family continued to reside until recent times; d. 16 April, 1624. He went to Gloucester Hall, Oxford, in 1570; but retired abroad four years later, and joined Allen at the English College, Douai. From thence he went to Rome, and after completing his studies and being ordained priest, we find him once more in England, where he was called upon to endure many and great hardships. On at least two occasions, he was apprehended, imprisoned for some years, and then banished. It was during one of these periods of banishment that he went to Paris and took the degree of Doctor of Divinity at the Sorbonne. Dr. Bishop took a leading part in the unfortunate disputes between seculars and regulars at that time. The latter party, by means of their influence at Rome, had secured the appointment of an "archpriest" as superior of the English mission. The secular clergy resented this, calling out for the restoration of episcopal government in some form. They became known as "the Appellants", and were favoured by Elizabeth, who contrived to assist them secretly to prosecute their appeals. In 1593 Bishop himself went to Rome, with another priest, to lay their case before the Holy See. On their arrival, however, they found the Jesuit influence still supreme, and by order of Cardinal Cajetan, Protector of England, they were imprisoned at the English College, under Father Persons. After three months' confinement, they were dismissed, but with a strict injunction not to go back to England. It was not until there had been further representations and another deputation to Rome that four years later this injunction was removed.

Soon after his return, in 1603, Bishop drew up the famous "Protestation of Allegiance" to Queen Elizabeth, signed by twelve other priests besides himself, in which they definitely took up their stand against those who aimed at the conversion of England by political means. At least one of these priests (Roger Cadwallador) was afterwards martyred and probably also a second (Robert Drury), though there is some doubt about his identity. Elizabeth never saw the "Protestation", for on the very day on which it was signed, she was seized with what proved to be her last illness. It was violently denounced by the opposing party; but it would seem that Rome was large-minded enough not to condemn it, for when more than twenty years later the petition of the clergy was at length granted, and a vicar Apostolic of England was appointed with episcopal powers, William Bishop was chosen for the office. He became nominally Bishop of Chalcedon, *in partibus infidelium*. Dr. Bishop was only to be Vicar Apostolic for ten months; but during that short time he organized a systematic form of ecclesiastical government, consisting of five vicars-general, assisted by archdeacons and rural deans throughout the country. He also instituted a chapter of twenty-four canons, who were to assume jurisdiction whenever there should be for any reason no vicar Apostolic, which happened at one time for thirty years. His right to make such institution has often been questioned, but during the period

referred to, Rome recognized their jurisdiction. On the restoration of the hierarchy in 1850, when diocesan chapters were erected, the "Old Chapter" did not dissolve, but changed its name, and as the "Old Brotherhood of the Secular Clergy" it exists to-day, a lasting memorial to the work of the first vicar Apostolic. An oil painting of Bishop hangs at Archbishop's House, Westminster, London, a print of which appeared in the "Catholic Directory" for 1810. The works of Bishop are: "A Reformation of a Catholic Deformed, in answer to W. Perkins" (1604; Part II, 1607); "Answer to Mr. Perkins's Advertisement" (1607); "Reproof of Dr. Abbot's Defence of a Catholic Deformed" (1608); "Disproof of Dr. Abbot's Counterproofs" (1614); "Defence of King's Title"; "Pitts, de Illustribus Angliæ Scriptoris" (1619); "Protestation of Loyalty" (see above); pamphlets on archpriest controversy, etc.

**Bishopric.** See DIOCESE.

**Bishop's Crook.** See CROSIER.

**Bisignano, DIOCESE OF.** See SAN MARCO, DIOCESE OF.

**Bisomus**, a tomb large enough to contain two bodies. The ordinary tombs (*loci*) in the galleries of the Roman catacombs contained one body. It sometimes happened, however, that a space large enough to contain two bodies was excavated. Such a double grave is referred to in inscriptions as *locus bisomus*. An inscription from the catacomb of St. Calixtus, for instance, informs us that a certain Boniface, who died at the age of twenty-three years and two months, was interred in a double grave which had been prepared for himself and for his father (Bonifacius, qui vixit annis XXIII et II (mens) es, positus in bisomum in pace, sibi et patr. suo). A fourth-century inscription tells of two ladies who had purchased, for their future interment, a bisomus in a "new crypt" which contained the body of a Saint:—

IN CRYPTA NOBA RETRO SAN  
CTUS EMERVM VIVAS BALER  
RA ET SABINA MERUM LOC  
V BISOM AB APRONE ET A  
BIATORE

Like so many pious but rather superstitious persons of that age "Balerra" and "Sabina" wished to be buried in the closest proximity to a martyr, *retro sanctos*, a privilege which, as we learn from another inscription, "many desire but few receive" (*quod multi cupiunt et rari accipiunt*).

**Blackburne, ROBERT**, an English Catholic who suffered imprisonment in the closing years of the seventeenth, and during the earlier half of the eighteenth, centuries, d. 1748; was a son of Richard Blackburne, of Thistleton, Lancaster. The Blackburne family is one of the most ancient and respected Catholic families in Lancashire. Robert Blackburne was arrested in 1695 on suspicion of being connected with what was known as the Lancashire Plot. He was never brought to trial, although kept in prison for fifty-three years. The case was more than once

brought to the attention of Parliament, but nothing was done for his relief. He was never tried or released, and finally died in prison.

Gillog, *Bibl. Dict. Eng. Cath.*, I, 223.

THOMAS GAFFNEY TAAFFE.

**Black Fast, THE.**—This form of fasting, the most rigorous in the history of church legislation, was marked by austerity regarding the quantity and quality of food permitted on fasting days as well as the time wherein such food might be legitimately taken.

In the first place more than one meal was strictly prohibited. At this meal flesh meat, eggs, butter, cheese, and milk were interdicted (Gregory I, Decretals IV, cap. vi; Trullan Synod, Canon lvi). Besides these restrictions abstinence from wine, especially during Lent, was enjoined (Thomassin, *Traité des jeûnes de l'Eglise*, II, vii). Furthermore, during Holy Week the fare consisted of bread, salt, herbs, and water (Laymann, *Theologia Moralis*, Tr. VIII; De observatione jejuniurum, i). Finally, this meal was not allowed until sunset. St. Ambrose (De Elia et jejuniis, sermo viii, in Psalm CXVIII), St. Chrysostom (Homil. iv in Genesim), St. Basil (Oratio i, De jejuniis) furnish unequivocal testimony concerning the three characteristics of the black fast. The keynote of their teaching is sounded by St. Bernard (Sermo. iii, No. 1, De Quadragesima), when he says "hitherto we have fasted only until none" (3 p. m.) "whereas, now" (during Lent) "kings and princes, clergy and laity, rich and poor will fast until evening". It is quite certain that the days of Lent (Muller, *Theologia Moralis*, II, Lib. II, Tr. ii, § 165, no. 11) as well as those preceding ordination were marked by the black fast. This regime continued until the tenth century when the custom of taking the only meal of the day at three o'clock was introduced (Thomassin, loc. cit.). In the fourteenth century the hour of taking this meal was changed to noon-day (Muller, loc. cit.). Shortly afterwards the practice of taking a collation in the evening began to gain ground (Thomassin, op. cit., II, xi). Finally, the custom of taking a crust of bread and some coffee in the morning was introduced in the early part of the nineteenth century. During the past fifty years, owing to ever changing circumstances of time and place, the Church has gradually relaxed the severity of penitential requirements, so that now little more than a vestige of former rigour obtains.

J. D. O'NEILL.

**Blackfoot Indians**, an important tribe of the Northern Plains, constituting the westernmost extension of the great Algonquian stock. Instead of being a compact people with a head chief and central government, they are properly a confederacy of three sub-tribes speaking the same language, namely: Siksika or Blackfoot proper; Kaina (Kæna), or Blood; Pikûni, or Piegan, each of which sub-tribes is again subdivided into bands, to the number of some fifty in all. In close alliance with them are the Atsîna, or Grosventres, a branch of the more southern Arapahoe, and the Sassi, a detached band of the Beaver Indians farther to the north. As is usually the case with Indian etymologies, the origin of the name is disputed. One tradition ascribes it to the blackening of their moccasins from the ashes of prairie fires on their first arrival in their present country. It may have come, however, from the former wearing of a black moccasin, such as distinguished certain southern tribes. The name is also that of a prominent war-society among tribes of the Plains.

As indicated by linguistic affinity, the Blackfeet

are immigrants from the East. About one hundred years ago, and until gathered upon reservations, they held most of the immense territory stretching from the southern headwaters of the Missouri, in Montana, almost to the North Saskatchewan, in Canada, and from about 105° W. longitude to the base of the Rocky Mountains. They are now settled on three reservations in the Province of Alberta, Canada, and one in Montana, U. S., being about equally divided between the two governments. The Atsina are also now settled in Montana, while the Sassi are in Alberta.

Most of the early estimates of Blackfoot population are unreliable and usually exaggerated. The estimate made by Mackenzie (about the year 1790) of 2250 to 2550 warriors, or perhaps 8500 souls, is probably very near the truth for that period. In 1780, 1837, 1845, 1857, and 1869, they suffered great losses by smallpox. In 1883-84 some 600 on the Montana reservation died of starvation in consequence of a simultaneous failure of the buffalo and reduction of rations. In addition to these wholesale losses, they suffered a continual wasting from wars with the surrounding tribes—Cree, Assiniboin, Sioux, Crow, Flathead, Kutenai—for the Blackfeet were a particularly warlike and aggressive people, and, with the exception of the two small tribes living under their protection, they had no allies. The official Indian report for 1858 gives them 7300 souls, but a careful unofficial estimate made about the same time puts them at 6720. In 1906 they were officially reported to number in all 4617, as follows: Blackfoot Agency, Alberta, 842; Blood Agency, Alberta, 1204; Piegan Agency, Alberta, 499; Blackfoot Agency (Piegan), Montana, 2072.

In their culture the Blackfeet were a typical Plains tribe, living in skin tipis, roving from place to place without permanent habitation, without pottery, basketry, or canoes, having no agriculture except for the planting of a native tobacco, and depending almost entirely upon the buffalo for subsistence. Their traditions go back to a time when they had no horses, hunting the buffalo on foot by means of driveways constructed of loose stones; but as early as 1800 they had many horses taken from the southern tribes, and later became noted for their great herds. They procured guns and horses about the same time, and were thus enabled to extend their incursions successfully over wide areas. While generally friendly to the Hudson's Bay Company traders, they were, in the earlier period, usually hostile towards Americans, although never regularly at war with the government. Upon ceremonial occasions each of the three principal tribes camped in a great circle, as usual among the Plains tribes, the tipis of each band occupying a definite section of the circle, with the "medicine lodge", or ceremonial sacred structure, in the centre of the circle. The assertion that these smaller bands constituted exogamic clans seems consistent with Plains Indians custom. There was also a military society consisting of several subdivisions, or orders, of various rank, from boys in training to the retired veterans who acted as advisers and directors of the rites. Each of these orders had its distinctive uniform and equipment, songs and dance, and took charge of some special function at public gatherings. There were also the ordinary secret societies for the practice of medicine, magic, and special industrial arts, each society usually having its own sacred tradition in the keeping of a chosen priest. The industrial societies were usually composed of women. The ordinary dress in old times was of prepared deerskins; the arms were the bow, knife, club, lance, and shield, and, later, the gun. The principal deity was the sun, and a supernatural being known as *Napi*, "Old Man"—perhaps an incarnation of the same idea. The great

tribal ceremony was the Sun Dance, held annually in the summer season. The marriage tie was easily broken, and polygamy was permitted. The dead were usually deposited in trees, or sometimes in tipis erected for the purpose on prominent hills. In physique the Blackfeet are tall and finely built; in temper, aggressive, unruly, and uncertain.

The earliest missionary work among the Blackfeet was that of the French Jesuits who accompanied the explorer Verendrye in the Saskatchewan region in 1731-42. Among these may be named Fathers Nicholas Gonnor, Charles Mesnager, and Jean Aulneau. Nothing more was done until the establishment of the Red River colony by Lord Selkirk, who, in 1816, brought out Fathers Dumoulin and Provencher from Montreal to minister to the wants of the colonists and Indians. Their Indian work, at first confined to the Crees and Ojibwa, was afterwards extended, under the auspices of the Oblates, to the Blackfeet and Assiniboin. Among the most noted of these Oblate missionaries were Father Albert Lacombe (1848-90), author of a manuscript Blackfoot dictionary, as well as of a monumental grammar and dictionary of the Cree, and Father Emile Legal (1881-90), author of several important manuscripts relating to the Blackfoot tribe and language. Protestant mission work in the tribe was begun by the Wesleyan Methodists about 1840 (though without any regular establishment until 1871), and by the Episcopalians at about the same date.

**Blackwood, ADAM**, author, b. at Dunfermline, Scotland, 1539; d. 1613. He was a great-nephew of Robert Reid, Bishop of Orkney (1541-58), who provided for his education, both his parents being dead, at the University of Paris. On the bishop's death, Queen Mary's generosity enabled Adam to complete his studies at Paris and Toulouse. He taught philosophy at Paris and published there a funeral poem on King Charles IX (1574) and a work on the relation between religion and government (1575). Archbishop James Beaton recommended him to Mary for the office of Judge of the Parliament of Poitiers (Poitou was under her jurisdiction as Dowager of France), and here he married Catherine Courtinier. Blackwood collected a good library, and wrote several books, one an "Apology for Kings", denouncing Buchanan's views with much bitterness, and another a vigorous defence of Queen Mary, published in Paris (nominally in Edinburgh) after her death. Other works by him were a book of pious meditations in prose and verse and an ascetic commentary on the fiftieth Psalm. Blackwood died in 1613, and was buried at Poitiers. His widow married François de la Mothe le Vayer, and one of his daughters became the wife of George Crichton, Regius Professor of Greek in the University of Paris.

**Blais, ANDREW.** See RIMOUSKI, DIOCESE OF.

**Blaise (BLASIUS)**, Saint, bishop and martyr.—The ninth-century martyrologies of Europe in their lists, which are accompanied by historical notices, give on 15 February the name of St. Blasius, Bishop of Sebaste and martyr. The Greek synaxaria mention him under 11 February. In the oldest known recension of the so-called martyrology of St. Jerome the name of St. Blasius does not appear; it is only in the later, enlarged catalogues that he is mentioned. The historical notices concerning him in the above-mentioned martyrologies and synaxaria rest on the legendary Acts. All the statements agree that St. Blasius was Bishop of Sebaste in Armenia and most of the accounts place his martyrdom in the reign of Licinius (about 316). As these reports may rest on old traditions which are bound up with the veneration of the saint in the Church liturgy, they are not to be absolutely rejected. It can perhaps be assumed that St. Blasius was a bishop and that he suffered martyrdom at the beginning of the fourth century. All the particulars concerning his life and martyrdom which are found in the Acts are purely legendary and have no claim to historical worth. There are besides various recensions of the text of the Acts. According to the legend Blasius was a physician at Sebaste before he was raised to the episcopal see. At the time of the persecution under Licinius he was taken prisoner at the command of the governor, Agricolaus. The hunters of the governor found him in the wilderness in a cave to which he had retired and while in prison he performed a wonderful cure on a boy who had a fishbone in his throat and who was in danger of choking to death. After suffering various forms of torture St. Blasius was beheaded; the Acts relate also the martyrdom of seven women. The veneration of the Oriental saint was brought at an early date into Europe, as is shown by the recitals in the historical martyrologies of the ninth century, and the Latin recension of the legend of St. Blasius; so that Blasius became one of the most popular saints of the Middle Ages. The actual reason for the unusual veneration has not yet been made clear. Most probably one ground was that according to the legend he was a physician and wonderful cures were ascribed to him; for this reason the faithful sought his help and intercession when ill. Numberless churches and altars were dedicated to him and many localities (Taranto, Ragusa, the Abbey of St. Blasius in the Black Forest, etc.) claimed to possess some of his relics. He was also one of the Fourteen Holy Martyrs. In many places on the day of his feast the blessing of St. Blasius is given: two candles are consecrated, generally by a prayer, these are then held in a crossed position by a priest over the heads of the faithful or the people are touched on the throat with them. In other places oil is consecrated in which the wick of a small candle is dipped and the throats of those present are touched with the wick. At the same time the following blessing is given: "Per intercessionem S. Blasii liberet te Deus a malo gutteris et a quovis alio malo" (May God at the intercession of St. Blasius preserve you from throat troubles and every other evil). In some dioceses is added: "in nomine Patris et Filii et Spiritus" and the priest makes the sign of the cross over the faithful. In the Latin Church his feast falls on 3 February, in the Oriental Churches on 11 February. He is represented holding two crossed candles in his hand (the Blessing of St. Blasius), or in a cave surrounded

by wild beasts, as he was found by the hunters of the governor.

J. P. KIRSCH.

**Blanc, ANTHONY**, fifth Bishop, and first Archbishop, of New Orleans, La., U. S. A., b. at Sury, near Lyons, France, 11 Oct., 1792; d. at New Orleans, 20 June, 1860. He was one of the first ecclesiastical students after the restoration of the Church in France, and was ordained priest on 22 July, 1816, by Bishop Dubourg of New Orleans, in the Seminary at Lyons, during a visit of that prelate in search of help and volunteers for the American mission. He came to America in September, 1817, landing at Annapolis, Md., with several young seminarians, and was entertained until the end of October by Charles Carroll at Carrollton. He then went with Bishop Dubourg to New Orleans and for nearly fifteen years led the arduous life of a missionary over the wide field of the Mississippi Valley. In 1831, Bishop De Neckere appointed him his vicar-general and wanted to make him his coadjutor, but he refused the promotion. When the Bishop died, in 1853, Father Blanc was named administrator, and was consecrated bishop of the diocese, 22 November, 1835. His jurisdiction extended over the States of Louisiana and Mississippi, and in 1838 Texas was added. In 1842 he came into conflict with the lay trustees of the Cathedral over his right to appoint its rector, in the course of which contest he had to interdict the church. Litigation in the courts and appeals to the State Legislature dragged out the controversy for more than a year, but all the issues were decided in favour of the Bishop. In 1838 he established a diocesan seminary and introduced into the diocese the Lazarists, the Jesuits, the Redemptorists, the Christian Brothers, the Sisters of Charity, the Sisters of Notre Dame, the Sisters of the Good Shepherd, and the Congregations of Our Lady of Mount Carmel and of the Holy Cross. He attended the First Plenary Council of Baltimore, and was one of the few American prelates present in Rome when the dogma of the Immaculate Conception was proclaimed (8 Dec., 1854). New Orleans was made an archbishopric, 19 July, 1850, and he received the pallium, 16 February, 1851. During his tenure of the see many old abuses were corrected; the number of churches was increased from 26 to 73, of priests from 27 to 92, and many schools, academies, colleges, convents, and asylums testified to his zeal and labours. He died suddenly at his residence in New Orleans, discharging with activity to the last the arduous duties of his office.

THOMAS F. MEEHAN.

**Blanc, Le.** See LE BLANC.

**Blanchard (DUCESNE)**, JEAN-BAPTISTE, a French Jesuit and educator, b. 12 October, 1731, at Tourteron in the department of Ardennes; d. 15 June, 1794. In 1746 he entered the Society of Jesus, and later was professor at Metz, Verdun, and Pont-à-Mousson. At the time of the suppression of the Society he changed his name of Ducesne to that of Abbé Blanchard, under which his works were published.

He left the order, however, in 1762, before it was suppressed, retired to Belgium, and for seven years remained near Namur, occupied with pedagogical questions. He wrote "Le temple des Muses fabulistes" (Liège, 1776, 2 vols.) and "L'Ecole des mœurs" (Namur and Paris, 1775, 2 vols.). The latter work was first published without the author's name under the title, "Le poète des mœurs, ou les maximes de la sagesse . . ." (1771), and later was reprinted several times with the title "Maximes de l'honnête homme, ou le poète des mœurs". Blanchard's main work was published after his death by Bruyset: "Précéptes pour l'éducation des deux sexes à l'usage des familles chrétiennes" (Lyons, 1803, 2 vols.); a new edition in 1807 was entitled "Education chrétienne à l'usage de l'un et de l'autre sexe". Blanchard adapts to Christian education the principles found in Rousseau's "Emile". In the work there is little originality; yet, besides judiciously chosen quotations, we find very useful suggestions and good criticisms of Rousseau's views. It is divided into three parts: physical education, moral education, and education of girls. Great importance is attached to physical culture, health, hygiene of the whole organism, and of the special sense-organs. Useful rules are given for the formation of the intellect, feelings, and will. Good pronunciation and reading are insisted on. Blanchard rightly rejects the principle of negative education advocated by Rousseau. It would be very harmful to wait till reason is developed in order to make the child exercise it; on the contrary, it must be developed by proper exercise and under proper guidance. To start for a long journey, he says, the traveller does not wait till the sun is high in the sky, but rather profits by the first rays of light; so must it be with the child. As to the education of women, Blanchard's views seem rather narrow to-day. Woman is made for dependence. Her instruction must be limited to a few elementary notions; Fénelon's principles and the "Avis d'une mère à sa fille" of Madame de Lambert, which Blanchard reproduces, must form the basis of her moral education.

C. A. DUBRAY.

**Blanche, GUSTAVE, Eudist.** See GULF OF ST. LAWRENCE, VICARIATE APOSTOLIC OF.

**Blanchet, FRANÇOIS NORBERT**, missionary and first Archbishop of Oregon City, U. S. A., son of Pierre Blanchet, a Canadian farmer, b. 30 September, 1795, near Saint-Pierre, Rivière du Sud, Province of Quebec; d. 18 June, 1883, at Portland, Oregon. After three years in the village school he went in 1810, with his brother Augustin Magloire, later the first Bishop of Nesqueally, to the Seminary of Quebec, where he was ordained priest 18 July, 1819. He was stationed at the cathedral for a year and was then sent to Richibucto, New Brunswick, as pastor of the Micmac Indians and Acadian settlers, among whom he spent seven years of missionary apprenticeship, enduring poverty, isolation, and innumerable hardships. In 1827 he was recalled to Montreal and appointed pastor of St. Joseph de Soulanges, a parish of 2,000 souls. During the cholera epidemic of 1832 Father Blanchet attended the stricken so fearlessly that the Protestants of the place presented him with a testimonial. In 1837 he was appointed vicar-general by Archbishop Signay for the Oregon mission, a vast region never before visited by a priest, and he set out on 3 May, 1838, accompanied by the Rev. Modeste Demers with the annual express of the Hudson's Bay Company. The journey from Lachine to Fort Vancouver a distance of about 5,000 miles, was made in canoes,

by portages, in barges, on horseback, and in light boats. It took them nine days to cross the Rocky Mountains, on the summit of which, at three o'clock in the morning of 16 October Father Blanchet celebrated Mass. They arrived at Fort Vancouver on 24 November. The territory assigned to the two priests embraced about 375,000 square miles. It extended from California to Alaska and from the Rocky Mountains to the Pacific Ocean.

For four years they laboured alone, going from settlement to settlement, facing every peril of a wild country, recalling the scattered faithful to the practice of religion and instructing the aborigines. Then two other priests

MOST REV. FRANÇOIS NORBERT BLANCHET

from Canada, the Revs. A. Langlois and Z. Bolduc, came to their assistance. In 1844 they were reinforced by the great missionary, Father De Smet, with four other Jesuit priests, three lay brothers, and six Sisters of Notre Dame de Namur. The immense territory of the Oregon mission was made an Apostolic vicariate 1 December, 1843; Father Blanchet was named its first vicar Apostolic and titular Bishop of Philadelphia. The letters from Rome arrived in August, 1844. To receive episcopal consecration he started for Canada 5 December, boarded a steamer on the Columbia River, touched at Honolulu, doubled Cape Horn, landed at Dover, England, went by rail to Liverpool, took a vessel to Boston and thence proceeded by rail to Montreal, a journey of 22,000 miles. He was consecrated by Bishop Bourget in the Cathedral of Montreal 25 July, 1845. Later he returned to Europe, visiting Rome, France, Belgium, Germany, and Austria in the interests of his diocese. He gathered together six secular priests, four Jesuit priests, three lay brothers, and seven Sisters of Notre Dame. They sailed from Brest 22 February, 1847, and reached the Columbia River on 12 August. The bishop was translated to the See of Draza by letters of 4 May, 1844, to avoid the confusion of his former title with that of Philadelphia, U. S. A. The Vicariate was erected into a province 24 July, 1846. Bishop Blanchet was made Archbishop of Oregon City, his brother Magloire became Bishop of Walla Walla, and Father Demers Bishop of Vancouver's Island.

The archbishop was indefatigable. He summoned his first provincial council in 1848; attended the First Plenary Council of Baltimore in 1852; went in 1855 to South America and collected for two years in Chile, Peru, and Bolivia; returned to Canada in 1859 and took back to Oregon 31 priests, sisters, and servants. He attended the Second Plenary Council of Baltimore in 1866; celebrated, 19 July, 1869, the golden jubilee of his ordination, and in the following October set out for Rome to assist at the Vatican Council, where he voted for the definition of the dogma of Papal Infallibility. He was still in the city 26 September, 1870, when the temporal power of the papacy was overthrown. When Bishop Seghers was made his coadjutor in 1879 he retired to the hospital of the Sisters of Providence at Portland. He wrote the story of the Oregon mission (Historical sketches of

Catholicity in Oregon) in a series of papers published in the "Catholic Sentinel" of that city. In 1880 he resigned and was appointed titular Archbishop of Amida. He consecrated three bishops—Demers, D'Herbomez, and Seghers. He found on the Pacific coast a wilderness, spiritual as well as material; he left, after forty-six years of heroic work, a well-provided ecclesiastical province. His name will be forever illustrious in the history of the Church in America as the first archbishop of the North-west and the Apostle of Oregon.

BLANCHET, AUGUSTIN MAGLOIRE, brother of preceding, first Bishop of Walla Walla-Nesqually, State of Washington, U. S. A., b. 22 August, 1797, on his father's farm near the village of Saint-Pierre, Rivière du Sud, Canada; d. 25 February, 1887, at Fort Vancouver, Washington. After attending the village school for three years, he was sent to Quebec, with his brother François Norbert, to study for the priesthood. He was ordained 3 June, 1821. After a twelve-month as assistant pastor at St. Gervais, he was sent as missionary to the Isles de la Madeleine and later to Cape Breton Island. He gave four years of ministry to the Gulf provinces. Then he was recalled to the vicariate Apostolic of Montreal and was successively pastor of four parishes, in one of which he was the successor of his elder brother. In 1846 while a canon of the Montreal cathedral, he was appointed Bishop of the new Diocese of Walla Walla in what is now the State of Washington. He was consecrated 27 September, 1846. In the following spring he set out overland for his distant see with one priest, Rev. J. A. B. Brouillet, and two students. At Pittsburgh he declared his intention to become a citizen of the United States. At St. Louis the party was increased by Father Richard, two deacons and Brother Blanchet, all members of the Order of Mary Immaculate. Fort Walla Walla was reached on 5 September, 1847. The Bishop located at The Dalles and thence multiplied his apostolic labours throughout the vast territory under his care. He endured the many hardships of a pioneer country and braved all the perils of a region infested with wild beasts and still more savage men. He was full of zeal. He established missions; he built churches; he founded academies and colleges; he started schools for the Indians; he begged for priests in Canada and abroad; he obtained sisters to open hospitals and other institutions.

In 1850 the See of Walla Walla was suppressed and that of Nesqually was erected in its stead, with headquarters at Fort Vancouver. The bishop built there a cathedral of logs, and a house for himself out of the same material. In 1852 he attended the First Plenary Council of Baltimore, but, on account of infirmities, he was unable to go to Rome for the Vatican Council. In 1879, after thirty-two years of arduous service in Washington, he resigned his see and was named titular Bishop of Ibora. Worn out with labours, he spent his last eight years in prayer and suffering. His peaceful death was a fitting close for his life of sacrifice. He is revered as the Apostle of Washington.

L. W. REILLY.

**Blandina**, SAINT, virgin and martyr.—She belongs to the band of martyrs of Lyons who, after some of their number had endured the most frightful tortures, suffered a glorious martyrdom in the reign of Marcus Aurelius (177) and concerning whose

death we have the touching report sent by the Church of Lyons to the Churches of Asia Minor (Eusebius, *Hist. eccl.*, V, 2). The fanaticism of the heathen populace in Lyons had been excited against the Christians so that the latter, when they ventured to show themselves publicly, were harassed and ill-treated. While the imperial legate was away the chiliarch, a military commander, and the duumvir, a civil magistrate, threw a number of Christians, who confessed their faith, into prison. When the legate returned, the imprisoned believers were brought to trial. Among these Christians was Blandina, a slave, who had been taken into custody along with her master, also a Christian. Her companions greatly feared that on account of her bodily frailty she might not remain steadfast under torture. But although the legate caused her to be tortured in a horrible manner, so that even the executioners became exhausted "as they did not know what more they could do to her", still she remained faithful and repeated to every question "I am a Christian and we commit no wrongdoing." Through fear of torture heathen slaves had testified against their masters that the Christians when assembled committed those scandalous acts of which they were accused by the heathen mob, and the legate desired to wring confession of this misconduct from the Christian prisoners. In his report to the emperor the legate stated that those who held to their Christian belief were to be executed and those who denied their faith were to be released; Blandina was, therefore, with a number of companions subjected to new tortures in the amphitheatre at the time of the public games. She was bound to a stake and wild beasts were set on her. They did not, however, touch her. After this for a number of days she was led into the arena to see the sufferings of her companions. Finally, as the last of the martyrs, she was scourged, placed on a red-hot grate, enclosed in a net and thrown before a wild steer who tossed her into the air with his horns, and at last killed with a dagger. Her feast is celebrated 2 June.

J. P. KIRSCH.

**Blane** (or BLAAN), SAINT, Bishop and Confessor in Scotland, b. on the island of Bute, date unknown; d. 590. His feast is kept on 10 August. He was a nephew of St. Cathan, and was educated in Ireland under Sts. Comgall and Kenneth; he became a monk, went to Scotland, and eventually was bishop among the Picts. Several miracles are related of him, among them the restoration of a dead boy to life. The Aberdeen Breviary gives these and other details of the saint's life, which are rejected, however, by the Bollandists. There can be no doubt that devotion to St. Blane was, from early times, popular in Scotland. His monastery became the site of the Cathedral of Dunblane. There was a church of St. Blane in Dumfries and another at Kilblane. The year of the saint's death is variously given as 446, 590, and 1000; 446 (Butler, *Lives of the Saints*) is evidently incorrect; the date 1000, found in Adam King, "Kalendar of Scottish Saints" (Paris, 1588), in Dempster, "Menologium Scotorum" (Bonn, 1622), and in the "Acta SS.", seems to have crept in by confusing St. Kenneth, whose disciple Blane was, with a Kenneth who was King of Scotland about A. D. 1000. The highest authorities say the saint died 590. The ruins of his church at Kingarth, Bute, where his remains were buried, are still standing and form an object of great interest to antiquarians; the bell of his monastery is preserved at Dunblane.

**Blarer of Wartensee.** See ST. GALL, ABBEY OF.

**Blasendorf.** See FOGARAS, DIOCESE OF.

**Blasphemy** (Gr. *βλάπτειν*, "to injure", and *φήμη*, "reputation") signifies etymologically gross irreverence towards any person or thing worthy of exalted esteem. In this broad sense the term is used by Bacon when in his "Advancement of Learning" he speaks of "blasphemy against learning". St. Paul tells of being blasphemed (I Cor., iv, 13) and the Latin Vulgate employs the word *blasphemare* to designate abusive language directed either against a people at large (II Kings, xxi, 21; I Par., xx, 7) or against individuals (I Cor., x, 30; Tit., iii, 2).

**I. MEANING.**—While etymologically blasphemy may denote the derogation of the honour due to a creature as well as of that belonging to God, in its strict acceptance it is used only in the latter sense. Hence it has been defined by Suárez as "any word of malediction, reproach, or contumely pronounced against God" (De Relig., tract. iii, lib. I, cap. iv, n. 1). It is to be noted that according to the definition (1) blasphemy is set down as a word, for ordinarily it is expressed in speech, though it may be committed in thought or in act. Being primarily a sin of the tongue, it will be seen to be opposed directly to the religious act of praising God. (2) It is said to be against God, though this may be only mediately, as when the contumelious word is spoken of the saints or of sacred things, because of the relationship they sustain to God and His service. Blasphemy, by reason of the significance of the words with which it is expressed, may be of three kinds. (1) It is heretical when the insult to God involves a declaration that is against faith, as in the assertion: "God is cruel and unjust" or "The noblest work of man is God". (2) It is imprecatory when it would cry a malediction upon the Supreme Being as when one would say: "Away with God". And finally (3), it is simply contumelious when it is wholly made up of contempt of, or indignation towards, God, as in the blasphemy of Julian the Apostate: "Thou hast conquered, O Galilean". Again blasphemy may be (1) either direct, as when the one blaspheming formally intends to dishonour the Divinity, or (2) indirect, as when without such intention blasphemous words are used with adverbence to their import.

**II. THE MALICE OF BLASPHEMY.**—Blasphemy is a sin against the virtue of religion by which we render to God the honour due to Him as our first beginning and last end. St. Thomas says that it is to be regarded as a sin against faith inasmuch as by it we attribute to God that which does not belong to Him, or deny Him that which is His (II-II, Q. xiii, art. 1). De Lugo and others deny that this is an essential element in blasphemy (De just. et jure cæterisque virt. card., lib. II, c. xlv, disp. v, n. 26), but as Escobar (Theol. mor., lib. xxviii, c. xxxii, n. 716 sqq.) observes, the contention on this point concerns words only, since the followers of St. Thomas see in the contempt expressed in blasphemy the implication that God is contemptible—an implication in which all will allow there is attributed to God that which does not belong to Him. What is here said is of blasphemy in general; manifestly that form of the sin described above as heretical is not only opposed to the virtue of religion but that of faith as well. Blasphemy is of its whole nature (*ex toto genere suo*) a mortal sin, the gravest that may be committed against religion. The seriousness of an affront is proportioned to the dignity of the person towards whom it is directed. Since then the insult in blasphemy is offered to the ineffable majesty of God, the degree of its heinousness must be evident. Nevertheless because of slight or no adverbence blasphemy may be either a venial sin only or no sin at all. Thus many expressions voiced in anger escape the enormity of a grave sin, except,

as is clear, when the anger is vented upon God. Again, in the case where blasphemous speech is uttered inadvertently, through force of habit, a grave sin is not committed as long as earnest resistance is made to the habit. If, however, no such effort is put forth there cannot but be grave guilt, though a mortal sin is not committed on the occasion of each and every blasphemous outburst. It has been said that heretical blasphemy besides a content directed against religion has that which is opposed to the virtue of faith. Similarly, imprecatory blasphemy is besides a violation of charity. These forms of the sin being specifically distinct from the simpler kind, it is necessary to specify their character in confession. Whether blasphemy has been direct or indirect, however, calls not for specification on the part of the penitent, since both these forms are specifically the same, though clearly differing in the degree of malice. The question has been raised whether blasphemy against the saints differs in kind from that uttered immediately against God. While De Lugo thinks that such a difference obtains (De Pœnit., disp. xvi, n. 178 sqq.) the opposite opinion of St. Alphonsus seems more tenable, for as the latter theologian observes, the saints, ordinarily speaking, are not blasphemed because of their own excellence but because of their close relationship to God (Theol. Moral., lib. IV, n. 132).

**THE PENALTIES ATTACHED TO BLASPHEMY.**—In the Old Law the blasphemer was punished by death. So God appointed on the occasion of the blasphemy of Salumith's son: "The man that curseth His God, shall bear his sin: And he that blasphemeth the name of the Lord, dying let him die: all the multitude shall stone him, whether he be a native or a stranger. He that blasphemeth the name of the Lord, dying let him die" (Lev., xxiv, 15-16). Upon hearing blasphemy the Jews were wont in detestation of the crime to rend their clothes (IV Kings, xviii, 37, xix, 1; Matt., xxvi, 65).

Among the Athenians blasphemy was actionable and according to Plutarch, Alcibiades was made to suffer the confiscation of his goods for ridiculing the rites of Ceres and Proserpine (Plutarch, Alcibiades). Among the ancient Romans blasphemy was punishable, though not by death (Manutius, "De Legibus Romanis", quoted by Disney, "A view of Ancient Laws against Immorality and Profaneness", p. 826). In the time of Justinian we find most severe enactments against this sin. In a constitution of A. D. 538 the people are called upon to abstain from blasphemy, which provokes God to anger. The prefect of the city is commanded to apprehend all such as shall persist in their offence after this admonition and put them to death, that so the city and the empire may not suffer because of their impiety (Auth. Col., Tit. vii, 7 November). Among the Visigoths, anyone blaspheming the name of Christ or expressing contempt of the Trinity had his head shorn, was subjected to a hundred stripes, and suffered perpetual imprisonment in chains (Li. Wisigoth., lib. XII, tit. iii, l. 2). Among the Franks, according to a law enacted at the Diet of Aachen, A. D. 818, this sin was a capital offence. In the Gospels blasphemy is described as one of "the things that defile a man" (Matt., xv, 20; Mark, vii, 21-23).

Medieval canon law punished the blasphemer most severely. By a decree of the thirteenth century one convicted of blasphemy was compelled to stand at the door of the church during the solemnities of the Mass for seven Sundays, and on the last of these days, divested of cloak and shoes, he was to appear with a rope about his neck. Obligations of fasting and almsgiving were likewise imposed under heaviest penalties (Decret., lib. V, tit. xxvi). The rigours of the ancient discipline were insisted upon by Pius V in his Constitution "Cum primum apostolatus" (§ 10). Ac-

ording to the law herein laid down, the layman found guilty of blasphemy was fined. The fine was increased upon his second offence, and upon his third he was sent into exile. If unable to pay the fine, he was upon the first conviction condemned to stand before the door of the church, his hands tied behind him. For the second offence he was flogged, and for the third his tongue was pierced, and he was sentenced to the galleys. The blasphemous cleric, if possessed of a benefice, lost upon his first offence a year's income; upon his second he was deprived of his benefice and exiled. If enjoying no benefice, he was first subjected to a fine and bodily punishment; on repeating the offence he was imprisoned, and still persisting, he was degraded and condemned to the galleys.

**BLASPHEMY IN CIVIL LAW.**—Blasphemy cognizable by common law is defined by Blackstone to be "denying the being or providence of God, contumelious reproaches of our Saviour Jesus Christ, profane scoffing at the Holy Scripture, or exposing it to contempt or ridicule". In the United States we find many penal statutes against blasphemy, which have been declared constitutional as not subversive of the freedom of speech or liberty of the press (Am. and Eng. Ency. of Law, Vol. IV, 582). In the American Decisions (Vol. V, 335) we read that "Christianity being recognized by law therefore blasphemy against God and profane ridicule of Christ or the Holy Scriptures are punishable at common law". Accordingly where one uttered the following words "Jesus Christ was a bastard and his mother was a whore", it was held to be a public offence, punishable by the common law. The defendant found guilty by the court of common pleas of the blasphemy above quoted was sentenced to imprisonment for three months and to pay a fine of five hundred dollars.

**Blatares, MATTHEW**, a monk of the Order of St. Basil, living in the fourteenth century, who applied himself to the study of theology and canon law. Through the labours of John the Scholastic, Photius, Zonaras, Balsamon, and others the Greek Church possessed some collections of laws and commentaries. There was, however, need of a more comprehensive work, and one better adapted to the needs of the time. It appeared about 1335, in the "Syntagma" of Blatares, a collection of ecclesiastical constitutions in alphabetical order, written in Greek. The full title might be translated into Latin thus: "Syntagma alphabeticum rerum omnium, quæ in sacris divinisque canonibus comprehenduntur, elaboratum pariter et compositum per minimum ex hieromonachis Matthæum Blastarem". The collection, which contains a long preface, is arranged alphabetically by means of the initial letters of the words which indicate the subject-matter of each chapter; several chapters are thus found under one letter. For example under the Greek Γ: Thoughts concerning the degrees of relationship in reference to matrimony, concerning marriages permitted and prohibited. Under Δ: Thoughts on last testaments, deacons, justice, ecclesiastical trials, etc.

In each chapter the author first gives the law of the Church on the subject and then, if there be any, the civil law also, setting forth the sense rather than the exact wording of either, and contenting himself with noting where the constitutions referred to may be found. The "Syntagma", commonly called "Nomocanon" or, by metaphor,

πρόβλημα (rudder), soon became extensively employed, and is still used in the Greek Church, as is evidenced by the fact that an edition of the work in six volumes was published in Athens from 1852 to 1860, under the auspices of the Holy Synod. This edition bears the title: *Σύνταγμα τῶν θεῶν καὶ ἐκκλησίου καὶ βασιλείας*. This work is also found in the Synodicon of Beveridge (P. G., CXLIV, CXLV) published at Oxford in 1672. There are also attributed to Blatares a tract on matrimonial cases, and two poems published by Goar in Greek and Latin, one on the offices of the Church of Constantinople, the other on the court. His "Syntagma", like other medieval law-books of the Greeks, breathes a spirit inimical to the Roman Church.

A. B. MEEHAN.

**Blathmac, SAINT**, a distinguished Irish monk, b. in Ireland about 750. He suffered martyrdom in Iona, about 835. He is fortunate in having had his biography written by Strabo, Benedictine Abbot of Reichenau (824-849), and thus the story of his martyrdom has been handed down through the ages. Strabo's life of this saint is in Latin hexameters, and is to be found in Messingham's "Florilegium Insulæ Sanctorum" (Paris, 1624). A scion of a noble family he early showed a religious turn of mind, and longed to be enrolled in the noble army of martyrs, a wish which was afterwards fulfilled. His name was latinized *Florentius* (from the fact of the Irish word *Blath* meaning a flower), and as a religious, he was most exemplary, finally becoming abbot. In 824 he joined the community of Columban monks at Iona, and not long afterwards the Danes ravaged the island. One morning, as he was celebrating Mass, the Scandinavian rovers entered the monastic church and put the monks to death. St. Blathmac refused to point out the shrine of St. Columba, which was really the object of plunder, and he was hacked to pieces on the altar step. His body was afterwards reverently interred where the scene of martyrdom took place, and numerous miracles are claimed to have been wrought through his intercession. The date of his death is given by the "Annals of Ulster" as 825, although Mabillon places it thirty-six years earlier.

W. H. GRATTAN FLOOD.

**Blemmida (BLEMMYDES) NICEPHORUS**, a learned monk and writer of the Greek Church, b. about 1198, at Constantinople; d. 1272. After the establishment of the Latin Empire (1204) his family emigrated to Asia Minor. Blemmida there received a careful training and was soon reputed one of the most learned men of his time. About 1223 he became one of the Byzantine clergy, at that time established in Nicæa. But owing to difficulties and jealousies he renounced all worldly prospects, became a monk, and built a monastery near Ephesus, over which he presided until his death. In this condition he felt free from all entanglements and on various occasions exhibited independence and courage. At one time he dismissed from the church of his monastery the Princess Marcesina, a mistress of the Emperor John Ducas Batatzes (1222-54), and in justification of his conduct wrote an encyclical letter. Again, when the Patriarch Joseph of Constantinople (1268-75) sought to obtain recognition against the former Patriarch Arsenius (1255-66), he met with a straight refusal from Blemmida. Nevertheless Blemmida was held in

high esteem by the contemporary Greek Emperors. The aforementioned John Ducas, far from venting his wrath on him, accepted the rebuke as well merited. When the Patriarchal See of Constantinople fell vacant, in 1255, it was offered to Blemmida by Emperor Theodore II, Lascaris (1254-58); but he preferred his quiet monastic life.

The reputation of Blemmida was really due to his vast learning. Many a Greek youth of high estate learned from him the beauty of letters, or the secrets of philosophy and theology. Among his pupils were the learned Georgius Acropolites and the royal prince, afterwards emperor, Theodore II, Lascaris. Blemmida was the author of several poems, of letters, of a work on the duties of an emperor, of two autobiographies, of two geographical works, of philosophical writings on logic and physics, and of a rule of life for his monks. Among his theological works may be mentioned a commentary on the Psalms, a discourse on the Trinity and Christology, and two orations on the Holy Ghost. One of these orations was addressed to Jacob, Archbishop of Bulgaria; the other to Theodore Lascaris. In both he proved, from passages of Athanasius, Basil, Gregory Nazianzen, Gregory of Nyssa, Cyril of Alexandria and other Fathers, that the procession of the Holy Ghost from Father and Son, or from the Father through the Son, was genuine Catholic doctrine. In this precisely consists his importance. He was among the few Greek writers who recognized that the Latin Church was correct in its belief. This is evident not only from his own writings, but also from the explicit contemporary evidence of such men as Beccus, Pachymeres, and Nicephorus Gregoras. It was through the reading of the works of Blemmida that Beccus was converted to the teaching held by the Latin Church, and induced to write in its defence. Most of the works of Blemmida so far published are found in Migne's "Patrologia Græca", CXLII (Paris, 1855), or in the "Bibliotheca Teubneriana" (Leipzig, 1896).

FRANCIS J. SCHAEFER.

**Blenk, JAMES HUBERT.** See NEW ORLEANS, ARCHDIOCESE OF.

**Blenkinsop, PETER**, Catholic publisher, b. in Ireland; married a sister of Archbishop Oliver Kelly of Tuam and emigrated with his family from Dublin to Baltimore, Maryland, U. S. A., in 1826, where he established a printing and publishing house for Catholic books; he issued (1827) Pise's "History of the Church", 5 vols., and began the "Metropolitan", a monthly magazine (1830). Blenkinsop had three children: William A., Peter J., and Catherine.

WILLIAM A. BLENKINSOP was b. in Dublin, 1819; d. 8 January, 1892, in Boston, Massachusetts, U. S. A. He studied at St. Mary's College, Baltimore, from 1833-39, taught there (1839-44) taking the degree of A. M., and was ordained by Archbishop Eccleston in 1843. He went with Bishop Chanche to Natchez and laboured on the Mississippi mission for seven years; in 1850 he became affiliated to the Diocese of Boston and was appointed pastor of Cabotville (now Chicopee), where he built a church, one of the finest in the State; his pastoral charge included a large part of the Connecticut Valley in Massachusetts. When offered the position of Vicar-General of Natchez, he responded that he had more people in his parish than were in the whole Diocese of Natchez. In 1864, he became pastor of the Church of St. Peter and Paul, Boston, where he remained for twenty-eight years. He was a model of priestly virtue, courtly in manners, simple as a child, and

generous to the poor. He was buried in St. Augustine's Cemetery, S. Boston.

PETER J. BLENKINSOP was b. in Dublin, 19 April, 1818; d. in Philadelphia, Pennsylvania, 5 November, 1896. He studied at Georgetown College, Washington, D. C., entered the Society of Jesus in 1834, and was ordained by Archbishop Eccleston 26 July, 1846. He was President of Holy Cross College, Worcester, Massachusetts, from 1854-57, which he rebuilt after its destruction by fire. He was also pastor at Frederick, Maryland, St. Joseph's Church, Philadelphia, and was stationed at various times in the Jesuit colleges at Worcester, Georgetown, and Philadelphia.

CATHERINE BLENKINSOP, b. in Dublin, 18 April, 1816; d. at Emmitsburg, Maryland. She entered the Sisters of Charity at the latter place in May, 1831, at the age of fifteen. She took the name of Euphemia with the religious habit and was stationed successively at St. Joseph's School, New York, St. Peter's School, Baltimore, St. Mary's Asylum in the same city, and in 1855, at the mother-house, as assistant. During the Civil War she was entrusted with the delicate mission of directing the institutions of the Sisters of Charity in the South, and was the mainstay of the Sisters in their arduous labours; in 1866 she was appointed visitatrix of the community, which she continued to direct until her death.

E. I. DEVITT.

**Blessed.** See HEAVEN.

**Blessed, THE.**—There are at present two ways in which the Church allows public worship to be paid those who have lived in the fame of sanctity or died as martyrs. Of these some are beatified, others are canonized. (See BEATIFICATION AND CANONIZATION.) Beatification is a permission for public worship restricted to certain places and to certain acts. In the more recent discipline of the Church, the pope alone can beatify, though formerly bishops could grant the honour of beatification to those of the faithful who had shed their blood for Christ or lived lives of heroic virtue. All those permissions for public worship which in the early ages of the Church were granted to particular churches and spread thence with the sanction of other bishops to other congregations, to be finally made a matter of precept for the universal Church by the Roman pontiff, constituted beatification and canonization in the exact sense of the word. It was only beatification while the cult, of the martyr for instance, was restricted to the place where he had suffered, but became canonization when it was received in the entire Church. The difference between canonization and beatification lies in the presence or absence of two elements which are found united in canonization and either separate or entirely absent from beatification, though generally only one is lacking. These elements are: (1) the precept regarding public worship, and (2) its extension to the whole Church. In exceptional cases one or other of these is wanting; sometimes the cult of the beatified is not only permitted but enjoined, though not for the universal Church, and in other instances it is permitted for the whole Church but not enjoined. The case of St. Rose of Lima is an instance of the occurrence of both elements, though that did not of itself suffice for her canonization, as one of the elements was not really complete. When Clement X chose her as patron of all America, the Philippines, and the Indies, and by the same act allowed her cultus in the entire Church, it was clearly a case where a cultus was enjoined in America and merely allowed for the remainder of the Church.

The nature of beatification makes it evident that the worship of the blessed is restricted to certain

places and persons, and may be given only after permission. Such permission is usually granted to those persons or places which have in some way been connected with the blessed. In the case of a religious, it is granted to the members of the order or congregation to which he belonged; if a canon of a church, that church or chapter receives the permission; if a martyr, a bishop, or resident of some place for a long period, the concession is made to the place of his martyrdom or to his see or to the place that he adorned with his virtues. In some cases the place of his birth or burial is included. And in all these instances it may be that the concession is made only to the mother church, or to the church in which his body lies, or it may be extended to the whole city or diocese. With Benedict XIV (*De canonizatione de SS., Lib. IV, part. II, cap. i, n. 12*) we may add that such grants are affixed to the day on which the blessed died or to some other determined day. When this cultus is allowed to certain persons or places it is still further restricted with respect to the manner in which it is to be given, and not all acts of worship which the customs and discipline of the Church allow to be paid canonized saints may be used in the worship of the beatified. Benedict XIV (*loc. cit., c. ii*) treats the question at length and with regard to the inquiry as to whether a votive Mass may be said in honour of the blessed in places where the cultus has been granted decides in the negative against Castropalao and Del Bene. His opinion has since been confirmed by the decree of Alexander VII of 27 September, 1659, in which decree the pope settled many questions regarding the worship of the blessed. It may be remarked that ordinarily votive Masses cannot be said in honour of the blessed, though for several centuries they have been said in virtue of special indulgences. The oldest indulgence which Benedict XIV quotes in this connexion is that granted by Clement VII to the Dominicans of the Convent of Forlì, 25 January, 1526, to celebrate the Mass of Blessed James Salomonio "as often during the year as their devotion may move them to do so". Besides this indulgence there is another granted by Alexander VII at the request of Ferdinand Gonzaga, Prince of Castiglione, on 22 May, 1662, "to celebrate votive Masses in honour of Blessed Aloysius (Gonzaga) in the collegiate mother church of the town of Castiglione during the year". And this indulgence, a few months afterwards, was extended so as to allow "votive Masses of the same Blessed Aloysius to be celebrated in the church of the Regular Clerics of the Society of Jesus during the year on days not impeded by the rubrics".

Alexander VII further ordered that images of the blessed should not be exposed in any church, sanctuary, or oratory whatever, and especially in those in which Mass or other Divine services are held, without previous consultation with the Holy See. This rule is of such strict interpretation that in virtue of the granting of this indulgence it cannot be presumed that permission is had to place the images of the blessed upon the altars. They may be placed upon the walls of the church only. However, an indulgence permitting a contrary use is not of altogether rare occurrence in the recent discipline of the Church, and it is to be remarked that even in the time of Alexander VII a decree of the Congregation of Rites of 17 April, 1660, declared that the concession of an indulgence to say the Mass and Office of a blessed implied permission to place his picture or statue upon the altar, though the opposite does not hold. The same pope also decided that the names of the blessed should be entered in no catalogue except those proper to the persons who had received permission to honour them with cultus and a Mass and Office. He ruled too that no prayers should be addressed to the blessed in public services except those granted and approved

by the Holy See and that their relics should not be carried in procession. It must, however, be observed here in passing that Alexander VII, as he especially declares in his decree, did not intend to do away with any cultus that had been rendered to the blessed with the common consent of the Church, or from time immemorial, or approved by the writings of the Fathers and the saints, or even one which had been tolerated by the Holy See and the different ordinaries for more than a hundred years. In addition to all this, we have other decrees of the Congregations of Rites, such as: that the names of the blessed are not to be enrolled in the martyrology; that neither altars nor churches may be dedicated to them; that they may not be chosen as local patrons. It must not be forgotten that exceptions may be made by indulgence even in these cases. Recently, to quote an instance, Pius X at the request of the English bishops, in the matter of the English martyrs whom Leo XIII had beatified, granted that in each diocese an altar might be erected to each of the nine principal martyrs whose names are mentioned in the decree, the churches in which they were to be erected being designated by the bishops. Beatification is an entirely different matter from canonization, and is but a step to it, being in no wise an irrevocable decision of ecclesiastical authority. The observation of Benedict XIV then goes without saying, that the blessed are not to be given the title of saint; further that the distinctive signs which ecclesiastical use has made constant in regard to statues and pictures of saints cannot be used in the case of blessed, who are not to be represented with the aureola, but with rays above (*op. cit., Lib. I, c. xxxvii*).

To conclude, we may observe that in the cultus of the blessed great attention must be given to the indulgence which in each specific instance determines, according to the wishes of the sovereign pontiff, the restrictions with regard to persons, places, and acts of worship. This matter, and very justly so, has been made the subject of special legislation on the part of the Congregation of Rites which decreed on 5 October, 1652, that no one could go beyond the limits set by the words of the indulgences of the Holy See in regard to beatification. The solemnities of beatification cannot be compared with those of canonization. They are briefly as follows: On the day on which beatification takes place Mass is said in St. Peter's in presence of the entire Congregation of Rites. After the Gospel, instead of a homily, the secretary of the Congregation reads the pope's decree, on the conclusion of which the painting of the newly beatified, which stands over the altar, is uncovered and the Mass is finished. About the hour of Vespers the Holy Father comes down to the basilica to venerate the new blessed. After the beatification permission is granted to celebrate solemn triduum, and by a special decree Mass and Office are allowed to be said yearly on a fixed day, but with restrictions as to place, and it is permitted to insert the name in the special martyrologies. The expenses of a beatification from the first steps to its conclusion approximate 100,000 lire (\$20,000). (See **BEATIFICATION AND CANONIZATION.**)

CAMILLUS BECCARI.

**Blessed Sacrament.** CONGREGATION OF THE, an enclosed congregation and a reform of the Dominican Order devoted to the perpetual adoration of the Blessed Sacrament. It was founded in the face of great opposition by Father Anthony Le Queue, a French Dominican, whose canonization was stopped by the French Revolution. Born in 1601 at Paris, he entered the Order of Friars Preachers in the Rue St. Honoré, in 1622, and was in due time made master of novices first in his own monastery and afterwards at Avignon (1634). While at the

latter place (1639) he began to lay the foundation of the institute he desired to establish, but it was not till twenty years later (1659) that, after great difficulty, the first house was opened at Marseilles for the three ladies whom the saintly founder had begun to train at Avignon. The Bishop of Marseilles gave them the habit the following year, approved the rule and constitutions Father Le Queieu had drawn up, and erected them into a simple congregation. It was not till after the death of the founder, who lived to see another foundation made at Bollène, that the constitutions were approved by Pope Innocent XII (1693), who authorized the nuns to take solemn vows and bound them to enclosure. This was the first congregation instituted for the perpetual adoration of the Blessed Sacrament; it is not an austere one, but the degree of perfection put before the members by the founder is very high. The original mother-house at Marseilles was suppressed at the French Revolution, when the nuns were dispersed, but it was reopened in 1816; the Bollène house suffered more severely. Thirteen of the nuns endured martyrdom under the Commune; their cause of beatification is now before the Holy See; the remainder of the Bollène community returned to their convent and resumed their work of perpetual adoration in 1802. The Bollène nuns sent three of their number with one lay sister, under the Reverend Mother Emilie Pellier to England, to found a house at Cannington (1863), a community which was afterwards moved to Taunton in Somersetshire, where it has since remained. There is also a house at Oxford, and another near Newport. After Father Le Queieu's death foundations were made in the south of France, and after the French Revolution other houses were founded in the same locality. Since then a house has been established in Normandy, from which another convent has been opened at Hal in Belgium. There are no houses of this congregation in America.

FRANCESCA M. STEELE.

**Blessed Sacrament, SISTERS OF THE**, one of the most recent congregations of religious women in the Catholic Church and one of entirely American origin, founded by Miss Katharine Drexel at Philadelphia, Pa., in 1889, for missionary work among the Indians and coloured people of the United States. The formal approbation of the Holy See was given to the congregation in July, 1907.

The Third Plenary Council of Baltimore gave a new impetus to missionary work among the coloured and Indian races and as one of the results of its recommendations, Right Reverend James O'Connor, Bishop of Omaha, acting in conjunction with Miss Katharine Drexel, daughter of the late Francis A. Drexel of Philadelphia, decided with the approval of the Most Reverend P. J. Ryan, Archbishop of Philadelphia, to form a new congregation of religious women devoted exclusively to missionary work among these two races. For some years previous to this step, Miss Drexel had been very active in re-establishing and supporting schools in many of the Indian reservations. The greater portion of the income which she derived from her father's estate was used in maintaining and furthering these missionary projects. At this period a survey of the field of work revealed about 250,000 Indians neglected, if not practically abandoned, and over nine millions of negroes still struggling through the aftermath of slavery.

The piteous condition of these two races decided Miss Drexel to devote both her fortune and her life to them. With the approval of high church authorities in the United States she gathered around her young women imbued with the same ideas, and

thus founded, towards the close of 1899, the nucleus of the new community. In order to be well grounded in the principles of the religious life, the first members made a two years' novitiate with the Sisters of Mercy. After this, they continued their period of preparation in the old Drexel homestead, Torresdale, near Philadelphia. Early in 1892 a mother-house and novitiate

ST. ELIZABETH'S CONVENT, SISTERS OF THE BLESSED SACRAMENT, CORNWELLS, PENN.

were opened at Maud, Pennsylvania, adjoining which was erected a manual training and boarding school for coloured boys and girls.

The distinctive spirit of this institute is the consecration of its members, body and soul, to the service of Jesus Christ ever present in the Holy Eucharist. His Eucharistic life is to be the inspiration of the entire varied activity of the sisters. Besides the vows usual in all religious communities, the sisters pledge themselves to work exclusively for the spiritual and temporal welfare of the Indian and coloured races. By their rule, the Sisters of the Blessed Sacrament may (1) undertake all kinds of educational works; (2) they may care for orphans or spiritually or corporally destitute children; (3) they may attend the sick by visiting them in their homes or by conducting hospitals; (4) they may shelter destitute and deserving women; (5) they may visit and instruct inmates of prisons and reformatories; (6) they may establish and conduct homes for the aged; (7) they may establish schools and classes outside their own houses, visit the poor in order to look after their religious welfare and also to teach them habits of good living, neatness, and thrift—in short, to make them self-sustaining men and women.

The sisterhood now numbers one hundred and twelve members. In 1894, St. Catharine's boarding and industrial school for Pueblo Indians was opened at Santa Fé, New Mexico; in 1899, the Institute of St. Francis de Sales, Rock Castle, Va., a boarding academy and industrial school was opened for the training of Southern coloured girls; in 1902, St. Michael's Mission, Arizona, for the education of Navajo Indians, a boarding and industrial school, was completed and opened. The Academy of the Immaculate Mother, Nashville, Tenn., was opened in 1905. In this school girls are also trained to become teachers, while others not desiring to teach may take a full course of domestic science and dress-making. In 1906, the sisters commenced work at Carlisle, Pa., by instructing the Indian pupils of the Government School, and conducting a day school for coloured children.

SISTER MERCEDES.

**Blessing.**—In its widest acceptance this word has a variety of meanings in the sacred writings: (1) It is taken in a sense that is synonymous with praise; thus the Psalmist, "I will bless the Lord at all times, his praise shall be always in my mouth"

(Ps. xxxiii, 1). (2) It is used to express a wish or desire that all good fortune, especially of a spiritual or supernatural kind, may go with the person or thing, as when David says: "Blessed art thou, and it shall be well with thee" (Ps. cxxvii, 2). (3) It signifies the sanctification or dedication of a person or thing to some sacred purpose; "Christ took bread, and blessed, and broke" (Matt., xxvi, 26). (4) Finally, it is employed to designate a gift; so Naaman addresses Eliseus: "I beseech thee therefore take a blessing of thy servant" (IV Kings, vi, 15). With these various significations it is not the present purpose to deal. Coming, then, to its strictly liturgical and restricted sense, blessing may be described as a rite, consisting of a ceremony and prayers performed in the name and with the authority of the Church by a duly qualified minister, by which persons or things are sanctified or dedicated to Divine service, or by which certain marks of Divine favour are invoked upon them. The following aspects of the subject will be discussed: (I) Antiquity; (II) Minister; (III) Objects; (IV) Efficacy; and (V) Rite employed in administering.

**I. ANTIQUITY.**—The custom of giving blessings goes back to the very earliest times. In the morning of Creation, on the completion of each day's work, God blessed the living creatures that came from His hands, bidding them increase and multiply and fill the earth (Gen., i-ii). When Noe emerged from the Ark, he received God's benediction (Gen., ix, 1), and this heritage he transmitted through his sons, Sem and Japheth, to posterity. The pages of the Old Testament testify abundantly to the great extent to which the practice of blessing prevailed in the patriarchal ages. The head of each tribe and family seemed to be privileged to bestow it with a special unction and fruitfulness, and the priests at the express direction of God were wont to administer it to the people. "Thus shall you bless the children of Israel . . . and the Lord will turn His countenance and give them peace" (Num., vi, 23-26). That great value was attributed to blessings is seen from the stratagem adopted by Rebecca to secure Jacob's blessing for her favourite son. In general estimation it was regarded as a mark of Divine complacency and as a sure way to secure God's benevolence, peace, and protection. The New Dispensation saw the adoption of this rite by Our Divine Lord and His Apostles, and so, elevated, ennobled, and consecrated by such high and holy usage, it came at a very early stage in the Church's history to assume definite and concrete shape as the chief among her sacramentals.

**II. MINISTER.**—Since, then, blessings, in the sense in which they are being considered, are entirely of ecclesiastical institution, the Church has the power to determine who shall have the right and duty to confer them. This she has done by entrusting their administration to those who are in sacerdotal orders. The solitary case in which one inferior to a priest is empowered to bless, is where the deacon blesses the paschal candle in the ceremonies of Holy Saturday. This exception is more apparent than real. For in the instance referred to the deacon acts by way of a deputy, and, moreover, employs the grains of incense already blessed by the celebrant. Priests, then, are the ordinary ministers of blessings, and this is only in the fitness of things, since they are ordained, as the words of the Pontifical run; "ut quæcumque benedixerint benedicantur, et quæcumque consecraverint consecrentur" (That whatever they bless may be blessed, and whatever they consecrate shall be consecrated). When, therefore, laymen and women are represented as blessing others it is to be understood that this is an act of good will on their part, a wish or desire for another's spiritual or temporal prosperity, an appeal to God

which has nothing to recommend it but the merit of personal sanctity. The ordinary greetings and salutations that take place between Christians and Catholics, leavened by mutual wishes for a share of heavenly grace, must not be confounded with liturgical blessings. St. Gregory first definitely taught that the angels are divided into hierarchies or orders, each having its own rôle to play in the economy of creation. Similarly the Church recognizes different orders or grades among her ministers, assigning to some higher functions than to others. The working out of this idea is seen in the case of conferring blessings. For while it is true that a priest can ordinarily give them, some blessings are reserved to the Supreme Pontiff, some to bishops, and some to parish priests and religious. The first class is not large. The pope reserves to himself the right to bless the pallium for archbishops, Agnus Deis, the Golden Rose, the Royal Sword, and also to give that benediction of persons to which an indulgence of some days is attached. He may, and in the case of the last mentioned often does, depute others to give these. To bishops belongs the privilege of blessing abbots at their installation, priests at their ordination, and virgins at their consecration; of blessing churches, cemeteries, oratories, and all articles for use in connexion with the altar, such as chalices, vestments, and cloths, military standards, soldiers, arms, and swords; and of imparting all blessings for which Holy Oils are required. Some of these may, on delegation, be performed by inferiors. Of the blessings which priests are generally empowered to grant, some are restricted to those who have external jurisdiction, like rectors or parish priests, and others are the exclusive prerogative of persons belonging to a religious order. There is a rule, too, by which an inferior cannot bless a superior or even exercise the ordinary powers in his presence. The priest, for instance, who says Mass at which a bishop presides is not to give the final blessing without permission from the prelate. For this curious custom authors cite a text from the Epistle to the Hebrews: "And without all contradiction that which is less is blessed by that which is greater" (vii, 7). It would seem an overstraining of the passage to say that it affords an argument for maintaining that an inferior minister cannot bless one who is his superior in rank or dignity, for the text either merely enunciates an incident of common usage, or means that the inferior by the fact that he blesses is the greater, since he acts as the representative of God.

**III. OBJECTS.**—The range of objects that come under the influence of the Church's blessing is as comprehensive as the spiritual and temporal interests of her children. All the lower creatures have been made to serve man and minister to his needs. As nothing, then, should be left undone to enhance their utility towards this end, they are placed in a special way under the direct providence of God. "Every creature of God is good . . .", as St. Paul says, "for it is sanctified by the word of God and prayer" (I Tim., iv, 4-5). There is also the reflection that the effects of the Fall extended to the inanimate objects of creation, marring in a manner the original aim of their existence and making them, in the hands of evil spirits, ready instruments for the perpetration of iniquity. In the Epistle to the Romans St. Paul describes inanimate nature, blighted by the primal curse, groaning in travail and anxiously awaiting its deliverance from bondage. "The expectation of the creature waiteth for the revelation of the Sons of God. For the creature was made subject to vanity, not willingly, but by reason of him that made it subject, in hope" (viii, 19-20). From this it will be easily seen how very reasonable is the anxiety of the Church that the things which

we use in daily life and particularly in the service of religion, should be rescued from contaminating influences and endowed with a potency for good. The principal liturgical blessings recognized and sanctioned by the Church are contained in the Roman Ritual and the Pontifical. The Missal, besides the blessing given at the end of Mass, contains only those blessings associated with the great functions incidental to certain days of the year, such as the blessing of palms and ashes. In the Pontifical are found the blessings that are performed *de jure* by bishops, such as the solemn blessing of persons already referred to, the forms for blessing kings, emperors, and princes at their coronation, and those before mentioned as of episcopal prerogative.

The great treasury of ecclesiastical blessings is the Roman Ritual. (1) *Formula for blessing persons.* First comes a blessing for pilgrims to the Holy Land, on their departure and return, containing beautiful prayers and apt allusions to the Magi journeying through the Arabian desert under the guidance of the Star, to Abraham leaving his own country and setting his face towards the distant land of Canaan, to the Angel companion of the younger Tobias, and, finally, an appeal to God to prove to the wayfarers a solace on their journey, a shade from summer heats, a shelter in storm, and a haven of safety. Next follow blessings of persons with Holy Water before Mass, for an adult who is sick, for a number of sick people, one for a woman on the approach of confinement and another after childbirth, blessings for infants, for children come to the use of reason and for those arrived at years of discretion, for children on their presentation in Church, that they may lead good Christian lives, for boys and girls on the Feast of the Holy Infancy that they may grow up to imitate the virtues of the Saviour and reach salvation under His guidance.

(2) *Blessings for things.* (a) In addition to the blessings already mentioned for articles destined for altar purposes, the Roman Ritual has formulae for blessing crosses, images of Our Lord, of the Blessed Virgin and saints, church organs, processional banners, new bells for church uses and for other purposes, dress and cinctures worn in honour of Our Lady and of other saints, monstrances, reliquaries, vessels for Holy Oils, church ornaments, clerical habits, medals, pictures, and crosses for the Stations, rosaries of all the recognized kinds, water, candles, the Triagon of the Holy Trinity, the different scapulars of Our Lady, of Our Lord, of the Blessed Trinity, of St. Joseph, St. Michael the Archangel, and other saints. Most of the objects just enumerated, as, for instance, rosaries and scapulars, receive what is called an indulgenced blessing, that is to say, by the pious employment and use of them persons are enabled to gain an indulgence. (b) The following articles of food have benedictions assigned to them: paschal lamb, eggs, oil, wine, lard, cheese, butter, dripping, salt, and water which is used as an antidote to rabies. There is also a form for everything that may be eaten. The fruits of the earth, such as grapes, corn, and the garnered harvest, seeds that are put into the earth, wine and the vintage, herbs and grasses, may all in fitting and appropriate language be "sanctified by the word of God and prayer". (c) The lower animals which minister to the reasonable requirements of the human family may have blessings invoked upon them in order that the measure of their usefulness may be increased. Thus, birds of the air, beasts of the field, bees that afford such examples of industry to man, horses and oxen broken to the yoke, and other beasts of burden are included in the formularies of the Ritual. The Creator is invoked to grant to the brute strength and health to bear his burthen and, if attacked by sickness or plague, to obtain de-

liverance. (d) The Ritual has blessings for houses and schools and for the laying of their foundation stones; for stables for the lower animals and every other building of any description for which no special formula is at hand. There is also a special blessing for the bridal chamber. (e) Lastly, inanimate things that subserve the equitable needs and conveniences of society may receive from the Church the stamp of her benediction before they are sent on their way to do their appointed tasks. Such, for instance, are new ships, new railways with trains and carriages, new bridges, fountains, wells, corn-mills, limekilns, smelting-furnaces, telegraphs, steam engines, machines for producing electricity. The many serious accidents that occur explain the concern of the Church for those whose lives are exposed to danger from these various sources.

IV. *EFFICACY.*—The inquiry will be confined to the blessings approved of by the Church. As has been said, the value of a blessing given by a private person in his own name will be commensurate with his acceptableness before God by reason of his individual merits and sanctity. A blessing, on the other hand, imparted with the sanction of the Church has all the weight of authority that attaches to the voice of her who is the well-beloved spouse of Christ, pleading on behalf of her children. The whole efficacy, therefore, of these benedictions, in so far as they are liturgical and ecclesiastical, is derived from the prayers and invocations of the Church made in her name by her ministers. Blessings may be divided into two classes, viz: invocative and constitutive. The former are those in which the Divine benignity is invoked on persons or things, to bring down upon them some temporal or spiritual good, without changing their former condition. Of this kind are the blessings given to children, and to articles of food. The latter class are so called because they permanently depute persons or things to Divine service by imparting to them some sacred character, by which they assume a new and distinct spiritual relationship. Such are the blessings given to religious at their profession, and to churches and chalices by their consecration. In this case a certain abiding quality of sacredness is conferred in virtue of which the persons or things blessed become inviolably sacred, so that they cannot be divested of their religious character or be turned to profane uses. Again, theologians distinguish blessings of an intermediate sort, by which things are rendered special instruments of salvation without at the same time becoming irrevocably sacred, such as blessed salt, candles, etc. Blessings are not sacraments; they are not of Divine institution; they do not confer sanctifying grace; and they do not produce their effects in virtue of the rite itself, or *ex opere operato*. They are sacramentals and, as such, produce the following specific effects: (1) Excitation of pious emotions and affections of the heart and, by means of these, remission of venial sin and of the temporal punishment due to it; (2) freedom from power of evil spirits; (3) preservation and restoration of bodily health; (4) various other benefits, temporal or spiritual. All these effects are not necessarily inherent in any one blessing; some are caused by one formula, and others by another, according to the intentions of the Church. Neither are these effects to be regarded as infallibly produced, except in so far as the imprecation of the Church has this attribute. The religious veneration, therefore, in which the faithful regard blessings has no taint of superstition, since it depends altogether on the Church's suffrages offered to God that the persons using the things she blesses may derive from them certain supernatural advantages. Instances are alleged in the lives of the saints where miracles have been wrought

by the blessings of holy men and women. There is no reason to limit the miraculous interference of God to the early ages of the Church's history, and the Church never accepts these wonderful occurrences unless the evidence in support of their authenticity is absolutely unimpeachable.

**V. RITE EMPLOYED.**—Before a minister proceeds to impart any blessing he should first satisfy himself that it is one which he is duly qualified to give, either by his ordinary or delegated powers. He should next use the prescribed rite. As a rule, for the simple blessings of the Ritual, a soutane, surplice, and stole of the requisite colour will be sufficient. A clerk should be at hand to carry the Holy Water or incense if required, or to prepare a lighted candle. The blessings are ordinarily given in a church; but, if necessary, they can be lawfully administered elsewhere according to the exigencies of place or other circumstances or privileges, and without any sacred vestment.

PATRICK MORRISROE.

**Blessing**, APOSTOLIC, the solemn blessing (*urbi et orbi*) which, before 1870, the Holy Father himself gave from the loggias of the following churches: of St. Peter's, on Maundy Thursday and Easter; of the Lateran, on Ascension Day; and of Santa Maria Maggiore, on the feast of the Assumption of the B. V. M. The popes very often delegated to others the power to give this blessing in answer to petitions from princes, at the close of missions, and on such occasions. This power was restricted by Clement XIII, 3 September, 1762, to patriarchs, primates, archbishops, and bishops, who petition the Apostolic See for it; they can give the Apostolic blessing on Easter Sunday and on some other feasts. Prelates who have the use of the *pontificalia* and jurisdiction over a certain territory can give it only once a year. A certain formula is prescribed. The superiors of certain religious orders, especially the Franciscans, can give it twice a year in the churches of their own order; they must use a formula and ask permission of the ordinary (30 August, 1763). The faculty is occasionally granted to particular priests, regular or secular, to give the Apostolic blessing upon return from Rome, at the close of missions or retreats; in this case no solemn rite is required. The Apostolic blessing is a sacramental with which is granted a plenary indulgence (under the usual conditions), but no absolution from ecclesiastical censures. During a jubilee this blessing cannot be given. A special feature of this blessing is the Apostolic benediction in *articulo mortis*. This blessing is given to those who are in danger of death by priests who possess the required faculty. A formula is prescribed by Benedict XIV; to gain the indulgence it is necessary to receive the sacraments, to invoke the name of Jesus, and to be resigned to the will of God. In missionary countries the bishops can subdelegate every priest to grant this indulgence (5 April, 1772). It is not suspended by a jubilee.

FREDERICK G. HOLWECK.

**Blessing of Abbots and Abbesses.** See ABBOT; ABBESS.

**Blind**, EDUCATION OF THE. See EDUCATION OF THE BLIND; HAÛY.

**Blois** (BLESSENSIS), DIOCESE OF, coextensive with the civil department of Loir-et-Cher and a suffragan of Paris. On 1 July, 1697, Innocent XII canonically erected the Bishopric of Blois, that territory having theretofore been dependent on the Diocese of Chartres. Prior to the Revolution, the Diocese of Blois was less extensive than at present, almost the entire arrondissement of Romorantin being subject to the Bishopric of Orléans, and the Bas-Vendômois to that of Mans. The Concordat of 1802 gave Loir-et-

Cher to the Diocese of Orléans, and in 1822 the Diocese of Blois was re-established. Monseigneur de Théménes, who was Bishop of Blois in 1776 and died in exile in 1829, was one of the most obstinate enemies of the Concordat. St. Solennius, Bishop of Chartres under Clovis, is a patron of Blois; his relics were preserved by a miracle.

Owing to the proximity of the monasteries of Micy and Marmoutier, Blois counts among its saints a number of monks; Lubinus, Bishop of Chartres in the sixth century; Laumerus, Abbot of Corbion in the Diocese of Chartres (d. about 590), whose body was transported to Blois, at the time of the Norman invasions, by fugitive monks, who founded in that city the Abbey of St. Laumer; St. Deodatus, the anchorite, also called St. Dié (sixth century), who assured Clovis of the victory at Vouillé (507); the solitaries Victor and Leonardus; and Aigulphus (seventh century), a native of Blois and Abbot of Lérins, who was assassinated. Peter of Blois, who came from the Abbey of St. Laumer, was conspicuous in the twelfth century for his defence of St. Thomas Becket and for encouraging devotion to the Blessed Virgin. The Venerable Charles of Blois, killed in 1364 at the Battle of Auray, was the son of Guy, Count of Blois. The Benedictines had several great abbeys in this diocese, one at Selles-sur-Cher, begun as early as the sixth century by the hermit, St. Eusinus, and another at Pontlevoy, now a college. The monastery of the Blessed Trinity at Vendôme, dedicated in 1040, was also quite celebrated. The Oratorians Jean Morin and Jérôme Viguier, learned ecclesiastics of the seventeenth century, were natives of Blois.

At the close of the year 1905, the Diocese of Blois had a population of 275,538; 28 pastorates, 266 mission churches, and 8 curacies with subventions from the State. According to the latest statistics, the following institutions are to be found in the diocese: 48 infant schools conducted by sisters; 2 orphanages where farming is taught, conducted by the Frères de St. François Régis and the Sœurs du Protectorat de St. Joseph; 7 girls' orphanages conducted by sisters; 1 house of refuge for young women, conducted by the Religieuses de Notre Dame de la Charité; 5 *patronages* at Blois; 1 *patronage* at Romorantin; 8 hospitals and hospices conducted by sisters; 5 houses of retreat conducted by sisters; 5 communities of sisters who care for the sick in their homes; and 9 homes for the aged conducted by sisters.

In 1900 the following congregations were represented in the diocese: the Capuchins at Blois and Premonstratensians at Authon. Among the local congregations are the Sisters of Our Lady of Providence, with mother-house at Blois, who have charge of orphan asylums. The most frequented place of pilgrimage is Notre Dame de Villethion at Saint Amand. Others are Notre Dame de Nanteuil at Montrichard, Notre Dame des Aydes at Blois, and Notre Dame des Blanchés at Pontlevoy, a sanctuary built at the end of the tenth century by Gilduin, opponent of Foulques Nerra.

**Blois**, FRANÇOIS-LOUIS DE. See BLOSIUS.

**Blomevenna**, PETER (PETER A LEYDIS), a Carthusian, b. at Leyden, in Holland, in 1466; d. 30 September, 1536. Owing to the avarice and cruelty of his parents and relatives, his early years were spent in poverty and hardship. But he led withal a singularly pure and devout life. Entering the Carthusian Order, he distinguished himself by his absorption in heavenly things and his zeal for the glory of God. In 1506 he was elected prior of the Carthusian monastery of Cologne, a post

which he held until his death, twenty-nine years later. His long term of office enabled him to do much to promote strict religious observance both in his monastery and throughout the Rhenish province, of which he had been named visitor. Besides his active work among his brethren, he found time for the composition of several treatises which have a certain value as ascetic and controversial literature. In his "Enchiridion Sacerdotum" (1532) he enlarges upon the august mystery of the Holy Eucharist. His "De Bonitate Divina" is a valuable work for preachers of the word of God. In 1513 he translated into the Latin tongue the Franciscan De Herp's ascetic treatise "Directorium Aureum Contemplativorum", adding thereto explanatory notes. He also edited several volumes of Denis the Carthusian (Dionysius of Rickel) and wrote vigorously against the then nascent Protestant heresy. Among Blomevenna's controversial works are "Candela Evangelica" (1536); "Assestio Purgatorii" (1534); "De Auctoritate Ecclesie" (1535); "De Vario Modo adorandi Deum, Sanctos et eorum Imagines" (1535).

**Blondus, FLAVIUS.** See **BIONDO, FLAVIO.**

**Blood Indians**, a group of North American aborigines forming part of the Blackfeet Tribe, which, with the Arapahoes and Cheyennes, constitute the Western division of the great Algonquin family. (See **BLACKFOOT INDIANS.**) The Blood Indian (*Kæna*) group is now subdivided into several branches, or clans, the most important of which is (1) the Ini-poyex (Standing-buffaloes), which is sub-divided into (a) Keay-etapix (Bear people), (b) Noto-spitax (All-tall-people), (c) Mami-ahoyin (Fish-eaters), (d) Ayom-okekax (Closely-camped), (e) Akæ-pokax (Many-children), (f) Apikax (Scabby). Other clans of the group are (2) the Six-immokax (Black-elks), (3) Akæ-namax (Many-scabbed-mouths), and (4) the Tai-sokasimix (Buffalo-coats).

The language of the Blood Indians is like that of the other two groups of the Blackfeet, with but few and unimportant peculiarities. It is called Blackfoot, and is classed as one of the branches of the Algonquin, though it possesses only a very limited number of words in common with the other branches of the same family. The aboriginal name, *Kæna*, might, it seems, be translated "Already-chief"; but the true meaning is in fact altogether lost, and no one, even among these people themselves, could now give a satisfactory interpretation of it. In the sign language, the gesture for *Kæna* is made by rapidly passing the right hand, palm downward, in front of the mouth, of which gesture the exact signification is also lost.

In the year 1882 the Bloods were supposed to number about 1800 souls; they now number not more than 1200. The former of these estimates may have been exaggerated, as it was difficult at that time to obtain statistics of mortality, but it is undoubtedly true that the numbers of these people have considerably diminished in the last twenty-five years, and that they are still, slowly, but steadily, diminishing. They used to be, as a rule, well-developed and powerful physical specimens of humanity, some of the men being over 6 feet 6 inches in height, the women generally shorter, but strong and healthy-looking. Their present physical condition, however, shows the melancholy constitutional effects of consumption and scrofula. The country over which the Bloods, with the other Blackfeet tribes, formerly roamed extended from the basin of the Missouri, on the south, northwards to the Red Deer River in the Canadian Province of Alberta, with the Rocky Mountains as its western boundary. Since 1877,

when they entered into a treaty with the Canadian Government, they have been settled on the tract of land known as the Blood Reserve. This reserve, lying near the Belly Buttes, which had always been a favourite resort of the tribe, is bounded on the west by the Belly River, on the north by the Belly River and the Old Man River, on the east by the St. Mary River, and on the south by the Mormon settlement of Cardston.

Like most prairie Indians, the Bloods are very proud and superstitious. In their own way they are a very religious people, religion being a part of every important act of their lives. Their religious system closely resembles that of other Algonquins, but especially of the Crees. It centres in the worship of the sun (*Natos*), the moon (*Kokomi-kisum*), some constellations, and also some minor deities—genii of the mountains, forests, and streams. The most important of their religious practices is the sundance (*okan*), an elaborate ceremonial performance which needs months of preparation and ends with a week or so of festivities, in which fasting, self-torture, and self-mutilation are joined with rejoicings and frolics of every description. This practice, although dying out, is still revived from time to time. Other superstitious dances and performances are parts of the same curious and intricate system.

While the tribe was constantly roaming from place to place in the immense territory which now forms the States of Montana and the Dakotas, and the Province of Alberta, they were but rarely and irregularly visited by Catholic missionaries, among whom were Fathers de Smet and Imoda, S. J., and Father A. Lacombe, O. M. I. After the settlement of the tribe on their reserve, however, in 1877, it became possible to establish permanent missions among them. Of the three denominations—Catholic, Anglican, and Methodist—which had established missions among the Bloods in 1881, the first and second have remained in the field. They maintain industrial and boarding schools, and have educated a number of Indian children. The progress of Christianity has been slow. Unfortunately, the example of many of the whites has not been of a nature to attract the Indians to the white man's religion; yet there is a goodly number (about 35) of young Catholic families, mostly made up of the boys and girls educated in the Catholic schools. Besides, most of the children are baptized Catholics when young, and when these have been trained and educated the number of Catholic families will increase. There are also a few Protestant families. At the present time there are two Catholic priests on the Blood Reserve, with a neat little church, a residence, and a boarding school conducted by seven Sisters with some forty pupils. Children are also sent to the industrial school, which is established at a place about 100 miles distant from the Reserve, and is open to all the Blackfeet tribes. On the reserve there is a hospital conducted by Sisters of Charity for the exclusive benefit of the Indians, an institution which was probably unique of its kind at the time of its foundation, in 1893. Polygamy has been almost entirely eradicated, yet the bulk of the adult population—over thirty years of age, that is—are still pagans, and can be thoroughly habituated to Catholic practices only in a very limited number of cases. One most remarkable case of this kind was that of Chief Red-Crow (*Mikahestow*), who was converted and lived the life of a practical Catholic for several years preceding his death, which occurred in 1890.

The progress of civilization among the Bloods during the last twenty-five years may be regarded as marvellous in the extreme. At first they were trained to become farmers; but this occupation was not to their liking, and little progress was made.

For the last twelve years, therefore, a new policy has been adopted which has proved to be the right one. In pursuance of this later policy, the Indians have been set to ranching and cattle-raising—a congenial occupation. Many of them now have herds of their own, and are self-supporting. Noteworthy progress has also been achieved in their dress, housing, preparation of food, treatment of wives, and, generally, in their ideas of social relations; so much so that the Blood Indian of to-day may be considered an entirely different being from his predecessor of twenty-five years ago.

**Blosius** (or DE BLOIS), FRANÇOIS-LOUIS, a Benedictine abbot and spiritual writer, b. at Donstienne, near Liège, Flanders, 1506; d. at Liessies, 1566. His parents were nobles of Hainault, his father being Sieur of Jumigny. He became page to the Archduke

FRANÇOIS-LOUIS BLOSIUS

Charles (afterwards Emperor Charles V) but entered the Abbey of Liessies when only fourteen. Whilst still a novice he was sent to study at the University of Louvain, whence he was recalled in 1527 to become coadjutor to the Abbot, Gilles Gippus, his nomination as such being confirmed by a Bull of Pope Paul III. Three years later, in 1530, he succeeded

Gippus as thirty-fourth Abbot of Liessies, and received ordination and the abbatial blessing in the same year. His first care was the cultivation in his abbey of a true monastic spirit and strict discipline, which had somewhat declined under his predecessors. He had hardly settled down to the work of reform before Flanders was immersed in war owing to its invasion by Francis I of France, which occurred in 1537. Liessies, being on the frontier, became in consequence an unsafe habitation and Blosius proposed a move to the priory of Ath, in the interior, but most of his monks, being opposed to his reform, either elected to remain at Liessies or else went to other laxer monasteries. The abbot, however, with three monks, retired to Ath and there he at once restored the primitive observance of the rule. In spite of opposition the reform gained ground and numbers increased rapidly. When a return to Liessies became possible, in 1545, the reform was accepted by those that had remained there and was confirmed by a Bull of Pope Paul III. Blosius next began a restoration and enlargement of the abbey buildings, which were only completed after his death. In 1556 Charles V offered him the Archbishopric of Cambrai and the abbacy of Tournai, both of which he refused in order that he might remain at Liessies. In personal character he was distinguished for his gentleness, his generosity to the poor, his love of chastity, and his devotion to the Mother of God. He was a diligent student, especially of the Scriptures, the works of the Fathers, and the mystical writers of the fourteenth century. His own writings were numerous, the chief being "Speculum Monachorum", written in Latin, translated into French 1726, and into English 1872

(Mirror for Monks, by Sir John Coleridge), "Entretiens spirituels", and "Instructions spirituelles et pensées consolantes". His complete works were first published at Louvain in 1568 and have been many times reprinted and translated. Of English editions, besides the "Mirror for Monks", there are "A Book of Spiritual Instruction" (London, 1900) and "Comfort for the Faint-hearted" (London, 1902), both translated by Father Bertrand Wilberforce, O.P.

G. CYPRIAN ALSTON.

**Blissen**, HEINRICH, b. at Cologne or Bonn, Germany, in 1526; d. at Graz, 24 April, 1586. He entered the Society of Jesus, and St. Ignatius, appreciating his logic and his knowledge of the theology, sent him with eleven other Jesuits to Bohemia to combat heresy there, and to sustain a public disputation with the disciples of Luther and Hus. Though only twenty-five years of age, he acquitted himself with honour, and in 1556 he became professor of theology and Hebrew at the Jesuit college at Prague. Still maintaining his controversies with the heretics of Bohemia, he published a collection of theses: "De ciborum delectu atque jejuniis" (Prague, 1559). To continue the work of public lectures which he had begun, he gave a Sunday course of polemics to the clergy and laity. Appointed rector of the college at Prague in 1561, he was transferred in 1570 to the college at Graz where he vigorously continued his lectures on theology. Attacked by Jacob Heerbrand on his doctrine concerning the Church, he published a defence of his thesis: "Defensio assertionum theologiarum de verâ et sacrosanctâ Christi, quam habet in terris, Ecclesiâ militante" (Ingolstadt, 1577). His last and principal work "De uno geminoque sacræ eucharistiæ synaxeos salubriter percipiendæ ritu ac usu" was published (Ingolstadt, 1585) when he was provincial of Austria.

M. DE MOREIRA.

**Blyth**, FRANCIS, English Carmelite, reviser of the Douay Bible, born c. 1705; d. in London, 11 December, 1772. Though born of Protestant parents, he joined the Catholic Church while yet a youth, and entered the Carmelite novitiate at Modena in 1723, taking the name Simon Stock of the Blessed Trinity. Having obtained a dispensation from irregularity on account of a defect in vision, he proceeded to Malta for a course of studies, and after ordination returned to England, in November, 1730, where he first served a mission in Wiltshire. In 1741 he became assistant chaplain, and in 1756 chaplain-major to the Portuguese embassy in London, where he remained until his death. From 1742 till 1755, he also was Vicar Provincial of the English Carmelites. While in London, he assumed the name of Courtney. The chapels of the various embassies being recognized as places of worship for Catholics, the chaplains held a position not unlike that of parish priests, and Father Blyth distinguished himself by his eloquent and zealous preaching. The first ambassador under whom Father Blyth served was Dom Sebastião José de Carvalho e Mello, afterwards Marquês de Pombal (1739-45), whom he was, at a later period, accused of having aided in high-handed proceedings against the Jesuits. He indignantly protested against the calumny. Blyth was buried in the cemetery of St. Pancras, London, and, being a man of great literary attainments and author of many works, a memorial was raised there in his honour. His chief labour was the revision, in conjunction

with Bishop Challoner, of the so-called Douay Bible; while adhering closely to the text of the Vulgate, the revisers sacrificed the energetic language of the older translators for a much weaker one which frequently lacks dignity. His other works comprise expositions of the Penitential Psalms and other portions of Holy Scripture, sermons, and controversial writings.

**Bobadilla, NICOLAS, b.** at Valencia, Spain, 1511; d. at Loretto, Italy, 23 September, 1590. After having taught philosophy in his native country, he went to Paris to acquire a more perfect knowledge of Greek and Latin. Here he met Ignatius of Loyola, joined him in his plans and was among the first seven followers of the saint to consecrate themselves to God in the Society of Jesus, at Montmartre, 15 August, 1534. Hereafter Bobadilla's career was a very active one, as a most zealous worker in the cause of the Catholic Faith. While serving the sick in the camp of the army of Charles V about Ratisbon, he himself caught the plague. Here too, about this time, 1546, as he was returning from the camp into the city he was waylaid by assassins and severely wounded. At another time he barely escaped with his life from an attempt to poison him.

By order of the Sovereign Pontiff Paul III, Bobadilla took a prominent part in the Diets of Nuremberg, 1543, and of Speyer, 1543, as well as in that of Ratisbon, 1546. Shortly after this an incident occurred which forced him to leave Germany. In 1548, the "Interim" of Augsburg was published by the Emperor, Charles V. It was a tentative document intended to suggest a basis of agreement between Catholics and Protestants until their religious differences could be definitely settled. But as it seemed in the eyes of many Catholics to go too far, and in the eyes of many Protestants not far enough, it satisfied neither party. Bobadilla opposed it in speech and in writing, and so vigorously, that although he was highly esteemed in the imperial court, he was obliged, by the Emperor's order, to retire from Germany. He was a most popular preacher, as is evidenced by the fact that he delivered sermons in seventy-seven archbishoprics and bishoprics in Italy, Germany, and Dalmatia.

The writings of Bobadilla cover a wide range of topics. Among them are commentaries on some chapters of Genesis and other portions of the Old and New Testaments; annotations on the Gospels; treatises on predestination, the sacraments and their use, against the Lutherans, cases of conscience; a defence of the Council of Trent against Melancthon and Calvin, etc. The last survivor of the seven first companions of Ignatius of Loyola, Bobadilla took part in the election of four generals of the Society of Jesus.

JOSEPH M. WOODS.

**Bobbio, ABBEY AND DIOCESE OF.**—The diocese (*Ebovium*, or *Bobium*; *Diocesis Eboviensis*, or *Bobienensis*), which is suffragan to the Archiepiscopal See of Genoa, is contemporaneous with the civil district of Bobbio. This district is situated in the Province of Pavia and contains, besides Bobbio, its chief town, only two small villages and eighteen communes. The diocese was suppressed from 1803 to 1817, during which time it was annexed to Alexandria, then to Casala. Pius VII re-established it in 1818. The population, entirely Catholic, is (1907) about 30,000. There are 52 parishes and 105 churches or

chapels, served by 80 secular priests. The cathedral chapter consists of a provost, archpriest, and ten canons. In the diocesan seminary there are at present 40 students. Under Bishop Gianelli a congregation of priests was formed in 1839 under the title of Oblates of St. Alphonsus Liguori. They devote themselves especially to hearing confessions in prisons and hospitals, as well as to spreading good literature among the people. Bobbio also possesses a Congregation of Daughters of Mary, popularly known as *Gianelliane*.

**HISTORY.**—The origin of the See of Bobbio, indeed of the town itself, is due to the establishment of a monastery here by the Irish saint, Columban, in 614. The Lombards, with other savage tribes, had invaded northern Italy under their leader Alboin in 568. A half-Arian, half-heathen horde, wherever they passed all the horrors of wanton destruction and cruelty marked their track. But at length the new barbarian ruler, Agilulph, became less hostile and by degrees even not unfavourably disposed towards the Catholic Faith. Queen Theodelinda, whom he married in 590, was a fervent Catholic; she had wonderful influence over her consort, and at last he was converted by the preaching of Columban. From the day of his baptism, Agilulph displayed great zeal for the conversion of his subjects, and for this purpose gave St. Columban a ruined church and devastated district known as Ebovium, which, before the Lombards seized it, had formed part of the Patriarchy of St. Peter. Columban had set his heart on this secluded place, for while intent on instructing the Lombards he chose solitude for his monks and himself. By the side of this little church, which was dedicated to St. Peter, soon arose the walls of an abbey. Here the nucleus of what was to be the most celebrated library in Italy was formed by the MSS. which Columban had brought from Ireland and the treatises of which he himself was the author.

The sainted founder of Bobbio was soon afterwards laid to rest (23 November, 615), but his crosier passed into worthy hands. The names of St. Attala (627) and St. Bertulf (640) will live forever in ecclesiastical history. Both were conspicuous for holiness and learning, and both inherited Columban's apostolic spirit. It was indeed sorely needed, for a reaction towards Arianism set in, which became formidable under the Arian king, Rotharis (636-652). Ariold, the immediate predecessor of Rotharis, who became a Catholic, had before his conversion caused St. Bladulf, a monk of Bobbio, to be assassinated, because Bladulf would not salute him, as being an Arian. It is said that Attala restored Bladulf to life and delivered Ariold from a diabolical possession, the punishment of his crime; and that this twofold miracle led to Ariold's conversion. In 628, when St. Bertulf made a pilgrimage to Rome, Honorius I exempted Bobbio from episcopal jurisdiction, thus making the abbey immediately subject to the Holy See. Under the next abbot, Bobolen, the rule of St. Benedict was introduced. At first its observance was optional, but in course of time it superseded the more austere rule hitherto in use, and Bobbio joined the Congregation of Monte Cassino. In 643, at the request of Rotharis and Queen Gundelberga, Pope Theodore I granted to the Abbot of Bobbio the use of the mitre and other pontificals. It has even been asserted that Bobbio had a bishop, named Peter Aldus, as early as the seventh century, but according to the best authorities (Ughelli, Gams, and others) the See of Bobbio was not founded till four centuries later, although recent investigation has shown that the name of its first bishop really was Peter Aldus (Savio, 158).

From the seventh century on, in the midst of widespread turmoil and ignorance, Bobbio remained a home of piety and culture. Through the efforts

of St. Columban's disciples, increasing numbers of the Lombards were received into the Church. But during the first half of the seventh century, the large tract of country lying between Turin and Verona, Genoa and Milan, was in a very irreligious and disturbed state; and even idolatry was not unknown. In fact not until the reign of the usurper Grimoald (663-673), himself a convert, was the bulk of the nation brought into the Church. But from that time Arianism disappeared in the West. The historians of the abbey regard as one of its chief glories the prominent part which it took in the final contest with this heresy. Theodelinda's nephew, the pious Arribert (653-663), restored all the lands of Bobbio which belonged by right to the Prince of the Apostles. Arribert II also gladly confirmed this restitution to John VII in 707. The unruly Lombards soon dispossessed the pope, but in 756 Aistulf was compelled by Pepin to give up the lands. In 774 Charlemagne made liberal grants to the abbey. In 1153 Frederick Barbarossa confirmed by two charters various rights and possessions. Thus it came to pass that the abbots were for centuries entrusted with a large administration of temporals.

The fame of Bobbio reached the shores of Ireland, and the memory of Columban was dear to the hearts of his countrymen. Bobolen's successor was St. Comgall who had resigned his see in Ireland in order to become a monk of Bobbio; St. Cummin who did the same died in the abbey about 730 (Holder-Egger in "Mon. Germ. Hist."); and the learned St. Dungal (d. after 827) bequeathed to the abbey his valuable library, consisting of some seventy volumes, among which was the famous "Antiphony of Bangor". A tenth-century catalogue, published by Muratori, shows that at that period every branch of knowledge, divine and human, was represented in this library. Many of the books have been lost, the rest have long since been dispersed and are still reckoned among the chief treasures of the later collections which possess them. In 1616 Cardinal Federigo Borromeo took for the Ambrosian Library of Milan eighty-six volumes, including the famous "Bobbio Missal", written about 911, the "Antiphony of Bangor", and the palimpsests of Ulfilas's Gothic version of the Bible. Twenty-six volumes were given, in 1618, to Paul V for the Vatican Library. Many others were sent to Turin, where, besides those in the Royal Archives, there were seventy-one in the University Library until the disastrous fire of 26 January, 1904. As scholars of later ages have owed a great deal to the Bobbio MSS., so, too, did those of the tenth century. Gerard of Aurillac, for example, who was afterwards Pope Sylvester II, became Abbot of Bobbio in 982; and with the aid of the numerous ancient treatises which he found there he composed his celebrated work on geometry. And indeed it appears that at a time when Greek was almost unknown in western Europe, the Irish monks of Bobbio read Aristotle and Demosthenes in the original tongue.

In the year 1014, the Emperor Henry II, on the occasion of his own coronation in Rome, obtained from Benedict VIII the erection of Bobbio as a see. Peter Aldus, its first bishop, had been Abbot of Bobbio since 999, and his episcopal successors for a long time lived in the abbey, where many of them had been monks. According to Ughelli and others, Bobbio was made a suffragan see of Genoa in 1133; but Savio finds this subordination mentioned for the first time in a Bull of Alexander III, dated 19 April, 1161. From time to time disputes arose between the bishop and the monks, and in 1199 Innocent III issued two Bulls, restoring the abbey in spirituals and temporals, and empowering the bishop to depose an abbot if within a certain time he did not obey.

Bobbio's greatest bishops have been (1) Blessed

Albert (1184), who was translated to the Patriarchal See of Jerusalem and died a martyr at Acre in 1214; (2) the learned canonist Giovanni de Mondani (1477-82), whose remains were found incorrupt in 1614; and (3) Venerable Antonio Gianelli (1838-46), whose cause has been introduced. St. Columban's abbey and church were taken from the Benedictines by the French soldiers in 1803; what remains of the abbey is now used as a municipal school, and the church, where the relics of Sts. Columban, Attala, Bertulf, Cummin, and others repose, is now a parish church, served by secular priests. The altars and the sarcophagi in the crypt present beautiful specimens of the interlaced ornamentation which is characteristic of Irish art. In the Cathedral of Bobbio there is a beautiful tabernacle in the Ravenna style.

REGINALD WALSH.

**Boccaccino**, BOCCACCIO, an eminent Italian painter, b. at Cremona, 1460, and d. probably in 1525 rather than in 1518, the date usually given. He studied, it is thought, with followers of Mantegna, at Ferrara, and was a pupil or fellow-student of Domenico Panetti. At Cremona he painted in Sant' Agostino a series of frescoes. He had as an assistant Benvenuto Garofalo, who left him and went to Rome. The master followed and painted a "Coronation of the Virgin" in Santa Maria in Trastevere. This, however, was so ridiculed by the public, which had expected much of one who had had the hardihood to criticize Michael Angelo, that the disappointed artist returned to Cremona where, among his most appreciated works, is a frieze in the cathedral, showing the "Birth of the Virgin" and other subjects from the life of Our Lady. Lanzi, who considered Boccaccino as the best modern among the ancients and the best ancient among the moderns, compares his work in these productions with that of Perugino, treating it as inferior in some qualities while superior in others.

The works of Boccaccino possess much charm, and a number of them greatly resemble those of Perugino. This is notably so in his "Marriage of the Virgin" and "The Madonna with St. Vincent and St. Anthony" in the church of San Vincenzo at Cremona, which have often been assumed to be the work of the greater painter. Among Boccaccino's works in the cathedral at Cremona, in addition to those already spoken of, are: "The Appearance of the Angel to Joachim"; "The Meeting of Joachim and Anna"; "The Circumcision"; "Christ Reasoning with the Doctors"; and "Christ with the four Patron Saints of Cremona". At the Academy in Venice is his much admired "Marriage of St. Cath-

erine" and "Virgin and Child in a Landscape", and in the church of San Giuliano, in the same city, is his "Virgin and Child with four Saints". The Louvre possesses a "Holy Family"; the London National Gallery a "Procession to Calvary", formerly in a Cremona church; and the Ferrara Pinacoteca a "Death of the Virgin". Light grey eyes outlined with a dark rim are characteristic of the pictures of Boccaccio.

BOCCACCINO, CAMILLO, a short-lived but brilliant painter, b. at Cremona, 1511; d. 1546. He was the son and pupil of Boccaccio Boccaccino, whom he surpassed, taking care, it is pointed out, to avoid the errors into which his father's self-esteem had led him. He early showed both originality and strength, and his work has been considered to approach that of Correggio, notably his "Four Evangelists" in the niches of the cupola of San Sigismondo near Cremona, which are thoroughly in the Correggio style and were painted when the artist was only twenty-six. Camillo Boccaccino is thought by Lanzi to be the greatest artist of the Cremonese school. Two of his works at Cremona are "The Raising of Lazarus" and the "Adulteress before Christ", surrounded by friezes showing many angels.

CHAMPLIN and PERKINS, *Cyclopedia of Painters and Painting* (New York, 1886-88); BRYAN, *Dictionary of Painters and Engravers* (London and New York, 1903-05).

AUGUSTUS VAN CLEEF.

**Boccaccio, GIOVANNI**, Italian novelist, b. in Paris, 1313; d. in Certaldo, 21 December, 1375. His father, a merchant from Certaldo and a man of some prominence in Florence, had gone into business in Paris. Shortly afterwards the elder Boccaccio deserted Giannina, the mother of Giovanni, and brought the boy to Florence, where he put him to school until he was ten years old, when he took him into business. In 1327 Giovanni was sent to Naples to study law. But he gave himself up almost entirely to literature, and became intimately acquainted with some of the most prominent men and women of the court of Anjou. It is supposed that it was in 1334 that he saw for the first time Maria d'Aquino, a married woman and natural daughter of King Robert. She was the inspiration of his earlier works, and the heroine of whom he tells under the name of Fiammetta. In 1340 we find him back in Florence; on the death of his father in 1348, he became the guardian of a younger brother. He held certain public offices in Florence and was entrusted with diplomatic missions to Padua, the Romagna, Avignon, and elsewhere. After 1350 began his friendship with Petrarch, which lasted until the latter's death in 1374. In spite of his advanced age and the political dissensions in Florence which afflicted him sorely, he began, in 1373, his course of lectures in that city on the poems of Dante. He died two years later at his ancestral home in Certaldo.

The earliest, longest, and perhaps the weakest of Boccaccio's works is the "Filocolo", written between 1338 and 1340; it is a version of the story, widespread in the Middle Ages, of Floire and Blanche-fleur, and contains a curious admixture of pagan myths and Christian legends. The "Ameto", written in the two following years, is an allegorical novel, telling, among other love-adventures, the sad story of the life of Boccaccio's mother. The "Amorosa Visione", in praise of love, dates from about the year 1342, and consists of fifty cantos in *terzine*, and the initial letters of the verses form an acrostic of two sonnets and one *ballata*. The "Teseide", probably of the year 1341, is the first artistic work in *ottava rima*. It contains many imitations of antiquity, and was widely read up to the sixteenth century. Tasso thought so highly of it that he annotated it. The subject is the story of Palemon

and Arcite which Chaucer used for his "Knight's Tale".

The "Filostrato", written in the same year and likewise in *ottava rima*, tells of the love of Troilus for Chryseis. The subject may have been suggested to Boccaccio by his adventure with Fiammetta. The "Ninfale Fiesolano", a short poem in *ottava rima*, is the best, in style and invention, of the minor works of Boccaccio. The "Fiammetta" is one of the best written of his works, the most original and the most personal. Panfilo, the hero and lover of Fiammetta, is supposed to represent Boccaccio himself. The "Corbaccio" (1354) has had its admirers, but it is one of the most bitter and indecent satires ever written against woman. The "Vita di Dante" (about 1364), based chiefly on information furnished by contemporaries of Dante, remains one of the best lives of the poet. The "Commento sopra la Commedia", the fruit of his public lectures on Dante, was planned to be a colossal work, but Boccaccio had commented only upon the first seventeen cantos when it was broken off by his death.

Boccaccio shares with Petrarch the honor of being the earliest humanist. In their time there were not a dozen men in Italy who could read the works of the Greek authors in the original. Boccaccio had to support at his house for three years a teacher of Greek, with whom he read the poems of Homer. Of Boccaccio's Latin works the following are to be mentioned: "De genealogiis deorum gentiliū" (between 1350 and 1360), but published first in 1373. This dictionary of classical mythology shows remarkably wide reading and a very good understanding of the works of the ancients and, in spite of errors which it could not but contain, it continued for several hundred years to be an authority for the student of classical antiquity. Two biographical works: "De claris mulieribus" and "De casibus virorum illustrium" (between 1357 and 1363) are of little interest, since they tell of men and women of ancient times and but rarely of the author's contemporaries. There remain the Latin letters and eclogues, which are not of much worth, and eight or ten unimportant works which have been ascribed to Boccaccio.

The book with which Boccaccio's name is inseparably linked is the "Decameron", which was finished in 1353, but part of which had probably been written before the "Black Death" reached its height in 1348. The "Decameron" opens with a masterly description of the terrors of the pest, and we are then introduced to a gay company of seven ladies and three young men who have come together at a villa outside Naples to while away the time and to escape the epidemic. Each in turn presides for a day over the company and on each of the ten days each of the company tells a story, so that at the end one hundred stories have been told. It is difficult to say whether such a company as Boccaccio describes ever met. At all events, he says that he has taken pains to conceal the real names of the persons mentioned in the stories. There are reasons to believe, however, that Fiammetta is the same lady to whom Boccaccio has given that name in other works, while Dioneo may well represent Boccaccio himself.

The great charm of the "Decameron" lies in the wonderful richness and variety of the adventures which he relates, in the many types of character and the close analysis of all shades of feeling and passion, from the basest to the noblest. The style is now Ciceronian, now that of the everyday speech of Florence. The sentence-structure is, to be sure, often involved and inverted, and it often requires several readings to enjoy a full understanding of the phrase. Boccaccio found the germs of his *novelle* in other literatures, in historic events, and in tradi-

tion, but, like Shakespeare, whatever he borrowed he made his own and living, by placing the adventures in the lives of his contemporaries. The indecency which is the greatest blot on the "Decameron", but to which it undoubtedly owes not a little of its celebrity, is no greater than is to be found elsewhere in medieval literature, and is due as much to the time and the circle in which the work was written as to the temperament of the author. He himself in his later years expressed deep repentance for the too free works of his youth; moreover, his jibes and anecdotes at the expense of clerics did not impair his belief in the teachings of the Church. Boccaccio's character was by no means a despicable one. He was a steadfast friend, a son who felt tenderly for his mother and never forgave his father for having abandoned her. He speaks with affection of his daughters who had died in childhood; it is not known who their mother was. He was a scholar of the first rank for his time, a man of independent character, and a good patriot.

No autograph copy of the "Decameron" exists, but there are three manuscript copies dating from the fourteenth century. The first edition was not printed until 1470 in Venice, and since then numerous editions have appeared, but there is as yet no critical edition. Of the modern editions P. Fanfani's is convenient (2 vols., reprinted Florence, 1904). An excellent school edition of selected *novelle* with notes is that of R. Fornaciari (Florence, 1890). The "Decameron" has been translated into nearly every European tongue; the first complete English edition dates from 1620.

The best edition of the Italian works of Boccaccio is MOUTIER, *Opere volgari di Giovanni Boccaccio corrette su i testi a penna* (Florence, 1827-34). For sources of the *Decameron*, LANDAU, *Die Quellen des Dekameron* (Stuttgart, 1884); for Boccaccio's life and works in general, LANDAU, *Giovanni Boccaccio, sein Leben u. seine Werke* (Stuttgart, 1877); CRESCINI, *Contributo agli studi sul Bocc.* (Turin, 1887); see also FERRARI, *Bibliografia Boccaccesca* (Florence, 1888).

JOSEPH DUNN.

**Böcken** (BÖCKEN), PLACIDUS, a German Benedictine, canonist, and Vice-Chancellor of the University of Salzburg, b. at Munich, in Bavaria, 13 July, 1690; d. at Salzburg, 9 February, 1752. He entered the Order of St. Benedict at an early age, made his religious profession at the Abbey of St. Peter, Salzburg, in 1706, and was ordained to the priesthood in 1713. Having been made a Doctor of Canon and Civil Law (1715), he was sent to Rome and on his return was chosen, in 1721, to succeed the noted canonist Benedict Schmier, as professor of canon law at the Benedictine University of Salzburg, where he remained for a period of twenty years. He proved himself a brilliant jurist, and an exceptionally gifted teacher. In 1729 he was appointed vice-chancellor of the university. He was also attached to the theological faculties of Salzburg and Fulda, was secretary of the university, and a valued ecclesiastical councillor of four successive archbishops in the See of Salzburg and of the Prince-Abbot of Fulda. Eventually he appears to have incurred the displeasure of Archbishop Leopold of Salzburg, and in consequence of repeated friction resigned his position in 1741. He was then made pastor of Dornbach, a suburb of Vienna, and, two years later, superior of Maria-Plain near Salzburg, where he spent the last nine years of his life as confessor to the many pilgrims frequenting that famous shrine.

The "Commentarius in Jus Canonicum universum" which Böcken published at Salzburg (1735-39), and dedicated to his friend and patron the Prince-Abbot of Fulda, is his most important work. He had previously (1722-28) issued a number of separate treatises on the five books of the Decretals, all written with great learning and care; these, now thoroughly revised and supplemented, were incorporated in his

larger work, to the third volume of which, in an appendix, he also added a lengthy disquisition "De præscriptionibus". A reprint of the "Commentarius" appeared at Paris in 1776. Böcken's work, like that of the Salzburg canonists generally, is one of definite value. Böcken held rather extreme views on the subject of the veneration due the saints. He maintained that the special veneration and invocation of the saints, particularly of the Blessed Virgin Mary, is absolutely necessary for salvation. A sermon which he preached on this subject in 1740 precipitated an acrid discussion at the university between the members of the "Old School" and the "New School" of theology, between the *Sycophantæ* and the *Illuminati* as they were called. The sermon appeared also in print, with annotations wherein Böcken characterized as erroneous the contrary opinion of Muratori.

THOMAS OESTREICH.

**Bocking** (or BOKKYNG), EDWARD, English Benedictine, b. of East Anglian parentage, end of fifteenth century; d. 20 April, 1534. He graduated B. D. at Oxford, in 1513, and D. D. in 1518, was for some time Warden of Canterbury College there, and became a monk at Canterbury 1526. When Elizabeth Barton, "The Holy Maid of Kent", commenced her alleged Divine revelations, Bocking, with another monk, was sent to examine and report upon their authenticity, and he is said to have induced her to declare herself an inspired emissary for the overthrow of Protestantism and the prevention of the divorce of Queen Catherine. To further this scheme he had her removed to the Convent of St. Sepulchre at Canterbury. There is little doubt that he was her chief instigator in the continuance of her career of deception. His share in the affair, though it cannot be excused, must be ascribed to a mistaken zeal for the preservation of the ancient Faith. After the divorce of Queen Catherine and Henry's marriage to Anne Boleyn in 1533, Cromwell had Elizabeth Barton arrested, together with Bocking and others. Bocking confessed the imposture and, with his accomplices, did public penance at Paul's Cross. He and six others were hanged at Tyburn.

**Bodey**, JOHN, VENERABLE, martyr, b. at Wells, Somerset, 1549; d. at Andover, Wilts., 2 November, 1583. He studied at Winchester and New College, Oxford, of which he became a Fellow in 1568. In June, 1576, he was deprived, with seven other Fellows, by the Visitor, Horne, Protestant Bishop of Winchester. Next year he went to Douay College to study civil law, returned to England in February, 1578, and probably married. Arrested in 1580, he was kept in iron shackles in Winchester gaol, and was condemned in April, 1583, together with John Slade, a schoolmaster, for maintaining the old religion and denying the Royal Supremacy. There was apparently a feeling that this sentence was unjust and illegal, and they were actually tried and condemned again at Andover, 19 August, 1583, on the same indictment. Bodey had a controversy with Humphreys, Dean of Winchester, on the Nicene Council, and the martyr's notes from Eusebius still exist. After

his second trial, he wrote from prison to Dr. Humphrey Ely, "We consider that iron for this cause borne on earth shall surmount gold and precious stones in Heaven. That is our mark, that is our desire. In the mean season we are threatened daily, and do look still when the hurdle shall be brought to the door. I beseech you, for God's sake, that we want not the good prayers of you all for our strength, our joy, and our perseverance unto the end. . . . From our school of patience the 16th September, 1583."

At his martyrdom, Bodey kissed the halter, saying, "O blessed chain, the sweetest chain and richest that ever came about any man's neck", and when told he died for treason, exclaimed, "You may make the hearing of a blessed Mass treason, or the saying of an *Ave Maria* treason . . . but I have committed no treason, although, indeed, I suffer the punishment due to treason". He exhorted the people to obey Queen Elizabeth and died saying, "*Jesu, Jesu, esto mihi Jesus*". His mother made a great feast upon the occasion of her son's happy death, to which she invited her neighbours, rejoicing at his death as his marriage by which his soul was happily and eternally espoused to the Lamb.

BEDE CAMM.

**Bodin, JEAN**, b. at Angers, 1520, probably of Jewish origin; d. at Laon, 1596. He studied and taught law at Toulouse, where in 1559 he pronounced his "Oratio de instituenda in republica juventute", on the public instruction of youth. At the age of forty, he went to Paris, his name being still obscure. By his "Methodus ad faciliem historiarum cognitionem" (1566) he laid the foundation of the philosophy of history, and set forth his theory of the effect of climate on society and government, likewise his theory of progress, both of which were later expanded in "La République". In his "Réponse aux paradoxes de M. de Malestroit, touchant le fait des monnaies et l'enchérissement de toutes choses" (1568), he developed his thesis on the necessity of free trade. The "République" in six books (French, 1577; Latin, 1586) was written to defend the principle of authority and to describe the ideal commonwealth. Bodin represents a reaction against Machiavelli in the field of moral and political science. Unlike Cujas and the "Romanist" juriconsults, who confined themselves to the observation of Greek and Roman antiquity, he drew upon the modern history of Germany, England, Spain, and Italy. His theory of the influence of climates foreshadows that of Montesquieu. Bodin collects carefully numerous small facts, definite and concrete information; daily experience and the observation of current events are the sources of his almost "scientific" researches concerning the laws of political life. It is somewhat surprising to note that as early as 1580 this thoughtful writer wrote a work (*La Démonomanie des Sorciers*) to demonstrate the existence of sorcerers and the legality of their condemnation, on the basis of "experience" and respect for *res judicate* or the reliability of the courts. This belief in witchcraft rests on the same arguments as his theory of civil government.

In 1576 this somewhat puzzling man was chosen a deputy of the Third Estate (*tiers état*) to the States-General of Blois where he championed the cause of the Reformers, thereby incurring the royal displeasure. Fourteen years later (1590) as Attorney-General at Laon, he sided with the "Ligue", persuaded the citizens to do likewise, and finally went over to

Henry IV. This superstitious believer in sorcery left in manuscript a work known as "Colloquium Heptaplomeres", which propounds a certain rationalistic spiritualism. Though a civil magistrate and a partisan of the Ligue, his writings exhibit him as one of the earliest advocates of the theory of religious toleration. Brunetiere assigns Bodin a place in French literature beside Henri Estienne and Amyot; at a time when men looked to antiquity for guidance only in the domain of good taste, all three showed that from the same source could be drawn lessons in history, politics, and morality.

Though Bodin never abandoned the Catholic religion, and was buried in the Franciscan Church at Laon, his writings often betray an un-Catholic temper, when they are not more or less openly hostile to the existing ecclesiastical order. In religion he inclines to an abstract theism. In keeping with the Gallican legists of France he champions the absolute supremacy of the State, though he bases it on the Divine will and the natural law; his ideal prince is not an impious and unjust ruler of the Machiavelli type. All the works of Bodin were placed on the Index in 1628; the edition of 1900 continues the prohibition of his "Universæ naturæ theatrum". Catholic theologians, like Possevin have noted and refuted in the "République" certain errors and anti-Christian subtleties. "To judge by his writings," says Toussaint (*Dict. de théol. cath.*, II, 918), "he was a bizarre, inconstant, and superficial" man.

GEORGES GOYAU.

**Bodleian Codex.** See MSS. OF THE BIBLE.

**Bodone**, a titular see of Albania. The name is a dialectic form of Dodone, in Epirus, near Janina at the foot of Mount Tomaros, or Tmaros, the present Olistika (C. Carapanos, Dodone et ses ruines, Paris, 1878). At an early date a Christian church was built here on the site of the temple of Zeus. Theodorus, a Bishop of Dodona, was present at Ephesus, in 431; Philotheus appeared at Chalcedon in 451; Uranius, in 458, signed the letter of the bishops of Epirus Vetus to Emperor Leo; Philippus in 516 subscribed a synodal report of the bishops of Epirus to Pope Hormisdas concerning the election of John to the See of Nicopolis, the metropolis of the province (Hierocles, Synecdemos, 651, 5). When Naupactus was substituted for Nicopolis about the end of the tenth century, Dodona was the first suffragan see; the "Nova Tactica" (Georgius Cyprius, ed. Gelzer, 1661) has *Μούνητρα*, but this is an evident mistake for *Βούνητρα*, a form derived from Bodone (Parthey, *Notit. episcop.*, App. 48). In fact the later "Notitia" wrote only Bounditza (*ibid.*, III, 524), or Bonditza (*ibid.*, X, 616; XIII, 467). John, Bishop of Bonditza, signed a synodal act in 1229 (P. G., CXIX, 797). The present name is Bonitza. When the Greek residential bishopric disappeared is unknown; the Roman curia used for a long time the forms Bodona and Bodonensis, and a decree of 1894 directed this see to be suppressed at the death of its titular.

**Body, SPIRITUAL.** See RESURRECTION.

**Boece** (also BOYCE and BOETHIUS), HECTOR, chronicler and one of the founders of the University of Aberdeen, b. at Dundee c. 1465; d. 1536. At

Paris he was a student, then Bachelor of Divinity, and finally a professor at the College of Montaigu, whose course had been reorganized on the principles of monastic poverty and severe routine by James Standone of Brabant, at one time rector of the university. At the college, Boece formed a lasting friendship with Erasmus. From about 1495, Boece was zealously aiding Wm. Elphinstone, the learned Bishop of Aberdeen, to carry out the provisions of a Bull of Alexander VI, obtained at the request of James IV, chartering a university with all faculties in the city of Aberdeen. Finally, in 1505, having received help from various sources, they founded the collegiate church of St. Mary of the Nativity, later known as King's College, and regular teaching took the place of the occasional lectures of the canons. The organization was modelled upon that of the Universities of Paris and Orléans. The foundation was to support, on meagre stipends, four doctors in the respective faculties, two teaching masters, five student masters, thirteen poor scholars, eight chaplains, and four choristers. Boece was principal and read lectures on divinity and on medicine. History was not regularly taught, but both Elphinstone and Boece made collections of materials. In 1527, Boece received a pension of £50 Scots, and, from 1529 to 1534, a like amount, to be paid annually until he should obtain a benefice of 100 marks Scots. Besides his principalship, he held the offices of Canon of Aberdeen and Rector of Tyrie.

Boece published at Paris, 1522, "Lives of the Bishops of Murchlack and Aberdeen", about a third of which is devoted to Elphinstone (d. 1514). In 1527 appeared, also at Paris, his "Scotorum Historiæ" in seventeen books. Boece was preceded in the field of published Scottish history only by the learned work of Mair. The Scottish translation of this work by Bellenden, in 1536, was later used by Holinshed and thus indirectly by Shakespeare. As a historian, Boece has been praised for elegance, patriotism, and love of freedom; and most severely arraigned, even by contemporaries, for his credulity in the matter of historic origins. His literary honesty, attacked in his own day, has more recently been defended. The impetus which he gave to historical studies at Aberdeen has been of lasting effect.

BELLENDEN (1821).

J. VINCENT CROWNE.

**Boeri** (BOHIER), PETRUS, a French Benedictine canonist and bishop, b. during the first quarter of the fourteenth century at Laredorte, department of Aude, canton of Peyriac Minervois; d. probably 1388. Of his early life nothing is known. In 1350, when he is first mentioned, Boeri was Abbot of St. Chinian (St.-Anianus, Hérault) in the small Diocese of Saint-Pons de Tomières (*Sandi Pontii Tomeriarum*) which at that time formed a part of the Metropolitan Province of Narbonne. By his virtue and learning he attracted the favourable notice of Urban V, who appointed him Bishop of Orvieto, 16 Nov., 1364. A few years later (7 Oct., 1370) he was transferred by the same pontiff to the See of Vaison, near Avignon in France. But in 1371, shortly after Urban's death, he returned to Orvieto and remained in possession of that see until 28 June, 1379, when he was deprived of his bishopric by Urban VI for having espoused the cause of the Antipope Robert of Geneva, then reigning at Avignon as Clement VII. Upon his subsequent withdrawal to France he served Charles V in the capacity of ambassador to the pontifical court at Avignon. (Duchesne, *Liber Pontificalis*, II, 27-28.) However, 31 August, 1387, Clement VII likewise deposed him from his episcopal

office and entrusted the temporal and spiritual administration of Orvieto to Thomas de Jarente, Bishop of Grasse. Boeri died shortly afterwards. He was the author of two commentaries on the Rule of St. Benedict; in one, written when he was Abbot of St. Chinian, he deals with the Rule from the point of view of the canonist; in the other, written in the *Sacro Speco* at Subiaco when he was Bishop of Orvieto, he deals with it more from the point of view of the ascetic. He dedicated the later commentary to Charles V, King of France. He also wrote a commentary on the Constitution "Pastor bonus" of Benedict XII; "Speculum Monachorum"; "De Signis locutionum"; "Notæ in Damasi Pontificale" (an annotated copy of the "Liber Pontificalis" likewise dedicated to Charles V); and began at Rouen in 1379 a treatise on the question of calling a general council with a view to ending the deplorable schism then distracting the Church. This treatise remained unfinished. With the exception of "In Regulam S. P. Benedicti Commentarium" (ed. Dom Leone Allodi, Subiaco, Rome), and "Notæ in Damasi Pontificale" Boeri's works have never been printed.

THOMAS OESTREICH.

**Bœrnerian Codex.** See MSS. OF THE BIBLE; LE LONG, JACQUES.

**Boethius**, ANICIUS MANLIUS SEVERINUS, Roman statesman and philosopher, often styled "the last of the Romans", regarded by tradition as a Christian martyr, b. at Rome in 480; d. at Pavia in 524 or 525. Descended from a consular family, he was left an orphan at an early age and was educated by the pious and noble-minded Symmachus, whose daughter, Rusticana, he married. As early as 507 he was known as a learned man, and as such was entrusted by King Theodoric with several important missions. He enjoyed the confidence of the king, and as a patrician of Rome was looked up to by the representatives of the Roman nobility. When, however, his enemies accused him of disloyalty to the Ostrogothic king, alleging that he plotted to restore "Roman liberty", and added the accusation of "sacrilege" (the practice of astrology), neither his noble birth nor his great popularity availed him. He was cast into prison, condemned unheard, and executed by order of Theodoric. During his imprisonment, he reflected on the instability of the favour of princes and the inconstancy of the devotion of his friends. These reflections suggested to him the theme of his best-known philosophical work, the "De Consolatione Philosophiæ".

Tradition began very early to represent Boethius as a martyr for the Christian Faith. It was believed that among the accusations brought against him was devotion to the Catholic cause, which at that time was championed by the Emperor Justin against the Arian Theodoric. In the eighth century this tradition had assumed definite shape, and in many places Boethius was honoured as a martyr, and his feast observed on the twenty-third of October. In recent times, critical scholarship has gone to the opposite extreme, and there have not been wanting critics who asserted that Boethius was not a Christian at all, or that, if he was, he abjured the Faith before his death. The foundation for this opinion is the fact that in the "Consolations of Philosophy" no mention is made of Christ or of the Christian religion. A saner view, which seems at the present time to be prevalent among scholars, is that Boethius was a Christian and remained a Christian to the end.

That he was a Christian is proved by his theological

tracts, some of which, as we shall see, are undoubtedly genuine. That he remained a Christian is the obvious inference from the ascertained fact of his continued association with Symmachus; and if the "Consolations of Philosophy" bears no trace of Christian influence, the explanation is at hand in the fact that it is an entirely artificial exercise, a philosophical dialogue modelled on strictly pagan productions, a treatise in which, according to the ideas of method which prevailed at the time, Christian feeling and Christian thought had no proper place. Besides, even if we disregard certain allusions which some interpret in a Christian sense, there are passages in the treatise which seem plainly to hint that, after philosophy has poured out all her consolations for the benefit of the prisoner, there are more potent remedies (*validiora remedia*) to which he may have recourse. There can be no reasonable doubt, then, that Boethius died a Christian, though it is not easy to show from documentary sources that he died a martyr for the Catholic Faith. The absence of documentary evidence does not, however, prevent us from giving due value to the constant tradition on this point. The local cult of Boethius at Pavia was sanctioned when, in 1883, the Sacred Congregation of Rites confirmed the custom prevailing in that diocese of honouring St. Severinus Boethius, on the 23d of October.

To the science of mathematics and the theory of music Boethius contributed the "De Institutione Arithmetica Libri II", "De Institutione Musica Libri V", and "Geometria Euclidis a Boethio in Latinum translata". The last-mentioned work is found in various MSS. of the eleventh and twelfth centuries. There is also found among the MSS. a work "De Geometria", which, in its extant form, is considered to be a ninth- or tenth-century elaboration of a work of Boethius. How far the work is genuine, and to what extent interpolations have crept in, is a question of more than ordinary interest for the student of general history, for on the answer to this question depends the determination of the date of the first use of Arabic numerals in Western Europe. Boethius' philosophical works include: (a) translations from the Greek, e. g. of Aristotle's logical treatises (with commentaries) and of Porphyry's "Isagoge" (with commentaries); (b) commentaries on Porphyry's "Isagoge", translated by Marius Victorinus, and on Cicero's "Topica"; (c) original logical treatises, "De Categoriis Syllogismis", "Introductio ad Syllogismos Categoriis", "De Divisione" (of doubtful authenticity), and "De Differentiis Topicis". These exercised very great influence on the development of medieval terminology, method, and doctrine, especially in logic. In fact, the schoolmen, down to the beginning of the twelfth century, depended entirely on Boethius for their knowledge of Aristotle's doctrines. They adopted his definitions and made them current in the schools; for instance, the definitions of "person", "eternity", etc.

The theological works of Boethius include: "De Trinitate"; two short treatises (*opuscula*) addressed to John the Deacon (afterwards Pope John I); "Liber contra Eutychen et Nestorium"; and "De Fide Catholica" (generally regarded as spurious, although the only argument against its genuineness is the lack of manuscript authority). These were much studied in the early Middle Ages, as is testified by the number of glosses found in the MSS. as far back as the ninth century (e. g. glosses by John Scotus Erigena and Remi of Auxerre). To the theologians of the Middle Ages generally they appeared as the genuine works of the Christian martyr, Boethius. In modern times, those who denied that Boethius was a Christian were, of course, obliged to reject all the *opuscula* as spurious. However, the publica-

tion of the so-called "Anecdota Holderi" (ed. by Usener, Leipzig, 1877) brought to light a new argument for their genuineness. For, as Cassiodorus ought certainly to have known which works of Boethius were genuine, when he wrote "[Boethius] scripsit librum de Sancta Trinitate et capita quedam dogmatica et librum contra Nestorium", he settled the question as far as four of the treatises are concerned.

Boethius' best-known work is the "Consolations of Philosophy" written during his imprisonment—"by far the most interesting example of prison literature the world has ever seen." It is a dialogue between Philosophy and Boethius, in which the Queen of Sciences strives to console the fallen statesman. The main argument of the discourse is the transitoriness and unreality of all earthly greatness and the superior desirability of the things of the mind. There are evident traces of the influence of the Neo-Platonists, especially of Proclus, and little, if anything, that can be said to reflect Christian influences. The recourse to Stoicism, especially to the doctrines of Seneca, was inevitable, considering the nature of the theme. It does astonish the modern reader, although, strange to say, it did not surprise the medieval student, that Boethius, a Christian, and, as everyone in the Middle Ages believed, a Christian martyr, should have failed, in his moment of trial and mental stress to refer to the obvious Christian sources of consolation. Perhaps the medieval student of Boethius understood better than we do that a strictly formal dialogue on the consolation of philosophy should adhere rigorously to the realm of "natural truth" and leave out of consideration the lesson to be derived from the moral maxims of Christianity—"supernatural truth".

The work takes up many problems of metaphysics as well as of ethics. It treats of the Being and Nature of God, of providence and fate, of the origin of the universe, and of the freedom of the will. In medieval times, it became one of the most popular and influential philosophical books, a favourite study of statesmen, poets, and historians, as well as of philosophers and theologians. It was translated into Anglo-Saxon by King Alfred the Great, and into Old German by Notker Teutonicus; its influence may be traced in Beowulf and in Chaucer, in Anglo-Norman and Provençal popular poetry, in the first specimens of Italian verse, as well as in the "Divina Commedia". The important part which it played in Dante's mental struggle after the death of Beatrice is described in the "Convito", where, strange to say, it is referred to as "a book not known to many". Echoes of it and citations from it occur frequently in the "Divina Commedia". For instance, the lines which Tennyson paraphrases by "a sorrow's crown of sorrow" are themselves at least a haunting memory of Boethius' "In omni adversitate fortunæ infelicissimum genus est infortunii fuisse felicem" (De Consol. Phil., II, Pros. IV). That the "De Consolatione" was a favourite study of the theologians as well as of the poets is evidenced by the numerous imitations under the title "De Consolatione Theologiæ" which were widely read during the later Middle Ages. The complete works of Boethius were first published at Venice in 1497; the best edition is in P. L. LXIII, LXIV. A good edition of the *De Consolatione* is that of PEIPER in Teubner Collection, where are also to be found the commentaries on ARISTOTLE, ed. MEISER.

**Bogadines.** See FRANCISCANS.

**Bogomill,** a Neo-Manichæan sect, found in the

later Middle Ages at Constantinople and in the Balkan States. *Doctrinal Principles*.—The admission of a twofold creative principle, one good, the other evil, formed the basis of the doctrinal system of the Bogomili, as of all Manichean sects. Originally, they seem to have claimed eternity for these two principles, but their teaching in its fuller development was less dualistic. God the Father, according to them, had a human appearance but was incorporeal. He had two sons, the first-born, Satanael, and the younger, Jesus Christ or Michael. Satanael, though seated at the right hand of the Father and endowed with creative power, rebelled and was, with some of the angels, his followers, cast out of heaven. He created a second heaven and a second earth, and formed man out of earth and water. Being unable to give him a living spirit, he besought the Father to bestow life on this new creation, which would be their common property. God consented and thus man is the production of two creators. Eve, created in a similar manner, was seduced by Satanael. In punishment of this sin, Satanael lost his creative power, but retained sway over his own creation and strove successfully for the ruin of man. To save mankind, God sent His second son, Jesus, who penetrated the right ear of Mary and took from her the semblance of a human body; indeed, everything material in Him was merely appearance. Jesus vanquished Satanael, who lost his divine name *El*, and was henceforth called Satan. His place in heaven was now occupied by his conqueror. The Holy Ghost was sent forth, but dwells only in the Bogomili. Both He and Jesus will ultimately be absorbed by the Father, the only surviving person in God. The sect rejected the Old Testament, except the Psalter and the Prophetical books. Instead of baptism by water, it admitted only a spiritual baptism; it denied the Real Presence in the Eucharist, condemned marriage, rejected images, and prohibited the eating of meat.

*History*.—The name of the Bogomili has been traced by some to *Bog Milui* (God have mercy), a formula of prayer believed to have been in frequent use among them; others have sought its origin in *Bogomil* (beloved of God), which is also said to have been the name of a prominent representative of their doctrine in the tenth century. Other names were also applied to the members of the sect by its adversaries; but they called themselves Christians. The Bogomili probably developed from the Euchites and, although they existed previously, came into prominence in the twelfth century. They are first mentioned by name in 1115 at Philippopolis (European Turkey). More definite knowledge regarding them was obtained when their leader Basil, monk and physician, who had surrounded himself with twelve apostles, became known at Constantinople to the emperor Alexius I, Comnenus (1081-1118). The latter cleverly obtained from Basil a frank exposition of the doctrine of the sect. Having received this information, he demanded from the leader and those of his followers who could be seized a retraction of their errors. Some complied with this demand and were released; others remained obstinate and died in prison. Basil alone was condemned to death (1118) and burned. Vigorous as the repression was, it did not suppress the heresy. A synod of Constantinople (1140) ordered the destruction of writings propagating the errors of the sect; in 1143, two bishops of Cappadocia were deposed for embracing its tenets; and the favour extended to one of its adherents, the monk Niphon, caused the deposition of Cosmas, Patriarch of Constantinople (1147). The Patriarch Germanus (1221-39) continued to combat the pernicious

doctrines; new condemnations were issued by the synods of Constantinople in 1316 and 1325. The Bogomili, however, remained until the conquest of the Balkan States by the Mussulmans in the fourteenth and fifteenth centuries.

N. A. WEBER.

**Bogotá** (BOGOTENSIS), ARCHDIOCESE OF SANTA FÉ DE.—The city of Bogotá, capital of the republic of Colombia, is situated on a plateau 8700 feet above the sea level, at the western base of the Guadalupe and Monserrat mountains, in the eastern cordillera of the Andes. High mountains surround this plateau on all sides except to the southwest, where the River Funcha cuts its way to Magdalena, forming, a few miles from the city, the falls of Tequendana 475 feet in height. Two other rivers, the S. Francisco and the S. Agustino, divide the city. Bogotá was settled by the Spaniards in 1538 and became, in 1598, the capital of Nueva Granada, which was then a viceregal province, and in 1819, when Colombia became independent of Spain, Bogotá was made the capital of the new republic. Bogotá is a quaint city, its lack of easy communication with other foreign cities having perpetuated its ancient Spanish character. Though the capital of the republic, it has a population of only 100,000 inhabitants.

The Archdiocese of Bogotá, the primatial see of Colombia, was created by Pope Pius IV in 1564. At first it had six suffragans, but, on account of the tremendous growth of the population of the diocese, Pope Leo XIII, in 1902, separated the Bishopric of Medellín from it, and erected it into a province. The actual suffragan sees of Bogotá are: Antioquia (Antioquiensis), which was erected a bishopric by Pius VII, 31 August, 1804, re-erected by Pope Leo XII, 19 January, 1829, suppressed in 1868, and re-established by Pius IX, 29 January, 1873. This bishopric contains 211,000 Catholics, 69 Protestants, 75 secular priests, and 80 churches and chapels. Ibagué (*Ibaguensis*), of which no accurate statistics can be given, as the diocese has only lately been created. It was formerly, with the bishopric of Garzon, suffragan to the see of Tolima, and at the extinction of this see was assigned to the Metropolitan of Bogotá. It has for its territory the two provinces of North and Central Colombia. Nueva Pamplona (*Neo-Pampilonensis*), erected into a bishopric by Gregory XVI, 25 September, 1835. It contains 250,000 Catholics, 8 secular priests, 7 regular priests, and 46 churches and chapels. Socorro (*de Succursu*), erected as a bishopric by Pope Leo XIII, 20 March, 1895, contains 230,000 Catholics. Tunja (*Tunquensis*), erected as a bishopric in July, 1880, by Pope Leo XIII, contains 350,000 Catholics, 10,000 pagans, 53 parishes, and 159 churches and chapels.

The religious orders of men represented in the Archdiocese of Bogotá are: Jesuits, Franciscans, Augustinians, Salesians, and the Brothers of the Christian Doctrine. Those for women are: Sisters of Charity, of the Visitation, of the Good Shepherd Salesians, Dominicans, Carmelites, and the Little Sisters of the Poor. Most of these orders, especially those for men, have charge of the schools and colleges. There are in the archdiocese 1 seminary, 30 colleges and academies, 150 schools, and 14 hospitals.

M. DE MOREIRA.

**Bohemia** (Germ. *Böhmen*, or formerly *Böheim*; Lat. *Bohemia* or *Bojohemum*), a cisleithan (i. e. west of the River Leitha) crown province of the Austro-

Hungarian Monarchy, which until 1526 was an independent kingdom.

**PHYSICAL CHARACTERISTICS.**—Bohemia has an area of 20,058 square miles. It is bounded on the north-west by Saxony, on the north-east by Prussian Silesia, on the south-east by Moravia and the Grand duchy of Lower Austria, on the south by the Grand duchy of Upper Austria, and on the south-west by Bavaria. It is enclosed on three sides by mountain ranges, namely: the Bohemian Forest (Böhmerwald), the Ore mountains (Erzgebirge), and the Sudetic mountains. The highest peaks of these ranges seldom rise above 4,593 feet. On the fourth, or south-eastern, border Bohemia is separated from Moravia by a moderately high range called the Bohemian-Moravian highlands (about 1,968 feet high). The country resembles the flat bottom of a trough with a depression towards the north. The average height above sea-level is 1,460 feet. Bohemia is drained by the Elbe, which rises in the Isergebirge, a range of the Sudetic mountain system. After receiving the waters of the Moldau, a stream from the south, the Elbe, now greatly increased in size, passes out of Bohemia at Tetschen near the most northern point of the country. Besides the Moldau, which may be called the most important river of Bohemia, the chief tributaries of the Elbe are the Iser and the Eger.

Geologically the country forms the so-called Bohemian system of mountain ranges, the spurs of which run into Moravia and Silesia. The greater part consists of old crystalline rocks; in the south gneiss predominates, in the north the formation is chiefly cretaceous sandstone, with tertiary deposits due to the action of water from the south. This part of the country also shows volcanic action, as in the Bohemian mineral springs. The climate is moderate and, with the exception of the mountain districts, does not show great variations of temperature. The mean temperature of the year is about 46.4° Fahrenheit. Bohemia has much mineral wealth; it is especially rich in silver, tin, lead, semi-precious stones, such as Bohemian garnets, hard coal, and lignite.

**POPULATION.**—According to the last census (31 December, 1900), Bohemia has a population of 6,318,697. It is one of the most thickly settled provinces of the monarchy, having 315 inhabitants to the square mile. The Czechs form 63 per cent of the population, and the Germans 36 per cent. The Germans live chiefly near the boundaries of the country, especially near the northern and north-western boundaries.

**NATIONAL HISTORY.**—Bohemia (home of the Boii) owes its name to the Boii, a Celtic people which occupied the country in prehistoric times. About 78 B. C. the land was occupied by a Suevic people, the Marcomanni, while the related tribe of the Quadi settled in Moravia and that part of Hungary adjoining Moravia. Some years after the birth of Christ, Marbod, King of the Marcomanni, united the German tribes as far as the North Sea and the Baltic to form a great confederation which menaced the Roman Empire. When the Marcomanni and the Quadi left Bohemia and Moravia in the sixth century, there came in from the north-east a Slavonic people which was soon to appear in history under the general name of Cechen (Czechs). Before the close of the sixth century this Slavonic people came under the domination of the Avars of Hungary. But early in the seventh century they regained their freedom with the aid of the Frank, Samo, whom the Czechs elected as their king. In 796, Bohemia paid tribute to Charlemagne. Eighty years later Borziwoi, Grand Duke of the Cechen (Czechs), seems to have been tributary to Swatopluk, King of Great Moravia. In the confusion which followed the break-up of the Empire of Great Mo-

ravia Spithnevi I succeeded in uniting the various tribes of Czechs under his rule. From his time there is an unbroken succession of dukes of the Premysl line. One duke of this line, Wratislav II, received the title of King for life from the German Emperor, Henry IV. After 1158 the title of King became hereditary. Ottokar I and Ottokar II were the most conspicuous rulers of the Premysl dynasty. After this line became extinct (1306) Bohemia came under the sway of John of Luxembourg (1310-46). The Bohemian rulers of the Luxembourg line, from Charles I, of Bohemia (the Emperor, Charles IV), until the extinction of the dynasty at the death of Sigismund (1437), were all German emperors. Bohemia reached the height of its prosperity under the Emperor Charles IV, who conquered Silesia and also occupied for a time the Mark of Brandenburg and the Upper Palatinate. In 1348, Charles founded the University of Prague, the first university on German soil. By his Golden Bull, Charles IV gave Bohemia the highest secular electoral dignity of the Holy Roman Empire. After 1437, Bohemia was ruled by kings of various lines until the death of Ludwig II, of the Jagellon dynasty, who was King of Bohemia and Hungary. He fell in the battle of Mohács (1526). Both Bohemia and Hungary after this battle came into the possession of Ferdinand I of Hapsburg who had married the sister of Ludwig II. (For the further history of Bohemia see **AUSTRO-HUNGARIAN MONARCHY**.)

**INTRODUCTION OF CHRISTIANITY.**—Fritigil, Queen of the Marcomanni, in 396 applied to Ambrose of Milan for instruction in the doctrines of Christianity. In 846, fourteen princes of the Czechs were baptized at Ratisbon. Although the two brothers, Cyril and Methodius, the Apostles of the Slavs, never entered Bohemia, yet Methodius was able to win over the Bohemian Duke Borziwoi to Christianity when the latter was at the court of Swatopluk, Grand Duke of Moravia. In 878, Borziwoi was baptized by Methodius at Welehrad. Soon after this Borziwoi's wife, Ludmilla, and most of his relations were also baptized. The grandson of Borziwoi and Ludmilla, St. Wenzel I (Wenceslaus), was murdered in 935 at Alt-Bunzlau by his brother and successor Boleslaw I. Religious and national motives prompted this act. Christianity made such progress in Bohemia that in the latter part of the tenth century (973) the German Emperor Otto I gave the country a bishop of its own with his see at Prague, the capital of the country. Bohemia had until then formed a part of the Diocese of Ratisbon. In 1344, the Diocese of Leitomischl was founded, while Prague was made an archbishopric with the Diocese of Olmütz as suffragan. The thirteenth and fourteenth centuries may be called the golden age of Christianity in Bohemia. In 1384, 240 ecclesiastics were attached to the Cathedral of Prague. Bohemia contained at that time 1,914 parish priests with many assistants; there were one hundred monasteries, and almost a third of the land belonged to the Church. But when John Hus was condemned by the Council of Constance for spreading the errors of Wyclif, and was burned at the stake in 1415 by the secular authorities, the Hussite wars followed (1420-34), and the Church in Bohemia met with losses which it took centuries to repair.

The causes of this religious-national movement were the excessive numbers and wealth of the clergy, their moral decay, and, in addition, the national reaction against the disproportionate power of the Germans, and the weakness of the secular government. Notwithstanding the death of the leaders, Hus and Jerome of Prague, the fire of revolution broke out when the followers of Hus demanded the Lord's Supper under both kinds (Utraquists). Those in revolt encamped with their leaders, Ziska,

Procopius the Great, and Procopius the Less, upon Mount Tabor, and from 1419 to 1434 they made marauding expeditions from that point in all directions. The army of Sigismund, in the Fifth Crusade, accomplished nothing. An agreement was finally made with the moderate Utraquists (called Calixtines) in 1433. By this agreement, which is called "the Compactata of Basle", or "of Prague", the cup was granted to the laity; at the same time the teaching of the Church as to the Real Presence of Christ under each form was insisted upon. From the descendants of the radical Taborites sprang later the Bohemian and Moravian Brethren.

A great number of parishes and other cures of souls had been obliterated during the Hussite wars; in those which still remained there was a woeful lack of priests, especially for the German population. It was, therefore, easy for Protestantism to make rapid advances, especially as it was looked on with favour by both the nobility and the people. Desertion of the Church was accompanied by treason against the hereditary dynasty. In 1547, a large part of the population took sides with the League of Smalkald, and in 1618 Bohemia was the starting point of the Thirty Years' War which brought such terrible disasters upon the whole of Germany. During this war the population of Bohemia fell from three millions to eight hundred thousand. The Hapsburg dynasty finally gained the victory. The nobility were punished for their treason, either by execution or by banishment, with confiscation of property; the rebellious cities lost their freedom; the common people either emigrated or returned to the Catholic Faith. In 1655, the See of Leitmeritz was founded; in 1644 the Emperor Ferdinand IV erected a new bishopric at Königgrätz, to take the place of Leitomischl, which had disappeared during the Hussite wars. Finally, in 1784, the Emperor Joseph II made the new Bishopric of Budweis out of the southern part of the Archdiocese of Prague.

#### STATISTICS OF BOHEMIAN CLERGY

Diocese	Year	Secular Clergy				Regular Clergy
		Total Number	Employed in Diocese	Employed outside of Diocese	From Foreign Dioceses	
Prague (Archd.)	1905	1,385	1,219	126	40	413

		6,210,385	165,192	92,757	6,458,389

**PRESENT STATE OF DIOCESES.**—Bohemia is divided ecclesiastically as follows: The Archdiocese of Prague includes the north-western and central parts of the country, the Diocese of Leitmeritz embraces the northern part, the Diocese of Königgrätz takes in the eastern part, and the Diocese of Budweis the southern part of the country. In addition to its share of the territory of Bohemia, the Archdiocese of Prague also includes the countship (*Grafschaft*) of Glatz in Prussian Silesia.

**Religious Orders.**—There are in the archdiocese 14 orders for men, having 35 houses; the total number of members of the orders is 704, of these 416 are priests, 135 are clerics preparing for the priesthood, and 153 are lay brothers. Special mention should be made of the Benedictines at Emaus, of the Jesuits at Prague, and of the Premonstratensians at Tepl. There are also 21 orders for women, with 1,517 members. The Diocese of Leitmeritz has 13 orders for men, with 31 houses. The members of these orders include 136 priests, 15 clerics preparing for the priesthood, and 49 lay brothers. The Cistercian Abbey of Oseeg and the Jesuit college at Mariaschein are worthy of special mention. There are 10 orders for women, with 62 houses and 651 members. The Diocese of Königgrätz has 9 orders for men, with 88 priests; and 8 orders for women, with 442 members. The Diocese of Budweis has 13 orders for men, in 32 houses; these orders include 131 regular priests; the orders for women are 7, with 419 members. The Cistercian Monastery of Hohenfurt, founded in 1259, should be mentioned in connexion with this diocese.

**Educational and Charitable Institutions.**—In the Archdiocese of Prague there are: 1 seminary for priests, 1 private gymnasium, 3 homes for university students preparing for the priesthood, 52 hospitals, homes for the poor, orphan asylums, etc., over 200 endowments for the aid of the poor, and 34 associations of St. Vincent de Paul. In the Diocese of Leitmeritz there are: 1 theological school, 1 high school for boys, 5 homes for university students preparing for the priesthood, 11 Catholic primary schools, 2 grammar-schools, 8 boarding-schools, 18 industrial and advanced schools, 20 orphanages, 7 asylums for children, 14 kindergartens, 20 crèches, and over 130 homes for the poor, hospitals, etc., as well as 13 Conferences of St. Vincent de Paul. In the Diocese of Königgrätz there are: 1 theological school, 1 seminary for priests, 1 boys' seminary, 7 boarding-schools for girls, 2 training-schools for women teachers, 10 other schools for girls and young women, 21 institutions for the care of children, 67 orphanages, hospitals, etc., 8 conferences of St. Vincent de Paul, and numerous endowments for the aid of the poor. In the Diocese of Budweis, besides 1 theological school and 1 seminary for priests, there are under ecclesiastical control: 1 boys' seminary, 1 home for university students preparing for the priesthood, 12 public and industrial schools, 23 kindergartens, 7 boarding-schools, about 140 stipends for students, 99 hospitals, homes for the aged and the poor, and 8 conferences of St. Vincent de Paul.

**RELATIONS OF CHURCH AND STATE.**—Since the last years of the reign of Maria Theresa and es-

pecially since the time of Joseph II, the Catholic Church in Austria has suffered from state interference. According to existing laws, the State at present guarantees to the recognized denominations freedom from molestation in the management of their internal affairs. The State avoids every interference in matters of faith, of ritual, and of ecclesiastical discipline, but it also claims that the religious associations, like all other associations, are subject to the general state laws in their "outward legal relations". The sore point in this condition of affairs is this: that the State assumes for itself the right to define the boundary between internal and external legal relations. At present state control shows itself in the appointment of ecclesiastical officials, in the co-operation of the State in determining and collecting church dues and taxes, in measures for the protection of the property of the Church, and in a certain supervision of the church press, which is hardly perceptible. The legal position of the Catholic Church in Austria rests on the Imperial Patent of 8 April, 1861, and the Law of 7 May, 1874.

*Incorporation of Churches.*—In the Archdiocese of Prague there are 32 parishes incorporated with the Premonstratensian foundation at Tepl, the other orders in the diocese have 28 parishes incorporated with them; in the Diocese of Leitmeritz the Cistercians at Osseg control 11 parishes, the other orders for men, 12; in the Diocese of Königgrätz there are 10 parishes united with the Benedictine houses, and 6 with the Premonstratensian; in the Diocese of Budweis the Monastery of Hohenfurt controls 16 parishes, the other orders have 13 incorporated with their foundations.

*Taxation of Churches.*—Churches, public chapels, and cemeteries are exempt from the income-tax, ground- and dwelling-tax.

*Privileges of the Clergy.*—Theological students are exempt, both in war and in peace, from all forms of military service, from military training, exercise with weapons, and reserve service; but after they have been ordained they can be called upon to serve as army chaplains in case of the mobilization of the whole army. Parish priests are exempt from paying the direct and the local taxes, and from jury duty. Parish priests have the right to accept an election to community and district boards of commissioners. Regularly installed ecclesiastics have the right of legal residence in that community in which they live permanently. Without regard to the actual payment of taxes they are entitled to vote for the local boards, for the provincial diet and for the imperial parliament (Reichstag); as a rule they are included in the first class of the electoral body. Only one-third of the fees of a parish priest can be attached for debt; besides this, his income cannot be reduced below 1,600 kronen (\$320), nor the income of a retired priest below 1,000 kronen (\$200). According to the law of 1898, which was intended to equalize clerical salaries, the salary of a parish priest at Prague was set at 2,400 kronen (\$480); in the suburbs, up to a distance of over nine miles from the capital, and in cities with over 5,000 inhabitants, at 1,800 kronen (\$360); in other places at 1,600 kronen (\$320) or 1,400 kronen (\$280). In Prague the salary of an assistant priest was set at 800 kronen (\$160) or 700 kronen (\$140).

*MARRIAGE AND DIVORCE.*—Marriage, for Catholics, rests on the Law of 25 May, 1868, with which the second main section of the civil code, treating of the law of marriage, came again into force. According to this anyone can enter into a marriage contract when there is no legal impediment. Apart from the impediments arising from the duties of certain positions and those due to the army laws,

these impediments rest on: (1) lack of consent; (2) lack of ability for the married state, and (3) lack of the necessary formalities. Under the first head are (a) impediments from inability to give consent, as mental disease (violent mania, lunacy, imbecility); minority, and control of guardians, or lack of free choice; (b) impediments resting on lack of actual consent, as compulsion through well-grounded fear, seduction, mistake in the identity of the future consort, pregnancy of the woman before marriage by another person. Under (2) belong (a) the impediment of impotency and (b) impediment from the lack of moral ability, such as an unexpired sentence of imprisonment for felony; a still existing previous marriage; consecration to Holy orders, or a solemn vow of celibacy; difference in religion (e. g. the marriage of a Christian and a non-Christian); relationship in the ascending and descending line, or close family connexion (as brothers and sisters, cousins, uncle and niece, aunt and nephew); degrees of affinity parallel to the forbidden degrees of consanguinity; adultery proved before the contracting of the new marriage; and murder or attempted murder of a consort. In (3) are (a) the impediments arising from the lack of publication of the banns, and (b) those from lack of the prescribed formalities of a marriage contract. Lastly, there should also be mentioned the impediments, enacted by the Catholic Church (for Catholics), of participation in the cause of divorce, and the impediment caused by the lack of a certificate of birth. A temporary impediment exists for widows, who are not allowed, as a rule, to marry again before the expiration of six months after the death of the husband. Some of these ecclesiastical impediments to marriage can be set aside; others are irremovable. Among the latter are all those which would give an appearance of guilt to a marriage contracted under the existing circumstances. Dispensation from these impediments are granted by the civil authorities. Catholic married couples can be separated from bed and board. A dissolution of the bond of marriage does not take place; that is, no married Catholic, either husband or wife, can enter upon a new valid marriage before the death of the consort.

*TESTAMENTARY LAWS.*—A secular cleric has the right to free disposal of his property both in life and at death. The bishop of a diocese has no testamentary control over those objects which belong to his office, and which by law descend to his successor, such as mitres, vestments intended to be worn during Mass, etc. In consequence of the vow of poverty, members of religious orders are incapable of inheriting or disposing of property. Large legacies to a church, a religious or charitable foundation, or a public institution must be announced at once by the court to the governor or president of the province. A half-yearly list of smaller legacies must be sent to these authorities. Legacies for the benefit of the poor, those intended for religious or charitable foundations, for churches, schools, parishes, public institutions, or other religious and benevolent purposes must be paid over or secured before the heirs can inherit the property.

*BURIAL LAWS.*—Old graveyards are ordinarily regarded as dependencies of the parish church, and as such are considered, even by the Law of 30 April, 1870, as being ecclesiastical institutions. But in sanitary regards, as places of burial, they are controlled by the police regulations of the community. Denominational cemeteries can be enlarged or laid out anew. For this, however, the consent of the civil authorities and of the parties interested is necessary, although, if the parish community refuses to enlarge the cemetery, the

responsibility for providing a proper burial-place falls on the civil community. But a parish community or a church vestry cannot be compelled by the authorities to enlarge or lay out a church cemetery. If in the same community both a town cemetery and a Catholic cemetery exist, the burial of the dead in the public cemetery is not obligatory, but every Catholic has the right to bury the members of his family in the Catholic cemetery. When a Catholic cemetery serves also for the burial of non-Catholics, a part of the cemetery is to be set apart for the exclusive use of the non-Catholic community. Where a part of a Catholic cemetery is used for non-Catholic burial without the formal separation of the parts, the non-Catholic clergyman must follow the regulations of the law; he may conduct the burial with prayer and benediction, but there can be no singing nor address.

KARL KLAAR.

**Bohemian Brethren (MORAVIAN BRETHREN, or UNITAS FRATRUM).**—DEFINITION AND DOCTRINAL POSITION.—Bohemian Brethren, Moravian Brethren are the current popular designations of the *Unitas Fratrum* founded in Bohemia in 1457, renewed by Count Zinzendorf in 1722, and still active in our own day. Placing life before creeds, the Moravian Church seeks "to exemplify the living Church of Christ constituted of regenerated men and women, while it affords a common meeting-point for Christians who apprehend dogmas variously". Personal faith in the crucified Saviour constitutes the chief foundation for the fellowship thus established. Scripture is the only rule of faith, but "nothing is posited as to the mode of inspiration, for this partakes of the mysteries which it has not pleased God to reveal". The Trinity, the Fall, Original Sin, and "Total Depravity" are admitted, but "discussion about them is shunned". The Love of God manifested in Christ—without theories about the mode—is the centre of Moravian belief and practice. Justification by faith alone and the necessity of regeneration "are posited as facts of personal experience". Sanctifying grace, the need of prayer, and other public means of grace, a complete ritual, a strict discipline, "the orders of the ministry with no conception of the functions of the episcopate", i. e. bishops ordain, but the episcopal office implies no further ruling or administrative power (see *infra* in regard to Zinzendorf), Baptism and the Lord's Supper as the only sacraments, and the common Christian eschatology: Resurrection, Judgment, Heaven, Hell; such are the tenets from which Moravians are expected not to depart, whilst they are allowed to speculate about them on Scriptural lines with entire liberty.

**HISTORY OF THE ANCIENT UNITAS FRATRUM (1457-1722).**—The Bohemian Brethren are a link in a chain of sects beginning with Wyclif (1324-84) and coming down to the present day. The ideas of the Englishman found favour with Hus, and Bohemia proved a better soil for their growth than England. Both Wyclif and Hus were moved by a sincere desire to reform the Church of their times; both failed and, without intending it, became the fathers of new heretical bodies—the Lollards and the Hussites. The former were persecuted out of existence in Eng-

land by Catholic rulers; the latter prospered in Bohemia, thanks to royal and national support. The burning of John Hus at the stake for his stubborn adherence to the condemned doctrines of Wyclif (at Constance, 6 July, 1415) was considered an insult to the faith of the Bohemian nation, which, since its first conversion to Christianity, had never swerved from the truth. The University of Prague came boldly forward to vindicate the man and his doctrines; the party which hitherto had worked at reforming the Church from within now rejected the Church's authority and became the Hussite sect. Divisions at once arose amongst its members. Some completely set aside the authority of the Church and admitted no other rule than the Bible; others only demanded Communion under both kinds for the laity and free preaching of the Gospel, with some minor reforms. The former, who met for worship at "Mount Tabor", were called Taborites; the latter received the name of Calixtines, i. e. the party of the Chalice. As long as they had a common enemy to fight they fought together under the leadership of that extraordinary man, John Trocnowski, known as Zizka (the one-eyed), and for fully fifteen years proved more than a match for the imperial armies and papal crusaders sent to crush them. Peace was at length obtained, not by force of arms, but by skilful negotiations which resulted in the "Compactata of Basle" (30 November, 1433). The compact was chiefly due to the concessions made by the Calixtine party; it found little or no favour with the Taborites. The discontent led to a feud which terminated at the Battle of Lippau (30 May, 1434) with the death of Procopius, the Taborite leader, and the almost total extinction of his party. The small remnant, too insignificant to play a rôle in politics, withdrew into private life, devoting all their energies to religion. In 1457 one section formed itself into a separate body under the name of the "Brethren's Union" (*Unitas Fratrum*), which is now generally spoken of as the Bohemian Brethren. Their contemporaries coined for them several opprobrious designations, such as Jamnici (cave-dwellers) and Pivnici (beerhouse men), Bunzlau Brethren, Picards (corrupted to Pickarts), etc.

The originator of the new sect was a certain Gregory, a nephew of the leading Calixtine preacher, Rokyzana, whose mind was imbued with the conviction that the Roman Church was helplessly and hopelessly corrupt. Gregory therefore decided to found a new Church in accordance with his uncle's and his own ideas of what a perfect Church should be. Through Rokyzana's influence he obtained leave from the governor George von Podiebrad to organize a community in the village of Kunwald near Senftenberg. Michael, the parish priest of Senftenberg, and Matthias, a farmer of Kunwald, joined Gregory, and soon the community counted several thousand members. Their distinguishing tenets at this early period were rather vague: abolition of all distinctions of rank and fortune, the name of Christian being the one all-sufficient dignity; abolition of oaths, of military service, etc. Governor von Podiebrad kept a vigilant eye on the growing community. In 1461 he had Gregory and several other persons arrested on suspicion of reviving the heresies of the Taborites. The accused admitted that they did not believe in the real presence of Christ in the Holy Eucharist, but had partaken of the bread and wine at their nocturnal meetings as of common food. They were set free, but, to avoid further interference, Gregory and his companions fled into the Lordship of Reichenau, where they lived hidden in the mountains. There, in 1464, was held a secret assembly consisting of Brethren from Bohemia and Moravia, who accepted as basis of their creed the doctrine that justification is obtained through faith and charity and

confers the hope of eternal salvation. The rich were requested to abandon their wealth and worldly pomp and to live in voluntary poverty. The Brethren were to give up private property for the benefit of the Brotherhood. Anyone not observing the brotherhood of faith and practice was to be separated from the community.

Meanwhile the persecution continued. The Utraquist (Calixtine) priests refused the Sacrament to the Brethren. These, therefore, were forced to constitute a priesthood of their own belief. A bishop and a number of priests were chosen by lot, and the separation from the Utraquists became an accomplished fact. The head of the Austrian Waldenses, who was believed to have received consecration from a real bishop, gave episcopal orders to the ex-parish priest, Michael, and Michael consecrated his friend, Matthias, bishop and ordained several priests. The new Bishop Matthias of Kunwald then reordained his consecrator, to make him a true priest of the Brotherhood. This happened in 1467 at the synod of Lhotka, near Reichenau, where also all those present were rebaptized. The breach with both Catholics and Utraquists was now completed, and the Brethren began to order their community on the model of "the primitive Church". The governing power centred in a council presided over by a judge. Four seniors, or elders, held the episcopal power. The priests had no property and were encouraged to celibacy. The strictest morality and modesty were exacted from the faithful. All acts subservient to luxury were forbidden; oaths and military service were only permitted in very exceptional cases. Public sins had to be publicly confessed, and were punished with ecclesiastical penalties or expulsion. A committee of women watched with relentless severity over the behaviour of their sisters.

A new persecution quickly followed on the synod of Lhotka. The Brethren defended their cause in copious writings, but in 1468 many of them were imprisoned and tortured, one was burnt at the stake. The death of the governor George von Podiebrad in 1471 brought some relief. Brother Gregory died in 1473. From 1480 Lucas of Prague was the leading man. Thanks to him, and to toleration granted the Brethren by King Ladislaus II, the Brotherhood rapidly increased in numbers. By the end of the fifteenth century there were 400 communities. Pope Alexander VI's endeavour to reconvert the Brethren (in 1499) proved futile. About this time an internal feud in the "Unity of Brethren" led to a renewal of persecution. The Amosites, so called from their leader, Brother Amos, accused their more moderate Brethren of fomenting violent opposition to the Government in imitation of their spiritual ancestors, the Taborites. King Ladislaus II thereupon issued a decree prohibiting the meetings of the Brethren under heavy penalties. In many places, however, the decree was left unheeded, and powerful landowners continued to protect the Brotherhood. Once more the king resorted to milder measures. In 1507 he invited the chiefs of the Brethren to meet the Utraquists in conference at Prague. The Brethren sent a few rude, unlettered fellows unable to give answers to the questions of the professors. The king regarded this as an insult and ordered all the meetings of the "Pickarts" to be suppressed, all their books to be burnt, and the recalcitrants to be imprisoned (1508).

The Brethren now began to look for foreign sympathy. Erasmus complimented them on their knowledge of truth, but refused to commit himself further. Luther objected to their doctrine on the Eucharist, to the celibacy of their clergy, to the practice of rebaptizing, and to the belief in seven sacraments. Brother Lucas answered in a sharp pamphlet and, having ascertained the low standard of church discipline among the Lutherans of Witten-

berg, ceased all attempts at union. At the same time (1525) Lucas rejected the Zwinglian doctrines which some Brethren were trying to introduce. After the death of Lucas (1528) the government of the Brotherhood passed into the hands of men fond of innovations, among whom John Augusta is the most remarkable. Augusta reopened negotiations with Luther and so modified his creed that it gained the Reformer's approbation, but the union of the two sects was again prevented by the less rigid morals of the Lutherans in Bohemia and Moravia. Augusta pleaded for stricter church discipline, but Luther dismissed him, saying: "Be you the apostle of the Bohemians, I will be the apostle of the Germans. Do as circumstances direct, we will do the same here" (1542). Soon afterwards the Bohemian Estates were requested to join Charles V in his war against the Smalkaldic league. Catholics and old Utraquists obeyed, but the Bohemian Protestants, having met in the house of Brother Kostka, established a kind of provisional government composed of eight members, four of whom belonged to the Brotherhood, and appointed a general to lead the armed rebels into Saxony against the emperor. Charles's victory over the Smalkaldians at Mühlberg (1547) left the rebels no choice but to submit to their king, Ferdinand I. The Brethren, who had been the chief instigators of the rebellion, were now doomed to extinction. John Augusta and his associate, Jacob Bilek, were cast into prison; the Brethren's meetings were interdicted throughout the whole kingdom; those who refused to submit were exiled. Many took refuge in Poland and Prussia (1578); those who remained in the country joined, at least *pro forma*, the Utraquist party. Owing to Maximilian II's leniency and Protestant propensities, the Bohemian diet of 1575 could draw up the "Bohemian Confession of Faith" in which the principles of the Brethren find expression along with those of the Lutherans. Under Rudolph II (1584) persecution was again resorted to, and lasted with more or less intensity down to 1609, when Rudolph's Charter granted the free exercise of their religion to all Protestants. No sooner, however, did external oppression relent than internal dissension broke out in the Protestant ranks. The Consistory, composed of Lutherans and Brethren, was unable to maintain peace and union between the two parties. Ferdinand II, after his victory over the rebellious Bohemians at the White Mountain near Prague (1620), offered them the choice between Catholicism and exile. Many Brethren emigrated to Hungary, but a greater number to northern Poland, where they settled in Lissa (now in Prussian Posen). Even to this day there are in that district seven communities calling themselves Brethren, although their confession of faith is the Helvetic. In Prussian Silesia there are also three communities of Brethren claiming descent from the Bohemian Brotherhood.

THE BOHEMIAN BRETHREN AND ENGLAND.—During the reign of Maximilian II and Rudolph II the Bohemian Brethren enjoyed a period of prosperity which allowed them to establish relations with younger Protestant churches. They sent students to Heidelberg and one at least to Oxford. In 1583 "Bernardus, John, a Moravian", was allowed to supply B. D. He had studied theology for ten years in German universities and was now going to the universities of Scotland. This Bernardus, however, has left no trace but the entry in the Register of Oxford just quoted. The man who brought the Brotherhood prominently before the Anglican Church was Johann Amos, of Comna, generally known as Comenius. As a scholar and educationist he was invited by his English friends to assist in improving the state and administration of the universities, then under consideration in Parliament. The outbreak of the Civil War brought all these plans to naught.

and Comenius returned to Germany in 1642. His influence in England allowed him to set on foot several collections for his severely persecuted church in Poland: the first three were failures, but the fourth, authorized by Cromwell, produced £5,900, of which sum Cambridge University contributed £56. This was in 1658-59. Intercourse with the Anglican Church was kept up uninterruptedly until the remnants of the ancient Brotherhood had dwindled away and been swallowed up by other Evangelical confessions. When the renewed Brotherhood was established in England it benefited by the memory of former friendly relations.

**HISTORY OF THE RENEWED BROTHERHOOD.**—Persecution from without and dissension within well-nigh brought about the total extinction of the Bohemian Brethren. The small but faithful remnant was, however, destined to blossom into a new and vigorous religious body under the name of *Moravian Brethren*. The founder and moulder of this second *Unitas Fratrum* was the pious and practical Count Zinzendorf (b. 1700, d. 1760). In 1722 the Lutheran Pastor Rothe, of Berthelsdorf in Upper Lusatia, introduced to the Count, from whom he held his living, a Moravian carpenter named Christian David. This man had been deputed by his co-religionists to look out for a concession of land where they could freely practise their religion. Zinzendorf was so far unacquainted with the history and the tenets of the Bohemian Brethren, but in his charity, he granted them the desired land, on the slopes of the Hutberg in the parish of Berthelsdorf. In a short time emigrants from Moravia founded there a colony, called Herrnhut. The colonists worshipped at the Lutheran parish church. Two years later, there arrived from Zauchenthal in Moravia five young men fully conscious of being true members of the old "Bohemian Brotherhood". At once religious quarrels arose, to the annoyance of Count Zinzendorf and his friends. The count was not slow in perceiving that the colonists, all simple labourers and craftsmen, were more concerned with church discipline and Christian rules of life than with dogma. Accordingly he set about elaborating a constitution for a community of which religion should be the chief concern and bond of union. He left Dresden and, with the pastor's leave, began to work as a lay catechist among the Brethren at Herrnhut. The community met for their religious services in their own hall where one of the Brethren, either chosen by lot or elected by the assembly, acted as minister. In 1731 they seceded from the parish church and added to their usual services the celebration of the Lord's Supper. They were divided in "choirs" according to age, sex, and calling; each choir was ruled by elders (male and female), pastors, and administrators chosen among its members. The female choirs were distinguished by their dresses. Widows, unmarried young men, and young women formed separate choirs under the supervision of elders. Everything at Herrnhut was controlled by the College of Elders, even matrimony, subject to the sanction of the lot. Provision was made for the poor and the sick, for prayer meetings and so forth. Deacons, acting for the Elders, administered the property accruing to the community from donations. Great care was given to the education of the young, Zinzendorf being anxious to raise a generation that would perpetuate his work. The organization of the renewed Brotherhood was complete in 1731. It bore the stamp of the personality of its founder, a man deeply religious, nurtured in Spener's Pietism by the two noble ladies who brought him up, and well acquainted with Catholic life from his sojourn in Paris. As soon as the foundations were solidly laid at Herrnhut Zinzendorf began to think of missionary work. His personal connexion with the Danish Court led him to choose the Danish

possessions in the West Indies and in Greenland for the field of his labours. His first missionaries were sent out in 1732 and 1733. Feeling, however, that as a simple layman he could not well confer missionary powers, he took orders at Tübingen in 1734 and, moreover, received episcopal consecration from the Reformed court-preacher Jablonsky of Berlin, in whose family the Moravian episcopacy, originated in 1467 by a validly ordained Waldensian bishop, had been—or was said to have been—preserved. Persecution was not long in coming. The orthodox Lutherans became the Brethren's bitterest enemies. The Imperial Government in Vienna strongly objected to their propaganda in Bohemia, which caused Austrian subjects to emigrate and sowed discontent in the country. Under imperial pressure the King of Saxony banished Zinzendorf "for ever". The zealous count put his exile to good use. During the ten years (1737-47) of his absence from Saxony he founded congregations in Holland, England, Ireland, America; new ones also arose in Germany at Herrenhag, Neuwied, Gnadenfrei, Gnadenberg, and Neusatz. Zinzendorf showed a special predilection for the London establishment. In 1750 he fixed his residence in the English capital and from there ruled the whole "Unity of Brethren". But in 1755 he returned to Herrnhut, which now became and remained the centre of the whole administration. To the present day the "Provincial Board of Elders for Germany" occupies Zinzendorf's own house at Berthelsdorf. The finishing touch of the new church system is the liberty enjoyed by those who join it to retain the Lutheran, the Reformed, or the Moravian Confession to which they belonged, and to be placed under the rule of Elders of the same belief. This peculiar feature shows the founder's disregard for dogma and the great value he attached to Christian practice and ecclesiastical discipline. He held that faith and justification could only be found by individuals who were, or became, members of a religious community. However much, in this and in other points, he copied the Catholic Church, yet he was to the end a faithful adherent of the Augsburg Confession and obtained from the Consistory in Dresden an official acknowledgment that the Moravian Brethren were followers of the same faith. He also succeeded after a long struggle in securing for the Brotherhood recognition by the Saxon government. When, regretted by all, he died in 1760, his work and his spirit lived on in the strongly organized body of the "Unity of Brethren". No material changes have taken place since. In 1775 the Brethren, assembled in a synod at Barbý, adopted the following statement of principles:—

"The chief doctrine to which the Church of the Brethren adheres, and which we must preserve as an invaluable treasure committed unto us, is this: That by the sacrifice for sin made by Jesus Christ, and by that alone, grace and deliverance from sin are to be obtained for all mankind. We will, therefore, without lessening the importance of any other article of the Christian faith, steadfastly maintain the following five points: (1) The doctrine of the universal depravity of man: that there is no health in man, and that, since the Fall he has no power whatever left to help himself. (2) The doctrine of the Divinity of Christ: that God, the Creator of all things, was manifest in the flesh, and reconciled us to Himself; that He is before all things and that in Him all things exist. (3) The doctrine of the atonement and satisfaction made for us by Jesus Christ: that He was delivered for our offences and raised again for our justification and that by His merits *alone* we receive freely the forgiveness of sin, faith in Jesus and sanctification in soul and body. (4) The doctrine of the Holy Spirit and the operation of His grace: that it is He who worketh in us conviction of

sin, faith in Jesus, and pureness in heart. (5) The doctrine of the fruits of faith: that faith must evidence itself by willing obedience to the commandments of God, from love and gratitude."

Faith in the Redemption and entire surrender of self to Christ (with Whom in 1741 a spiritual covenant was made) are held to be the very essence of religion. The will of Christ was ascertained by casting of lots as the final sanction in case of marriage (until 1820), in the election of superiors (until 1889), etc. Zinzendorf ruled as bishop over all the communities, both in Europe and America, but since his death the episcopal office has remained a mere title. In 1857 the British and American Unity became independent; the only bond of union being now the General Synod held once every ten years.

**THE MORAVIANS IN ENGLAND.**—The beginnings of the Brethren's Church in England are an interesting chapter in the commerce of thought between Germany and that country. The German dynasty on the English throne had attracted a strong colony of their countrymen; towards the middle of the eighteenth century London alone numbered from 4000 to 5000 Germans among its inhabitants. These would naturally be in sympathy with the Brethren. But the "Religious Societies" founded by Doctor Smithies, curate of St. Giles, and Dr. Horneck, of the Lower Palatinate, together with the writings of William Law—the father of the religious revival of the eighteenth century—had prepared the minds of many Englishmen for stronger spiritual food than that offered by the established religion. Horneck was a German Pietist, and William Law, in his "Serious Call", sets up a standard of perfection little short of Catholic monasticism. John Wesley, who confesses that he was stimulated into activity by William Law, at first sought satisfaction of his spiritual cravings in the Moravian Brotherhood. He, with three other Oxford Methodists, met the Moravian Bishop Nitschmann and twenty Brethren at Gravesend, where they were waiting for the vessel that was to carry them all to Georgia (1736). The Englishmen were favourably impressed with the religious fervour of the Germans, and a fruitful friendship sprang up between them. As early as 1728 Zinzendorf had sent to England a deputation headed by the Moravian Johann Töltschig "to tell such as were not blinded by their lusts, but whose eyes God had opened, what God had wrought". Countess Sophia von Schaumburg-Lippe, Lady-in-Waiting at the English Court, used her influence in their behalf, but was unable to counteract the opposition of the Lutheran court-chaplain Ziegenhagen. The embassy had little or no result. Other visits followed at intervals, most of them by missionaries and emigrants on their way to America. On the occasion of such a visit Zinzendorf himself induced some young people to form a society for the reading of the Bible, mutual edification, abstention from theological controversy, brotherly love, etc. It was the first step towards realizing his ideals in England. The next step was Peter Boehler's zealous preaching to the "religious societies" and the working classes.

It was Boehler who founded the religious society in Fetter Lane of which John Wesley became a member, and for which he framed most of the rules; it seems also due to the influence of Boehler that John and Charles Wesley "found conversion" (June, 1738), yet not a conversion exactly of the Moravian type. A visit of John Wesley to the German centres made it clear that the Brotherhood had no room for two men like Zinzendorf and Wesley, both being born leaders of men, but having little else in common. Little by little Wesley became estranged from the Brethren, and his former friendship turned to open hostility (12 November, 1741, according to Wesley's journal). At a meeting in Fetter Lane Wesley ac-

cused the Brethren of holding false doctrines and left the hall exclaiming: "Let those who agree with me follow me." Some eighteen or nineteen of the members went out after him, the rest called upon the Brethren to be their leaders. Thus a religious society of the Church of England became a society of the Brethren. After their rupture with Wesley the Brethren began to work on their own account in England. Professor Spangenberg organized the young church with rare talent, and its activity spread far and wide in the provinces, even to Scotland and Ireland, but their success was greatest in Yorkshire. They also came in for some persecution from people who still confused them with the Methodists. The legal status of the Brotherhood was now to be determined. They did not wish to be classed as Dissenters, which would at once have severed them from the Anglican Church, and, on the other hand, the Anglican Church disowned them because they neither had Anglican orders nor did they use the Book of Common Prayer. Archbishop Potter would grant them no more than the toleration accorded to foreign Protestants. To obtain a license from a Justice of the Peace they had to adopt a name, and Spangenberg decided on "Moravian Brethren, formerly of the Anglican Communion". This name implied a new denomination and led to the immediate formation of the first congregation of Brethren of English nationality (1742). Zinzendorf greatly objected to the name of Moravians being given to his Brethren whom he considered as an *ecclesia in ecclesia*, a select small church within a greater one, which might exist in almost any denomination. The proposed designation, "Old Lutheran Protestants", was distasteful to English members. They resolutely clung to the names "United Brethren" and "Moravians" as their official and popular designations, and the "Bill for encouraging the people known by the name of Unitas Fratrum or United Brethren to settle in His Majesty's colonies", passed in 1749, gives official sanction to the old name, recognizes that the Brethren belonged to an "ancient protestant and episcopal Church", and maintains their connexion with Germany.

**BEGINNINGS OF THE MORAVIAN CHURCH IN AMERICA.**—In 1734 Zinzendorf obtained for thirty families of banished Schwenkfelders (adherents of Kaspar von Schwenkfeld) a home in Georgia which had just been carved out of the Carolina grant "to serve as an asylum for insolvent debtors and for persons fleeing from religious persecution". These exiles, however, found it preferable to join an older colony in Pennsylvania. The Brethren now conceived the plan of securing for themselves in Georgia a home of refuge in time of persecution. The governor general, Oglethorpe, granted them 500 acres, and Spangenberg, the negotiator, received a present of 50 acres for himself, a part of the site on which the city of Savannah now stands. The first eleven immigrants reached Savannah 17 April, 1734, led by Spangenberg. Bishop Nitschmann brought over another twenty, 7 February, 1736. The work of evangelizing and colonizing was at once vigorously taken in hand and carried on with more courage than success. The climate, wars, enmities from within and without, checked the growth and cramped the organization of the Brotherhood.

**PRESENT CONDITION OF THE MORAVIAN BODY.**—The outcome of their faithful struggles during 175 years is shown in the subjoined statistics, and may be read in detail in the "Transactions of the Moravian Historical Society," Vol VI:—

*Statistics for America* (from "The Moravian," 13 March, 1907).—On the 1st of January, 1907, there were in the five northern districts of America 96 congregations with 13,859 communicants, 1,194 noncommunicants, and 5,316 children; a total membership

of 20,369; an increase of 228 over the previous year. In Sunday schools there were 9,666 pupils under 1,156 officers and teachers, a total membership of 10,822, against 11,012 in the preceding year, implying a loss of 187.—Receipts from all sources: 31 December, 1906, \$145,517.67; a decrease of \$8,006.19 on 1905. Expenses exactly balance receipts. In the Southern Province of America there were on the 1st of January, 1907, 3,703 communicants, 320 non-communicants, 1,819 children; total, 5,842. Sunday schools contained 3,883 pupils, 323 officers and teachers; total, 4,206.—Total membership in both provinces: 26,211 against 25,877 in 1906—an increase of 334.

In Great Britain and Ireland, the Moravian Church numbered on the 31st of December, 1906, 41 congregations, with a total membership of 6,343; an increase of 211 on 1905; 5,072 pupils attended Sunday schools, with 568 teachers; there were also 213 pupils, with 5 teachers, in 5 day schools, and 305 scholars, with 38 teachers, in 5 boarding schools.

The German Province, 31 December, 1905, had 25 congregations, with total membership of 7,958, of whom 5,795 were communicants; 50 missionary centres ministered to about 70,000 persons (the "Diaspora").

The Mission Fields of the Moravians: In North America, Labrador, begun 1771; Alaska, 1885; California, 1890.—In Central America, Mosquito Coast, 1849.—In South America, Surinam, 1735, Demerara, 1878.—In the West Indies, Jamaica, 1754; St. Thomas, 1732, St. Jan, 1754; St. Croix, 1740; Antigua, 1756; St. Kitts, 1777; Barbadoes, 1765; Tobago, 1790; Trinidad, 1890.—In Africa, Cape Colony, East and West, 1736; German East Africa, 1891.—In Asia, West Himalaya, 1853; Jerusalem, Leper House, 1867.—In Australia, Victoria, 1849; North Queensland, 1891. The work is carried on by 470 missionaries of whom 76 are natives. Bohemia and Moravia are also counted among the mission fields. The mission work there, like that of the foreign missions, is a joint undertaking of all the Provinces of the Church. In December, 1905, the total membership was 984; income (of which £111 was from the British Province), £1761, 16/4; outlay, £1,991, 10/9.

J. WILHELM.

**Bohemians of the United States, THE.**—A traveller who has seen the natural beauties of Bohemia, its vast resources, and the thrift of its people, will, no doubt, be surprised at the comparatively great number of persons who have emigrated to the United States of America. The causes for this are political, religious, and economical. Religious dissensions at the beginning of the seventeenth century induced many to leave their native country and even to cross the ocean. The religious revolution stirred up by the preachings and teachings of John Hus gave birth to several religious sects in Bohemia, the suppression of which, after the battle of White Mountain near Prague (1620), caused many to emigrate to other countries and several even as far as America. Of the latter Augustyn Hefman (d. 1692) and Frederick Filip (d. 1702) are the most important from an historical standpoint. Hefman must have been a man of good education, for Governor Stuyvesant, of New Amsterdam, entrusted him with many important missions. He made the first map of the State of Maryland, of which one copy is still preserved in the British Museum and another at Richmond, in the archives of the State of Virginia. Hefman always publicly professed his nationality. The second

of these Bohemian emigrants, Filip, or Philipps as he is commonly known, was likewise a man of prominence and his descendants played no small part in the development of New Amsterdam. He was buried in the cemetery of Sleepy Hollow, near Tarrytown, New York. Though historical proof is lacking, without doubt many other Bohemians, of similar religious convictions, emigrated to this country at the same time. Their families either died out, or, as is more probable, were entirely assimilated by the American people so that they have left no trace. Of late years emigration from Bohemia has been chiefly caused by political conditions. Many Bohemian patriots, especially during the stormy year of 1848, sought refuge beyond the sea to evade the consequences of patriotic zeal, as the courts showed little mercy to those accused of political crimes. A similar state of affairs existed later on when the reins of the Austrian Government passed into the hands of the enemies of Bohemia, who punished every patriotic act as high treason to Austria. These political conditions, coupled with the Austro-Prussian war of 1866, in which Bohemia suffered great loss of life and property, forced many to seek their fortunes in the land of freedom. The greater number of emigrants, however, came to this country on account of poverty, brought on, for the most part, by the failure of the Government to interest itself in the welfare of certain parts of Bohemia, especially the southern and eastern parts, where, for lack of industry, the people were forced to depend for their livelihood, almost exclusively, on the fruits of the fields. This poverty was increased by overtaxation and frequent failures of crops. It was precisely these parts of Bohemia that sent thousands of their best citizens to America about 1870, and are sending a still greater number at the present time.

It will be impossible to give the exact number of Bohemian immigrants to the United States, as the Immigration Bureau up to the year 1881 enrolled all immigrants that came from any province of Austria as Austrians, and even after 1881, many Bohemians were listed as Austrians. As later immigration reports in which Bohemians were entered separately show that one-third of all immigrants from Austria come from Bohemia, the total number of Bohemians who came to this country before 1881 may be estimated approximately. It must be stated, however, that after 1881 many immigrants from Moravia and Silesia, Austrian provinces in which the Bohemian language is spoken, were enrolled as Bohemians. Taking all these facts into consideration, it is safe to give the number of foreign born Bohemians in the United States as 222,000. The number of American-born Bohemians is about 310,000, making the total Bohemian population of the United States about 522,000. It is worthy of note that these figures are almost equally divided between males and females, which shows that the Bohemian immigrants have come to this country to stay. Statistics prove that only a very small number of Bohemians return to their native country to live. In 1906, 12,958 Bohemian immigrants were received, eclipsing the record of all previous years. The latest report of the Commissioner of Immigration shows only two per cent of Bohemian immigrants illiterate, as compared with four per cent of Germans and still higher proportions for other nations. The following table gives the approximate Bohemian population according to states:—

	Number of Bohemians	Foreign born
Illinois . . . . .	115,000	40,000
New York . . . . .	45,000	17,700
Ohio . . . . .	43,000	16,200
Maryland . . . . .	11,000	
Nebraska . . . . .	60,000	18,000

	Number of Bohemians	Foreign born
Wisconsin . . . . .	43,000	14,900
Minnesota . . . . .	36,000	12,500
Texas . . . . .	40,000	12,000
Iowa . . . . .	35,000	10,800
Kansas . . . . .	17,000	
Missouri . . . . .	15,000	
North and South Dakota . . . . .	15,000	
Michigan . . . . .	10,000	
Pennsylvania . . . . .	7,000	
New Jersey . . . . .	5,000	
Massachusetts . . . . .	2,400	
Oklahoma . . . . .	4,000	
California . . . . .	2,100	
Colorado . . . . .	1,300	
Indiana . . . . .	1,800	
Connecticut . . . . .	1,300	
Arkansas . . . . .	1,000	
Other States . . . . .	5,000	

Of the larger cities Chicago has a Bohemian population of about 100,000; New York, 40,000; Cleveland, 40,000; Baltimore, 8,500; Omaha, 8,000; Milwaukee, 5,500; St. Paul, 6,000; and St. Louis, 8,000.

It is in the farming districts that the Bohemian immigrants have attained the greatest degree of success. It is here that we can best see the great share they had in building up the United States. Coming for the most part from rural districts, accustomed to hard labour, and ever willing to undergo the hardships of pioneer life, the Bohemians have attained an honourable place amongst the Western farmers. There is a saying amongst the Western farmers that if anyone can wrest crops from the soil, it is the Bohemian farmer. About half of the Bohemian immigrants have cast their lot with farming communities.

**SOCIETIES.**—Amongst the great number of Bohemians in this country, there is no one organization uniting them into one national body. This may be explained by the fact that they are divided into two strongly antagonistic camps: Catholics and atheists or free-thinkers. The latter are chiefly those who have apostatized from the faith of their fathers. Only an insignificant percentage of Bohemians are adherents of Protestant sects, though Protestants have expended great labour and large sums in proselytizing amongst the Bohemians. The two camps are entirely separate, each with its own fraternal organizations. The Catholics have the following fraternal or benevolent organizations: The First Bohemian Roman Catholic Central Union (*První Římsko-Katolická Ústřední Jednota*), founded in 1877 at St. Louis, has a membership of 11,505; the Catholic Workman (*Katolický Dělník*), founded in 1891, 3,225; the Bohemian Roman Catholic Central Union of the State of Wisconsin (*Česká Římsko-Katolická Ústřední Jednota ve Státu Wisconsin*) founded in 1888, 1,380; the Bohemian Catholic Union of the State of Texas (*Katolická Jednota Těžská*), founded in 1889, 1,900; the Western Bohemian Catholic Union (*Západní Česko-Katolická Jednota*), founded in 1898, 3,000; the Bohemian Catholic Union of Cleveland (*Česko-Římsko-Katolická Jednota ve Cleveland, O.*), founded in 1899, 1,800; the Bohemian Catholic Central Union of American Women (*Ústřední Jednota Žen Amerických*) established in 1880, 14,100; the Bohemian Catholic Union of Women of The State of Texas (*Česká Římsko-Katolická Jednota Žen ve Státu Texas*) likewise a large membership. All these organizations are thoroughly Catholic in spirit, and not only practise benevolence and charity towards their members, but have been the right hand of the clergy in building Catholic churches and schools and in fostering the spirit of religion amongst their countrymen.

Opposed to these Catholic organizations are the fraternal organizations of the freethinking Bohe-

mians. The strongest of these is the Bohemian Slavic Benevolent Society (*Česko-Slovanská Podporující Společnost*), established at St. Louis in 1854, which has a membership of about 15,000. This organization is chiefly responsible for the loss of faith amongst many Bohemians of this country, having enticed thousands of well-meaning people to join its ranks under the pretext of strict neutrality in religious matters. By association with free-thinkers, and under other evil influences, thousands grew lukewarm in the performance of their religious duties and finally lost their faith entirely. This organization is atheistic in spirit and propagates atheism amongst its members. A similar tendency is exercised by the gymnastic or athletic societies commonly called the *Sokol* (turners); by the Western Benevolent Society (*Západní Česká Bratrská Jednota*), which has a membership of about 7,000; by the Society of Bohemian Ladies (*Jednota Českých Dam*), with a membership of about 15,000, as well as several minor organizations of the same type.

**SCHOOLS.**—Wherever it is possible Bohemian Catholics endeavour to build a school. Love of their faith as well as love of their native tongue impels them to send their children to these schools, it being the desire of Bohemian parents that their children learn at least to read and write the language of their parents. Experience shows that without such schools children are soon estranged to the language and lose many of the good characteristics of their parents. The number of Bohemian Catholic parochial schools in this country is seventy-five, with a total attendance of about 14,000. There is also an institution of higher education, St. Procopius College at Lisle, Illinois, founded and conducted by the Bohemian Benedictine Order. The object of this institution is not only to train candidates for the priesthood, but to give young men in general such an education as to enable them to become leaders of their people in the various walks of life.

**PRESS.**—The first, and for a long time the only, Bohemian Catholic newspaper published in the United States, was the "Hlas" (Voice) of St. Louis, published semi-weekly. After its establishment in 1873 it was edited and managed for many years by its venerable founder, Monsignor Joseph Hessoun, pastor of St. John's Church, St. Louis, who gave it a special prestige among the Bohemian Catholics of the United States. In the year 1890 the "Přítel Dítěk" (Friend of Children) was established in Chicago, a weekly periodical, and, as its name implies, intended chiefly for children. In the year 1892 the "Katolík" (The Catholic) was founded, published twice a week, and by far the best periodical in the Bohemian language in this country. The "Katolík" was followed by the daily "Národ" (Nation) and the "Hospodářské Listy" (Agricultural News), established in 1898, which appears twice a month. All of these papers are published by the Bohemian Benedictine Order of Chicago. In addition, there are the following Bohemian Catholic papers: "Nový Domov" (The New Home), a weekly publication of Hallettsville, Texas; the "Vlastenec" (Patriot) published weekly at La Crosse, Wisconsin; the "Měsíční Věstník", published by the Redemptorist Fathers of New York once a month. All of these publications are doing inestimable service in the cause of religion.

The freethinking press is no less powerful. Four Bohemian dailies are *ex professo* hostile to religion, while two others, though posing as neutral and independent papers, are in reality anti-religious in their sympathies and tendencies. Three Bohemian dailies are published in Chicago, two in New York, and two in Cleveland. There are in addition four bi-weeklies, ten weeklies, and several smaller publications.

**COMMUNITIES AND CHURCHES.**—There are three Bohemian religious communities in the United States.

The first and oldest, the Bohemian Benedictine Order of Chicago was founded in 1887 by the Right Rev. Boniface Wimmer, O. S. B., first Abbot of St. Vincent's, Beatty, Pennsylvania. This apostolic man, perceiving the great dearth of priests among the Bohemians in the United States, invited Bohemian young men to his abbey, educated them free of charge, and fitted them for exercising the ministry amongst their own countrymen. At his request the pope granted permission for the establishment of an independent or canonical Bohemian priory, in St. Procopius Priory of Chicago, which in 1894 was raised by His Holiness Leo XIII to the dignity of an abbey; the Right Rev. John Nepomuk Jäger, O. S. B., was elected the first abbot. The Bohemian Benedictine Fathers have charge of three Bohemian and two Slovak congrega-

ST. PROCOPIUS COLLEGE, Lisle, ILLINOIS

tions in the city of Chicago, amongst them the congregation of St. Procopius, the largest Bohemian parish in the United States, with a membership of about 10,000. They have likewise a large modern printing plant in which four leading Bohemian Catholic newspapers are printed. The order has 13 priests, 3 clerics, 3 novices, and 10 lay-brothers. The second purely Bohemian religious community is that of the Bohemian Benedictine Sisters of the Sacred Heart at Chicago, established in 1894. These sisters are also in charge of St. Joseph's Orphanage at Lisle, Illinois. A second Bohemian orphanage is to be established at St. Louis, in connexion with St. John's church, the oldest Bohemian parish in the United States. The Bohemian Benedictine Sisters have at present 27 sisters, 7 novices, and 1 candidate, and teach in several Bohemian schools. Besides these two exclusively Bohemian religious communities we have the Bohemian Redemptorist Fathers of New York and Baltimore, who do not, however, form independent communities, but are directly under the provincial who is at the head of all Redemptorist communities belonging to the Eastern province. They are in charge of the church of Mary Help, New York City, which has four Bohemian priests, and of St. Wenceslaus Church, Baltimore, which has three.

There are in the United States 138 Bohemian Catholic churches with resident pastors and about 129 missions; many of the missions, however, are attended from churches of different nationalities. The number of Bohemian priests in the United States is 208; 35 minister to non-Bohemian parishes, 30 of them to Slovak congregations.

**DISTINGUISHED REPRESENTATIVES.**—The name of the Very Rev. Monsignor Joseph Hesson (b. 1830; d. 4 July, 1906), late pastor of the church of St. John Nepomuk, St. Louis, is held in grateful remembrance by the Bohemian Catholic people of the United States. Born at Vrcovic, Bohemia, he came to the United States in 1865, eleven years after his ordination, and up to his death worked with untiring zeal among his people. The fruits of his labours were felt by Bohemians throughout the country. He

not only encouraged them to perseverance by his editorials in the "Hlas", but he often sacrificed his last cent to assist in the building of Catholic churches. Furthermore, he did everything that lay in his power to procure priests for his people. Whenever necessity demanded he visited the Bohemian parishes without Bohemian priests. In his old age he was universally called *naš tatíček* (our little father). Among other Bohemian priests who have laboured with untiring zeal for the salvation of the Bohemians in this country must be mentioned the Very Rev. William Coka, Vicar-General of Omaha, b. at Černovir, Moravia; d. 1902; the Rev. Father Sulák, S. J., of Chicago, the oldest Bohemian missionary; the Right Rev. John Nepomuk Jäger, Abbot of the Bohemian Benedictine Order of Chicago; the Rev. Wenceslaus Kočárník, O. S. B., of Chicago; the Rev. John Vránek of Omaha, a Bohemian poet of great ability and merit. Above all there is the noble pioneer of Bohemian priests on the soil of the new world, the saintly John Nepomuk Neuman, fourth Bishop of Philadelphia, b. at Prachatitz, Bohemia, 1811; d. 1860.

The Bohemians all over the world are renowned for their musical gifts. In Bohemian churches of this country church music has attained a high degree of excellence, especially noticeable by the congregational singing in the larger churches. Not a few Bohemian priests are finished musicians. The feasts of the national patrons, those of St. John Nepomuk and of St. Wenceslaus, the first Christian Prince of Bohemia, are celebrated with special pomp, according to the usages of Bohemia. Good Friday is likewise observed with a solemnity unusual in this country. The Resurrection of Our Lord is celebrated with great pomp in the evening of Holy Saturday, wherever possible in the open air.

JOS. ŠINKMAJER.

**Boiano, DIOCESE OF**, in the province of Benevento, Italy, suffragan to the Archbishopric of Benevento. The city, situated at the foot of Monte Matese, occupies the site of the ancient Roman colony of Bovianum, or Bobianum. Cappelletti has demonstrated the error of Ughelli (Italia Sacra, VIII, 241) who thought he recognized a bishop of this see in a certain Laurentius at the beginning of the sixth century. The see, however, is decidedly ancient. Its first recorded bishop is Adalberto (1071). Others worthy of note are: Poliziano (1215) who consecrated the cathedral; Giovanni (1226), who decorated the façade at his own expense, as recorded in an inscription; Silvio Pandolfi (1489), who restored the work of Giovanni; Cardinals Franciotto Orsini (1519) and Carlo Carafa (1572), who adorned the cathedral with costly furnishings; Celestino Bruni (1653), a distinguished theologian and preacher. After the death of Bishop Nicolò Rosetti (elected in 1774), differences between the Holy See and the court of Naples prevented the appointment of a successor until 1836, when Giuseppe Riccardi was appointed. The most notable sacred edifice is the cathedral, dedicated to St. Bartholomew the Apostle. The diocese has a population of 90,300, with 33 parishes, 134 churches and chapels, 173 secular priests, 19 regulars, and 62 seminarians.

U. BENIGNI.

**Boiardo, MATTEO MARIA**, an Italian poet, b. about 1434, at, or near, Scandiano (Reggio-Emilia); d. at Reggio, 20 December, 1494. The son of Gio-

vanni di Feltrino and Lucia Strossi, he was of noble lineage, ranking as Count of Scandiano, with seigniorial power over Arceto, Casalgrande, Gesso, and Torricella. Boiardo was an ideal type of the gifted and accomplished courtier possessing, at the same time, a manly heart and deep humanistic learning. Up to the year of his marriage to Taddea Gonzaga, the daughter of the Count of Novellara (1472), he had received many marks of favour from Borso d'Este, Duke of Ferrara, having been sent to meet Frederick III (1469), and afterwards visiting Pope Paul II (1471), in the train of Borso. In 1473 he joined the retinue which escorted Eleonora of Aragon, the daughter of Ferdinand I, to meet her spouse, Ercole, at Ferrara. Five years later he was invested with the governorship of Reggio, an office which he filled with signal success till his death, except for an interval (1481-86) during which he was governor of Modena.

His great poem of chivalry and romance "L'Orlando innamorato" (Scandiano, 1495), consisting of sixty-eight cantos and a half, was begun about his thirty-eighth year, interrupted for a time by the Venetian war, then resumed, to be left unfinished on account of the author's death. To material largely quarried from the Carolingian and Arthurian cycles the Count of Scandiano added a gorgeous superstructure of his own. As the plot is not woven around a single pivotal action, the inextricable maze of most cunningly contrived episodes must be linked, first, with the quest of beautiful Angelica by love-smitten Orlando and the other enamoured knights, then with the defence of Albracca by Angelica's father, the King of Cathay, against the beleaguering Tartars, and, finally, with the Moors' siege of Paris and their struggle with Charlemagne's army. The whole, in spite of a lack of finish and sundry rhythmical deficiencies, formed a magnificent work of art, echoing from every *ottava* the poet's ardent devotion to Love and Loyalty, shedding warmth and sunshine wherever the lapse of ages had rendered the legends colourless and cold, and opening a path which Ariosto and Tasso were soon to tread. Still, the poem, after sixteen editions, was not to be republished for nearly three centuries. Francesco Berni's *rifacimento*, or re-casting of "L'Orlando" appeared in 1542, and from that date till 1830, when Panizzi revived it, Boiardo's name was well-nigh forgotten. A similar fate had befallen the count's "Rime" (Scandiano, 1499), which Panizzi's edition (London, 1835), snatched from oblivion. In his youth Boiardo had been a successful imitator of Petrarca's love strains. Evidence of his more severe attainments is furnished in an "Istoria Imperiale", some versions from Nepos, Apuleius, Herodotus, Xenophon, etc., and by his Latin Eclogues. A comedy, "Il Timone" (1487?), adds little to his credit. See BERNI.

Ital.**, XLII, 260-373; **RAZZOLI, Per le fonti dell'Orlando innamorato** (Milan, 1901). UGO FOSCOLO's views on the poet are found in *Q. Rev.*, n. 62, 527; and LEIGH HUNT's in *Stories from the Italian Poets* (London, 1846). **ALCOE** (New York, 1806) and **ROSS** (Edinburgh, 1823) have published fragmentary translations of Berni's recast.

EDOARDO SAN GIOVANNI.

**Boil, BERNARDO.** See **BUIL, BERNARDO.**

**Boileau-Despréaux, NICHOLAS**, French poet, b. at Paris, 1 November, 1636; d. there, 13 March, 1711. He was educated at the college of Beauvais and was at first destined to enter the Church, but soon abandoned the study of theology and, to please his father, prepared himself for the Bar. Though

admitted as counsellor-at-law (December, 1656), he never practised and his father having died leaving him enough to satisfy his wants, he devoted himself entirely to poetry. He was then twenty-one years old. Four years later he published his first satirical poem: "Adieux d'un poète à la ville de Paris"; immediately after this he published six others: "Les embarras de Paris", "La satire à Molière", "Le repas ridicule", "La noblesse", and two others of minor importance. In these satires not only did Boileau parody and attack such writers as Cotin, Chapelain, and Le Voyer, but he also developed the practical capabilities of the French language. Prose, in the hands of such writers as Descartes and Pascal, had proved itself a flexible instrument of expression, while with the exception of Malherbe, there had been no system in French versification.

Enfin Malherbe vint et, le premier en France, Fit sentir dans les vers une juste cadence.

Above all, these satires inaugurated in France a systematic literary criticism for art's sake, where previously criticism had been nothing but the expression of envy or anger. Indeed, in these imitations of Juvenal and Horace, one recognizes a judge of his own masters, who judged them by a higher standard than his personal tastes. In 1660 Boileau published the "Epistles", more serious in tone and also more polished in style. In 1674 appeared "Le lutrin" which, lighter in tone, still deserves a certain degree of admiration. It furnished the model for the "Rape of the Lock", but the English poem is superior in richness and imagination. His masterpiece, however, and that of the didactic school in French, was without doubt, "L'art poétique". This was also the first code of French versification. It comprises four books, the first and the last containing general precepts; the second treating of the pastoral, the elegy, the ode, the epigram, and the satire; and the third of tragic and epic poetry. His later publications were chiefly poems which he composed to defend himself against the numerous enemies his satires had raised up against him.

The end of Boileau's life was sad. He suffered a great deal from an operation which he underwent while young, and which, together with deafness, obliged him to retire from public life and even from the society of his friends. The death of Racine, his very best friend (1699), affected him deeply and his thoughts turned strongly towards religion. He was preparing a new edition of his works when death called him away. He holds a well-defined place in French literature as the first to introduce a regular system into its method of versification.

M. DE MOREIRA.

**Boise, DIOCESE of (Xylopolitana)**, created by Leo XIII, 25 August, 1893, embraces the whole State of Idaho, U. S. A., an area of 84,290 square miles. In 1842 a mission was started among the Cœur d'Alène Indians (whom Father De Smet, S.J., had recently visited) by Father Nicholas Point, S.J., and Brother Charles Huet, S.J. Father Joset followed next. The first Catholic church in Idaho was built sixteen miles from Cœur d'Alène Lake by the Jesuit Fathers Gazzoli and Ravalli, aided by the red men. In its construction wooden pegs were used instead of nails. In 1863, the pioneer secular priests, the Rev. Toussaint Mesplé, a Frenchman, and the Rev. A. Z. Poulin, a Canadian, were successively sent to the placer miners of Boisé Basin by Archbishop F. N. Blanchet, first administrator of Idaho Territory. Within six months they built the first churches erected for white people in Idaho City, Placerville, Centerville, and Pioneer; and later, a school at Idaho City, of

which Sisters of the Holy Names, from Portland, Oregon, took charge. Father J. M. Cataldo, S.J., made unsuccessful advances to the Nez Percés in 1867. Recalled by them in 1872, he soon baptized three hundred of these fierce warriors. In 1876, Father Gazzoli drew many to the Faith by his remarkable medical skill. Interrupted by the Nez Percés war (1877), the work has since been successfully carried on, Archbishop Seghers' visits in 1879-83 having given it a new impetus. The Holy See, 3 March, 1868, established Idaho as a vicariate Apostolic and placed it in charge of the Right Rev. Louis Lootens who was consecrated Titular Bishop of Castabala, at San Francisco, 9 August, 1868. Born in Bruges, Belgium, 17 March, 1827, he emigrated to Victoria in 1852, and spent nine years as a missionary in Vancouver Island and six in California. The new vicar Apostolic reached Idaho in January, 1869, and took up his abode at Granite Creek. In 1870 the first Catholic church was erected in the capital by Fathers Mesplé and Poulin, on a site donated by John A. O'Farrell, Col. A. St. Clair, commander of Fort Boise, being the priests' main helper in this laborious work. It was scarcely dedicated, however, when it was burned down. Bishop Lootens resigned 16 July, 1875, and died 13 January, 1898. He was succeeded by the second vicar Apostolic, the Right Rev. Alphonsus Joseph Glorieux, consecrated at Baltimore, Maryland, titular Bishop of Apollonia, 19 April, 1885. He found in his territory about 2,500 Catholics with ten churches attended by two secular and several Jesuit priests. When Boise was made an episcopal see he was transferred thither as its first bishop, 26 August, 1893.

The diocese has fifty-four churches and chapels, 34 priests, 7 academies, and 5 parochial schools, with 950 pupils; 2 industrial and reform schools with 150 inmates; 3 hospitals and a Catholic population of about 15,000, mostly of Irish and German racial affiliations, a sprinkling of Canadians, and 4,000 Indians. On 11 November, 1906, the corner-stone of a fine cathedral was laid near the new episcopal residence. Among the pioneer priests who did splendid missionary work here were Fathers L. Verhaag, E. Nattini, F. Hartleib, W. Hendrickx, and C. Van der Donckt, the last being the first priest ordained for Idaho in 1887, and stationed at Pocatello since June, 1888. The academies and parochial schools are conducted respectively by the Sisters of the Holy Cross, of St. Joseph, of the Visitation, of Charity, of Providence, of St. Benedict, and of the Immaculate Heart of Mary.

C. VAN DER DONCKT.

**Boisgelin, JEAN DE DIEU-RAYMOND DE CUCÉ DE**, French prelate and cardinal, b. of an ancient family at Rennes in Brittany, 27 February, 1732; d. 22 August, 1804. Destined from his early youth to the ecclesiastical state, he achieved remarkable success in his studies. The death of his elder brother made him the head of his family, but, giving up his birthright, he consecrated his life to the Church. First made Vicar-General of Pontoise, he was in 1765 raised to the Bishopric of Lavaur, and in 1770 to the archiepiscopal See of Aix in Provence. In this last position he won for himself the name of skilful administrator and princely benefactor. Provence owes to him the digging of a canal bearing his name, several works of public utility, such as a bridge at Lavaur and educational institutions for poor children. When in a time of scarcity and of political ferment, at the outset of the French Revolution, Aix was threatened with violence and famine, the archbishop by his

firmness, great ascendancy, wisdom, and generosity, proved its saviour. The mob had pillaged the public granaries, and had answered by insults the summons of authority; Boisgelin assembled the magistrates, chief citizens, and merchants, dispelled their fears, and prevailed upon these men to procure for Aix an abundant supply of grain, towards the payment of which he contributed one hundred thousand livres. He issued a pastoral letter to his clergy, asking them to urge the people to restore to the granaries the grain they had carried away. Where law had failed, religion and piety triumphed. The people obeyed and, flocking to the cathedral, expressed in touching terms their gratitude to the archbishop who was so absolutely devoted to their welfare.

Boisgelin was elected to represent the higher clergy of his province at the States-General, 1789. In that famous assembly his practical political wisdom and moderation appeared on many occasions; he voted, in the name of the clergy, for the union of the three orders, the abolition of feudal rights, and offered 400,000 livres to the public treasury; but he opposed the abolition of tithes and the confiscation of church property. His political sagacity and eloquence made him the recognized leader and spokesman of thirty bishops, his colleagues in the assembly. He spoke the language of liberty and that of religion with equal eloquence; he would have every citizen share in the establishment and maintenance of the government, with his political rights as indestructible as his natural and civic rights. The majority of the assembly voted for the civil constitution, a constitution subversive of the government of the Church, and of its discipline, a constitution that denied the supreme jurisdiction of the pope, subjected ecclesiastics to the civil power, and decreed that all the members of the clergy, beginning with those in the assembly, should take the oath of allegiance to the constitution, under penalty of exile and the forfeiture of their salaries. This legislation placed the clergy between two evils, schism and dishonour on one side, dire poverty, exile, if not death, on the other. Boldly and firmly Boisgelin rose to champion the cause of the Church: "Let the law", he exclaimed in the assembly, "leave us our honour and liberty; take back your salaries." It was he who wrote the famous "Exposition of Principles", signed by all except four of the bishops of France, condemning the Civil Constitution of the Clergy; it was he who in the name of his colleagues corresponded during two years with Rome, he who in a letter, dated 3 May, 1791, proposed to the bishops to lay their resignations at the feet of Pius VI; in 1801 he effectively made to Pius VII the sacrifice not accepted by Pius VI. When persecutions drove him out of France he went to England. In his answer to a letter from Edmund Burke in which the orator expressed his admiration for the spirit of disinterestedness and dignity of character of the French episcopacy, he complains that he is expelled from France in the name of that liberty he had in perfect faith contributed to establish, and under whose protection he hoped to end his days.

Boisgelin returned to France when Napoleon restored peace to the Church and to France by his Concordat, 15 July, 1801. In 1802, he was raised to the archiepiscopal See of Tours and soon after created cardinal. Boisgelin who had displayed administrative qualities of a high order at Aix, was no less remarkable for his literary and oratorical talents. Simplicity, grace, and pathos characterize his eloquence. In 1776 he was chosen member of the French Academy. His works include: "Collection de diverses pièces en vers" (1783); "L'art de juger d'après l'analogie des idées" (1789); "Considérations sur la paix publique adressées aux chefs de la Révolution" (1791); "Exposition des principes

sur la constitution du clergé" (1791); "Le Psalmiste, traduction des Psaumes en vers" (1799); "Traduction des Héroïdes d'Ovide" (1784). His complete works appeared in Paris, 1818.

L. F. M. DUMONT.

Boisil, SAINT, superior of Melrose Abbey, d. 664. Almost all that is known of St. Boisil is learnt from Bede (*Eccles. Hist.*, IV, xxvii, and Vita Cuthberti). He derived his information from Sigfrid, a monk of Jarrow, who had previously been trained by Boisil at Melrose. St. Boisil's fame is mainly due to his connexion with his great pupil, St. Cuthbert, but it is plain that the master was worthy of the disciple. Contemporaries were deeply impressed with Boisil's supernatural intuitions. When Cuthbert presented himself at Melrose, Boisil exclaimed "Behold a servant of the Lord", and he obtained leave from Abbot Eata to receive him into the community at once. When in the great pestilence of 664 Cuthbert was stricken down, Boisil declared he would certainly recover. Somewhat later Boisil himself, as he had foretold three years before, fell a victim to this terrible epidemic, but before the end came he predicted that Cuthbert would become a bishop and would effect great things for the Church. After his death Boisil appeared twice in a vision to his former disciple, Bishop Ecgberht. He is believed, on somewhat dubious authority, to have written certain theological works, but they have not been preserved. St. Boswell's, Roxburghshire, commemorates his name. His relics, like those of St. Bede, were carried off to Durham in the eleventh century by the priest Ælfred. In the early Calendars his day is assigned to 23 February, but the Bollandists treat of him on 9 September.

HERBERT THURSTON.

Bois-le-Duc, THE DIOCESE OF (BUSDUCENSIS) lies within the Dutch province of Brabant, and is suffragan of Utrecht. The city of Bois-le-Duc (s'Her-togenbosch, or Hertzogenbusch—*Sylva Ducis*) was founded in 1184, but, with the surrounding territory, was included in the Diocese of Liège until 12 March, 1561. At that time, and in order to check the spread of Protestantism, Pius IV raised it to the dignity of a see, and made it suffragan to Mechlin. The first bishop was the illustrious theologian Francis Sonnius (1562-69), afterwards transferred to the See of Antwerp. His successors suffered not a little amid the political disorders and the disastrous wars of the last quarter of the sixteenth century. When after a long siege the city was captured by Prince Frederic Henry (14 Sept., 1629) and held in the name of the States-General, the sixth bishop, Michael Ophorius, was obliged to abandon his see, which he did in a solemn procession, surrounded by his clergy, and bearing with him a famous miraculous statue of the Blessed Virgin which he placed in safety at Brussels.

Joseph de Bargaigne (1638-47) was really little more than bishop in name. He was unable to assert his right to the office, and lived an exile from the see to which he was deeply attached, but which he beheld in the power of Dutch Calvinists. By the Treaty of Westphalia (1648) the entire territory of Bois-le-Duc was recognized as a permanent conquest of the seventeen united provinces, and made directly subject to their jurisdiction, i. e. to the States-General. The exercise of the Catholic religion was forbidden by law, and the pertinent decrees were

applied with all possible rigour in the hope of extirpating the ancient Faith. Catholic priests, however, continued secretly their ministry of preaching and their administration of the sacraments, while their flocks met with invincible patience the storm of persecution. The diocese became a simple mission, governed by a vicar-Apostolic, nearly always, however, a titular bishop.

Bois-le-Duc was administered in this fashion until 1853. Napoleon had tried (1810) to create another diocese under that name, inclusive of the territory known as Bouches du Rhine, and had even obtained a titular for the new see in the person of the imperial courtier, Monsignor Van Camp, but the latter was despised by all good Catholics, and the arbitrary act of the emperor was doomed to failure. A similar failure awaited the attempt, authorized by the Concordat of 27 August, 1827, to divide all Holland into two large dioceses, Amsterdam and Bois-le-Duc. The ancient see was finally revived by Pius IX on the occasion of the restoration of the hierarchy in Holland, where, since 1848, the revised constitution has assured to Catholics full political and religious liberty. Together with three other Dutch sees, Bois-le-Duc was re-established by the pontifical Brief of 4 March, 1853, and with its former limits; all four sees were made suffragan to Utrecht. The Right Rev. Jan Zwýsen, a native of the diocese and its most illustrious son, hitherto vicar-Apostolic, was the first bishop of the re-established see, though temporarily he was known as administrator-Apostolic, since he was already Archbishop of Utrecht, with which office he was to unite the government of Bois-le-Duc.

In 1865 the first provincial synod was held there, the decrees of which form the actual ecclesiastical discipline in all the dioceses of Holland, and exhibit Archbishop Zwýsen as the true organizer of the ecclesiastical order in that country. In 1868 he was allowed to resign the archiepiscopal See of Utrecht. Thenceforth, until his death in 1877, he devoted himself to the administration of his beloved See of Bois-le-Duc. He was succeeded by the Right Rev. Adrian Godschalk, who died in 1892, leaving the see to be filled by Bishop William van den Ven. The cathedral of Bois-le-Duc, dedicated to St. John the Evangelist, is the finest monument of medieval Gothic in the possession of the Catholics of Holland. Though it was almost entirely rebuilt after the conflagration of 1419, it had again suffered notable decay in succeeding centuries. A thorough restoration of the edifice, however, was later begun. Bois-le-Duc had a collegiate chapter as early as 1360, which was made a cathedral chapter in 1561. The above-mentioned miraculous statue of the Blessed Virgin has been restored to the cathedral and is once more the object of general devotion. There are two diocesan seminaries, one at St. Michiels-Gestel for preparatory studies and the other at Haaren for philosophy and theology. The diocese includes 451,670 Catholics, 260 parishes, 625 priests, 143 charitable institutions, and 476 free (Catholic) schools.

GILBERT BROM.

Boismenu, ALAN DE. See NEW GUINEA, VICARIATE APOSTOLIC OF.

Bokenham (or BOKENAM), OSBERN, English Augustinian friar and poet, b. 1393 (the year in which the most famous of English Augustinians, John Capgrave, was also born); d. probably, in 1447. The assertion of Horstmann, his German editor, that Bokenham was born at Bookham, Surrey, appears

to be contradicted by the friar's own statement that his birthplace was in the vicinity of a "pryory of blake [black] canons" which Mr. Sydney Lee (*Dict. Nat. Biogr.*, V, 314) identifies with a famous house of Augustinian canons at Bokenham, now Old Buckenham, Norfolk. Bokenham may or may not have got some early schooling from these "blake canons", but he certainly spent five years as a young man in Italy, chiefly at Venice, making frequent pilgrimages to the great Italian centres of devotional life, Rome, of course, among them. His long residence in Italy, in a generation to which the memory of Petrarch (d. 1374) was still recent, must have been in itself something of a liberal education. Bokenham is known to have read both Cicero and Ovid—classical accomplishments not by any means a matter-of-course with young Englishmen destined to the ecclesiastical state in those days. Lydgate (d. 1451?) was among his contemporaries; Gower (d. 1402) and Chaucer (d. 1400) had been living in England in his boyhood, and had demonstrated the splendid possibilities of a language which for more than three centuries had been a mere rustic vernacular. His admission to the Order of Hermit-Friars of St. Augustine, whatever the exact date, certainly fell within the period of that order's greatest intellectual activity in England, when Dr. John Lowe (d., Bishop of Rochester, 1436) was making such valuable additions to the great Austin-Friars library in London. Bokenham finally became a professed religious in the Augustinian convent at Stoke Clare, Suffolk.

His writings were chiefly religious in theme and feeling. A "Dialogue" (printed in vol. VI of Dugdale's "Monasticon"), on the genealogy of a great Suffolk family, is attributed to Bokenham on internal evidence. The "Lyvys of Seyntys" he compiled chiefly from the "Legenda Aurea" of Jacobus à Voragine. These are the lives of twelve female saints, with an account of the legendary "11,000 virgins". Though valuable in a devotional sense, the "Lyvys of Seyntys" cannot be very seriously considered by modern hagiologists; but as illustrating the evolution of English literature, their historical value is inestimable. The language, described by its author as "of Suthfolke speche", is forced into the exotic form of *ottava rima*. This work, preserved among the Arundel MSS. in the British Museum, was printed for the Roxburghe Club in 1835; but Horstmann's edition (vol. I of Kölbing's "Altenglische Bibliothek") had appeared at Heilbronn two years earlier. Bokenham's ideas of religious humility are curiously illustrated by his using the names of several contemporary ladies of high rank as *noms de plume* to cover his own authorship.

*Dict. of Nat. Biogr.* (London and New York, 1886), V, s. v.; *Steele, Monasteries and Religious Houses* (London, New York, etc., 1903). The two printed editions of Bokenham's poem furnish material for critical study of the author.

E. MACPHERSON.

**Bolanden, CONRAD VON (JOSEPH BISCHOFF)**, a German novelist, son of a rich merchant, b. 9 August, 1828, at Niedergeilbach, a village of the Palatinate. He attended the Latin school at Blieskastel, the seminary at Speyer, and in 1849 entered the University of Munich to study theology. Ordained priest in 1852 he was appointed assistant pastor at the cathedral. Two years later he became pastor at Kirchheim Bolanden whence his pen name "Conrad von Bolanden". The following year he was transferred to Börstadt and three years later to Bergshausen. During this time he wrote his first four works: "A Wedding Trip", "Queen Bertha", "Historical Tales of Frederick II", and "Gustav Adolf". In 1870 he resigned his parish to devote himself exclusively to literary work, and lived in strict retirement at Speyer. He published numerous novels of which the most noteworthy are: "Canossa", "Trowel

or Cross", "Night of St. Bartholomew", "Savonarola", "Crusades", "Wambold", "Charlemagne", "Otto the Great", "Pillar of Truth".

His novels and romances, though not all of equal worth, are written for the people, brilliant in conception, simple in style. He fearlessly defends the Catholic standpoint and supports his position by frequent quotations from original sources. But in discussing questions of the day his criticisms are often severe and unjust. His works are widely read and have been translated into English and other European languages.

B. DIERINGER.

**Boleslaw.** See POLAND.

**Bolgeni, GIOVANNI VINCENZO**, theologian and controversialist, b. at Bergamo, Italy, 22 January, 1733; d. at Rome, 3 May, 1811. He entered the Society of Jesus, 31 October, 1747, taught philosophy and theology with marked success at Macerata and was a member of the Society when it was suppressed by Clement XIV. Henceforth he devoted himself to controversy and in recognition of his signal services against Jansenism and Josephinism, Pius VI appointed him Theologian-Penitentiary, an office of which he was deprived by Pius VII on account of the Jacobin principles he tolerated and advocated during the occupation of Rome by Napoleon I.

Of Bolgeni's theological writings, the best known and at the same time the least fortunate was his "Della carità o amor di Dio" (Rome, 1788). In it he endeavoured to refute the Dominican, de Rubeis, by demonstrating that the theological virtue of charity essentially consists in loving God as He is good to us and not as He is absolute goodness. This position won for him misrepresentation at the hands of Teofilo Cristiani, fictitious author of "Lettera teologico-critica sull' amore di Dio" (1791) and opposition from his former Jesuit comrades, Mazzarelli (1790-91), Regono (1791), Cortes (1790-93), Chantre y Herrera (1790-92) and Gentilini (1803). Against Cristiani he successfully disposed of the charge that he held purely servile fear a sufficient motive for attrition, but the arguments of his other adversaries he met at first with more subtlety than precision, and later with silence. He did not attempt to answer the searching criticism of his doctrine contained in Palestrina's "Idea genuina della carità o amor di Dio" (1800). In addition to his original work he contributed to the controversy, "Schiaramenti in confermazione e difesa della sua dissertazione" (Rome, 1788; Foligno, 1790), and "Apologia dell' amor di Dio detto di concupiscenza" (Foligno, 1792). Though practically defeated in this dispute Bolgeni's presentation of his case proved that he was endowed with controversial talents of no mean order, and these he used with telling effect in his writings on moral subjects and on matters which may be classed as politico-theological. As Theologian-Penitentiary he edited a novel defence of probabilism under the caption "Il possesso, principio fondamentale per decidere i casi morali". The second part of this work, "Dissertazione seconda fra le morali sopra gli atti umani" (Cremona, 1816; Orvieto, 1853), together with a treatise on usury, published under his name but probably not written by him, appeared after his death. The defence of probabilism aroused a storm of controversy, and among the noted anti-probabilists who engaged in the discussion may be mentioned the Bishop of Assisi (1798), Agapitus of Palestrina, O. Min. Ref. (1799), Cajetan Maria de Fulgore (1798), Canon John Trinch of the Cathedral of Tivoli (1850), and Montbach (1857). Of these Trinch added to his "Il Bolgenismo Confutato" a "digression on the necessity of confessing all mortal sins, whether certain or doubtful, just as they are in conscience."

The remaining productions of Bolgeni are chiefly devoted to attacks on Jansenism, Josephinism, and Jacobinism. Not long after the suppression of the Society of Jesus he entered the lists with the Society's traditional enemy, Jansenism, by publishing "Esame della vera idea della Santa Sede" (Macerata, 1785; Foligno, 1791), a work undertaken in refutation of the Jansenistic doctrines contained in "La Vera Idea della Santa Sede" by Pietro Tamburini, a celebrated professor of the University of Pavia. Several replies to the criticisms of Tamburini and to the censures of the Archpriest Guadagnini were published in rapid succession. In 1787, he wrote "Stato de' bambini morti senza battesimo", and in it scored the rigid doctrine of Guadagnini that infants dying without baptism are doomed to the torments of Hell. This controversy over, he devoted his pen to defending the juridical powers of the hierarchy, cataloguing the errors of the day, and combating the principles of Josephinism in Austria and of the Revolution in France. His publications at this period were: "Fatti dommatici ossia dell' infallibilità della Chiesa nel decidere sulla dottrina buona, o cattiva de' libri" (Brescia, 1788); "Specchio istorico da servire di preservativo contra gli errori correnti" (1789); "L'episcopato ossia della potestà di governare la Chiesa" (1789). These literary labours led to his appointment by Pius VI as Theologian-Penitentiary and in this capacity he issued a defence of "L'episcopato" (Rome, 1791), and "Dissertazione sulla giurisdizione ecclesiastica" (Rome, 1791), a refutation of George Sicard's contention that the powers of orders and jurisdiction were identical. About the same time he renewed his attacks on Guadagnini and Tamburini, refuting the former's state-deifying proclivities in "L'Economia della Fede Cristiana" (Brescia, 1790), and the latter's anti-ecclesiasticism in "Problema se i Giansenisti siano Giacobini" (Rome, 1794). "L'Economia della Fede Cristiana" was of such merit that it was incorporated by Migne in his "Démonstrations Évangéliques", vol. XVIII.

The last phase of Bolgeni's life is to say the least a strange one. After Napoleon I had seized Rome, Bolgeni, with wellnigh unintelligible inconsistency, favoured the anti-regal oath of allegiance imposed by the conqueror. This change of front he defended vigorously and subtly, but vainly. He was obliged to make a retraction in the presence of the cardinals assembled at Vienna for the election of a pope; "Ritrattazione di Gio. Vincenzo Bolgeni diretta a Monsignor Illmo. e Rmo. Vicegerente di Roma". His writings during this unfortunate stage of his career were: "Parere sul giuramento civico" (Rome, 1798); "Sentimenti de' professori della università del Collegio Romano sopra il giuramento prescritto dalla Repubblica Romana" (Rome, an. VII); "Sentimenti sul giuramento civico" (Rome, an. VII); "Metamorfosi del dott. Gio. Marchetti, da penitenziere mutato in penitente" (1800); "Parere . . . sull' alienazione de' beni ecclesiastici"; "Schiaramenti" to confirm the preceding. After his death a work was edited, believed by some to be from his pen, "Dei limiti delle due potestà ecclesiastica e secolare" (Florence, 1849), and it was put on the Index *donec corrigatur*. It is most probably unauthentic.

J. T. LANGAN.

**Bolivia**, a South American republic which lies between longitudes west of Greenwich 57° 30' and 74°, and latitudes 8° and 22° 50' south. These figures are, however, still subject to treaty changes.

**AREA, POPULATION, ETC.**—The republic covers an area of 702,767 sq. miles (1,822,334 sq. kilometers) and ranks as third in size among the South American countries. In 1905 its population was estimated

at 1,816,271, or a little more than five persons to every two square miles. Of these, 231,088 are reported as whites; 484,611 as mestizos, and 792,850 as Indians. Besides these, there were about 4,000 negroes, and the residue are of unascertained origin. The proportion of Catholics to non-Catholics is approximately as seventy-two to one. All these figures are to be taken with reserve, since the efforts at serious statistics are but very recent.

Since the close of the war with Chile in 1881, Bolivia has had no sea-coast. It is bounded on the west, north-west, and north by Peru; on the north-east and east by Brazil; on the south-east by Paraguay; on the south by the Argentine Republic, and on the south-west by Chile. Its communications with the outer world were still defective in 1905. A line of steamers on Lake Titicaca then plied between the Peruvian port of Puno and the Bolivian of Huaqui, and stage lines, between La Paz and the Chilean frontier. On the east side of the Andes, in the Basin of the Amazon, rivers, which are often interrupted in their upper course by rapids (*cachuelas*), afford the only means of transit. Bolivia had two short railroad lines of its own, besides the Chilean line to Oruro, of which the terminus is upon

A STREET IN LA PAZ

Bolivian soil. The two Bolivian railroads were trunk-lines, with an aggregate length of sixty-five miles. Work was, however, progressing on several other newly begun lines.

Bolivia is divided into nine departments and a "National Territory of Colonies", the area of which covers somewhat less than one-third of the whole surface of the republic, while its population is only one-sixtieth of the whole. Of the nine departments, La Paz is the most populous. Since 1899 the national capital has been La Paz de Aya-cucho, with a population of 59,014 souls, situated in this department. Next to La Paz in importance is Cochabamba with 21,886 inhabitants. Sucre and Potosí are reported with 20,900 each, and Santa Cruz de la Sierra with 18,000, while the im-

portant mining centre of Oruro has a little over 15,000 inhabitants.

**NATURAL FEATURES AND RESOURCES.**—The southwestern third of the country lies at a great altitude above the Pacific Ocean. The Puna, or table-land comprised within the Departments of La Paz, Oruro, and Potosí, has an average elevation of nearly 13,000 feet. Two lofty mountain ranges form natural breastworks to Bolivia: in the West, the Coast Cordillera (Chilian frontier) and, in the East, the Bolivian chain, consisting of the Andes of Carabaya and Apolobamba towards the North, and the Royal Cordillera or central Bolivian range, with its southern ramifications and prolongations to the Argentine lines. The mountainous section of Bolivia has no important rivers. Its drainage is in the North to Lake Titicaca, which itself empties to the South into the Lago (Lake) Poópo, which has no visible outlet. Towards the East mountain streams descend abruptly into the Basin of the Amazon. But the mountainous section has the two largest, and also most elevated lakes of South America: Titicaca,

able ores. Gold is not generally distributed, and is extracted mainly by "placer" mining, as for instance at Chuquiguillo, near La Paz. In the first half of the nineteenth century the Tipuani district, so difficult of access, was productive of gold of great fineness, and in quantities very considerable for that time, and the Tipuani mines are even now far from exhausted. Quartz gold is worked at Araca. Silver is very plentiful, and is extensively extracted in places. Native copper is mined at Corocoro, where it crops out in veins of unusual richness and width, but other copper ores are found in abundance also. Of late it has been established that Bolivia is probably one of the countries in the world, where tin (cassiterite) is most abundant, and the same may be said of bismuth. While on the eastern slope of the Andes the existence of gold and other mineral wealth has been proved, the attention of prospectors and miners has been turned chiefly towards the mountains themselves. The processes of mining and treatment of the ores are still, in many places, rudimentary and primitive, but with the influx of

MISSION CONVENT ON THE RIVER BENI

12,500 feet above sea-level, 138 miles long from north-west to south-east, and of varying width, and Poópo, farther south. The eastern two-thirds of Bolivia, that section lying towards the Atlantic, is traversed by mighty streams (e. g. the Beni and Mamoré) and their affluents, all of which rise in the central Bolivian chain. Bolivia has properly but two seasons: winter, corresponding in time to summer and part of fall and spring in the Northern Hemisphere, and summer embracing the rest of the year.

The mineral resources of this republic are known to be very important, but as yet they have been only superficially prospected. Difficulty of access to the country, unsettled political conditions in former times, and cumbersome, primitive transportation have been the main cause of this backwardness. The upper regions of the Amazonian Basin are known to contain coal, but there attention has been given chiefly to the vegetable resources, the India rubber tree having rendered possible the establishment of a highly important and growing industry. The same section, also, produces both coffee and sugar, and to-day the coca shrub is a staple, while calisaya bark is returning into favour. The highlands in the departments of La Paz, Oruro, Potosí, parts of Cochabamba and Tarija abound in a variety of valu-

foreign capital and the introduction of machinery, conditions are rapidly improving. On the shores of Lake Titicaca bituminous coal is found both east and west of that lake. Besides mining, the chief industry of the mountain region is agriculture. As this branch is almost entirely in the hands of the Indians, it will be treated in connexion with the ethnography of Bolivia.

The Amazon Basin and its forests, as well as open spaces with high grass, are full of animal life. The large rivers, as everywhere in tropical South America, teem with fish, crocodiles, snakes, and other amphibia, and the manatee also occurs. Aquatic birds, parrots, etc., are abundant. The fauna of the mountain districts is more in evidence, but much poorer in species and individuals, than in the adjacent countries. The llama and its congeners, the alpaca, vicuña, and guanaco, belong to the Bolivian fauna. The llama and alpaca are domesticated by the Indian. Beasts of prey are not numerous and are found only within the limits of arboreal vegetation. Lower down the great ant-eater is occasionally seen, the puma and the bear (*Ursus ornatus*). In southern Bolivia, as well as in the eastern sections, the American ostrich occurs, and a tiny armadillo has its home in the cold, arid Puna,

south of Lake Titicaca. Over the highest peaks soars the condor.

**GOVERNMENT, THE CHURCH, AND EDUCATION.**—Bolivia, then the Spanish colony of *Alto Peru*, or Upper Peru, declared its intention to achieve political independence 16 July, 1809, and actually became an autonomous republic 6 August, 1825, taking its name in honour of Simon Bolivar, its founder. The Constitution under which the republic is now governed dates from 28 October, 1880, and aims at a "unitarian republican" polity. Under this Constitution the legislative power is vested in a Congress which comprises a Chamber of Deputies and a Senate, the former body consisting of 72 members elected by direct popular vote for terms of four years, the latter of 16 members also elected by direct popular vote, but for terms of six years. The executive power is vested in a president, elected by direct popular vote for a term of four years. The president, however, can exercise his authority only through his Cabinet, which consists of five *Ministros de Estado*, jointly responsible with him for all his official acts. Under this chief executive the civil government of the country is carried on by prefects of Departments, appointed by it and directly responsible to it, and they in turn have under their jurisdiction sub-prefects and *Corregidores* for the subdivisions of Departments. The revenue of the republic for 1905 was stated at 7,928,730 bolivianos (1 boliviano = \$0.422 in United States currency).

By Article 2 of the Constitution of Bolivia, "The State recognizes and supports the Roman Apostolic Catholic religion, the public exercise of any other worship being prohibited, except in the colonies, where it is tolerated". For the support of Catholic worship in general the State pays the sum of 182,027 bolivianos (\$76,815 U. S. currency), besides 14,000 bolivianos (\$5,908) for missions to the aboriginal tribes. There is one archbishopric, Sucre, or Charcas, formerly La Plata, with 146 parishes, three colleges of the Propagation of the Faith, and five monasteries. The suffragan bishoprics are: La Paz, with 102 parishes, and 5 monasteries; Cochabamba, with 69 parishes and 4 convents, and Santa Cruz, divided into 73 parishes. Both La Paz and Santa Cruz were erected into bishoprics in 1605, the Archbishopric of Charcas was founded 1609, and the Diocese of Cochabamba in 1847. Efforts are kept up to gather the unsettled tribes of the Amazon Basin into permanent settlements (reductions), a very slow and difficult task.

The legal status of marriage is thus summed up in Art. 99 of the Civil Code of Bolivia: "Matrimony being in the Republic elevated to the dignity of a sacrament, the formalities necessary for its celebration will be the same as those which the Council of Trent and the Church have designated." Bolivian law recognizes no divorce permitting re-marriage, and all questions arising between husband and wife can be decided only by the ecclesiastical tribunals.

**ETHNOGRAPHY.**—The comparatively small proportion of whites among the Bolivian population makes of the Indian the numerically preponderant stock. The mestizos, while not disclaiming their partly white origin, sometimes stand, in the country and among the lower classes in towns and cities, but slightly higher than the aborigines, being distinguished from the latter mostly by the fact that they wear European costume. Of the Indians several linguistic stocks inhabit the country. The roaming tribes of the Amazon lowlands are neither numerous nor important enough to deserve mention here. But in the mountains two powerful stocks, sedentary, agricultural, and pastoral ever since they have been known to the whites, form the working lower class of the people of Bolivia. These stocks are the Quichua and the Aymará. These two large tribes

may, perhaps be about equally numerous. The Quichua occupy southern Bolivia and the Andean districts adjacent to Lake Titicaca on the East; the Aymará hold the upper valleys of the Andes, the West, and the centre. Physiologically, no great difference in type exists. They are, first of all, husbandmen, in fact they control agriculture. Nearly all agricultural lands being held by whites or mestizos, who do not themselves cultivate, but prefer to live in settlements following some trade or commerce, the Indians, who are settled everywhere, take care of the fields. This they do, either in a kind of serfdom, living on the property and performing, also, some personal services for the proprietors, or, as Indian communities settled near the land, they have a tacit lease of it. The Indians organized in communities according to their primitive customs control the land, through their labour, virtually more than the owners, and thus remain a power in the republic, since they are the feeders of the people. Their serfdom is much more apparent than real, for the masters depend upon them for subsistence. Some alimentary plants in the high regions are potatoes, quinoa, oca, etc., as well as maize in districts suitable for its growth, with coarse beans (*habas*) and barley, the last two being of European origin. The Indians raise cattle for themselves and sometimes for the landowners. All their farming is done in a primitive and very slovenly way. Next to agriculture, transportation and

CATHEDRAL AT COPACABANA

personal service in housework are also in the hands of the Indians. In fact their silent influence pervades the whole of public and private life; their industrial methods are obsolete, and they resist improvement with the greatest tenacity.

As the Indian has maintained his primitive organization with few changes, he might form a State within the State, and thus become a grave danger to the whites. But as he never had any conception of a State, being, moreover, divided into autonomous or independent tribes, that danger is much diminished. Neither the Aymará nor the Quichua could coalesce to form a homogeneous body. This they have shown ever since the Spanish occupation, and during the most alarming of their attempted uprisings, such as that of 1781. They would like to return to their primitive condition of barbarism, but feel that, despite their vast superiority of numbers, they are virtually powerless. In addition to these two principal Indian groups, the mountain districts still shelter the Uros, feeble remnants of a tribe dwelling among rushes and reeds, and comparatively little known. Of the white population of Bolivia little need be said that is not applicable

generally to the whites in other South American countries. They differ of course from the inhabitants of less mountainous countries in that they have the general characteristics common to all mountaineers.

(For special information on the individual dioceses, aboriginal tribes, languages, etc., of Bolivia, see articles under separate headings.)

INTERNATIONAL BUREAU OF THE AMERICAN REPUBLICS, *Bolivia* (Washington, D. C., 1904); RENÉ MORENO, *Biblioteca Boliviana* (Santiago, Chile, 1879). Of the latter very full and very reliable book a supplement was issued by the author in 1899, and VALENTIN ABEICIA published *Adiciones*, in 1902. These Chilean publications are not very easy to obtain; easier of access is *Geografía de la República de Bolivia* (La Paz, 1905). The colonial history of Bolivia is so intimately connected with that of Peru that the early sources touching the former are also those for the latter. Of general works from the sixteenth and seventeenth century, GOMARA, ACOSTA, HERRERA, GARCÍA are of course indispensable for consultation.

AD. F. BANDELIER.

**Bollandists**, THE, an association of ecclesiastical scholars engaged in editing the *Acta Sanctorum*. This work is a great hagiographical collection begun during the first years of the seventeenth century, and continued to our own day. The collaborators are called Bollandists, as being successors of Bolland, the editor of the first volume. The collection now numbers sixty-three volumes in folio, to which must be added a supplementary volume, published in 1875 by a French priest, and containing chiefly certain tables and directions facilitating research in the volumes which had appeared at that time. Although Bolland has given his name to the work, he is not to be regarded as its founder. The idea was first conceived by Heribert Rosweyde (b. at Utrecht, 1569; d. at Antwerp, 1629). He entered the Society of Jesus in 1588. An indefatigable worker and a fearless but judicious investigator, notwithstanding his duties as professor of philosophy in the Jesuit college at Douai during the last years of the sixteenth century, Rosweyde devoted the leisure of his vacations and holidays to exploring the libraries of the numerous monasteries scattered through Hainault and French Flanders. He copied with his own hand a vast number of documents relating to church history in general, and to hagiography in particular, and found in the old texts contained in the manuscripts coming under his observation quite a different flavour from that of the revisions to which many editors, notably Lippomano and Surius, then the latest and most celebrated, had believed it necessary to subject them. Rosweyde thought it would be a useful work to publish the texts in their original form. His superiors, to whom he submitted his plan in 1603, gave it their hearty approval, and allowed him to prepare the projected edition, without, however, relieving him of any of the occupations on which he was expending his prodigious activity. So, for the time being, he was allowed merely the privilege of devoting his spare moments to the preparation of the work. Rosweyde did not cease to pursue his project, which he announced publicly in 1607, as well as the plan he proposed to follow. Under the title: "*Fasti sanctorum quorum vitæ in belgicis bibliothecis manuscriptæ*", he gave in a little volume in 16mo., published by the Plantin press at Antwerp, an alphabetical list of the names of the saints whose acts had been either found by him or called to his attention in old manuscript collections. This list filled fifty pages; the prefatory notice in which he indicates the character and arrangement of his work, as he had conceived it, takes up fourteen. Finally, the work contains an appendix of twenty-six pages containing the unpublished acts of the passion of the holy Cilician martyrs, Tharsacus, Probus, and Andronicus, which Rosweyde regarded—wrongly—as the authentic official report from the pen of a clerk of the court of the Roman tribunal. According to this programme the collection was to comprise

sixteen volumes, besides two volumes of explanations and tables. The first volume was to present documents concerning the life of Jesus Christ and the feasts established in honour of the special events of His life; the second volume would be devoted to the life and the feasts of the Blessed Virgin, and the third to the feasts of the saints honoured with a more special cult. The twelve succeeding volumes were to give the lives of the saints whose feasts are celebrated respectively in the twelve months of the year, one volume for each month. This calendar arrangement had been prescribed by his superiors, in preference to the chronological order Rosweyde himself favoured. But this presented, especially at that time, formidable difficulties. Lastly, the sixteenth volume was to set forth the succession of martyrologies which had been in use at different periods and in the various Churches of Christendom. The first of the two supplementary volumes was to contain notes and commentaries bearing on the lives already published. It was to be divided into eight books treating respectively of the following subjects: (1) The authors of the lives; (2) the sufferings of the martyrs; (3) the images of the saints; (4) liturgical rites and customs mentioned in hagiographical documents; (5) profane customs to which allusions had been made; (6) questions of chronology; (7) names of places encountered in these same documents; (8) barbarous or obscure terms which might puzzle the readers. The other supplementary volume was to present a series of copious tables giving: (1) the names of the saints whose lives had been published in the preceding volumes; (2) the same names followed by notes indicating the place of the saint's birth, his station in life, his title to sanctity, the time and place in which he had lived, and the author of his life; (3) the state of life of the various saints (religious, priest, virgin, widow, etc.); (4) their position in the Church (apostle, bishop, abbot, etc.); (5) the nomenclature of the saints according to the countries made illustrious by their birth, apostolate, sojourn, burial; (6) nomenclature of the places in which they are honoured with a special cult; (7) enumeration of the maladies for the cure of which they are especially invoked; (8) the professions placed under their patronage; (9) the proper names of persons and places encountered in the published lives; (10) the passages of Holy Scripture there explained; (11) points which may be of use in religious controversies; (12) those applicable in the teaching of Christian doctrine; (13) a general table of words and things in alphabetical order. "And others still" adds the author, "if anything of importance presents itself, of which our readers may give us an idea."

Cardinal Bellarmine, to whom Rosweyde sent a copy of his little volume, could not forbear exclaiming after he had read this programme: "This man counts, then, on living two hundred years longer!" He addressed to the author a letter, the original of which is preserved in the present library of the Bollandists, signed, but not written, by the hand of Bellarmine, in which he intimates in polished but perfectly plain language that he regarded the plan as chimerical. Rosweyde was nowise disconcerted by this. From various other sources he received encouragement, enthusiastic praise, and valuable assistance. The new enterprise found an especial protector, as generous as he was zealous and enlightened, in Antoine de Wynghé, abbot of the celebrated monastery of Liessies in Hainault. Venerable Louis of Blois, whose third successor de Wynghé was, seemed to have bequeathed to him his affectionate devotion to the sons of St. Ignatius of Loyola. The large sympathy of this religious Mæcenas manifested itself in every way; in letters of recommendation to the heads of the various houses of the great Benedictine Order, which opened to Rosweyde and his associates monastic

libraries; in loans and gifts of books, of manuscripts, and of copies of manuscripts; and in pecuniary assistance. Rosweyde quite counted on completing by his own efforts the monument of which he had dreamed, and on bringing it to a worthy end. As a matter of fact, he did not get beyond the first stages of the structure. His literary activity was expended on a multitude of historical works, both religious and polemical, some of which, it is true, would have later formed a part of the great hagiographical compilation. The majority, however, bear no relation whatever to the work. The writings which would have been available are: the edition of the Little Roman Martyrology, in which Rosweyde believed he recognized the collection mentioned by St. Gregory the Great in his letter to Eulogius of Alexandria; the edition of the martyrology of Ado of Vienne (1613); the ten books of the Lives of the Fathers of the Desert, which he first published in Latin (1615 in fol.), dedicating the work to the Abbot of Liessies, and later in Flemish (1617) in fol., with an inscription to Jeanne de Baillienecourt, Abbess of Messines. The rest, however, as for instance the Flemish edition of Ribadeneira's "Flowers of the Saints" (1619, two folio volumes), the "General History of the Church" (1623), to which he added as an appendix the detailed history of the Church in the Netherlands, both in Flemish; the Flemish lives of St. Ignatius and St. Philip Neri; the Flemish translation of the first part of the "Treatise on Perfection", drew his attention completely from what he should have regarded as his principal task. It is due to him, however, to say that for several years his superiors, without ceasing to encourage him in the pursuit of his project, were forced through the necessity of filling vacant offices, to lay upon him duties which did not leave him the absolutely indispensable leisure. He set this forth clearly himself in the memorandum addressed to them in 1611, in response to their inquiry as to how he was progressing with the preparation of his volumes. But it is not less true that nearly all his publications, the most important of which have been mentioned above, are of a later date than this, and undoubtedly Rosweyde himself was chiefly to blame for the delay, which, however, may be called a fortunate one, since it resulted in advantageous modifications of the plan of the work. At the time of Rosweyde's death, then, which took place in Antwerp in 1629, not a page was ready for the printer. Moreover, the superiors of the order, on their part, hesitated to have the work carried on by another. For more than twenty years, however, Rosweyde had been extremely active; he had secured access to a quantity of manuscripts and had enlisted the co-operation of many learned men who had manifested the keenest interest in his undertaking; thanks to their assistance, he had collected many manuscripts and books relating to the lives of the saints; in a word, he had aroused an eager interest in his compilation, so great and so universal that it was necessary to satisfy it.

Father John van Bolland (b. at Julemont, in Limburg, 1596; d. at Antwerp, 12 September, 1665) was at this time prefect of studies in the college of Mechlin, and had charge of a congregation composed of the principal people of the city. It was called the "Latin Congregation", because all the exercises, sermons included, were conducted in that language. His family either took their name from, or gave it to, the village of Bolland, near Julemont. Before making his theological studies he had taught belles-lettres with distinction in the three higher classes of the humanities at Ruremonde, Mechlin, Brussels, and Antwerp. The superior of the Belgian province of the Society of Jesus bade him examine the papers left by Rosweyde, and report to him his opinion as to what it was advisable to do with them. Bolland

went to Antwerp, familiarized himself with the manuscripts, and, while admitting that the work was still merely a rough and faulty draft, gave reasons for believing that without an undue expenditure of labour it might be brought to a successful completion. He even showed himself disposed to take charge of the work, but only under two conditions: first, that he should be left free to modify the plan of Rosweyde as he understood it; second, that the copies, notes, and books which had been collected by Rosweyde should be removed from the library of the Professed House, where they were interspersed among the books in common use, and set apart in a place of their own for the exclusive use of the new director of the undertaking. The provincial, Jacques van Straten, accepted with alacrity both offer and conditions. Bolland was removed from the college of Mechlin and attached to the Professed House at Antwerp, to be director of the Latin Congregation and confessor in the church, and with the charge of preparing, in his leisure hours (*horis subsecivis*) the *Acta Sanctorum* for publication. Happily, he had not the least idea, any more than had the provincial, of all the undertaking involved. He fancied that he could finish it by his own unaided efforts, and that after the completion of the work proper and the preparation of historical, chronological, geographical, and other tables, as announced by Rosweyde, he could complete the publication by adding to it a comprehensive collection of notices of holy persons who flourished in the Church subsequent to the fifteenth century, but have not been honoured with a public cult. "And after all that is done", he wrote in his general preface, at the beginning of the first volume of January, "if I still have any time to live, I shall lend a charm to the leisure hours of my old age by gathering the ascetical doctrine found in the teachings of the saints recorded in this work." And nevertheless, he began by outlining a plan of quite another vastness from that of Rosweyde, whose programme had already appalled Bellarmine. Rosweyde had confined his quest of original texts to the libraries of Belgium and the neighbouring regions. He had not gone beyond Paris to the south, or Cologne and Trier to the east. Bolland made appeal to collaborators, either Jesuits or others, residing in all the different countries of Europe. Then Rosweyde had proposed to publish at first only the original texts, without commentaries or annotations, relegating to the last volumes the studies intended to enable one to appreciate their value and to throw light on their difficulties. Bolland recognized at once how defective this plan was. So he decided to give in connexion with each saint and his cult all the information he had been able to find, from whatever sources; to preface each text with a preliminary study destined

JOHN VAN BOLLAND, S. J.

to determine its author and its historical value, and to append to each notes of explanation for the purpose of clearing away difficulties. The duties of the various offices filled by Bolland, added to the formidable correspondence imposed on him by his research into documents and other sources of information concerning the life and cult of the saints to be treated in the work, together with the answers to the numerous letters of consultation addressed to him from all parts, concerning matters of ecclesiastical learning, left him no leisure for the discharge of his duties as hagiographer. Thus, after five years at Antwerp, he was forced to admit that the work was almost where Rosweyde had left it, except that the mass of material which the latter had begun to classify was notably augmented; as a matter of fact it was more than quadrupled. Meanwhile, eager desire for the appearance of the hagiographical monument announced by Rosweyde almost thirty years previously grew apace in the learned and the religious world. There was nothing left for Bolland but to admit that the undertaking was beyond his individual strength and to ask for an assistant. The generous Abbot of Liessies, Antoine de Wynghé, effectually supported his demand by volunteering to defray the living expenses of the associate who should be assigned to Bolland, as the Professed House at Antwerp, which depended on the alms of the faithful for its support, could not pay a man to do work which was not strictly in the field of its ministrations.

The assistant chosen, doubtless at Bolland's suggestion, for he had been one of his most brilliant pupils in the humanities, was Godfrey Henschen (b. at Venray in Limburg, 1601; d. 1681), who had entered the Society of Jesus in 1619. He was assigned to his former master in 1635 and laboured at the publication of the *Acta Sanctorum* up to the time of his death in 1681, forty-six years later. Twenty-four volumes had then appeared, of which the last was the seventh volume of May. He had, moreover, prepared a great amount of material and many commentaries for June. It may be safely said that the Bollandist work owes its final form to Henschen. When he arrived at Antwerp, Bolland had succeeded in putting into good order the documents relating to the saints of January, and had found a publisher in the person of John van Meurs. Doubtless for the purpose of trying Henschen, he bade him study the acts of the February saints, leaving him every latitude as to the choice of his first subjects and the manner of treating them. Bolland then gave himself entirely to the printing of the volumes for January. It was well under way when Henschen brought to Bolland the first fruits of his activity in the field of hagiography. They were studies for the history of St. Vaast and that of St. Amand, printed later in the first volume of February under date of February sixth. Bolland was absolutely astonished, and possibly somewhat abashed, by the great scope and solidity of the work which his disciple had to show him. He himself had not dared to dream of anything like it. His preliminary commentaries on the acts of the various saints of January were practically confined to designating the manuscript where the texts he was publishing had been found, to annotations, and a list of the variants in the various copies and the previous editions. The commentaries and annotations of Henschen solved, or at least tried to solve, every problem to which the text of the Acts could give rise, in the matter of chronology, geography, history, or philological interpretation, and all these questions were treated with an erudition and a method which could be called absolutely unknown hitherto. Modest and judicious savant that he was, Bolland at once admitted the superiority of the new method and desired Henschen, despite the

reluctance occasioned by his humility and the profound respect in which he held his master, to review the copy already in press. He held it back for a considerable time to enable his colleague to make the additions and corrections he judged necessary or advantageous. The pages containing the material for the first six days of January had already come from the press; the pages which seemed most defective to Henschen were replaced by revisions. His hand is more clearly apparent in the following pages, although he persisted in employing a reserve and watchfulness which sometimes seems to have cost him an effort, in order to avoid too marked a difference between Bolland's commentaries and his own. Papebroch, in his notice on Henschen printed at the beginning of the seventh volume of May, points out as particularly his the toil expended on the acts of St. Wittikind, St. Canute, and St. Raymond of Pennafort on the seventh of January; of St. Atticus of Constantinople and Blessed Laurence Justinian on the eighth; of Sts. Julian and Basilissa on the ninth. "But from this day on," he adds, "Bolland left to Henschen the Greek and Oriental saints, as well as the majority of those of France and of Italy, reserving for himself only those of Germany, Spain, Britain, and Ireland". He still desired to associate the name of Henschen with his own on the title-page of the various volumes, but the humble religious would not allow it to appear except as his assistant and subordinate. Meanwhile Bolland, in his general preface to the first volume of January, did not fail to tell what he owed to his excellent collaborator. He then insisted that in the volumes of February and the following ones, Henschen's name should figure on the title-page as prominently as his own and, moreover, that in the course of these volumes all commentaries from the pen of Henschen should be signed with his initials, claiming, doubtless not without some foundation, that he received a great number of letters relating to articles written by his colleague, which caused him difficulty. The two volumes of January, containing respectively, if we take into account the various tables and preliminary articles, the first, 1,300 pages, the second, more than 1,250, appeared in the course of the same year, 1643. They aroused in the learned world positive enthusiasm, which is easily understood when we consider how far the new publication surpassed anything of the kind known up to that time—the Golden Legend, Guido Bernardus, Vincent of Beauvais, St. Antoninus of Florence, Peter de Natali, Mombritius, Lippomano, and Surius. There was another marked difference when, fifteen years later, in 1658, the three volumes for February were published, showing a notable improvement over those for January. Congratulations and warm encomiums came from every side to testify to Bolland and his companion the admiration aroused by their work. The encouragement was not only from Catholics. Learned Protestants of the foremost rank did not hesitate to praise highly the truly scientific spirit which marked the new collection. Among others who had been heard from even before the publication of the February volumes, was the celebrated Gerard Vossius. The editors had the satisfaction of seeing added to all these approbations that of Alexander VII, who publicly testified that there had never been undertaken a work more useful and glorious to the Church. The same pontiff and, at his suggestion, the General of the Society of Jesus, Goswin Nickel, immediately invited Bolland to Rome, promising him a rich harvest of materials. The invitation was equivalent to a command, though for that matter this literary journey was of too great advantage to the work in hand for Bolland to do anything but gladly accept it. Finding, however, that he was too much enfeebled by recent illness to stand the fatigues of the journey, and that,

moreover, it was necessary for one of the editors to remain in Antwerp, the centre of correspondence, he easily obtained permission from the Father General to send in his place Henschen, who was already so favourably known through his collaboration in the volumes published.

At this time, the hagiographers were joined by a new companion, who was to accompany Henschen on his journey, and who later was to shed as great glory on the work as had his two predecessors. This was Father Daniel von Papenbroeck, better known under the slightly altered form of Papebroch (b. at Antwerp, 1628; d. 28 June, 1714). He entered the Society in 1646, after having been, like Henschen, a brilliant pupil of Bolland's in the course of the humanities. He had just completed his thirty-first year when he was called on, in 1659, to give himself entirely to the work of hagiography, in which he was to have a remarkably long and fruitful career, for it lasted till his death, which occurred in the eighty-seventh year of his age, and the fifty-fifth of his work in this field. At the same time that they appointed Papebroch a collaborator to Bolland and Henschen, the superiors of the order, at the instance of important persons who wished the publication of the "Acta Sanctorum" hastened as much as possible, relieved the Fathers in charge of the work of every other regular occupation, in order that they might thenceforth devote their entire time to the hagiographical work. They were not obliged to fulfil any duties of the sacred ministry except for the distraction and rest that men of such great intellectual activity might find in a change of occupation. About the same time they were granted another favour. We have seen that Bolland, in accepting the succession to Rosweyde's post, had obtained that a special place should be set apart for the manuscript copies and books collected by Rosweyde, which had hitherto been scattered among the books belonging to the general library of the Professed House. This embryo of the Bollandist Museum consisted of two small mansard rooms, lighted by dormer windows so narrow that in the corners it was impossible to see clearly enough to read the titles of the books, even at noonday. Moreover, the walls were not fitted with shelves where the books could be arranged. They were merely piled one above the other without any attempt at order. It required Bolland's wonderful local memory to find anything in this chaos. About 1660, he had the satisfaction of having a spacious hall on the first floor placed at his disposal, where books and manuscripts could be placed on shelves in methodical order. The library, or the "Hagiographical Museum", as it became customary to call it, had already received, and continued to receive daily, thanks to the gifts of generous benefactors and judicious purchases, many acquisitions, so that Henschen during the course of his literary journey was able to say that he found very few historical libraries, public or private, that could compare with the "Hagiographical Museum" of Antwerp. This library was greatly enriched some years later when Papebroch, through the death of his father, a rich merchant of Antwerp, was enabled to apply to the work on which he was engaged his large inheritance.

Bolland's two companions began their journey on the feast of St. Mary Magdalen, 22 July, 1660. Their old master accompanied them as far as Cologne, where they left him after a week's stay. An almost daily correspondence kept up with him, and preserved nearly entire at Brussels, partly at the Royal Library and partly at the Library of the Bollandists, allows us to follow each step of their learned pilgrimage through Germany, Italy, and France. In Germany, they visited successively Coblenz, Mainz, Worms, Speyer, Frankfort, Aschaffenburg, Würzburg, Bam-

berg, Nuremberg, Eichstätt, Ingolstadt, Augsburg, Munich, and Innsbruck. Everywhere the name of Bolland ensured them an enthusiastic welcome and opened every library to them; everywhere they found precious material to take with them for use in the succeeding volumes of the "Acta". A reception no less friendly and a harvest even more abundant awaited the travellers in Italy, at Verona, Vicenza, Padua, Venice, Ferrara, Imola, Florence, Ravenna, Forlì, Rimini, Pesaro, Fano, Sinigaglia, Ancona, Osimo, Loreto, Assisi, Perugia, Foligno, and Spoleto. They arrived in Rome the day before the Vigil of Christmas, and remained there until 3 October of the following year, 1661. During all this time they were overwhelmed with attentions and favours by Alexander VII, who in person did the honours of his rich Chigi library and commanded by special Briefs that all libraries should be opened to them, and especially that they should be allowed access to the manuscripts of the Vatican. They were received with no less courtesy by the cardinals, the heads of the various orders, the savants Allatius, Aringhi, Ughelli, Ciampini, and others, then shining lights in the capital of the Christian world. The five or six copyists placed at their disposal were kept constantly busy during the nine months they were in Rome in transcribing manuscripts according to their directions, and this occupation was continued by them a long time after the Bollandists' departure. As for the Bollandists themselves, their time was principally employed in collecting Greek manuscripts, in which they were diligently assisted by the celebrated Hellenist, Laurentius Porcius, and the abbot Francesco Albani, later cardinal, and pope under the name of Clement XI. The learned Maronite, Abraham of Eckel, who had just brought to Rome a great number of Syriac manuscripts, was willing to make extracts and translate for them the Acts of the Saints found therein. Ughelli gave them two volumes in folio of notes which he had collected for the completion of his "Italia Sacra". The Oratorians put them in touch with the manuscripts of Baronius, and a large collection of lives of the saints which they had intended to publish themselves. On leaving Rome they visited Naples, Grotta-Ferrata, and Monte Cassino, then Florence, where they remained for four months, and lastly Milan. Everywhere, as at Rome, they left behind them copyists who continued for years the work of transcribing which had been marked out for them. They then spent more than six months in travelling through France, where they halted successively at the Grande Chartreuse of Grenoble, at Lyons, at the monasteries of Cluny and Cîteaux, at Dijon, Auxerre, Sens, and lastly at Paris. They arrived in the great capital, 11 August, 1662, and were immediately put in touch with whatever distinguished savants Paris could then boast of. They found at their command, with unrestricted leave to copy whatever served their purpose, the wealth of hagiographical matter contained in the rich libraries of Saint-Germain-des-Prés and St. Victor, as well as those of the Celestines and Feuillants, of Wion d'Hérouval, de Thou, de Séguier, and lastly the Mazarine and the Royal Library. Their stay at Paris extended over three months, every moment of which time they spent in transcribing and collating, besides enlisting the services of several copyists during the entire time.

They left Paris 9 November and turned their steps toward Rouen, then went through Eu, Abbeville, and Arras, omitting, to their great regret, the city of Amiens, because of the impassable roads, washed out by rains, and the impossibility of securing means of transportation. They reached Antwerp 21 December, 1662, after an absence of twenty-nine months. They not only brought back with them an enormous mass of documents transcribed

by themselves and by the copyists they had been obliged to engage, but they found awaiting them at Antwerp a like number from the copyists whom they had employed in the principal cities they had visited (notably, Rome, Florence, Milan, and Paris) and who were still carrying on the labour with which they had been charged. This long journey caused little delay in the progress of the work, for which, on the other hand, it was so productive of good results. Thanks to the incredible activity of the three eminent hagiographers, the three volumes for March were given to the public in 1668. They bore only the names of Henschen and Papebroch, as Bolland had passed to a better life, 12 September, 1665, thirty-six years after succeeding Rosweyde in the preparation of the "Acta Sanctorum". Seven years later, in 1675, the three volumes for April appeared, preceded by preliminary treatises, the subjects of which were respectively: in the first volume, the two most ancient collections of notices on the popes (catalogues of Liberius, and Felix) and the date of St. Ambrose's death, both by Henschen; in the second, the attempt at a diplomatical treatise by Papebroch, "whose chief merit", as the author himself was fond of saying with as much sincerity as modesty, "was that it inspired Mabillon to write his excellent work: 'De re diplomatica'"; in the third, a new revised edition of the "Diatriba de tribus Dagobertis", which had made the name of Henschen celebrated twenty years previously. The custom of having these "Parerga" was kept up in the succeeding volumes; there was even an entire volume, the "Propylæum ad tomos Maii", filled with notes of Papebroch on the chronology and history of the popes from St. Peter to Innocent XI. Another happy thought first carried out at that time was the publication of the Greek acts in their original text; previously, only Latin versions had been given. The Greek texts were still relegated to the end of the volumes in the form of appendices; it was only in the fourth volume of May that they were first printed in the body of the work. The first three volumes of May were published in 1688. Besides the names of Henschen and Papebroch, the title-page bore those of Conrad Janninck and François Baert, who had been appointed to the work, the former in 1679; the latter in 1681, at the same time as Father Daniel Cardon, who was carried off by a premature death the second year after his appointment.

Up to this time Bolland and his first two companions had met with nothing but encouragement. A severe storm was soon to burst on the one who was now head of the undertaking and on the work itself. In the first volume of April Papebroch had occasion to treat, under date of the eighth, the Acts of St. Albert Patriarch of Jerusalem, and author of the Carmelite rule. In his preliminary commentary he had combated, as insufficiently grounded, the tradition universally received by the Carmelites, that the origin of the order dated back to the prophet Elias, who was regarded as its founder. This was the signal for an outburst of wrath on the part of these religious. From 1681 to 1693 there appeared no less than twenty or thirty pamphlets filled with abusive language against the unfortunate critic, and adorned with titles often ludicrous through their very efforts at violence: "Novus Ismaël, cuius manus contra omnes et manus omnium contra eum, sive P. Daniel Papebrochius . . ."; "Amyclæ Jesuiticæ, sive Papebrochius scriptis Carmeliticis convictus . . ."; "Jesuiticum Nihil . . ."; "Hercules Commodianus Joannes Launois . . . rediuvivus in P. Daniele Papebrochio . . ."; "R. P. Papebrochius Historicus Conjecturalis Bombardizans S. Lucam et Sanctos Patres", etc. The series culminated in the large quarto volume signed with the name of Father Sebastian of St. Paul, provincial of the Flemish-Belgian province of the

Carmelite Order, and entitled: "Exhibitio errorum quos P. Daniel Papebrochius Societatis Jesu suis in notis ad Acta Sanctorum commisit contra Christi Domini Paupertatem, Ætatem, etc. Summorum Pontificum Acta et Gesta, Bullas, Brevia et Decreta; Concilia; S. Scripturam; Ecclesiæ Capituli Primatum et Unitatem; S. R. E. Cardinalium Dignitatem et autoritatem; Sanctos ipsos, eorum cultum, Reliquias, Acta et Scripta; Indulgentiarum Antiquitatem; Historias Sacras; Breviaria; Missalia, Martyrologia, Kalendaria, receptasque in Ecclesia traditiones ac revelationes, nec non alia quævis antiqua Monumenta Regnorum, Regionum, Civitatum, ac omnium fere Ordinum; idque nonnisi ex meris conjecturis, argutiis negativis, insolentibus censuris, satyris ac sarcasmis, cum Æthnicis, Hæresiarchis, Hæreticis aliisque Auctoribus ab Ecclesia damnatis. — Oblata Sanctissimo Domino Nostro Innocentio XII . . . Colonia Agrippinæ, 1693." Papebroch, who was receiving at the same time from the most distinguished scholars lively protests against the attacks of which he was made the object, met them at first merely with a silence which perhaps seemed disdainful. But learning that active steps were being taken at Rome to obtain a condemnation of the collection of the Acta Sanctorum or of some of its volumes, he and his companions decided that the time for silence had passed. It was Father Janninck who entered the lists in an open letter to the author of the "Exhibitio Errorum", followed soon afterwards by another in which he replied to a new little book published in support of the work of Father Sebastian of St. Paul. The two letters were printed in 1693. They were followed by a more extended apology for the "Acta", published by the same Janninck in 1695; and lastly there appeared in 1696, 1697, and 1698 the three volumes of the "Responsio Danielis Papebrochii ad Exhibitionem Errorum", in which the valiant hagiographer takes up one by one the charges hurled against him by Father Sebastian and confutes each with an answer as solid in argument as it was temperate in tone. The adversaries of Papebroch, fearing lest they should not be able to obtain from the Court of Rome the condemnation for which they were begging, addressed themselves, with the utmost secrecy, to the tribunal of the Spanish Inquisition, where they won over to their side the most powerful influences. Before the writers of Antwerp had any suspicion of what was being plotted against them, there was issued, in November, 1695, a decree of this tribunal condemning the fourteen volumes of the "Acta Sanctorum" published up to that time, under the most rigorous qualifications, even going so far as to brand the work with the mark of heresy. Papebroch was painfully and deeply moved by the blow. He could submit to all the other insults heaped upon him, but he was obliged to refute the charge of heresy. He made the most vehement entreaties and had all his friends in Spain on the alert to let him know which propositions the Holy Office of Spain had regarded as heretical, in order that he might retract them, if he was unable to furnish satisfactory explanations, or secure the correction of the sentence, if his explanations were acceptable. His efforts proved fruitless. Having fallen seriously ill in 1701, and believing himself at the point of death, immediately after receiving the last sacraments he had a notary-public draw up in his presence and before witnesses a solemn protest which shows how greatly he was affected by the condemnation levelled at his head by the Spanish Inquisition. "After forty two years of assiduous toil, devoted to the elucidation of the Acts of the Saints, hoping to go to the enjoyment of their society, I ask only one thing on earth, and it is that His Holiness Clement XI be immediately implored to grant me after death what in life I have sought in

vain from Innocent XII. I have lived a Catholic, and I die a Catholic, by the grace of God. I have also the right of dying a Catholic in the eyes of men, which is not possible so long as the decree of the Spanish Inquisition shall appear justly issued and published, and so long as people read that I have taught in my books heretical propositions for which I have been condemned." Papebroch had accepted without appeal or murmur the decision of the Roman Congregation of 22 December, 1700, placing on the Index his chronological and historical Essay on the Popes, published in the "Propylæum Maii", a decree issued, as was expressly stated, on account of the sections bearing on certain conclaves and requiring merely the correction of the passages in question. But he did not cease working during the twelve years and a half that he still lived, both by his own efforts and those of his friends, not only to prevent the confirmation by Rome of the decree of the Spanish Inquisition, but also to secure the retraction of the decree. Father Janninck was even sent to Rome with this end in view and remained there for over two years and a half, from the end of October, 1697, till June, 1700. He was completely successful with respect to the first object of his mission, as in December, 1697, he received the assurance that no censure would be passed against the volumes condemned in Spain. The persecutors of Papebroch were compelled to sue for an injunction to silence for both parties, which was accorded them by a Brief of 25 November, 1698, gratefully accepted by Papebroch. More time was necessary, however, to bring about a final decision in the second matter. Whether it was judged prudent in Rome not to enter into conflict with the Spanish tribunal, or whether the latter prolonged the affair by passive resistance, the decree of condemnation made in 1695 was not revoked until 1715, the year following the death of Papebroch. As for the "Propylæum Maii", it was not withdrawn from the Index of Forbidden Books until the last edition (1900); but this did not prevent the French editor, Victor Palmé, from publishing it in his reprint of the *Acta Sanctorum*, which he undertook about 1860.

A grievous trial of another sort was visited on Papebroch during the last years of the seventeenth century. A cataract affecting both eyes reduced him for about five years to a state of total blindness, which compelled him to give up all literary composition. The sight of his left eye was restored in 1702 by a successful operation. He immediately took up his work again and continued the *Acta Sanctorum* as far as the fifth volume of June, the twenty-fourth of the whole collection, which appeared in 1709. The weight of age—he was then eighty-one—and his infirmities compelled him to abandon the more arduous work of the Bollandist museum. He lived for almost five years, which he devoted to editing the "*Annales Antverpienses*" from the foundation of Antwerp down to the year 1700. The manuscript of this work comprised eleven volumes in folio, seven of which are at the Royal Library of Brussels, the others probably having been lost. An edition of the volumes which have been preserved to us was published at Antwerp, 1845–48, in five volumes in octavo.

We shall not pursue further the history of the Bollandist work during the eighteenth century up to the suppression of the Society of Jesus, in 1773. The publication continued regularly, though with more or less unevenness as to the value of the commentaries, up to the third volume of October, which appeared in 1770. The suppression of the Society brought about a crisis in which the work nearly foundered. The Bollandists then in office were Cornelius De Bye, James De Bue, and Ignatius Hubens. The Fathers Jean Clé and Joseph Ghes-

quière had but recently been transferred from the work. The former, at the time of the suppression of the Society, was superior of the Flemish-Belgian province; the latter was in charge of the projected publication of the "*Analecta Belgica*", a collection of documents relating to the history of Belgium, a work for which the funds of the Musée Bellarmine were appropriated. This Museum was established at Mechlin at the beginning of the eighteenth century, for the purpose of opposing the Jansenists, but was afterwards transferred to the Professed House at Antwerp. On 20 September, 1773, commissaries of the Government presented themselves at the residence of the professed Jesuit Fathers at Antwerp, and before the assembled community read the Bull of suppression of Clement XIV and the imperial letters patent empowering them to execute it. They then affixed seals to the entrances of the archives, libraries, and any rooms of the Fathers which contained money or objects of value. A like proceeding took place on the same day in all the houses of the Society then existing in Belgium. Nevertheless a special order was issued enjoining the members of the commission charged with executing the decree on the Professed House at Antwerp "to summon the *ci-devant* Jesuits employed in the publication of the '*Acta Sanctorum*' and to announce to them that the government, satisfied with their labours, was disposed to exercise special consideration in their regard". Father Ghesquière and his collaborators in the "*Analecta Belgica*" were included in this indulgence granted to the Bollandists. This favourable attitude of the Government resulted, after various tiresome conferences, in the removal, in 1778, of the Bollandists and the historiographers of Belgium, together with their libraries, to the abbey of Caudenberg, at Brussels. Each of the Bollandists was to receive an annual pension of 800 florins, besides the 500 florins to be given to the community of Caudenberg in payment for their board and lodging. The same indulgence was accorded to Ghesquière in consideration of his office of historian. The results of the sale of the volumes were to be divided between the abbey and the editors on condition that the abbey should take charge of the matter on hand, and provide a copyist to make fair copies of manuscripts for the printers, as well as religious who should be trained under the direction of the elder Bollandists for the continuation of the work. The other half of the profits was to be divided in equal portions among the writers. The four hagiographers took up their residence at the Abbey of Caudenberg, and with the consent of the abbot adopted two young religious as assistants. One of these soon left them to pursue his scientific studies, feeling that he had not the vocation for this work; the other was John-Baptist Fonson, at that time (1788) twenty-two years of age, whose name soon afterwards appeared on the title page as editor. Under this new condition of things there appeared in 1780 Volume IV of October under the names of Constantine Suykens (d. 1771), Cornelius De Bye, John De Bue, Joseph Ghesquière, and Ignatius Hubens, all former Jesuits. In 1786, Volume V appeared, signed with the names of De Bye, De Bue, and Fonson. In the interval between these two volumes the corps of hagiographers had lost, in 1782, the youngest of the Antwerp members, Ignatius Hubens. He was replaced in October, 1784, by a French Benedictine, Dom Anselm Berthod, who voluntarily resigned the high positions he held in his order and those for which he was intended, so that he might devote himself to the learned work which the Imperial Government of Vienna requested him to take up. He was to be engaged upon it only a little more than three years, for he died at Brussels, in March, 1788.

Two new volumes were issued from the royal press

of Brussels, to which had been sent all the equipments of the printing establishment which the Bollandists had founded at Antwerp exclusively for their work. The printing expenses as well as those of pensions and indemnities were largely made up to the public treasury by the confiscation of the capital amassed by the older Bollandists through the sale of their volumes, the collective pension of 2,000 Brabant florins received from the government all through the eighteenth century up to the suppression of the Society, and the liberality of certain benefactors. This capital had grown by 1773 to the sum of 130,000 Brabant florins, (\$47,166) yielding an annual revenue of 9,133 florins and 18 sous to which were added the results of the sale of the *Acta Sanctorum* which averaged 2,400 florins yearly. The Empress Maria Theresa to the very last showed favour to the work of the Bollandists. The same benevolence was not experienced from her successor, Joseph II. The Bollandists now felt the consequences of one of the so-called reforms introduced into the ecclesiastical domain by this imperial philosopher. Among the religious houses suppressed as useless was the Abbey of Caudenberg. The decree of suppression was enforced in May, 1786. The Bollandists were not at first involved in the catastrophe, as they were assigned a dwelling-place and library in a part of the buildings formerly occupied by the college of the Society of Jesus, and were allowed to retain the pensions and privileges granted them in 1778. This was only a short postponement, however, of the complete destruction of the work. Already, in 1784, the Prince von Kaunitz, minister of Joseph II and his chief counsellor in the matter of religious reform, had intimated that the Emperor was not content with the slow progress of the undertaking, and that for the future he would expect to see the publication of at least a volume a year, so that the work might be entirely finished in ten years. The minister even went so far as to send word to the municipality of Brussels that "he attributed the lack of activity on the part of the Bollandists to their desire to keep up forever [*éterniser*] the profits accruing from the work, and that if they did not give satisfaction there was nothing to do but suppress the establishment." The accused had no difficulty in justifying themselves. But the Court of Vienna had fully decided to hear no explanation, and in 1788 asked for a report from the Court of Accounts concerning the expenses entailed by the work of the Bollandists. The conclusion deduced from this report was that the suppression of this work and that of the historiographers would result in an annual gain to the treasury of two to three thousand florins. The Chamber, moreover, took it on itself to say that there was no advantage to be gained by continuing it. The ecclesiastical commission and commission of studies (one and the same), consulted in its turn, gave a decision to the same effect (11 October, 1788). "The work of the Bollandists", it said, "is far from completion, and we cannot flatter ourselves that the end is yet in sight. This work has no merit but that of being an historical repertory, filled with an enormous quantity of details, which will always have but slight attraction for real savants. It is astonishing that at the time of the suppression of the Jesuit Order, they should have been successful in interesting the Government in such trash, and that it is such is proved by the scanty profit the Bollandists have derived from their labours. In business parlance, it is a very poor investment, and as it is not better, regarded from a scientific standpoint, it is quite time to put an end to it." Strengthened by this advice, the "Government Council" notified the Court of Accounts by a despatch dated 16 October, 1788, that it had been decided to put a stop to the work of the *Acta Sanctorum*, and that in consequence, beginning from

that date, no more payments should be made to the Fathers De Bye, De Bue, Fonson, Ghesquière, and Cornelius Smet (a former Jesuit, associated first with Ghesquière in the publication of the "*Analecta Belgica*" and later enrolled among the Bollandists) of the annual pension of 800 florins which had been assured them. It was to be decided later what should be done with the printing outfit and the other effects of the suppressed establishment. These spoils comprised the library of the Bollandists and the copies of the volumes already published which they had in stock. This involved no slight annoyance. Once the series was abandoned, it would be difficult to find a purchaser for these works, and they wished to realize as much money as possible from them. It was decided to ask the Bollandists themselves to undertake the sale of these effects for the benefit of the public treasury. The Bollandists willingly accepted the charge, hoping to keep intact the treasures of their library and thus to ensure, in a certain measure, the resumption of the work, if not at once, at least in the near future.

Cornelius De Bye, who had been especially commissioned to conduct the sale, turned first to Martin Gerbert, the learned abbot of the monastery of St. Blasius in the Black Forest. On behalf of the Government commissioners he named a purchase price for the library and such of the published volumes as remained unsold, and offered to come to St. Blasius for some months in order to train some of the young religious of the abbey for the work of publishing the *Acta Sanctorum*. His letter, dated 11 November, 1788, remained unanswered, whether as a result of dispositions little favourable to the Society of Jesus, such as had been more than once manifested by this famous abbot, or whether, already absorbed by many important works, he felt he could not think of undertaking yet another entirely new. About the same time, i. e. in November and December, 1788, the Congregation of Benedictines of Saint-Maur, in France, of its own accord made advances to the officials of the Imperial Government of Vienna for the acquisition of the Bollandist library, with a view to continuing the publication. This attempt was equally void of result. It was with the abbey of the Premonstratensians of Tongerlo that arrangements were finally concluded. By a contract signed 11 May, 1789, the Government transferred to this abbey the Bollandist library and the Bellarmine Museum, together with the furnishings appertaining to them, and the volumes already printed and the printing equipment. In return, the abbey was to pay the government for the libraries 12,000 Brabant florins (\$4,353.84) and for the other things 18,000 florins. Half of the latter sum was turned over to the three hagiographers, De Bye, De Bue, and Fonson. Moreover, the abbey agreed to pay a yearly salary to these three as well as to Ghesquière and Smet. The Bollandists were scarcely established in their new home when the Brabantine Revolution broke out. Nevertheless, they continued their labours and in 1794 published the sixth volume of October, signed with the names of Cornelius De Bye and James De Bue, former Jesuits, John Baptist Fonson, ex-Canon of Caudenberg, Anselm Berthod the Benedictine, and Siard van Dyck, Cyprian van de Goor, and Matthias Stalz, Premonstratensian canons. The same year Belgium was invaded by French troops and reunited to the great Republic. Ecclesiastical goods were confiscated, priests and religious hunted like criminals, the Premonstratensians of Tongerlo and the Bollandists whom they harboured forced to disperse, and the work of the Bollandists actually suppressed. Part of the treasures of the library were concealed in the homes of neighbouring peasants, and the rest, hastily piled into wagons, were taken to Westphalia. When

the storm of persecution had somewhat abated, an attempt was made to collect these scattered effects. Naturally, many of them were lost or destroyed. The remainder were restored to the abbey of Tongerlo, where they were undisturbed until 1825. Then, as all hope of resuming the Bollandist work seemed lost, the canons of Tongerlo disposed of a great number of the books and manuscripts by public sale. Such as remained were given to the Government of the Netherlands, which hastened to incorporate the volumes into the Royal Library of The Hague. The manuscripts seemed destined to a like fate, but as a result of earnest solicitations they were deposited in the Library of Bourgogne, Brussels, where they still remain. Nevertheless, the idea of resuming the publication of the *Acta Sanctorum* had never been entirely abandoned in Belgium. The prefect of the department of the Deux Nèthes (province of Antwerp), in 1801; the Institute of France, with the Minister of the Interior of the French Republic as mediator, in 1802; and lastly, in 1810, the Baron de Tour du Pin, Prefect of the Department of the Dyle (Brussels), at the request of the incumbent of the same important office, then the Count de Montalivet, applied to such of the former

that by 29 January, 1837, he received from Father van Lil, Provincial of the Society in Belgium, assurance of the appointment by the Society of new Bollandists, with their residence at the College of Saint-Michel at Brussels. These were Fathers Jean-Baptiste Boone, Joseph Van der Moere, and Prosper Coppens, to whom was added, in the course of the same year, Father Joseph Van Hecke. The provincial, in behalf of these Fathers, asked free access to public libraries and archives, and the privilege of taking home with them from the Library of Bourgogne and the Royal Library, such manuscripts and books as they would need for reference in the course of their work. Both requests were immediately granted. Moreover, an annual subsidy was promised, which was fixed in May, 1837, at 6,000 francs. This subsidy was continued from year to year under the different governments, both Catholic and Liberal, which succeeded to power, until the parliamentary session of 1868, in the course of which the Liberal majority of the Chamber of Deputies cut it out of the budget. It has never been re-established.

The new hagiographers began by drawing up a list of the saints whose acts or notices remained to be published, that is to say, those who are hon-

COLLEGE OF SAINT-MICHEL, BRUSSELS

Bollandists as were still living, to induce them to resume their task once more. But the attempts were futile.

Matters rested here until 1836. It was then learned that a hagiographical society had been formed in France under the patronage of several bishops and of M. Guizot, Minister of Public Instruction, and that it especially proposed to itself the resumption of the work of the Bollandists. The chief promoter of the enterprise, Abbé Théodore Perrin, of Laval, came to Belgium that same year, 1836, to solicit the support of the Government and the collaboration of Belgian savants. He did not meet with the reception he had hoped for. On the contrary, it aroused indignation in Belgium that a work which had come to be regarded as a national glory should pass into the hands of the French. The Abbé de Ram, *Rector Magnificus* of the University of Louvain and member of the Royal Commission of History, expressed this feeling in a letter addressed under date of 17 October to the Count de Theux, Minister of the Interior, urgently imploring him to lose no time in securing for their native land of Belgium the honour of completing the great hagiographical collection, and engaged him to entrust the work to the Fathers of the Society of Jesus, by whom it had been begun and carried so far in the preceding centuries. The Minister immediately took the field and conducted negotiations with such energy

oured in the Catholic Church on the various days of October, November, and December, beginning from 15 October, the day at which the work of their predecessors had been brought to a halt. This list was published in the month of March, 1838, with an introduction containing a summary of the history of the Bollandist movement, the announcement of the resumption of the work, and an earnest appeal to all friends of religious learning, imploring their assistance in securing what was felt by the new workers as the most necessary thing for their success, namely, a hagiographical library. This was published under the title of "*De prosecutione operis Bollandiani*" (in octavo, 60 pp.). The appeal was heard. Most of the European governments, many societies of learned men, and several great publishers sent copies of the historical works undertaken by them or under their patronage; private individuals made generous donations of books, often precious and rare volumes that had adorned their libraries. Everywhere, also, on their literary journeys, the Bollandists were accorded the most enthusiastic and flattering receptions.

The first volume published after the resurrection of Bollandism, Volume VII of October, appeared in 1845, containing over 2,000 pages in folio. There followed successively Volumes VIII to XIII of October, and I and II of November, besides the "*Propylæum Novembris*", an edition of the Greek Synaxa-

tion called "de Sirmond", with the variants of sixty manuscripts scattered through the various public libraries of Europe.

The author of this article does not consider himself qualified to give an estimate of the work of these later Bollandists, having himself been a member of the body for too long a time. It is able, however, to cite the appreciations of the most distinguished and capable scholars in this field, who testify that the volumes published by the later Bollandists are in no wise inferior to those of their predecessors of the seventeenth and eighteenth centuries. The reservations made by certain eminent critics in their commendation are generally due to the prolixity of the commentaries, which they think is often excessive, and to the timidity of certain conclusions, which do not seem to them to correspond with what the discussions had led them to expect. Another class of censors reproach the Bollandists for quite the reverse, accusing them of not showing sufficient respect towards what they call tradition, and of being too often hypercritical. The present members of the body are firmly resolved to be on their guard against these contrary excesses, something, indeed, which becomes easier for them as time passes, owing to the constant progress of good scientific methods. We may be permitted one word, in conclusion, as to what has been done during these latter years towards keeping the work up to the high level of contemporary historical erudition. It has been judged opportune, in the first place, to publish, besides the great volumes of the principal collection itself, which appear at undetermined intervals, a periodical review intended chiefly to make known to the learned public materials recently discovered by the Bollandists or their friends, which go towards completing either the Acts published in the volumes already printed or the entire mass of material to be employed in the future volumes of the work. This review was begun under the title of "Analecta Bollandiana" in the early part of 1882. At the rate of one volume in octavo a year, it has reached in the present year (1907) the twenty-sixth volume. In volumes subsequent to the sixth there have been inserted, besides unedited documents, various notes bearing on hagiographical matters. Since the publication of the tenth volume, each quarterly issue has contained a "Bulletin des publications hagiographiques" in which are announcements and summary appreciations of recent works and articles in reviews which concern matters of hagiography. Other auxiliary works have exacted long years of laborious preparation. They are the "Bibliotheca Hagiographica Græca" and the "Bibliotheca Hagiographica Latina", in which are enumerated under the name of each saint, following the alphabetical order of their names, all documents relating to his or her life and cult written in Greek or in Latin before the beginning of the sixteenth century, together with the indication of all collections and books where they can be found. The first of these collections, which appeared in 1895, numbers 143 pages. (There is now in preparation a new edition notably enlarged.) The second, issued 1898-99, has 1,387 pages. It is hoped that a "Bibliotheca Hagiographica Orientalis" will soon be printed. Moreover, there is a third class of auxiliary works to which the Bollandists of the present generation are directing their activity, and that is the careful preparation of catalogues containing a systematic detailed description of the Greek and Latin hagiographical manuscripts of various great libraries. A great many of these catalogues have been incorporated in the "Analecta". Such are the catalogues of the Greek manuscripts in the Roman libraries of the Barberini, the Chigi, and the Vatican; the National Library of Naples; the library of the University of Messina, and that of St. Mark's, in Venice; catalogues of the Latin manuscripts in the

Royal Library of Brussels (2 vols. in octavo), in the libraries of the cities, or of the universities, of Bruges, Ghent, Liège, and Namur, in Belgium; of the municipal libraries of Chartres, Le Mans, Douai, and Rouen, in France; those of The Hague in Holland, and, in Italy, of Milan (the Ambrosian), as well as the various libraries of Rome; also in the private library of His Majesty the Emperor of Austria, at Vienna, and that of Alphonsus Wins at Nivelles; and lastly, of

LIBRARY, COLLEGE OF SAINT-MICHEL, BRUSSELS

the Bollandist Library. Besides the "Analecta", there have appeared the catalogue of the old (before 1500) Latin manuscripts in the National Library of Paris (three octavo volumes, also the tables) and a list of the Greek manuscripts in the same library (compiled in collaboration with M. H. Omont). All these publications, although certainly delaying somewhat the appearance of succeeding volumes of the *Acta Sanctorum*, have gained for the Bollandists warm words of encouragement and commendation from the greatest scholars. In view of the impossibility of quoting at length these flattering testimonies, we shall confine ourselves to mentioning, as they come to mind, the articles of Mgr. Duchesne (*Bulletin critique*, 1 April, 1890); Léopold Delisle (*Bibliothèque de l'école des Chartres*, LI, 1890, 532); M. Solomon Reinach (*Revue Archéologique*, 1895, II, 228); Krieg (*Litterarische Rundschau*, 1 December, 1900); a passage in the *Belgian Archives* (1901), III, 31. There is a final detail which may not be without interest. The Bollandists had found themselves greatly hampered in the arrangement of their library at their residence in the Rue des Ursulines at Brussels which they had occupied since the resumption of the work in 1837. During the latter part of 1905 they were transferred to the new College of Saint-Michel on the Boulevard Militaire, where ample and convenient quarters for the library were assigned in the lofty buildings of the vast establishment. The 150,000 volumes contained in their literary museum are most suitably arranged here. A large space was also set apart for historical and philological reviews (about 600), nearly all of which are sent regularly by learned societies, either gratuitously or in exchange for the "Analecta Bollandiana". To class these according to the place of publication and the language chiefly employed in their preparation: 228

are French (a certain number of which are published in Belgium, Switzerland, and other countries than France); 135, German; 88, Italian; 55, English (of which ten are American); 13, Russian; 11, Dutch; 7, Flemish; 7, Spanish; 7, Croatian; 4, Swedish; 3, Portuguese; 2, Irish; 2, Hungarian; 1, Czech; 1, Polish; 1, Rumanian; 1, Dalmatian; and 1, Norwegian. Moreover, there are 9 printed in Greek, 6 in Latin, 4 in Armenian and 1 in Arabic. Finally, a large hall near the library has been set apart, and after October, 1907, it will be thrown open to foreign students who may wish to consult original sources of information likely to assist them in their researches.

The quotations of the *Acta Sanctorum* refer to three different editions. The first, the original one, commonly called the Antwerp edition, has been sufficiently described in the above article. The volumes of the Antwerp collection were first reprinted at Venice from 1764 to 1770. They reached then to volume VI of September. The main difference between this reimpression and the Antwerp edition lies in the fact that the supplementary additions to sundry commentaries printed by the Bollandists at the end of the single volumes, or of a set of volumes are transposed in the Venetian edition and joined to the commentary to which they refer; hence the contents of each volume are not in close correspondence in the volumes similarly marked in both editions. Moreover, many of the *parerga* or preliminary treatises scattered through the Antwerp collection have been brought together in three separate volumes. But the whole printing teems with typographical blunders. Lastly another reprinting of the Antwerp publication was undertaken by the Parisian editor, Victor Palmé, from 1863 to 1869, and carried on to the tenth volume of October. This edition reproduces exactly, volume by volume, the original one, except for the months of January and June. The two big volumes of January have been divided into three, and in the volumes of June also some changes have been made in the disposition of matter, in order to render the use of them easier to readers. Besides, to each of the volumes of the first four months were added a few unpublished short notes (filling from one to six pages) of Daniel Papebroch, found in his papers and relating to the commentaries printed in the volume.

BOLLAND, *Præfatio generalis in Acta Sanctorum* (at the beginning of vol. I for January); PAPEBROCH, *De vita, virtutibus et operibus Joannis Bollandi* (at the beginning of vol. I for March); PAPEBROCH, *De vita . . . Godefridi Henschenii* (at the beginning of vol. VII for May); J. PIEN, *De Vita Danielis Papebrochii* (at the beginning of vol. VI for June); J. VAN HECKE, *De ratione universi operis [Bollandiani]* (beginning of vol. VII for October).

**Bollandus** (BOLLAND). See BOLLANDISTS.

**Bollig**, JOHANN, distinguished Orientalist, b. near Düren in Rhenish Prussia, 23 August, 1821; d. at Rome in 1895. He studied theology and Semitic languages at Rome, where he entered the Society of Jesus in 1853. In 1862-63 he sojourned in Syria as professor of theology for the native seminaries, at the same time pursuing his researches in Oriental literature. After his return to Rome, he was appointed professor of Arabic and Sanskrit at the Roman College (afterwards the Gregorian University) and at the Sapienza. He was a member of the commission appointed by Pius IX to arrange the details of the Vatican Council and acted as pontifical theologian during the Council. For many years he was Consultor of the Congregation of the Propaganda for Oriental affairs. In 1880 he was appointed Prefect of the Vatican Library, which office he held till his death. Among his published works are: "*Brevia Chrestomathia arabica*" (Rome, 1882); "*Sti. Gregorii lib. carm. iambic.*", an ancient

Syriac translation (Beirut, 1895). He left many unpublished writings on Oriental philology.

B. GULDNER.

**Bologna**, ARCHDIOCESE OF.—*History*.—Bologna is the principal city in the province of the same name, Italy, and contains about 150,000 inhabitants. It was founded by the Etruscans, who called it Felsina. Later it fell into the hands of the Boii, a Gallic tribe, and from that time took the name of Bononia, whence the present form. The regions round about having been laid waste by the continual wars, in 189 B. C. the Romans established a colony there, which was enlarged and beautified by Augustus. After Byzantium had broken the power of the Goths in Italy, Bologna belonged to the Exarchate of Ravenna (536). By the donation of Pepin Bologna was made part of the patrimony of the Holy See, but during the disturbances of the ninth century was wrested from the popes. At the beginning of the ninth century it was laid waste during the incursions of the Hungarians. Otto I did much to restore the city to its former condition, giving it the privilege of enacting its own laws, and making it directly dependent on the imperial authority. Bologna was then governed by consuls. During the struggles between the empire and the popes, the city took the part of the latter and was enabled to assert its independence, which was definitely recognized by Henry V in 1122. Bologna was among the first to join the Lombard League. From 1153 it was ruled by podestats, who were for the most part foreigners. From the accession of Frederick II, Bologna was rent into the two factions of Guelphs and Ghibellines, the former being in the majority. On 26 May, 1249, the inhabitants of Bologna in the battle of Fossalta conquered the troops of Frederick II under the leadership of King Enzo of Sardinia; Enzo himself was taken prisoner, and neither the threats nor the promises of Frederick availed to secure his liberty. He remained in captivity until his death, eleven years later, although for the rest he was always treated with the greatest consideration.

In 1276, in order more thoroughly to safeguard their communal liberty, the inhabitants of Bologna placed themselves under the protection of the Holy See, and Pope Nicholas III sent them as legate his nephew, Bertoldo Orsini, whom he also commissioned to reconcile the opposing factions. In the fourteenth century the preponderance of power was in the hands of the Pepoli family, but later passed to the Visconti of Milan, who alternated with the Bentivoglio family in holding the reins of power. At intervals the popes attempted to make their authority recognized, or else the city spontaneously recognized their sovereignty (1327-34; 1340-47; 1360-76, through the efforts of Cardinal Albornoz; 1377-1401; 1403-11, during the pontificate of John XXIII; 1412-16; 1420-28, under Cardinal Condulmer). In the beginning of the fifteenth century there were frequent popular uprisings against the nobility. From 1443 to 1506 three of the Bentivoglio family succeeded each other as masters of Bologna. In 1506 Julius II incorporated Romagna into the Papal States, Bologna included; the city, however, retained a great degree of communal autonomy. The papal authority was vested in a legate, who in the beginning was generally a cardinal, later, however, only a titular bishop. In 1796 Bologna was occupied by the French and made a part of the Cisalpine Republic, and afterwards of the Italian Kingdom. In 1814 it was seized by the Austrians, who in 1815 restored it to the pope. From the time of its restoration, Bologna was the scene of a series of deep-seated agitations and revolts against the papal rule. These uprisings

were repressed by Austrian troops. Finally, in 1859 Romagna, together with the Marches and Umbria, was annexed to the Kingdom of Italy.

*Christianity in Bologna.*—The only sources for the history of the beginnings of Christianity in Bologna are legendary accounts, according to which St. Apollinaris, disciple of St. Peter and first Bishop of Ravenna, was the first to preach the Gospel in Bologna. The first bishop is said to have been St. Zama, who is supposed to have been ordained by Pope St. Dionysius (270). However, it may be maintained with certainty that Christianity, and likewise the episcopate, in Bologna dates back to a more remote period. During the persecution of Diocletian, Bologna was the scene of the martyrdoms of Sts. Vitalis and Agricola, whose bodies were interred in a Jewish cemetery and only discovered in the time of St. Ambrose, in 392, as related by him in a letter (Ep. lv), the authenticity of which, however, is questioned. The fact is referred to, perhaps, by Paulinus in his life of the saint, when he speaks of Ambrose taking to Florence some relics of these martyrs. It was possibly in the same persecution that the martyrdom of St. Proculus occurred. The episcopal See of Bologna was first subject to the Metropolitan of Milan, and later, probably after Milan had fallen into the hands of the Lombards, it recognized the authority of the Metropolitan of Ravenna. In 1106 it was placed immediately under the Holy See. Finally, in 1582 Gregory XIII raised the Bishop of Bologna to the dignity of a metropolitan, assigning him as suffragans the Sees of Imola, Cervia, Modena, Reggio, Parma, Piacenza, and Crema; to-day, however, only Imola and Faenza are suffragan to Bologna.

Among the Bishops of Bologna worthy of note are Sts. Faustianus, Basil, and Eusebius, in the fourth century. About 400 there is record of St. Felix, succeeded about 430 by St. Petronius, who is extolled for having restored the church of Bologna, and who later became patron of the city. His relics are preserved in the church of San Stefano. A number of the Bishops of Bologna were later raised to the papal chair, as, for instance, John X; Cosimo Migliorati, who assumed the name of Innocent VII; Tomaso Parentucelli, later Nicholas V; Giuliano della Rovere, who became Julius II; Alessandro Ludovisi, or Gregory XV; and Prospero Lambertini, or Benedict XIV. The last two mentioned were born in Bologna. Other celebrated bishops were: Cardinal Filippo Caraffa (1378-89); Cardinal Antonio Correr (1407-12); Blessed Nicolò, Cardinal Albergati (1417-34); Cardinal Lorenzo Campeggio, known for the many embassies on which he was sent to Germany and England, in connexion with the Reformation and the marriage of Henry VIII (1523-25). After Bologna became an archiepiscopal see, almost all the metropolitans were cardinals, among whom may be mentioned: Gabriele Paleotti (1591-97), who left the cathedral as it exists to-day, built the episcopal palace, and endeavoured to put the Tridentine reforms into execution in Bologna; Vincenzo Malvezzi (1754-75), to whom the cathedral and the seminary owed much; Carlo Opizzoni (1802-55); Michele Viale Prelà (1855-60); Lucido Maria Parocchi (1877-82). Bologna was also the birthplace of the following popes, in addition to the two already mentioned: Honorius II (Lamberto Scannabecchi), Lucius II (Gherardo Caccianemici dell' Orso), Alexander V (Pietro Filargo), Gregory XIII (Ugo Buoncompagni), and Innocent IX (Giannantonio Facchinetti).

*Churches.*—Chief among the sacred edifices of Bologna is the cathedral, dedicated to St. Peter and erected by the commune in 910 to replace the ancient cathedral which stood outside the city walls. Destroyed by fire in 1130, it was but rebuilt in 1165;

in its present form it dates from 1605, according to plans drawn up by Magenta, a Barnabite. The façade, however, was designed by Alf. Torreggiani, who also added the first two chapels to the church. The majority of the paintings are by famous masters, as, for instance, Ventura da Bologna, Ercole Graziani, Francesco Tadolini, Onofrio Zanotti, del Bagnacavallo (Bartolommeo Ramenghi), Ludovico Caracci, and others. There is also a lower church with five altars. Worthy of note is a crucifix of cedar wood dating from the time of the old cathedral. The church of San Petronio, dedicated to the patron of the city, was built by order of the Secento, at public expense, in 1390. A competition was announced for the plans, and among all the designs the preference was given those of Antonio Vincenzi,

BASILICA OF ST. PETRONIUS

while the supervision of the work of erection was entrusted to Andrea Manfredi da Faenza. However, the original drawings, providing for an octagonal dome 500 feet high, were not adhered to. The façade still remains incomplete, only the lower part being covered with sculptures in marble. The ornamentation of the larger door is the work of Pietro della Fonte; many of the figures compare favourably with the works of an age in which the art was more highly developed. In the architrave is the Madonna and Child. The two naves are adorned with statues of Sts. Petronius and Ambrose. The carving of the doors was done by Sigismondo Bargello, aided by Andrea Magnani and Gabriele di Zaccaria. The two side doors are also adorned with magnificent carvings, the work of other artists. It is a three-naved church, the twenty-three chapels being adorned with the masterpieces of distinguished artists of different ages. Worthy of note is the statue of St. Anthony of Padua by Sansovino. A sun-dial is to be found there, likewise two clocks, among the first to be made in Italy with pendulums. In Bologna is also the church of Corpus Domini, founded by St. Catherine de' Vigri, commonly known as St. Catherine of Bologna, and adjoining it the monastery of the Poor Clares. In one of the chapels is preserved the mummified body of the saint, together with many objects used by her during life. There is also a beautiful church of St. Dominic, close by the Dominican convent in which the death of St. Dominic occurred. The tomb of the saint is in itself a veritable museum of works of art by the great masters. The casket was carved by Nicolò Pisano, and one of the angels was done by Michelangelo in his youth. The choir is beautifully inlaid with tinted wood, the work of Fra Damiano da Bergamo, a Dominican lay brother. The church is cruciform, and in one chapel of the cross is the tomb of King Esselino; in another that of Guido Reni.

Among the many other churches, all rich in monuments, mention will be made only of San Stefano, made up of a group of chapels once used by ancient monks from Egypt, who dwelt there before the time of St. Benedict. The site later passed into the hands of the Benedictines who erected there a monastery, which in 1447 was reduced to the rank of an abbey to be held in *commendam*. In 1493 the Celestines took possession, and remained there until 1797. A tablet found there proves that this was once the site of a temple of Isis. Among the different chapels should be mentioned Calvary, or of the Holy Sepulchre; it is octagonal in form, and contains a replica in marble of the Holy Sepulchre in Jerusalem; here was probably situated the baptistery of the ancient cathedral, which was not far distant. The chapels of San Giacomo Maggiore, built in 1267; San Giovanni in Monte, said to have been erected by St. Petronius and renovated in 1221 and 1824; San Isaia the most ancient; Santa Maria di Galliera; Santa Maria dei Servi; San Martino; San Paolo; and San Francesco, still incomplete—all rich in monuments of artistic and historic interest. Outside Bologna is situated the celebrated Certosa, built in 1334 and in 1802 converted into a community burying-ground. The church attached to the convent is dedicated to St. Jerome. On the Monte della Guardia is the shrine of the Madonna di San Luca, which is connected with the Saragozza Gate by a portico with 635 arches 11,483 feet (2.17 miles), in length, constructed between 1661 and 1739. The shrine takes its name from a painting of the Madonna attributed to St. Luke, which was brought here in 1160 by Euthymius, a monk of Constantinople. The present church dates from 1731.

With respect to profane architecture, the first thing to be remarked are the porticoes in which nearly all the roads terminate. Noteworthy also are the towers, particularly that of the Asinelli, 320 feet in height, erected between 1105 and 1109, and, nearby, that of the Garisendi, built in 1110, the inclination of which, it seems, was due to a subsidence of the earth, in the fourteenth century, which carried away the uppermost part of the tower; it is 154 feet in height, and has an inclination of 7.77 feet. First among the palaces is that of the Podestà, a structure dating back to 1801, where the conclave for the nomination of John XXIII was held in 1410; next in importance are the communal palace, the civic museum, and the Archiginnasio, or ancient university.

The Archdiocese of Bologna contains 389 parishes, 1172 churches, chapels, and oratories, 837 secular priests, 119 regular, 311 seminarians, 48 lay brothers, 521 sisters, 10 schools for boys, 21 for girls, and a population of 565,489.

CAPPELLUZZI, *Le chiese d'Italia* (Venice, 1844), III; SIGONII CAROLI, *De episcopis Bononiensibus libri V* (Bologna, 1586), continued by RUBBI up to 1731; SAVIOLI, *Annali Bolognesi* (Bassano, 1784); TROMBA, *Serie cronologica dei vescovi*, etc. (Bologna, 1787).

U. BENIGNI.

**Bologna, GIOVANNI DA**, Flemish Renaissance sculptor, b. at Douai, in Flanders, about 1524; d. at Florence in 1608. Vasari gives little information about this eminent sculptor. He calls him "a youth of great talent and of spirit" and says he was one of the competitors with Cellini for the colossal figure of Neptune in his chariot drawn by sea horses. The duke, who was to decide the competition, although assured that Giovanni's model was superior to the others, did not confide the undertaking to him. We can judge of what he would have made of that commission from the bronze Neptune prepared for the fountain at Bologna.

Giovanni was called Il Fiammingo from the place of his birth. He studied in Rome and settled in Florence, having been adopted by the wealthy

Bernardo Vecchietti, who treated him as his son. He was thoroughly Florentine in sentiment, and in Florence are preserved his two masterpieces, "Mercury" and the "Rape of the Sabines". In the former, in the Bargello, he has come nearer to expressing swift, flashing motion and airy lightness than has any other artist of that or a later period. The figure of the youth with winged feet, holding the caduceus, and borne aloft upon a head of Æolus, is masterly in its expression of earnest purpose and light, easy movement. Hardly less important is the "Rape of the Sabines" in marble, under the Loggia dei Lanzi, in which Count Ginori posed for the figure of the triumphant youth who carries away a struggling woman in his embrace. Other works are the group of "Hercules and Nessus"; the equestrian bronze figure of "Duke Cosimo I" in the Piazza Signoria and the bas-relief of the doorway of the Cathedral of Pisa. Besides these, he executed more than one crucifix, a figure of "Diana", another of "Venus", and four syrens similar to the larger ones on the Bologna fountain. Vasari mentions a bronze figure of "Bacchus", and a "Samson" in combat with two Philistines, both larger than life size. Giovanni's work is marked by freedom and grace, while free from the fault of exaggeration which so injures much of the sculpture of the very late Renaissance.

DESJARDINS, *La vie de Jean Boulogne* (1883).

GEORGE CHARLES WILLIAMSON.

**Bologna, THE UNIVERSITY OF.**—A tradition of the thirteenth century attributed the foundation of this university to Theodosius II (433); but this legend is now generally rejected. The authentic "Habita", issued by Frederick Barbarossa in 1158, was at best only an implicit recognition of the existence of the school at Bologna, and the bull of Clement III (1189), though it speaks of "masters and scholars", has no reference to a university organization. The university, in fact, developed out

THE UNIVERSITY OF BOLOGNA

of the "Schools of the Liberal Arts" which flourished at Bologna early in the eleventh century. An important feature of the general education given in these schools was the *Didamen*, or Art of Composition which included rules for drawing up briefs and other legal documents. The study of grammar and rhetoric was closely connected with the study of law. At the same time, the political, commercial and intellectual growth of the Lombard cities created a demand for legal instruction. Ravenna, long the home of jurisprudence, lost its prestige through its conflict with the papacy, and Bologna was its successor. Towards the close of the eleventh century Pepo is

mentioned in connexion with the revived study of the "Digest"; but it was Irnerius who began the study of the entire "Corpus Juris Civilis" and organized the school of law as distinct from the arts school (1100-30). Along with this revival of the Civil Law came the epoch-making compilation of the Camaldolese (or Benedictine) monk, Gratian. The "Decretum Gratiani" (q. v.), published about 1140, became at once the recognized textbook of canon law. Bologna was thus, in its origin, a "jurist" university. The work of Irnerius and Gratian was continued by such men as Odopedus (d. 1300), Joannes Andrea (1270-1348), St. Raymond of Pennafort (1175-1275), and Ricardus Anglicus, who later became Bishop of Chichester (about middle of thirteenth century).

The fame of its professors drew to Bologna students from all parts of Italy and from nearly every country of Europe. It is said that their number at the beginning of the thirteenth century was 10,000. Bologna was known as the "Mater studiorum", and its motto, "Bononia docet", was literally true. The foreign (non-Bolognese) students formed two "universities"; that of the Cismontanes and that of the Ultramontanes. The former comprised seventeen "Nations", the latter, eighteen, including the English. The nations were organized on a plan similar to that of the guilds. Each framed its own statutes, elected its own "Consiliarii," and held its own meetings. The rector was elected by the students. The masters, also, were grouped in guilds or colleges. In the examination of candidates for degrees, the authority of the masters was supreme; in other matters the students had full control. In the conflicts that often arose between them and the city, the students enforced their claims by emigrating to other towns—Vicenza (1204), Arezzo (1215), Padua (1222), Sienna (1321). Appeal was sometimes taken to the pope, who as a rule decided in favour of the university. Notable among these papal interventions was the Bull of Honorius III (1217).

Bologna in its earliest organization was a "student" university: professors were hired by the students to give instruction. The lectures were either "ordinary" or "extraordinary", a distinction which corresponded with that between the more essential and the less essential of the law-texts (Rashdall). Ordinary lectures were reserved for the doctors; the extraordinary might be given by a student as part of his preparation for the baccalaureate. (See ARTS, BACHELOR OF.) This classification of teachers survives in the modern German university. At Bologna, no examination was required for the Bachelor's degree; permission to lecture was granted the student after a five years' course in law. For the Licentiate, the candidate was obliged to pass a private, and for the Doctorate a public, examination (*Conventus, Inceptio*). The examinations and the conferring of degrees belonged originally to the masters; but in 1219 Honorius III prescribed that no one should receive the Doctorate without the consent of the Archdeacon of Bologna. In 1292 Nicholas IV decreed that all who were licensed doctors by the Archdeacon of Bologna should have the right, without further examination or approbation, to teach everywhere. These enactments not only enhanced the value of the degree, but also affected the organization of the university. Functions hitherto exercised by private corporations passed into the hands of an official commissioned by public authority, and that authority was ecclesiastical. The degree system of Bologna was henceforth the same as that which had already been established at Paris; and these two schools became the models upon which the later universities were organized.

The development of the law schools at Bologna had as one result the reduction of the Liberal Arts

to a position of secondary importance. On the other hand, two factors in the situation favoured the Arts and made possible a new growth in the university, namely, the restoration of the Aristotelean philosophy and the introduction of mathematics from the Arabian schools. The physics and physiology of Aristotle formed the basis of the study of medicine, while mathematics opened the way to astrology, and eventually to astronomy. Among the physicians of note in Bologna were a number of ecclesiastics, one of whom, Nicolaus de Farnham, became (1241) Bishop of Durham. Churchmen were forbidden to study medicine by Honorius III (1219). But there was no regularly organized school of medicine until Thaddeus of Florence began his teaching, about 1260. From that time onward the medical faculty grew in importance. Surgery received special attention; dissection was practised, and the foundations of modern anatomy were laid by Mundinus (1275-1326). Closely allied with the work in medicine was the study of astrology. A famous astrologist, Cecco d'Ascoli (d. 1327), declared that a physician without astrology would be like an eye without the power of vision. The scientific study of astronomy was founded by the investigations of Novara and his disciple Copernicus (1473-1543). Both medical and mathematical studies were influenced by Arabian scholarship, in particular by that of Avicenna and Averroes. As these were also philosophers, their theories came to be part of the Scholasticism of Bologna, and their authority was scarcely inferior to that of Aristotle.

Theology had long been taught in the monastic schools; but the faculty of theology in the university was established by Innocent VI in 1360. Its chancellor was the Bishop of Bologna, and its doctors depended upon him rather than upon the student-body. The faculty received many privileges from Urban V, Boniface IX, and their successors. The popes, in fact, favoured the university in every possible way. Gregory IX and Boniface VIII sent it the Decretals (q. v.); Benedict XIV, various bulls and encyclicals. Among its benefactors were Martin V, Eugene IV, Nicholas V, Paul II, Innocent VIII, Paul III, Pius IV, Clement VIII, Urban VIII, Innocent X, and Clement XII. Gregory XI founded (1372), in connexion with the university, the *Collegium Gregorianum* for poor students of medicine and philosophy. Other colleges with similar scope were established by laymen and ecclesiastics (see list in Moroni). One of the most important was the College of Spain (*Casa Spagnuola*, or *Collegio Maggiore*), which owed its existence and endowment to Cardinal Albornoz (1364). The papal legates at Bologna took an active part in the direction of the university and eventually became the supreme authority. In the course of time, also, the student-body lost its control, and the various schools were consolidated in one university organization.

In the development of modern literature and science Bologna took an important part. The famous Cardinal Bessarion, a leader in the Renaissance movement, was legate from 1451 to 1455. Under his influence classical studies flourished in the university, and Humanists like Filelfo (1398-1481) and Guarino were among its professors. To these should be added, in more recent times, the great Mezzofanti (1774-1849). In the natural sciences, especially, Bologna points to a long list of distinguished men: the anatomists Achillini (1463-1512), Vesalius (1514-64), Varoli (1542-75), and Malpighi (1628-94), the botanist Aldrovandi (1522-1607), and the physicist Galvani (1737-98) are among the most illustrious. The number of women who taught at Bologna is also remarkable, including Novella, daughter of Joannes Andrea the jurist, Laura Bassi (1711-78), and Maria Agnesi (1718-99), mathema-

ticians, and Clotilda Tambroni (1758-1817), professor of Greek.

During the Napoleonic wars, the university suffered considerably: chairs were suppressed, and the existence of the entire university was often endangered. The popes, in particular Leo XII, came to its assistance, reorganized the faculties, and provided generously for the continuation of scientific work. Their control, however, ceased when the Papal States were merged in the present Kingdom of Italy.

The university now comprises the faculties of philosophy and letters, mathematics and science, law, and medicine, with schools of pharmacy, agriculture, and engineering. The professors and instructors number 190; the students, 1800. The library, founded in 1605 by Aldrovandi, contains 250,000 volumes. One of the most important institutes connected with the university is the Academy of Science, established in 1690 by the generous Count Marsigli, and reorganized by Pius VIII in 1829.

E. A. PACE.

**Bolsec, JÉRÔME-HERMÈS**, a theologian and physician, b. probably at Paris, date unknown; d. at Lyons c. 1584. He became a Carmelite monk at Paris. A sermon which he preached there aroused misgivings in ecclesiastical circles regarding the soundness of his ideas, and Bolsec left Paris. Having separated from the Catholic Church about 1545 he took refuge at the Court of Renée, Duchess of Ferrara, who was favourably disposed towards persons holding Protestant views. Here he married, and began the study of medicine, about 1550 settling as a physician at Veigy, near Geneva. A theological controversy with Calvin, whose doctrine of predestination he deemed an absurdity, soon ensued. In 1551, at one of the religious conferences or public discussions, then held at Geneva every Friday, he interrupted the orator of the day, Jean de Saint André, who was speaking on predestination, and argued against him. As the triumph of his ideas would have meant the ruin of Calvin's influence in the Swiss city, Bolsec was arrested, and through the influence of the reformer banished forever from Geneva (1551). In 1555 he was also driven from Thonon, in the Bernese territory, whither he had retired. He went to Paris and sought admission into the ministry of the Reformed Church. But his opinions were not found sufficiently orthodox, from a Reformed point of view, for one wishing to hold such a position. He was asked for a declaration of faith, but refused. He went to Lausanne (c. 1563), but as the signing of the Confession of Bern was made a condition of his residence here, he preferred to return to France. Shortly after this, he recanted his errors, was reconciled with the Catholic Church, and published biographies of the two Genevan reformers, Calvin and Beza (1519-1605). These works are violent in tone, and find little favour with Protestant writers. Their historical statements cannot always be relied on. They are "Histoire de la vie, des mœurs . . . de Jean Calvin" (Lyons and Paris, 1577; published in Latin at Cologne in 1580; German tr. 1581); "Histoire de la vie et des mœurs de Th. de Bèze" (Paris, 1582). The life of Calvin was edited by L. F. Chastel in 1875 with extracts from the life of Beza.

**Bolsena.** See ORVIETO.

**Bolsena, MIRACLE OF.** See ORVIETO.

**Bolton, EDMUND**, historian, antiquary, and poet, born c. 1575; died c. 1633. The genuine loyalty to the Catholic Faith which seems to have marked the career of this eccentric and unfortunate genius is indicated by the second name which appears in a signature of his preserved in Harleian MS. 6521 at the British Museum—"Edmundus Maria Boltonus".

The same MS. furnishes us with a clue to sundry details of his life. He seems to have been born of Catholic parents in Leicestershire, and must have been of good family and position, for he claims to have continued "many years on his own charge a free commoner at Trinity Hall, Cambridge", and after going to London to study law to have lived there "in the best and choicest company of gentlemen". There can be no doubt that there was a strong Catholic element among the lawyers of the Inner Temple (Richard Southwell, the father of the martyr, might be named as one example among many), and the tone of the drama and much of the lighter literature of the late Elizabethan and early Jacobean period shows that the Bohemian society into which Bolton and his fellows were thrown was often pronouncedly papist. But while many who for a while were Romanizers, like his friend Ben Jonson, ultimately fell away, Bolton, much to his credit, remained staunch to his principles. Of his ability and zeal in the pursuit of knowledge there can be no question. He was the friend of Cotton and Camden, whose antiquarian researches he shared, and as a writer of verses he was associated with Sidney, Spenser, Raleigh, and others in the publication of "England's Helicon". Many influential friends, including for example the Duke, then Marquess, of Buckingham, tried to help him in his pecuniary embarrassments, but there seems no doubt that his Catholicism stood in the way of his making a living by literature. For instance, a life of King Henry II which he had prepared for an edition of Speed's "Chronicle", then in course of publication, was rejected on account of the too favourable aspect in which he had depicted St. Thomas of Canterbury. It seems, however, that through Buckingham's influence he obtained some small post about the court of James I, and in 1617 he proposed to the king some scheme for a royal academy or college of letters which was to be associated with the Order of the Garter, and which was destined in the mind of its designer to convert Windsor Castle into a sort of English Olympus. James I gave some encouragement to the scheme, but died before it was carried into execution. With the accession of Charles I, Bolton seems to have fallen on evil days. The last years of his life were mostly spent either in the Fleet or in the Marshalsea as a prisoner for debt, to which no doubt the fines he incurred as a "recusant convict" largely contributed. The exact date of his death is unknown. Besides his contributions in English verse to "England's Helicon" Bolton wrote a certain amount of Latin poetry. He is best remembered, however, as the author of "The Elements of Armories", a curious heraldic dialogue published anonymously in 1610, and of "Nero Cæsar, or Monarchie depraved", a book of Roman history dealing in part with the earliest notices of Britain. A translation of the "Histories" of Florus which he also published is signed "Philanactophil" (i. e. friend of the king's friend). Bolton's "Hypercritica", a useful work of literary criticism, was published long after his death.

HERBERT THURSTON.

**Bolzano, BERNHARD**, Austrian mathematician

and philosopher, b. at Prague, 5 October, 1781; d. 18 December, 1848. As a student he devoted himself chiefly to mathematics with marked success. Against the wish of his father, he entered the ecclesiastical state and was ordained in 1805. In the same year he was appointed professor of the philosophy of religion in the University of Prague. His lectures and discourses were strongly tinged with rationalism, and it was not long before he was denounced to the ecclesiastical authorities. Through the personal intervention of the Prince-Archbishop Salm-Salm of Prague, he retained his professorship until 1820, when the long-threatened dismissal was suddenly put into effect in consequence of disorders that occurred in the seminary of Leitmeritz then under the direction of Dr. Fessler, who, as a disciple and friend of Bolzano, was strongly imbued with the latter's rationalizing spirit. Bolzano spent the remainder of his life in studious retirement, first on the estate of his friend Johann Hoffmann, at Techobuz, near Prague, and later in the house of his brother at Prague. A small pension, and the generosity of Count Leo Thun, relieved him of all monetary care.

Bolzano was always a loyal son of the Catholic Church. There is, however, a strong rationalizing tendency in his writings on doctrinal subjects, and his refusal to retract several propositions taken from his printed works justified his dismissal from the University of Prague. Bolzano's contributions to the science of mathematics are of the highest order. In 1804 he published a theory of parallel lines which anticipated Legendre's well-known theory. He shares with Cauchy the honour of having developed the theory of functions of one real variable. He made notable additions to the theory of differentiation, to the concept of infinity, and to the binomial theorem. As a philosopher, Bolzano had no sympathy for speculation as such. His mathematical bent made him a partisan of strict, methodic inquiry. His contributions to philosophy comprise a textbook on the "Science of Religion" (4 vols., Sulzbach, 1834), and one on the "Science of Knowledge" (4 vols., Sulzbach, 1837). Bolzano's complete writings fill twenty-five volumes. The full list is found in the "Sitzungsberichte" of the Vienna Academy (1849).

FESSLER, *Bolzano's Autobiographie* (Vienna, 1875); WISSEHAUPT, *Skizzen aus dem Leben Bolzano's* (Leipzig, 1849); ERDMANN, *History of Philosophy*, tr. (London, 1890), II, 463-471.

MATTHIAS LEIMKUHLER.

**Bombay (BOMBAYENSIS), ARCHDIOCESE OF**, comprises the Island of Bombay with several outlying churches in the neighbouring Island of Salsette, and a large portion of the Bombay Presidency stretching northwards from the river Nerbudda as far as Quetta, including the districts of Gujerat (Broach, Baroda, Ahmedabad), Kathiawar, Cutch, Sind and a portion of Beluchistan. Most of the archdiocese is thus separated from its centre in Bombay Island by a distance of about 200 miles, the intervening country being assigned to the Diocese of Damaun. The Catholic population under the archbishop is reckoned at about 18,000, of which about 8,000 are in Bombay Island; 3,500 in Salsette; 2,000 in Gujerat, Kathiawar, and Cutch, and 4,500 in Sind and Beluchistan. The archdiocese is served by 50 fathers, 19 scholastics, and 16 lay brothers of the German province of the Society of Jesus, and 19 native secular priests, attending 24 churches and 25 chapels, besides Sisters of the Orders of Jesus and Mary and the Daughters of the Cross engaged in education and charitable work.

**HISTORY.**—In 1534 the Portuguese began to settle in Bombay. They were accompanied by the Franciscans, who gradually covered the island with churches, monasteries, and communities of

converts. When in 1665 the island was ceded to the English, the work was continued by the same order and by secular clergy from Goa. In 1720, on political grounds, the Goanese clergy were expelled by the Government, and the Vicar of the Great Mogul (formerly the Vicar of the Deccan) was invited to take charge of the Catholics. Although

CHURCH OF THE HOLY NAME, BOMBAY

this was done with the approval of Rome, the Goanese clergy from time to time tried with the Government to recover their position, and in 1764 established a "double jurisdiction". At first the vicariate extended indefinitely over the north of India; but in 1784 the northern portion was separated and given over to the Mission of Tibet. The vicariate then gradually began to be called the Vicariate of Bombay. It was under the care of the Carmelite fathers from 1720 to 1854. When they resigned their charge the vicariate was divided, the northern, or Bombay portion, being taken over by the Capuchins, while the southern, or Poona portion, was given to the German Jesuits. A few years later the Capuchins also resigned, and hence in 1858 the whole of the Bombay-Poona Mission came into the hands of the German Jesuits. Meantime a distressing conflict over the rights of jurisdiction (often referred to in literature as the Goan or Indo-Portuguese schism) was raging between the Goanese clergy of the Portuguese "padroado" and the vicars Apostolic under Propaganda, which, in spite of certain ineffectual negotiations, continued till 1886. In that year a concordat with Portugal was entered into by the Holy See, which brought the quarrel to a close, and at the same time the whole of India was placed under a fully constituted hierarchy. The Archbishop of Bombay received territorial jurisdiction over Bombay Island and over the northern districts already described, with Poona as a suffragan diocese. Mangalore and Trichinopoly were added as suffragan sees in 1893, in which year the First Provincial Council was held (*Acta et Decreta*, Bombay, 1898). The Island of Salsette and the coast country as far as the Nerbudda were placed under the jurisdiction of the Bishop of Damaun who also received personal jurisdiction in Bombay Island over all who came from Goa, or from any other district under the Portuguese ecclesiastical regime. This arrangement is popularly known as the "double jurisdiction".

**SUCCESSION OF PRELATES.**—*Vicars Apostolic of the Carmelite order:* Maurice of St. Teresa, 1718-26; Peter D'Alcantara of the Most Holy Trinity, 1728-45; Innocent of the Presentation, 1746-53; John Dominic of St. Clara, 1755-72; Charles of St. Conrad, 1775-85; Victor of St. Mary, 1787-93; Peter D'Alcantara of St. Antony, 1794-1840; Aloysius Mary Fortini, 1840-48; John F. Whelan, 1848-

60. *Capuchin*, Anastasius Hartmann, 1850-58. *Jesuits*: Alexis Canoz (administrator), 1858-61; Walter Steins, 1861-1867; Leo Meurin (a writer and lecturer of considerable merit), 1867-87; George Porter (first archbishop), 1886-89; Theodore Dalhoff, 1891-1906; Hermann Jurgens, appointed 28 May, consecrated, 14 July, 1907.

INSTITUTIONS.—In *Bombay Island*.—The High School of St. Xavier with 1,400 pupils; the College of St. Xavier with about 350 students preparing for Bombay University degrees. The majority of these pupils are non-Christians, whose admission, however, brings prestige, personal respect and esteem to the Catholic body, and enables the College to work on a financial basis, making it possible to provide a good education for Catholics. Further, St. Mary's High School with 190 boarders and 310 day-scholars, mostly Europeans or Eurasians. The teaching staff of

ST. XAVIER'S HIGH SCHOOL

these three institutions consists of Jesuit fathers and scholastics, assisted by lay masters. For girls, High Schools at Clare Road, Parel, and the Fort, and a native school at Cavel, under the Nuns of Jesus and Mary. Other charitable institutions: St. Joseph's Foundling Home and St. Vincent's Home for poor women and girls, under the Daughters of the Cross; St. Elizabeth's Widows' Home, under the Nuns of Jesus and Mary; the Allbless Leper Home, Trombay, and the Deaf and Dumb Institute under a European secular priest. In *Salsette*: St. Stanislaus's Institution, Bandra, under the Jesuit fathers, with 240 native boarders and 450 day-scholars; St. Joseph's Convent, Bandra, under the Daughters of the Cross, for native girls, with 330 boarders and 220 day-scholars. In the *Northern Districts*: St. Patrick's High School, at Karachi, with 306 pupils; St. Joseph's Convent School, Karachi, with 70 boarders and 300 day-scholars; St. Paul's Orphanage belonging to the pagan mission at Anand in Gujerat with 100 orphans; St. Joseph's Convent, Ahmedabad, with 100 pupils; besides smaller establishments of all kinds scattered over the archdiocese. There is no diocesan seminary, the native secular clergy being trained at the Papal Seminary at Kandy in Ceylon. The finest buildings in the archdiocese are the Church of the Holy Name with the archbishop's residence and Convent School, Bombay; the Bombay Cathedral, a large structure in the Portuguese style; St. Patrick's Church, Karachi; the collegiate buildings of St. Xavier's and St. Mary's, Bombay, to which latter St. Anne's Church is attached. Local publications include "The Examiner" (formerly called the "Bombay Catholic Examiner") edited by a Jesuit father; established in 1849 it is

II.—1

published weekly at the Examiner Press which is the property of the archbishop; "The Bombay East Indian", the weekly organ of the Native Christians of Bombay; a local "Supplement" to the English "Messenger"; a "Messenger of the Sacred Heart" in Marathi, besides a number of vernacular books in Marathi, Gujerati, etc., published according to need.

*The Catholic Directory* (Madras, 1907); *Catalogues of the Bombay Mission; Diocesan Archives and Records* (unpublished); *The Examiner and The Pastoral Gazette* (the latter ceased publication in 1904) files; *Life of Dr. Hartmann* (Calcutta, 1868); *Monsieur Alexis Canoz* (Paris, 1891). No proper history of the Mission has yet been written, though materials are being collected for that purpose.

ERNEST R. HULL.

**Bommel, CORNELIUS RICHARD ANTON VAN**, Bishop of Liège, was b. at Leyden, in Holland, on 5 April, 1790; d. 7 April, 1852. He was educated at the college of Willingshegge near Münster, and later at the advanced school of Borcht. Against strong opposition he entered the seminary of Münster and was ordained priest in 1816 by Bishop Gaspard Droste de Vischering. On his return to Holland he founded a college for young men at Hageveld, near Haarlem. This college was closed in 1825 in consequence of the royal decree that subjected all the educational institutions to State control. King William offered van Bommel the presidency of another college, but met with a firm refusal. The Catholics and Liberals joined forces in opposing the arbitrary policy of the Government, and van Bommel took a prominent part in the agitation that forced the king to promulgate the Concordat concluded with Leo XII. Under the provisions of the Concordat, van Bommel was nominated to the See of Liège and consecrated on 15 November, 1829. He took no active part in the revolution of 1830, but as Bishop of Liège he was forced to sever his connexion with Holland. In a few years he remedied the evils which a vacancy of more than twenty years had occasioned in his diocese. He reorganized the seminary, revived Catholic elementary education, and gave the first impetus to the foundation of a Catholic university.

Bishop van Bommel was a zealous defender of the primacy of the Holy See, an aggressive opponent of Freemasonry, and an ardent advocate of religious education. At the reorganization of public instruction in 1842, his educational views were put in force in those gymnasia and technical schools which the State maintained wholly or in part. His writings comprise three volumes of "Pastoral Letters", and a number of pamphlets on ecclesiastical and educational questions.

MATTHIAS LEIMEUHLER.

**Bona, GIOVANNI**, a distinguished cardinal and author, b. of an old French family at Mondovi in Piedmont, 19 October, according to some 10 October, 1609; d. at Rome, 28 October, 1674. Although his father favoured a military career for him, after passing some years at a nearby Jesuit college he entered the Cistercian monastery at Pignerola, where, as also later at Rome, he pursued his studies with exceptional success. He laboured for fifteen years at Turin, then as prior at Asti and as abbot at Mondovi, and in 1651 was called to preside over the whole congregation. During his seven years of official life in Rome he modestly declined all further honours, at one time even refusing the Bishopric of Asti. He welcomed the expiration of his third term in the scholar's hope that he would be allowed to enjoy a life of retirement and study, but his intimate friend, Pope Alexander VII, wishing to honour his learning and piety, made him Consultor to the Congregation of the Index and to the Holy Office. In 1669 he was created cardinal, and then the beauty of his character was fully re-

vealed; there was no change in his extremely simple manner of life, and every year he donated his surplus revenue to the needy priests of the Missionary College at Rome.

His best known ascetical works are: "Via Compendii ad Deum" (1657); "Principia et documenta vitæ Christianæ" (1673); "Manuductio ad cælum" (1658); and "Horologium Asceticum" (Paris, 1676). The "Manuductio" is often compared to the "Imitation of Christ" on account of the simplicity of the style in which the solid doctrine is taught. It has always been extremely popular. Besides passing through fourteen Latin editions in four decades, it has been translated into Italian, French, German, Armenian, and Spanish. The latest translation is in English by Sir Robert L'Estrange (A Guide to Eternity, London, 1900). Shortly after his ordination he collected together some of the most beautiful passages in the Fathers on the august Sacrifice of the Mass, and later published them in a booklet, which with certain additions grew into his "De Sacrificio Missæ", a useful Mass book. In addition he composed several unpublished works, known as "Ascetici", for the instruction of members of his own order.

But his fame does not rest solely on his devotional writings. He was a deep student of antiquity, and so successful in treating of the use of the Psalter in the Christian Church (De Divinâ Psalmodiâ, Paris, 1663) that Cardinal Pallavicini urged him to undertake the history of the Sacrifice of the Mass. Realizing the magnitude of the task he at first declined, but finally set to work and after more than seven years' labour brought out his famous work familiar to all students of liturgy: "De Rebus Liturgicis" (Rome, 1671). It is a veritable encyclopedia of historic information on all subjects bearing on the Mass, such as rites, churches, vestments, etc. Not least remarkable about these volumes, besides the wealth of material gathered together, are the classic purity, the manly vigour, and the charming simplicity of the Latin style. The best edition of this work is by Robert Sala (Turin, 1747-53), who also in 1755 brought out a very interesting volume of Bona's letters. The first of the many editions of his complete works was published at Antwerp in 1677.

FABRONI, *Vita Italorum doctrinâ excellentium, etc.* (Pisa, 1778-1805), XIII, 7; MAZZUCCHELLI, *Gli scrittori d'Italia* (Brescia, 1758-63, II; Part III, 1515); BERTOLOTTI, *Vita Joannis Bona* (Asti, 1677); GOUJET, *Vie du cardinal Bona* in the French translation of *De principia vitæ Christianæ* (Paris, 1728); DUPIN, *Bibliothèque des auteurs ecclésiastiques du XVII<sup>e</sup> siècle* (Paris, 1708), III, 56.

LEO F. O'NEIL.

**Bonacum, THOMAS.** See LINCOLN, DIOCESE OF.

**Bona Fides.** See FAITH.

**Bonagratiæ of Bergamo** (or PERGAMO), Friar Minor, theologian, and canonist, date of birth unknown; d. at Munich, 1343. Before his entrance into religion, he was known as Boncortese, a name which was adopted at times by Clement V who used to call him *dilectus filius Frater Boncortese, dictus Bonagratiæ de Pergamo*. Though Bonagratiæ took an active and important part in the controversy with the so-called Spiritual Friars, especially with Ubertino of Casale, one of their leaders, his biography is interesting principally because of his connexion with the famous dispute concerning the poverty of Christ. The contest began at Narbonne in 1321 between the Dominicans and Franciscans, and the main question at issue seems to have been whether it is heretical to assert that Christ and His Apostles possessed no property either in particular or in common. On account of the important bearing of the controversy on the rule of the Friars Minor, a general chapter of the order was convoked at Perugia, in June of the year 1322, and the minister general, together with the other members of the chapter, caused two letters or communications to be

published in which the mind of the chapter regarding the controversy is set forth at considerable length, and with unmistakable distinctness; while Bonagratiæ was chosen to be the representative of the chapter before the papal Curia at Avignon. Displeased at the action of the chapter at Perugia, Pope John XXII published the Bull "Ad conditorem canonum" in which he renounces the dominion of all the goods of the Friars Minor hitherto assumed by the Roman pontiffs, and declares that the ownership of a thing cannot be separated from its actual use or consumption. At the public consistory held in January, 1323, Bonagratiæ appeared in the presence of the pope and cardinals, and with more zeal perhaps than discretion openly opposed the papal constitution. His boldness, however, was of little avail, for the Bull "Ad conditorem" was again promulgated in lengthier form, but bearing its previous date of 8 December, 1322, and the audacious Bonagratiæ himself was cast into prison. He was released after a year's confinement, and in 1330 followed the Emperor Louis of Bavaria to Munich, together with the Ex-Minister General Michael of Cesena and William of Occam. Still under sentence of excommunication, Bonagratiæ died there and was buried in the Barfüsserkirche, where Michael of Cesena and William of Occam also found their last resting-place. Among the writings of Bonagratiæ may be mentioned his "Articuli probationum", composed in confutation of the errors of Ubertino of Casale above mentioned.

STEPHEN M. DONOVAN.

**Bonal, FRANÇOIS DE**, Bishop of Clermont, b. 1734 at the castle of Bonal, near Agen; d. at Munich, 1800. He had been Vicar-General of Agen and Director of the Carmelite Nuns in France when he was made Bishop of Clermont, 1776. On the eve of the Revolution, as he was warning his diocesans against the license of the press, he foretold the visitations of God that were coming. He went as one of the deputies of the clergy to the États-Généraux of 1789, where he distinguished himself by his moderation and firmness. To Target who spoke of the "God of peace" he replied that the God of peace was also the God of order and justice. From his prison Louis XVI sent for his opinion as to whether he should receive Paschal Communion. The answer was full of sympathy, yet the unfortunate monarch was advised to abstain "for having sanctioned decrees destructive of religion". Bonal was alluding chiefly to the civil constitution of the clergy. Having declined to take the constitutional oath, he was compelled to leave his diocese and country. He passed to Flanders and later to Holland, was captured and sentenced to deportation by the French, but succeeded in making his escape and spent the last years of his life in various cities of Germany. He is the author of a "Testament spirituel".

FELLER, *Biographie Universelle* (Paris, 1866); DE CARRÉ-CEUR, *Journal d'Andrien Duquesnoy* (Paris, 1894).

J. F. SOLLIER.

**Bonal, RAYMOND**, French theologian and founder of the Congregation of the Priests of St. Mary (Bonallists), b. at Villefranche in Rouergue, 15 August, 1600; d. at Agde, Hérault, France, c. 1633. He studied classics and philosophy with the Jesuits at Cahors; theology and canon and civil law at the University of Toulouse, where he received the degree of Doctor in Theology in 1628. In 1632, he conceived the idea of organizing a community of priests in whose life and labours should be exemplified the spirit of St. Francis de Sales. With two other

ecclesiastics, he began to lead a community life in a house near the church of Our Lady of Pity, Villefranche. He was soon joined by others, and in 1639 the parish of Foix in the Diocese of Pamiers was entrusted to his community, which a few years later opened a seminary at Villefranche with Bonal as its director. In 1650 he organized a seminary and college at Toulouse and, having gone to Agde with a similar purpose, in 1653, fell a victim to an epidemic. The congregation founded by Bonal was approved in 1665 by Pope Alexander VII, and in 1678 by King Louis XIV. For lack of subjects, however, the seminaries confided to the Bonalists languished and were successively handed over to the Congregation of the Mission. After a little more than a hundred years of existence, the congregation itself was absorbed by the Lazarists.

Raymond Bonal published a "Cours de théologie morale" the 8th edition of which is dated, Paris, 1685. This course, which was followed in the Sulpician seminaries at Toulouse, Valence, Thiers, and elsewhere, was translated into Latin by Pierre Laur (Toulouse, 1674), under the title "Theologia Moralis R. Bonalis". Another work of Raymond Bonal, "Explication littérale et mystique des rubriques" was published at Lyons in 1679.

MANGENOT in *Dict. de théol. cath.*; FAILLON, *Vie de M. Olier* (Paris, 1873), X; MERCADIER, *Les constitutions, règlements et directoires de la congrégation des Frères de Sainte Marie* (Mende, 1689); BERTRAND, *Bibliothèque Sulpicienne* (Paris, 1900), I; *Recueil des principales circulaires des supérieurs généraux de la congrégation de la mission* (Paris, 1877), I; *Archives nationales* (Paris), S. 6705, 6715, 6716; *Archives of the Congregation of the Mission* (Paris), MS. 1101.

F. V. NUGENT.

**Bonal, LOUIS-GABRIEL-AMBROISE, VICOMTE DE**, French statesman, writer, and philosopher, b. at Monna, near Millau, in Rouergue (Aveyron) 2 October, 1754; d. at Paris, 23 November, 1840. He was educated by the Oratorians at the College of Juilly; joined the king's musketeers, returned to his own province in 1776, was elected mayor of Millau in 1785, and in 1790 was chosen member of the departmental Assembly for Aveyron. He resigned in 1791, emigrated, became a soldier in the army of Condé, and, when the army was disbanded, retired to Heidelberg, where he took charge of the education of his two elder sons.

Bonal published at Constance, in 1797, his first work: "Théorie du pouvoir politique et religieux", which was suppressed in France by order of the Directory. In 1797 Bonal returned to France under the name of Saint-Séverin, and published "Essai analytique sur les lois naturelles de l'ordre social" (1800); "Du divorce" (1801); and "La législation primitive" (1802). He also collaborated with Chateaubriand and others in the "Mercure de France", contributing several articles which were published in book form with other studies in 1819 under the title "Mélanges littéraires, politiques, et philosophiques". In 1808 he declined to be a member of the Council of the University, but finally accepted in 1810. He refused to take charge of the education of the son of Louis Bonaparte, King of Holland, and of the King of Rome, the son of Napoleon I.

A monarchist and royalist by nature and by principles, Bonal welcomed the restoration of the Bourbons. He was appointed a member of the Academy by royal decree in 1816. From 1815 to 1822 he served as deputy from Aveyron, and in 1823 became a peer of France. He then directed his efforts against all attempts at liberalism in religion and politics. The law against divorce was proposed by him in 1815 and passed in 1816. He took a prominent part in the law of 1822 which did away with the liberty of the press and established a committee of censure of which he was the president. In 1815 he published his "Réflexions sur l'intérêt général de

l'Europe"; in 1817, "Pensées sur divers sujets" in 2 vols. 8vo. (2d ed., Paris, 1887); in 1818 "Recherches philosophiques sur les premiers objets des connaissances morales"; in 1827, "Démonstration philosophique du principe constitutif des sociétés". Meanwhile he collaborated with Chateaubriand, Lamennais, and Berryer, in the "Conservateur", and later in the "Défenseur" founded by Lamennais. In 1830 he gave up his peerage and led a life of retirement in his native city.—"There is not to be found in this long career", says Jules Simon, "one action which is not consistent with his principles, one expression which belies them."

G. M. SAUVAGE.

**Bonal, LOUIS-JACQUES-MAURICE DE**, Cardinal, b. at Millau, in Rouergue (now Aveyron), 30 October, 1787; d. at Lyons, 25 Feb., 1870. He was the fourth son of the Vicomte de Bonal, the celebrated statesman and philosopher. Destined for the Church, he studied at Saint-Sulpice and was ordained priest in 1811. He was first attached to the imperial chapel and after the Restoration went to Rome as secretary to Archbishop de Presigny, who was entrusted by Louis XVIII with the task of arranging for a new Concordat. Three years later Bishop Latil of Chartres made him his vicar-general. When the Diocese of Puy was re-established (1823) Bonal became its first bishop and remained there for sixteen years, until his promotion to the primatial See of Lyons (1839), and in 1841 Gregory XVI made him cardinal. Cardinal de Bonal is one of the glories of the French episcopate. His personal qualities, as well as the salient features of his episcopal career, are most easily found in the only work we have from his pen, that long series of "Mandements et lettres pastorales", which show him to have been pious, sympathetic, eloquent, and full of zeal. His zeal seems to have embraced all vital interests. In point of doctrine, Bonal contributed a large share towards destroying all remnants of Gallicanism and Jansenism. The Jansenistic interpolations made by Montazet in the liturgical books of Lyons were, after a long struggle, finally suppressed. Dupin's Gallican book, "Manuel de droit ecclésiastique", was severely condemned by the primate, and when the Council of State declared him guilty of abuse (1845), Bonal replied that the censure had not even touched him because "when the Council of State has pronounced on questions of doctrine, the cause is not finished".

In matters of discipline Cardinal de Bonal corrected many abuses, and he crowned his work by convening a provincial synod (1850), whose statutes touched all the main points of church government. He always took great interest in social questions, and never was more eloquent than when appealing for help in behalf of misery, as for instance during the floods of 1840 and 1846 and the destitution of the Spanish refugees (1842). The closing of silk factories in Lyons gave him an opportunity of showing not only his liberality towards the needy, but also his broad sympathy for the toiling class in general.

LOUIS CARDINAL DE BONALD

The mainspring of Cardinal de Bonald's life, however, was his love of the Church, which he desired first of all to have respected. In 1825 the royal court of Paris, in rendering a verdict, implied that the whole body of clergy was disloyal to the Crown; Bonald in a dignified letter of protest to the king replied: "Were the clergy less loyal, they would not be the object of such hatred". He also desired the freedom of the Church, and his pastoral letter of 1846, "*La liberté de l'Eglise*", remains one of his best efforts. Of all the privileges essential to the Church, that of teaching seemed to him first and foremost. On several occasions he wrote either to approve or to condemn the legislation concerning schools. The royal ordinance of 1824 placing the schools under the surveillance of the bishops met with his entire approval; but the ordinances of 1828 establishing a new mode of direction for primary schools and even interfering with ecclesiastical schools for secondary education, as well as the Villemain educational bill of 1844 and Salvandy's project of 1847, he strongly opposed, thus preparing the way for the law of 1850. Having become, by the constitution of 1852, and by virtue of his dignity as cardinal, a member of the French Senate, Bonald showed once more his love of the Church by throwing the whole weight of his influence on the side of the Roman pontiff and the independence of the Holy See.

The long episcopal career of Bonald covers many successive political regimes. Although by birth and education a staunch legitimist, yet, as a bishop, he looked above the changes of human government to the Church and her welfare. Because the Revolution of February, 1848, with its motto "Liberty, Equality, Fraternity", seemed to him favourable to the best interests of the Church, he was one of the first bishops to welcome it. He wrote to his priests: "Give to the faithful the example of submission and obedience to the Republic. You have long cherished the hope of enjoying the liberty which makes our brethren of the United States so happy; that liberty you shall have." The same broadness of view he evinced when he refused to side with the Abbé Gaume on the question of the classics: "We decline to believe that the study of pagan authors has for three centuries instilled paganism into the social body."

J. F. SOLLIER.

**Bona Mors Confraternity, THE (HAPPY DEATH),** was founded 2 October, 1648, in the Church of the Gesù, Rome, by Father Vincent Caraffa, seventh General of the Society of Jesus, and approved by the Sovereign Pontiffs Innocent X and Alexander VII. In 1729 it was raised to an archconfraternity and enriched with numerous indulgences by Benedict XIII. He authorized the Father General of the Society of Jesus, who, in virtue of his office, was the director, to erect Bona Mors confraternities in all churches of his order. In 1827 Leo XII gave to the director general the power to erect and affiliate branch confraternities in churches not belonging to the Society of Jesus, and to give them a share in all the privileges and indulgences of the archconfraternity. The object of the association is to prepare its members by a well regulated life to die in peace with God. The longer title: "Confraternity of Our Lord Jesus Christ dying on the Cross, and of the most Blessed Virgin Mary, His sorrowful Mother", expresses the chief means to attain that end, devotion to the Passion of Christ and to the sorrows of Mary. Besides this the union of prayers and good works of the associates and the

special instructions at the public meetings help powerfully to prepare for a happy death. The conditions for membership are to present oneself to the director; to express to him one's desire to become a member; to receive from him an outward sign of acceptance, usually in the form of a certificate of admission; and to have one's name registered in the local Bona Mors Register. Only "by an unusual and extraordinary exception", says a decree of the Sacred Congregation of Indulgences, "is it allowed to enroll those absent". The director is authorized to decide what constitutes such an exceptional case. The practices of the association and the indulgences granted to the members are specified in the manual of the confraternity (New York, 1896).

JOHN J. WYNNE.

**Bonaparte, CHARLES-LUCIEN-JULES-LAURENT,** PRINCE OF CANINO AND MUSIGNANO, ornithologist, b. in Paris, 24 May, 1803; d. in the same city 29 July, 1857. He was the eldest son of Lucien Bonaparte, the brother of Napoleon, and was educated in the universities of Italy. After his marriage to his cousin Zénalde, daughter of Joseph Bonaparte, on 29 June, 1822, he came to the United States where his father-in-law was residing. While here he devoted himself to the study of natural science and particularly of ornithology. He undertook the completion of Wilson's "Ornithology or History of the Birds of the United States" in four volumes (Philadelphia, 1825-33). In this work he describes more than one hundred new species discovered by himself. He also published "Observations on the Nomenclature of Wilson's Ornithology" (in the Journal of the Philadelphia Academy); "Synopsis of the Birds of the United States" (in the Annals of the Lyceum of New York), etc. He returned to Europe in 1828 and took up his residence in Rome where he continued his scientific work. Upon the death of his father, Lucien, in 1840, he became Prince of Canino and Musignano and afterwards entered the political arena, associating himself with the anti-Austrian party. He did not, however, lose interest in his favourite studies for he organized and presided over several scientific congresses in Italy. He had been attached to Pius IX, but in 1848 he joined the radical party and in the following year was elected deputy of Viterbo and Vice-President of the Assembly. After the fall of the Republic he was obliged to leave Italy (July, 1849), but his cousin, Louis-Napoleon, refused to permit him to enter France until the following year when he settled in Paris. In 1854 he became director of the Jardin des Plantes. Bonaparte had twelve children of whom eight survived him. Among them was Lucien-Louis-Joseph-Napoleon, who was ordained priest in 1853 and was made cardinal in 1868. Bonaparte became an honorary member of the Academy of Upsala in 1833, and of the Academy of Sciences of Berlin in 1843, and corresponding member of the "Institut" in 1844. Besides his published works already referred to may be mentioned: "Specchio comparativo delle ornithologie di Roma e di Filadelfia" (Paris, 1827); "Iconografia della Fauna Italica" (Rome, 1834-41). This is his principal work and is illustrated with fine coloured plates. "Geographical and Comparative List of Birds of Europe and North America" (London, 1838); "Catalogo metodico degli uccelli Europei" (Bologna, 1842); "Conspectus systematis ornithologie" (Leyden, 1850); "Conspectus systematis ichthyologie" (Leyden, 1850); "Ornithologie fossile" (Paris, 1858).

**Bonaventure, SAINT,** Doctor of the Church, Cardinal-Bishop of Albano, Minister General of the

Friars Minor, b. at Bagnorea in the vicinity of Viterbo in 1221; d. at Lyons, 15 July, 1274.

Nothing is known of Bonaventure's parents save their names: Giovanni di Fidanza and Maria Ritella. How his baptismal name of John came to be changed to that of Bonaventure is not clear. An attempt has been made to trace the latter name to the exclamation of St. Francis, *O buona ventura*, when Bonaventure was brought as an infant to him to be cured of a dangerous illness. This derivation is highly improbable; it seems based on a late fifteenth-century legend. Bonaventure himself tells us (*Legenda S. Francisci Prolog.*) that while yet a child he was preserved from death through the intercession of St. Francis, but there is no evidence that this cure took place during the lifetime of St. Francis or that the name Bonaventure originated in any prophetic words of St. Francis. It was certainly borne by others before the Seraphic Doctor.

No details of Bonaventure's youth have been preserved. He entered the Order of Friars Minor in 1238 or 1243; the exact year is uncertain. Wadding and the Bollandists hold for the later date, but the earlier one is supported by Sbaralea, Bonelli, Panfilo da Magliano, and Jeiler, and appears more probable. It is certain that Bonaventure was sent from the Roman Province, to which he belonged, to complete his studies at the University of Paris under Alexander of Hales, the great founder of the Franciscan School. The latter died in 1245, according to the opinion generally received, though not yet definitely established, and Bonaventure seems to have become his pupil about 1242. Be this as it may, Bonaventure received in 1248 the "licentiate" which gave him the right to

teach publicly as *Magister regens*, and he continued to lecture at the university with great success until 1255, when he was compelled to discontinue, owing to the then violent outburst of opposition to the Mendicant orders on the part of the secular professors at the university. The latter, jealous, as it seems, of the academic successes of the Dominicans and Franciscans, sought to exclude them from teaching publicly. The smouldering elements of discord had been fanned into a flame in 1255, when Guillaume de Saint-Amour published a work entitled "The Perils of the Last Times", in which he attacked the Friars with great bitterness. It was in connexion with this dispute that Bonaventure wrote his treatise, "De paupertate Christi". It was not, however, Bonaventure, as some have erroneously stated, but Blessed John of Parma, who appeared before Alexander IV at Anagni to defend the Franciscans against their adversary. The Holy See having, as

is well known, re-established the Mendicants in all their privileges, and Saint-Amour's book having been formally condemned, the degree of Doctor was solemnly bestowed on St. Bonaventure and St. Thomas Aquinas at the university, 23 October, 1257.

In the meantime Bonaventure, though not yet thirty-six years old, had on 2 February, 1257, been elected Minister General of the Friars Minor—an office of peculiar difficulty, owing to the fact that the order was distracted by internal dissensions between the two factions among the Friars designated respectively the *Spirituales* and the *Relaxati*. The former insisted upon the literal observance of the original Rule, especially in regard to poverty, while the latter wished to introduce innovations and mitigations. This lamentable controversy had moreover been aggravated by the enthusiasm with which many of the "Spiritual" Friars had adopted the doctrines con-

connected with the name of Abbot Joachim of Floris and set forth in the so-called "Evangelium æternum". The introduction to this pernicious book, which proclaimed the approaching dispensation of the Spirit that was to replace the Law of Christ, was falsely attributed to Bl. John of Parma, who in 1257 had retired from the government of the order in favour of Bonaventure. The new general lost no time in striking vigorously at both extremes within the order. On the one hand, he proceeded against several of the Joachimite "Spirituals" as heretics before an ecclesiastical tribunal at Città-della-Pieve; two of their leaders were condemned to perpetual imprisonment, and John of Parma was only saved from a like fate through the personal intervention of Cardinal Ottoboni, afterwards Adrian V. On the other hand,

ST. BONAVENTURE (DETAIL FROM RAPHAEL'S DISPUTATION, VATICAN)

Bonaventure had, in an encyclical letter issued immediately after his election, outlined a programme for the reformation of the *Relaxati*. These reforms he sought to enforce three years later at the General Chapter of Narbonne when the constitutions of the order which he had revised were promulgated anew. These so-called "Constitutiones Narbonenses" are distributed under twelve heads, corresponding to the twelve chapters of the Rule, of which they form an enlightened and prudent exposition, and are of capital importance in the history of Franciscan legislation. The chapter which issued this code of laws requested Bonaventure to write a "legend" or life of St. Francis which should supersede those then in circulation. This was in 1260. Three years later Bonaventure, having in the meantime visited a great part of the order, and having assisted at the dedication of the chapel on La Verna and at the translation of the remains

of St. Clare and of St. Anthony, convoked a general chapter of the order of Pisa at which his newly composed life of St. Francis was officially approved as the standard biography of the saint to the exclusion of all others. At this chapter of 1263, Bonaventure fixed the limits of the different provinces of the order and, among other ordinances, prescribed that at nightfall a bell should be rung in honour of the Annunciation, a pious practice from which the Angelus seems to have originated. There are no grounds, however, for the assertion that Bonaventure in this chapter prescribed the celebration of the feast of the Immaculate Conception in the order. In 1264, at the earnest request of Cardinal Cajetan, Bonaventure consented to resume the direction of the Poor Clares which the Chapter of Pisa had entirely renounced the year before. He required the Clares, however, to acknowledge occasionally in writing that the favours tendered them by the Friars were voluntary acts of charity not arising from any obligation whatsoever. It is said that Pope Urban IV acted at Bonaventure's suggestion in attempting to establish uniformity of observance throughout all the monasteries of Clares. About this time (1264) Bonaventure founded at Rome the Society of the Gonfalone in honour of the Blessed Virgin which, if not the first confraternity instituted in the Church, as some have claimed, was certainly one of the earliest. In 1265 Clement IV, by a Bull dated 23 November, nominated Bonaventure to the vacant Archbishopric of York, but the saint, in keeping with his singular humility, steadfastly refused this honour and the pope yielded.

In 1266 Bonaventure convened a general chapter in Paris at which, besides other enactments, it was decreed that all the "legends" of St. Francis written before that of Bonaventure should be forthwith destroyed, just as the Chapter of Narbonne had in 1260 ordered the destruction of all constitutions before those then enacted. This decree has excited much hostile criticism. Some would fain see in it a deliberate attempt on Bonaventure's part to close the primitive sources of Franciscan history, to suppress the real Francis, and substitute a counterfeit in his stead. Others, however, regard the decree in question as a purely liturgical ordinance intended to secure uniformity in the choir "legends". Between these two conflicting opinions the truth seems to be that this edict was nothing more than another heroic attempt to wipe out the old quarrels and start afresh. One cannot but regret the circumstances of this decree, but when it is recalled that the appeal of the contending parties was ever to the words and actions of St. Francis as recorded in the earlier "legends", it would be unjust to accuse the chapter of "literary vandalism" in seeking to proscribe the latter. We have no details of Bonaventure's life between 1266 and 1269. In the latter year he convoked his fourth general chapter at Assisi, in which it was enacted that a Mass be sung every Saturday throughout the order in honour of the Blessed Virgin, not, however, in honour of her Immaculate Conception as Wadding among others has erroneously stated. It was probably soon after this chapter that Bonaventure composed his "*Apologia pauperum*", in which he silences Gerard of Abbeville who by means of an anonymous libel had revived the old university feud against the Friars. Two years later, Bonaventure was mainly instrumental in reconciling the differences among the cardinals assembled at Viterbo to elect a successor to Clement IV, who had died nearly three years before; it was on Bonaventure's advice that, 1 September, 1271, they unanimously chose Theobald Visconti of Piacenza who took the title of Gregory X. That the cardinals seriously authorized Bonaventure to nominate himself, as some writers aver, is most improbable. Nor is there

any truth in the popular story that Bonaventure on arriving at Viterbo advised the citizens to lock up the cardinals with a view to hastening the election. In 1272 Bonaventure for the second time convened a general chapter at Pisa in which, apart from general enactments to further regular observances, new decrees were issued respecting the direction of the Poor Clares, and a solemn anniversary was instituted on 25 August in memory of St. Louis. This was the first step towards the canonization of the holy king, who had been a special friend of Bonaventure, and at whose request Bonaventure composed his "Office of the Passion". On 23 June, 1273, Bonaventure, much against his will, was created Cardinal-Bishop of Albano, by Gregory X. It is said that the pope's envoys who brought him the cardinal's hat found the saint washing dishes outside a convent near Florence and were requested by him to hang it on a tree nearby until his hands were free to take it. Bonaventure continued to govern the Order of Friars Minor until 20 May, 1274, when at the General Chapter of Lyons, Jerome of Ascoli, afterwards Nicholas IV, was elected to succeed him. Meanwhile Bonaventure had been charged by Gregory X to prepare the questions to be discussed at the Fourteenth Ecumenical Council, which opened at Lyons 7 May, 1274.

The pope himself presided at the council, but he confided the direction of its deliberations to Bonaventure, especially charging him to confer with the Greeks on the points relating to the abjuration of their schism. It was largely due to Bonaventure's efforts and to those of the Friars whom he had sent to Constantinople, that the Greeks accepted the union effected 6 July, 1274. Bonaventure twice addressed the assembled Fathers, on 18 May, during a session of the Council, when he preached on Baruch, v, 5, and on 29 June, during pontifical Mass celebrated by the pope. While the council was still in session, Bonaventure died, Sunday, 15 July, 1274. The exact cause of his death is unknown, but if we may credit the chronicle of Peregrinus of Bologna, Bonaventure's secretary, which has recently (1905) been recovered and edited, the saint was poisoned. He was buried on the evening following his death in the church of the Friars Minor at Lyons, being honoured with a splendid funeral which was attended by the pope, the King of Aragon, the cardinals, and the other members of the council. The funeral oration was delivered by Pietro di Tarantasia, O.P., Cardinal-Bishop of Ostia, afterwards Innocent V, and on the following day during the fifth session of the council, Gregory X spoke of the irreparable loss the Church had sustained by the death of Bonaventure, and commanded all prelates and priests throughout the whole world to celebrate Mass for the repose of his soul.

Bonaventure enjoyed especial veneration even during his lifetime because of his stainless character and of the miracles attributed to him. It was Alexander of Hales who said that Bonaventure seemed to have escaped the curse of Adam's sin. And the story of St. Thomas visiting Bonaventure's cell while the latter was writing the life of St. Francis, and finding him in an ecstasy is well known. "Let us leave a saint to work for a saint", said the Angelic Doctor as he withdrew. When, in 1434, Bonaventure's remains were translated to the new church erected at Lyons in honour of St. Francis, his head was found in a perfect state of preservation, the tongue being as red as in life. This miracle not only moved the people of Lyons to choose Bonaventure as their special patron, but also gave a great impetus to the process of his canonization. Dante, writing long before, had given expression to the popular mind by placing Bonaventure among the saints in his "*Paradiso*", and no canonization was ever more ardently

or universally desired than that of Bonaventure. That its inception was so long delayed was mainly due to the deplorable dissensions within the order after Bonaventure's death. Finally on 14 April, 1482, Bonaventure was enrolled in the catalogue of the saints by Sixtus IV. In 1562 Bonaventure's shrine was plundered by the Huguenots and the urn containing his body was burned in the public square. His head was preserved through the heroism of the superior, who hid it at the cost of his life, but it disappeared during the French Revolution and every effort to discover it has been in vain. Bonaventure was inscribed among the principal Doctors of the Church by Sixtus V, 14 March, 1587. His feast is celebrated 14 July.

Bonaventure, as Hefele remarks, united in himself the two elements whence proceed whatever was noble and sublime, great and beautiful, in the Middle Ages, viz., tender piety and profound learning. These two qualities shine forth conspicuously in his writings. Bonaventure wrote on almost every subject treated by the Schoolmen, and his writings are very numerous. The greater number of them deal with philosophy and theology. No work of Bonaventure's is exclusively philosophical, but in his "Commentary on the Sentences", his "Breviloquium", his "Itinerarium Mentis in Deum" and his "De reductione Artium ad Theologiam", he deals with the most important and difficult questions of philosophy in such a way that these four works taken together contain the elements of a complete system of philosophy, and at the same time bear striking witness to the mutual interpenetration of philosophy and theology which is a distinguishing mark of the Scholastic period. The "Commentary on the Sentences" remains without doubt Bonaventure's greatest work; all his other writings are in some way subservient to it. It was written, *superiorum præcepto* (at the command of his superiors) when he was only twenty-seven and is a theological achievement of the first rank. It comprises more than four thousand pages in folio and treats extensively and profoundly of God and the Trinity, the Creation and Fall of Man, the Incarnation and Redemption, Grace, the Sacraments, and the Last Judgment, that is to say, traverses the entire field of Scholastic theology. Like the other medieval Summas, Bonaventure's "Commentary" is divided into four books. In the first, second, and fourth Bonaventure can compete favourably with the best commentaries on the Sentences, but it is admitted that in the third book he surpasses all others. The "Breviloquium", written before 1257, is, as its name implies, a shorter work. It is to some extent a summary of the "Commentary" containing as Scheeben says, the quintessence of the theology of the time, and is the most sublime compendium of dogma in our possession. It is perhaps the work which will best give a popular notion of Bonaventure's theology; in it his powers are seen at their best. Whilst the "Breviloquium" derives all things from God, the "Itinerarium Mentis in Deum" proceeds in the opposite direction, bringing all things back to their Supreme End. The latter work, which formed the delight of Gerson for more than thirty years, and from which Bl. Henry Suso drew so largely, was written on Mount la Verna in 1259. The relation of the finite and infinite, the natural and supernatural, is again dealt with by Bonaventure, in his "De reductione Artium ad Theologiam", a little work written to demonstrate the relation which philosophy and the arts bear to theology, and to prove that they are all absorbed in it as into a natural centre. It must not be inferred, however, that philosophy in Bonaventure's view does not possess an existence of its own. The passages in Bonaventure's works on which such an opinion

might be founded only go to prove that he did not regard philosophy as the chief or last end of scientific research and speculation. Moreover, it is only when compared with theology that he considers philosophy of an inferior order. Considered in itself, philosophy is, according to Bonaventure, a true science, prior in point of time to theology. Again, Bonaventure's pre-eminence as a mystic must not be suffered to overshadow his labours in the domain of philosophy, for he was undoubtedly one of the greatest philosophers of the Middle Ages.

Bonaventure's philosophy, no less than his theology, manifests his profound respect for tradition. He regarded new opinions with disfavour and ever strove to follow those generally received in his time. Thus, between the two great influences which determined the trend of Scholasticism about the middle of the thirteenth century, there can be no doubt that Bonaventure ever remained a faithful disciple of Augustine and always defended the teaching of that Doctor; yet he by no means repudiated the teaching of Aristotle. While basing his doctrine on that of the old school, Bonaventure borrowed not a little from the new. Though he severely criticized the defects of Aristotle, he is said to have quoted more frequently from the latter than any former Scholastic had done. Perhaps he inclined more, on the whole, to some general views of Plato than to those of Aristotle, but he cannot therefore be called a Platonist. Although he adopted the hylomorphic theory of matter and form, Bonaventure, following Alexander of Hales, whose Summa he appears to have had before him in composing his own works, does not limit matter to corporeal beings, but holds that one and the same kind of matter is the substratum of spiritual and corporeal beings alike. According to Bonaventure, *materia prima* is not a mere *indeterminatum quid*, but contains the *rationes seminales* infused by the Creator at the beginning, and tends towards the acquisition of those special forms which it ultimately assumes. The substantial form is not in Bonaventure's opinion, essentially, one, as St. Thomas taught. Another point in which Bonaventure, as representing the Franciscan school, is at variance with St. Thomas is that which concerns the possibility of creation from eternity. He declares that reason can demonstrate that the world was not created *ab æterno*. In his system of ideology Bonaventure does not favour either the doctrine of Plato or that of the Ontologists. It is only by completely misunderstanding Bonaventure's teaching that any ontological interpretation can be read into it. For he is most emphatic in rejecting any direct or immediate vision of God or of His Divine attributes in this life. For the rest, the psychology of Bonaventure differs in no essential point from the common teaching of the Schoolmen. The same is true, as a whole, of his theology.

Bonaventure's theological writings may be classed under four heads: dogmatic, mystic, exegetical, and homiletic. His dogmatic teaching is found chiefly in his "Commentary on the Sentences" and in his "Breviloquium". Treating of the Incarnation, Bonaventure does not differ substantially from St. Thomas. In answer to the question: "Would the Incarnation have taken place if Adam had not sinned?", he answers in the negative. Again, notwithstanding his deep devotion to the Blessed Virgin, he favours the opinion which does not exempt her from original sin, *quia magis consonat fidei pietati et sanctorum auctoritati*. But Bonaventure's treatment of this question marked a distinct advance, and he did more perhaps than anyone before Scotus to clear the ground for its correct presentation. His treatise on the sacraments is largely practical and is characterized by a distinctly devotional element. This appears especially in his treatment of

the Holy Eucharist. He rejects the doctrine of physical, and admits only a moral, efficacy in the sacraments. It is much to be regretted that Bonaventure's views on this and other controverted questions should be so often misrepresented, even by recent writers. For example, at least three of the latest and best known manuals of dogma in treating of such questions as "*De angelorum naturâ*", "*De scientiâ Christi*", "*De naturâ distinctionis inter caritatem et gratiam sanctificantem*", "*De causalitate sacramentorum*", and "*De statu parvulorum sine baptismo morientium*", gratuitously attribute opinions to Bonaventure which are entirely at variance with his real teaching. To be sure Bonaventure, like all the Scholastics, occasionally put forward opinions not strictly correct in regard to questions not yet defined or clearly settled, but even here his teaching represents the most profound and acceptable ideas of his age and marks a notable stage in the evolution of knowledge. Bonaventure's authority has always been very great in the Church. Apart from his personal influence at Lyons (1274), his writings carried great weight at the subsequent councils at Vienne (1311), Constance (1417), Basle (1431), and Florence (1438). At Trent (1546) his writings, as Newman remarks (*Apologia*, ch. v) had a critical effect on some of the definitions of dogma, and at the Vatican Council (1870), sentences from them were embodied in the decrees concerning papal supremacy and infallibility.

Only a small part of Bonaventure's writings is properly mystical. These are characterized by brevity and by a faithful adherence to the teaching of the Gospel. The perfecting of the soul by the uprooting of vice and the implanting of virtue is his chief concern. There is a degree of prayer in which ecstasy occurs. When it is attained, God is sincerely to be thanked. It must, however, be regarded only as incidental. It is by no means essential to the possession of perfection in the highest degree. Such is the general outline of Bonaventure's mysticism which is largely a continuation and development of what the St. Victorians had already laid down. The shortest and most complete summary of it is found in his "*De Triplici Via*", often erroneously entitled the "*Incendium Amoris*", in which he distinguishes the different stages or degrees of perfect charity. What the "*Breviloquium*" is to Scholasticism, the "*De Triplici Via*" is to mysticism—a perfect compendium of all that is best in it. Savonarola made a pious and learned commentary upon it. Perhaps the best known of Bonaventure's other mystical and ascetical writings are the "*Soliloquium*", a sort of dialogue containing a rich collection of passages from the Fathers on spiritual questions; the "*Lignum vitæ*", a series of forty-eight devout meditations on the life of Christ, the "*De sex alis seraphim*", a precious opuscle on the virtues of superiors, which Father Claudius Acquaviva caused to be printed separately and circulated throughout the Society of Jesus; the "*Vitis mystica*", a work on the Passion, which was for a long time erroneously ascribed to St. Bernard, and "*De Perfectione vitæ*", a treatise which depicts the virtues that make for religious perfection, and which appears to have been written for the use of Blessed Isabella of France, who had founded a monastery of Poor Clares at Longchamps.

Bonaventure's exegetical works were highly esteemed in the Middle Ages and still remain a treasure house of thoughts and treatises. They include commentaries on the Books of Ecclesiastes and Wisdom and on the Gospels of St. Luke and St. John. In addition to his commentary on the Fourth Gospel, Bonaventure composed "*Collationes in Joannem*", ninety-one conferences on subjects relating to it. His "*Collationes in Hexameron*" is a work of the

same kind, but its title, which did not originate with Bonaventure, is somewhat misleading. It consists of an unfinished course of instructions delivered at Paris in 1273. Bonaventure did not intend in these twenty-one discourses to explain the work of the six days, but rather to draw some analogous instructions from the first chapter of Genesis, as a warning to his auditors against some errors of the day. It is an exaggeration to say that Bonaventure had regard only to the mystical sense of Scripture. In such of his writings as are properly exegetical he follows the text, though he also develops the practical conclusions deduced from it, for in the composition of these works he had the advantage of the preacher mainly in view. Bonaventure had conceived the most sublime idea of the ministry of preaching, and notwithstanding his manifold labours in other fields, this ministry ever held an especial place among his labours. He neglected no opportunity of preaching, whether to the clergy, the people, or his own Friars, and Bl. Francis of Fabriano (d. 1322), his contemporary and auditor, bears witness that Bonaventure's renown as a preacher almost surpassed his fame as a teacher. He preached before popes and kings, in Spain and Germany, as well as in France and Italy. Nearly five hundred authentic sermons of Bonaventure have come down to us; the greater part of them were delivered in Paris before the university while Bonaventure was professor there, or after he had become minister general. Most of them were taken down by some of his auditors and thus preserved to posterity. In his sermons he follows the Scholastic method of putting forth the divisions of his subject and then expounding each division according to the different senses.

Besides his philosophical and theological writings, Bonaventure left a number of works referring to the religious life, but more especially to the Franciscan Order. Among the latter is his well-known explanation of the Rule of the Friars Minor; in this work, written at a time when the dissensions within the order as to the observance of the Rule were so painfully marked, he adopted a conciliatory attitude, approving neither the interpretation of the *Zelanti* nor that of the *Relaxati*. His aim was to promote harmony in essentials. With this end in view, he had chosen a middle course at the outset and firmly adhered to it during the seventeen years of his generalship. If anyone could have succeeded in uniting the order, it would have been Bonaventure; but the *via media* proved impracticable, and Bonaventure's personality only served to hold in check the elements of discord, subsequently represented by the Conventuals and the Fraticelli. Following upon his explanation of the Rule comes Bonaventure's important treatise embodying the Constitutions of Narbonne already referred to. There is also an answer by Bonaventure to some questions concerning the Rule, a treatise on the guidance of novices, and an opuscle in which Bonaventure states why the Friars Minor preach and hear confessions, besides a number of letters which give us a special insight into the saint's character. These include official letters written by Bonaventure as general to the superiors of the order, as well as personal letters addressed like that "*Ad innominatum magistrum*" to private individuals. Bonaventure's beautiful "*Legend*" or life of St. Francis completes the writings in which he strove to promote the spiritual welfare of his brethren. This well-known work is composed of two parts of very unequal value. In the first Bonaventure publishes the unedited facts that he had been able to gather at Assisi and elsewhere; in the other he merely abridges and repeats what others, and especially Celano, had already recorded. As a whole, it is essentially a *legenda pacis*, compiled mainly with a view to pacifying

the unhappy discord still ravaging the order. St. Bonaventure's aim was to present a general portrait of the holy founder which, by the omission of certain points that had given rise to controversy, should be acceptable to all parties. This aim was surely legitimate even though from a critical standpoint the work may not be a perfect biography. Of this "Legenda Major", as it came to be called, Bonaventure made an abridgment arranged for use in choir and known as the "Legenda Minor".

Bonaventure was the true heir and follower of Alexander of Hales and the continuator of the old Franciscan school founded by the *Doctor Irrefragabilis*, but he surpassed the latter in acumen, fertility of imagination, and originality of expression. His proper place is beside his friend St. Thomas, as they are the two greatest theologians of Scholasticism. If it be true that the system of St. Thomas is more finished than that of Bonaventure, it should be borne in mind that, whereas Thomas was free to give himself to study to the end of his days, Bonaventure had not yet received the Doctor's degree when he was called to govern his order and overwhelmed with multifarious cares in consequence. The heavy responsibilities which he bore till within a few weeks of his death were almost incompatible with further study and even precluded his completing what he had begun before his thirty-sixth year. Again, in attempting to make a comparison between Bonaventure and St. Thomas, we should remember that the two saints were of a different bent of mind; each had qualities in which he excelled; one was in a sense the complement of the other; one supplied what the other lacked. Thus Thomas was analytical, Bonaventure synthetical; Thomas was the Christian Aristotle, Bonaventure the true disciple of Augustine; Thomas was the teacher of the schools, Bonaventure of practical life; Thomas enlightened the mind, Bonaventure inflamed the heart; Thomas extended the Kingdom of God by the love of theology, Bonaventure by the theology of love. Even those who hold that Bonaventure does not reach the level of St. Thomas in the sphere of Scholastic speculation concede that as a mystic he far surpasses the Angelic Doctor. In this particular realm of theology, Bonaventure equals, if he does not excel, St. Bernard himself. Leo XIII rightly calls Bonaventure the Prince of Mystics: "Having scaled the difficult heights of speculation in a most notable manner, he treated of mystical theology with such perfection that in the common opinion of the learned he is *facile princeps* in that field." (Allocutio of 11 October, 1890.) It must not be concluded, however, that Bonaventure's mystical writings constitute his chief title to fame. This conclusion, in so far as it seems to imply a deprecation of his labours in the field of Scholasticism, is opposed to the explicit utterances of several pontiffs and eminent scholars, is incompatible with Bonaventure's acknowledged reputation in the Schools, and is excluded by an intelligent perusal of his works. As a matter of fact, the half of one volume of the ten comprising the Quaracchi edition suffices to contain Bonaventure's ascetic and mystic writings. Although Bonaventure's mystical works alone would suffice to place him in the foremost rank, yet he may justly be called a mystic rather than a Scholastic only in so far as every subject he treats of is made ultimately to converge upon God. This abiding sense of God's presence which pervades all the writings of Bonaventure is perhaps their fundamental attribute. To it we may trace that all-pervading unction which is their peculiar characteristic. As Sixtus V aptly expresses it: "In writing he united to the highest erudition an equal amount of the most ardent piety; so that whilst enlightening his readers he also touched their hearts penetrating to the inmost recesses of their souls" (Bull, *Triumphantis Jerusalem*). St.

Antoninus, Denis the Carthusian, Louis of Granada, and Father Claude de la Colombière, among others, have also noted this feature of Bonaventure's writings. Invariably he aims at arousing devotion as well as imparting knowledge. He never divorces the one from the other, but treats learned subjects devoutly and devout subjects learnedly. Bonaventure, however, never sacrifices truth to devotion, but his tendency to prefer an opinion which arouses devotion to a dry and uncertain speculation may go far towards explaining not a little of the widespread popularity his writings enjoyed among his contemporaries and in all succeeding ages. Again Bonaventure is distinguished from the other Scholastics not only by the greater warmth of his religious teaching, but also by its practical tendency as Trithemius notes (*Scriptores Eccles.*). Many purely speculative questions are passed over by Bonaventure; there is a directness about all he has written. No useful purpose, he declares, is achieved by mere controversy. He is ever tolerant and modest. Thus while he himself accepts the literal interpretations of the first chapter of Genesis, Bonaventure acknowledges the admissibility of a different one and refers with admiration to the figurative explanation propounded by St. Augustine. He never condemns the opinions of others and emphatically disclaims anything like finality for his own views. Indeed he asserts the littleness of his authority, renounces all claims to originality and calls himself a "poor compiler". No doubt Bonaventure's works betray some of the defects of the learning of his day, but there is nothing in them that savours of useless subtlety. "One does not find in his pages", writes Gerson (*De Examin. Doctrin.*) "vain trifles or useless cavils, nor does he mix as do so many others, worldly digressions with serious theological discussions". "This", he adds, "is the reason why St. Bonaventure has been abandoned by those Scholastics who are devoid of piety of whom the number is alas! but too large". It has been said that Bonaventure's mystical spirit unfitted him for subtle analysis. Be this as it may, one of the greatest charms of Bonaventure's writings is their simple clearness. Though he had necessarily to make use of the Scholastic method, he rose above dialectics, and though his argumentation may at times seem too cumbersome to find approval in our time, yet he writes with an ease and grace of style which one seeks in vain among the other Schoolmen. To the minds of his contemporaries impregnated with the mysticism of the Middle Ages, the spirit that breathed in Bonaventure's writings seemed to find its parallel only in the lives of those that stand nearest to the Throne, and the title of "Seraphic Doctor" bestowed upon Bonaventure is an undeniable tribute to his all-absorbing love for God. This title seems to have been first given to him in 1333 in the Prologue of the "Pantheologia" by Rayner of Pisa, O.P. He had already received while teaching in Paris the name of *Doctor Devotus*.

The Franciscan Order has ever regarded Bonaventure as one of the greatest Doctors and from the beginning his teaching found many distinguished expositors within the order, among the earliest being his own pupils, John Peckham later Archbishop of Canterbury, Matthew of Aquasparta, and Alexander of Alexandria (d. 1314), both of whom became ministers general of the order. The last named wrote a "Summa questionum S. Bonaventurae". Other well-known commentaries are by John of Erfurt (d. 1317), Vorilongus (d. 1464), Brulifer (d. c. 1497), de Combes (d. 1570), Trigosus (d. 1616), Coriolano (d. 1625), Zamora (d. 1649), Bontemps (d. 1672), Hauzeur (d. 1676), Bonelli (d. 1773), etc. From the fourteenth to the sixteenth century the influence of Bonaventure was undoubtedly somewhat overshadowed by that of

Duns Scotus, owing largely to the prominence of the latter as champion of the Immaculate Conception in the disputes between the Franciscans and Dominicans. Sixtus V, however, founded a special chair at Rome for the study of St. Bonaventure; such chairs also existed in several universities, notably at Ingolstadt, Salzburg, Valencia, and Osuna. It is worthy of note that the Capuchins forbade their Friars to follow Scotus and ordered them to return to the study of Bonaventure. The centenary celebrations of 1874 appear to have revived interest in the life and work of St. Bonaventure. Certain it is that since then the study of his writings has steadily increased.

Unfortunately not all of Bonaventure's writings have come down to us. Some were lost before the invention of printing. On the other hand, several works have in the course of time been attributed to him which are not his. Such are the "Centiloquium", the "Speculum Disciplinæ", which is probably the work of Bernard of Besse, Bonaventure's secretary; the rhythmical "Philomela", which seems to be from the pen of John Peckham; the "Stimulus Amoris" and the "Speculum B. M. V.", written respectively by James of Milan and Conrad of Saxony; "The Legend of St. Clare", which is by Thomas of Celano; the "Meditationes vitæ Christi" composed by a Friar Minor for a Poor Clare, and the "Biblia pauperum" of the Dominican Nicholas of Hanapia. Those familiar with the catalogues of European libraries are aware that no writer since the Middle Ages had been more widely read or copied than Bonaventure. The earliest catalogues of his works are those given by Salimbene (1282), Henry of Ghent (d. 1293), Ubertino of Casale (1305), Ptolemy of Lucca (1327) and the "Chronicle of the XXIV Generals" (1368). The fifteenth century saw no less than fifty editions of Bonaventure's works. More celebrated than any preceding edition was that published at Rome (1588-96) by order of Sixtus V (7 vols. in fol.). It was reprinted with but slight emendations at Metz in 1609 and at Lyons in 1678. A fourth edition appeared at Venice (13 vols. in 4to) 1751, and was reprinted at Paris in 1864. All these editions were very imperfect in so far as they include spurious works and omit genuine ones. They have been completely superseded by the celebrated critical edition published by the Friars Minor at Quaracchi, near Florence. Any scientific study of Bonaventure must be based upon this edition, upon which not only Leo XIII (13 December, 1885) and Pius X (11 April, 1904), but scholars of all creeds have lavished the highest encomiums. Nothing seems to have been omitted which could make this edition perfect and complete. In its preparation the editors visited over 400 libraries and examined nearly 52,000 MSS. while the first volume alone contains 20,000 variant readings. It was commenced by Father Fidelis a Fanna (d. 1881) and completed by Father Ignatius Jeller (d. 1904): "Doctoris Seraphici S. Bonaventuræ S. R. E. Episcopi Cardinalis Opera Omnia, edita studio et curâ P. P. Collegii S. Bonaventuræ in fol. ad Claras Aquas [Quaracchi] 1882-1902". In this edition the works of the saint are distributed through the ten volumes as follows: the first four contain his great "Commentaries on the Book of Sentences"; the fifth comprises eight smaller scholastic works such as the "Breveloquium" and "Itinerarium"; the sixth and seventh are devoted to his commentaries on Scripture; the eighth contains his mystical and ascetic writings and works having special reference to the order; the ninth his sermons; whilst the tenth is taken up with the index and a short sketch of the saint's life and writings by Father Ignatius Jeller.

We do not possess any formal, contemporary biography of St. Bonaventure. That written by

the Spanish Franciscan, Zamorra, who flourished before 1300, has not been preserved. The references to Bonaventure's life contained in the works of Salimbene (1282), Bernard of Besse (c. 1380) Bl. Francis of Fabriano (d. 1322), Angelo Clareno (d. 1337), Ubertino of Casale (d. 1338), Bartholomew of Pisa (d. 1399) and the "Chronicle of the XXIV Generals" (c. 1368), are given in vol. X of the Quaracchi Edition (pp. 39-72).

PASCHAL ROBINSON.

**Bonaventure, MARY STEPHEN.** See NAGPUR, DIOCESE OF.

**Boncompagni, BALTHASAR,** an Italian mathematician, b. at Rome, 10 May, 1821; d. 13 April, 1894. He was a member of the illustrious family to which had belonged Gregory XIII, the reformer of the calendar. He studied mathematics and physics under Santucci and became known as a prolific writer on mathematical and historical subjects. At an early age (1840) he contributed to the "Giornale Arcadico" biographical sketches of Father Joseph Calandrelli, director of the observatory of the Roman College after the suppression of the Society of Jesus, and his assistant Conti. These were followed by his "Recherches sur les intégrales définies", which appeared in "Crelle's Journal" (Berlin). In 1846 the "Giornale Arcadico" published his "Studi intorno ad alcuni avanzamenti della fisica in Italia nei secoli

XVI e XVIII". In 1847 he became a member of the Accademia dei Lincei and shortly after its librarian.

Boncompagni contributed much to the study of the history of mathematics by his "Bolletino", which he founded in 1868 and conducted until 1887. To it he contributed numerous essays, biographies, reviews, etc. Among his essays published before the founding of the "Bolletino" may be mentioned, "Della vita e delle opere di Gherardo Cremonese traduttore del secolo XII" (1850); "Gherardo da Sabionetta, astronomo del secolo XIII" (1851); "Della vita e delle opere di Guido Bonatti" (1851); "Memoria sopra Leonardo" (1854); "Saggio intorno ad alcune opere di Leonardo" (1854); "Tre scritti inediti di Leonardo da un manoscritto dell' Ambrosiana di Milano" (Florence, 1854); "Intorno ad una proprietà dei numeri" (in the "Annali delle scienze matematiche e fisiche" 1855); "Scritti inediti del P. D. Pietro Cossali" (1857); "Dissertazione intorno ad un trattato di aritmetica stampato nel 1478" (in the "Atti dei Nuovi Lincei" 1862-63). In 1857 Boncompagni also published the "Algoritmi de numero Indorum" which he had found in the Library of Cambridge University. It is supposed to be a translation of the famous treatise on arithmetic of Al-khwarizmi, the most illustrious of the Arabian mathematicians. *Nuova Enciclopedia Italiana, Suppl.*, 6th ed., Turin; BALL, *Hist. of Mathematics* (New York, 1888).

H. M. BROCK.

**Bonet, JUAN PABLO**, a Spanish priest and one of the first to give attention to the education of the deaf and dumb, b. towards the end of the sixteenth century. He became secretary of the High Constable of Castile. The latter's brother being a deaf-mute, Bonet took his education in hand. To make his pupil understand words and speak them he invented a system of visible signs and of gymnastics for pronunciation. This consisted in certain signs representing to the sense of sight the sounds of words, in exercises of breathing in the formation of sounds and to adapt the different organs of articulation, the lips, tongue, and teeth, to the proper pronunciation of each sound. He reduced his system to practice by means of a manual alphabet—a combination of signs made with the hands representing the various letters—and a description of the dispositions of the vocal organ necessary to the pronunciation of each letter. He succeeded fairly well with his pupil and explained the principles of his system in a book, "Reducción de las letras y arte para enseñar á hablar los mudos" (Madrid, 1620).

KENELM DIGBY, *Of Bodies and of Man's Soul* (London, 1669); DE L'ÉPÉE, *Instruction des sourds-muets* (Paris, 1776); DE GERANDO, *De l'éducation des sourds-muets* (Paris, 1827).

G. M. SAUVAGE.

**Bonet, NICHOLAS**, Friar Minor, theologian, and missionary, date of birth uncertain; d. 1360. Probably a Frenchman by birth, he taught theology with great success at Paris, where he received the title of "Doctor Pacificus" (The Peaceful Doctor) on account of his suave and tranquil mode of lecturing. Bonet took an important part in the dispute concerning the beatific vision which was warmly discussed during the pontificate of John XXII and finally settled by the decree of his successor, Benedict XII, "Benedictus Deus". As a member of the papal embassy sent by Benedict XII to Kublai Khan, grandson of the famous conqueror Genghis Khan, Bonet exchanged the comparative ease and comfort of the professor of theology for the arduous and perilous labours of the missionary. The Franciscan missions in Tatar were founded as early as the year 1245 by the zealous apostles of the Faith, Lorenzo da Portogallo and Giovanni da Pian Carpino; and in his desire to see the great work which was inaugurated by them and continued by the saintly Archbishop

John of Monte Corvino kept up and extended, the great khan was induced to send an embassy to Benedict XII to petition for new labourers in the missions of Asia. The pope received the legates with every mark of honour and, according to the wish of the Mongolian monarch, commissioned four religious of the order of Friars Minor as his legates, on whom he conferred all the Apostolic faculties and privileges necessary for their missionary labours. These were John of Florence, afterwards Bishop of Bisignano in Calabria, Nicholas Bonet, Nicolas da Molano, and Gregory of Hungary. The embassy bearing letters from the pope to the khan left Avignon towards the end of the year 1338, and after a long and arduous journey arrived at Peking in China, the residence of the Tatar emperor at the beginning of 1342. The missionaries were encouraged in their apostolic labours by the kindly attitude of Kublai Khan and succeeded in founding numerous Christian settlements throughout the vast Mongolian empire. About the year 1346 they set out again for Italy. Part of the homeward journey they made by sea and the remainder, from the Kingdom of Persia, by land, arriving in Avignon at the beginning of the year 1354. Shortly after the return of the missionaries, Bonet was consecrated titular Bishop of Mileve in Africa in recognition of his devoted services while on the mission of Mongolia. Among the writings of Nicholas Bonet, the "Tractatus de conceptione B. Mariæ Virginis jussu Clementis V scriptus", the "Formalitates e Doctrinâ Scoti" and his "Commentarius in IV libros sententiarum" deserve special mention.

STEPHEN M. DONOVAN.

**Bonfrère, JACQUES**, Biblical scholar, b. at Dinant, Belgium, 12 April, 1573; d. at Tournai, 9 May, 1642. He entered the Society of Jesus in 1592. After having taught rhetoric, philosophy, and theology, he devoted himself to the Sacred Scriptures. He was long a professor of Scripture and Hebrew at Douai, where he was superior of the Scots College. Sweett, in his "Athenæ Belgicæ", speaks of him as a man of rare virtue; he praises his industry and prudence, as well as the penetration of his mind and the solidity of his judgment. His work in the department of Sacred Scriptures, into which, he tells us, he had been initiated by Cornelius à Lapide, has always been highly appreciated. His "Præloquia" was, in 1839, selected by Migne as the most suitable treatise or general introduction with which to begin his "Sacra Scripturæ Cursus Completus" (I, cols. 5-242). In this work Bonfrère deals with subjects pertaining to the Bible as a whole. His selection and treatment of topics was determined largely by the controversies of the time regarding the value of the Vulgate, the obscurity of Scripture, etc. But many of them still retain their interest; and they are all handled in a clear and interesting way. The historical methods now applied to the canon, text, and hermeneutics of Sacred Scripture were not known in his time. He deals with inspiration in one chapter (ch. viii: *De modo quo Deus cum hisce Scriptoribus hagiographis habuit*). The views he sets forth here do not in all respects agree with the teaching of modern theologians. He holds, for instance, that approval of a writing by God, subsequent to its composition, would suffice to make it canonical. In point of fact, though, he assures us, no book of the Bible was so composed. Then he expresses the opinion that when writing on what they knew without revelation, the sacred authors only had the assistance necessary to preserve them from error. He does not

make a clear distinction between inspiration and revelation. (See Pesch, "De Inspiratione," Nos. 323 and 324.)

The "Præloquia" were published along with a commentary on the Pentateuch in a volume entitled: "Pentateuchus Mosis commentario illustratus, præmissis præloquiis perutilibus" (fol., Antwerp, 1625). This was followed by his commentary on Josue, Judges, and Ruth, to which he added a treatise on sacred geography, composed by Eusebius and translated by St. Jerome: "Josue, Judices et Ruth commentario illustrati. Accessit Onomasticon" (fol., Paris, 1631). Bonfrère had undertaken to explain the Books of Kings before his work on the Pentateuch, he tells us in his preface to the latter; but he had felt the need of going back to the beginning of things. His "Libri Regum et Paralipomenon commentariis illustrati", was given to the press at Tournai, in 1643, after his death. But the printing-house was burned, and the work did not appear. Bibliographers have no reference even to the MSS. The learned professor is said to have left commentaries on nearly all the other books of the Bible. Bonfrère's explanation of the text of Scripture shows a very good knowledge of Hebrew, and he pays special attention to the places mentioned. His erudition was extensive for his time. The soberness and judiciousness of his comments are generally admired.

W. S. REILLY.

**Boniface** (WINFRID, WYNFRITH), SAINT, Apostle of Germany, date of birth unknown; martyred 5 June, 755 (754); emblems: the oak, axe, book, fox, scourge, fountain, raven, sword. He was a native of England, though some authorities have claimed him for Ireland or Scotland. The place of his birth is not known, though it was probably in the south-western part of Wessex. Crediton (Kirtton) in Devonshire is given by more modern authors. The same uncertainty exists in regard to the year of his birth. It seems, however, safe to state that he was not born before 672 or 675, or as late as 680. Descended from a noble family, from his earliest years he showed great ability, and received a religious education. His parents intended him for secular pursuits, but, inspired with higher ideals by missionary monks who visited his home, Winfrid felt himself called to a religious state. After much difficulty he obtained his father's permission and went to the monastery of Adescancastre on the site of the present city of Exeter, where, under the direction of Abbot Wolfhard, he was trained in piety and learning. About seven years later he went to the Abbey of Nhutscelle (Nuthalling) between Winchester and Southampton. Here, leading an austere and studious life under Abbot Winbert, he rapidly advanced in sanctity and knowledge, excelling especially in the profound understanding of the Sacred Scriptures, of which he gives evidence in his letters. He was also well educated in history, grammar, rhetoric, and poetry. He made his profession as a member of the Benedictine Order and was placed in charge of the monastic school. At the age of thirty he was ordained priest. Through his abbot the fame of Winfrid's learning soon reached high civil and ecclesiastical circles. He also had great success as a preacher. With every prospect of a great career and the highest dignities in his own country, he had no desire for human glory, for the thought of bringing the light of the Gospel to his kindred, the Old Saxons, in Germany, had taken possession of his mind. After many requests Winfrid at last obtained the permission of his abbot.

In 716 he set out for the mission in Friesland. Since the Faith had already been preached there by Wigbert, Willibrord, and others, Winfrid expected to find a good soil for his missionary work, but po-

litical disturbances caused him to return temporarily to England. Towards the end of 717 Abbot Winbert died, and Winfrid was elected to succeed him, but declined and induced Daniel, Bishop of Winchester, to influence the monks to elect another. Winfrid was left free to follow out his intentions, but before going back to his apostolic work he wished to visit Rome and to obtain from the pope the apostolic mission and the necessary faculties. Bishop Daniel gave him an open letter of recommendation to kings, princes, bishops, abbots, and priests, and a private letter to the pope. On Winfrid's arrival in Rome, in the fall of 718, Pope Gregory II received him kindly, praised his resolution, and, having satisfied himself in various conferences as to the orthodoxy of Winfrid, his morals, and the purity of his motives, on 15 May, 719, he gave him full authority to preach the Gospel to the heathens in Germany to the right of the Rhine, ordering him at the same time to adhere to the Roman practice in the administration of the Sacrament of Baptism, and to consult with the Holy See in case of difficulties.

Having received instructions to make his first journey through the country, only a tour of inspection, he travelled through Bavaria and found the Church flourishing, with a number of churches and monasteries. In Alamannia, which he crossed on his way to Thuringia, he found similar conditions. Thuringia was considered by Rome as Christian, and the mission of Winfrid was supposed to be that of an authorized reformer. He found the country, however, in a sad condition. St. Kilian had laboured with energy, but without success. Duke Gotzbert and some years later his son, Hethan II, both converts of St. Kilian, had been murdered, perhaps on account of their injudicious zeal in trying to spread Christianity. Great numbers of their rebellious subjects had lapsed into heathenism, or a mixture of Christianity and idolatry. Winfrid tried to enkindle a missionary spirit in the priests and to make the people live up to the pure precepts of the Christian religion. Though he converted some of the heathens, he did not meet with the success which he had anticipated. On his way to the court of Charles Martel, possibly to interest that prince in the matter, he received news of the death of the Frisian King Radbod, and went to Friesland. Here he spent three years under the aged St. Willibrord, travelling about with tireless energy, and preaching fearlessly as he went. Multitudes of Christians who had fallen away during the persecution of Radbod were brought to repentance and thousands of pagans accepted the Faith. Many of the converts were brought together to lead a religious life under the Rule of St. Benedict. St. Willibrord, feeling the weight of his years, wished to make Winfrid his assistant and successor in the See of Utrecht. Winfrid refused, giving as his main reason that the pope had sent him for missionary work. He therefore left and followed in the wake of the army of Charles Martel as far as Trier. Near this city was the Abbey of Pfalz (Palatiolum). From there he took with him as a disciple and companion Gregory, a boy of about fourteen or fifteen, afterwards abbot in Utrecht, and continued his journey to Thuringia, where he converted many. He then went into Hessa, where many more were brought into the fold of Christ. With the assistance of two chiefs whom he had converted he established a monastic cell at Amöneburg at the River Ohm (then called Amana) in Upper Hessa, as a kind of missionary centre in which native clergy were to be educated.

While Winfrid was under the jurisdiction of St. Willibrord he had no special reason for reporting to the Holy See, but, now working independently, he considered it his duty to do so. He therefore sent Bynnan, one of his disciples, with a letter to Gregory II, recounting his labours of the past years and asking

for further directions. Bynnan promptly executed his commission and soon returned with the pope's answer, expressing satisfaction with what had been done and a desire to confer with Winfrid personally. Winfrid accordingly set out for Rome, taking his course through France and Burgundy. He was warmly welcomed by the pope, who questioned him carefully, made him take the usual oath of allegiance, received from him a profession of faith, and on 30 November, 722 (723), consecrated him a regional bishop, with the name Boniface. Some say that Winfrid had taken this name at the time of his religious profession; others, that he received it on his first visit to Rome. The same discrepancy of opinion exists in regard to its derivation from *bonum facere* or *bonum fatum*; perhaps it is only an approximate Latinization of Wyn-frith. Pope Gregory then sent Boniface back with letters to his diocesans in Thuringia and Hessa demanding obedience for their new bishop. A letter was also addressed to Charles Martel asking his protection. Boniface himself had received a set of ecclesiastical canons for his guidance.

Boniface returned to Upper Hessa and repaired the losses which occurred during his absence, many having drifted back into paganism; he also administered everywhere the Sacrament of Confirmation. He continued his work in Lower Hessa. To show the heathens how utterly powerless were the gods in whom they placed their confidence, Boniface felled the oak sacred to the thunder-god Thor, at Geismar, near Fritzlar. He had a chapel built out of the wood and dedicated it to the prince of the Apostles. The heathens were astonished that no thunderbolt from the hand of Thor destroyed the offender, and many were converted. The fall of this oak marked the fall of heathenism. Tradition tells us that Boniface now passed on to the River Werra and there erected a church of St. Vitus, around which sprang up a town which to the present day bears the name of Wannfried. At Eschwege he is said to have destroyed the statue of the idol Stufio. Thence he went into Thuringia.

The difficulties that confronted him here were very great. Christianity had indeed made great progress, but it had become mixed up with heretical tenets and pagan customs. This was due to a great extent to some Celtic missionaries, several of whom had never been ordained, while others had been raised to the priesthood by non-Catholic bishops, though all performed priestly functions. These taught doctrines and made use of ceremonies at variance with the teaching and use of the Roman Church, especially in regard to the celebration of Easter, the conferring of baptism, celibacy, the papal and episcopal authority. Besides, many were wanting in education, some scarcely able to read or write, and equally ready to hold services for the Christians and to offer sacrifices to the idols for the heathens. A neighbouring bishop (probably of Cologne) also gave trouble, by laying claim to a part of the district under Boniface's jurisdiction and treating his authority as an intrusion, thereby indirectly strengthening the party of the heretics. All this caused him great anxiety and suffering, as may be seen from his letters to England. He overcame all, thanks to his episcopal dignity and to his own personality, full of courage and zeal in the cause which he defended, and supported by the authority of the pope and of Charles Martel. His friends helped him not only by their prayers, but also by material aid. Many valuable books, ecclesiastical articles, and the like were sent to him with words of encouragement. Numbers of men and women went to Germany at different times to be his helpers. Among them were Lullus, Denehard, Burchard, Wigbert, Sola, Witta (called also Wizo and Albinus) Wunibald, Willibald and the pious women Lioba, Chunihild, Chunitruide, Berthgit, Walburga, and Thecla. With these, and others re-

cruited in Thuringia and elsewhere in Germany, he continued his labours. The number of the faithful increased wonderfully, including many of the nobility and the educated of the country. These assisted him in the building of churches and chapels. Boniface took care to have institutions in which religious life would be fostered. In Thuringia he built the first monastery Ohrdruf on the River Ohr near Altenberga. He appointed Thecla Abbess of Kitzingen, Lioba of Bischofsheim, and Walburga of Heidenheim.

Pope Gregory II died 11 February, 731, and was succeeded on 18 March by Gregory III. Boniface hastened to send a delegation to the new pontiff, to pay his respects and to assure him of his fidelity. The answer to this seems to be lost. In 732 Boniface wrote again and stated among other things that the work was becoming too much for one man. In answer Gregory III congratulated him on his success and praised his zeal, in recognition sending him the pallium, and making him an archbishop, but still without a fixed see. He gave him instructions to appoint bishops wherever he thought it necessary. Boniface now enlarged the monastery of Amöneburg and built a church, dedicating it to St. Michael. Another monastery he founded at Fritzlar near the River Eder, which was completed in 734. The church, a more magnificent structure, was not finished before 740. In 738 Boniface made his third journey to Rome, intending to resign his office and devote himself exclusively to the mission among the Saxons. He was accompanied by a number of his disciples, who were to see true Christian life in the centre of Christianity. Gregory III received him graciously and was rejoiced at the result of Boniface's labour, but would not allow him to resign. Boniface remained in Rome for about a year and then returned to his mission invested with the authority of a legate of the Holy See. His first care on his return was the Church in Bavaria.

In 715 (716) Duke Theodo had come to Rome out of devotion, but probably also to secure ecclesiastical order in his provinces. Gregory II sent three ecclesiastics with instructions to do away with abuses. Their work, however, was rendered futile by the death of Theodo in 717 and the subsequent political quarrels. Boniface had twice passed through the country. Now with the help of Duke Odilo and of the nobles, he began the work of reorganization acting entirely according to the instructions of Gregory II. He examined the orders of the clergy, deposed the obstinate, reordained those whose ordination he found invalid, provided they had erred through ignorance and were willing to submit to authority. He made a new circumscription of the dioceses and appointed bishops for the vacant sees, viz., the Abbot John to the See of Salzburg, vacant since the death of St. Rupert in 718; Erembert to Freising, vacant since the death of his brother, St. Corbinian, in 730; Gaubald for Ratisbon. Passau had been established and provided for by the pope himself through the nomination of Vivilo. About this time Boniface founded the new Diocese of Buraburg, and named Witta as its bishop. This diocese existed only for a short time, during the administration of two bishops, and was then joined to Augsburg. Somewhat later the dioceses of Eichstätt and Erfurt (Erphesfurt) were formed, and Willibald was consecrated bishop for the former about October, 741; for the latter Boniface appointed as first (and last) bishop Adalar, who, it seems, never received episcopal consecration, as he is continually spoken of as a priest. Burchard was chosen for Würzburg.

Charles Martel had died 22 October, 741, at Quiercy on the Oise and was succeeded by his sons Carloman and Pepin. In Rome Pope Gregory III died 28 November, 741, and was followed by Zachary. Carloman asked Boniface, his former preceptor, to a consultation. The result of this was a letter to the pope

in which Boniface reported his actions in Bavaria and asked advice in various matters. He also stated the wish of Carloman that a synod be held. In answer Pope Zachary, 1 April, 742, confirmed the erection of the dioceses, sanctioned the holding of the synod, and gave the requested information. The synod, partly ecclesiastical and partly secular, was held 21 April, 742, but the place cannot be ascertained. The bishops appointed by Boniface were present and several others, but it was mainly the authority of Boniface and the power of Carloman that gave weight to the first German synod. Among its decrees the most noteworthy are those ordaining the subjection of the clergy to the bishop of the diocese, and forbidding them to take any active part in wars, to carry arms, or to hunt. Very strict regulations were made against carnal sins on the part of priests and religious. The Rule of St. Benedict was made a norm for religious. Laws were also enacted concerning marriage within the forbidden degrees of kindred. A second national synod was held 1 March, 743, at Liptina in Hainault, and another at Soissons, 2 March, 744. In this synod a sentence of condemnation was passed against two heretics, Adalbert and Clement, the former a native of Gaul, the latter of Ireland. They were again condemned in 745 and also at a synod held in Rome. Several other synods were held in Germany to strengthen faith and discipline. At the request of Carloman and Pepin the authority of Boniface over Bavaria was confirmed and extended over Gaul.

In 744 St. Willibrord, Bishop of Utrecht, died, and Boniface took the diocese under his charge, appointing an assistant or *chor-episcopus*. About the same time the See of Cologne became vacant through the death of Ragenfried, and it was the intention of Boniface as well as the wish of Pope Zachary to make this his archiepiscopal see, but the clergy opposed. Before the project could be carried out the Diocese of Mainz lost its bishop through the deposition of Gewilib who led a very irregular life and had killed the slayer of his father, who was his predecessor in the episcopal office. Pope Zachary, 1 May, 748 (747), appointed Boniface Archbishop of Mainz and Primate of Germany. The new archdiocese comprised the dioceses of Tongem, Cologne, Worms, Speyer, Utrecht, and the dioceses erected by Boniface himself: Buraburg, Eichstätt, Erfurt, and Würzburg. Of Augsburg, Coire, and Constance the decree does not speak, but they are shortly afterwards mentioned as belonging to the province. After a few years Boniface was able to reconcile his enemies with the Holy See, so that the supremacy of the pope was acknowledged in Great Britain, Germany, and Gaul, as well as in Italy.

In 747 Carloman resigned his share of the government to his brother Pepin and left to spend the remainder of his days as a monk. He built a monastery in honour of St. Silvester at Soracte near Rome, and later retired to Monte Cassino. His motives for this are not known, but perhaps he was frightened at the severity of the measures he had felt himself obliged to use in order to obtain a union among the German tribes. Pepin, now the sole ruler, became the founder of the Carolingian dynasty. That Boniface had anything to do with the disestablishment of the old royal family and the introduction of a new one cannot be proved. He did not mingle in the politics of the country, except in this, that he did all in his power to convert the people to the true Faith, and to bring them into spiritual subjection to the Roman pontiff. It is generally stated that Boniface anointed and crowned Pepin by order of the pope, though this is denied by some.

The rest of his life Boniface spent in confirming what he had achieved in Germany. This he did by frequently holding synods and by enforcing the

sacred canons. He did much for true religious life in the monasteries, especially at Fulda, which had been established under his supervision by St. Sturm, and into which Boniface retired yearly to train the monks and to spend some days in prayer and meditation. At his request Pope Zachary exempted the abbey from all episcopal jurisdiction and placed it under the immediate care of the Holy See. This was something new for Germany, though already known and practised in Italy and England. It seems that Boniface's last act as Archbishop of Mainz was the repudiation of the claim of the Archbishop of Cologne to the Diocese of Utrecht. The matter was laid before Pepin, who decided against Cologne. The same decision must have been given by Pope Stephen II (III) who had become the successor of Zachary, 26 March, 752, for after that time no further claim was made by Cologne. No change was made until the ninth century, when Cologne was made an archdiocese and Utrecht one of its suffragan sees. Boniface appointed Abbot Gregory as administrator of Utrecht, and Eoban, who had been assistant, he took as his companion.

When Boniface saw that all things had been properly taken care of, he took up the work he had dreamed of in early manhood, the conversion of the Frisians. With royal consent, and with that of the pope previously given, he in 754 resigned the Archdiocese of Mainz to his disciple Lullus, whom in 752 he had consecrated bishop, again commenced a missionary tour, and laboured with success to the East of the Zuider Zee. Returning in the following year, he ordered the new converts to assemble for confirmation at Dokkum on the River Borne. The heathens fell upon them and murdered Boniface and fifty-two companions (according to some, thirty-seven). Soon afterwards, the Christians, who had scattered at the approach of the heathens, returned and found the body of the martyr and beside him the blood-stained copy of St. Ambrose on the "Advantage of Death". The body was taken to Utrecht, afterwards through the influence of Lullus removed to Mainz, and later, according to a wish expressed by the saint himself during his lifetime, to the Abbey of Fulda. Portions of his relics are at Louvain, Mechlin, Prague, Bruges, and Erfurt. A considerable portion of an arm is at Eichfeld. His grave soon became a sanctuary, to which the faithful came in crowds especially on his feast and during the Octave. England is supposed to have been the first place where his martyrdom was celebrated on a fixed day. Other countries followed. On 11 June, 1874, Pope Pius IX extended the celebration to the entire world. Brewers, tailors, and file-cutters have chosen St. Boniface as their patron, also various cities in Germany. The writings of St. Boniface which have been preserved are: "Collection of Letters"; "Poems and Riddles"; "Poenitentiale"; "Compendium of the Latin Language"; "Compendium of Latin Prosody"; "Sermons" (doubtful).

FRANCIS MERSHMAN.

**Boniface I, SAINT, Pope;** elected 28 December, 418; d. at Rome, 4 September, 422. Little is known of his life antecedent to his election. The "Liber Pontificalis" calls him a Roman, and the son of the presbyter Jocundus. He is believed to have been ordained by Pope Damasus I (366-384) and to have served as representative of Innocent I at Constantinople (c. 405).

At the death of Pope Zosimus, the Roman Church entered into the fifth of the schisms, resulting from double papal elections, which so disturbed her peace

during the early centuries. Just after Zosimus's obsequies, 27 December, 418, a faction of the Roman clergy consisting principally of deacons seized the Lateran basilica and elected as pope the Archdeacon Eulalius. The higher clergy tried to enter, but were violently repulsed by a mob of adherents of the Eulalian party. On the following day they met in the church of Theodora and elected as pope, much against his will, the aged Boniface, a priest highly esteemed for his charity, learning, and good character. On Sunday, 29 December, both were consecrated, Boniface in the Basilica of St. Marcellus, supported by nine provincial bishops and some seventy priests; Eulalius in the Lateran basilica in the presence of the deacons, a few priests and the Bishop of Ostia, who was summoned from his sickbed to assist at the ordination. Each claimant proceeded to act as pope, and Rome was thrown into tumultuous confusion by the clash of the rival factions. The Prefect of Rome, Symmachus, hostile to Boniface, reported the trouble to the Emperor Honorius at Ravenna, and secured the imperial confirmation of Eulalius's election. Boniface was expelled from the city. His adherents, however, secured a hearing from the emperor who called a synod of Italian Bishops at Ravenna to meet the rival popes and discuss the situation (February, March, 419). Unable to reach a decision, the synod made a few practical provisions pending a general council of Italian, Gaulish, and African bishops to be convened in May to settle the difficulty. It ordered both claimants to leave Rome until a decision was reached and forbade return under penalty of condemnation. As Easter, 30 March, was approaching, Achilleus, Bishop of Spoleto, was deputed to conduct the paschal services in the vacant Roman See. Boniface was sent, it seems, to the cemetery of St. Felicitas on the Via Salaria, and Eulalius to Antium. On 18 March, Eulalius boldly returned to Rome, gathered his partisans, stirred up strife anew, and spurning the prefect's orders to leave the city, seized the Lateran basilica on Holy Saturday (29 March), determined to preside at the paschal ceremonies. The imperial troops were required to dispossess him and make it possible for Achilleus to conduct the services. The emperor was deeply indignant at these proceedings and refusing to consider again the claims of Eulalius, recognized Boniface as legitimate pope (3 April, 418). The latter re-entered Rome 10 April and was acclaimed by the people. Eulalius was made Bishop either of Nepi in Tuscany or of some Campanian see, according to the conflicting data of the sources of the "*Liber Pontificalis*". The schism had lasted fifteen weeks. Early in 420, the pope's critical illness encouraged the partisans of Eulalius to make another effort. On his recovery Boniface requested the emperor (1 July, 420) to make some provision against possible renewal of the schism in the event of his death. Honorius enacted a law providing that, in contested papal elections, neither claimant should be recognized and a new election should be held.

Boniface's reign was marked by great zeal and activity in disciplinary organization and control. He reversed his predecessor's policy of endowing certain Western bishops with extraordinary papal vicariate powers. Zosimus had given to Patroclus, Bishop of Arles, extensive jurisdiction in the provinces of Vienna, and Narbonne, and had made him an intermediary between these provinces and the Apostolic See. Boniface diminished these primatial rights and restored the metropolitan powers of the chief bishops of provinces. Thus he sustained Hilary, Archbishop of Narbonne in his choice of a bishop of the vacant See of Lodeve, against Patroclus, who tried to intrude another (422). So, too, he insisted that Maximus, Bishop of Valence, should

be tried for his alleged crimes, not by a primate, but by a synod of the bishops of Gaul, and promised to sustain their decision (419). Boniface succeeded to Zosimus's difficulties with the African Church regarding appeals to Rome and, in particular, the case of Aparius. The Council of Carthage, having heard the representations of Zosimus's legates, sent to Boniface on 31 May, 419, a letter in reply to the *commonitorium* of his predecessor. It stated that the council had been unable to verify the canons which the legates had quoted as Nicene, but which were later found to be Sardican. It agreed, however, to observe them until verification could be established. This letter is often cited in illustration of the defiant attitude of the African Church to the Roman See. An unbiased study of it, however, must lead to no more extreme conclusion than that of Dom Chapman: "it was written in considerable irritation, yet in a studiously moderate tone" (Dublin Review, July, 1901, 109-119). The Africans were irritated at the insolence of Boniface's legates and incensed at being urged to obey laws which they thought were not consistently enforced at Rome. This they told Boniface in no uncertain language; yet, far from repudiating his authority, they promised to obey the suspected laws, thus recognizing the pope's office as guardian of the Church's discipline. In 422 Boniface received the appeal of Anthony of Fussula who, through the efforts of St. Augustine, had been deposed by a provincial synod of Numidia, and decided that he should be restored if his innocence be established. Boniface ardently supported St. Augustine in combating Pelagianism. Having received two Pelagian letters calumniating Augustine, he sent them to him. In recognition of this solicitude Augustine dedicated to Boniface his rejoinder contained in "*Contra duas Epistolas Pelagianorum Libri quatuor*".

In the East he zealously maintained his jurisdiction over the ecclesiastical provinces of Illyricum, of which the Patriarch of Constantinople was trying to secure control on account of their becoming a part of the Eastern empire. The Bishop of Thessalonica had been constituted papal vicar in this territory, exercising jurisdiction over the metropolitans and bishops. By letters to Rufus, the contemporary incumbent of the see, Boniface watched closely over the interests of the Illyrian church and insisted on obedience to Rome. In 421 dissatisfaction expressed by certain malcontents among the bishops, on account of the pope's refusal to confirm the election of Perigines as Bishop of Corinth unless the candidate was recognized by Rufus, served as a pretext for the young emperor Theodosius II to grant the ecclesiastical dominion of Illyricum to the Patriarch of Constantinople (14 July, 421). Boniface remonstrated with Honorius against the violation of the rights of his see, and prevailed upon him to urge Theodosius to rescind his enactment. The law was not enforced, but it remained in the Theodosian (439) and Justinian (529) codes and caused much trouble for succeeding popes. By a letter of 11 March, 422, Boniface forbade the consecration in Illyricum of any bishop whom Rufus would not recognize. Boniface renewed the legislation of Pope Soter, prohibiting women to touch the sacred linens or to minister at the burning of incense. He enforced the laws forbidding slaves to become clerics. He was buried in the cemetery of Maximus on the Via Salaria, near the tomb of his favourite, St. Felicitas in whose honour and in gratitude for whose aid he had erected an oratory over the cemetery bearing her name. The Church keeps his feast on 25 October.

lation, §§ 120, 122; DUCHESNE, *Fastes Episcopaux de l'Antienne Gaul* (Paris, 1894), I, 84-109; *Les Eglises Séparées* (Paris, 1905), 229-279; BUCHANAN in *Dict. Christ. Biog.*, s. v.; GREGOROVITUS-HAMILTON, *Hist. of Rome in the Middle Ages* (London, 1894), I, 180-181.

JOHN B. PETERSON.

**Boniface II**, POPE, elected 17 September, 530; d. October, 532. In calling him the son of Sigisbald, the "Liber Pontificalis" makes first mention of a pope's Germanic ancestry. Boniface served the Roman Church from early youth. During the reign of Pope Felix IV, he was archdeacon and a personage of considerable influence with the ecclesiastical and civil authorities. His elevation to the papacy is remarkable as offering an unquestionable example of the nomination of a pope by his predecessor, without even the formality of an election. Felix IV apprehending death and fearing a contest for the papacy between Roman and Gothic factions, gathered about him several of his clergy and a number of Roman Senators and patricians who happened to be near. In their presence, he solemnly conferred on his aged archdeacon the pallium of papal sovereignty, proclaiming him his successor and menacing with excommunication those refusing to recognize and obey Boniface as validly chosen pope. On Felix's death Boniface assumed succession, but nearly all of the Roman priests, sixty out of perhaps about seventy, refused to accept him and elected Dioscorus. They feared the undue influence in papal affairs of the Ostrogothic King Athalaric, whose grandfather, Theodoric I, had helped to elect Pope Felix IV, a circumstance rendering more odious the latter's nomination of Boniface. Both popes were consecrated 22 September, 530, Boniface in the basilica of Julius, and Dioscorus in the Lateran. The Roman Church was thus involved in the seventh anti-papal schism. Fortunately it endured but twenty-two days, for Dioscorus died 14 October, leaving Boniface in possession. He soon convened a Roman synod and presented a decree anathematizing his late rival to which he secured the signatures of the priests who had been Dioscorus's partisans (December, 530). Each of these expressed regret for their participation in the irregular election and pledged future obedience. Boniface reconciled many by his mild, conciliatory administration, but some resentment remained, for he seems not to have been tendered a formal election by those who, despite their submission, had impugned the validity of his nomination; and five years later a pope of their own choice solemnly burned the anathema against Dioscorus. (See AGAPETUS I.) In a second synod, held (531) in St. Peter's, Boniface presented a constitution attributing to himself the right to appoint his successor. The Roman clergy subscribed to it and promised obedience. Boniface proposed as his choice the deacon Vigilius and it was ratified by priests and people. This enactment provoked bitter resentment and even imperial disfavour, for in a third synod (531) it was rescinded. Boniface burned the constitution before the clergy and senate and nullified the appointment of Vigilius.

The reign of Boniface was marked by his active interest in diverse affairs of the Western and Eastern churches. Early in his pontificate he confirmed the acts of the Second Council of Orange, one of the most important of the sixth century, which effectually terminated the Semipelagian controversies. Its presiding officer, Cæsarius, Archbishop of Arles, an intimate friend of Boniface, had, previous to the latter's succession, sent the priest Armenius to Rome to ask Boniface to secure the pope's confirmation of the council. Being himself pope when the messenger came, Boniface sent a letter of confirmation to Cæsarius (25 January, 531) in which he condemned certain Semipelagian doctrines. He received an appeal from the African bishops, who were labouring

at the reorganization of their church after the Vandal devastation, requesting him to confirm in primatial rights the Archbishop of Carthage, that the latter might be better able to profit by the help of the Roman See. In the east he asserted the rights of the pope to jurisdiction in Illyricum. (See BONIFACE I.) In 531, Epiphanius, Patriarch of Constantinople, declared irregular the election of Stephen to the Archbishopric of Larissa in Thessaly. Despite the severe measures taken in Constantinople to thwart his purpose, Stephen appealed to Rome on the ground that Epiphanius was not competent to decide the case, maintaining his point in terms which reveal a clear conception of Roman primacy. Boniface convened a fourth Roman synod 7-9 December, 531, in which some twenty-five documents were adduced in support of Rome's claim to jurisdiction in Illyricum. The outcome of the synod is not known. Boniface was esteemed for his charity, particularly towards the suffering poor of Rome during a year of famine. He was buried in St. Peter's, 17 October, 532, where a fragment of his epitaph may yet be seen (Dufresne, *Les Cryptes Vaticanes*, Rome, 1902).

*Liber Pontificalis*, ed. DUCHESNE (Paris, 1886), pp. xi-xli, 281-284; JAFFÉ, *Regesta Romanorum Pontificum* (Leipzig, 1885), I, 111-112; *Acta SS.*, XIII, 78-79; BARONIUS, *Annales Ecc.* (Bar-le-Duc, 1867), IX, 389-405; HEFELÉ, *Conciliengeschichte*, and translations §§ 242, 244; P. L., LXV, 29-48; LXXXIV, 675-680.

On the election of Boniface no literature is reliable which antedates 1883, when AMELLI published the documents on which he comments in *Scuola Cattolica* (Milan), XXI, fascic. 123; DUCHESNE, *La succession du Pape Félix IV in Mélanges de l'Ecole de Rome* (1883), III, 238, 266; CRAIGIE in *Ecclesiastical Review* (January, 1903), XXVIII, 41-50; EWALD, *Acten zum Schisma des Jahres 530 in Neues Archiv*, (1885-86); GREGOROVITUS-HAMILTON, *Hist. of the City of Rome in the Middle Ages* (London, 1894), I, 346-348; HUTTON, *The Church of the Sixth Century* (London, 1897).

JOHN B. PETERSON.

**Boniface III-VII**, POPES.—**BONIFACE III**, POPE, of Roman extraction and the son of John Cataadiocce, was elected to succeed Sabinian after an interregnum of nearly a year; he was consecrated 19 February, 607; d. 12 November of the same year. He had been ordained a deacon of the Roman Church, and in 603 sent by Gregory the Great as *apocrisiarius*, or legate, to the court of Constantinople, where, by his tact and prudence, he appears to have gained the favourable regard of the Emperor Phocas. After his elevation to the See of Rome, Boniface obtained a decree from Phocas, against Cyriacus, Bishop of Constantinople, by which it was ordained, that "the See of Blessed Peter the Apostle should be the head of all the Churches", and that the title of "Universal Bishop" belonged exclusively to the Bishop of Rome—an acknowledgment somewhat similar to that made by Justinian eighty years before (Novell., 131, c. ii, tit. xiv). At Rome Boniface held a council, attended by seventy-two bishops and all the Roman clergy, wherein he enacted a decree forbidding anyone under pain of excommunication, during the lifetime of a pope or of a bishop, to treat of or to discuss the appointment of his successor, and setting forth that no steps were to be taken to provide for a successor until three days after the burial of the deceased. The acts of the council are lost, and it is not known what may have been the occasion for the decree. Pope Boniface was a man "of tried faith and character" (St. Greg., ep. xiii, 41). He died within a year of his elevation and was buried in St. Peter's. His epitaph is found in the works of Duchesne and Mann.

**BONIFACE IV**, SAINT, POPE, son of John, a physician

a Marsian from the province and town of Valeria; he succeeded Boniface III after a vacancy of over nine months; consecrated 25 August, 608; d. 8 May, 615 (Duchesne); or, 15 September, 608—25 May, 615 (Jaffé). In the time of Pope St. Gregory the Great he was a deacon of the Roman Church and held the position of *dispensator*, i. e. the first official in connexion with the administration of the patrimonies. Boniface obtained leave from the Emperor Phocas to convert the Pantheon into a Christian Church, and on 13 May, 609 (?) the temple erected by Agrippa to Jupiter the Avenger, to Venus, and to Mars was consecrated by the pope to the Virgin Mary and all the Martyrs. (Hence the title *S. Maria ad Martyres*; from its shape also called *S. Maria Rotunda*.) It was the first instance at Rome of the transformation of a pagan temple into a place of Christian worship. Twenty-eight cartloads of sacred bones were said to have been removed from the Catacombs and placed in a porphyry basin beneath the high altar. During the pontificate of Boniface, Mellitus, the first Bishop of London, went to Rome "to consult the pope on important matters relative to the newly established English Church" (Bede, H. E., II, iv). Whilst in Rome he assisted at a council then being held concerning certain questions on "the life and monastic peace of monks", and, on his departure, took with him to England the decrees of the council together with letters from the pope to Lawrence, Archbishop of Canterbury, and to all the clergy, to King Ethelbert, and to all the English people "concerning what was to be observed by the Church of England". The decrees of the council now extant are spurious. The letter to Ethelbert (in William of Malmesbury, *De Gest. Pont.*, I, 1464, ed. Migne) is considered spurious by Hefele (*Conciliengeschichte*, III, 66), questionable by Haddan and Stubbs (*Councils*, III, 65), and genuine by Jaffé (*Regest. R.R. PP.*, 1998 [1548]).

Between 612-615, St. Columban, then living at Bobbio in Italy, was persuaded by Agilulf, King of the Lombards, to address a letter on the condemnation of the "Three Chapters" to Boniface IV, which is remarkable at once for its expressions of exaggerated deference and its tone of excessive sharpness. In it he tells the pope that he is charged with heresy (for accepting the Fifth Council, i. e. Constantinople, 553), and exhorts him to summon a council and prove his orthodoxy. But the letter of the impetuous Celt, who failed to grasp the import of the theological problem involved in the "Three Chapters", seems not to have disturbed in the least his relation with the Holy See, and it would be wrong to suppose that Columban regarded himself as independent of the pope's authority. During the pontificate of Boniface there was much distress in Rome owing to famine, pestilence, and inundations. The pontiff died in monastic retirement (he had converted his own house into a monastery) and was buried in the portico of St. Peter's. His remains were three times removed—in the tenth or eleventh century, at the close of the thirteenth under Boniface VIII, and to the new St. Peter's on 21 October, 1603. For the earlier inscription on his tomb see Duchesne; for the later, Grisar, "*Analecta Romana*", I, 193. Boniface IV is commemorated as a saint in the Roman Martyrology on 25 May.

*Liber Pontificalis* (ed. DUCHESNE), I, 317; JAFFÉ, *Regesta R.R. PP.* (2nd ed.), I, 220; *Acta et Epistolæ in Mansi*, X, 501; PAUL THE DEACON, *Hist. Longobard.*, IV, 36 (37); GASQUET, *A Short History of the Catholic Church in England* (London, 1903), 19; HUNT, *A History of the English Church from its Foundation to the Norman Conquest* (London, 1901), 42; MANN, *Lives of the Popes*, I, 268-279; VON REUMONT, *Gesch. der Stadt Rom* (Berlin, 1867), II, 156, 165; GREGOROVIVS, II, 104; LANGEN, 501.

BONIFACE V, POPE, a Neapolitan who succeeded Deusdedit after a vacancy of more than a year; consecrated 23 December, 619; d. 25 October, 625. Be-

fore his consecration Italy was disturbed by the rebellion of the eunuch Eleutherius, Exarch of Ravenna. The patrician pretender advanced towards Rome, but before he could reach the city, he was slain by his own troops. The "*Liber Pontificalis*" records that Boniface made certain enactments relative to the rights of sanctuary, and that he ordered the ecclesiastical notaries to obey the laws of the empire on the subject of wills. He also prescribed that acolytes should not presume to translate the relics of martyrs, and that, in the Lateran Basilica, they should not take the place of deacons in administering baptism. Boniface completed and consecrated the cemetery of St. Nicomedes on the Via Nomentana. From the Venerable Bede we learn of the pope's affectionate concern for the English Church. The "letters of exhortation" which he is said to have addressed to Mellitus, Archbishop of Canterbury, and to Justus, Bishop of Rochester, are no longer extant, but certain other letters of his have been preserved. One is written to Justus, after he had succeeded Mellitus as Archbishop of Canterbury (624), conferring the pallium upon him and directing him to "ordain bishops as occasion should require". According to Bede, Pope Boniface also sent letters to Edwin, King of Northumbria (625), urging him to embrace the Christian Faith, and to the Christian Princess Ethelberga, Edwin's spouse, exhorting her to use her best endeavours for the conversion of her consort (Bede, H. E., II, vii, viii, x, xi). In the "*Liber Pontificalis*" Boniface is described as "the mildest of men", whose chief distinction was his great love for the clergy. He was buried in St. Peter's, 25 October, 625. His epitaph is found in Duchesne.

*Liber Pontificalis* (ed. DUCHESNE), I, 321-322; JAFFÉ, *Regesta R.R. PP.* (2nd ed.), I, 222; *Letters in Mansi*, X, 547-554, and in BEDE, *Hist. Eccles. Gent. Angl.*; MANN, *Lives of the Popes*, etc., I, 294-303; GASQUET, *A Short History of the Catholic Church in England*, 19; HUNT, *A History of the English Church*, etc., 49, 56, 58; GREGOROVIVS, II, 113; LANGEN, 506; JUNGSMANN, *Dissertationes*, II, 389.

BONIFACE VI, POPE, a Roman, elected in 896 by the Roman faction in a popular tumult, to succeed Formosus. He had twice incurred a sentence of deprivation of orders, as a subdeacon and as a priest. At the Council of Rome, held by John IX in 898, his election was pronounced null. After a pontificate of fifteen days, he is said by some to have died of the gout, by others to have been forcibly ejected to make way for Stephen VI, the candidate of the Spoletan party.

*Liber Pontificalis* (ed. DUCHESNE), II, 228; IDEM, *Les premiers temps de l'état pontifical* (2nd ed., Paris, 1904), 299; JAFFÉ, *Regesta R.R. PP.*, I, 439; JUNGSMANN, *Dissertationes*, IV, 22.

BONIFACE VII, ANTIPOPE (previously BONIFACE FRANCO), a Roman and son of Ferrucius, was intruded into the Chair of St. Peter in 974; reinstalled, 984; d. July, 985. In June, 974, one year after the death of Emperor Otto I, Crescentius the son of Theodora and brother of John XIII, stirred up an insurrection at Rome, during which the Romans threw Benedict VI into the Castle of Sant' Angelo, and elevated as his successor the Cardinal-Deacon Franco, who took the name of Boniface VII. The imprisoned pontiff was speedily put to death by the intruder. But in little more than a month the imperial representative, Count Sicco, had taken possession of the city, and Boniface, not being able to maintain himself, robbed the treasury of the Vatican Basilica and fled to Constantinople. After an exile of nine years at Byzantium, Franco, on the death of Otto II, 7 December, 983, quickly returned to Rome, overpowered John XIV (April, 984), thrust him into the dungeons of Sant' Angelo, where the wretched man died four months later, and again assumed the government of the Church. The usurper had never ceased to look upon himself as the lawful pontiff, and reckoned the

years of his reign from the deposition of Benedict VI in 974. For more than a year Rome endured this monster steeped in the blood of his predecessors. But the vengeance was terrible. After his sudden death in July, 985, due in all probability to violence, the body of Boniface was exposed to the insults of the populace, dragged through the streets of the city, and finally, naked and covered with wounds, flung under the statue of Marcus Aurelius, which at that time stood in the Lateran Place. The following morning compassionate clerics removed the corpse and gave it Christian burial.

THOMAS OESTREICH.

**Boniface VIII, POPE (BENEDETTO GAETANI)**, b. at Anagni about 1235; d. at Rome, 11 October, 1303. He was the son of Loffred, a descendant of a noble family originally Spanish, but long established in Italy—first at Gaeta and later at Anagni. Through his mother he was connected with the house of Segni, which had already given three illustrious sons to the Church, Innocent III, Gregory IX, and Alexander IV. Benedetto had studied at Todi and at Spoleto in Italy, perhaps also at Paris, had obtained the doctorate in canon and civil law, and been made a canon successively at Anagni, Todi, Paris, Lyons, and Rome. In 1265 he accompanied Cardinal Ottobuono Fieschi to England, whither that prelate had been sent to restore harmony between Henry III and the rebellious barons. It was not until about 1276 that Gaetani entered upon his career in the Curia, where he was, for some years, actively engaged as consistorial advocate and notary Apostolic, and soon acquired considerable influence. Under Martin IV, in 1281, he was created Cardinal-Deacon of the title of S. Nicolò in carcere Tulliano, and ten years later, under Nicholas IV, Cardinal-Priest of the title of SS. Silvestro e Martino ai Monti. As papal legate he served with conspicuous ability in France and in Sicily (H. Finke, *Aus den Tagen Bonifaz VIII*, Münster, 1902, I sqq., 9 sqq.).

On the 13th of December, 1294, the saintly but wholly incompetent hermit-pope Celestine V, who five months previously, as Pietro di Murrahone, had been taken from his obscure mountain cave in the wilds of the Abruzzi and raised to the highest dignity in Christendom, resigned the intolerable burden of the papacy. The act was unprecedented and has been frequently ascribed to the undue influence and pressure of the designing Cardinal Gaetani. That the elevation of the inexperienced and simple-minded recluse did not commend itself to a man of the stamp of Gaetani, reputed the greatest jurist of his age and well-skilled in all the arts of curial diplomacy, is highly probable. But Boniface himself declared, through Agidius Colonna, that he had at first dissuaded Celestine from taking the step. And it has now been almost certainly established that the idea of resigning the papacy first originated in the mind of the sorely perplexed Celestine himself, and that the part played by Gaetani was at most that of a counsellor, strongly advising the pontiff to issue a constitution, either before or simultaneously with his abdication, declaring the legality of a papal resignation and the competency of the College of Cardinals to accept it. [See especially H. Schulz, Peter von Murrahone—Papst Celestin V—in *Zeitschrift für Kirchengeschichte*, xvii (1897), 481 sqq.; also Finke, op. cit., 39 sqq.; and R. Scholz, *Die Publizistik zur Zeit Philipps des Schönen und Bonifaz VIII*, Stuttgart, 1903, 3.] Ten days after Cele-

tine the Fifth's *gran rifiuto* the cardinals went into conclave in the Castel Nuovo at Naples, and on the 24th of December, 1294, by a majority of votes elected Cardinal Benedetto Gaetani, who took the name of Boniface VIII. (For details of the election see Finke, op. cit., 44-54.) With the approval of the cardinals, the new pope immediately revoked (27 December, 1294) all the extraordinary favours and privileges which "in the fullness of his simplicity" Celestine V had distributed with such reckless prodigality. Then, early in January of the following year, in spite of the rigour of the season, Boniface set out for Rome, determined to remove the papacy as soon as possible from the influence of the Neapolitan court. The ceremony of his consecration and coronation was performed at Rome, 23 January, 1295, amid scenes of unparalleled splendour and magnificence. King Charles II of Naples and his son Charles Martel, titular king and claimant of Hungary, held the reins of his gorgeously accoutred snow-white palfrey as he proceeded on his way to St. John Lateran, and later, with their crowns upon their heads, served the pope with the first few dishes at table before taking their places amongst the cardinals. On the following day the pontiff issued his first encyclical letter, in which, after announcing Celestine's abdication and his own accession, he depicted in the most glowing terms the sublime and indefectible nature of the Church.

The unusual step taken by Celestine V had aroused much opposition, especially among the religious parties in Italy. In the hands of the Spirituals, or Fraticelli, and the Celestines—many of whom were not as guileless as their saintly founder—the former pontiff, if allowed to go free, might prove to be a dangerous instrument for the promotion of a schism in the Church. Boniface VIII, therefore, before leaving Naples, ordered Celestine V to be taken to Rome in the custody of the Abbot of Monte Cassino. On the way thither the saint escaped and returned to his hermitage near Sulmona. Apprehended again, he fled a second time, and after weary weeks of roaming through the woods of Apulia reached the sea and embarked on board a vessel about to sail for Dalmatia. But a storm cast the luckless fugitive ashore at Vieste in the Capitanata, where the authorities recognized and detained him. He was brought before Boniface in his palace at Anagni, kept in custody there for some time, and finally transferred to the strong Castle of Fumone at Ferentino. Here he remained until his death ten months later, 19 May, 1296. The detention of Celestine was a simple measure of prudence for which Boniface VIII deserves no censure; but the rigorous treatment to which the old man of over eighty years was subjected—whoever may have been responsible for it—will not be easily condoned. Of this treatment there can now no longer be any question. The place wherein Celestine was confined was so narrow "that the spot whereon the saint stood when saying Mass was the same as that whereon his head lay when he reclined" (*quod, ubi tenebat pedes ille sanctus, dum missam diceret, ibi tenebat caput, quando quiescebat*), and his two companions were frequently obliged to change places because the constraint and narrowness made them ill. (In this connexion see the very important and valuable paper "S. Pierre Célestin et ses premiers Biographes" in "Analecta Bolland.", XVI, 365-487; cf. Finke, op. cit., 267.)

Thoroughly imbued with the principles of his great and heroic predecessors, Gregory VII and Innocent III, the successor of Celestine V entertained most exalted notions on the subject of papal supremacy in ecclesiastical as well as in civil matters, and was ever most pronounced in the assertion of his claims. By his profound knowledge of the canons of the Church, his keen political instincts, great practical

experience of life, and high talent for the conduct of affairs, Boniface VIII seemed exceptionally well qualified to maintain inviolate the rights and privileges of the papacy as they had been handed down to him. But he failed either to recognize the altered temper of the times, or to gauge accurately the strength of the forces arrayed against him; and when he attempted to exercise his supreme authority in temporal affairs as in spiritual, over princes and people, he met almost everywhere with a determined resistance. His aims of universal peace and Christian coalition against the Turks were not realized; and during the nine years of his troubled reign he scarcely ever achieved a decisive triumph. Though certainly one of the most remarkable pontiffs that have ever occupied the papal throne, Boniface VIII was also one of the most unfortunate. His pontificate marks in history the decline of the medieval power and glory of the papacy.

Boniface first endeavoured to settle the affairs of Sicily, which had been in a very distracted condition since the time of the Sicilian Vespers (1282). Two rivals claimed the island, Charles II, King of Naples, in right of his father Charles of Anjou, who had received it from Clement IV, and James II, King of Aragon, who derived his claims from the Hohenstaufen, through his mother Constance, the daughter of Manfred. James II had been crowned King of Sicily at Palermo in 1286, and had thereby incurred the sentence of excommunication for daring to usurp a fief of the Holy See. On his succession to the throne of Aragon, after the death of his brother Alfonso III, in 1291, James agreed to surrender Sicily to Charles II on condition that he should receive the latter's daughter, Blanche of Naples, in marriage, together with a dowry of 70,000 pounds of silver. Boniface VIII, as liege lord of the island, ratified this agreement 21 June, 1295, and further sought to reconcile the conflicting elements by restoring James II to peace with the Church, confirming him in his possession of Aragon, and granting him the islands of Sardinia and Corsica, which were fiefs of the Holy See, in compensation for the loss of Sicily. By these measures Boniface VIII merely adhered to the traditional policy of the papacy in dealing with Sicilian affairs; there is no evidence to show that, either before or shortly after his election, he had pledged himself in any way to recover Sicily for the House of Anjou. Sicily was not, however, pacified by this agreement between the pope and the kings of Aragon and Naples. Threatened with a renewal of the detested rule of the French, the inhabitants of that island asserted their independence, and offered the crown to Frederick, the younger brother of James II. In an interview with Frederick at Velletri, the pope sought to dissuade him from accepting the offer by holding out prospects of a succession to the throne of Constantinople and a marriage with Princess Catherine of Courtenay, granddaughter and heir of Baldwin II, the last Latin Emperor of the East. But the young prince would not be dissuaded. The papal legate was expelled from the island, and, against the protests of Boniface VIII, Frederick was crowned King of Sicily at Palermo, 25 March, 1296. He was at once excommunicated and the island placed under interdict. Neither the king nor his people paid any heed to the censures. At the instigation of the pope a war ensued, in which James of Aragon, as Captain-General of the Church, was compelled to take part against his own brother. The contest was brought to a close (1302) through the efforts of Prince Charles of Valois, whom the pope had called to his assistance in 1301. Frederick was to be absolved from the censures he had incurred, to marry Eleonora, younger daughter of Charles II, and to retain Sicily during his lifetime. After his death the island

should revert to the King of Naples. Though frustrated in his hopes, Boniface VIII ratified the treaty 12 June, 1303, and agreed to recognize Frederick as vassal of the Holy See.

In the meantime Boniface VIII had directed his attention also to the north of Italy, where, during a period of forty years, the two rival republics of Venice and Genoa had been carrying on a bitter contest for commercial supremacy in the Levant. A crusade was wellnigh impossible without the active co-operation of these two powers. The pope, therefore, commanded a truce until 24 June, 1296, and ordered both the contestants to send ambassadors to Rome with a view to arranging terms of peace. The Venetians were inclined to accept his mediation; not so the Genoese, who were elated by their success. The war continued till 1299, when the two republics were obliged finally to conclude peace from sheer exhaustion, but even then the intervention of the pope was rejected.

The efforts made by Boniface VIII to restore order in Florence and Tuscany proved equally futile. During the closing years of the thirteenth century the great Guelph city was torn asunder by the violent dissensions of the Bianchi and the Neri. The Bianchi or Whites, of Ghibelline tendencies, represented the popular party and contained some of the most distinguished men in Florence—Dante Alighieri, Guido Cavalcanti, and Dino Compagni. The Neri or Blacks, professing the old Guelph principles, represented the nobles or aristocracy of the city. Each party as it gained the ascendancy sent its opponents into exile. After a vain attempt to reconcile the leaders of the two parties, Vieri dei Cerchi and Corso Donati, the pope sent Cardinal Matteo d'Acquasparta as papal legate to mediate and establish peace at Florence. The legate met with no success and soon returned to Rome leaving the city under an interdict. Towards the end of 1300, Boniface VIII summoned to his aid Charles of Valois, brother of Philip the Fair. Appointed Captain-General of Church and invested with the governorship of Tuscany (in consequence of the vacancy of the empire), the French prince was given full powers to effect the pacification of the city. Valois arrived at Florence on 1 November, 1301. But instead of acting as the official peace-maker of the pope, he conducted himself as a ruthless destroyer. After five months of his partisan administration, the Neri were supreme and many of the Bianchi exiled and ruined—among them Dante Alighieri. Beyond drawing on himself and the pope the bitter hatred of the Florentine people, Charles had accomplished nothing. (Levi, *Bonifazio VIII e le sue relazioni col commune di Firenze*, in *Archiv. Soc. Rom. di Storia Patria*, 1882, V, 365-474. Cf. Franchetti, *Nuova Antologia*, 1883, 23-38.) It may be noted here that many scholars of repute seriously question Dante's famous embassy to Boniface VIII in the latter part of 1301. The only contemporary evidence to support the poet's mission is a passage in Dino Compagni, and even that is looked upon by some as a later interpolation.

While thus endeavouring to promote peaceful relations between various states in Northern and Southern Italy, Boniface had himself become engaged in a desperate struggle at Rome with two rebellious members of the Sacred College, Jacopo Colonna and his nephew Pietro Colonna. The Colonna cardinals were Roman princes of the highest nobility and belonged to a powerful Italian family that had numerous palaces and strongholds in Rome and in the Campagna. The estrangement which took place between them and Boniface, early in 1297, was owing chiefly to two causes. Jacopo Colonna, upon whom the administration of the vast Colonna family possessions had been conferred, violated the rights of his brothers,

Matteo, Ottone, and Landolfo, by appropriating the property rightfully belonging to them, and bestowing it on his nephews. To obtain redress they appealed to the pope, who decided in their favour, and repeatedly admonished the cardinal to deal justly with his brothers. But the cardinal and his nephews bitterly resented the pope's intervention and obstinately refused to abide by his decision. Moreover, the Colonna cardinals had seriously compromised themselves by maintaining highly treasonable relations with the political enemies of the pope—first with James II of Aragon, and later with Frederick III of Sicily. Repeated warnings against this alliance having availed nothing, Boniface, in the interests of his own security, ordered the Colonna to receive papal garrisons in Palestrina—the ancestral home of the family—and in their fortresses Zagarolo and Colonna. This they declined to do and forthwith broke off all relations with the pope. On the 4th of May, 1297, Boniface summoned the cardinals to his presence, and when, two days later (6 May), they appeared, he commanded them to do three things: to restore the consignment of gold and silver which their relative Stefano Colonna had seized and robbed from the pope's nephew, Pietro Gaetani, as he was bringing it from Anagni to Rome; to deliver up Stefano as a prisoner to the pope; and to surrender Palestrina together with the fortresses Zagarolo and Colonna. They complied with the first of these demands, but rejected the other two. Thereupon Boniface on the 10th of May, 1297, issued a Bull, "*In excelso throno*", depriving the rebellious cardinals of their dignities, pronouncing sentence of excommunication against them, and ordering them, within a space of ten days, to make their submission under penalty of forfeiting their property. On the morning of the same day (10 May) the Colonna had attached to the doors of several Roman churches, and even laid upon the high altar of St. Peter's, a manifesto, in which they declared the election of Boniface VIII invalid on the ground that the abdication of Celestine V was uncanonical, accused Boniface of circumventing his saintly predecessor, and appealed to a general council from whatever steps might be taken against them by the pope. This protest, compiled at Longhezza, with the assistance of Fra Jacopone da Todi and of two other Spirituals, had somewhat anticipated the papal Bull, in answer to which, however, the Colonna issued the second manifesto (16 May) containing numerous charges against Boniface and appealing anew to a general council. The pope met this bold proceeding with increased severity. On the 23rd of May, 1297, a second Bull, "*Lapis abscessus*", confirmed the previous excommunication, and extended it to the five nephews of Jacopo with their heirs, declared them schismatics, disgraced, their property forfeited, and threatened with the interdict all such places as received them. Boniface at the same time pointed out how the Colonna cardinals had themselves favoured his election (in the conclave they had voted for Gaetani from the first, as they had been among those who counselled Celestine's abdication), had publicly acknowledged him as pope, attended his coronation, entertained him as their guest at Zagarolo, taken part in his consistories, signed all state documents with him, and had for nearly three years been his faithful ministers at the altar. The rebels replied with a third manifesto (15 June), and immediately set about preparing their fortresses for defense.

Boniface now withdrew from Rome to Orvieto, where, on the 4th of September, 1297, he declared war and entrusted the command of the pontifical troops to Landolfo Colonna, a brother of Jacopo. In December of the same year he even proclaimed a crusade against his enemies. The fortresses and castles of the Colonna were taken without much

difficulty. Palestrina (Præneste), the best of their strongholds, alone held out for some time, but in September, 1298, it too was forced to surrender. Dante says it was got by treachery by "long promises and short performances" as Guido di Montefeltro counselled, but the tale of the implacable Ghibelline has long since been discredited. Clad in mourning, a cord around their necks, the two cardinals, with other members of the rebellious family, came to Rieti to cast themselves at the feet of the pontiff and implore his forgiveness. Boniface received the captives amid all the splendours of the papal court, granted them pardon and absolution, but refused to restore them to their dignities. Palestrina was razed to the ground, the plough driven through and salt strewn over its ruins. A new city—the Città Papale—later replaced it. When shortly afterwards the Colonna organized another revolt (which was however speedily suppressed), Boniface once more proscribed and excommunicated the turbulent clan. Their property was confiscated, and the greater part of it bestowed on Roman nobles, more especially on Landolfo Colonna, the Orsini, and on the relatives of the pope. The Colonna cardinals and the leading members of the family now withdrew from the States of the Church—some seeking shelter in France, others in Sicily. (Denifle, see below, and Petrine, *Memorie Prænestine*, Rome, 1795.)

Early in the reign of Boniface, Eric VIII of Denmark had unjustly imprisoned Jens Grand, Archbishop of Lund. Isarnus, Archpriest of Carcassonne, was commissioned (1295) by Boniface to threaten the king with spiritual penalties, unless the archbishop were freed, pending the investigation of the matter at Rome, whither the king was invited to send representatives. The latter were actually sent, but were met at Rome by Archbishop Grand, who had in the meanwhile escaped. Boniface decided for the archbishop, and, when the king refused to yield, excommunicated him and laid the kingdom under interdict (1298). In 1303 Eric yielded, though his adversary was transferred to Riga and his see given (1304) to the legate Isarnus. In Hungary Charobert or Canrobert of Naples claimed the vacant crown as descendant of St. Stephen on the distaff side, and was supported by the pope in his quality of traditional overlord and protector of Hungary. The nobles, however, elected Andrew III, and on his early demise (1301) chose Ladislaus, son of Wenceslaus II of Bohemia. They paid no heed to the interdict of the papal legate, and the arbitration of Boniface was finally declined by the envoys of Wenceslaus. The latter had accepted from the Polish nobles the Crown of Poland, vacant owing to the banishment (1300) of Ladislaus I. The solemn warning of the pope and his protest against this violation of his right as overlord of Poland were unheeded by Wenceslaus, who soon, moreover, allied himself with Philip the Fair.

In Germany, on the death of Rudolph of Hapsburg (1291), his son Albert, Duke of Austria, declared himself king. The electors, however, chose (1292) Count Adolph of Nassau, whereupon Albert submitted. Adolph's government proving unsatisfactory, three of the electors deposed him at Mainz (23 June, 1298) and enthroned Albert. The rival kings appealed to arms; at Gölheim, near Worms, Adolph lost (2 July, 1298) both life and crown. Albert was re-elected king by the Diet of Frankfurt and crowned at Aachen (24 August, 1298). The electors had sought regularly from Boniface recognition of their choice and imperial consecration. He refused both on the plea that Albert was the murderer of his liege lord. Very soon Albert was at war with the three Rhenish archbishop-electors, and in 1301 the pope summoned him to Rome to answer various charges. Victorious in battle (1302), Albert sent

agents to Boniface with letters in which he denied having slain King Adolph, nor had he sought the battle voluntarily, nor borne the royal title while Adolph lived, etc. Boniface eventually recognized his election (30 Apr., 1303). A little later (17 July) Albert renewed his father's oath of fidelity to the Roman Church, recognized the papal authority in Germany as laid down by Boniface (May, 1300), and promised to send no imperial vicar to Tuscany or Lombardy within the next five years without the pope's consent, and to defend the Roman Church against its enemies. In his attempt to preserve the independence of Scotland, Boniface was not successful: After the overthrow and imprisonment of John Baliol, and the defeat of Wallace (1298), the Scots Council of Regency sent envoys to the pope to protest against the feudal superiority of England. Boniface, they said, was the only judge whose jurisdiction extended over both kingdoms. Their realm belonged of right to the Roman See, and to none other. Boniface wrote to Edward I (27 June, 1299) reminding him, says Lingard, "almost in the very words of the Scottish memorial", that Scotland had belonged from ancient times and did still belong to the Roman See; the king was to cease all unjust aggression, free his captives, and pursue at the court of Rome within six months any rights that he claimed to the whole or part of Scotland. This letter reached the king after much delay, through the hands of Robert of Winchelsea, Archbishop of Canterbury, and was laid by Edward before a parliament summoned to meet at Lincoln. In its reply (27 Sept., 1300) the latter denied, over the names of 104 lay lords, the papal claim of suzerainty over Scotland, and asserted that a king of England had never pleaded before any judge, ecclesiastical or secular, respecting his rights in Scotland or any other temporal rights, nor would they permit him to do so, were he thus inclined (Lingard, II, ch. vii). The king, however (7 May, 1301), supplemented this act by a memoir in which he set forth his royal view of the historical relations of Scotland and England. In their reply to this plea the representatives of Scotland re-assert the immemorial suzerainty of the Roman Church over Scotland "the property, the peculiar allodium of the Holy See"; in all controversies, they said, between these equal and independent kingdoms it is to their equal superior, the Church of Rome, that recourse should be had. This somewhat academic conflict soon seemed hopeless at Rome, owing to the mutual violence and quarrels of the weaker party (Bellesheim, "Hist. of the Cath. Church of Scotland", London, 1887, II, 9-11), and is of less importance than the strained relations between Boniface and Edward, apropos of the unjust taxation of the clergy.

In 1294, of his own authority, Edward I sequestered all moneys found in the treasuries of all churches and monasteries. Soon he demanded and obtained from the clergy one half their incomes, both from lay fees and benefices. In the following year he called for a third or a fourth, but they refused to pay more than a tenth. When, at the Convocation of Canterbury (November, 1296), the king demanded a fifth of their income, the archbishop, Robert of Winchelsea, in keeping with the new legislation of Boniface, offered to consult the pope, whereupon the king outlawed the clergy, secular and regular, and seized all their lay fees, goods, and chattels. The northern Province of York yielded; in the Province of Canterbury many resisted for a time, among them the courageous archbishop, who retired to a rural parish. Eventually he was reconciled with the king, and his goods were restored, but as Edward soon after demanded in his own right a third of all ecclesiastical revenues, his recognition of the Bull "*Clericis laicos*" was evanescent.

The memorable conflict with Philip the Fair of

France began early in the pope's reign and did not end even with the tragic close of his pontificate. The pope's chief aim was a general European peace, in the interest of a crusade that would break forever, at what seemed a favourable moment, the power of Islam. The main immediate obstacle to such a peace lay in the war between France and England, caused by Philip's unjust seizure of Gascony (1294). The chief combatants carried on the war at the expense of the Church, whose representatives they sorely taxed. Such taxation had often been permitted in the past by the popes, but only for the purpose (real or alleged) of a crusade; now it was applied in order to raise revenue for ecclesiastics for purely secular warfare. The legates sent by Boniface to both kings a few weeks after his elevation accomplished little; later efforts were rendered useless by the stubborn attitude of Philip. In the meantime numerous protests from the French clergy moved the pope to action, and with the approval of his cardinals he published (24 Feb., 1296) the Bull "*Clericis laicos*", in which he forbade the laity to exact or receive, and the clergy to give up, ecclesiastical revenues or property, without permission of the Apostolic See; princes imposing such exactions and ecclesiastics submitting to them were declared excommunicated. Other popes of the thirteenth century, and the Third and Fourth Lateran Councils (1179, 1215), had legislated similarly against the oppressors of the clergy; apart, therefore, from the opening line of the Bull, that seemed offensive as reflecting on the laity in general (*Clericis laicos infensos esse oppido tradit antiquitas*, i. e., "All history shows clearly the enmity of the laity towards the clergy,"—in reality a byword in the schools and taken from earlier sources), there was nothing in its very general terms to rouse particularly the royal anger. Philip, however, was indignant, and soon retaliated by a royal ordinance (17 Aug.) forbidding the export of gold or silver, precious stones, weapons, and food from his kingdom. He also forbade foreign merchants to remain longer within its bounds. These measures affected immediately the Roman Church, for it drew much of its revenue from France, inclusive of crusade moneys, whence the numerous papal collectors were henceforth banished. The king also caused to be prepared a proclamation (never promulgated) concerning the obligation of ecclesiastics to bear the public burden and the revocable character of ecclesiastical immunities. (For the generous contributions of the French clergy to the national burdens, see the exhaustive statistics of Bourgain in "Rev. des quest. hist.", 1890, XLVIII, 62.) In the Bull "*Ineffabilis Amor*" (20 Sept.) Boniface protested vigorously against these royal acts, and explained that he had never meant to forbid voluntary gifts from the clergy or contributions necessary for the defence of the kingdom, of which necessity the king and his council were the judges. During 1297 the pope sought in various ways to appease the royal embitterment, notably by the Bull "*Etsi de Statu*" (31 July), above all by the canonization (11 Aug., 1297) of the king's grandfather, Louis IX. The royal ordinance was withdrawn, and the painful incident seemed closed. In the meantime the truce which in 1296 Boniface had tried to impose on Philip and Edward was finally accepted by both kings early in 1298, for a space of two years. The disputed matters were referred to Boniface as arbiter, though Philip accepted him not as pope, but as a private person, as Benedetto Gaetano. The award, favourable to Philip, was issued (27 June) by Boniface in a public consistory.

In the Jubilee of 1300 the high spirit of Boniface might well recognize a compensation and a consolation for previous humiliations. This unique celebration, the apogee of the temporal splendour of the

papacy (Zaccaria, *De anno Jubilæi*, Rome, 1775), was formally inaugurated by the pope on the feast of Sts. Peter and Paul (29 June). Giovanni Villani, an eyewitness, relates in his Florentine chronicle that about 200,000 pilgrims were constantly in the City. It was necessary to make an opening in the wall of the Leonine City, near the Tiber, so that the multitude might have a larger freedom of movement. Pilgrims came from every country in Europe and even from distant Asia. Ominously enough, if we except the elder son of the King of Naples, none of the kings or princes of Europe came to pay their respects to the Vicar of Christ. The second crown in the papal tiara, indicative of the temporal power, is said to date from the reign of Boniface, and may have been added at this time.

In the meantime Philip continued in a merciless way his fiscal oppression of the Church, and abused more than ever the so-called *regalia*, or royal privilege of collecting the revenues of a diocese during its vacancy. Since the middle of 1297 the exiled Colonna had found refuge and sympathy at the court of Philip, whence they spread calumnious charges against Boniface, and urged the calling of a general council for his deposition. The royal absolutism was now further incited by suggestions of a universal Christian dominion under the hegemony of France. The new state was to secure, besides the Holy Land, a universal peace. Both empires, the Byzantine and the German, were to be incorporated in it, and the papacy was to become a purely spiritual patriarchy, its temporalities administered by the French king, who would pay the pope an annual salary corresponding to his office. Such was the new Byzantinism outlined in a work on the recovery of the Holy Land ("*De recuperatione terræ sanctæ*", in Bongars, "*Gesta Dei per Francos*", II, 316-61, ed. Langlois, Paris, 1891), and though only the private work of Pierre Dubois, a civil servant of Philip, it probably reflected some fantastic plan of the king (Finke, *Zur Charakteristik*, 217-18).

In the first half of 1301 Boniface commissioned Bernard de Saisset, Bishop of Pamiers (Languedoc), as legate to Philip. He was to protest against the continued oppression of the clergy, and to urge the king to apply conscientiously to a crusade the ecclesiastical tithes collected by papal indulgences. For various reasons De Saisset was not a welcome envoy (Langlois, *Hist. de France*, ed. Laviisse, III, 2, 143). On his return to Pamiers he was accused of treasonable speech and incitement to insurrection, was brought to Paris (12 July, 1301), thence to Senlis, where he was found guilty in a trial directed by Pierre Flote, and known to modern historians (Von Reumont) as "a model of injustice and violence". De Saisset in vain protested his innocence and denied the competency of the civil court; he was committed temporarily to the care of the Archbishop of Narbonne, while Pierre Flote and Guillaume de Nogaret went to Rome to secure from Boniface the degradation of his legate and his delivery to the secular authority. Boniface acted with decision. He demanded from the king the immediate liberation of De Saisset and wrote to the Archbishop of Narbonne to detain the latter no longer. By the Bull "*Salvator Mundi*" he withdrew the indulgences by which the French king collected canonically ecclesiastical revenue for the defence of the kingdom, i. e., he re-established in vigour the "*Clericis laicos*", and in the famous Bull "*Ausculda Fili*" (Listen, O Son) of 5 Dec., 1301, he stood forth as the mouthpiece of the medieval papacy, and as the genuine successor of the Gregories and the Innocents. In it he appeals to the king to listen to the Vicar of Christ, who is placed over kings and kingdoms (cf. Jer., i, 10). He is the keeper of the keys, the judge of the living and the dead, and sits on the throne of justice, with power to extirpate

all iniquity. He is the head of the Church, which is one and stainless, and not a many-headed monster, and has full Divine authority to pluck out and tear down, to build up and plant. Let not the king imagine that he has no superior, is not subject to the highest authority in the Church. The pope is concerned for the welfare of all kings and princes, but particularly for the house of France. He then goes on to relate his many grievances against the king, the application of ecclesiastical goods to secular uses, despotic procedure in dragging ecclesiastics before civil courts, hindrance of episcopal authority, disrespect for papal provisions of benefices, and oppression of the clergy. He will no longer be responsible for the protection (*custodia*) of the monarch's soul, but has decided, after consulting his cardinals, to call to Rome for 4 Nov., 1302, the French bishops and doctors of theology, principal abbots, etc., to "dispose what is suitable for the correction of abuses, and for the reformation of the king and the kingdom". He invites the king to be present personally or through representatives, warns him against his evil counsellors, and finally reminds him eloquently of the royal neglect of a crusade. An impartial reader, says Von Reumont, will see that the document is only a repetition of previous papal utterances and resumes the teaching of the most esteemed medieval theologians on the nature and extension of papal authority. It was presented to the king (10 Feb., 1302) by Jacques de Normans, Archdeacon of Narbonne. The Comte d'Artois tore it from the archdeacon's hands and cast it into the fire; another copy destined for the French clergy was suppressed (Hefele, 2d ed., VI, 329). In the place of the "*Ausculda Fili*", there was at once circulated a forged Bull, "*Deum time*" (Fear God), very probably the work of Pierre Flote, and with equal probability approved by the king. Its five or six brief haughty lines were really drawn up to include the fateful phrase, *Scire te volumus quod in spiritualibus et temporalibus nobis subes* (i. e., We wish thee to know that thou art our subject both in spiritual and in temporal matters). It was also added (an odious thing for the grandson of St. Louis) that whoever denied this was a heretic.

In vain did the pope and the cardinals protest against the forgery; in vain did the pope explain, a little later, that the subjection spoken of in his Bull was only *ratione peccati*, i. e., that the morality of every royal act, private or public, fell within the papal prerogative. The general tone of the "*Ausculda Fili*", its personal admonitions couched in severe Scriptural language, its proposal to provide from Rome a good and prosperous administration of the French Kingdom, were not calculated to soothe at this juncture the minds of Frenchmen already agitated by the events of the preceding years. It is also improbable that Boniface was personally very popular with the French secular clergy, whose petition (1290) against the encroachments of the regular orders he had rejected in his rough sarcastic manner, when legate at Paris (Finke in "*Römische Quartalschrift*", 1895, IX, 171; "*Journal des Savants*", 1895, 240). The national concern for the independence and honour of the French king was further heightened by a forged reply of the king to Boniface, known as "*Sciat maxima tua fatuitas*". It begins: "Philip, by the grace of God King of the Franks, to Boniface who acts as Supreme Pontiff. Let thy very great fatuity know that in temporal things we are subject to no one. . . ." Such a document, though probably never officially presented at Rome (Hefele), certainly made its way thither. After forbidding the French clergy to go to Rome or to send thither any moneys, and setting a watch on all roads, ports, and passes leading to Italy, Philip forestalled the pope's November council by a national assembly at

Paris (10 April, 1301) in the Cathedral of Notre Dame. The forged Bull was read before the representatives of the three estates; the pope was violently denounced by Pierre Flote as aiming at temporal sovereignty in France; the king besought as their friend, and as their ruler commanded all present to aid him with their counsel. Nobles and burghers offered to shed their blood for the king; the clergy, confused and hesitating, sought delay, but finally yielded so far as to write to the pope quite in the sense of the king. The lay estates directed to the cardinals a defiant protest, in which they withheld the papal title from Boniface, recounted the services of France to the Roman Church, and re-echoed the usual royal complaints, above all the calling to Rome of the principal ecclesiastics of the nation. The letter of the bishops was directed to Boniface and begged him to maintain the former concord, to withdraw the call for the council, and suggested prudence and moderation, since the laity was prepared to defy all papal censures. In the reply of the cardinals to the lay estates, they assert their complete harmony with the pope, denounce the aforesaid forgeries, and maintain that the pope never asserted a right of temporal sovereignty in France.

In his reply Boniface roundly scoured the bishops for their cowardice, human respect, and selfishness; at the same time he made use, after his fashion, of not a few expressions offensive to the pride of French ecclesiastics and poured sarcasm over the person of the powerful Pierre Flote (Hefele). Finally, in a public consistory (August, 1302) at which the envoys of the king were present, the Cardinal-Bishop of Porto formally denied that the pope had ever claimed any temporal sovereignty over France and asserted that the genuine Bull (*Ausculat Fili*) had been well weighed and was an act of love, despite the fatherly severity of certain expressions. He insisted that the king was no more free than any other Christian from the supreme ecclesiastical jurisdiction of the pope, and maintained the unity of ecclesiastical authority. The Apostolic See, he said, was not foreign territory, nor could its nominees be rightly called foreigners. For the rest, the pope had full authority in temporal matters *ratione peccati*, i. e., in as far as the morality of human acts was concerned. He went on, however, to say that in temporal jurisdiction one must distinguish the right (*de jure*) and its use and execution (*usus et executio*). The former belonged to the pope as Vicar of Christ and of Peter; to deny it was to deny an article of faith, i. e., that Christ judges the living and the dead. This claim, says Hefele (2d ed., VI, 346), "must have appeared to the French as quite destructive of the aforesaid limitation *ratione peccati*. Gregory IX had maintained (1232, 1236), in his conflict with the Greeks and with Frederick II, that Constantine the Great had given temporal power to the popes, and that emperors and kings were only his auxiliaries, bound to use the material sword at his direction (Concilien-gesch., 2d ed., V, 102, 1044). This theory, however, had never yet been officially put forth against France, and was all the more likely to rouse opposition in that nation, since it was now a question not of a theory, but of a practical situation, i. e., of the investigation of Philip's government and the menace of his deposition." He refers to the closing words of the discourse with which Boniface supplemented that of the Cardinal-Bishop of Porto, viz., that his predecessors had deposed three French kings, and, though unequal to such popes, he would, however sorrowfully, depose King Philip, *sicut unum garrionem* (like a servant); he thinks it not impossible (Hergenröther, Kirche und Staat, 229; Hefele, IV, 344) that the present harsh conclusion of the discourse of Boniface is one of the numerous forgeries of Pierre Flote and Nogaret. In the first half of this discourse the pope

insists on the great development of France under papal protection, the shameless forgeries of Pierre Flote, the exclusive ecclesiastical nature of the grant (*collatio*) of benefices, and the papal preference for doctors of theology as against lay nepotism in matter of benefices. He is wroth over the assertion that he claimed France as a papal fief. "We have been a doctor of both laws (civil and canon) these forty years, and who can believe that such folly [*fatuitas*] ever entered Our head?" Boniface also expressed his willingness to accept the mediation of the Duke of Burgundy or the Duke of Brittany; the efforts of the former, however, availed not, as the cardinals insisted on satisfaction for the burning of the papal Bull and the calumnious attacks on Boniface. The king replied by confiscating the goods of the ecclesiastics who had set out for the Roman Council, which met 30 Oct., 1302.

There were present four archbishops, thirty-five bishops, six abbots, and several doctors. Its acts have disappeared, probably during the process against the memory of Boniface (1309-11). Two Bulls, however, were issued as a result of its deliberations. One excommunicated whoever hindered, imprisoned, or otherwise ill-treated persons journeying to, or returning from, Rome. The other (18 Nov., 1302) is the famous "Unam Sanctam", probably the composition of Ægidius Colonna, Archbishop of Bourges and a member of the council, and largely made up of passages from such famous theologians as St. Bernard, Hugo of St. Victor, St. Thomas Aquinas, and others. Its chief concepts are as follows (Hergenröther-Kirsch, 4th ed., II, 593): (1) There is but one true Church, outside of which there is no salvation; but one body of Christ with one head and not two. (2) That head is Christ and His representative, the Roman pope; whoever refuses the pastoral care of Peter belongs not to the flock of Christ. (3) There are two swords (i. e., powers), the spiritual and the temporal; the first borne by the Church, the second for the Church; the first by the hand of the priest, the second by that of the king, but under the direction of the priest (*ad nutum et patientiam sacerdotis*). (4) Since there must be a co-ordination of members from the lowest to the highest, it follows that the spiritual power is above the temporal and has the right to instruct (or establish—*instituere*) the latter regarding its highest end and to judge it when it does evil; whoever resists the highest power ordained of God resists God Himself. (5) It is necessary for salvation that all men should be subject to the Roman Pontiff—"Porro subesse Romano Pontifici omni humanæ creaturæ declaramus, dicimus, definimus et pronunciamus omnino esse de necessitate salutis". (For a more detailed account of the Bull and several controversies concerning it see UNAM SANCTAM.)

Philip had a refutation of the Bull prepared by the Dominican Jean Quidort (Joannes Parisiensis) in his "Tractatus de potestate regiâ et papali" (Goldast, Monarchia, II, 108 sq.), and the conflict passed at once from the domain of principle to the person of Boniface. The king now rejected the pope as arbiter in his disputes with England and Flanders, and gave a courteous but evasive answer to the Legate, Jean Lemoine, whom the pope sent (February, 1303) on a mission of peace, but with insistence, among other conditions, on recognition of the aforesaid rights of the papacy. Lemoine was further commissioned to declare to Philip that, in default of a more satisfactory reply to the twelve points of the papal letter, the pope would proceed *spiritualiter et temporaliter* against him, i. e., would excommunicate and depose him. Boniface also sent to Lemoine (13 Apr., 1303) two Briefs, in one of which he declared the king already excommunicated, and in the other ordered all French prelates to come to Rome within three months.

In the meantime there was brewing at Paris the storm in which the pontificate of Boniface was so disastrously to close. Philip concluded peace with England, temporized with the Flemings, and made concessions to his subjects. Boniface on his side acknowledged, as aforesaid, the election of Albert of Austria, and brought to an end his hopeless conflict with the Aragonese King of Sicily. Otherwise he seemed politically helpless, and could only trust, as he publicly stated, in his sense of right and duty. Later events showed that in his own household he could not count on loyalty. In an extraordinary session of the French Council of State (12 March, 1303) Guillaume de Nogaret appealed to Philip to protect Holy Church against the intruder and false pope, Boniface, a simonist, robber, and heretic, maintaining that the king, moreover, ought to call an assembly of the prelates and peers of France, through whose efforts a general council might be convoked, before which he would prove his charges. Such an assembly was called for 13 June, and met at the Louvre in Paris. The papal messenger with the aforesaid Briefs for the legate was seized at Troyes and imprisoned; Lemoine himself, after protesting against such violence, fled. At this assembly, packed with friends or creatures of Philip, the knight Guillaume de Plaisians (Du Plessis) submitted a solemn accusation against the pope in twenty-nine points, offered to prove the same, and begged the king to provide for a general council. The Colonna furnished the material for these infamous charges, long since adjudged calumnious by grave historians (Hefele, *Conciliengesch.*, 2nd ed., VI, 460-63; Giovanni Villani, a contemporary, says that the Council of Vienne, in 1312, formally absolved him from the charge of heresy. Cf. Muratori, "*SS. Rer. Ital.*", XIV, 454; Raynaldus, *ad an.* 1312, 15-16). Scarcely any possible crime was omitted—infidelity, heresy, simony, gross and unnatural immorality, idolatry, magic, loss of the Holy Land, death of Celestine V, etc. The king asserted that it was only to satisfy his conscience and to protect the honour of the Holy See that he would co-operate in the calling of a general council, asked the help of the prelates, and appealed (against any possible action of Boniface) to the future council, the future pope, and to all to whom appeal could be made. Five archbishops, twenty-one bishops, and some abbots sided with the king. The resolutions of the assembly were read to the people, and several hundred adhesions were secured from chapters, monasteries, and provincial cities, mostly through violence and intimidation. The Abbot of Cîteaux, Jean de Pontoise, protested, but was imprisoned. Royal letters were sent to the princes of Europe, also to the cardinals and bishops, setting forth the king's new-found zeal for the welfare of Holy Church.

In a public consistory at Anagni (August, 1303) Boniface cleared himself on his solemn oath of the charges brought against him at Paris and proceeded at once to protect the Apostolic authority. Citations before the Holy See were declared valid by the mere fact of being affixed to the church doors at the seat of the Roman Curia, and he excommunicated all who hindered such citations. He suspended Archbishop Gerhard of Nicosia (Cyprus), the first signatory of the schismatical resolutions. Pending satisfaction to the pope, the University of Paris lost the right to confer degrees in theology and in canon and civil law. He suspended temporarily for France the right of election in all ecclesiastical bodies, reserved to the Holy See all vacant French benefices, repelled as blasphemies the calumnious charges of de Plaisians, saying, "Who ever heard that We were a heretic?" (Raynaldus, *ad an.* 1311, 40), and denounced the appeal to a future general council which could be convoked by none other than himself, the

legitimate pope. He declared that unless the king repented he would inflict on him the severest punishments of the Church. The Bull "*Super Petri solio*" was ready for promulgation on 8 September. It contained in traditional form the solemn excommunication of the king and the liberation of his subjects from their oath of fidelity. Philip, however, and his counsellors had taken measures to rob this step of all force, or rather to prevent it at a decisive moment. It had long been their plan to seize the person of Boniface and compel him to abdicate, or, in case of his refusal, to bring him before a general council in France for condemnation and deposition. Since April, Nogaret and Sciarra Colonna had been active in Tuscany for the formation, at Philip's expense, of a band of mercenaries, some 2,000 strong, horse and foot. Very early on the morning of 7 September the band appeared suddenly before Anagni, under the lilies of France, shouting, "Long live the King of France and Colonna!" Fellow-conspirators in the town admitted them, and they at once attacked the palaces of the pope and his nephew. The ungrateful citizens fraternized with the besiegers of the pope, who in the meanwhile obtained a truce until three in the afternoon, when he rejected the conditions of Sciarra, viz., restoration of the Colonna, abdication, and delivery to Sciarra of the pope's person. About six o'clock, however, the papal stronghold was penetrated through the adjoining cathedral. The soldiers, Sciarra at their head, sword in hand (for he had sworn to slay Boniface), at once filled the hall in which the pope awaited them with five of his cardinals, among them his beloved nephew Francesco, all of whom soon fled; only a Spaniard, the Cardinal of Santa Sabina, remained at his side to the end.

In the meantime the papal palace was thoroughly plundered; even the archives were destroyed. Dino Compagni, the Florentine chronicler, relates that when Boniface saw that further resistance was useless he exclaimed, "Since I am betrayed like the Saviour, and my end is nigh, at least I shall die as Pope." Thereupon he ascended his throne, clad in the pontifical ornaments, the tiara on his head, the keys in one hand, a cross in the other, held close to his breast. Thus he confronted the angry men-at-arms. It is said that Nogaret prevented Sciarra Colonna from killing the pope. Nogaret himself made known to Boniface the Paris resolutions and threatened to take him in chains to Lyons, where he should be deposed. Boniface looked down at him, some say without a word, others that he replied: "Here is my head, here is my neck; I will patiently bear that I, a Catholic and lawful pontiff and vicar of Christ, be condemned and deposed by the Paterini [heretics, in reference to the parents of the Tolosan Nogaret]; I desire to die for Christ's faith and His Church." Von Reumont asserts that there is no evidence for the physical maltreatment of the pope by Sciarra or Nogaret. Dante (*Purgatorio*, XX, 86) lays more stress on the moral violence, though his words easily convey the notion of physical wrong: "I see the flower-de-luce Anagni enter, and Christ in his own Vicar captive made; I see him yet another time derided; I see renewed the vinegar and gall, and between living thieves I see him slain." Boniface was held three days a close prisoner in the plundered papal palace. No one cared to bring him food or drink, while the banditti quarrelled over his person, as over a valuable asset. By early morning of 9 September the burghers of Anagni had changed their minds, wearied perhaps of the presence of the soldiers, and ashamed that a pope, their townsman, should perish within their walls at the hands of the hated *Francesi*. They expelled Nogaret and his band, and confided Boniface to the care of the two Orsini cardinals, who had come from Rome with

four hundred horsemen; with them he returned to Rome. Before leaving Anagni he pardoned several of the marauders captured by the townsmen, excepting the plunderers of Church property, unless they returned it within three days. He reached Rome, 13 Sept., but only to fall under the close surveillance of the Orsini. No one will wonder that his bold spirit now gave way beneath the weight of grief and melancholy. He died of a violent fever, 11 October, in full possession of his senses and in the presence of eight cardinals and the chief members of the papal household, after receiving the sacraments and making the usual profession of faith. His life seemed destined to close in gloom, for, on account of an unusually violent storm, he was buried, says an old chronicler, with less decency than became a pope. His body lies in the crypt of St. Peter's in a large marble sarcophagus, laconically inscribed *BONIFACIUS PAPA VIII.* When his tomb was opened (9 Oct., 1605) the body was found quite intact, especially the shapely hands, thus disproving another calumny, viz., that he had died in a frenzy, gnawing his hands, beating his brains out against the wall, and the like (Wiseman).

Boniface was a patron of the fine arts such as Rome had never yet seen among its popes, though, as Guiraud warns us (p. 6), it is not easy to separate what is owing to the pope's own initiative from what we owe to his nephew and biographer, the art-loving Cardinal Stefaneschi. Modern historians of Renaissance art (Müntz, Guiraud) date its first efficient progress from him. The "idolatry" accusation of the Colonna comes from the marble statues that grateful towns, like Anagni and Perugia, raised to him on public sites, "where there once were idols", says a contemporary, an anti-Bonifacian libel (Guiraud, 4). The Anagni statue stands yet in the cathedral of that town, repaired by him. He also repaired and fortified the Gaetani palace in Anagni, and improved in a similar way neighbouring towns. At Rome the Palace of the Senator was enlarged, Castel Sant' Angelo fortified, and the Church of San Lorenzo in Panisperna built anew. He encouraged the work on the cathedral of Perugia, while that gem of ornamental Gothic, the cathedral of Orvieto (1290-1309), was largely finished during his pontificate. For the great Jubilee of 1300 he had the churches of Rome restored and decorated, notably St. John Lateran, St. Peter's, and St. Mary Major. He called Giotto to Rome and gave him constant occupation. A portrait of Boniface by Giotto is still to be seen in St. John Lateran; in our own day M. Müntz has restored the original concept, and in it is seen the noble balcony of Casetta, whence, during the jubilee, the pontiff was wont to bestow upon the vast multitude the blessing of Christ's vicar. In the time of Boniface the Cosimati continued and improved their work and under the influence of Giotto rose, like Cavallini, to higher concepts of art. The delicate French miniaturists were soon equalled by the pope's Vatican scribes; two glorious missals of Oderisio da Gubbio, "Agubbio's honour", may yet be seen at the Vatican, where lived and worked his disciple, likewise immortalized by Dante (*Purg.*, XI, 79), who speaks of "the laughing leaves touched by the brush of Franco Bolognese". Finally, sculpture was honoured by Boniface in the person of Arnolfo di Cambio, who built for him the "Chapel of the Crib" in St. Mary Major, and executed (Müntz) the sarcophagus in which he was buried. Boniface was also a friend of the sciences. He founded (6 June, 1303) the University of Rome, known as the Sapienza, and in the same year the University of Fermo. Finally, it was Boniface who began anew the Vatican Library, whose treasures had been scattered, together with the papal archives, in 1227, when the Roman Frangipani passed over to the side of Frederick II

and took with them the *turris chartularia*, i. e. the ancient repository of the documents of the Holy See. The thirty-three Greek manuscripts the Vatican Library contained in 1311 are pronounced by Fr. Ehrle the earliest known, and long the most important, medieval collection of Greek works in the West. Boniface honoured with increased solemnity (1298) the feasts of the four evangelists, twelve Apostles, and four Doctors of the Church (Ambrose, Augustine, Jerome, Gregory the Great, *egregios ipsius doctores Ecclesie*) by raising them to the rank of "double feasts". He was one of the most distinguished canonists of his age, and as pope enriched the general ecclesiastical legislation by the promulgation ("*Sacro-sanctæ*", 1298) of a large number of his own constitutions and of those of his predecessors, since 1234, when Gregory IX promulgated his five books of Decretals. In reference to this the collection of Boniface was entitled "*Liber Sextus*", i. e., Sixth Book of Pontifical Constitutions (Laurin, *Introd.* in *Corp. Juris can.*, Freiburg, 1889), being constructed on the same lines. Few popes have aroused more diverse and contradictory appreciations. Protestant historians, generally, and even modern Catholic writers, wrote Cardinal Wiseman in 1844, class him among the wicked popes, as an ambitious, haughty, and unrelenting man, deceitful also and treacherous, his whole pontificate one record of evil. To dissipate this grossly exaggerated and even calumnious view, it is well to distinguish his utterances and deeds as pope from his personal character, that even in his lifetime seemed to many unsympathetic. Careful examination of the sources of his most famous public pronouncements has shown that they are largely a mosaic of teachings of earlier theologians, or solemn re-enforcements of the canons of the Church and well-known Bulls of his predecessors. His chief aims, the peace of Europe and the recovery of the Holy Land, were those of all preceding popes. He did no more than his duty in defending the unity of the Church and the supremacy of ecclesiastical authority when threatened by Philip the Fair. His politico-ecclesiastical dealings with the kings of Europe will naturally be blamed by Erastians and by those who ignore, on the one hand, the rapacity of an Edward and the wily vindictiveness and obtuse selfishness of a Philip, and on the other, the supreme fatherly office of the medieval pope as the respected head of one mighty family of peoples, whose civil institutions were only slowly coalescing amid the decay of feudalism and ancient barbarism (Gosselin, Von Reumont), and who were long conscious that in the past they owed to the Church alone (i. e., to the pope) sure and swift justice, equitable courts and procedure, and relief from a feudal absolutism justified as yet by no commensurate public service. "The loftiest, truest view of the character and conduct of the popes has often been overlooked", says Cardinal Wiseman (*op. cit.*); "the divine instinct which animated them, the immortal destiny allotted to them, the heavenly cause confided to them, the superhuman aid which strengthened them could not be appreciated but by a Catholic mind, and are too generally excluded from Protestant historians, or are transformed into corresponding human capacities, or policies, or energies, or virtues." He goes on to say that, after examination of several popular assertions affecting the moral and ecclesiastical conduct of Boniface, this pope appeared to him in a new light, "as a pontiff who began his reign with most glorious promise and closed it amid sad calamities; who devoted, through it all, the energies of a great mind, cultivated by profound learning and matured by long experience in the most delicate ecclesiastical affairs, to the attainment of a truly noble end; and who, throughout his career, displayed many great virtues. and could plead in extenuation of his faults the con-

vulved state of public affairs, the rudeness of his times, and the faithless, violent character of many among those with whom he had to deal. These circumstances, working upon a mind naturally upright and inflexible, led to a sternness of manner and a severity of conduct, which, when viewed through the feelings of modern times, may appear extreme, and almost unjustifiable. But after searching through the pages of his most hostile historians, we are satisfied that this is the only point on which even a plausible charge can be brought against him.

The memory of Boniface, curiously enough, has suffered most from two great poets, mouthpieces of an ultra-spiritual and impossible Catholicism, Fra Jacopone da Todi and Dante. The former was the "sublime fool" of spiritual love, author of the "Stabat Mater", and chief singer of the "Spirituals", or extreme Franciscans, kept in prison by Boniface, whom he therefore satirized in the popular and musical vernacular of the peninsula. The latter was a Ghibelline, i. e., a political antagonist of the Guelph pope, to whom, moreover, he attributed all his personal misfortunes, and whom he therefore pilloried before the bar of his own justice, but in quivering lines of immortal invective whose malignant beauty will always trouble the reader's judgment. Catholic historians like Hergenröther-Kirsch (4th ed., II, 597-93) praise the uprightness of the pope's motives and that courage of his convictions which almost on the eve of his death made him count as straws all earthly rulers, if only he had truth and justice on his side (op. cit., II, 597, note 4). They admit, however, the explosive violence and offensive phraseology of some of his public documents, and the occasional imprudence of his political measures; he walked in the footsteps of his immediate predecessors, but the new enemies were more fierce and logical than the extirpated Hohenstaufen, and were quicker to pervert and utilize the public opinion of young and proud nationalities. A contemporary and eyewitness, Giovanni Villani, has left in his Florentine chronicle (Muratori, XIII, 348 sqq.) a portrait of Boniface which the judicious Von Reumont seems to consider quite reliable. According to it Boniface, the most clever canonist of his time, was a great-hearted and generous man and a lover of magnificence, but also arrogant, proud, and stern in manner, more feared than loved, too worldly-minded for his high office and too fond of money, both for the Church and for his family. His nepotism was open. He founded the Roman house of the Gastani, and in the process of exalting his family drew down upon himself the effective hatred of the Colonna and their strong clansmen. Gröne, a German Catholic historian of the popes, says of Boniface (II, 164) that while his utterances equal in importance those of Gregory VII and Innocent III, the latter were always more ready to act, Boniface to discontinue; they relied on the Divine strength of their office, Boniface on the cleverness of his canonical deductions. For the process against his memory see CLEMENT V.

**Original Materials.**—The history of Boniface is best found in DIGARD, FAUCON, and THOMAS, *Les registres de Boniface VIII.* (Paris, 1884, sqq.); DU PUY (Gallican), *Hist. du différend du pape Boniface VIII. avec Philippe le Bel* (Paris, 1656), with a very partial selection and arrangement of valuable, but badly edited, materials; BAILLET (violent Jansenist), *Hist. des démeurs du pape Boniface VIII. avec Philippe le Bel* (Paris, 1718). On the Roman side see: VIGOR, *Historia eorum quae acta sunt inter Philippum Pulcherum et Bonifacium VIII.* (Rome, 1639); RUBENS, *Bonifatius VIII et Familia Caietanorum* (Rome, 1661). The earlier career and coronation of the pope are related (in verse) by CARDINAL STEPHANESCHI (STEPHANESBUS) in *Acta SS.* (May, IV, 461). RAYNALDUS, *Ann. Ecc.* (1294-1303), where many of the most important documents are given in full.

**Contemporary Chroniclers.**—VILLANI, *Hist. Florentine*, in Muratori *SS. Rer. Ital.*, XIII, 348; DINO COMPAGNI, *Chronica*, ed. DE LUNGO (Florence, 1879-87); the Italian chroniclers quoted in HERGENRÖTHER-KIRSCH (4th ed.) are in MURATORI, *Scriptores*. For the election of Boniface see HEFELÉ, *Conciliengech.*; SOUCHON, *Die Papstwahl von Bonifaz VIII.*

*bis Urban VI.*, etc. (Brunswick, 1888); FINKE, *Aus den Tagen, etc.*, 44-76; DENIFLÉ, *Die Denkschrift der Colonna gegen Bonifaz VIII.*, u. der Kardinäle gegen die Colonna, in *Archiv für Lit. u. Kircheng.* des M. A. (1892), V, 493. For the Anagni incident see: KERVYN DE LETTENHOVE, in *Rev. des quest. hist.* (1872), XI, 511; DIGARD, *ibid.* (1888), XXIII, 557.

**Catholic Biography.**—Besides the general historians, FLEURY (Gallican), ROHRBACHER, CHRISTOPHE, see CHANTEREL, *Bonifaz VIII.* (Paris, 1862), and the excellent work of TOETI, *Storia di Bonifazio VIII e de suoi tempi* (Monte Cassino, 1846). The most important modern critical contributions to the life of Boniface are those of FINKE, op. cit. (Munich, 1902), the result of new discoveries in medieval archives, especially at Barcelona, among the papers of the reign of James II, King of Aragon and contemporary of Boniface (reports of the royal agents at Rome, etc.). Cf. *Anal. Bolland.* (1904), XXIII, 358; *Rev. des quest. hist.* (1903), XXVI, 122; Lüt. Rundschauf (1902), XXVIII, 315; and *Canoniste Contemporain* (1903), XXVI, 122. See also FINKE, *Bonifaz VIII.*, in *Hoehland* (1904), I, IDEM, *Zur Charakteristik Philipps des Schönen in Mithrid. des Inst. f. ast. Geschichtsforschung* (1905), XXIV, 201-14. An excellent apology is that of (CARDINAL) WISSEMAN, *Pope Bonifaz VIII.*, in *Dublin Review* (1844), reprinted in *Historical Essays*; HEMMER, in *Dict. de théol. cath.*, II, i, 992-1003 (good bibliography); and the thorough study of HEFELÉ, op. cit. (2nd ed. Freiburg, 1890), VI, 281 passim; JONGMANN, *Dies. selecta in hist. ecc.* (Ratisbon, 1886), VI. The (non-Catholic) work of DEUMANN, *Geschichte Bonifaz VIII.* (Königsberg, 1852), is learned but partisan.

**Political Situation and Attitude of Medieval Popes.**—See the solid work of GOSSELIN, *The Power of the Pope in the Middle Ages*, tr. KELLY (London, 1883); the erudite work of HERGENRÖTHER, *Kath. Kirche und christ. Staat* (Freiburg, 1873; Eng. tr. London, 1876); BAUDRILLARD, *Des idées qu'on se faisait au XIV<sup>e</sup> siècle sur le droit d'intervenir du Souv. Pont. dans les affaires polit.*, in *Revue d'hist. et de litt. relig.* (1898); PLANCH, *Hist. de la const. de la soc. eccl. chrét.* (1809), V, 12-154 (favourable).

The most notable of the modern French writers favourable to Philip are: LUCIÉRO and RENAN, in *Hist. Litt. de la France au XIV<sup>e</sup> siècle* (Paris, 1895); [see RENAN, *Études sur la polit. relig. du règne de Philippe le Bel* (Paris, 1899)]; and LANGLOIS, *Hist. de France*, ed. LAVISSÉ (Paris, 1901), III, II, 127-73; cf. the equitable study of BOUTARIC, *La France sous Philippe le Bel* (Paris, 1861), also the fair narrative of VON REUMONT, *Gesch. der Stadt Rom* (Berlin, 1867), II, i, 614-71; GREGOROVICUS (non-Catholic), *Gesch. d. Stadt Rom* (3d. ed., Stuttgart, 1878), V, 502, tr. by Hamilton; HÖRNER, *Rückblick auf Papst Bonifaz VIII.*, in *Abhandl. d. bayrisch. Akad. d. Wiss. hist. Kl.* (Munich, 1843), III, iii, 32 sqq.; ROQUAINE, *La Cour de Rome et l'esprit de réforme avant Luther* (Paris, 1895), II, 258-312; LAURENT, *L'Eglise et l'Etat, moyen âge et réforme* (Paris, 1866), violent and unjust.

**Pamphlet Literature.**—For both sides, see: SCHOLZ, *Die Pamphlete zur Zeit Ph. des Schönen und Bonif. VIII.* (Stuttgart, 1903); also SCARDUO, *Stato e Chiesa negli scritti politici*, 1122-1347 (Florence, 1847); and RIESLER, *Die literarischen Widersacher der Päpste zur Zeit Ludwigs des Bayern* (Munich, 1874). Important new monographs concerning chief figures in the conflict are those of HOLTMANN, *Wilhelm von Noyen* (Freiburg, 1898); and HURCKEN, *Kardinal Napoleon Orsini, ein Lebensbild*, etc. (Marburg, 1902). Among the latest studies, based on the above-described researches of Dr. Finke, are: SCHOLZ, *Zur Beurteilung Bonifaz VIII. und seines stichtischen Charakters*, in *Hist. Vierteljahrsschrift* (1906), X, 470-508; WENCK, *War Bonifaz VIII. ein Ketzer?* in *Hist. Zeitschrift* (1905), 1-66 (maintaining that Boniface was an Averroist); and the good refutation by HOLTMANN, *Papst Bonifaz VIII., ein Ketzer?* in *Mithrid. d. Inst. f. ast. Gesch.* (1905), 488-98; cf. WENCK's reply, *ibid.* (1906), 185-95.

**The Bull "Unam Sanctam"**—BERCHTOLD, *Die Bulle Unam Sanctam, etc., und ihre wahre Bedeutung für Kirche und Staat* (1887); cf. GRATYER in *Hist. Jahrbuch* (1887). MUMRY, in *Rev. des quest. hist.* (July, 1887), abandoned his (and DANBERGER's) thesis that this Bull was a forgery (*ibid.*, 1879), 91-130. On the exact sense of the much-disputed *constitutio* (instruct or establish?) in "Unam Sanctam" see FUNK, *Kirchengesch. Abhandlungen* (Paderborn, 1897), I, 453-89.

For the services of Boniface to the sciences and the fine arts, see EHELE, *Zur Gesch. des Schatzes der Bibl. und des Archivs der Päpste im 14. Jahrh.*, in *Archiv für Lit. u. Kircheng.* des M. A. (1885), I, i, 228; IDEM, *Hist. Biblioth. Avenionensis* (Rome, —); MOLINIER, *Inventaire du trésor du Saint-Siège sous Bonifaz VIII.*, in *Bibl. de l'École des Chartes* (1882-85); the writings of the art-historian, MÜNTZ, and GUIRAUD, *L'Eglise et les Origines de la Renaissance* (Paris, 1904).

THOMAS OESTREICH.

**Boniface IX, POPE**, elected at Rome, 2 November, 1389, as successor of the Roman Pope, Urban VI; d. there, 1 October, 1404. Piero (Perino, Pietro) Tomacelli came of an ancient but impoverished baronial family of Naples. He lacked good theological training and skill in the conduct of curial business, but was by nature tactful and prudent. His firm character and mild manner did much to restore respect for the papacy in the countries of his own obedience (Germany, England, Hungary, Poland, and the greater part of Italy). The Avignon Pope

Clement VII, had just crowned (1 November, 1389) as King of Naples the French prince, Louis of Anjou. Boniface took up the cause of the youthful Ladislaus, heir of Charles III of Naples and Margaret of Durazzo, had him crowned King of Naples at Gaeta (29 May, 1390), and for the next decade aided him efficiently to expel the Angevin forces from Italy. In the course of his reign Boniface extinguished the municipal independence of Rome and established the supremacy of the pope. He secured the final adhesion of the Romans (1398) by fortifying anew the Castle of Sant' Angelo, the bridges, and other points of vantage. He also took over the port of Ostia from its cardinal-bishop. In the Papal States Boniface gradually regained control of the chief strongholds and cities, and is the true founder of these States as they appear in the fifteenth century. Owing to the faithlessness and violence of the Romans he resided frequently at Perugia, Assisi, and elsewhere. Clement VII, the Avignon pope, died 16 September, 1394. Boniface had excommunicated him shortly after his own election, and in turn had been excommunicated by Clement. In 1392 Boniface attempted, but in vain, to enter into closer relations with Clement for the re-establishment of ecclesiastical unity, whereupon Boniface reasserted with vigour his own legitimacy. Clement was succeeded at Avignon, 28 September, 1394, by Cardinal Pedro de Luna, as Benedict XIII. Suffice it to say here that Boniface always claimed to be the true pope, and at all times rejected the proposal to abdicate even when it was supported by the principal members of his own obedience, e. g. Richard II of England (1396), the Diet of Frankfort (1397), and King Wenceslaus of Germany (Reims, 1398).

During the reign of Boniface two jubilees were celebrated at Rome. The first took place in 1390, in compliance with an ordinance of his predecessor Urban VI, and was largely frequented from Germany, Hungary, Poland, Bohemia, and England. Several cities of Germany obtained the privileges of the jubilee, but the preaching of the indulgences gave rise to abuses and to impositions on the part of unaccredited agents of the pope, so that he was obliged to proceed against them with severity. The jubilee of 1400 drew to Rome great crowds of pilgrims, particularly from France. In spite of a disastrous plague Boniface remained at his post. In the latter part of 1399 bands of penitents, known as the *Bianchi*, or *Albati* (White Penitents), arose, especially in Provence and Italy. They went in procession from city to city, clad in white garments, with faces hooded, only the eyes being left uncovered, and wearing on their backs a red cross. For a while their penitential enthusiasm had some good results. After they had satisfied their spiritual ardour at Rome, Boniface gradually discountenanced these wandering crowds, an easy prey of agitators and conspirators, and finally dissolved them. In England the anti-papal virulence of Wyclif increased the opposition of both Crown and clergy to the methods of Boniface in the granting of such English benefices as fell vacant in the Roman Curia through the death or promotion of the incumbent. The Parliament confirmed and extended more than once the statutes of Provisors and Præmunire, of Edward III. Boniface protested vigorously, particularly in 1391, but in the end found himself unable to execute his grants without the king's consent and sanction. "Thus ended," says Lingard (*ad. an.* 1393), "this long and angry controversy entirely to the advantage of the Crown." Nevertheless, at the Synod of London (1396), the English Church condemned the anti-papal teachings of Wyclif, and in 1398 the University of Oxford, consulted by Richard II, issued in favour of Boniface an influential document, while in 1390 and again in 1393 the spiritual peers upheld the right of the pope to excommunicate even those who obeyed the statutes

of Provisors. In Germany the electors had deposed at Rhense (20 August, 1400) the unworthy Wenceslaus, King of the Romans, and had chosen in his place Rupert, Duke of Bavaria and Rhenish Count Palatine. In 1403 Boniface abandoned his uncertain attitude towards both, approved the deposition of Wenceslaus as done by papal authority, and recognized the election of Rupert. In 1398 and 1399 Boniface appealed to Christian Europe in favour of Emperor Emmanuel, threatened at Constantinople by Sultan Bajazet. St. Bridget of Sweden was canonized by Boniface, 7 October, 1391. The universities of Ferrara (1391) and Fermo (1398) owe him their origin, and that of Erfurt its confirmation (1392). In 1404 Benedict XIII sent the last of his embassies to Boniface, who received the agents of Benedict 29 September, but the interview ended unfavourably. The pope, highly irritated, took to his bed with an attack of gravel, and died after an illness of two days.

Contemporary and later chroniclers praise the political virtues of Boniface, also the purity of his life, and the grandeur of his spirit. Some, like Dietrich of Niem, charge him with an inordinate love of money, dishonest traffic in benefices, the sale of dispensations, etc. But Dietrich is no impartial writer and is blamed by Raynaldus for being bitter and unjust (*acerbus et iniquus*). In his gossip pages one misses a proper appreciation of the difficulties that surrounded Boniface—local sources of revenue lost in the long absence of the papacy from Rome, foreign revenue diminished by the schism, extraordinary expenses for the restoration of papal Rome and the reconquest of the Papal States, the constant wars necessitated by French ambition, the inheritance of the financial methods of Avignon, and the obligation of conciliating supporters in and out of Italy. Boniface sought nothing for himself and died poor. He is also charged with nepotism and he certainly provided generously for his mother, brothers, and nephews. It may be said, however, that in the semi-anarchic conditions of the time good government depended upon such personal support as a temporal ruler could gather and retain, i. e. could reward, while fidelity was best secured by close domestic ties. Boniface was the first pope to introduce the form of revenue known as *annales perpetuae*, or reservation of one-half the first year's fruits of every benefice granted in the Roman Court, this in addition to other traditional expenses. It must be remembered that at this time the cardinals claimed a large part of these revenues, so that the Curia was perhaps more responsible than the pope for new financial methods destined in the next century to arouse bitter feelings against Rome, particularly in Germany.

Vaticana res gestas Bohemias illustrantia* (Prague, 1903), V.

THOMAS OESTREICH.

**Boniface Association** (BONIFATIUSVEREIN), one of the most successful Catholic societies of Germany, owes its origin to a suggestion made by Döllinger

at the Third Catholic Congress of Germany, held at Ratisbon in 1849. The object of the association is to maintain what the Catholic Church possesses in those regions where Catholics are few in number, to found and support missions and schools, and to erect churches, parish-houses, and schools for Catholics in the Protestant parts of Germany. The territories which the association takes under its especial care are: the Diocese of Kulm; the Delegation of Brandenburg and Pomerania, belonging to the Prince-Bishopric of Breslau; the Vicariate Apostolic of Saxony; the Dioceses of Paderborn, Hildesheim, Osnabrück, and Fulda; the Northern Missions, etc. The association is managed by a general committee at Paderborn; the diocesan committees have entire control of the contributions they receive; after consultation with their respective diocesan councils, and under the approval of the general committee, the diocesan committees designate the objects to which the money shall be given. Since the association was founded about \$9,250,000 has been collected and some 2,600 churches have been erected or aided.

Besides the diocesan committees another important branch is formed by the Boniface collecting societies. The first of these was founded in 1885 among the merchants of Paderborn by the Marian congregation; the aim of this branch of the association is, by the founding of orphan asylums and institutions where children are prepared for their first communion, to care for the religious training of Catholic children in non-Catholic communities. The funds are obtained by the collection and sale of objects of little value in themselves, such as, tin-foil, old postage stamps, clothing, leaden seals, old coins, books, cigar bands, cigar tips, and such trifles. More than \$625,000 has been raised by this branch association since its foundation; it aids more than 120 institutions for first communicants and orphan asylums, besides contributing considerable sums to children in non-Catholic communities for railway tickets, school and living expenses.

Another branch is the Academic Boniface Association which has existed for forty years at the German universities, the first one of these societies being founded at Münster in 1867. In 1888 the various university branches met at Freiburg and united into a common organization; in 1907 they included thirty-six branches with a membership of 750. Their organ is the "Akademische Bonifatius-Korrespondenz". Since 1860 the general association has had a printing office and since 1888 a bookstore for old and new publications, both at Paderborn. The popes have granted indulgences and privileges to priests connected with the association. The association issues the "Bonifatiusblatt", founded in 1850; the "Schlesisches Bonifatiusblatt", 1860; and the "St. Bonifatiusblatt" at Prague, founded in 1904.

KLEFFNER AND WOKER, *Festschrift* (Paderborn, 1899); ARNDT, *Die dem Bonifatiusverein vom heiligen Stuhl verliehenen Gnaden* (Paderborn, 1902); *Der Bonifatius-Sammelverein* (Paderborn, 1907); Financial statements of the managing committee, annual reports of the combined Boniface collecting societies, etc.

JOSEPH LINS.

**Boniface of Savoy**, forty-sixth Archbishop of Canterbury and son of Thomas, Count of Savoy, date of birth uncertain; d. in Savoy, 14 July, 1270. While yet a child he became a Carthusian. In 1234, as sub-deacon, he was elected Bishop of Belley in Burgundy; and, in 1241, administered the Diocese of Valence. His connexion with the royal house of England secured his promotion to the primacy. The Queen of Henry III was Eleanor, daughter of Berengar, Count of Provence, and Beatrice of Savoy. This Beatrice was the sister of the future archbishop. When St. Edmund died, in 1241, the Queen's uncle was elected. But Gregory IX and Celestine IV dying unexpectedly, it was not until the end of 1243

that the new Pope, Innocent IV, was able to confirm his election. In the following year Boniface went to England for the first time. He found his see in debt. The heavy taxation during the sequestration in St. Edmund's primacy had severely burdened its already slender resources. Therefore his first act was to make every economy, abolishing all sinecures and unnecessary offices connected with the archbishopric. He ordered the tenants and clergy to contribute towards the liquidation of the debt.

In 1244 he set out for the Council of Lyons, where he was consecrated (15 January, 1245) by the pope. His brother Philip, afterwards Count of Savoy, although not consecrated, held the archbishopric of Lyons and was in command of the papal troops. During the sitting of the council Boniface held a commission under him. He obtained from the pope the grant of the first-fruits of all vacant benefices in the Province of Canterbury during seven years, and his claim to levy a contribution from the whole province to meet the debt of the metropolitan see was allowed. In 1249 he returned to England and was enthroned with great pomp at Canterbury on All Saints' Day. The archbishop then began a personal visitation of his diocese, correcting abuses and levying fines. But, on extending his visitation to the dioceses of his suffragans, resistance was offered to him. In London the Dean and Canons of St. Paul's protested that the Bishop of London was their visitor and appealed. They were promptly excommunicated. On the following day the archbishop visited the Priory of St. Bartholomew. He was met by the sub-prior and brethren, who welcomed him as a prelate but not as a visitor. Like the clergy of St. Paul's they represented that they had their own bishop and would not submit to other jurisdiction without permission from him. The archbishop was so incensed that he felled the venerable sub-prior to the earth. This was more than the Londoners could stand from a foreigner, even were he their archbishop. They fell upon him, his vestments were torn in the struggle, and the coat of mail worn beneath them disclosed. He was rescued by his bodyguard and escaped by barge to Lambeth, where he proceeded to excommunicate the clergy of St. Bartholomew's and the Bishop of London.

He then announced his intention of holding a visitation at St. Albans. The suffragans met and resolved to resist him. The clergy of the province levied a tax upon themselves in order to proceed against him at Rome. Learning of these things he promptly set out for the Roman court. The result was a compromise, the pope confirming the right of visitation, but restricting its use. Godwin says of him that Boniface did three worthy things: he paid off a debt of 22,000 marks; he built and endowed the hospital at Maidstone; and he finished the great hall of the archbishop's palace.

Pope Gregory XVI, at the suit of Charles Albert of Savoy, King of Sardinia (1831-49), approved the cult of Boniface, Archbishop of Canterbury, as *ab immemorabili*.

**Bonifacius de Vitalinis.** See VITALINI, BONIFACIO DE.

**Boni Homines** (or BONSHOMMES).—This name was popularly given to at least three religious orders in the Church:

I.—THE ORDER OF GRANDMONT, founded by St. Stephen of Muret (b. 1046, d. 1124) for an austere order of eremitical friars professing the rule of St. Augustine (though they have sometimes been claimed

also by the Benedictines). Towards the end of the twelfth century they possessed more than sixty houses, principally in Aquitaine, Anjou, and Normandy. The kings of England (then rulers of Normandy) were great benefactors of these friars, who were known as the Bonshommes of Grandmont from the earliest times. The oldest house of the order was at Vincennes (founded by Louis VII, in 1164); and this more than four centuries later came into the possession of the Minims, who were hence known afterwards as Bonshommes. The observance of the order had become greatly relaxed when a general chapter was held at Grandmont (after an interval of more than a century) in 1643, with the object of re-establishing regular discipline. New statutes, modifying the original rigour of the rule, were drawn up and approved. The habit of the order was black, with a hood and a broad scapular. At the time when Hélyot wrote his great work on the religious orders (1714-21) there were in France also three houses of nuns of the Order of Grandmont; but both monasteries and convents were suppressed at the Revolution sixty years later. A reformed branch of the order was established in 1642 by Père Frémont, but the members of this institution do not seem to have been known by the old name of Bonshommes.

II.—THE FRATRES SACCATI, or BROTHERS OF PENITENCE, were also known as Boni Homines, Bonshommes, or, as Leland calls them, Bones-homes. Their origin, as well as the date of their foundation, is obscure, but they had a house at Saragossa in the time of Pope Innocent III (d. 1216) and one about the same time at Valenciennes. Their rule was founded on that of St. Augustine. They had one house in Paris, in a street called after them the *rue des Sassettes*, and in 1257 they were introduced into England. Matthew Paris records under this year that "a certain new and unknown order of friars appeared in London", duly furnished with credentials from the pope; and he mentions later that they were called from the style of their habit *Fratres Saccati*. We learn from Polydore Vergil that Edmund (son of Richard, Earl of Cornwall) founded a little later (according to Tanner, in 1283) a monastery at Ashridge, Herts, for a rector and twenty canons of "a new order not before seen in England, and called the Boni homines". It was finished in 1285. The first rector was Richard, and the last Thomas Waterhouse (1529), who surrendered the house to Henry VIII. The suppressed college was granted first to the king's sister Elizabeth, and afterwards to the Egertons, later created Earls and Dukes of Bridgewater. The church was destroyed under Elizabeth; but in 1800 the last duke was living in a portion of the old college. He sold the great hall piecemeal, and pulled down the cloisters. The estate and (modern) mansion now belong to Earl Brownlow. The only other English house of the Boni Homines was at Edington in Wilts. The former college there (consisting of a dean and prebendaries) was granted to them by desire of Edward the Black Prince, who (says Leland) "had a great favour to the Bones-homes beyond the Se". The first rector (brought from Ashridge) was John de Aylesbury, the last John Ryve. Edward VI granted the property to Lord St. John; it now belongs to the Watson-Taylor family. The splendid church, one of the finest of its period, still remains. (Little, *The Friars of the Sack*, in Eng. Hist. Review, 1894, 33, 121.)

III. THE PORTUGUESE BONI HOMINES.—The identity of the *Fratres Saccati* mentioned by Matthew Paris as, in 1257, a "new order in England", with the "new order" (the Bonshommes) established a little later at Ashridge and Edington, seems to be generally admitted. An entirely separate institute, however, was that of the Portuguese Boni Homines, or Secular Canons of St. John the Evangelist, founded

by John de Vicenza, afterwards Bishop of Lamego, in the fifteenth century. Living at first independently in a monastery granted to them by the Archbishop of Braga at Villar de Frades, they afterwards embraced the institute of Secular Canons of St. George in Alga (in Venice), and the Portuguese order was confirmed by Pope Martin V under the title of "Boni Homines of Villar de Frades". They had fourteen houses in Portugal, and King John III gave them charge of all the royal hospitals in the kingdom, while many of the canons went out as missionaries to India and Ethiopia. Several members of the order have won a high reputation as scholars and theologians.

D. O. HUNTER-BLAIR.

**Bonizo of Sutri** (or BONITHO), Bishop of Sutri in Central Italy, in the eleventh century, an adherent of Gregory VII and advocate of the ideals of that pope; b. about 1045, probably in Cremona, Northern Italy; put to death 14 July, 1090. Early in his life he joined the party known as the Pataria, and when a subdeacon in Piacenza he came into conflict with Dionysius, bishop of that city. In 1074 he went to Rome, and won the favour of Pope Gregory, by whom he was soon appointed to the episcopal See of Sutri. Bonizo took part in several councils held in Rome; in 1078 he went to Cremona as papal legate and consecrated there the church of St. Thomas. In the struggle between Gregory VII and Henry IV he was ever on the side of the pope. He was seized by Henry in 1082 and entrusted to the custody of the antipope Clement III. About a year afterwards Bonizo made his escape, and lived for several years under the protection of Countess Mathilda of Tuscany. In 1086 he was present at the funeral of his friend, Anselm, Bishop of Lucca. He was, soon after, elected to the See of Piacenza by the Pataria, but owing to strong opposition was unable to take possession of it until the year 1088, when he was strongly supported by Pope Urban II. His enemies, however, contrived to bring about his death.

Bonizo wrote: (1) the "Paradisus", or extracts from the writings of St. Augustine (still unpublished); (2) a short treatise on the sacraments (Muratori, "Antiquitates Italicae Med. Aevi", III, in Migne, P. L., CL); (3) the "Decretum" or "De vitâ Christianâ", a work in ten books on ecclesiastical law and moral theology written at the request of a certain priest Gregory [fragments of this work are in Mai's *Nova Bibliotheca*, VII, iii, 1-76 (Rome, 1854)]; (4) "In Hugonem schismaticum", now lost, probably against the schismatic Cardinal Hugo Candidus; (5) a description of the various classes of judges in the Roman Empire and in the Roman Church (ed. Blühme, in *Mon. Ger. Hist. Leges*, IV); (6) his most important work the "Liber ad amicum", a history of the Church, in which the author relates events of his own times.

FRANCIS J. SCHAEFER.

**Bonn, UNIVERSITY OF** (RHEINISCHE FRIEDRICH-WILHELMS-UNIVERSITÄT). An academy was founded at Bonn in 1777 by Max Friedrich, Prince-Archbishop

of Cologne. To secure its support he ordered that every monastery and convent within the archdiocese should either provide two professors or contribute a certain sum of money. He also endeavoured to obtain the papal sanction, but failed. In 1784 Kaiser Joseph II raised the academy to the rank of a university, and the inauguration took place 20 November, 1786. In this first period the university suffered from Febronianism and Rationalism. The leaders were Hedderich (1744-1808), Dereser (1757-1827), and Schneider (1756-94). Pius VI in a Brief of 24 March, 1790, called the archbishop's attention to the deplorable condition of the university, but without result. In 1794 the French invasion obliged the professors to suspend their courses, and in 1797 the university was closed. It was restored in 1818 by King Friedrich Wilhelm III. Among its professors of theology were George Hermes (1775-1831), Achterfeldt (1788-1879), and Braun (1801-63), originators of the movement known as Hermesianism. Some of their followers, e. g. Elverich (1796-1886), joined the "Old Catholics", a party which also had as adherents Reusch (1825-1900) and several other members of the faculty. Their action led finally to their suspension and excommunication after having created a division among both professors and students of theology. The other departments of the university developed rapidly under the direction of Niebuhr (1776-1831) and Arndt (1769-1860) in history, A. W. Schlegel (1767-1845) in literature, Nasse (1778-1851) in medicine, Kekule (1829-96) and Mohr (1806-79) in chemistry, Clausius (1822-88) in physics, Von Rath (1830-88) in mineralogy, Preyer (1841-97) and Pfugger (1829-) in physiology. Since 1868 new buildings have been provided for the scientific departments either in Bonn or in Pappelsdorf. The university comprises at present the Catholic faculty of theology, the Protestant faculty of theology, and the faculties of law, medicine, and philosophy. There are 284 instructors and 3488 students. In 1905-06, the Catholic faculty of theology had 309 students, the Protestant 80. The library contains 350,000 volumes.

E. A. PAGE.

**Bonnard, JEAN LOUIS, VENERABLE**, a French missionary and martyr, b. 1 March, 1824 at Saint-Christôt-en-Jarret (Diocese of Lyons); beheaded 30 April, 1852. After a collegiate course at Saint-Jodard, he entered the seminary of Lyons, which he left at the age of twenty-two, to complete his theological studies at the Seminary of the Foreign Missions in Paris. From Nantez, where he was ordained, he sailed for the missions of Western Tongking and reached there in May, 1850. In 1851, he was put in charge of two parishes there; but as early as 21 March, 1852, he was arrested and cast into prison. Sentence of death was pronounced against him and was executed immediately upon receipt of its confirmation by the king (30 April, 1852). His remains were thrown into the river, but recovered by Christians and sent by them to the Seminary of Foreign Missions. Bonnard has been declared Venerable by the Church.

N. A. WEBER.

**Bonnechese, HENRI-MARIE-GASTON BOISNORMAND** DE, cardinal and senator, b. at Paris, 1800; d. 1883. Entering the magistracy, he became attorney-general for the district of Besançon in 1830, but having received sacred orders at Strasburg, under the episcopate of de Trevern, he was made professor of sacred eloquence in the school of higher studies founded at Besançon by Cardinal de Rohan. After the death of de Rohan, he went to Rome to settle the differences between Bishop de Trevern and himself, due to philo-

sophical opinions found in his work, "Philosophy of Christianity", for which Bonnechese had written an introduction. In 1844, he was named by Rome superior of the community of St. Louis; in 1847 he became Bishop of Carcassonne, was transferred, 4 November, 1854, to Evreux, and in 1854 raised to the archiepiscopal See of Rouen. Created cardinal in 1863, he became ex-officio senator of the empire. The cardinal showed himself a warm advocate of the temporal power of the popes, and firmly protested against the withdrawal of the French army from the Pontifical States. In 1870, at the urgent prayers of the citizens of Rouen, notwithstanding his advanced years, he went in the rigour of the season to Versailles, the headquarters of the German armies, to entreat King William of Prussia to reduce the war contribution imposed on the city of Rouen. Under the republican government he uniformly opposed the laws and measures passed against religious congregations and their schools, but endeavoured to inspire his clergy with sentiments of deference and conciliation in their relations with the civil authorities. His best known work is "Introduction à la philosophie du Christianisme" (1835), two octavo volumes.

F. M. L. DUMONT.

**Bonne-Espérance, THE ABBEY OF**, situated near Binche, province of Hainault, Diocese of Tournai, Belgium. It owes its foundation to the conversion of William, the only son and heir of Rainard, the Knight of Croix. William had been seduced by the heresies of Tanchelm, but through the persuasive exhortations of St. Norbert he had been brought back to the true Church, and his grateful parents, Rainard and Beatrix, had given land to St. Norbert for the foundation of an abbey at Ramignies, while William followed St. Norbert to Prémontré. Ramignies having been found unsuitable, Odo, the first abbot, led his young colony to another locality in the neighbourhood. The legend says that when Odo saw the spot he exclaimed: "Bonæ spei fecisti filios tuos" (Wis. xii, 19—O God, Thou hast made Thy children to be of good hope). Others say that the statue of Our Lady of Good Hope was venerated there. Whatever may have been the cause, Blessed Odo's confidence was not misplaced. The abbey grew and prospered and has ever sent forth numbers of holy and learned priests. Blessed Odo was succeeded by Blessed Philip, surnamed the Almoner. Abbot Philip is the author of several books which have been published in Migne, P. L., CCIII. Blessed Odo, whose heroic act in defence of her virginity has been described by Abbot Philip, was a Norbertine nun in the convent of Rivreulle under the direction of the Abbot of Bonne-Espérance. The forty-sixth and last Abbot of Bonne-Espérance, Bonaventure Daublain, saw in 1792 and again in 1794 the abbey taken and pillaged and his religious dispersed by the French Republican army. At the time of its suppression the abbey counted sixty-seven inmates. Greatly though they wished to live in community, they were not allowed to do so during the French Republic, nor after 1815 under William I, King of the Netherlands. The last surviving religious gave the abbey to the Bishop of Tournai for a diocesan seminary. The church is still Norbertine in its appearance, possessing as it does the body of St. Frédéric, which had been saved from the Protestants and brought from the Norbertine Abbey in Holland to the Abbey of Bonne-Espérance in Belgium. The church is still adorned with the statues of St. Norbert, of St. Frédéric, and of two Norbertine bishops, St. Evremonde and St. Isidre. At the time of the suppression the miraculous statue of Our Lady of Good Hope was hidden; and when peace was restored, it

was brought to the church of Vellereille of which one of the canons of Bonne-Espérance was the parish priest. In 1833 it was solemnly brought back to the abbey church, or, as it is now, the seminary church.

MARTIN GEUDENS.

**Bonner, EDMUND**, Bishop of London, b. about 1500; d. 1569. He was the son of Edmund Bonner, a sawyer of Potter's Henley in Worcestershire, England, and Elizabeth Frodsham. Doubt was cast on his legitimacy by Bale and other opponents, who asserted that he was the natural son of a priest named Savage, but Strype and other Anglican writers, including the historian S. R. Maitland, have shown the groundless nature of these assertions. He was educated at Pembroke College, Oxford, then Broadgate Hall, where he took his degree as Bachelor both of canon and of civil law in 1519, and was ordained priest about the same time. In 1525 he became doctor of civil law and soon after entered the service of Cardinal Wolsey, which brought him to the notice of the king and Cromwell, and thus led to a diplomatic career. After the fall of Wolsey, he remained faithful to him and was with him at the time of his arrest and death. When the question of the king's divorce was raised, he was employed by the king as his agent at Rome, where he remained a whole year, 1532-33. During the following years he was much employed on important embassies in the king's interests, first to the pope to appeal against the excommunication pronounced in July, 1533, afterwards to the emperor to dissuade him from attending the general council which the pope wished to summon at Vicenza, and again to the French Court to succeed Gardiner there as ambassador. In this capacity he proved capable and successful, though irritation was frequently caused by his overbearing and dictatorial manner. Meanwhile his services were rewarded by successive grants of the livings of Cherry Burton (Yorks), Ripple (Worcester), Blyndon (Durham), and East Dereham (Norfolk), and he was made Archdeacon of Leicester in 1535. Finally, while ambassador in France, he was elected Bishop of Hereford (27th November, 1538) but owing to his absence he could neither be consecrated nor take possession of his see, and he was still abroad when he was translated to the Bishopric of London. Elected in November, 1539, he returned, and was consecrated 4th April, 1540. Almost his first duty was to try heretics under Henry's Act of the Six Articles, and though his action seems to have been only official, accusations of excessive cruelty and bias against the accused were spread broadcast by his enemies, and from the first he seems to have been unpopular in London. During the years 1542-43 he was again abroad in Spain and Germany as ambassador to the emperor, at the end of which time he returned to London. The death of the king on 28th January, 1547, proved the turning point in his career. Hitherto he had shown himself entirely subservient to the sovereign, supporting him in the matter of the divorce, approving of the suppression of the religious houses, taking the oath of supremacy which Fisher and More refused at the cost of life itself, and accepting schismatical consecration and institution. But while acting in this way, he had always resisted the innovations of the Reformers, and held to the doctrines of the old religion. Therefore from the first he put himself in opposition to the religious changes introduced by Protector Somerset and Archbishop Cranmer.

He opposed the "Visitors" appointed by the Council, and was committed to prison for so doing. Though not long a prisoner, after two years of unsatisfactory struggle he came again into conflict with the Protector owing to his omission to enforce the

use of the new Prayer Book. When ordered to preach at St. Paul's Cross he did so, but with such significant omissions in the matter which had been prescribed touching the king's authority, that he was finally deprived of his see and sent as a prisoner to the Marshalsea. Here he remained till the accession of Mary in 1553. On 5th of August in that year he took possession of his diocese once more. In estimating Bishop Bonner's conduct on his restoration to his see the difficulties of the position must be recalled. There was in London an extremely violent reforming element which opposed in every way the restoration of Catholic worship. For twenty years the authority of the Holy See had been set at naught and ridiculed in unsparing terms, and though the Parliament in 1554 welcomed Pole as Papal Legate and sought absolution and reconciliation from him with apparent unanimity, there was a real hostility to the whole proceeding among a considerable section of the populace. During 1554 Bonner carried out a visitation of his diocese, restoring the Mass and the manifold practices and emblems of Catholic life, but the work was carried out slowly and with difficulty. To help in the work, Bonner published a list of thirty-seven "Articles to be enquired of", but these led to such disturbances that they were temporarily withdrawn. While many rejoiced to have the old worship restored, others exhibited the most implacable hostility. As Bonner sat at St. Paul's Cross to hear Gilbert Bourne preach, when reference was made to the bishop's sufferings under Edward VI a dagger was thrown at the preacher. At St. Margaret's, Westminster, a murderous assault was made on the priest giving Holy Communion, the Blessed Sacrament itself was the object of profane outrages, and street brawls arising out of religious disputes were frequent. Meanwhile many of the Reformers attacked the Queen herself in terms that were clearly treasonable. Had these been proceeded against by the civil power much evil might have been averted, but unfortunately it was thought at the time that, as the root of the evil lay in the religious question, the offenders would best be dealt with by the ecclesiastical tribunals, and on Bonner, as Bishop of London, fell the chief burden. Besides his judicial work in his own diocese, Bonner was appointed to carry out the painful task of degrading Cranmer at Oxford in February, 1556. The part he took in these affairs gave rise to intense hatred on the part of the Reformers, and by them he was represented as hounding men and women to death with merciless vindictiveness. Foxe in his "Book of Martyrs" summed up this view in two doggerel lines:

"This cannibal in three years space three hundred martyrs slew

They were his food, he loved so blood, he spared none he knew."

That this was an absolutely ungrounded charge is shown by the letter from the king and queen in Council, addressed to Bonner on the express ground that he was not proceeding with sufficient energy. As to the number of his "victims" Foxe, whose untrustworthiness now needs no demonstration, has exaggerated according to his wont. The number of persons who were executed under the laws against heresy in his jurisdiction seems to have been about 120. As to these persons Mr. Gairdner writes "Over their ultimate fate it must be remembered he had no control, when once they were declared to be irreclaimable heretics and handed over to the secular power; but he always strove by gentle suasion first to reconcile them to the Church". Throughout the "Book of Martyrs" Foxe is unsparing in his accusations of cruelty against the bishop; but his charges have been impartially examined at great length by Dr. Maitland, who comes to the same decision as the Catholic writers against Foxe, and sums it up by

remarking that when anyone "calmly inquires what these tales so full of rage and fury really mean, when they mean anything, he finds the bloody wolf transformed . . . into something much more like a good-tempered mastiff, who might safely be played with, and who, though he might be teased into barking and growling, had no disposition to bite and would not do it without orders". (Essays, 422-424.)

Another virulent opponent of Bonner was John Bale, formerly a friar and ex-Bishop of Ossory, who in 1554 published from his place of exile at Basle, an attack on the bishop, in which he speaks of him as "the bloody sheep-bite of London", "bloody Bonner", and still coarser epithets. Concerning this outburst Dr. Maitland quietly remarks, "when Bale wrote this book, little that could be called persecution had taken place. Not one martyr had suffered." These attacks of Foxe and Bale are noteworthy as being the foundation on which the current traditional view of Bonner's work and character has been based, a tradition that has only been broken down by the research of the past century. A man so regarded could expect small consideration when the death of Mary (17th November, 1558) placed Elizabeth on the throne, and the new queen's attitude to the bishop was marked at their first interview, when she refused him her hand to kiss. From 24th June, 1559, the Mass was forbidden as well as all other services not in the Book of Common Prayer, but long before that date the Mass ceased in most London churches, though Bonner took care that in his cathedral at least it should still be celebrated. On 30th May, Il Schifanoia, envoy from the Court of Mantua, wrote: "The Council sent twice or thrice to summon the Bishop of London to give him orders to remove the service of the Mass and of the Divine Office in that Church; but he answered them intrepidly 'I possess three things—soul, body, and property. Of the two latter, you can dispose at your pleasure, but as to the soul, God alone can command me.' He remained constant about body and property, and again to-day he has been called to the Council, but I do not yet know what they said to him." (Phillips, *op. cit. infra*, 103.) As a matter of fact, they had ordered him to resign the bishopric, which he refused to do, adding that he preferred death. He was then deprived of the office and went for a time to Westminster Abbey. On 20th April, 1560, he was sent as a prisoner to the Marshalsea. During the next two years representatives of the reforming party frequently clamoured for the execution of Bonner and the other imprisoned bishops. When the Parliament of 1563 met, a new Act was passed by which the first refusal of the oath of royal supremacy was *præmunire*, the second, high treason. The bishops had refused the oath once, so that by this Act, which became law on 10th April, their next refusal of the oath might be followed by their death. On 24th April, the Spanish Ambassador writes that Bonner and some others had been already called on to take the oath. Partly owing to the intervention of the emperor and partly to an outbreak of the plague, no further steps seem to have been taken at the time. A year later, on 29th April, 1564, the oath was again tendered to Bonner by Horne, the Anglican Bishop of Winchester. This he firmly refused, but the interference of the Spanish ambassador and his own readiness of resource saved immediate consequences. Being well skilled both in civil and canon law, he raised the point that Horne, who offered him the oath, was not qualified to do so, as he had not been validly consecrated bishop. This challenged the new hierarchy as to the validity of their orders, and so strong was Bonner's case that the Government evaded meeting it, and the proceedings commenced against him were adjourned time after time. Four times a year for three years he was forced to appear in the courts at Westminster only to be fur-

ther remanded. The last of these appearances took place in the Michaelmas term of 1568, so that the last year of the bishop's life was spent in the peace of his prison. His demeanour during his long imprisonment was remarkable for unflinching cheerfulness, and even Jewel describes him in a letter as "a most courteous man and gentlemanly both in his manners and appearance" (Zurich Letters, I, 34). The end came on 5th September, 1569, when he died in the Marshalsea. The Anglican Bishop of London wrote to Cecil to say that he had been buried in St. George's churchyard, Southwark, but if this was so the coffin was soon secretly removed to Copford, near Colchester, where it was buried under the north side of the altar. Sander, Bridgewater, and other contemporary writers attributed to Bonner and the other bishops who died in prison the honour of martyrdom: *in vinculis obierunt martyres*. On the walls of the English College, Rome, an inscription recording the death of the eleven bishops, but without naming them, found a place among the paintings of the martyrs. In a work quoted below the Catholic tradition with regard to these bishops has been ably set forth by Rev. George Phillips, avowedly for the purpose of promoting their beatification. Bishop Bonner differs from the others in this respect, that owing to the prominent part circumstances compelled him to play in the persecution, he was attacked during life with a hatred which has followed him even after death, so that in English history few names have been so execrated and vilified as his. Tardy justice is now being done to his memory by historians, Catholic and Protestant alike, yet there remains immense prejudice against his memory in the popular mind. Nor could this be otherwise in face of the calumnies that have been repeated by tradition. The reckless charges of Bale and Foxe were repeated by Burnet, Hume, and others, who join in representing him as an inhuman persecutor, "a man of profligate manners and of a brutal character, who seemed to rejoice in the torments of the unhappy sufferers" (Hume c. xxxvii). The first historian of note to challenge this verdict was the Catholic, Lingard, though even he wrote in a very tentative way and it was by an Anglican historian, S. R. Maitland, that anything like justice was first done to Bonner. This writer's analysis remains the most discriminating summary of the bishop's character. "Setting aside declamation and looking at the details of facts left by those who may be called, if people please, Bonner's victims, and their friends, we find, very consistently maintained, the character of a man, straightforward and hearty, familiar and humorous, sometimes rough, perhaps coarse, naturally hot tempered, but obviously (by the testimony of his enemies) placable and easily intreated, capable of bearing most patiently much intemperate and insolent language, much reviling and low abuse directed against himself personally, against his order, and against those peculiar doctrines and practices of his church for maintaining which he had himself suffered the loss of all things, and borne long imprisonment. At the same time not incapable of being provoked into saying harsh and passionate things, but much more frequently meaning nothing by the threatenings and slaughter which he breathed out, than to intimidate those on whose ignorance and simplicity argument seemed to be thrown away—in short, we can scarcely read with attention any one of the cases detailed by those who were no friends of Bonner, without seeing in him a judge who (even if we grant that he was dispensing bad laws badly) was obviously desirous to save the prisoner's life." This verdict has been generally followed by later historians, and the last word has been added, for the present, in the recently published volume on the Reformation, in the "Cambridge Modern History" planned by Lord Acton (1903) where the statement

is expressly made: "It is now generally admitted that the part played by Bonner was not that attributed to him by Foxe, of a cruel bigot who exulted in sending his victims to the stake. The number of those put to death in his diocese of London was undoubtedly disproportionately large, but this would seem to have been more the result of the strength of the reforming element in the capital and in Essex, than of the employment of exceptional rigour; while the evidence also shows that he himself patiently dealt with many of the Protestants, and did his best to induce them to renounce what he conscientiously believed to be their errors."

Bonner's writings include "Responsum et Exhortatio in laudem Sacerdotii" (1553); "Articles to be enquired of in the General Visitation of Edmund Bishop of London" (1554); "Homelies sette forth by Edmunde Byshop of London, . . . to be read within his diocese of London of all Parsons, vycars and curates, unto their parishioners upon Sondayes and holy days" (1555). There was also published under his name a catechism, probably written by his chaplains, Harpsfield and Pendleton, entitled "A profitable and necessary doctrine" (1554; 2d ed. 1555). He also wrote the preface to Bishop Gardiner's "Book of Obedience" (1534).

EDWIN BURTON.

**Bonnetty, Augustin**, a French writer, b. at Entrevaux (dept. of Basses-Alpes) 9 May, 1798; d. at Paris, 26 March, 1879. In 1815 he entered the seminary at Digne and studied for the priesthood. After completing his philosophical and theological studies, as he was too young to be ordained, he went to Marseilles as private tutor in an excellent family. He soon felt that his mission was to use science and philosophy in the defence of the Church and to remain a layman. In 1825 he went to Paris, and five years later founded the "Annales de philosophie chrétienne" (first number 31 July, 1830) which he edited until his death. His main object was to show the agreement of science and religion, and to point out how the various sciences contributed to the demonstration of Christianity. In 1838 he also took up the direction of the "Université catholique" founded two years before by Gerbet, de Salinis, de Scorbiac, and de Montalembert. Having become the sole owner of this review in 1846, he suspended its publication, in 1855, in order to devote himself exclusively to the "Annales". Among the main features of the "Annales" was the attempt to show the universality of a primitive revelation which is recognizable even in the myths and fables of all nations. But Bonnetty went farther, exaggerating the necessity of this primitive revelation, and minimizing the value of reason in attaining truth. This tendency to the system known as "traditionalism" soon drew the attention of the ecclesiastical authorities. A report was sent to the Congregation of the Index by Archbishop Sibour of Paris, and two years later (1855) Bonnetty was asked to sign the following four propositions: "(1) Although faith is superior to reason, yet no discord or disagreement can ever be found between them, since both proceed from one and the same unchangeable source of truth, God infinite in perfection, and thus are of mutual assistance. (Encyclical of Pius IX, 9 November, 1846.) (2) Reasoning can demonstrate with certainty the existence of God, the spirituality of the soul, and the freedom of man. Faith is posterior to revelation, and in consequence cannot consistently

be adduced to prove the existence of God against an atheist, or the spirituality and freedom of the rational soul against an adherent of naturalism and fatalism. (Proposition subscribed to by Bautain, 8 September, 1840.) (3) The use of reason precedes faith, and, with the help of revelation and grace, leads man to faith. (Prop. subscribed to by Bautain, 8 September, 1840.) (4) The method used by St. Thomas, by St. Bonaventure, and, after them, by other scholastics, does not lead to rationalism, nor does it explain why, in modern schools, philosophy should fall into naturalism and pantheism. Hence these doctors and masters cannot be reproached for using that method, especially with the approval, at least tacit of the Church. (Prop. contradictory to propositions, extracted from different passages of Bonnetty.)"

It must be noted that in the letter sent at the same time as these propositions by Father Modena, the secretary of the Congregation of the Index, to Monsignor Sacconi, the papal nuncio in Paris, it was stated that Bonnetty's attachment to the Holy See and to Catholic doctrines was never suspected. The intention was not to pronounce any judgment declaring his opinions "erroneous, suspicious, or dangerous", but only "to prevent the possible consequences, proximate or remote, which others might deduce from them, especially in matters of faith". Bonnetty, without any hesitation, gave his full assent to the above propositions. He declared that he had meant all along to defend these doctrines, and that he would hereafter endeavour to do so with greater accuracy.

Bonnetty was a member of the "Société des études littéraires", the "Association pour la défense de la religion catholique", the "Société asiatique", and the "Roman Academy of the Catholic Religion". He was also a knight of the Order of St. Gregory the Great and of the Order of Pius IX. In addition to his numerous articles in the "Annales de philosophie chrétienne" and the "Université catholique", he wrote the following works most of which, however, were first published as articles in the *Annales*: "Beautés de l'histoire de l'Eglise" (Paris, 1841); "Le christianisme et la philosophie" (Paris, 1845); "Table de tous les auteurs édités par le cardinal Mai" (Paris, 1850); "Documents historiques sur la religion des Romains" (Paris, 1867-78); "Dictionnaire raisonné de diplomatique", based on that of Dom de Vaines (Paris, 1863-65); a translation of the Latin work by Father de Prémare, a Jesuit missionary in China (1666-1734), "Vestiges des principaux dogmes chrétiens tirés des anciens livres chinois" (1879).

C. A. DUBRAY.

**Bonosus**, Bishop of Sardica, a heretic in the latter part of the fourth century. Against the common teaching of the Church he held that, after Jesus, Mary had several other children. The Council of Capua (391), before which the matter was brought, did not pass any judgment on it, but referred it to the Metropolitan Anysius of Thessalonica and the other bishops of Illyria. They condemned Bonosus and tried to exclude him from his church. In a letter to the same bishops Pope Siricius approves the sentence and also condemns the opinion that Mary did not always preserve her virginity. Notwithstanding his condemnation, and the prudent advice of St. Ambrose to submit, Bonosus continued to exercise the episcopal functions, to consecrate bishops and ordain priests. According to two letters of Pope Innocent I, one to Martian of Naissa (409), and the other to the bishops of Macedonia (414), those ordained by Bonosus before his condemnation were to be received in the Church without a new ordina-

tion; those ordained since Bonosus's condemnation, especially if they had themselves sought to be ordained by him, were to be deprived of their dignity. As Innocent speaks of Bonosus as no longer living, we may infer that he died at the end of the fourth, or the beginning of the fifth century.

Whether, besides denying Mary's perpetual virginity, Bonosus also denied Christ's divinity cannot be determined with certainty. But it is certain that his followers, the Bonosians, to whom we find references in the councils and in ecclesiastical writers up to the seventh century, denied this dogma. On this point they were at one with the Photinians. As a consequence, they affirmed the purely adoptive divine filiation of Our Lord. However, they differed from the Adoptionists in rejecting all natural sonship, whereas the Adoptionists, distinguishing in Christ the God and the man, attributed to the former a natural, and to the latter an adoptive sonship. The baptism conferred by the Bonosians was by some declared valid and by others invalid.

C. A. DUBRAY.

**Bon Secours (DE PARIS)**, INSTITUTE OF, the first of the congregations of nursing sisters, *gardes malades*, founded in France during the nineteenth century, whose object is to take care of both rich and poor patients in their own homes. This congregation was begun by Archbishop de Quélen of Paris in 1822 and was formally approved by Pope Pius IX in June, 1875. Its members nurse the poor gratuitously. Patients who can afford it pay for such service. The habit of the sisters is black; they wear a white cap with frilled border and a black veil. Besides the sixteen houses of the congregation in France, there are four in Ireland, one in England, two in the United States, and one in Belgium. The mother-house is in Paris. The scope of the institute is expressed in the constitutions: "After the personal sanctification of its members, the principal aim of this pious society is the care of the sick in their own homes". Although these sisters had governmental approbation and complied with the fiscal laws in France they have suffered heavily by the recent religious persecution. Four large schools which had been started in behalf of miners' children and at the urgent request of the mining population of Northern France (Lille, Lens, etc.) were closed on the plea that they formed no part of the institute's approved charter. And with the schools were also suppressed attendance by the sisters on sick or wounded miners and a very interesting work called "*la goutte de lait*", or "the drop of milk," a sort of dispensary wherein the sisters superintended the food of miners' infants.

**II. BON SECOURS (DE TROYES)**, INSTITUTE OF, a congregation founded at Arcis-sur-Aube, France, in 1840, by the Very Reverend Paul-Sébastien Millet, canon of the Cathedral of Troyes. The mother-house was moved to Troyes in 1843 and the name of that place was added to the title of the congregation in order to distinguish it from other sisterhoods whose object is also to nurse the sick in their own homes. The members of this congregation make no distinction because of the creed or financial condition of their patients. The poor are nursed free, those who can afford to make some recompense do so, and the sisters accept what is given them, but are not allowed to beg. The approbation of the constitutions of the congregation was not given by the Holy See until 21 March, 1899. The novices go to the mother-house

in France for three years. Vows are renewed annually for five years, then made for five years, and finally perpetual vows are taken. The habit is black with a small black cape, a black veil, and white guimpe. A crucifix suspended by a purple ribbon is worn round the neck. There are 120 houses of these sisters in various countries, most of them in France, outside of which territory there are 3 in Belgium, 4 in Italy, 1 in Spain, 3 in England, 1 in the United States, and 6 in Africa. The sisters number about 1,000.

THOMAS F. MEEHAN.

**Bonvicino, ALESSANDRO** (called IL MORETTO, or MORETTO DA BRESCIA), one of the finest North Italian painters of the sixteenth century, b. at Brescia about 1498; d. at the same place, 1555. It is said that he was a pupil of Titian, but it is considered more likely that he was but an earnest student of the works of this great master whose style he imitated so closely that many of his portraits bear well a comparison with those of the noted Venetian. It is known that he studied under his father, also a painter, and under Floriano Ferramola, and that G. Romanino had much influence over him. He himself had as a pupil that superb portrait painter, Giambattista Moroni. Bonvicino's manner is most natural and attractive; his feeling, where necessary, most devotional, his colour remarkable for its freshness and opulence, and his figures sympathetic and graceful. He was in his later life greatly influenced by Raphael. He assisted Ferramola in painting an altar screen for the old cathedral at Brescia and did similar work for Romanino in the church of San Giovanni Evangelista in that city. It was here, also, that he produced his notable painting, the "Massacre of the Innocents".

Among his other church works at Brescia are the "Coronation of the Virgin", and "Christ in Glory", at Santi Nazaro e Celso; "The Ascension of the Virgin", "Five Virgin Martyrs", and "St. Ursula", in San Clemente; "The Majesty of St. Margaret", in San Francesco; "The Enthronement of St. Anthony of Padua", in Santa Maria delle Grazie; "The Virgin and St. Nicholas", in Santa Maria de Miracoli; and "Christ in the House of Simon", in Santa Maria Calchera. In the Brescia Gallery, among other works, is a "St. Nicholas of Bari"; in Venice at Santa Maria della Pietà is his "Feast in the House of Simon"; in the Uffizi, at Florence, are "The Descent of Christ into Hades", "The Death of Adonis", and a male portrait; at the Brera in Milan, "The Assumption", "Virgin in Glory", "Sts. Clara and Catherine", and "St. Jerome and an Apostle"; at the Ambrosiana in the same city the "Death of Peter Martyr". At the Louvre are "St. Bernardine and St. Louis of Toulouse" and "Sts. Bonaventure and Anthony"; at the National Gallery in London a "Virgin and Child with two Saints", "St. Bernardine of Sienna", and two portraits of Italian noblemen. In the Städelsches Institut at Frankfurt is the "Enthroned Madonna" with four doctors of the Church below, and there are examples in many other European galleries.

AUGUSTUS VAN CLEEF.

**Bonze.** See BUDDHISM.

**Book of Common Discipline.** See PURITANS.

**Book of Common Prayer.**—I. HISTORY.—On 21 January, 1549, the first Act of Uniformity was passed, imposing upon the whole realm of England

"The Book of the Common Prayer and Administration of the Sacraments and other Rites and Ceremonies of the Church after the Use of the Church of England". Before this date (with some recent exceptions) the services had always been conducted in Latin; and though there were various "uses", e. g. Salisbury, Hereford, Bangor, York, and Lincoln, these were all derived from, and for the most part identical with, the Roman liturgy. "Altogether, some eighteen English uses are known. . . . Without exception these English Missals are Roman—they have the Roman Canon to begin with; they have the Roman variables; in short, their structure is identical with that of the Roman Missal" (J. Wickham Legg, 27 February, from a correspondence in "The Guardian", February and March, 1907). Though the motive for the introduction of the new liturgy is stated to be the desire for uniformity, simplicity, and the edification of the people, it is clear that this was merely a pretext. The real motive was the removal from the service books of the doctrines rejected by the Protestant Reformers. *Lex orandi, lex credendi*. The old books clearly contained the Real Presence, the Sacrifice of the Mass, Invocation of the Blessed Virgin and the Saints, Prayer for the Dead, the Seven Sacraments, with Auricular Confession, and a Sacrificing Priesthood. The Act of Uniformity states that the king by the advice of Somerset and the rest of the Council, "appointed the archbishop of Canterbury and certain of the most learned and discreet bishops and other learned men of this realm" to draw up the new book. Who these were, besides Cranmer, cannot now be determined. No list is known earlier than that given in Fuller's "Church History", published in 1657. However, "the history of the Prayerbook down to the end of Edward's reign is the biography of Cranmer, for there can be no doubt that almost every line of it is his composition" (Mason, Thomas Cranmer, 139). With regard to the authority by which it was composed and issued, Abbot Gasquet and Mr. Bishop have carefully gone over the evidence (Edward VI and the Book of Common Prayer, ch. x), and they have come to the same conclusion as the Anglican Canon Dixon, who affirms that "the Convocation of the clergy had nothing to do with the first Act of Uniformity of religion. Laymen made the first English Book of Common Prayer into a schedule of a penal statute. As little in the work itself, which was then imposed upon the realm, had the clergy originally any share" (Hist. of the Ch. of England, III, 5). The instruction given by royal authority was that the framers of the book should "have as well eye and respect to the most sincere and pure Christian religion taught by scripture as to the usages in the primitive Church". How this was carried out will appear when we come to examine the contents of the book. Meantime we may observe that the Communion Service cannot be classed with any of the old liturgies, but rather resembles the form drawn up by Luther in 1523 and 1526. Both agree in the elimination of anything denoting offertory or sacrifice in the true sense of the words. "Even if it were not an ascertained fact that during the year when it was in preparation, Cranmer was under the influence of his Lutheran friends, the testimony of the book itself would be sufficient to prove beyond doubt that it was conceived and drawn up after the Lutheran pattern" (Gasquet and Bishop, op. cit., 228; cf. ch. xiii). Though there were of course some who welcomed the new service, the imposition of it gave rise to strenuous opposition in most parts of the country. By the time, however, that the Book of 1549 appeared, Cranmer had already adopted views more advanced than those contained in it, and was preparing for a further revision. Early in 1550 an act was passed approving of a new ordinal

(see ANGLICAN ORDERS) and the altars were removed and tables substituted for them in many places. In this same year Gardiner, while still a prisoner in the Tower, made use of the words of the Prayer Book to refute Cranmer's own work on the Sacrament of the Body and Blood of our Saviour. About the same time Bucer completed his elaborate "Censura" of the Prayer Book. Accordingly in 1552 a second Book of Common Prayer was published, in which everything in the First Book which had been fixed upon by Gardiner as evidence that the new liturgy did not reject the old beliefs, and everything which Bucer had objected to was in the revision carefully swept away and altered. Before this book could come into general use the old Catholic services were restored by Mary. After her death the Second Book was imposed by Elizabeth in 1559 with some few, though important, changes. Further changes were made in 1604 and again in 1662, but the Prayer Book as a whole practically remains what it was in 1552. "The position which was deliberately abandoned in 1549 and still further departed from in 1552 has never been recovered. The measure of the distance traversed in these new liturgies by those who controlled the English reformation can only be duly estimated on an historical survey of the period in which the ground was lost" (Gasquet and Bishop, op. cit., 307).

II. CONTENTS.—The Book of Common Prayer is really a combination of four of our liturgical books viz., the Breviary, Missal, Pontifical, and Ritual.

(1) *The New Calendar*.—The old Sarum and other calendars in use before the Reformation contained the fast days and the feasts for most of the days in the year. Among these were the Purification, Annunciation, Visitation, Assumption, Nativity, and Conception of "the Blessed Mary"; a large number of purely Roman saints; and All Souls' Day. Corpus Christi was kept on the Thursday after Trinity Sunday. The Calendar of the First Prayer Book omitted the fast days altogether and gave only twenty-two saints' days, all being New Testament saints; the only feasts of the Blessed Virgin retained are the Purification and the Annunciation; All Souls' Day is omitted, and there is no office for Corpus Christi. Hardly any change was made in this part in the Second Prayer Book, though the "dog Daies" are characteristically noted. The Calendar of the Third Prayer Book (1559-61) reintroduced the mention of the fast days and a goodly number of feasts; among the latter, the Visitation of the "Blessed Virgin Mary", the Conception and the Nativity of "the Virgin Mary"; but no special offices were appointed for any of these feasts. "The reason why the names of these Saints-days and Holy-days were resumed into the calendar are various", says Wheatly in "A Rational Illustration of the Book of Comm. Prayer" (Pt. II, Introd.), "some of them being retained upon account of our Courts of Justice. . . . Others are probably kept for the sake of such tradesmen as are wont to celebrate the memory of their tutelar Saints. . . . And again, it has been the custom to have Wakes or Fairs kept upon these days; so that the people would be displeased if their favourite Saint's name should be left out. . . . For these reasons our second reformers under Queen Elizabeth . . . thought convenient to restore the names of them to the Calendar, though not with any regard of being kept holy by the Church".

(2) *The Breviary*.—The Sarum Breviary contained the canonical Hours, the Psalms distributed through the week, antiphons, versicles and responses, and Little Chapters much the same as the modern breviary—of course without the modifications since introduced by St. Pius V and later pontiffs. But

in 1535 there appeared a new breviary drawn up by Cardinal Quignonez, in which a complete break had been made with the old order of the Office. The canonical Hours had indeed been retained, but the antiphons, versicles, responses, and Little Chapters had been omitted, the Psalms were distributed in such a way that three were said at each hour, and the same Psalms said every day of the week in the same order. A striking feature of this breviary was the great length of the Scripture lessons which enabled the priest to read through in the course of the year almost the whole of the Old Testament and the whole of the New Testament, with the Epistles of St. Paul twice over. It was this book which Cranmer had before him when framing the office portion of the First Prayer Book. Indeed he copied word for word in his preface a considerable portion of Quignonez's preface. (See Gasquet and Bishop, op. cit., App. III.) He reduced, however, the Hours to two—Matins and Evensong (called Morning and Evening Prayer in the Second Book)—and arranged the Psalms for recital once a month instead of once a week. He also introduced two Scripture lessons, one from the Old Testament and one from the New Testament at both hours of prayer, and entirely omitted the lessons of the saints. In the Second Book he introduced "When the wicked man", "Dearly beloved brethren, the Scripture moveth us", the general confession ("Almighty and most merciful Father"), and the Absolution ("Almighty God, the Father of our Lord Jesus Christ"), which have remained to the present day. When we remember that more than a hundred editions of Quignonez's breviary were printed during the short space of twenty years, and that it was on the point of being adopted universally, we can see that this portion of the Book of Common Prayer has some justification. No doctrinal questions were at stake—unless it might be the omission of the intercession of the saints.

(3) *The Missal*.—The Canon of the Mass in the Sarum Missal is taken almost word for word from the Roman Missal. In the First Prayer Book the Communion service is styled "The Supper of the Lord and the Holy Communion, commonly called the Mass"; in the Second, and also in the present book, "The Order for the Administration of the Lord's Supper, or the Holy Communion". It is not possible within the limits of the present article to compare in detail the First Book with the Sarum on the one hand, and with the subsequent books on the other. (See Gasquet and Bishop, ch. xii and xvi.) The word *altar* is used in the First Book, though with the alternative of "God's board"; in the Second Book and subsequent Books "table" and "board" alone occur. As regards vestments the First Book directs that the priest shall wear "a white alb plain, with a vestment (chasuble?) or cope", and the assisting clergy "albs with tunicles"; the Second Book "the minister at the time of the Communion and all other times in his ministrations, shall use neither alb, vestment, nor cope; but being archbishop or bishop, he shall have and wear a rochet, and being a priest or deacon, he shall have and wear a surplice only". In the Third Book (1559) "it is to be noted that such ornaments of the church and of the ministers thereof, at all times of their ministrations, shall be retained, and be in use, as were in the Church of England by the authority of Parliament in the second year of the reign of King Edward the Sixth". As is well known, the meaning of this rubric has long been a matter of dispute. The First Book directs the priest to stand "humbly before the midst of the altar"; the Second, to stand "at the north side of the table", as is still the rule. No mention is made of incense, or lights, or holy water in any of the books. As to the service itself,

the changes may be briefly summed up as follows: The First Book omitted all mention of any true sacrifice, but retained expressions capable of referring to the Real Presence; the Second Book excluded these; the Third and subsequent Books re-admitted and combined expressions which might be taken in either sense. "On comparing the first with the second Communion office what is obvious at first sight is, that whilst the former, in spite of the substantial change made in the ancient mass, manifested a general order and disposition of parts similar to the mass itself, the latter was changed beyond recognition" (Gasquet and Bishop, 288). It will be sufficient to note here that while the First retained something like the preparatory prayer of Consecration ("Vouchsafe to bless and sanctify these thy gifts, and creatures of bread and wine that they may be unto us the body and blood of thy most dearly beloved Son Jesus Christ"), the Second and subsequent Books omitted this altogether; in the Second Book no directions were given as to the acts of the minister—he might recite the words of Consecration as a mere lesson; but in the later Books he was directed to take the paten and cup into his hands. Most significant, too, are the changes made in the form of administering the Holy Communion. In 1549: "When he delivereth the Sacrament of the Body of Christ, he shall say unto every one these words: 'The body of our Lord Jesus Christ which was given for thee, preserve thy body and soul unto everlasting life'. And the Minister delivering the Sacrament of the Blood . . . shall say 'The blood of our Lord Jesus Christ which was shed for thee, preserve thy body and soul unto everlasting life'". In 1552: "And when he delivereth the bread, he shall say: 'Take and eat this, in remembrance that Christ died for thee, and feed on him in thy heart by faith, with thanksgiving'. And the Minister that delivereth the cup shall say: 'Drink this in remembrance that Christ's blood was shed for thee, and be thankful'". In 1559 and the present Book: "And when he delivereth the Bread to any one he shall say, 'The Body of our Lord Jesus Christ which was given for thee, preserve thy body and soul unto everlasting life. Take and eat this in remembrance that Christ died for thee, and feed on him in thy heart by faith with thanksgiving'. And the Minister that delivereth the cup shall say: 'The Blood of our Lord Jesus Christ, which was shed for thee, preserve thy body and soul unto everlasting life. Drink this in remembrance that Christ's Blood was shed for thee, and be thankful'". The First Book forbade "any elevation or showing the Sacrament to the people"; the Second Book added the so-called "Black Rubric" denying any "real and essential presence of Christ's natural flesh and blood". This was omitted in 1559, but was reintroduced in 1662, shortened and slightly altered, "corporal presence" being substituted for "real and essential".

(4) *The Ritual*.—The order of the administration of Baptism in the old Sarum Manuale (Ritual) was almost identical in words and ceremonies with that now in use among us. (For the differences see SARUM.) The principal changes in 1549 were the omission of the blessing of the font, of the giving of the blessed salt, and of the first anointing. New prayers were also introduced, but the general character of the old service was preserved, including the exorcisms, the giving of the white garment, and the second anointing. All of these met with Bucer's disapproval, and were accordingly removed in 1552, and have never been restored. The present rite is exactly the same as that of 1552, with a few verbal alterations.

As the Reformers did not recognize Confirmation as a sacrament, we are not surprised to find that the

rite of administering it has undergone great changes. In 1549 the anointing with chrism was omitted, but the prayer that the Holy Ghost might come down upon those about to be confirmed was retained, and they were signed with the sign of the cross on their forehead. In 1552, owing again to Bucer's influence, the first prayer was altered ("strengthen them . . . with the Holy Ghost"); the signing with the cross was omitted; and a colourless form of words used. This latter rite is still in use; but in 1662 the renewal of baptismal vows was prefixed to it.

The "Form of Solemnization of Matrimony" comes next. As the essential part of the ceremony is the contracting of the parties, considerable latitude has existed in the Church with regard to the rest of the service. The First Book followed the old rite rather closely, but the blessing of the ring and the nuptial Mass were omitted. Of course the Reformers looked upon matrimony merely as a "state of life allowed in the Scriptures", and not as a sacrament.

"The Order of the Visitation of the Sick" contains matters of grave importance. In the First Book and in all subsequent Books, the "sick person shall make a special confession, if he feels his conscience troubled with any weighty matter; after which the priest shall absolve him after this form [sort]. . . . 'I absolve thee from thy sins'". The First Book alone adds: "and the same form of absolution shall be used in all private confessions. Moreover the First Book alone contains the anointing of the sick: 'If the sick person desire to be anointed, then shall the priest anoint him upon the forehead or breast only, making the sign of the cross', and afterwards reciting a long prayer entirely different from the old forms, which were the same as the present Catholic ones. This ceremony was removed at Bucer's suggestion. The First Book also has a rubric about reservation of the Blessed Sacrament: 'If there be more sick persons to be visited the same day . . . then shall the curate reserve so much of the sacrament of the body and blood as shall serve the other sick persons, and such as be appointed to communicate with them if there be any; and shall immediately carry it and minister it unto them.' Bucer does not seem to have objected to this; nevertheless no mention of reservation is made in any of the later Books.

The Sarum Office of the Dead included Vespers (*Placebo*), Matins (*Dirige*), Lauds, Mass (*Requiem*), the Absolution, and the Burial. As might be expected from the views of the Reformers on prayer for the dead, nothing was preserved in the new Books but the "Order for the Burial of the Dead". The First Book, indeed, contains distinct prayers for the soul of the departed, but these were removed in 1552, and have never been restored. For the Thirty-nine Articles see the article under that heading.

In recent years attempts have been made to reform the Prayer Book in two opposite directions. The Evangelicals have considered it as still containing too much of the old "popery"; while the High Church party have endeavoured to get back the portions omitted or altered since 1549. Various changes have actually been made in the Prayer Book as used by the Protestant Churches of Scotland, Ireland, and America.

It is only fair, in concluding, to note Cranmer's "splendid command of the English language and his instinctive sense of what would suit average English minds. His genius for devotional composition in English is universally recognized, even by those who have least sympathy with his character and career" (Mason, *Thomas Cranmer*, 140). "I value the Prayer Book, as you cannot do", says one

of the Anglican characters in Newman's "Loss and Gain" (ch. viii), "for I have known what it is to be in affliction. May it be long before you know it in a similar way; but if affliction comes on you, depend on it all these new fancies and fashions will vanish from you like the wind, and the good old Prayer Book alone will stand you in any stead."

The best work on the subject is GASQUET AND BISHOP, *Edward VI and the Book of Common Prayer*; FREER, *Revision of Procter's Book of Common Prayer*; WESTON, *The Prayer Book in the Making* (1907), a poor and prejudiced work; WHEATLEY, *A Rational Illustration of the Book of Comm. Pr.*, being the substance of everything liturgical in Bishop Sparrow, Mr. L'Estrange, Dr. COMBE, Dr. NICCOLA, and all former ritualists, commentators, and others upon the same subject; MASON, *Thomas Cranmer*; and various other works treating of the Reformation in England, especially in the reign of Edward VI.

**Book of Enoch.** See APOCRYPHA.

**Book of Jubilees.** See APOCRYPHA.

**Book of Life.** See PREDESTINATION.

**Book of Martyrs.** FOXE'S.—John Foxe was born at Boston in Lincolnshire, England, in 1516, and was educated at Magdalen School and College, Oxford. He joined the more extreme Reformers early in life and under Edward VI acted as tutor to the children of the recently beheaded Earl of Surrey. In Mary's reign he fled to Germany and joined the exiles at Frankfort. In the controversy which arose there he took sides with Knox and the extremists and after the break up of the Frankfort colony he went to Basle where poverty compelled him to take service with the Protestant printer Oporinus. In 1559 he returned to England and entered the ministry; he was helped by his old pupil the Duke of Norfolk and was mainly occupied with his martyrology. He still belonged to the extremists and objected to the surplice. His opinions interfered with his prospects, but he was not an ambitious man. Though violent and dishonest in controversy, he was personally of a kind and charitable temper. Besides his "Acts and Monuments" he published a number of sermons, translations, and controversial attacks on Catholicism. He died in 1587.

Even before leaving England in 1554 Foxe had begun the story of the persecutions of the Reformers. The result was the publication of a little Latin work dealing mainly with Wyclifism. While at Basle he was supplied by Grindal with reports of the persecution in England and in 1559 he published a large Latin folio of 740 pages which began with Wyclif and ended with Cranmer. After his return to England he began to translate this book and to add to it the results of fresh information. The "Acts and Monuments" were finally published in 1563 but came almost immediately to be known as the "Book of Martyrs". The criticism which the work called forth led to the publication of a "corrected" edition in 1570. Two more (1576 and 1583) came out during his life and five (1596, 1610, 1632, 1641, 1684) within the next hundred years. There have been two modern editions, both unsatisfactory; they are in eight volumes and were published in 1837-41 and 1877. The size of the work may be gathered from the fact that in the edition of 1684 it consists of three folio volumes of 895, 682, and 863 pages respectively. Each page has two columns and over eighty lines. The first volume besides introductory matter contains the story of early Christian persecutions, a sketch of medieval church history and an account of the Wyclifite movement in England and on the continent. The second volume deals with the reigns of Henry VIII and Edward VI and the third with that of Mary. A large number of official documents such as injunctions, articles of accusation, letters, etc., have been included. The book is illustrated throughout by woodcuts, some of them symbolizing the

triumph of the Reformation, most of them depicting the sufferings of the martyrs.

The convocation of the English Church ordered in 1571 that copies of the "Book of Martyrs" should be kept for public inspection in all cathedrals and in the houses of church dignitaries. The book was also exposed in many parish churches. The passionate intensity of the style, the vivid and picturesque dialogues made it very popular among Puritan and Low Church families down to the nineteenth century. Even the fantastically partisan church history of the earlier portion of the book, with its grotesque stories of popes and monks and its motley succession of witnesses to the truth (including the Albigenses, Grosseteste, Dante, and Savonarola) was accepted amongst simple folk and must have contributed much to anti-Catholic prejudices in England. When Foxe treats of his own times his work is of greater value as it contains many documents and is largely based on the reports of eyewitnesses; but he sometimes dishonestly mutilates his documents and is quite untrustworthy in his treatment of evidence. He was criticized in his own day by Catholics such as Harpsfield and Father Parsons and by practically all serious ecclesiastical historians.

The most careful examination of his methods is to be found in MATTLAND, *Essays on the Reformation in England* (1849), and in GAIRDNER, *History of the English Church from the ascension of Henry VIII to the Death of Mary* (1903); LEE in *Dict. of Nat. Biog.* GERARD, *John Foxe and His Book of Martyrs* (Catholic Truth Society, London), includes the opinions of a number of Foxe's critics. See also WOOD, *Athenae Oxon.*; FULLER, *Worthies and Church History*; TANNER, *Bibl. Brit.*; NICHOLS, *Narratives of the Reformation*.

**Bordeaux** (BURDIGALA), ARCHDIOCESE OF, comprises the entire department of the Gironde and was established conformably to the Concordat of 1802 by combining the ancient Diocese of Bordeaux (diminished by the cession of Born to the Bishopric of Aire) with the greater part of the suppressed Diocese of Bazas. Constituted by the same Concordat metropolitan to the Bishoprics of Angoulême, Poitiers, and La Rochelle, the See of Bordeaux received in 1822, as additional suffragans, those of Agen, withdrawn from the metropolitan jurisdiction of Toulouse, and the newly re-established Périgueux and Luçon; and still later, in 1850, the three colonial Bishoprics of Fort-de-France (Martinique), Basse-Terre (Guadeloupe), and Saint-Denis (Réunion).

*The Old Diocese of Bordeaux.*—According to old Limousin legends which date back to the beginning of the eleventh century, Bordeaux was evangelized in the first century by St. Martial (Martialis), who replaced a temple to the unknown god, which he destroyed, with one dedicated to St. Stephen. The same legends represent St. Martial as having brought to the Soulac coast St. Veronica, who is still especially venerated in the church of Notre-Dame de Fin des Terres at Soulac; as having cured Sigebert, the paralytic husband of the pious Benedicta, and made him Bishop of Bordeaux; as addressing beautiful Latin letters to the people of Bordeaux, to which city he is said to have left the pastoral staff which has been treasured as a relic by the Chapter of Saint-Seurin (For this cycle of legends see LIMOGES).

The first Bishop of Bordeaux known to history, Orientalis, is mentioned at the Council of Arles, in 314. By the close of the fourth century Christianity had made such progress in Bordeaux that a synod was held there (385-386) for the purpose of adopting measures against the Priscillianists, whose heresy had

caused popular disturbances. This was during the episcopate of Delphinus (380-404), who attended the Council of Saragossa in 380 and maintained correspondence with St. Ambrose and with St. Paulinus of Nola. At the beginning of the fifth century a mysterious personage who, according to St. Gregory of Tours, came from the East, appeared at Bordeaux. This was St. Seurin (or Severinus), in whose favour Bishop Amand abdicated the see from 410 to 420, resuming it after Seurin's death and occupying it until 432. In the sixth century Bordeaux had an illustrious bishop in the person of Leontius II (542-564), a man of great influence who used his wealth in building churches and clearing lands and whom the poet Fortunatus calls *patria caput*. During this Merovingian period the cathedral church, founded in the fourth century, occupied the same site that it does to-day, back to back against the ramparts of the ancient city. The Faubourg Saint-Seurin outside the city was a great centre of popular devotion, with its three large basilicas of St. Stephen, St. Seurin, and St. Martin surrounding a large necropolis from which a certain number of sarcophagi are still preserved. This faubourg was like a holy city; and the cemetery of St. Seurin was full of tombs of the Merovingian period around which the popular imagination of later ages was to create legends. In the high noon of the Middle Ages it used to be told how Christ Himself had consecrated this cemetery and that Charlemagne, having fought the Saracens near Bordeaux, had visited it and laid Roland's wonderful horn Olivant on the altar of Saint-Seurin.

Dessus l'autel de Saint Seurin le baron,

Il met l'oliphant plein d'or et de mangons

—says the "Chanson de Roland". Many tombs passed for those of Charlemagne's gallant knights, and others were honoured as the resting-places of Veronica and Benedicta. At the other extremity of the city, the Benedictines filled in the marshes of l'Eau-Bourde and founded there the monastery of Sainte-Croix. While thus surrounded by evidences of Christian conquest, the academic Bordeaux of the Merovingian period continued to cherish the memory of its former school of eloquence, whose chief glories had been the poet Ausonius (310-395) and St. Paulinus (353-431), who had been a rhetorician at Bordeaux and died Bishop of Nola. The reigns of William VIII and William IX, Dukes of Aquitaine (1052-1127), were noted for the splendid development of Romanesque architecture in Bordeaux. Parts of the churches of Sainte-Croix and Saint-Seurin belong to that time, and the Cathedral of Saint-André was begun in 1096.

In the Middle Ages, a struggle between the Sees of Bordeaux and Bourges was brought about by the claims of the latter to the primacy of Aquitaine. This question has been closely investigated by modern scholars, and it has been ascertained that a certain letter from Nicholas I to Rodolfus, which would date the existence of the primacy of Bourges from the ninth century, is not authentic. As the capital of *Aquitania prima*, Bourges at an early date vaguely aspired to pre-eminence over the provinces of *Aquitania secunda* and *tertia*, and thence over Bordeaux. It was about 1073 that these aspirations were more formally asserted; between 1112 and 1126 the papacy acknowledged them, and in 1146 Eugenius III confirmed the primacy of Pierre de la Châtre, Archbishop of Bourges, over Bordeaux. In 1232, Gregory IX gave the Archbishop of Bourges, as patriarch, the right to visit the province of Aquitaine, imposed upon the Archbishop of Bordeaux the duty of assisting, at least once, at the councils held by his "brother" of Bourges, and decided that appeals might be made from the former to the latter. Occasionally, however, as in 1240 and 1294, the

Archbishops of Bourges, coming to Bordeaux, found the doors of the churches closed against them, and answered by excommunication the solemn protests which the Bordeaux clergy made against their visits. Aquitaine was lost to France by the annulment of that marriage between Louis VII and Eleanor of Aquitaine which was celebrated in the Cathedral of Bordeaux in the year 1137, and Bordeaux became the capital of the English possessions in France. Thereupon the struggle between the Sees of Bordeaux and Bourges assumed a political character, the King of France necessarily upholding the claims of Bourges. Most of the archbishops were conspicuous as agents of English policy in Aquitaine, notable amongst them being Guillaume Amanieu (1207-26), on whom King Henry III of England conferred the title of seneschal and guardian of all his lands beyond the sea, and who took part in Spain in the wars against the Saracens; Gérard de Mallemort (1227-60), a generous founder of monasteries, who acted as mediator between St. Louis and Henry III, and defended Gascony against the tyranny of Simon de Montfort, Earl of Leicester. During the episcopate of Gérard de Mallemort the old Romanesque church of Saint-André was transformed into a Gothic cathedral. Pope Clement V (1305-14) was unfavourable to the claims of Bourges. He was a native of Villandraut near Bazas, where he had built a beautiful collegiate church, was Archbishop of Bordeaux from 1300 to 1305, and political adviser to Philip the Fair. When he became pope, in spite of his French sympathies, his heart was set upon the formal emancipation of Bordeaux from Bourges. Blessed Pierre Berland, or Peyberland as tradition calls him (1430-57), was an Archbishop of Bordeaux, illustrious for his intelligence and holiness, founder of the University of Bordeaux and of the College of St. Raphael for poor students, who, after helping the English to defend Bordeaux against the troops of Charles VII, received Dunois into his episcopal city and surrendered it to France. It was during his episcopate that the beautiful campanile known as the Pey Berland Tower was added to the cathedral.

The rich and powerful chapters of Saint-André and Saint-Seurin subsisted in the Middle Ages as a vestige of that duality which was already noticeable in Merovingian Bordeaux. Between the two there were frequent and very animated conflicts. The artistic feeling of the canons in the thirteenth century is attested by the Gothic portal of Saint-Seurin which is still extant. At the end of the fourteenth century Canon Vital de Carle established the great Hospital of Saint-André, which he placed under the protection of the municipality; and it was through the exertions of the chapter of Saint-André that the first city library of Bordeaux was founded, towards the year 1402. During the Middle Ages Bordeaux was a great monastic city, with its Carmelite, Franciscan, and Dominican convents, founded respectively in 1217, 1227, and 1230. In 1214 an important council was held in Bordeaux against usurers, highwaymen, and heretics. When, after the Hundred Years' War, Bordeaux again became French, Louis XI flattered its citizens by joining the confraternity of Notre-Dame de Montuzet, a religious association formed of all the mariners of the Gironde, by heaping favours on the church of Saint-Michel, the tower of which, built in the period between 1473 and 1492, was higher than the Pey Berland, and by furthering the canonization of its former archbishop, Pierre Berland.

Among the Archbishops of Bordeaux, in the modern epoch, may be mentioned: Charles de Gramont (1530-44), who during its earliest years helped the College of Guyenne (founded in 1533) and introduced into Bordeaux the art of the Renaissance; François de Sourdis (1599-1628), who had

great political influence during the minority of Louis XIII, caused the marshes in the neighbourhood of Bordeaux to be filled in, erected there a magnificent Carthusian monastery, welcomed to Bordeaux many congregations devoted to ecclesiastical reform, approved (1606) the teaching order of the Filles de Notre-Dame, founded by Blessed Jeanne de Lestonnac, and befriended the College of the Madeleine founded by the Jesuits in opposition to the College of Guyenne which, during the sixteenth century, was open to Protestant influences; Cardinal de Cheverus (1826-36), who during the cholera epidemic had the sign *Maison de Secours* (House of Refuge) put over his palace, of whom M. Jullian said that no prelate in the history of the diocese had come nearer the ideal of sanctity, and during whose episcopate Thérèse de Lamourus, the "Good Mother", considered by Cardinal Cheverus a saint worthy of the early days of the Church, opened for repentant women the *Maison de la Miséricorde*; Cardinal Donnet (1837-82), who re-established the old provincial councils interrupted for 224 years.

*The Old Bishopric of Bazas.*—According to Gregory of Tours, Bazas had a bishop at the time of the Vandal invasion in the fifth century. The dedication of the cathedral to St. John the Baptist is explained in an account given by the same historian, that a lady of Bazas, whom certain hagiographers of the nineteenth century believe to have been St. Veronica, brought from Palestine a relic of St. John the Baptist at the time of that saint's death. For two hundred and fifty years prior to 1057, the Bishop of Bazas bore the title of Bishop of Aire, Dax, Bayonne, Oloron, and Lescar. Urban II (1088-99) preached the crusade at Bazas.

*Places of Ecclesiastical Interest in the Archdiocese.*—The town of La Réole (from *Regula*, rule) owes its origin, and even its name, to a Benedictine monastery founded in 777, destroyed by the Northmen, and rebuilt in 977 by Sancho of Gascony and his brother, Bishop Gombald. It was there that Abbo, Abbot of Fleury, who came to reform the monastery in 1004, was assassinated. The town of Saint-Emilion is likewise indebted for its origin to the hermit of that name, a native of Vannes, who died in 767 after having founded in these parts an abbey which the Augustinians occupied after the year 1110. The Abbey of Saint-Romain at Blaye in which, it is said, the remains of Roland, nephew of Charlemagne, were once preserved, was founded on the spot where, in the fourth century, St. Romanus, the recluse, died in the arms of St. Martin. The Benedictine monastery of the Grande Sauve entre Deux Mers was founded in 1080 by St. Gerard of Corbie. The Abbey of Notre Dame at Guîtres had for abbot, between 1624 and 1637, Peiresc the celebrated numismatist, one of the greatest scholars of the seventeenth century (1580-1637).

The most important pilgrimage is that of Notre Dame of Verdélais, founded in 1390 by Isabella, Countess of Foix, when her mule stumbled over a buried statue of the Blessed Virgin.

*Statistics.*—In 1900 the religious orders for men were represented in the Archdiocese of Bordeaux as follows: Augustinians, Jesuits, Franciscans, Lazarists, Carmelites, and Fathers of the Holy Ghost at Bordeaux; Olivetans at Soulac; Dominicans at Arcachon; Redemptorists at Coutras; Marists at Notre Dame de Verdélais and several houses of Marianists. In 1900 the congregations for women peculiar to the diocese were, in addition to those mentioned above: Sisters of Charity of the Holy Agony, a teaching and nursing order founded in 1849, with the mother-house at Bordeaux; Sisters of the Christian Doctrine, founded in 1814, with the mother-house at Bordeaux; Sisters of the Holy Family, founded in 1820 by the Abbé Noailles. The last-named con-

gregation has 200 houses, in different parts of the world. It includes the: Sisters of St. Joseph, who have charge of asylums for orphans and working women; Sisters of the Immaculate Conception and Ladies of the Immaculate Conception, who conduct boarding-schools; Agricultural Sisters (Sœurs Agricoles); Sisters of Hope, attendants on the sick; Contemplative Sisters (Sœurs Solitaires); Sisters of St. Martha, for domestic service. In 1899, the following charitable and educational institutions were to be found in the Archdiocese of Bordeaux: 1 foundling hospital, 11 infant asylums, 66 infant schools, 2 children's infirmaries, 2 deaf-mute institutes for girls, 2 orphanages where farming is taught, 1 boys' and girls' orphanage, 34 girls' orphanages, 1 servants' guild, 2 guilds for penitent women, 10 charity kitchens, 12 hospitals or hospices, 8 communities for the care of the sick in their homes, 8 houses of retreat, 3 homes for incurables, 2 insane asylums, and 7 homes for the aged, all conducted by sisters; and 1 institute for deaf, dumb, and blind boys, and 1 orphanage where farming is taught, both conducted by brothers. At the close of the year 1905 the archdiocese contained 823,131 inhabitants, 79 parishes, 431 mission churches, and 70 curacies.

GEORGES GOYAU.

**Bordeaux**, UNIVERSITY OF, was founded during the English domination, under King Henry VI, in 1441, by a Bull of Pope Eugenius IV, at the demand of the archbishop's officials, Pierre Berland being at the time archbishop, and of the Aquitanian councillors. It did not, however, receive official recognition from the king until the reign of Louis XI. According to the terms of the Bull, it was to be organized on the model of the *studium* of the University of Toulouse. The Archbishop of Bordeaux was the chancellor for life. It included all the different faculties: theology, canon law, civil law, arts, etc. On account of the constant lack of endowment, the University of Bordeaux, from the time of its foundation until the French Revolution, never had any remarkable standing. After the Revolution, when the universities were reorganized in France by the Government, Bordeaux was one of the cities chosen to be the seat of a university. During the nineteenth century it had a brilliant career, especially in the field of medicine, among its professors being such men as Azam, Pitres, and others who were famous on account of their pathological researches.

I.

G. M. SAUVAGE.

**Bordone**, CAVALIERE PARIS, an eminent painter of the Venetian school, b. at Treviso, 1500; d. at Venice, 1570. A member of a noble family, he early showed an inclination for art and, after being given a good general education, was placed in the school of Titian with whom he studied for several years. He afterwards had Giorgione for his master. While feeling strongly the influence of both great painters, Bordone finally settled down to the style of Titian, whose manner he so successfully imitated

that his works have sometimes been mistaken for Titian's. In portraiture he was most successful, ceding to none but to Titian in excellence. In his early career he painted at Venice, Vicenza, and Treviso. At the last place his most important work was in the church of San Vioenzo, where he painted in the six compartments of the dome "The Annunciation", "The Nativity", "The Adoration of the Shepherds", "The Crucifixion", "The Ascension", and "The Assumption of the Virgin". Bordone was invited to visit France, some say by Francis I, and others by Francis II, by whom he was knighted. He remained, according to the latter authority, after the death of that king, for several years at the court of Charles IX, before returning to Italy. He painted the portraits of the royal family and the principal figures of their courts, working notably for the Duke of Guise and the Cardinal de Lorraine.

The most famous work of Bordone is the large painting in the Academy at Venice, representing with great brilliancy of colour and effect "The Fisherman Presenting the Ring of St. Mark to the Doge". On his return to Venice from France, Bordone stopped at Augsburg, where he did some work in the Fugger Palace, and at Milan, where he painted in the chapel of St. Jerome. Among the principal works of Bordone in European galleries are: Louvre, "Vertumna and Pomona", "Portrait of a Man", and "Portraits (presumed) of Philip II, King of Spain, and his Preceptor"; National Gallery, London, "Daphnis and Chloe", and "Portrait of a Genoese Lady"; Berlin Museum, "Madonna and Saints", "The Chess Players", and "Man in Black"; Dresden Gallery, "Holy Family with St. Jerome and St. Elizabeth", and "Diana, Apollo and Marsyas"; Munich, Old Pinakotek, "Portrait of a Man", and "Man Counting Jewels"; Vienna Gallery, seven works including "Venus and Adonis in an Arbour", and "A Young Lady at her Toilet"; St. Petersburg Hermitage, "Madonna and Saints"; Brera, Milan, "Baptism of Christ"; Venice, Academy, "Presenting the Ring", and "The Tiburtine Sibyl"; Rome, Colonna Palace, "Holy Family"; Doria Palace, "Mars and Venus"; Padua Gallery, "Christ Taking Leave of His Mother"; Lovere, Tadini Collection, "Madonna and Two Saints"; Genoa, Brignole Palace, two portraits.

BRYAN, *Dictionary of Painters and Engravers* (London, and New York, 1903-05).

AUGUSTUS VAN CLEEF.

**Borgess**, CASPAR HENRY, third Bishop of Detroit, Michigan, U. S. A., b. at Kloppenburg, Hanover, Germany, 1 August, 1824; d. at Kalamazoo, Michigan, 3 May, 1890. He emigrated to the United States in boyhood and made his classical and theological studies at St. Xavier's College, Cincinnati, and at St. Charles's Seminary, Philadelphia. He was ordained priest at Cincinnati, 8 December, 1847, after which he was stationed for ten years at Columbus.

In 1859 he was made rector of St. Peter's Cathedral, Cincinnati, and remained there until he was consecrated titular Bishop of Calydon and administrator of Detroit, 24 April, 1870. The first Bishop of Detroit, the Right Rev. Frederick Reese, consecrated 6 October, 1833, the first German in the United States to be raised to the episcopal dignity, became demented four years after his consecration and was called to Rome. He never resigned his charge and lived until 30 December, 1871, when he died in an institution at Hildesheim, Germany. As a consequence, Detroit was ruled by an administrator for thirty years, Bishop Borgess assuming the title only in 1871. The see up to his appointment had been dominated by Belgian and French influences, and he gradually made the changes to the English speaking regime that the growth of the new population

THE FISHERMAN PRESENTING THE RING OF ST. MARK TO THE DOGE BARTOLOMMEO GRADENIGO (BORDONE'S MASTERPIECE—ACADEMY, VENICE)

demanded. The Jesuits were introduced into the diocese by him. He resigned the see 16 April, 1888, and spent his last days in retirement, having received the titular see of Phacusias.

THOMAS F. MEEHAN.

**Borgia, SAINT FRANCIS.** See FRANCIS BORGIA, ST.

**Borgia, CESAR.** See ALEXANDER VI.

**Borgia, LUCREZIA.** See ALEXANDER VI.

**Borgia, STEFANO,** Cardinal, b. at Velletri, 3 December, 1731; d. at Lyons, 1804; Italian theologian, antiquarian, and historian. He belonged to a well-known family of Velletri, not to be confounded with the Spanish Borgias or Borjas. His early education was controlled by his uncle Alessandro (1682-1764), Archbishop of Fermo. From his youth, Stefano Borgia manifested a great aptitude for historical research, but his dominant trait was his extraordinary taste for relics of ancient civilizations, a line in which he succeeded so well that, at the age of nineteen, he was received into the Academy of Cortona. He founded a museum at Velletri, in which, during his whole life, he gathered coins and manuscripts, especially Coptic, and which may be considered as his greatest undertaking and achievement. Such was his passion for antiquities that he is known to have sold his jewels and precious earthenware in order to secure the coveted treasures and have the description of them printed. In his scientific career Borgia showed great disinterestedness, placing his collection at the disposal of learned men, regardless of creed and country, and giving them all possible encouragement and support. His amiable temperament and broad-minded character attracted to him all those with whom he came in contact; Paolino da S. Bartolomeo, Adler, Zoega, Heeren, and many others were among his enthusiastic friends.

Borgia was not left, however, entirely to his chosen field of activity, but was called to fill several important political positions. Benedict XIV appointed him Governor of Benevento, and Borgia showed there great administrative talent. In 1770 he was made secretary of the Congregation de Propaganda Fide, an office of which he naturally took advantage to acquire antiquities by the help of the missionaries, a help, be it said to their credit, which proved always forthcoming. He was made a cardinal in 1789. In the troubled period of the French invasion Borgia was given charge of Rome by Pius VI (1797-98). After the proclamation of the Republic, he was arrested (1798), but quickly released, whereupon he immediately resumed his studies and work of collecting; soon afterwards he joined Pius VI at Valencia, and endeavoured to have this pontiff send to Asia and Africa a body of missionaries who would preach the Gospel and gather various monuments.

Cardinal Borgia was of the greatest service to Pope Pius VII in the reorganization of the Pontifical States. In 1801 he was made Rector of the Collegium Romanum, and he was in the retinue of Pius VII when this pontiff went to France to crown the new emperor, Napoleon. Having arrived at Lyons, Cardinal Borgia was taken ill and died. After his death his collection of Coptic MSS. was divided: the non-Biblical MSS. were taken to Naples by mistake, given to the Propaganda, together with the collection of coins and monuments, forming the Museo Borgiano. (Cf. Ciasca, *Fragmenta Copto-Sahidica*, I, p. xvii.) Only a few years ago the MSS. of the Museo Borgiano

were transferred to the Vatican library, where they are to be found to-day. Before the partition of the MSS. was made the eminent scholar and convert, Zoega, wrote a complete and accurate description of them in his posthumous work "*Catalogus Codicum Copticorum manu scriptorum qui in Museo Borgiano Velitris adservantur*" (Rome, 1810). Besides the many services which Cardinal Borgia rendered to science and scientists, he published several works bearing especially on historical topics: "*Monumento di papa Giovanni XVI*" (Rome, 1750); "*Breve istoria dell' antica città di Tadino*" (ibid., 1751); "*Memorie storiche della città di Benevento*" (ibid., 1763-69); "*Vaticana confessio B. Petri chronologicis testimoniis illustrata*" (ibid., 1776); "*De Cruce Vaticanâ*" (ibid., 1779); "*De Cruce Veliternâ*" (ibid., 1780); "*Istoria del dominio temporale della Sede Apostolica nelle Due-Sicilie*" (ibid., 1788).

**Borgianus Codex.** See MSS. OF THE BIBLE.

**Borgognone, AMBROGIO,** real name AMBROGIO STEFANI DA FOSSANO, a distinguished Italian painter and architect, b. Milan, c. 1455; d. at Milan, 1523. The name Borgognone is variously accounted for. By some authorities it is attributed to some Flemish characteristics in his art, and by others to the fact that some of his ancestors had lived in Flanders, then known to the Italians as Borgogna. It is supposed that he studied with Vincenzo Foppa, with Zenale, and with Buttinone, but there is little known of the details of his career. The earliest work credited to him is the façade of the Carthusian convent or Certosa near Pavia. The stalls and other woodwork in the choir were carved from the designs of Borgognone, who painted there, among other works, an altar piece of the Crucifixion. Great refinement and deep religious feeling mark his work, which is likewise notable for its beautiful celestial and mundane types. On his return to Milan he went to work in the church of San Satiro, and his productions appeared, among other churches, at Sant' Ambrogio, San Simpliciano, and Sant' Agostino. At San Simpliciano he painted scenes, since lost, from the story of St. Sisinius. He worked also at Lodi in the church of the Incoronata and did an altar piece for San Satiro at Bergamo.

Borgognone painted in tempera and also in oil in the style of tempera and in fresco. His early work lacked freedom, but later he fell under the beneficent influence of Leonardo da Vinci. Among

THE MADONNA ENTHRONED

his works in public galleries are: National Gallery, London, "Marriage of St. Catherine of Alexandria"; a triptych with a "Virgin and Child Enthroned", having at one side the "Agony in the Garden", and on the other "Christ Bearing His Cross", and two groups of family portraits; Louvre, "Presentation in the Temple", and "St. Peter of Verona", with a kneeling woman; Berlin Museum, "Madonna Enthroned", and "Madonna with Saints"; Munich, Old Pinakotek, "Madonna in Adoration"; Dresden Gallery, "Madonna in Adoration"; Brera Gallery, Milan, "The Assumption of the Virgin"; and Pavia Academy, "Christ Bearing His Cross, followed by Carthusians". In the Casa Borromeo at Milan is a portrait of Bishop Andrea Novelli. The Pavia picture is considered without an equal in art in simple pathos and deep religious meaning. Lanzi and other authors have treated Ambrogio da Fossano, the architect, and Ambrogio Borgognone, the painter, as two different persons, but the signatures he left show that this was not the case.

BRYAN, *Dictionary of Painters and Engravers* (London, and New York, 1903-05).

AUGUSTUS VAN CLEEF.

**Borgo San-Donnino**, DIOCESE OF, in the province of Parma, Italy. The city takes its name from St. Dominus, who fled to that place during the persecution of Maximian (286-305) and suffered martyrdom. It did not become an episcopal see until 1601, under Clement VIII, having until then been governed ecclesiastically by a provost with full faculties, subject directly to the Holy See. The last provost, Papiro Piccioli da Castel Vezzano, was the first Bishop of Borgo San-Donnino. The cathedral, dating from the twelfth century, is a beautiful monument of Romanesque architecture; its façade, however, is still unfinished. Among the notable occupants of this see have been: Alfonso Pozzi (1620), a learned and zealous man; Ranuccio Scotti (1626), several times papal nuncio under Urban VIII, particularly to Switzerland; Filippo Casoni (1650), who urged Ughelli to write his "Italia Sacra"; Alessandro Parravicini, a Benedictine (1660); Gaetano Garimberti (1675), who enlarged the episcopal residence and enriched the cathedral with gifts of sacred vessels and furnishings; Alessandro Roncovieri (1700), distinguished for his zeal and charity; Gerardo Giamdemaria (1719), who held a diocesan synod the wise decrees of which are still in force; Girolamo Baiardi (1753), who restored the episcopal residence and founded a hospital; Alessandro Garimberti (1776) who was distinguished for his prudent conduct during the French invasion, and who left his library to the seminary. This diocese has a population of 60,400, with 54 parishes, 76 churches and chapels, 100 secular priests, 10 regulars, and 70 seminarians.

BATTANDIER, *Ann. pont. cath.* (Paris, 1907).

U. BENIGNI.

**Borgo San-Sepolcro**, DIOCESE OF, situated in the province of Arezzo, Tuscany, Italy. The city is believed by some to be the ancient Biturgia mentioned by Ptolemy, and is so designated in the usage of the Roman Curia. The foundation of the present city is attributed to two pilgrims of the tenth century, who halted in this neighbourhood on their return from Palestine, and built an oratory in which they placed the relics they had brought from the holy places. This oratory attracted many pilgrimages; gradually there grew up about it a settlement of considerable size known as Borgo San-Sepolcro. Later on, Camaldoli monks erected a monastery there, the abbot of which had temporal jurisdiction over the town. Guido Petramala, Bishop of Arezzo, fortified Borgo San-Sepolcro, and made it a Ghibelline stronghold. At first subject to the Diocese of Castello, it was made an episcopal see by Leo X in 1515, the first bishop being Giovanni Ev. Galeotto Graziani. Among

the bishops worthy of record are Nicolò Tornabuoni (1560), a learned theologian, author of a treatise on the controversies between Catholics and Calvinists; Dionisio Bussotti (1638), likewise a skilled theologian; Gian Lorenzo Tilli (1704), founder of the seminary. The cathedral is a splendid three-nave Romanesque edifice, showing, however, a marked tendency towards the Gothic. A famous image of the Holy Face (*Volto Santo*) is venerated in the cathedral. It is a wooden crucifix of heroic size; the sacred Body is covered with a long tunic, and a crown rests on the head. It resembles the *Volto Santo* of Lucca, and has been in this cathedral since the tenth century; previously it was kept in the neighbouring castle of Bibbiana. Nothing certain is known as to its origin. However, the crucified Christ dressed in a long garment (*colobium*) indicates a great antiquity, perhaps the eighth or ninth century. Other beautiful churches are those of San Agostino and Santa Maria; the latter has a beautiful baptistery, brought thither from the ancient church of San Agostino. Noteworthy also is the church of San Nicola, built in 1258 by the Franciscan, Fra Tommaso da Spello, and restored in the eighteenth century. This diocese has a population of 60,500 Catholics, with 135 parishes, 250 churches and chapels, 190 secular priests, 26 regulars, and 60 seminarists. There are 3 academies, one for girls, and 2 for boys. The male religious orders represented are: Minors Conventual, Servites, Capuchins; the female congregations are: Franciscans, Capuchins, Benedictines, Sisters of St. Anne, Sisters of Charity, Sisters of the Sacred Heart, Salesian Sisters, about 70 in all.

U. BENIGNI.

**Borie**, PIERRE-ROSE-URSULE-DUMOULIN, Bishop-elect of Acanthus, Vicar Apostolic of Western Tongking and Martyr; b. 20 February, 1808, at Beynat, Diocese of Tulle, France; beheaded 24 November, 1838. He studied successively at the colleges of Beaulieu and Servières, and in 1826 entered the seminary of Tulle. Meanwhile the desire to devote his life to the evangelization of distant lands matured, and in 1829 he proceeded to Paris and spent thirteen months at the Seminary of the Foreign Missions. Too young for the priesthood, he was to have been ordained at Pondicherry, on his way to his missionary post. However, a dispensation from Rome permitted his immediate ordination, which took place at Bayeux (1830). He sailed from Havre, 1 December, 1830, and, after spending some time at Macao, in China, arrived in Tongking in the year 1832. His progress in the language of the country was rapid, but eight months after his installation an edict of persecution was issued (January, 1833). Borie had to remain almost continually concealed and to endure great privations. In 1834, failing health increased the acuteness of the sufferings of persecution. He regained his strength the following year and was enabled to visit even the least accessible Christian communities of the vast district of which he was in charge. He fell into the hands of the persecutors in 1838. During his captivity he received the news of his nomination to the Vicariate Apostolic of Western Tongking, with Acanthus as titular see. Shortly after this, on the 24th of November, 1838, the death-sentence was pronounced on him and two native priests; the execution took place that same day. His remains were brought to France in 1843, and are religiously kept at the Seminary of the Foreign Missions, in Paris. The cause of his beatification has been introduced at Rome.

P. D. H. BORIE (brother of Monseigneur Borie, writing anonymously), *Vie de Mgr. Borie, par un prêtre du diocèse de Tulle* (Paris, 1844; 2d ed., 1846); LAUNAY, *Les cinquante-deux serviteurs de Dieu* (Paris, 1896), 138-162.

N. A. WEBER.

### Borneo, PREFECTURES APOSTOLIC OF.—

**I. DUTCH BORNEO.**—The former Vicariate of *Batavia* was composed of Sumatra, Java, and the other Sunda Islands, including Borneo, under the control of Holland. The northern part of Borneo, now under British suzerainty, was separated from this immense vicariate, 27 August, 1855; that part of Borneo which is under Dutch rule was taken from the Vicariate Apostolic of *Batavia*, 11 February, 1905, and made into a separate prefecture under the care of the Capuchins. The missionaries for the new prefecture were selected from the Dutch province of this order, and the first prefect Apostolic was appointed 10 April, 1905. Up to the time of the separation what is now the Prefecture of Dutch Borneo was administered by the Jesuits who had charge of the Vicariate of *Batavia*, and who visited the Catholics of Dutch Borneo twice a year. In 1875 the Jesuit Father de Vriez built a little church at Singkawang, a small town situated on the west coast of the island. In the neighbourhood of Singkawang there were nearly 200 Chinese Catholics and 118 soldiers. In 1890 Father Staal, afterwards Vicar Apostolic of *Batavia*, founded a station in the interior at Smitau. The station was afterwards transferred to Sedjiram on the Penboeang in the region inhabited by the Dyaks. The mission at Sedjiram gave good promise of success and in 1897 included 400 baptized persons, but the missionaries were too few in number to give the station constant supervision, and it was consequently abandoned. Later the Holy See decided to erect a separate prefecture covering an area of 204,633 square miles. According to the "Statistics of the Capuchin Missions" for 1906, there were in Dutch Borneo at that date 8 Capuchin priests; 4 brothers; 396 Catholics, consisting of 210 Chinese, 100 Dyaks, and 86 Europeans; 2 stations, Singkawang and Sedjiram; 3 chapels; 20 conversions were claimed. There had been 56 baptisms and 156 communions, the latter number referring to the Catholic laity as, outside of the Capuchins, there are no religious in the prefecture. The population included in the prefecture is 2,000,000. A report of 26 November, 1906, gave the founding of a third station at Samarinda on the east coast of Borneo, some two weeks' sail from Singkawang, and of a fourth station at Pamangkat, which is seven hours from Singkawang.

**II. BRITISH BORNEO, OR THE PREFECTURE OF NORTH BORNEO AND LABUAN.**—In 1687 Father Ventimiglia, a Theatine, was commissioned by Pope Innocent XI to preach Christianity in Borneo. There are no memorials of this mission, which has left no traces in the island although the missionary declared that God had blessed his labours. The Propaganda, 27 August, 1855, decreed the erection of the northern part of the island of Borneo into an independent prefecture and entrusted it to the Rev. Charles Cuarteron, a Spaniard. Father Cuarteron was originally a sea-captain and had vowed, after escaping great peril, to devote himself to the evangelization of Borneo. He landed at Labuan in 1857, in company with several missionaries who deserted him in 1860. Although alone in the island of Labuan, Father Cuarteron courageously continued his labours. At length, seeing that isolation made him powerless, he went to Rome in 1879 to request that the Propaganda place the mission in charge of an institute. From Rome Father Cuarteron went to Spain, where he soon died. The British had obtained the island of Labuan in 1846; they gradually extended their power over the petty rulers of the northern part of Borneo until, in 1888, the British Protectorate of North Borneo was formally acknowledged. English-

speaking missionaries being desired in the British part of Borneo, the Propaganda (19 March, 1881) confided the mission of North Borneo and Labuan to the Society for Foreign Missions of Mill-hill, England. The first prefect Apostolic appointed under the new administration was the Rev. Thomas Jackson. The society has since continued in charge of the mission.

The island of Labuan has an area of 30 square miles and contains 6,800 inhabitants; it is an important shipping station between Singapore and Hong-Kong. The prefect Apostolic lives at Labuan. The stations served are Labuan and Sarawak (Kuching), the two most important towns. Outside of these two places where the missionaries live there are ten stations which are visited: Sibu, Kanowit, Egan, Oya, Mukah, Baram, Papar, Jesselton, Patatan, and Sandakan. According to the "Missions-Atlas" of P. Streit, the statistics of the mission are: 19 regular priests; 2 lay brothers; 15 sisters; 8 churches; 20 chapels; 16 catechists; 14 schools with 740 pupils; 2,600 baptisms; about 1,000 catechumens.

ALBERT BATTANDIER.

**BORRAS, FRANCISCO NICOLÁS**, a distinguished Spanish painter, b. at Cocentaina, 1530; d. at Gandia, 1610. Going to Valencia at an early age to study under Vicente Joanes, he became that master's most noteworthy pupil. His works in general resemble those of Joanes and some of them are good enough to have been taken for the master's. Entering the priesthood, he was assigned to his native place, where he devoted all his spare moments to painting and acquired such skill that the authorities of the monastery of St. Jerome, at Gandia, employed him to paint the picture for the high altar of their church. He enjoyed his stay at the monastery so much, that taking a great liking to the brothers and their life he determined to ask for no other payment for his work than membership in the order. He received the habit in 1575, and took the final vows the following year. Three years thereafter, Fra Nicolás, in search, perhaps, of an even more austere life, spent some little time with the Capuchins at the Franciscan monastery of San Juan de la Riviera near Valencia. He was soon back, however, at Gandia where he passed the rest of his life painting in every part of the monastery, in the church, chief chapel, chapter house, oratories, refectories, and cloisters, leaving twelve altar pieces in the church alone. He also spent his own money in the employment of sculptors and builders for the embellishment of his beloved monastery.

Besides his great labours at Gandia, Borrás also did much work for churches and religious houses in Valencia, at the capital, and elsewhere. His paintings appeared at the cathedral at Valencia and at the Hieronymite monastery in the city of San Miguel de los Reyes, where there was a "Christ at the Column", and a picture of the painter in adoration of "The Holy Virgin". Others were at his native place in the church of St. Stephen, in the Escorial at Aldaya, and at Ontiniente. In the Museum at Valencia there are some fifty paintings by Borrás chiefly from Gandia and San Miguel. Among them are "The Last Supper", "Christ Bearing His Cross", "The Dead Saviour in the Arms of the Eternal Father", and "The Archangel Michael Driving Souls into Purgatory and Hell". In the last Borrás is supposed to have pictured himself as a white robed monk kneeling on the brink.

**Borromeans.** See SISTERS OF MERCY OF ST. CHARLES BORROMEO.

**Borromeo, ANDREA**, an Italian missionary, b. in the first half of the seventeenth century, at or near Milan; d. in 1683. He was the son of Count Giulio Cesare Borromeo, and was received into the religious order of the Theatines in 1637. In 1652 he visited Mingrelia and Georgia (Russian Transcaucasia) as a missionary, and laboured with success for eleven years, to convert the inhabitants. On his return to Rome he was elected procurator for these missions. He declined the offer of a bishopric. He left an account of the above mentioned missions of his order entitled: "Relazione della Georgia, Mingrelia, e Missioni de' Padri Teatini in quelle parti" (Rome, 1704).

**Borromeo, SAINT CHARLES.** See CHARLES BORROMEO, St.

**Borromeo, FEDERICO**, Cardinal and Archbishop of Milan, cousin and successor of St. Charles Borromeo, b. at Milan 18 August, 1504; d. there, 22 September, 1631. He was the son of Giulio Cesare Borromeo and Margherita Trivulzio, members of the Milanese aristocracy. He studied successively at Bologna and Pavia, in which latter city he was the first pupil of the Borromeo College. Later he went to Rome for higher studies and was there strongly influenced by St. Philip Neri, Cardinal Baronius, and Cardinal Bellarmine. In 1580 he began his ecclesiastical career under the guidance of St. Charles Borromeo. He was made cardinal at the age of twenty-three, in 1587, by Sixtus V; and, in 1595, Archbishop of Milan by Clement VII, who personally consecrated him to this high office. During thirty-six years he gave the world an example of episcopal virtue, zeal, and dignity. He was tireless in preaching and in instructing both clergy and people, was an apostle of religious education and a persistent reformer of all abuses, both lay and ecclesiastical. An almost constant conflict with the local Spanish authorities, suspicious and haughty by nature, did not diminish his sweetness of temper nor his patience; the traditional immunities and authority of the ecclesiastical order were defended as an inheritance of his see that he dared not abandon. Von Reumont thinks that, though often right, he went at times too far, e. g. in the assertion of minute ceremonial rights; it may be said, however, that in all probability it was the principle and substance of customary ecclesiastical rights that the fearless pastor ever intended to preserve and hand down. His affection for the people of Milan was made evident during the great famine and pest of 1627-28, when he fed daily 2,000 poor at the gates of his residence, and was personally an example of such absolute heroism that nearly one hundred of his clergy (sixty-two parish priests and thirty-three vicars) gave up their lives in attendance on the perishing multitudes. Alessandro Manzoni has immortalized this extraordinary devotion in his "I Promessi Sposi" (The Betrothed). If Cardinal Borromeo shared the current excessive credulity in witchcraft and magic, he was in every other way far in advance of his time as a friend of the people and a promoter of intellectual culture and social refinement based on a practical religious life. He is the founder of the famous Ambrosian Library (q. v.) opened by him in 1609, as a college of writers, a seminary of savants, a school of fine arts, and after the Bodleian at Oxford the first genuinely public library in Europe. The cares of a thickly populated diocese did not prevent him from acquiring great ecclesiastical erudition or from composing some seventy-one intended and forty-six manuscript books written

mostly in Latin that treat of various ecclesiastical sciences. The universal approbation of his own and later times is echoed in the following words from the above-mentioned work of Manzoni, engraved on the pedestal of the marble statue that the citizens of Milan erected in 1865 before the gates of the Ambrosiana Library: "He was one of those men rare in every age, who employed extraordinary intelligence, the resources of an opulent condition, the advantages of privileged station, and an unflinching will, in the search and practice of higher and better things."

His life was first written by FRANCESCO RIVOLA (Milan, 1656), later by G. RIPAMONTI, CANTÙ, *La Lombardia nel secolo XVII* (Milan, 1832), which includes a catalogue of his works; ROBERTI, *Apologia del Card. Federico Borromeo* (Milan, 1870); VON REUMONT in *Kirchenlex.*, II, 1125 sqq.; BOUQUILLON in *Catholic University Bulletin* (Washington, 1895), I, 566-572.

THOMAS J. SHAHAN.

**Borromeo, THE SOCIETY OF ST. CHARLES (BORROMÄUSVEREIN)**, a German Catholic association for the encouragement and diffusion of edifying, instructive, and entertaining literature. It was founded at Bonn, in 1845, by Franz Xavier Dieringer, one of the professors of the Catholic theological faculty at Bonn, August Reichensperger, and Freiherr Max von Loë. From the first the society placed itself under the protection of the episcopate. Cardinal Johannes von Geissel, Cardinal Krementz, and Archbishop Simar did much to further its aims, and it gradually spread over the whole of Germany, so that by the middle of 1907 it had 145,250 members, who were grouped in 258 main societies and 3,247 branches. The administrative department and chief office are at Bonn. The society has 73 branches outside of Germany: in Belgium, 6; France, 2; Holland, 4; Italy, 1; Luxemburg, 36; Austria, 6; Switzerland, 18. In 1906 its total income was \$124,743, and its expenses, \$123,174. In accordance with its by-laws the society seeks: (1) to send every year one book or several books as a gift to each of its members, the quantity of reading matter thus bestowed being dependent on the ability of the society and the amount of the annual subscription, as the dues vary from \$1.50 to 75 or 38 cents a year; (2) to use the annual surplus in founding libraries (those thus founded numbered over 3,000 in 1907) and in the support of libraries; (3) to aid workingmen's and people's libraries and those of asylums, hospitals, and other charitable or social institutions. Formerly the society was able to supply its members with a large number of books at a reduced price, which was often not more than two-thirds of the ordinary cost of the volumes. The society's catalogue for 1906 contained over 10,000 titles of works which could be thus purchased. But since 1907 it has been obliged to abandon this branch of its activity, on account of the position taken by the business union of the German book-sellers. In the larger cities the society has opened free reading-rooms for the use of the public in connexion with its libraries. Since 1902 the society has issued a periodical; originally this publication was called "Borromäusblätter"; it now bears the name of "Die Bücherwelt".

JOSEPH LINS.

**Borromini, FRANCESCO**, architect and sculptor; b. 25 September, 1599, at Bissone; d. (by his own hand) 1 August, 1667, at Rome. He studied architecture under Carlo Maderna, a relative. On the death of Maderna, he was nominated as architect of St. Peter's, under the direction of Bernini. His most extravagant effort was the church of San Carlo alle Quattro Fontane (1640-67), a good example of the fully developed baroque style in Rome. In the

church and part of the College of Propaganda Borromini's fancies are wildest; the cupola and campanile of Sant' Andrea delle Fratte are in better taste. The great nave of Saint John Lateran was modernized, as it now stands, by Borromini. His best work is the façade of Santa Agnese in the Piazza Navona. Borromini is generally considered the father of all modern abuses in architecture. He inverted the whole system of Greek and Roman architecture, without offering a substitute.

THOMAS H. POOLE.

**BORRUS** (BORRI, BURRUS), CHRISTOPHER, missionary, mathematician, and astronomer, b. at Milan in 1583; d. at Rome, 24 May, 1632. His family was one of good standing in Milan. He became a member of the Society of Jesus, 16 September, 1601; in 1618 he was sent from Macao with Father Petrus Marques, S.J., as one of the first missionaries to Cochinchina. Here he stayed until 1622, being known under the name of Bruno. After his return he taught mathematics at Coimbra; in 1632 he entered the Cistercian Order, taking the name of Father Onofrio, and died the same year. His most important work "Relatione della nuova missione delli P. P. della Compagnia di Gesù al Regno della Cocinchina" appeared at Rome in 1631 and was translated into French (Rennes, 1631), Dutch (Louvain, 1632), Latin and German (Vienna, 1633), and English (London, 1633). It was also inserted in Churchill's "Collection of Voyages" (1704), II, 787-838, and in Sprengel and Forster's "Neue Beiträge zur Völker- und Länderkunde" (Leipzig, 1793), II, 27-110. The work was considered one of the best sources of information concerning Cochinchina on account of its excellent description of the physical, political, and ecclesiastical conditions of the country. The observations of Borrus on the magnetic variation of the compass appear to be of more importance, but unfortunately they have not yet been published. According to Kircher he drew up the first chart for the Atlantic and Indian Oceans showing the spots where the magnetic needle makes the same angles with the meridian; in this he is to be regarded as the forerunner of Halley. Borrus gives the explanation to the chart in a manuscript that belongs to the Royal Academy at Lisbon. In another manuscript, now at Evora, "Tratada da arte de navegar pelo Cristovão Bruno", which bears on the same subject, he makes excellent suggestions, according to Allatius, as to a new method for determining the longitude at sea and also concerning improvements in sea-charts. Father Le Jeunehomme undertook a translation of the treatise into Latin. Philip of Spain, desiring to understand the nautical studies and inventions of Borrus, once summoned the latter from Coimbra to Madrid. Besides what has been already mentioned Borrus wrote, "Doctrina de Tribus Caelis, Aereo, Sydereo et Empeireo" (Lisbon, s. d.), which Pietro de Valle translated into Persian (Maius, Scriptor. vet. nova collect., IV, n. ix), and also some accounts of his travels for the Propaganda.

OTTO HARTIG.

**BOSA**, DIOCESE OF, in the province of Cagliari, Sardinia, and suffragan to the Archdiocese of Sassari. The city numbers about 35,000 inhabitants. St.

Gregory the Great, in one of his letters, speaks of a Bishop of Bosa, without, however, mentioning the bishop's name. In 1073 Costantino de Castro, Bishop of Bosa, who, according to an inscription, had built the cathedral dedicated to St. Peter, was appointed Metropolitan of Torres by St. Gregory VII. Among the most illustrious bishops of this see are numbered: the learned Cardinal Giovanni Casanova (1424); G. Francesco Fara (1591), author of the first (but very inaccurate) history of Sardinia; Serafino Esquirro, a learned theologian, who had been General of the Servites (1677). It is asserted by some that the see was originally at Calmedia, but was transferred to Bosa after the destruction of the former town; also, that the first bishop was St. Emilius, sent thither by St. Peter and martyred in 70—for this, however, there is no historical evidence. The diocese has a population of 40,200, with 21 parishes, 104 churches and chapels, 100 secular priests, and 40 seminarians.

U. BENIGNI.

**BOSCH**, PETER VAN DER, Bollandist, b. at Brussels, 19 October, 1686; d. 14 November, 1736. After studying the humanities at the College of Brussels, 1698-1705, he entered the novitiate of the Society of Jesus at Mechlin, 25 September, 1705. At the close of his novitiate he studied philosophy at Antwerp, 1707-09, and then spent a year in Italy to complete his literary training. Recalled to Antwerp in 1710, he spent six years in teaching and then went to Louvain, where he took a theological course, 1716-20. He was ordained priest at Louvain in 1719 and distinguished himself by the public defence of theses in March and September, 1719, and by his defence "De Universâ Theologiâ" in 1720. In 1721, at the end of his third year of probation, he was made an assistant to the Bollandists and remained a member of this body during the rest of his life. His hagiographical writings are found in July, IV-VI, and August, I-III.

DOLMAUS, *Elogium R. P. Petri Boschi hagiographi in Acta SS.*, III.

CH. DE SMEDT.

**BOSCO**, GIOVANNI MELCHIOR, VENERABLE (DON BOSCO), founder of the Salesian Society, b. of poor parents in a little cabin at Becchi, a hill-side hamlet near Castelnovo, Piedmont, Italy, 16 August, 1815; d. 31 January, 1888; declared Venerable by Pius X, 24 July, 1907. When he was little more than two years old his father died, leaving the support of three boys to the mother, Margaret Bosco. John's early years were spent as a shepherd and he received his first instruction at the hands of the parish priest. He possessed a ready wit, a retentive memory, and as years passed his appetite for study grew stronger. Owing to the poverty of the home, however, he was often obliged to turn from his books to the field, but the desire of what he had to give up never left him. In 1835 he entered the seminary at Chieri and after six years of study was ordained priest on the eve of Trinity Sunday by Archbishop Franzoni of Turin.

Leaving the seminary, Don Bosco went to Turin where he entered zealously upon his priestly labours. It was here that an incident occurred which opened up to him the real field of effort of his afterlife. One of his duties was to accompany Don Cafasso upon his visits to the prisons of the city, and the condition of the children confined in these places, abandoned to the most evil influences, and with little before them but the gallows, made such an indelible impression upon his mind that he resolved to devote his life to the rescue of these unfortunate outcasts. On the eighth of December, 1841, the feast of the Immaculate Conception, while Don Bosco was

vesting for Mass, the sacristan drove from the church a ragged urchin because he refused to serve Mass. Don Bosco heard his cries and recalled him, and in the friendship which sprang up between the priest and Bartolomeo Garelli was sown the first seed of the "Oratory," so called, no doubt, after the example of St. Philip Neri and because prayer was its prominent feature. Don Bosco entered eagerly upon the task of instructing this first pupil of the streets; companions soon joined Bartholomeo, all drawn by a kindness they had never known, and in February, 1842, the Oratory numbered twenty boys, in March of the same year, thirty, and in March, 1846, four hundred.

As the number of boys increased, the question of a suitable meeting-place presented itself. In good weather walks were taken on Sundays and holidays to spots in the country about Turin where lunch was eaten, and realizing the charm which music held for the untamed spirits of his disciples Don Bosco organized a band for which some old brass instruments were procured. In the autumn of 1844 he was appointed assistant chaplain to the *Rifugio*, where Don Borel entered enthusiastically into his work. With the approval of Archbishop Franzoni, two rooms were secured adjoining the *Rifugio* and converted into a chapel, which was dedicated to St. Francis de Sales. The members of the Oratory now gathered at the *Rifugio*, and numbers of boys from the surrounding district applied for admission. It was about this time (1845) that Don Bosco began his night schools and with the closing of the factories the boys flocked to his rooms where he and Don Borel instructed them in rudimentary branches.

The success of the Oratory at the *Rifugio* was not of long duration. To his great distress Don Bosco was obliged to give up his rooms and from this on he was subjected to petty annoyances and obstacles which, at times, seemed to spell the ruin of his undertaking. His perseverance in the face of all difficulties led many to the conclusion that he was insane, and an attempt was even made to confine him in an asylum. Complaints were lodged against him, declaring his community to be a nuisance, owing to the character of the boys he befriended. From the *Rifugio* the Oratory was moved to St. Martin's, to St. Peter's Churchyard, to three rooms in Via Cottolengo, where the night schools were resumed, to an open field, and finally to a rough shed upon the site of which grew up an Oratory that counted seven hundred members. Don Bosco took lodgings nearby, where he was joined by his mother. "Mama Margaret", as Don Bosco's mother came to be known, gave the last ten years of her life in devoted service to the little inmates of this first Salesian home. When she joined her son at the Oratory the outlook was not bright. But sacrificing what small means she had, even to parting with her home, its furnishings, and her jewelry, she brought all the solicitude and love of a mother to these children of the streets. The evening classes increased and gradually dormitories were provided for many who desired to live at the Oratory. Thus was founded the first Salesian Home which now houses about one thousand boys.

The municipal authorities by this time had come to recognize the importance of the work which Don Bosco was doing, and he began with much success a fund for the erection of technical schools and workshops. These were all completed without serious difficulty. In 1868, to meet the needs of the Valdocco quarter of Turin, Don Bosco resolved to build a church. Accordingly a plan was drawn in the form of a cross covering an area of 1,500 sq. yards. He experienced considerable difficulty in raising the necessary money, but the charity of some friends finally enabled him to complete it at a cost of more than a million francs (about \$200,000). The church

was consecrated 9 June, 1868, and placed under the patronage of Our Lady, Help of Christians. In the same year in which Don Bosco began the erection of the church fifty priests and teachers who had been assisting him formed a society under a common rule which Pius IX, provisionally in 1869, and finally in 1874, approved.

*Character and Growth of the Oratory.*—Any attempt to explain the popularity of the Oratory among the classes to which Don Bosco devoted his life would fail without an appreciation of his spirit which was its life. From his earliest intercourse with poor boys he had never failed to see under the dirt, the rags, and the uncouthness the spark which a little kindness and encouragement would fan into a flame. In a vision or dream which he is said to have had in his early boyhood, wherein it was disclosed to him what his lifework would be, a voice said to him: "Not with blows, but with charity and gentleness must you draw these friends to the path of virtue." And whether this be accounted as nothing more than a dream, that was in reality the spirit with which he animated his Oratory. In the earlier days when the number of his little disciples was slender he drew them about him by means of small presents and attractions, and by pleasant walks to favourite spots in the environs of Turin. These excursions occurring on Sunday, Don Bosco would say Mass in the village church and give a short instruction on the Gospel; breakfast would then be eaten, followed by games; and in the afternoon Vespers would be chanted, a lesson in Catechism given, and the Rosary recited. It was a familiar sight to see him in the field surrounded by kneeling boys preparing for confession.

Don Bosco's method of study knew nothing of punishment. Observance of rules was obtained by instilling a true sense of duty, by removing assiduously all occasions for disobedience, and by allowing no effort towards virtue, how trivial soever it might be, to pass unappreciated. He held that the teacher should be father, adviser, and friend, and he was the first to adopt the preventive method. Of punishment he said: "As far as possible avoid punishing . . . try to gain love before inspiring fear." And in 1877 he wrote: "I do not remember to have used formal punishment; and with God's grace I have always obtained, and from apparently hopeless children, not alone what duty exacted, but what my wish simply expressed." In one of his books he has discussed the causes of weakness of character, and derives them largely from a misdirected kindness in the rearing of children. Parents make a parade of precocious talents; the child understands quickly, and his sensitiveness enraptures all who meet him, but the parents have only succeeded in producing an affectionate, perfected, intelligent animal. The chief object should be to form the will and to temper the character. In all his pupils Don Bosco tried to cultivate a taste for music, believing it to be a powerful and refining influence. "Instruction", he said, "is but an accessory, like a game; knowledge never makes a man because it does not directly touch the heart. It gives more power in the exercise of good or evil; but alone it is an indifferent weapon, wanting guidance." He always studied, too, the aptitudes and vocations of his pupils, and to an almost supernatural quickness and clearness of insight into the hearts of children must be ascribed no small part of his success. In his rules he wrote: "Frequent Confession, frequent Communion, daily Mass: these are the pillars which should sustain the whole edifice of education." Don Bosco was an indefatigable confessor, devoting days to this work among his children. He recognized that gentleness and patience alone were not enough to bring to the task of education. He

thoroughly believed in play as a means of arousing childish curiosity—more than this, he places it among his first recommendations, and for the rest he adopted St. Philip Neri's words: "Do as you wish, I do not care so long as you do not sin."

**Statistics.**—At the time of Don Bosco's death in 1888 there were 250 houses of the Salesian Society in all parts of the world, containing 130,000 children, and from which there annually went out 18,000 finished apprentices. In the mother-house Don Bosco had selected the brightest of his pupils, taught them Italian, Latin, French, and mathematics, and this band formed a teaching corps for the new homes which quickly grew up in other places. Up to 1888 over six thousand priests had gone forth from Don Bosco's institutions, 1,200 of whom had remained in the society. The schools begin with the child in his first instruction and lead, for those who choose it, to seminaries for the priesthood. The society also conducts Sunday schools, evening schools for adult workmen, schools for those who enter the priesthood late in life, technical schools, and printing establishments for the diffusion of good reading in different languages. Its members also have charge of hospitals and asylums, nurse the sick, and do pastoral work, especially in rural districts. The society has houses in the following countries: Italy, Spain, Portugal, France, England, Belgium, Switzerland, Austria, Palestine, and Algiers; in North America, Mexico, in South America, Patagonia, Terra del Fuego, Ecuador, Brasil, Paraguay, the Argentine Republic, Bolivia, Uruguay, Chile, Peru, Venezuela, and Colombia. In the United States the Salesians have four churches. Sts. Peter and Paul and Corpus Christi in San Francisco, California; St. Joseph's in Oakland, California; and the Transfiguration in New York City. Very Rev. Michael Borghino, Provincial for America, resides in San Francisco.

E. F. SAXTON.

**Boscovich, RUGGIERO GIUSEPPE**, a Dalmatian Jesuit and well-known mathematician, astronomer, and natural philosopher, b. at Ragusa, 18 May, 1711; d. at Milan, 13 February, 1787. He was the youngest of six brothers and his education was begun at the

Jesuit college of his native city. Being early impressed by the success achieved by his masters he resolved to seek admission in their ranks and on 31 October, 1725, at the youthful age of fourteen, he entered the novitiate of the Society of Jesus in Rome. His unusual talents manifested themselves particularly during the years devoted to literary and philosophical

talents, and he made such progress, especially in mathematics, that he was able to take the place of his former professor at the Roman College even before the completion of his theological studies. As soon as he had completed the ordinary studies of a young Jesuit, he was appointed regular professor of mathematical science in the same college. He performed the duties of this office with much distinction for a whole generation, as is evidenced by the numerous Latin dissertations which he published nearly every year, according to the custom of the time. These show Boscovich's preference for astronomical problems. Among them may be mentioned: "The Sunspots" (1736); "The Transit of Mercury" (1737); "The Aurora Borealis" (1738); "The Applications of the Telescope in Astronomical Studies" (1739); "The Figure of the Earth" (1739); "The Motion of the heavenly Bodies in an unresisting Medium" (1740); "The various Effects of Gravity" (1741); "The Aberration of the Fixed Stars" (1742). Problems in pure mathematics as well as philosophical speculations regarding the various theories on the constitution of matter also engaged his attention and he took an active part in all scientific discussions which agitated the learned world of his time. To these belong his "The Deviation of the Earth from the probable Spherical Shape"; "Researches on Universal Gravitation"; "The Computation of a Comet's Orbit from a Few Observations", etc. His able treatment of these and similar problems attracted the attention of foreign, as well as of Italian, Academies, several of which—among them Bologna, Paris, and London—admitted him to membership. At Paris he shared with the famous mathematician Euler the honour of having submitted the correct solution of a prize problem.

Boscovich also showed much ability in dealing with practical problems. To him was due the project of the Observatory of the Collegio Romano, which afterwards became so well known. He first suggested using the massive dome-pillars of the college church of St. Ignatius as a foundation, on account of their great stability. (The church dome has not yet been completed, so the pillars still await the superstructure planned by the architect.) The unfavourable circumstances of the time and the storms brewing against the Jesuits, which ended, as is well known, in the suppression of the Society, prevented Boscovich's plan from being carried out until 1850, when Father Secchi, his worthy successor, was able to bring it to completion. There is a close parallel, it may be observed, between these two *coryphæi* of the Roman College, and Boscovich may, without hesitation, be considered the intellectual forerunner of Secchi. Like Secchi, too, he was the adviser of the papal Government in all important technical questions. Thus, when in the middle of the eighteenth century the great dome of St. Peter's began to show cracks and other signs of damage, causing consternation to the pope and to the Eternal City, Boscovich was consulted, and the excitement was not allayed until his plan to place large iron bands about the dome was carried out. His advice was sought when there was question of rendering innocuous the Pontine marshes and he was also entrusted with the survey of the Papal States. Pope Benedict XIV commissioned him and his fellow-Jesuit, Le Maire, to carry out several precise meridian arc measurements, and it seems to have been due chiefly to his influence that the same pope, in 1757, abrogated the obsolete decree of the Index against the Copernican system.

Many universities outside of Italy sought to number Boscovich among their professors. He himself was full of the spirit of enterprise, as was shown when King John V of Portugal petitioned the general of the Jesuits for ten Fathers to make an elaborate

RUGGIERO GIUSEPPE BOSCOVICH

studies at the Collegio Romano, the most celebrated of the colleges of the Society of Jesus. Thus, for example, young Boscovich discovered for himself the proof of the theorem of Pythagoras. His professors, especially Father Horatius Borgondi, professor of mathematics, knew how to cultivate his

survey in Brazil. He voluntarily offered his services for the arduous task, hoping thus to be able to carry out an independent survey in Ecuador, and so obtain data of value for the final solution of the problem of the figure of the earth, which was then exciting much attention in England and France. His proposal led to the institution of similar surveys in the Papal States, the pope taking this means of retaining him in his own domain. A detailed account of the results of the work appeared in a large quarto volume (Rome, 1755) entitled: "*De litterariâ expeditione per Pontificiam ditionem ad dimetiendos duos meridiani gradus et corrigendam mappam geographicam*". A map of the Papal States made at the same time, which corrected many previous errors, proved to be likewise a welcome contribution to the discussion regarding the more or less spherical form of the earth. Many of the triangulations were accompanied by no slight difficulties. The two base-lines employed in the survey—one on the Via Appia, the other in the neighbourhood of Rimini—were measured with great care. The first was redetermined in 1854–55 by Father Secchi, as the mark indicating one end of the line measured by Boscovich and Le Maire had been lost. (Cf. Secchi's work: *Misura della Base trigonometrica eseguita sulla via Appia per ordine del governo pontificio*, Roma, 1858.) Besides his work in mathematical astronomy we also find Boscovich speculating, upon scientific grounds, on the essence of matter and endeavouring to establish more widely Newton's law of universal gravitation. As early as 1748 we meet essays from his pen in this field of thought, e. g. "*De materiæ divisibilitate et de principis corporum dissertatio*" (1748); "*De continuitatis lege et ejus consecutariis pertinentibus ad prima materiæ elementa eorumque vires*" (1754); "*De lege virium in naturâ existentium*" (1755); "*Philosophiæ naturalis theoria redacta ad unicam legem virium in naturâ existentium*" (1758). Boscovich, according to the views expressed in these essays, held that bodies could not be composed of a continuous material substance, nor even of contiguous material particles, but of innumerable, point-like structures whose individual components lack all extension and divisibility. A repulsion exists between them which is indeed infinitesimal but cannot vanish without compenetration taking place. This repulsion is due to certain forces with which these elements are endowed. It tends to become infinite when they are in very close proximity, whereas within certain limits it diminishes as the distance is increased and finally becomes an attractive force. This change is brought about by the diverse directions of the various forces. Boscovich divided his last-mentioned exhaustive work into three parts, first explaining and establishing his theory, then pointing out its applications to mechanical problems, and finally showing how it may be employed in physics. His attempt to reduce the most complicated laws of nature to a simple fundamental law aroused so much interest that in 1763 a third, and enlarged, edition of his "*Theoria philosophiæ naturalis*" (Venice, 1763) had become necessary. The publisher added as an appendix a catalogue of Boscovich's previous works. There are no less than sixty-six treatises dating from 1736—a proof of his literary activity. Some have already been mentioned and to these may be added his "*Elementorum matheseos tomi tres*", in quarto (1752).

Boscovich attracted attention by his political writings as well as by his scientific achievements. His Latin verses in which he eulogized the Polish king, Stanislaus, Pope Benedict XIV, and various Venetian noblemen, were read before the Arcadian Academy of Rome. His "*Carmen de Solis ac Lunæ defectibus*" (5 vols., London, 1760) was much admired. His services were also in demand in several

cities and provinces. Thus, in 1757, he was sent by the city of Lucca to the Court of Vienna, to urge the damming of the lakes which were threatening the city. He acquitted himself of this task with such skill that the Luccans made him an honorary citizen and rendered him generous assistance on his scientific journeys, both in Italy, France, and England. While in England he gave the impulse to the observations of the approaching transit of Venus, on 6 June, 1761, and it is not unlikely that his proposal to employ lenses composed of liquids, to avoid chromatic aberration, may have contributed to Dollond's success in constructing achromatic telescopes. The citizens of Ragusa, his native town, besought him to settle a dispute in which they had become involved with the King of France—an affair which the pope himself deigned to adjust. Boscovich returned from England in company with the Venetian ambassador who took him by way of Poland as far as Constantinople. He availed himself of this opportunity to extend and complete his archaeological studies in these countries, as may be gathered from his journal published at Bassano in 1784: "*Giornale d'un viaggio da Constantinopoli in Polonia con una relazione delle rovine di Troja*". The hardships of this journey shattered his health, yet we find him shortly after (1762) employed at Rome in various practical works, such as the draining of the Pontine marshes. In 1764 he accepted the appointment of professor of mathematics at the University of Pavia (Ticinum). At the same time Father La Grange, the former assistant of Father Pezenas of the Observatory of Marseilles, was invited by the Jesuits of Milan to erect an observatory at the large college of Brera. He was able to avail himself of the technical skill of Boscovich in carrying out his commission and it may be questioned to which of the two belongs the greater credit in the founding of this observatory which, even in our own time, with that of the Collegio Romano, is among the most prominent of Italy. It was Boscovich who selected the south-east corner of the college as a site for the observatory and worked out the complete plans, including the reinforcements and the necessary remodelling for the structure. Building operations were immediately begun and in the following year, 1765, a large room for the mural quadrants and meridian instruments, another for the smaller instruments, and a broad terrace, with several revolving domes to contain the sextants and equatorials, were completed. Such was the stability of the observatory that the new 18-inch glass of Schiaparelli could be mounted in it although a cylindrical dome with a diameter of 13 yards, 4 inches now takes the place of the octagonal hall of Boscovich.

The London Academy proposed to send Boscovich in charge of a scientific expedition to California to observe the transit of Venus in 1769 but, unfortunately, the opposition manifested everywhere to the Society of Jesus and leading finally to its suppression, made this impossible. He continued, however, to give his services to the Milan Observatory for whose further development he was able to obtain no inconsiderable sums of money. In particular the adjustment of the instruments engaged his attention, a subject about which he has left several papers. But as his elaborate plans received only partial support from his superiors and patrons, he thought seriously in 1772 of severing his connexion with the observatory and, in fact, in the same year, Father La Grange was placed in complete charge of the new institution. Boscovich was to become professor at the University of Pisa, but Louis XV gained his services and invited him to Paris where a new office, Director of Optics for the Marine—*d'optique au service de la Marine*—with a salary of 8,000 francs, was created for him. He retained this position until 1783 when he returned to Italy to supervise the

printing of his as yet unpublished works in five volumes, for it was not easy to find a suitable publisher in France for books written in Latin. In 1785 there appeared at Bassano, "Rogerii Josephi Boscovich opera pertinentia ad opticam et astronomiam . . . in quinque tomos distributa", the last important work from the pen of this active man, who, after its completion, retired for a time to the monastery of the monks of Vallombrosa. He returned to Milan with new plans, but death shortly overtook him at the age of seventy-six, delivering him from a severe malady which was accompanied by temporary mental derangement. He was buried in the church of Santa Maria Podone.

Boscovich, by his rare endowments of mind and the active use which he made of his talents, was pre-eminent among the scholars of his time. His merits were recognized by learned societies and universities, and by popes and princes who honoured him and bestowed favours upon him. He was recognized as a gifted teacher, an accomplished leader in scientific enterprises, an inventor of important instruments which are still employed (such as the ring-micrometer, etc.), and as a pioneer in developing new theories. All this, however, did not fail to excite envy against him, particularly during the later years of his life in France, where men like d'Alembert and Condorcet reluctantly saw the homage paid to the former Jesuit, and that, too, at a time when so many frivolous charges were being made against his lately suppressed order. This hostility was further increased by various controversies which resulted in differences of opinion, such as the contention between Boscovich and Rochon regarding priority in the invention of the rock crystal prismatic micrometer. (Cf. Delambre, *Histoire de l'Astronomie du XVIII<sup>e</sup> siècle*, p. 645.) The invention of the ring-micrometer just mentioned, which Boscovich describes in his memoir "De novo telescopii usu ad objecta celestia determinanda" (Rome, 1739), has been ascribed without reason by some to the Dutch natural philosopher Huygens. The chief advantage of the simple measuring instrument devised by Boscovich consists in its not requiring any artificial illumination of the field of the telescope. This makes it useful in observing faint objects, as its inventor expressly points out in connexion with the comet of 1739. The novel views of Boscovich in the domain of natural philosophy have not, up to the present time, passed unchallenged, even on the part of Catholic scholars. Against his theory of the constitution of matter the objection has been raised that an inadmissible *actio in distans* is inevitable in the mutual actions of the elementary points of which material bodies are supposed to be composed. The theory therefore leads to Occasionalism. Acknowledgment must, however, be made of the suggestiveness of Boscovich's work in our own day, and the germs of many of the conclusions of modern physics may be found in it. His illustrious successor at the Observatory of the Collegio Romano, Father Angelo Secchi, in his "Unità delle forze fisiche", has in many respects followed in his footsteps, and in fact the cosmological views held by many later natural philosophers furnish unequivocal proof of the influence of the theories maintained by Boscovich.

Among his many smaller works (for full list cf. Sommervogel, cited below) the following deserve special attention: "De annuis stellarum fixarum aberrationibus" (Rome, 1742); "De orbitis cometarum determinandis ope trium observationum parum. *ne invicem remotarum*" (Paris, 1774); "De recentibus compertis pertinentibus ad perficiendam dioptricam" (1767). His chief works, however, are: (1) "De litteraria expeditione per Pontificiam ditionem" (1755); (2) "Theoria philosophiæ naturalis" (1758); (3) "Opera pertinentia ad opticam et As-

tronomiam maxima ex parte nova et omnia hucusque inedita" (1785). The second was published in Vienna 1758-59, in Venice, 1763, and again in Vienna in 1764. The last-named work was subjected to an exhaustive criticism by Delambre, by no means a friend of the Jesuits. He closes with these words: "Boscovich in general manifests a preference for graphical methods in the use of which he gives evidence of great skill. In his whole work he shows himself a teacher who prefers to lecture rather than to lose himself in speculations".

The most extended biographical account of Boscovich may be found in *Vita Italorum, Auctore Angelo Fabronio, Academia Pisana curatore* (Pisa, 1789), XIV; cf. also SOMMERVOGEL, *Bibl. de la c. de J.* (Brussels, 1890), I, col. 1828-50. For shorter accounts cf. ZAMAGNA (Ragusa, 1787); LALANDE (Paris, 1792); RICCA (Milan, 1789); BAGAMONTI (Ragusa, 1789); BIZZARRO (Venice, 1817); *Galleria di Ragusani illustri* (Ragusa, 1841); VACCOLINI in *Giornale arcadico* (1842), XCII, 174.

ADOLF MÜLLER.

Bosio, ANTONIO, known as "The Columbus of the Catacombs", b. in the island of Malta about the year 1576; d. 1629. While still a boy he was sent to Rome and placed in charge of an uncle who represented the Knights of Malta in the Eternal City. In the Roman schools he studied literature, philosophy, and jurisprudence, but at the age of eighteen he gave up his legal studies and for the remaining thirty-six years of his life all his time was devoted to archaeological work in the Roman catacombs. The accidental discovery, in 1578, of an ancient subterranean cemetery on the Via Salaria had for the moment attracted general attention in Rome. Few, however, realized the importance of the discovery, and, with the exception of three foreign scholars, Ciacconio, De Winghe, and L'Heureux, no one seriously thought of pursuing further investigations. It was reserved for Bosio to begin the systematic exploration of subterranean Rome and thus to become the founder of the science of Christian archaeology. The young explorer from the beginning realized that in early Christian literature he would find an indispensable ally, and accordingly he began to study the Acts of the Martyrs and of the Councils, the writings of the Greek and the Latin Fathers, and in fact every species of document that might help to throw light on the obscurities of his subject. An idea of the vast scope of his reading may be obtained from the two great tomes of his manuscript notes in the Vallicelliana library at Rome, each of which contains about a thousand pages in folio.

The literary labours of Bosio account for only half of his time; the other half was consumed in systematic efforts to utilize the information derived from his reading for his particular object. Thus, for example, after he had collected all the data possible relative to the location of a catacomb on one of the great roads leading from Rome, Bosio would betake himself to the place indicated, and go over every inch of ground carefully in the hope of discovering a forgotten stairway, or *luminarium*, of a cemetery. If fortune crowned his investigations with success, he would then descend to the subterranean abode of the long-forgotten dead, and, sometimes at the imminent danger of being lost in the labyrinth of galleries, commence his explorations. The great work achieved by Bosio was almost unknown till the publication three years after his death of his "Roma Sotterranea". The folio volume was brought out under the patronage of the Knights of Malta, by the Oratorian Severano, who had been entrusted with its editorship by Cardinal Francesco Barberini. Its full title is "Roma Sotterranea, opera postuma di Antonio Bosio Romano, antiquario ecclesiastico singolare de' suoi tempi. Compita, et accresciuta dal M. R. P. Giovanni Severano da S. Severino" (Rome, 1632). The great merit of the new publication was at once recognized. A Latin

translation was undertaken by Severano, but never published. Aringhi's Latin translation appeared in 1651, but the liberties which this writer took with the original text were far from being improvements. Bosio's "*Roma Sotterranea*" is entirely devoted to a description of the cemeteries explored by the great archaeologist. His leading thought was to ascertain all that was possible regarding the history of each cemetery, by what name it was known in antiquity, who were its founders, what martyrs and illustrious Christians were interred there. Many of his conclusions have in modern times been found to be erroneous, but on the other hand, recent research has shown, in one important instance, that a conjecture of Bosio's, which de Rossi thought without foundation, was wholly correct. (See CHRISTIAN ARCHAEOLOGY.) Bosio's method is acknowledged by all to have been scientific; his shortcomings were those of the age in which he lived. In view of the fact that numerous frescoes which existed in the early seventeenth century have since been destroyed, it is unfortunate that the copyists employed by Bosio were not equal to the task assigned to them. Wilpert states that the illustrations of "*Roma Sotterranea*" are of little use to the modern archaeologist.

MAURICE M. HASSETT.

#### Bosnia, DIOCESE OF. See SIRMUM.

**Bosnia and Herzegovina.**—Bosnia and Herzegovina form the north-western corner of the Balkan Peninsula. Taking the two together as one territory, Bosnia-Herzegovina is bounded on the north by the Austrian provinces and titular kingdoms of Croatia and Slavonia, on the east by the Kingdom of Serbia, on the south by one of the nominal provinces of Turkey, the principality of Montenegro, and the titular kingdom and Austrian province of Dalmatia, and on the west by Dalmatia and Croatia. The Dinaric Alps and the Save and Drina Rivers form a large part of the boundary line of the country which in shape closely resembles an equilateral triangle. The joint territory has an area of about 19,702 square miles and belongs nominally to the Turkish Empire. Article 25 of the Treaty of Berlin, 13 July, 1878, granted Austria-Hungary the right to occupy and administer the two provinces. Since then they have been under the control of the Minister of Finance of the Austro-Hungarian monarchy as crown provinces. Bosnia and Herzegovina belong, with their alternating highlands and mountain chains, to the region of the Karst mountains. The Karst region forms a part of the spurs of the southern Alps. It is a mountainous limestone district of the mesozoic period with valleys of incomplete formation. The rocky, unfruitful character of the Karst region is more evident in the southern part of the territory than in the northern, for in the north the forest-covered ranges, running chiefly from south-east to north-west, enclose fertile valleys. The only flat country is the district called Posavina, lying on the Save. There is in general a terrace-like descent from the mountainous region towards the Adriatic and the Hungarian depression.

Bosnia may be regarded as a succession of great terraces, but Herzegovina, in which the mountain sides slope down towards the Neretva River, has more the shape of a basin. The former belongs to the region of the Black Sea, the latter to that of the Adriatic. The highest peaks, the Ločike (6,913 feet), the Treskavica-Planina (6,851 feet), and the Bjelasnica-Planina (6,782 feet) lie near the border of Herzegovina, respectively west and south-west of Sarajevo. The Save is the chief river of Bosnia and its tributaries are the Una, the Vrbas, the Ukina, the Bosna,

and the Drina. Herzegovina is drained by the Neretva (Neretva) River. As Bosnia falls away towards the north until it descends into the low-lying region of the Save, it is easy of access from central Europe and was, consequently, exposed to incursions by the kings of Hungary. After crossing the Saxe the Hungarian armies could penetrate into the heart of the country without encountering any natural obstacles. Bosnia was also, in consequence of the physical formation of the land, frequently divided politically into two parts, the upper or mountainous Bosnia, which extended to where the rivers pass into the flat country of the Save, and the Bosnian plain along the Save. The Romans observed this natural line of division and made it the boundary between the provinces of Dalmatia and Pannonia. Just as the political unity of Bosnia was made more difficult by its natural configuration, so on the other hand, the development of a compact principality was favoured in Herzegovina (called also Hum, Chulm, and Chulmo) by its basin-like shape.

**Physical Formation.**—Mesozoic formations appear throughout this territory especially in the shape of Triassic rocks; where there are dislocations the underlying palæozoic rocks frequently project. These latter are made of slate, sandstone, and limestone, as for example, the famous mountain range of slate rock called Krešev, in the western part of the Sarajevo district, and the range called Posara on the Save. Jurassic rock and chalk formations appear chiefly in Herzegovina and western Bosnia. Of far greater extent are the neogenic fresh water formations containing the great coal deposits of the two territories. There is also much volcanic rock of various ages. The climate of Bosnia is in general the usual continental one of cold winters and hot summers, while in Herzegovina the nearness of the sea makes the climate almost semi-tropical. The average yearly temperature is from 48.2° to 50° Fahr. The average temperature of Travnik, situated at a height of 1,640 feet in about the centre of the country, is in January 28.4° Fahr., in April 50.5°, in July, 68.3°, and in October 50.3°. Since the time of the Romans Bosnia has yielded a large amount of iron; lignite or brown coal and salt are also obtained in a number of places. Mineral and hot springs abound; among these are the hot spring at Ilidže near Sarajevo, the chalybeate spring at Kiseljak, and a spring impregnated with arsenic at Srebrenica. Bosnia contains a large amount of timber; 50 per cent of its area is covered with forests; 34 per cent is productive farming-land, and the remaining 16 per cent is in the rocky Karst region. The Bosnian forests are full of boars, bears, wolves, foxes, lynxes, and deer. Agriculture is of a very primitive character and could be made far more productive. The chief agricultural products of the country are maize and wheat; oats, rye, barley, hemp, and buckwheat are also raised. In Herzegovina in addition to these staples wine and oil are produced and figs are cultivated.

**Population.**—According to the census of 22 April, 1895, Bosnia has 1,361,868 inhabitants and Herzegovina 229,168, giving a total population of 1,591,036. The number of persons to the square mile is small (about 80), less than that in any of the other Austrian crown provinces excepting Salzburg (about 70). This average does not vary much in the six districts (five in Bosnia, one in Herzegovina). The number of persons to the square mile in these districts is as follows: Dolina Tuzla, 106; Banjaluka, 96; Bihać, 91; Sarajevo, 73; Mostar (Herzegovina), 65; Travnik, 62. There are 5,388 settlements, of which only 11 have more than 5,000 inhabitants, while 4,689 contain less than 500 persons. Excluding some 30,000 Albanians, living in the south-east, the Jews who emigrated in earlier times from Spain, a few Osmanli Turks, the merchants, officials, and Austrian troops, the rest of

population (about 98 per cent) belong to the southern Slavonic people, the Serbs. Although one in race, the people form in religious beliefs three sharply separated divisions: the Mohammedans, about 550,000 persons (35 per cent), Greek Schismatics, about 674,000 persons (43 per cent), and Catholics, about 334,000 persons (21.3 per cent). The last mentioned are chiefly peasants. The Mohammedans form the mass of the population in the region called the Krajina in the north-west, in the district of Serajevo and in the south-eastern part of the territory; the Greek Schismatics preponderate in the district of Banjaluka. The Catholics of the Latin Rite exceed the other two denominations only in the district of Travnik and in northern Herzegovina. There are in addition 8,000 Jews and 4,000 Protestants. Divided according to occupation 85 per cent of the population are farmers or wine-cultivators (1,385,291). There are 5,833 large estates, the owners of which are chiefly Mohammedans, 88,970 cultivators of land not their own (*kmelen*), 88,867 free peasants who own the land they till, and 22,625 peasants who own farming-land and also cultivate the land of others. The population of the towns is small.

*History.*—There are traces of human settlements in Bosnia dating from the Stone Age. The earliest inhabitants of Bosnia and Herzegovina of whom there is any certainty are the Illyrians, an exceedingly rapacious pastoral people who were divided into various tribes. The best known of these are: a small tribe called the Liburnians living in the north-west, who were notorious pirates; the Ardiaeans living south of the Liburnians, and the Antiariats, who were neighbours of the Ardiaeans living still farther to the south. The migrations of the Celts in the third and fourth centuries before Christ drove various Illyrian tribes out of their former possessions. From the third century until 167 B. C., a powerful Illyrian kingdom existed, under rulers called Agron, Teuta, and Gentius, in southern Dalmatia, and the adjoining Herzegovina and Montenegro. The Romans had a hard struggle before they succeeded finally in breaking the power of the Illyrians and in getting control of Bosnia and Herzegovina (6 B. C.—A. D. 9). The sagacious Romans saw that in order to control the line of the Danube and the east coast of Italy it was necessary to absorb the triangular shaped country of the Illyrians. No part of the peninsula contains so many traces of Roman civilization as Dalmatia and the adjoining Bosnia. The Romans built a road from Mitrovič or Mitrovitz (Sirmium) near the Save to Gradisca and continued it from Gradisca through what is now western Bosnia or Turkish Croatia as far as Salona; they constructed a second road through upper Bosnia across the present district of Serajevo to Domavia on the Drina, and from here to Mitrovič; a third road went from Salona to Naron (near Dubrava) and to Scodra (Scutari). The Romans named the province Dalmatia after the largest and bravest of the tribes living on the coast. They divided it into three administrative dioceses, the chief cities being, respectively, Salona, the capital of the whole province, Scardona, and Narenta. The northernmost part of Bosnia, extending for some distance from the Save, was included in the province of Pannonia. The Illyrians who had been familiar only with war and cattle-raising now turned their attention, under the guidance of the Romans, to mining, placer-mining for gold, and agriculture. They became largely Romanized and for hundreds of years their legions bravely defended the empire.

After the fall of the Western Roman Empire Dalmatia and Pannonia came into the possession of the Ostrogoths under King Theodoric. During the war that followed (535–554) between Justinian and the Ostrogoths, the Slavs made repeated incursions into the provinces. It may be that they were called in by the

Ostrogoths. After the Slavs the Avars raided the territory and in 598 turned Dalmatia almost into a wilderness. After this the Slavs greatly desired the country and succeeded in taking possession during the first half of the seventh century. Among the tribes which now owned the land, the Hroati (later called Croats) lived on the Dalmatic coast and the Serbi in the interior. Up to the eighth century the influence of the Byzantine Empire was paramount. At the end of the ninth century when the power of the Carolingian dynasty extended as far as the south-eastern Alpine provinces, the Croats came under the influence of Western civilization and embraced Latin Christianity. The tribes of the interior retained the patriarchal form of government and the old pagan worship much longer than the dwellers on the coast, notwithstanding the connexion which they had had for centuries with Constantinople. Bosnia seems to have belonged to Croatia as late as the beginning of the tenth century. A little later the Serbian prince Ceslav (931–960) succeeded in freeing Serbia from the suzerainty of Bulgaria and built up a confederation of which Bosnia formed a part. About 955 Ceslav was obliged to defend the dependent *banat*, or district, of Bosnia (originally merely the valley of the upper Bosna) from an incursion of the Magyars. After the death of Ceslav and the dissolution of his kingdom, Bosnia was ruled by native *bans* or chiefs. In 968 however, Bosnia was conquered by the Croatian king Kresimir and in 1019 the whole north-western part of the Balkan Peninsula came under the sway of the Eastern Roman Emperor, Basil II. After Basil's death Bosnia regained its independence and was ruled by native bans until it was united with the domain of Béla II, King of Hungary. In 1135 this ruler called himself for the first time King of Rama (Bosnia).

During the entire reign of the Emperor Manuel I, Comnenus, (1143–80) a long and fierce struggle went on between the Byzantine Empire on the one side and Hungary and the southern Slavs on the other; in this Ban Boris, the first ruler of Bosnia known by name, remained faithful to Hungary. In 1163, however, Boris took sides against Stephen III in the quarrel over the succession to the Hungarian throne. He was defeated by Gottfried of Meissen who was sent with an army against him, and his family lost their power in Bosnia. The Banat of Boris extended from Livno and the valley of the Rama in the west to the Drina River in the east. Three years later Bosnia, Syrmia, Croatia, and Dalmatia became subject to the Byzantine Empire. After the death of Manuel I, Comnenus (1180) the new Ban, Kulin, was able to shake off the foreign yoke. But Béla III of Hungary, desiring to make Bosnia a dependency of his own kingdom, persuaded the pope to place the Bishopric of Bosnia and the Diocese of Ston in Herzegovina under the Archdiocese of Spalato, the territory of which belonged to Hungary. Before this Bosnia had been suffragan to Ragusa. In order to counteract this indirect Hungarian control Kulin, his family, and 10,000 Bosnians, between the years 1190–99, became adherents of the Paterine heresy. When Pope Innocent III and King Emmerich of Hungary joined forces to exterminate the Paterines and to conquer Bosnia, Kulin preserved Bosnia's independence of Hungarian control by returning in 1203 to the Catholic religion in the presence of the papal legate, Johannes de Casamaris. During the reign of his successor, Ban Stephen, the Paterines grew so powerful that they deposed Stephen and substituted one of their own adherents, the able Matthias Ninoslav (1232–50), who was probably related to Kulin. In 1233 Ninoslav returned to the Catholic Faith, but notwithstanding this the land was filled with the adherents of the Paterine belief, and in 1234–39 a crusade was preached against Bosnia but was not, however, carried out. Although Ninoslav main-

tained his position as Ban of Bosnia, he was not able to found a dynasty and after his death his principality gradually fell to pieces. The districts of Herzegovina near Ragusa aimed at individual independence, while the rest of the territory now included in Bosnia and Herzegovina gradually came into a more complete dependence on Hungary.

During the reign of Béla IV of Hungary (1235-70) upper Bosnia and the district of Posavina were formed into the Banat of Bosnia, the region in the west on the Usora into the Banat of Usora, and the region in the east on the Drina into the Banat of Soli or Tuzla, while the western part of the present territory of Herzegovina, the region of the Rama, and southern Bosnia were ruled by various powerful Croatian families. At this time a relative of Ninoslav named Prýezda lived on the upper part of the Bosna River. Prýezda's son, Stephen Katroman (1322-53), was the first of the Katroman family from which for a century and a half came the bans and kings of Bosnia. Stephen was a vassal of the kings of Hungary, who were his relatives and members of the house of Anjou. Through this connexion Stephen was able, after defeating the rulers of the present Herzegovina, to unite this territory to his domains. From the tenth century Herzegovina had formed a so-called buffer district between the Dalmatic coast and Bosnia on the one side and Serbia on the other. On the dismemberment of the great Serbian empire of Dusan the Strong, Tvrtko, Stephen Katroman's nephew and successor, with the help of King Louis I (the Great) of Hungary, became master of the district of the upper Drina, Trebinje, and Canale. Tvrtko now, with the consent of Louis, took the title of King of Bosnia. A few years later (1384) Bosnia and Herzegovina were laid waste for the first time by the Turks. After the death of Louis the Great (1382) Tvrtko threw off the suzerainty of Hungary and conquered the cities on the Dalmatic coast. During the reigns of his successors Stephen Dabitscha (1391-95), Queen Helena (1395-98), Stephen Osoja (1398-1418), Stephen Ostojitch (1418-21), Stephen Tvrtko II (1404-31) (the rival of the two last-named kings), Stephen Thomas (1443-61), and Stephen Thomaschewitz (1461-63) the kingdom rapidly declined in power so that these rulers were not able to maintain their authority over the conquered districts or to keep the insubordinate vassals and nobles in check. The nobles ruled their territories with little regard for the king; they had their own courts with state officials, granted pardons, had relations with foreign powers, and carried on bloody wars with one another.

The last king, who possessed only the land on the right bank of the Bosna, sought to strengthen his position by becoming a vassal of the pope. He hoped by this means to obtain the aid of the Christian countries of Western Europe in defending himself against the threatening power of the Turks. In 1462 he refused to pay tribute to the Sultan Mohammed II; but when in the following spring Mohammed invaded Bosnia with a powerful army, the young king found himself deserted. Deceit and treason, especially on the part of the Bogomili, completed his ruin. He was taken prisoner by the Turks and beheaded, by the order of the sultan, July, 1463, probably near Jajce (Jaitza). The campaign of the Turks ended in the overthrow of the Bosnian kingdom; only Herzegovina maintained its independence. One hundred thousand prisoners of both sexes were taken; 30,000 Bosnian youths were compelled to join the janizaries. The nobility, especially the Bogomili, became Mohammedans. A large part of the remaining population left the country. The following year King Matthias Corvinus of Hungary freed from the Turkish yoke a part of Bosnia, the Banats of Jajce and Srebrenica (Srebrenitz) which belonged to Hungary until the battle of Mohács (1526). Herzegovina came under the do-

minion of the Turks twenty years after the fall of Bosnia (1483). The long period of Turkish oppression is lightened by the daring feat of Prince Eugene, who in the autumn of 1697 after the battle of Zenta, with 4,000 cavalry and 2,000 infantry advanced towards the capital of Bosnia; as the expected rising of the Christian population failed to take place, he retreated, carrying with him 40,000 liberated Christians. By the Treaty of Passarowitz (1718) the northern part of Bosnia and Serbia was given to Austria, but the Treaty of Belgrade restored this district to the Turks.

Among the many revolts in Bosnia against the bureaucratic rule of the Osmanli Turks that of 1830-31 under Hussein Aga deserves mention; of the revolts in Herzegovina that of 1875. Article 25 of the Treaty of Berlin, 13 July, 1878, granted Austria the right to occupy and govern Bosnia and Herzegovina. The main column of the Austrian troops (thirteenth army corps), under the command of General of the Ordnance Joseph Freiherr von Philippovich crossed the Save into Bosnia near Brod 29 July; two days later Major-General Jovanovic entered Herzegovina with a division. As the occupation took place with the consent of the Porte, it was thought that there would be no fighting. But the Mohammedan population, secretly incited by Serbia, rose under the leadership of the adventurer, Hadschi Loja, against the "foreign conquerors". They were joined by large bands of Arnauts from Albania and by the Turkish troops who had received no instructions. The insurgents were defeated in bloody battles at Maglaj, Zepce, Jajce, Tuzla, and other places. On the evening of 18 August the Austrian troops stood before Serajevo which was taken by storm the next day. In order to hasten the end of the revolt three other Austrian army corps entered the contested district; by the end of September, 1878, both territories were subdued with the exception of a few points in the north-western part. In the *sanjak* (subdivision of a Turkish province) of Novibazar Austria holds some important military positions and controls the commercial routes; the Turks still retain the civil administration.

*Introduction of Christianity.*—Christianity was introduced into both Bosnia and Herzegovina from Salona at a very early date. Many of the dioceses which were suffragans of the Archdiocese of Salona in the sixth century must be sought within the present limits of Bosnia and Herzegovina. This is especially true of the Bishporic of Bistue (*Bestuensis ecclesia*) which was situated in the heart of the upper part of the present Bosnia. When the Arian Ostrogoths came into possession of these districts they did not interfere with the organization of the Church nor did they persecute the Catholics. The acts of the two provincial synods of Dalmatia which were held at Salona in 530 and 532 have been preserved and these show that in the year 530 four dioceses existed in Bosnia-Herzegovina. At the second synod two new dioceses were founded, Ludricensis (Livno), and Sarsenterensis (Sarsitero), the last named lying north of Mostar. During the war that lasted twenty years between Justinian and the Ostrogoths, the latter changed their policy towards the Catholics and persecuted them. Only one of the dioceses just mentioned, Bistue, survived the Slavonic invasion. Until the middle of the eleventh century Bistue was suffragan to the Archdiocese of Spalato; in 1067 it was transferred to the Archdiocese of Dioclea-Antivari, and shortly after it was made suffragan to the Archdiocese of Ragusa. Disputes now arose between the two last mentioned archdioceses as to the administration of the Bosnian bishopric; the strife was unfortunate for it allowed the sect of the Bogomili to gain a firm footing in Bosnia.

The heresy of the Bogomili was started in the tenth century by Jeremiah, also called Bogomil, a Bulgarian

priest. His followers called themselves Christians and considered their faith the only true one. In Bosnia they were named Paterines. The Paterines, or Bogomili, rejected marriage, forbade intercourse with those of other faiths, disbelieved in war, in any execution of human beings, in oaths, in seeking for wealth, and in subjection to secular authority. The Paterines greatly increased in number and influence in Bosnia after the accession to their faith of Ban Kulin, and gained numerous adherents in the neighbouring districts of Croatia and Slavonia and in the cities of the Dalmatic coast. A similar sect, the Albigenses, appeared at the same time. At the beginning of the thirteenth century even the Bosnian bishop was an adherent of the Paterines; Pope Gregory IX, therefore, deposed him in 1233 and raised to the see Johannes, a German Dominican from Wildhausen in Westphalia. It is to the great credit of the Dominicans that they entered upon a successful spiritual campaign against the Paterines in Bosnia and Dalmatia. The Franciscans who had an intimate knowledge of the common people had even greater success. They not only brought back the population of the Dalmatic coast to the Church, but they also extended their spiritual activity to the interior of the country. Yet notwithstanding these efforts and those of the popes, in spite of two Bosnian crusades, and of the transfer of the Diocese of Bosnia to the Archdiocese of Kalocsa in Hungary, the sect was not suppressed. The formal return of the Bosnian nobles and monarchy to Catholicism was merely superficial.

The Turkish conquest of 1463 drove a large part of the Catholic population out of Bosnia. This led the courageous Franciscan monk, Angelus Zojezdovic, to go before the Sultan Mohammed II to call his attention to the fact that the Christian inhabitants were going out of Bosnia in all directions. The sultan, not wishing to have the newly conquered province depopulated, granted as a favour to the Franciscans that Christians should be allowed the free exercise of their religion. From that time until the present the Franciscan Order has been the only shield of the Christians in these two territories.

*Church Statistics.*—After the Turkish conquest the Bishopric of Bosnia had only a nominal existence. In 1735 the diocese was reorganized as the Vicariate Apostolic of Bosnia and Herzegovina and its administration confided to the Franciscans. Since 1846 the country has been divided into two vicariates. Three years after the Austrian occupation Pope Leo XIII erected the Archdiocese of Serajevo with the suffragan dioceses of Banjaluka in the north-western part of Bosnia, Mostar-Duvno in the northern part of Herzegovina, and Markana-Trebinje in the southern part of the same province. The Diocese of Markana-Trebinje which was founded in 870 has no bishop of its own but is administered by the Bishop of Mostar-Duvno. The training of the secular priests in all four dioceses is in the hands of the Jesuits. The other male religious orders represented are: the Franciscans who possess 17 monasteries, and have almost entire charge of the work of the sacred ministry in the Archdiocese of Serajevo and the Diocese of Mostar-Duvno; and the Trappists, with 3 monasteries and 182 members. The female congregations are: the Sisters of Mercy, with 12 convents; the Daughters of Divine Love, 5 convents; the Sisters of the Precious Blood, 9 convents; the School Sisters, 1 convent.

The Austrian occupation of Bosnia and Herzegovina since 1878 has not only done much for the material prosperity of these provinces, but has also been of great assistance to the Catholic religion. This is shown by a comparison with earlier years. In 1850 the two territories contained 150,000 Catholic inhabitants; in 1874, 185,503; in 1897, 334,142, or one-fourth of the whole population, and in 1907, 334,000. About 1880 there were no Catholic families in the

district between Gradiška and Banjaluka, now there are 10 monasteries in this region. Before the Austrian occupation there were only 7 Catholic families in Trebinje; Trebinje has now several parishes and churches. In Herzegovina 8 parishes, 25 priests, and 36,000 Catholics have increased to 45 parishes, 100 priests, and 110,000 Catholics. The many churches, monasteries, school-houses, etc., which have come into existence since 1878 are proofs of the advance in intelligence and religion. Both territories show how beneficent has been the action of Austria in the Balkan Peninsula. In the agreement made between Austria-Hungary and Turkey of 21 April, 1879, the former country bound itself to protect in Bosnia and Herzegovina the religious liberty of the inhabitants as well as of temporary residents. This agreement includes Catholics. The regulations in regard to marriage and divorce, as well as the exemption of the clergy from public services and military duty, are about the same as those in Austria. The cemeteries are still denominational institutions and are reserved even more exclusively than in Austria for the adherents of each faith.

KARL KLAAR.

**Boso**, first Bishop of Merseburg, in the present Prussian Province of Saxony, and Apostle of the Wends, d. November, 970. He was a Benedictine monk of St. Emmeram in Ratisbon whence he was summoned to the court of Otto I. The emperor, considering the conversion of the lately subjugated Wends indispensable to the security of the German Empire, sent Boso to Christianize them. In the beginning Boso's mission appeared useless, owing to the hate of the Wends for the Germans who had deprived them of their liberty. Boso, however, being a true apostle, did not despair, but studied the language of the Wends in order to preach to them in their own tongue. They appreciated the unselfish devotion with which Boso worked for their temporal and spiritual welfare, and their hatred soon turned into love. In 968 Boso was able to provide for the creation of three new sees, Merseburg, Meissen, and Zeitz. Being given his choice he selected Merseburg as his bishopric; Hugo, another Benedictine monk, became Bishop of Zeitz, and Burchard, of Meissen. All three were consecrated on Christmas Day, 968, by their metropolitan, Adalbert of Magdeburg. Boso continued his missionary labours, but died on a visit to his native Bavaria.

MICHAEL OTT.

**Boso** (BREAKSPEAR), third English Cardinal, date of birth uncertain; d. at Rome, about 1181. He was a Benedictine monk of St. Albans Abbey and the nephew of Adrian IV. Though this relationship was on the maternal side, Cardella states that Boso as well as Adrian IV bore the surname of Breakspear. He had a reputation not only for piety, but also for learning, and was esteemed by contemporary writers

as among the most eminent theologians of his age. He compiled or wrote the lives of several eleventh and twelfth century popes, among them the life of his uncle, and indulged in the lighter accomplishment of versifying, examples of his poetic powers still existing in the Cotton MSS. in the British Museum, in the form of metrical lives of saints. He followed his uncle to Rome; and on the latter's elevation to the Papal Chair, was created by him Cardinal-Deacon of the title of Sts. Cosmas and Damian, in December, 1155, and was also appointed Camerlengo of the Holy See. Adrian sent Boso on a mission to Portugal; for what precise purpose does not transpire, but the fact is attested by the registers of Pope Innocent III. He also confided to him the governorship of the Castle of Sant' Angelo, being somewhat suspicious of the fidelity of the Roman populace. When Adrian IV died in 1159, dissensions arose in the conclave as to the choice of his successor, the result of which was the creation of a schism lasting seventeen years. Four cardinals in the imperial interest voted for Cardinal Octavian, who assumed the name of Victor IV, but he was acknowledged only by the Germans. On the very day of Adrian's burial in the Vatican basilica, 5 September, Cardinal Boso, who appears to have taken the lead, withdrew with the majority, twenty-three, of the cardinals within the fortress of Sant' Angelo to escape the vengeance of the anti-pope, and straightway elected as pope, Cardinal Rolando (Bandinelli) of Siena, who was consecrated under the name of Alexander III. The new pope was not unmindful of his obligations to Boso, and soon (1163) promoted him Cardinal-Priest of the title of St. Pudenziana. When Alexander made his memorable journey to Venice to receive the submission and allegiance of the Emperor Frederick, and to ratify the "Peace of Venice" (24 June, 1177) which closed the schism, he was accompanied by Boso. Alexander also entrusted Boso with a mission to Tuscany, an event attested by the registers of Alexander IV. Boso's name appears attached to many Bulls, both of Adrian IV and of Alexander III.

HENRY NORBERT BIRT.

**BOSSU, JACQUES LE**, French theologian and Doctor of the Sorbonne, b. at Paris 1546; d. at Rome 1626. He entered the Benedictine Order at the Royal Abbey of St. Denis, of which he became claustral prior. He was preceptor to the Cardinal de Guise and took a prominent part in the Catholic League and the disputes concerning the successor to Henry III, whose death he considered to be a just punishment. The accession of Henry IV, against whom he had written, and the execution of de Guise in 1587 necessitated his leaving France in 1591, and he went to Rome, where he entered the service of the Curia. He was made a consultant of the Congregation de Auxiliis, established in 1599 to settle the controversy on grace between the Dominicans and the Jesuits. On its dissolution, in 1607, he desired to return to France, but the pope, Paul V, kept him in Rome. His chief work consisted of "Animadversiones" against twenty-five propositions of Molina, a Spanish Jesuit who had written a book on grace, defending the doctrines of Scotus against those of the Dominicans. The "Animadversiones" were published by Antonio Raynaldo, the Dominican, in 1644. Le Bossu's "Diarium Congregationis de Auxiliis" has unfortunately perished.

G. CYPRIAN ALSTON.

**Bossuet, JACQUES-BÉNIGNE**, a celebrated French

bishop and pulpit orator, b. at Dijon, 27 September, 1627; d. at Paris, 12 April, 1704. For more than a century his ancestors, both paternal and maternal, had occupied judicial functions. He was the fifth son of Bénigne Bossuet, a judge in the Parliament of Dijon, and Madeleine Mochet. He began his classical studies at the Collège des Godrans, conducted by the Jesuits, in Dijon, and, on his father's appointment to a seat in the Parliament of Metz, he was left in his native town, under the care of his uncle, Claude Bossuet d'Aiseray, a renowned scholar. His extraordinary ardour for study gave occasion to the schoolboy joke, deriving his name from *Bos suetus aratro*. In a very short time, he mastered the Greek and Latin classics. Homer and Virgil were his favourite authors, while the Bible soon became his *livre de chevet*. Speaking of the Scriptures, he used to say: "Certe, in his consensescere, in his immori, summa votorum est." Early destined to the Church, he received the tonsure when he was only eight years old, and at the age of thirteen he obtained a canonicate in the cathedral of Metz. In 1642, he left Dijon and went to Paris to finish his classical studies and to take up philosophy and theology in the Collège de Navarre. A year later he was introduced by Arnauld at the Hotel de Rambouillet, where, one evening at eleven o'clock, he delivered an extempore sermon, which caused Voiture's remark: "I never heard anybody preach so early nor so late." A Master of Arts in 1644, he held his first thesis (*tentativa*) in theology, 25 January, 1648, in the presence of the Prince de Condé. He was ordained sub-deacon the same year, and deacon the following year, and preached his first sermons at Metz. He held his second thesis (*sorbonica*) 9 November, 1650. For two years, he lived in retirement, preparing himself for the priesthood under the direction of St. Vincent de Paul, and was ordained 18 March, 1652. A few weeks later, the degree of Doctor of Divinity was conferred upon him. Appointed Archdeacon of Sarrebourg (January, 1652), he resided for seven years at Metz, devoting himself to the study of the Bible and the Fathers, preaching sermons, holding controversies with Protestants, and yet, finding time for the secular affairs for which he was responsible, as a member of the Assembly of the Three Orders. In 1657 he was induced by St. Vincent de Paul to come to Paris and give himself entirely to preaching.

Though living in Paris, Bossuet did not sever his connexion with the cathedral of Metz; he continued to hold his benefice, and was even appointed dean in 1664, when his father, a widower, had just received the priesthood and become a canon of the same cathedral. There are extant one hundred and thirty-seven sermons which were delivered by Bossuet between 1659 and 1669, and it is estimated that more than one hundred have been lost. In 1669 he was appointed Bishop of Condom, without being obliged to reside in his diocese, was consecrated 21 September, 1670, but, obeying scruples of conscience, resigned his bishopric a year later, in which year, also, he was elected to the French Academy. Appointed preceptor to the Dauphin, 13 September, 1670, he threw himself with indefatigable energy into his tutorial functions, composing all the books deemed necessary for his pupil's instruction, models of handwriting as well as manuals of philosophy, and himself giving all the lessons, three times a day. When his functions as preceptor ended (1681), he was appointed to the bishopric of Meaux. He took a prominent part in the Assembly of the French Clergy in 1682. Unlike the court bishops, Bossuet constantly resided in his diocese and busied himself with the details of its administration. In that period he completed his long-interrupted works of historical controversy,

wrote innumerable spiritual letters, took care of his religious communities (for whom he composed "Meditations on the Gospel" and "Uplifting of the Soul on the Mysteries"), and entered on endless polemics with Ellies du Pin, Caffaro, Fénelon, the Probabilists, Richard Simon and the Jansenists. From 1700, his health began to fail, which, however, did not prevent him from wrestling in defence of the Faith. Confined to his bed by illness, he dictated letters and polemical essays to his secretary. As Saint-Simon says, "he died fighting".

A list and criticism of Bossuet's chief works will be found in the following appreciation, by the late Ferdinand Brunetière. Out of one hundred and thirty works composed by Bossuet from 1653 to 1704, eighty were edited by himself, seven or eight by his nephew, the Abbé Bossuet, afterwards Bishop of Troyes; the remainder, about forty-two, not including the "Letters" and "Sermons", appeared from 1741 to 1789. The principal complete editions are: the Versailles edition 1815-19, 47 vols. in-8; Lachat (Vivès), Paris, 1862-64, 31 vols. in-8; Guillaume, Paris, 10 vols. in-4. No critical and chronological edition of Bossuet's complete works has been made as yet, only the sermons having been edited (in a most scientific manner) by the Abbé Lebarcq: "Œuvres oratoires; édition critique complète, avec introduction grammaticale, préface, notes, et choix de variantes", Paris, 1890, 6 vols. in-8.

LOUIS N. DELAMARRE.

**BOSSUET, LITERARY AND THEOLOGICAL APPRECIATION OF.**—The life of this great man, perfectly simple as it was, and all of one piece with itself, may be divided into three epochs, to each of which as a matter of fact there are found to correspond, if not a new aspect of his genius, at least occupations or labours which are not altogether of the same nature, and which consequently show him to us in a somewhat different light. At first, one perceives in him only the orator, the greatest, perhaps, who has ever appeared in the Christian pulpit—greater than Chrysostom and greater than Augustine; the only man whose name can be compared in eloquence with those of Cicero and of Demosthenes (1617-70).

Appointed preceptor to the Dauphin, son of Louis XIV, he devoted himself for more than ten years entirely to this onerous task (1670-81), appeared in the pulpit only at rare intervals, returned to the studies which he had somewhat neglected, and composed for his pupil works of which the "Discourse on Universal History" is still the most celebrated. Finally, in the last period of his life (1681-1704), having become Bishop of Meaux, though he still preaches regularly to his own flock, and raises his eloquent voice on solemn occasions—to open the Assembly of the Clergy of France, in 1681, or to pronounce the funeral oration of the Prince de Condé, in 1687—yet it is above all the great controversialist that his contemporaries admire in him, the defender of tradition against all the novelties which sought to weaken it, the unwearied opponent of Jurieu, of Richard Simon, of Madame Guyon, and, incidentally, of Fénelon himself; he is the theologian of Providence, and—startling contrast—on the eve of the Regency, he is "the last of the Fathers of the Church".

**FIRST PERIOD (1627-70).**—He made his first studies with the Jesuits of his native city, completed them in Paris at the College of Navarre, and, ordained priest, entered into possession of the archdeaconry of Sarrebourg, in the Diocese of Metz, in 1652. Anywhere else than at Metz, no matter in what part of the world, he would without doubt have been himself. In literary history, environment commonly shows its effects only in the formation of mediocrities. But, as there existed at Metz a large

Jewish community (and in some respects, the only one in France that was recognized by the State), and as the Protestants were numerous, and still fervent, in the neighbouring province of Alsace, one may believe that Bossuet's natural tendency to take religion on its controversial side was encouraged or strengthened by these circumstances. Proof of this, if desired, may be found in the fact that the manuscript of one of his first sermons, "On the Law of God", 1653, still bears this statement in his own handwriting: "Preached at Metz against the Jews"; and in this other fact, that the first work he had printed was a "Refutation", in 1655, of the catechism of Paul Ferry, a renowned Protestant pastor of Metz. Be that as it may, as soon as the young archdeacon began to preach his reputation quickly spread, and very soon the pulpits of Paris were vying with one another to secure him. It may therefore be said that from 1656 to 1670 he gave himself entirely to the ministry of preaching, and as a matter of fact, three-fourths of the two hundred, or more, "Sermons" which have reached us, either complete or in fragments, date from this period. They may be distinguished as "Sermons" properly so called; "Panegyrics of Saints"; and "Funeral Orations". These last number ten in all. In some editions the "Sermons on Religious Professions" (*Sermons de Véture*), of which the most celebrated is that for the profession of Madame de la Vallière, preached in 1674, and the "Sermons for the Feasts of the Virgin", are classed by themselves.

What are the essential characteristics of Bossuet's eloquence? In the first place, the force, or, to put it, perhaps, better, the energy, of speech, or of the word, and by this I mean, inclusively, exactitude and precision, the fitness of phrase, the neatness of turn, the impressiveness of the gesture implied in his words, and, generally, all the qualities of that French writer who, entertaining, with Pascal, a great horror of the artifices of rhetoric, for that very reason best understood the resources of French prose. There is nothing, in French, which surpasses a fine page of Bossuet.

The second characteristic of his eloquence is what Alexandre Vinet, though a Protestant, has not feared to call, in an essay on Bourdaloue, the depth and reach of its philosophy. He meant that while the illustrious Jesuit in his "Sermons" is always strictly and evidently Catholic, Bossuet, surely no less so, excels, besides, in demonstrating, even apart from Catholicism, the peremptory reasons in the depths of our nature and in the sequence of history why one should feel and think like a Catholic even if one were not a Catholic. Those who care to verify this opinion of Vinet may read Bossuet's sermons on "Death", "Ambition", "Providence", "The Honour of the World", "Our Dispositions in Regard to the Necessities of Life", "The Eminent Dignity of the Poor", "Submission to the Law of God", and also the sermons for the Feasts of the Blessed Virgin. The "Sermon for the Profession of Madame de la Vallière" is another beautiful example of this philosophic character of Bossuet's eloquence.

Lastly, its third characteristic is its movement and lyric power. Bossuet—the Bossuet of the "Sermons" and of the "Funeral Orations"—is a poet, a great poet; and he is lyrical in his blending of personal and interior emotions with the expression of the truths which he unfolds. "The Uplifting of the Soul by the Divine Mysteries" and "Meditations on the Gospel" are titles of two of his most beautiful works, in which in his old age he, as it were, condensed the substance of his "Sermons". But it may be truly said that there is no sermon of his which is not either a "Meditation" or an "Uplifting of the Soul". And is it not strange that at the beginning of the nineteenth century these titles, "Uplifting of the Soul" and "Medi-

tations", were applied by Lamartine and Vigny to their own first poetic works? Such are the essential characteristics of Bossuet's eloquence, to which might easily be added a great many others, perhaps more showy, but which may be found in other preachers, while those we have mentioned belong to him alone.

Meanwhile, the reputation of the preacher was growing every day. Above all, his Lenten conferences before the Court in 1662 and in 1666 had brought him into prominence, particularly the second series, which included some of his finest "Sermons". The Protestants, on the other hand, although they had no adversary more moderate than he, had none more formidable; and when some startling conversion, like that of Turenne, took place, the honour or the blame of it was laid upon the Abbé Bossuet. His little book, circulated in manuscript under the title of "Exposition of the Doctrine of the Catholic Church on Subjects of Controversy", worried the Protestant divines more than had any folio in fifty years. The public voice marked him out for a bishopric. We know, too, that, though doubtless without his being aware of it, his name figured, after 1667, among the candidates for the office of preceptor to the Dauphin, those names having been selected, by the king's command, under the direction of Colbert. It is true that Louis XIV did not favour Bossuet's appointment; he preferred the President De Périgny. In 1669, however, Bossuet was appointed Bishop of Condom. It was as Bishop of Condom that in September of that same year he pronounced the "Funeral Oration on Henrietta of France", and was summoned to preach the Advent of 1669 at Court. When, soon after this, the daughter followed her mother to the grave, he was again summoned, in 1670, to pronounce the "Funeral Oration of the Duchess of Orleans". In the meanwhile, the President De Périgny died unexpectedly, and this time the choice of Louis XIV went straight to Bossuet. He was named preceptor to the Dauphin, 5 September, 1670, and a new period began in the history of his life.

SECOND PERIOD (1670-81).—In order to devote himself solely to his task, he gave up his Bishopric of Condom, which he never saw, and returned to the profane studies which he had been obliged to abandon. He himself laid down in his letter to Pope Innocent XI, the programme he made his royal pupil follow, a programme the intelligent liberality of which it is impossible not to admire. But, while giving the closest personal attention to the Dauphin's education, his own genius completed, in a way, its process of ripening by contact with antiquity; his ideas collected themselves and gained in precision; he took conscious possession of what may be called his originality as a thinker, and made for himself his private domain, as it were, in the vast field of apologetics. And, as the other Fathers of the Church have been, in the history of Christian thought, one the theologian of the Incarnation, another, the theologian of Grace, so did Bossuet then become the theologian of Providence.

Here we may take an excellent example of what is to-day called the development, or evolution, of a dogmatic truth. The idea of Providence surely constitutes the basis of Christian belief in all that touches the relations of man with God, and in this respect it may be said that the "Discourse on Universal History" is completely anticipated in the "City of God" of St. Augustine, or in the "De Gubernatione Dei" of Salvianus. We are perfectly willing to add that in this wide, and even slightly vague, sense it is found also in the Old Testament, and notably in the Book of Daniel. But that does not alter the fact that Bossuet in his turn appropriated this idea of Providence to himself, made it profoundly his own,

and without any innovation—for every innovation in this field inspired him with horror—formed from it deductions which up to his time had never been perceived.

The idea of Providence, in Bossuet's theology, appears to us as at once (a) the sanction of the moral law, (b) the very law of history, and (c) the foundation of apologetics.

(a) It is the sanction of the moral law, in the first place, inasmuch as, being able to act only under the eyes of God, no act of ours is indifferent, since there is not one but is for us an occasion of, or, to put it better, a manner of acquiring, merit or demerit. It is under this aspect that the idea of Providence seems to have presented itself primarily to Bossuet, and that it is found in some sort scattered or diffused in his earliest "Sermons". But, since, moreover, nothing happens to us which is not an effect of God's Will, therefore we ought always to see in whatever happiness or unhappiness—according to the world's judgment—may befall us only a chastisement, a trial, or a temptation, which it is for us to make a means either of salvation or of damnation. Here is the mystery of pain and the solution of the problem of evil. If we did not place entire confidence in Providence, the existence of evil and the prosperity of the wicked would be for the human mind nothing but an occasion of scandal; and if we did not accept our sufferings as a design of God in our regard, we should fall into despair. A source of resignation, our trust in Providence is also a source of strength, and it governs, so to speak, the entire domain of moral action. If our actions are moral, it is by reason of their conformity with, or at least of their analogy to, the views of Providence, and thus the life of the Christian is only a perpetual realization of the Will of God. We merit according to our endeavours to know it in order to carry it into effect; and, on the contrary, to demerit consists exactly in not taking account of God's Will or warnings, whether the omission be through negligence, pride, or stubbornness.

(b) This is why the idea of Providence is at the same time the law of history. If the crash of empires "falling one upon another" does not in truth express some purpose of God regarding humanity, then history, or what is called by that name, is indeed no longer anything but a chaotic chronology, the meaning of which we should strive in vain to disentangle. In that case, Fortune, or rather Chance, would be the mistress of human affairs; the existence of humanity would be only a bad dream, or phantasmagoria, whose changing face would be inadequate to mask a void of nothingness. We should be fretting ourselves in that void without reason and almost without cause, our very actions would be but phantoms, and the only result of so many efforts accumulated through so many thousands of years would be the conviction, every day more clear, of their uselessness, which would be another void of nothingness. And why, after all, were there Greeks and Romans? Of what use was Salamis?—Actium?—Poitiers?—Lepanto? Why was there a Cæsar, and a Charlemagne? Let us frankly own, then, that unless something Divine circulates in history, there is no history. Nations, like individuals, live only by maintaining uninterrupted communication with God, and it is precisely this condition of their existence which is called by the name of Providence. The hypothesis of Providence is the condition of the possibility of history, as the hypothesis of the stability of the laws of nature is the condition of the possibility of science.

(c) Having made Providence the sanction of morality, we are now led to make it the basis of apologetics. For if there be indeed more than one way which leads to God, or, in other words, many means of establishing the truth of the Christian

religion, there is, in Bossuet's view, none more convincing than that which is at once the highest expression and the summing-up of the history of humanity, that is to say, "the very sequence of religion", or "the relation of the two Testaments", and, in a more objective manner, the visible manifestation of Providence in the establishment of Christianity. It was Providence that made of the Jewish people a people apart, a unique people, the chosen people, charged with maintaining and defending the worship of the true God throughout the pagan centuries, against the prestige of an idolatry which essentially consisted in the deification of the energies of nature. It was Providence that, by means of Roman unity and of its extension throughout the known universe, rendered not only possible, but easy and almost necessary, the conversion of the world to Christianity. It was Providence, again, that developed the features of the modern world out of the disorder of barbarous invasions and reconciled the two antiquities under the law of Christ. The full importance of these views of Bossuet—for we are only summarizing here the "Discourse on Universal History"—will be understood if we observe that, in our day, when the Strausses and Renans have sought to give us their own version of the origins of Christianity, they have found nothing more than this and nothing else; and all their ingenuity has issued in the conclusion that things have happened in the reality of history *as if* some mysterious will had from all eternity proportioned effects and causes. But the real truth is that Christianity, in propagating itself, has proved itself. If the action of Providence is manifest anywhere, it is in the sequence of the history of Christianity. And what is more natural under the circumstances than to make of its history the demonstration of its truth?

It was appropriate to insist here upon this idea of Providence, which is, in a manner, the masterpiece of Bossuet's theology. Besides the "Discourse on Universal History", he wrote other works for the education of the Dauphin; notably the "Treatise on the Knowledge of God and of Oneself" and the "Art of Governing, Drawn from the Words of Holy Scripture", which appeared only after his death; the "Art of Governing", in 1709, and the "Treatise on the Knowledge of God", in 1722. To the "Treatise on Free Will" and the "Treatise on Concupiscence", also posthumous, a like origin has been assigned; but this is certainly a mistake; these two works, which contain some of Bossuet's most beautiful pages, were not written for his royal pupil, who certainly would not have understood them at all. Did he even understand the "Discourse on Universal History"? In this connexion it has been questioned whether Bossuet, in his quality of preceptor, did not fail in his first obligation, which was, as his critics assert, to adapt himself to his pupil's intelligence. Here we can only reply, without going to the bottom of the question, that the end which Bossuet intended was no ordinary education, but the education of a future King of France, the first obligation incumbent upon whose preceptor was to treat him as a King. Thus, for that matter, professors in our universities never seem to subordinate their teaching to the capacity of their pupils, but only to the exigencies of the science taught. And we will add, moreover, that as the Dauphin never reigned, no one can really say how much he did, or did not, profit by a preceptor such as Bossuet was.

The education of a prince ordinarily, and naturally, ended with his marriage. The functions of Bossuet as preceptor ceased, therefore, in 1681. He had been appointed Bishop of Meaux; he was made Almoner to the Dauphin, quite in accordance with usage, and the King honoured him with the title of General Counsellor (*Conseiller en tous les conseils*). We may be

permitted to call attention to the fact that this was only an honorary title, and one need not therefore conclude, as seems to have been done sometimes, that Bossuet took his seat, or voted, in, for instance, the *Conseil des dépêches*, which was the Council of Foreign Affairs, or in the *Conseil du Roi*, which busied itself with the internal affairs of the kingdom. But during his preceptorship, and independently of any participation in the councils, his authority had nevertheless become of considerable importance at Court, with Louis XIV personally. No member of the French clergy was thenceforth more in evidence than he; no preacher, no bishop. He had no reason, then, to fear that, having accomplished the education of the Dauphin, his activity would fail to find employment. In truth, the last epoch of his life was to be its fullest.

THIRD PERIOD (1681-1704).—This period was the most laborious, indeed the most painful; and the impassioned struggles in which he becomes engaged will now end only with his life. But why so many struggles at the time of life when most men seek for rest? What circumstances occasioned them? And if we recall that up to this time his existence had not been disturbed by any agitation that could be called deep, whence this sudden combative ardour? It cannot be explained without a preliminary remark. The reconciliation of Protestantism and Catholicism had been an early dream of Bossuet; and, on the other hand, France in the seventeenth century had, in general, ill chosen her side in a division which she regarded as not only regrettable from the standpoint of religion, but destructive, and even dangerous to her political unity. This is why Bossuet was to work all his life and with all his strength for the reunion of the Churches, and to force himself to exert every effort for the attainment of those conditions which he believed necessary to that end. Abundant and instructive details on this point are to be found in M. A. Rébelliau's charming work, "*Bossuet, historien du Protestantisme*". Being, moreover, too reasonable and too well-informed not to recognize the legitimate element which the Reformation movement had had in its time, Bossuet was convinced that it was of the greatest moment not indeed to—in the phrase of our own day—"minimize" the demands of the Catholic verity, but at all events not to exaggerate those demands; and, therefore, (1) to make to Protestant opinion every concession which a rigorous orthodoxy would permit; and (2) not to add anything, on the other hand, to a creed more than one difficulty of which was already repelling the Protestants.

Thus may we explain his part in the Assembly of the French Clergy in 1682; the plan of his "History of the Variations of the Protestant Churches", as well as the character of his polemics against the Protestants; his fundamental motive in the matter of Quietism and the true reason for his fierce animosity against Fénelon; his writings against Richard Simon, such as his "Defence of Tradition and of the Holy Fathers"; such steps as those which he took against the mystic reveries of Maria d'Agreda; and lastly, the approbation which, in 1682 and 1702, he so loudly expressed for the renewed censures of the Assemblies of the Clergy upon the relaxed morals of the day. However, it is little to our purpose to ascertain whether Bossuet, in the course of all these controversies, more than once allowed himself to be drawn on beyond the point which he intended, especially, as he has been reproached, in the questions of Gallicanism and of Quietism. The celebrated Declaration of 1682 seems to have altogether exceeded the measure of what it was useful or necessary to say in order to defend the temporal power of the prince or the independence of nations against the Roman Curia. Quietism, too, was perhaps not so

great a danger as he believed it to be; nor, above all, a danger of the kind to repel Protestants from Catholicism, since, after all, it is in a Protestant country that the works of Madame Guyon are still read in our day. But to properly explain these points we should have to write volumes; it suffices here to throw some light on Bossuet's controversial work with this general remark: his essential purpose was to get rid of the reasons for resistance which Protestants drew from the substance or the form of Catholicism, in opposition to the reasons for reunion.

In this remark, also, is to be found the decisive answer to the question, often raised, and amply discussed for some years, of the Jansenism of Bossuet. Jansenism, indeed, involves two things: the "Five Propositions"—a doctrine, or a heresy, formally and solemnly condemned; and a general tendency, very much like that of Calvin, to rationalize Christian morality and even dogma. So far as Jansenism is a heresy, Bossuet was never a Jansenist; but so far as it is a mere tendency, an intellectual disposition and a tendency to effect a mutual drawing together of reason and faith, it is scarcely possible to deny that he leaned towards Jansenism. Quite apart from the satisfaction which his own genius, naturally attracted to order and to clarity, found in this conciliation of reason and faith, he judged this the most propitious ground of all for the reconciliation of Protestantism with Catholicism. But to this it should be added at once that Bossuet, while not adding to the difficulties of faith, made it a condition that care must be taken not to trench upon faith, and this trait it is which completes the picture of Bossuet's character. Tradition has never had a more eloquent or a more vigorous defender. *Quod ubique, quod semper, quod ab omnibus creditum est*; this was for Bossuet, in a manner, the absolute criterion of Catholic truth. He had no difficulty in deducing from it "the immutability of morality or of dogma"; and in this precisely, as is well known, consists his great argument against the Protestants. The "History of the Variations of the Protestant churches" is nothing more than a history of the alterations, if one may say so, to which the Protestant Churches have subjected dogma, and the adjustments or adaptations of dogma which they have pretended to make to circumstances that had nothing but what was transitory and contingent. But "the truth which comes from God possesses from the first its complete perfection", and from that it follows that as many "variations" as there are, so many "errors" are there in faith, since they are so many contradictions or omissions of tradition.

This point has been reserved for the last in the present article, because no other trait of Bossuet's genius seems to have gone further towards establishing the common conception of it. It is easy to see that that conception is not altogether false; but neither is it altogether true, nor, above all, fair when, as is often done, it is extended from the genius of the controversialist or theologian to the character of the man himself. Tradition, we repeat, has had no more eloquent or more implacable champion; it has had none more sincere; but tradition such as he comprehended it is not all of the past, for so understood it would include even heresy and schism. Tradition, for Bossuet as for the Catholic Church, is only what has survived of the past. If Nestorian Christianities still exist to-day—and some do exist—they are as if they were not, and Nestorianism does not on that account constitute a part of tradition. It would, and does, constitute a part of the tradition of Free Thought. But for the Church, tradition is only what she has thought herself obliged to preserve out of those doctrines which have succeeded one another in the course of her development, among which she has made her choice in virtue of her

*magisterium*, retaining some, rejecting others, without even being always obliged to condemn the latter. It can be proved, on the other hand, that, thus understood, tradition in the writings of Bossuet, and on his lips when he invokes it, does not exclude religious progress, even if, perhaps, the former does not postulate the latter as a condition. And already, doubtless, it is beginning to be half seen that the true Bossuet, even in theology, even in his long combats with the heretics, was not the unbending, irreconcilable man he is commonly painted.

This will be still better seen if we reflect that a great writer is not always the man of his style. In his sermons as in his writings, it would be impossible to deny that Bossuet has an imperious and authoritative style. He counsels nothing which he does not command, or which he does not impose; and to everything which he advances he communicates the character and force of a demonstration by his manner of expressing it. Not that many pages of a different tenor might not be cited from him, and some such will be found notably in his "Uplifting of the Soul", his "Meditations", or his "Sermons for Festivals of the Virgin". But the habitual quality of his style, for all that, remains, as we have said, imperious and authoritative, because it is in harmony with the nature of his mind, which demands first and foremost clearness, certainty, and order. It may be said of him that, seeing all things in their relation to Providence, he expresses nothing except under the aspect of eternity. A great poet in later times has said: "Qu'est-ce que tout cela qui n'est pas éternel", and, looked at in this light, there is a perfect agreement between the style and the thought of Bossuet. But as to his character the same thing cannot be said; here every testimony alike shows us in this writer, whose accent seems to brook no contradiction, the most gentle, the most affable, and sometimes the most hesitating of men.

Such was the true Bossuet. In his life we cannot always find the daring of his eloquence, nor in his conduct the audacity of his reasoning. This great dominator of the ideas—one might even say of the intelligences—of his time suffered himself to be dominated more than once by the thoroughly human dread of being disagreeable and, above all, of giving offence. "He has no joints", he himself said of one of the gentlemen of Port Royal who was somewhat lacking in flexibility; to which the individual in question retorted: "And as for him, you may tell him that he has no bones!" The strong, concise *mot* sums up all the reproaches that can be made against this great memory. Had his strength of character and his apostolic vigour equalled the force of his genius, he would have been a St. Augustine. Falling short of St. Augustine, a Catholic and a Frenchman may be permitted to believe that it is still something rare, something exalted among men to have been merely Jacques Bénigne Bossuet.

DE BURIGNY, *Vie de Bossuet* (1731); DE BAUSSET, *Histoire de Bossuet* (4 vols., 1814); FLOQUET, *Études sur la vie de Bossuet* (4 vols., 1855-70—these four volumes, unfortunately, do not go beyond 1681); RÉAUME, *Histoire de Bossuet* (3 vols., 1869); LANSON, *Bossuet* (1890); RÉBELLIAU in *Grands écrivains français*; Bossuet; *Journal de l'abbé LE DIEU* (4 vols., 1856-67); DELMONT, *Around Bossuet*; LEBARQ, *Histoire de la prédication de Bossuet* (1888).

For an almost complete list of historical works and literary criticism which deal with Bossuet, cf. BOURBEAUD, *Histoire et description des manuscrits et des éditions originales des ouvrages de Bossuet*, with an indication of the translations of them, and of the writings which they occasioned at the time of their publication (Paris, 1897); URBAIN in *Bibliothèque de bibliographies critiques* (Paris, Société des Études historiques).

F. BRUNETIERE.

Bost, ARNOLD. See TRITHEMIUS.

Boste (or BOAST), JOHN, VENERABLE, priest and martyr, b. of good Catholic family at Dufton, in Westmoreland, about 1544; d. at Durham, 24 July. 1594. He studied at Queen's College, Oxford, 1569-

72, became a Fellow, and was received into the Church at Brome. in Suffolk, in 1576. Resigning his Fellowship in 1580, he went to Reims, where he was ordained priest, 4 March, 1581, and in April was sent to England. He landed at Hartlepool and became a most zealous missionary, so that the persecutors made extraordinary efforts to capture him. At last, after many narrow escapes, he was taken at Waterhouses, the house of William Claxton, near Durham, betrayed by one Eglesfield, 5 July, 1593. The place is still visited by Catholics. From Durham he was conveyed to London, showing himself throughout "resolute, bold, joyful, and pleasant", although terribly racked in the Tower. Sent back to Durham for the July Assizes, 1594, he behaved with undaunted courage and resolution, and induced his fellow-martyr, George Swalwell, a convert minister, who had recanted through fear, to repent of his cowardice, absolving him publicly in court. He suffered at Dryburn, outside Durham. He recited the Angelus while mounting the ladder, and was executed with extraordinary brutality; for he was scarcely turned off the ladder when he was cut down, so that he stood on his feet, and in that posture was cruelly butchered alive. An account of his trial and execution was written by an eye-witness, Venerable Christopher Robinson, who suffered martyrdom shortly afterwards at Carlisle.

Nat. Biog. WAINEWRIGHT, Venerable John Boste (London, Cath. Truth Soc., 1907); GOLDIE, The Martyr of Waterhouses in Ushaw Magazine, 1902, 1903.*

#### BEDE CAMM.

**Boston**, ARCHDIOCESE OF, comprises Essex, Middlesex, Suffolk, Norfolk, and Plymouth counties in the State of Massachusetts, U. S. A., the towns of Mattapoisett, Marion, and Wareham excepted, embracing an area of 2,465 square miles. The see was erected 8 April, 1808, and created an archbishopric in 1875. When the first Bishop of Boston was consecrated his jurisdiction extended over all New England and a mere handful of Catholics. There are now eight dioceses in the same territory with about 2,100,000 Catholics of whom 850,000 are within the limits of the Archdiocese of Boston where the first bishop found a scant hundred. The growth of the Church has been due mainly to the immigrants attracted by the advantages offered by the great and varied manufacturing interests of New England. The Irish came first, after them the French Canadians, the Italians, the Poles, the Portuguese, and representatives of nearly all the peoples of the globe.

**EARLY HISTORY.**—Early Irish emigration to America took place in three distinct periods, from 1621 to 1653; from 1653 to 1718, and from 1718 to 1775. But the mistake must not be made, as it often is, that these immigrants were all Catholics. Many of them were not, and those who were had few inducements to settle in the Puritan colony where their Faith was held in detestation. Some who were sold to the Barbadoes in the time of Cromwell were afterwards found in the Massachusetts settlements. One of these, Ann Glover, and her daughter had lived in Boston before she fell a victim, in 1688, to Cotton Mather's witchcraft mania. In his "Magnalia" he calls her "a scandalous old Irishwoman, very poor, a Roman Catholic and obstinate in idolatry". Robert Calef, a Boston merchant who knew her, says "Goody Glover was a despised, crazy, poor old woman, an Irish Catholic who was tried for afflicting the Goodwin children. Her behaviour at her trial was like that of one distracted. They did her cruel. The proof against her was wholly deficient. The jury brought her guilty. She was hung. She died a Catholic" (More Wonders of the Invisible World, London, 1700). Other immigrants came as

bond slaves or "redemptioners" and were not so steadfast in the Faith as Goody Glover. Their environment precluded any open manifestation of their religion or the training of their children in its precepts. As an instance of many such may be cited the famous Governors Sullivan of Massachusetts and New Hampshire. Their grandfather was one of the "Wild Geese" who fled with Sarsfield from Limerick to France. His son married Margaret Brown, a fellow "redemptioner", and with their six children all drifted into Protestantism. One of their sons, General John Sullivan, of Revolutionary fame, writing on 5 September, 1774, of the "Quebec Act" that gave religious freedom to the Catholics of Canada under British rule, denounced these co-religionists of his grandfather as "determined to extirpate the race of Protestants from America to make way for their own cursed religion".

Traces of the Church in New England begin with the arrival of the Jesuit missionary, Peter Biard, among the Abenaki Indians of Maine in June, 1611. Others, notably Father Gabriel Druilleles (15 August, 1643), followed. About the same date, the ship of La Tour, the French commander of Canada, which visited Boston harbour had "two friars" on board, but they did not land. In September, 1646, another French ship, commanded by D'Aulnay, also having two priests on board, was in port. The priests visited the governor, who entertained them at his residence. Four years later Father Druilleles visited Boston to confer with General Gibbons as to the details of a trading pact and alliance with the Canadian French against the Iroquois. The governor entertained him for two weeks at his home, which was on what is now Washington Street, near Adams Square (Memorial Hist. of Boston, II, p. xiv), and it is surmised that he said Mass in private there during that time. John Eliot, John Endicott, and other noted men of the time were among those he met there and who united in urging him to prolong his visit, though their efforts were unsuccessful. The "Andros Papers" (quoted in Memorial Hist. of Boston) declare that in 1689 there was not a single "Papist" in all New England. They began to drift in soon, however, for in the Boston "Weekly Rehearsal" of 20 March, 1732, is this statement: "We hear that Mass has been performed in town this winter by an Irish priest among some Catholics of his own nation of whom it is not doubted we have a considerable number among us." During the war with France one hundred French Catholics were arrested in Boston in 1746 "to prevent any danger the town may be in", but the sheriff much to the disgust of their captors, refused to hold them. In 1756 the exiled Acadians, of whom nearly 2000 had landed in Massachusetts, were denied the services of a priest because, as Governor Hutchinson declared, "the people would upon no terms have consented to the public exercise of religious worship by Roman Catholic priests". The Boston "Town Records" (1772, pp. 95-96) while admitting that toleration in religion was "what all good and candid minds in all ages have ever practiced" excluded "Roman Catholics" because their belief was "subversive of society".

With the Revolution, however, came the dawn of a better era, the upsetting of religious as well as political barriers, and the beginning of the slow but sure growth of the Church which has resulted in the wonderful change of the present. A favourite New England diversion was an annual procession, on 5 November, of the Pope and the Devil in celebration of the famous "Gunpowder Plot". In Boston it was usually attended by riot and violence. In 1775 Washington, while at Boston, issued an order in which he could not "help expressing his surprise that there should be officers and soldiers in this army so void of common sense" as to thus insult the re-

ligious feelings of the Canadians with whom friendship and an alliance was then being sought. The stay of the French fleet in New England waters and the settling of some of the allies there after the war had ended laid the foundations of the first Catholic parish in the heart of New England. There appeared in Boston, in 1788, a French priest who called himself Claudius Florent Bouchard de la Poterie, "Priest, Doctor of Divinity, Clerk, and Apostolic Missionary". He had faculties from the prefect Apostolic, Dr. Carroll, and announced his advent in a pompous "pastoral letter". He secured the old French Huguenot church at what is now No. 18 School Street and opened there on All Saints' Day, 1788, under the patronage of the Holy Cross, the first Catholic church in New England. The report of the celebration of the first Mass on that date can be read in the Boston "Independent Chronicle", 6 November, 1788. To the aid of this church subscriptions were received from Canada, and the Archbishop of Paris, in answer to an appeal from the little French colony in Boston, sent a needed outfit of vestments and vessels for the altar. He also notified them that the Abbé de la Poterie was an unworthy priest (Campbell in U. S. Cath. Magazine, VIII, 102). His conduct in Boston proved this, and the prefect Apostolic, finding he had been imposed on, sent the Rev. William O'Brien, O. P., of New York to Boston to depose de la Poterie. A violent pamphlet printed in Philadelphia (1789) followed. It was dedicated "To the new Laurent Ricci in America the Rev. Fr. John Carroll, Superior of the Jesuits in the United States also to the friar-monk-inquisitor William O'Brien", and represented de la Poterie as a victim to their wiles.

After his suspension de la Poterie went to Canada and was succeeded in Boston by the Rev. Louis Rousselet, who was in turn suspended and went to Guadeloupe, where he was killed in a revolution. In 1790 the Catholic colony numbered less than two hundred, and the Rev. John Thayer, a convert, was sent to take charge of the church which he found "dilapidated and deserted" after his predecessor's departure. Thayer had been a Congregationalist minister, and chaplain to Governor Hancock. At the close of the Revolution, being in his twenty-sixth year, he went abroad, and became a convert in Rome 25 May, 1783. He determined to become a priest in order to labour for the conversion of New England to the Catholic Faith and was ordained at St. Sulpice in Paris, in 1787. He returned to Boston 4 January, 1790. The first of a genuine New England family to enter the priesthood, he retained much of his inherited Puritanical oppressiveness, and, as Bishop Carroll said of him, he lacked "amiable and conciliatory manners" and was not a success as an administrator. Rousselet, who did not leave Boston immediately, set up a rival church and divided the little congregation, the French element siding with him and the Irish with Thayer. In the spring of 1791 Bishop Carroll had to visit the parish to restore unity. He was received with courtesy by all citizens and was made the guest of honour at the annual dinner of the most important social and military organization there, the Ancient and Honorable Artillery Company. Governor John Hancock attended Mass as a mark of respect for him. "It is wonderful", the bishop wrote, "to tell what great civilities have been done to me in this town, where a few years ago a Popish priest was thought to be the greatest monster in the creation. . . . If all the Catholics here were united their number would be about one hundred and twenty" (U. S. Cath. Magazine, Baltimore, VIII, 149).

Father Thayer having failed as a pastor he was relieved by the Rev. Francis A. Matignon, one of the many French priests exiled by the Revolution, and to whom the Church in the United States owes so

much. Born in Paris, in 1753, he was ordained priest in 1773 and taught theology in the College of Navarre. Having arrived in Boston, 20 August, 1792, he soon healed all the local dissensions and by his zeal, eloquence, piety, and winning courtesy made an immediate success of his pastorate. In 1796 he invited his old friend and associate, the Rev. John Louis de Cheverus, then an exile in England, to Boston to help him, and to his great joy the call was heeded. The Abbé de Cheverus arrived on the third of October of that year. He remained in Boston with Father Matignon until July, 1797, when he went at Bishop Carroll's request to visit the Indian missions in Maine. On his way, he looked after the scattered Catholics between Boston and the Penobscot. According to a report then made to Bishop Carroll of the Easter Communions of 1798 there were 210 Catholics in Boston; 15 in Plymouth; 21 in Newburyport, and 3 in Salem. Outside Boston the only important Catholic colony was at Damariscotta, Lincoln County, Maine, where Roger and Patrick Hanly, two Irishmen, had settled some time before, and their descendants and friends made up the community. The leading merchants and shipbuilders of Newcastle, James Kavanagh (father of Edward Kavanagh, later Governor of Maine, the hero of Longfellow's novel "Kavanagh"), and the first Catholic governor of a New England State) and Matthew Cottrill, built a chapel and later, in 1808, a brick structure, St. Patrick's church, for the use of their fellow Catholics. This was the only church in New England outside Boston. Having put these missions in order Father Cheverus returned to Boston and with Father Matignon exhibited heroic courage and charity during the yellow fever epidemic of 1798. By this time the old church in School Street was no longer fit for Divine service and another site on Franklin Street near Devonshire Street, was secured for \$2,500. Speaking at the centennial observance (29 September, 1903) of the dedication of this church, Archbishop Williams said: "We bought that land from the Boston Theatre. Remember the site of the old cathedral was in the most beautiful part of the town—at the end of Franklin Square—and the theatre owned both sides of the lower part of the street. The theatre people agreed to sell us that lot at one-half what they could get for it when we bought it. And remember in that street in those days were some of the principal families of the city. I remember the Bradleys, the Wigglesworths, the Amorys, and others who lived each side of the street, showing what a choice spot it was and one of the select streets of the city." The Spanish consul-general, Don Juan Stoughton, father of the Don Tomas Stoughton, who had so much to do with the building of St. Peter's, the first church in New York, lived opposite the site selected. At a meeting held 31 March, 1799, he and John Magner, Patrick Campbell, Michael Burns, Owen Callahan, John Duggan, and Edmund Connor were named the committee to take charge of the new project. From the congregation they collected \$16,000. Members of the leading Protestant families headed by President John Adams added \$11,000 to this, and from Catholics in other places and other sources \$5,500 more was received. The famous architect Charles Bulfinch, also a Protestant, who designed the capitol at Washington and the State House in Boston, supplied the plans without charge for a brick building 80 feet long and 60 wide of Ionic style, severely simple but impressive. Ground was broken for it on St. Patrick's Day 1800 and it was ready for dedication 29 September, 1803, having cost \$20,000. Prominent among this first congregation, besides those already mentioned, were James Kavanagh, John Ward, David Fitzgerald, Stephen Roberts, John Driscoll, William Daly, Daniel English, Thomas Murphy, John Hanly, Abraham Fitton,

Mary Lob, and representatives of the Duport, Duseaucoir, Dumesnil, Lepouse, and Julien families. Bishop Carroll went on from Baltimore to perform the ceremony of dedication. This visit of the bishop occasioned the greatest local satisfaction, and the two priests continued their zealous ministrations with such success that in 1805 their flock had increased to about 500. Soon Bishop Carroll saw the necessity of having a bishop in Boston and desired to nominate Father Matignon for the see, but the latter refused to allow his name to be considered. "The good accomplished here", he wrote, "is almost exclusively the work of Mr. Cheverus; he it is who fills the pulpit, who is most frequent in the confessional." Bishop Carroll therefore sent the name of the Rev. John Louis Cheverus to Rome declaring him to be "in the prime of life, with health to undergo any necessary exertion, universally esteemed for his unwearied zeal and his remarkable facility and eloquence in announcing the word of God, virtuous, and with a charm of manner that recalled Catholics to their duties and disarmed Protestants of their prejudices". Bishop Cheverus was appointed 8 April, 1808, but owing to the difficulties of communication the Bull did not reach him for nearly two years afterwards, when he was consecrated the first Bishop of Boston, in Baltimore, 1 November, 1810. He then went back to Boston to continue his simple, modest way of life. His old friend, Father Matignon, enjoyed honour and the esteem of all to the end of his long and useful career which came on the 18th of September, 1818.

**BISHOPS.**—(1) His many years of hard work at length began to tell on Bishop Cheverus and his physicians advised a return to his native land to escape repeated attacks of asthma. In 1823 King Louis XVIII of France nominated him to the vacant See of Montauban, and to the regret of all in the United States he embarked for Europe, 1 October, 1823. He remained in charge at Montauban until 30 July, 1826, when he was promoted to the Archbishopric of Bordeaux. On 1 February he was created cardinal. He died at Bordeaux, 19 July, 1836, in his sixty-ninth year. (See CHEVERUS, JOHN LOUIS DE.) During the administration of Bishop Cheverus the Ursuline nuns were introduced into the Diocese of Boston through the zeal of the Rev. John Thayer, who, when on a visit to Limerick, Ireland, where he died in 1815, enlisted the sympathy of Mary and Catharine, daughters of James Ryan of that city, in the project of founding a convent in Boston. They emigrated to Boston in 1817 and by direction of the bishop went to the Ursuline Convent at Three Rivers, Canada. They made their profession, 4 October, 1819. They returned to Boston, and a convent was secured for them on Federal Street near the cathedral. Here they remained until 17 July, 1826, when their new convent, Mount Benedict, Charlestown, was opened. This was the institution sacked and burned by an anti-Catholic mob on the 11th of August, 1834. Assisting in the work at the old School Street and Franklin Street churches at various times were the Rev. James Romagne, a West Indian priest, who also looked after the Indian missions in Maine, the Rev. J. S. Tisserand, Fathers Matthew O'Brien and F. X. Brosius, an Alsatian, who opened a school near Harvard University and was the only teacher of German then in Boston, also the Revs. Gabriel Richard, John Grassi, S.J., Philip Lariscy, the Augustinian, and Paul McQuade. In twenty years the bishop had no regular assistant. In 1817 he ordained his first ecclesiastical student, Denis Ryan, a native of Kilkenny, Ireland. In 1820 he ordained the second of his pupils Patrick Byrne, also from Kilkenny. In December, 1822, Virgil Barber (see BARBER FAMILY) was raised to the priesthood, and to the school he opened at Claremont, New Hampshire, were sent as further recruits

for the work of the diocese James Fitton, William Wiley, who later became successful and long-lived pastors, and William Tyler, first Bishop of Hartford. Churches were built in Salem, South Boston, and other places. A cemetery was purchased near Dorchester Heights, South Boston, and a memorial erected there to Father Matignon. The chapel was dedicated to St. Augustine in compliment to Father Lariscy who collected most of the funds for the purchase of the ground. There were a number of converts through the zeal and instruction of Bishop Cheverus, notable among them being Thomas Walley, who had a private chapel at his residence in Brookline; Dr. Henry B. C. Greene, who was elected to the State legislature in 1841 and served for four terms, being the first Catholic office-holder in the State; Stephen Cleveland Blythe, the Rev. Calvin White, William Wiley, afterwards a priest, Mrs. John C. Sefton, Samuel Bishop, Captain Bela Chase, Nicholas Hazelborn, the Barber family, and General Ethan Allen's daughter Frances, who was the first nun from New England.

(2) **BENEDICT JOSEPH FENWICK**, second bishop, appointed 10 May, 1825. He was born 3 September, 1782, near Leonardstown, Maryland, Cuthbert Fenwick, the founder of the family in America, being one of the original Catholic settlers of Lord Baltimore's colony in Maryland. He was sent with his brother Enoch to Georgetown College in 1793, and in 1805 entered the Sulpician Seminary at Baltimore to study for the priesthood. When the Society of Jesus was restored in the United States in 1806 he and his brother were among the first scholastics received. He was ordained priest 12 March, 1808. In the succeeding years he was pastor in New York, director of its first Catholic Collegiate school, administrator and vicar-general of the diocese, missionary in South Carolina, and twice president of Georgetown College. He was then named Bishop of Boston, was consecrated in Baltimore on 1 November, 1825, and took possession of his see, 3 December. There were then only two priests in the diocese, the Revs. P. Byrne in Boston and D. Ryan at New Castle, Maine; and besides the cathedral only three churches. The bishop at once started a seminary in his own house and, having prepared Fathers Fitton, Wiley, Smith, Tyler, and Thomas J. O'Flaherty, ordained them. Other students were sent to study at Rome, Paris, Baltimore, and Montreal. The Rev. John Mahony was sent to take charge at Salem; C. D. Ffrench, a Dominican, to Maine in 1826, and Robert D. Woodley to look after the scattered congregations in Rhode Island and Connecticut. In 1828 Bishop Fenwick enlarged the cathedral and began a school in the basement, which was taught by his theological students, assisted by Patrick Haney, a mulatto from the West Indies. The erection of new churches, the providing of more priests for the increasing number of Catholics, the promotion of Catholic education, and the regulation of the general discipline of the Church took up the remaining years of his life, which ended on the eleventh of August, 1846. In 1844 he was given a coadjutor, the Right Rev. John Bernard Fitzpatrick. Bishop Fenwick began, on 8 September, 1829, for the defence of the Faith, the publication of "The Jesuit, or Catholic Sentinel", one of the first Catholic papers printed in the United States. In 1843 he founded the College of the Holy Cross at Worcester and entrusted it to the Jesuits. In 1829 he attended the First Provincial Council of Baltimore. At his death Boston had about fifty churches with attendant priests, a college, an orphan asylum, and numerous schools, and a portion of its original territory—the States of Connecticut and Rhode Island—had been erected into the new Diocese of Hartford (28 November, 1843). Three Sisters of Charity from Emmitsburg, Maryland, opened the first orphan

asylum in 1831. The first diocesan synod was held in 1842 and was attended by thirty priests. The clergy of this period were all men of broad, solid culture and knowledge. Among others not named above may be mentioned the Rev. Jeremiah O'Callaghan, a native of Cork, Ireland, whose strict views on the doctrine of usury brought him into conflict with the bishop of that place. He later became a tutor in the family of William Cobbett and came to New York in 1830. The mission of Burlington, Vermont, was given to his care, and there in 1834 he published a book under the title "Usury, Funds and Banking". Dr. Thomas J. O'Flaherty, a physician from Kerry, Ireland, was ordained priest in 1829. He edited "The Jesuit" for the bishop and made a translation of Joseph de Maistre's "Spanish Inquisition". The Rev. C. E. Brasseur de Bourbourg was for a time in the diocese and two years after the bishop's death went to Mexico, where he devoted much time to decyphering the native picture writings. In 1845 it was estimated there were 53,000 Catholics in the State, an increase of more than 20,000 in ten years. (See FENWICK, BENEDICT JOSEPH.)

(3) JOHN BERNARD FITZPATRICK, third bishop, was consecrated titular Bishop of Callipolis and coadjutor of Boston, 24 March, 1844. He was born in Boston, 1 November, 1812, his parents having emigrated from Ireland in 1805. His early education was received in the local grammar and Latin schools, and in 1829 he went to the Sulpician college at Montreal. After eight years spent there as student and professor he entered the Seminary of St. Sulpice, Paris, to complete his ecclesiastical course and was ordained priest there 13 June, 1840. He then returned to Boston and after a year as assistant at the cathedral was made pastor of the church at East Cambridge. In 1844 he was appointed coadjutor to Bishop Fenwick. He took part in the Sixth Provincial Council of Baltimore in 1846 and attended the subsequent provincial councils and the first plenary council (1853), which further reduced the original limits of his jurisdiction by creating the dioceses of Burlington and Portland. During 1854 he paid his official visit to Rome after having suffered, together with his people, the utmost indignities and persecution at the hands of bigots. In July of that year the churches at Dorchester, at Bath, and at Manchester, New Hampshire, were destroyed by mobs. In October, at Ellsworth, Maine, the Rev. John Bapst, S.J., was taken by a band of masked men, stripped, smeared with tar and feathers, and forced out of the place. The legislature of Massachusetts also appointed a special committee to investigate convents, and the members forced their way into several institutions. From the pope Bishop Fitzpatrick received consolation and encouragement and the message to his people to "persevere under afflictions". The anti-Catholic sentiment in the community continued. On 14 March, 1859, a Catholic boy named Thomas J. Wall was whipped for refusing to read the Protestant Bible and recite Protestant prayers in one of the Boston public schools. Thereupon so strong a protest was made by the bishop against the injustice done to the Catholics of the community by the system and regulations then in operation that for the first time in the history of the city a priest and several Catholic laymen were named on the school committee. For many years the bishop was an invalid and a great sufferer, but he kept up his activities to the end and before his death on 13 February, 1866, saw the prosperity of the diocese increased nearly threefold. In 1860 Bishop Fitzpatrick, intending to build a new cathedral, sold the old church in Franklin Street for \$115,000, the neighbourhood having changed into a business centre. Among his prominent converts may be noted Josue Moody, afterwards Bishop of Erie, Fathers George J. Goodwin, H. Tucker,

J. Coolidge Shaw, S.J., Edward H. Welch, S.J. Orestes A. Brownson, the philosopher, Buckley Hastings, General Joseph W. Revere (Paul Revere's grandson), and other members of old New England families. Chaplains in the regiments who volunteered in the Civil War were Fathers Thomas Scully, Charles L. Egan, Nicholas O'Brien, and Lawrence S. McMahon (afterwards Bishop of Hartford). Editors and writers were Fathers Joseph M. Finotti, John P. Roddan, and John Boyce.

(4) JOHN JOSEPH WILLIAMS, fourth bishop, consecrated 11 March, 1866; created first archbishop, 12 February, 1875. He was born in Boston of Irish parents 27 April, 1822, and died in Boston, 30 August, 1907. His boyhood and early manhood were spent under the spiritual direction of Bishop Fenwick. He attended the cathedral school and thence passed to the Sulpician college in Montreal and their seminary at Paris, where he was ordained priest in 1845. He was the special friend of Bishop Fitzpatrick, who made him his vicar-general at an early age and rector of St. James's church, where in 1842 he established the first Conference of the Society of St. Vincent de Paul in New England. Two other rectors of this church became bishops: the Rev. James A. Healy, appointed Bishop of Portland in 1875, and M. A. Harkins Bishop of Providence in 1887. Shortly before his death Bishop Fitzpatrick sought to have Father Williams made his coadjutor, but he did not live to see him consecrated. Boston was made an archdiocese in 1875, and Bishop Williams was promoted to be its metropolitan. He received as an auxiliary the Right Rev. John Brady, consecrated Titular Bishop of Alabanda, 5 August, 1891, and a coadjutor with the right of succession in the Right Rev. William H. O'Connell of Portland, who was promoted to be Titular Archbishop of Tomi and coadjutor of Boston, 8 February, 1906. Archbishop Williams also saw organized, within the limits of the Diocese of Boston as it was when he was born, the Dioceses of Springfield, 1870; Providence, 1872; Manchester, 1884; and Fall River, 1905, and among those immediately under his jurisdiction representatives of nearly every country and language of Europe. Prominent among the memorials of his long episcopate and priesthood were the new Cathedral of the Holy Cross, dedicated 8 December, 1875, and St. John's Ecclesiastical Seminary at Brighton, erected in 1884, which is in charge of the Sulpicians. Boston College was opened by the Jesuits in 1863. In the same year the Carney Hospital was established through the generosity of Andrew Carney, who with his family has given it \$75,000. The House of the Angel Guardian for boys, founded in 1849 by the Rev. G. F. Haskins, in 1876 was entrusted to the care of the Brothers of Charity from Montreal. St. Mary's Infant Asylum was opened in 1872; the Home for the Aged by the Little Sisters of the Poor, in 1870; the House of the Good Shepherd in 1867, and the Daly Industrial School was made possible by the gift in 1899 of \$50,000 from the Rev. Patrick J. Daly. The Home for Destitute children was opened in 1864; the Working Boys Home in 1883, and the Home for Girls in 1884. St. Elizabeth's Hospital dates from 1868, the Free Home for Consumptives from 1891, the Holy Ghost Hospital for Incurables from 1893. The Sisters of St. Joseph made their first foundation in the diocese in 1873; the Franciscan Sisters, in 1884; the Religious of the Sacred Heart, in 1880; and the Carmelites from Baltimore, in 1890. The Redemptorists began a mission in the late sixties, and built their first church in the Roxbury District, in 1871. In 1883 the Marist Fathers began their local work, and the Augustinians established themselves in Lawrence in 1861. French immigration from Canada, which had been going on since 1815, began to attract special attention about 1870. In

1868 the first distinctively French parish was organized in Lowell. Italian and Portuguese congregations date from 1872, the former in Boston and the latter in Gloucester. One congregation in Gloucester has a respectable section made up of Gaelic speaking Scotch from Cape Breton and Antigonish. There is one German Congregation in Boston, and one in Lawrence; that in Boston, the church of Holy Trinity, dates from 1836 and has the distinction of starting in 1844 one of the first parish schools in New England. There are also Polish, Lithuanian, and Syrian congregations in Boston. Archbishop Williams was a quiet, conservative prelate, known best as an administrator. He was one of the bishops who attended the Vatican Council and helped largely to establish the American College at Rome.

THE MOST REV. WILLIAM HENRY O'CONNELL, second archbishop, was born 8 December, 1859, at Lowell, Massachusetts, and received his early education in its local schools and at St. Charles's College, Ellicott City, Maryland. He then graduated in 1881 at the Jesuit College in Boston and was sent to the American College, Rome, to make his studies for the priesthood. He was ordained there 8 January, 1884, and returned to Boston in 1886. The following years he was stationed as an assistant at Medford, and at Boston until 1895 when he was appointed rector of the American College, Rome. He held this office five years, and was then appointed Bishop of Portland, Maine, being consecrated 19 May, 1901. In the fall of 1905 the pope sent him as a special envoy to Japan in the interests of the Church. He was decorated by the Mikado and on his return to Rome was warmly commended for the success of his efforts by the pope, who on 26 January, 1906, named him titular Archbishop of Tomi, and coadjutor of Boston. On the death of Archbishop Williams, he immediately took possession of the See of Boston.

The Right Rev. John Brady, auxiliary bishop, was born at Crosserlough, County Cavan, Ireland, 11 April, 1842. He made his first studies in the local diocesan schools and then completed his theological course at the Missionary College of All Hallows, where he was ordained priest for the Diocese of Boston, 4 December, 1864. He served as a curate in Boston and at Newburyport until 1868, when he was made pastor at Amesbury. He continued in this charge until he was nominated Titular Bishop of Alabanda and Auxiliary Bishop of Boston for which see he was consecrated 5 August, 1891.

SOCIAL PROGRESS.—"The foundation of a Catholic Church in Boston could only be surpassed by devoting a chamber in the Vatican to a Protestant Chapel" said William Tudor, writing in his "Letters on the Eastern States" (Boston, 1819). The records show that the notable constructive Catholic social period of the diocese did not begin until after the Civil War. Though the Catholics formed a quarter of the population of Boston in 1844 and two-fifths in 1853, not a single one of that faith ever held an elective or appointive public office in the city of Boston. There were only three Catholic teachers in the public schools until 1860. The first Catholic Member of the Common Council, John H. Barry, was elected in 1857, the first alderman, Christopher A. Connor, in 1870, and the first Member of Congress, Patrick A. Collins, in 1882. The changed conditions are shown by the fact that for ten of the past twenty-three years Boston has been ruled by Catholic Mayors, and public memorials have been set up amid general approval to the soldier, Colonel Thomas Cass; the poet journalist, John Boyle O'Reilly; and the statesman, Patrick Andrew Collins. In justice it must be said that much of the progress thus made was owing to Patrick Donahoe, who after the failure of "The Jesuit" continued in "The Pilot" (begun 2 January, 1836) the illustrations of Catholic truth and the de-

fence of Catholic rights. From his publication house issued for more than half a century a steady output of Catholic literature that aided materially the education of his fellow Catholics and won for the Faith a general popular appreciation. Other periodicals and publications in the archdiocese are the weeklies "The Republic" and the "Sacred Heart Review" (Boston); "The Catholic Citizen" (Chelsea); "The Sunday Register" (Lawrence); the monthlies "Donahoe's Magazine" (Boston); "The Index" (Haverhill); the French weeklies "Le Défenseur", "La Justice" (Holyoke); "L'Etoile", daily and weekly (Lowell).

STATISTICS.—Records of the Archdiocese of Boston for 1907 give these figures: 1 archbishop, 1 bishop, 598 priests (488 secular and 110 regular), 194 churches with resident priests, 54 missions with churches, 1 theological seminary with 86 students, 3 colleges for boys, 8 academies for girls, 76 parishes with schools and an attendance of 48,192 children; 6 orphan asylums with 650 inmates; 24 charitable institutions; the total number of children in Catholic institutions 48,740; 1 infant asylum, 538 inmates; industrial and reform schools 4, inmates 915; homes 7, inmates 826; brothers 140; religious women 1567; seminary for diocesan clergy 1, students 86; estimated Catholic population 850,000.

The following religious orders and congregations have foundations in the archdiocese: *Communities of Men*, Augustinians, 16; Franciscans (O. M. C.), 5; Jesuits, 32; Marists, 15; Oblates, 22; Congregation of St. Charles Borromeo, 4; Redemptorists, 16; Brothers of Charity of St. Vincent de Paul, 25; Brothers of the Christian Schools, 11; Little Brothers of Mary, 19; Xaverian Brothers, 58. *Communities of Women*, Sisters of St. Ann, Sisters of the Assumption, Sisters of Charity (Madison, New Jersey), Sisters of Charity (Grey Nuns, Montreal), Sisters of Charity of Nazareth, Sisters of Charity (Emmitsburg), Sisters of Charity (Halifax, N. S.), Sisters of the Holy Union of the Sacred Hearts, Sisters of St. Dominic (Jersey City, N. J.), Sisters of the Third Order of St. Francis, Sisters of St. Dominic (Springfield, Kentucky), Sisters of St. Francis (Allegany, N. Y.), Sisters of St. Francis (Rome), Sisters of the Good Shepherd, Sisters Servants of the Immaculate Heart of Mary, Grey Nuns of the Cross (Ottawa, Ontario), Religious of the Sacred Heart, Missionary Sisters of the Sacred Heart (Rome), Sisters of St. Joseph, Sisters of Mary, Sisters of Mercy (Manchester, New Hampshire), Sisters of Notre Dame, of Namur, since 1849, School Sisters of Notre Dame (Baltimore, Maryland), Little Sisters of the Poor, Sisters of Providence, Sisters of the Holy Union of the Sacred Hearts, Filles de Jésus, Franciscan Poor Clare nuns, Sisters of the Holy Childhood.

THOMAS F. MEEHAN.

**Bostra**, a titular see of Syria. Bostra, "The fortress", is neither Bosor of Reuben and Moab (Deut., iv, 24; Jos., xx, 8), nor Bosrah of Edom

(Gen., xxxvi, 33; Jer., xlix, 13, etc.), now Bouseira between Tafilé and Shobaq. Perhaps it is the same as Bosor, or Bosora, taken by the Machabees (1 Mach., v, 26, 28, 36), an independent town in Persæa. It was included in the Nabatean Kingdom (M. de Vogüé, *La Syrie centrale*, Inscriptions, 103) and last held by the Romans. When the kingdom was destroyed by Cornelius Palma (105 or 106), a general of Trajan, Bostra became the metropolis of Arabia and was known as Nova Trajana Bostra. There the Third *Legio Cyrenaica* held its garrison. In the same year began the era of Bostra, after which the numerous inscriptions in trans-Jordanic Palestine are reckoned. The city was already a very important one; it was there that the great Roman road began which ran to the Red Sea, as well as most of the other roads that crossed the country in every direction; the governor of the province had his residence there.

Under Alexander Severus (222-235) Bostra became a Roman colony. In the fourth century it is called "a great city", by Ammianus Marcellinus (*Res gestæ*, XIV, 8, 3), and from the extent of its ruins G. Rindfleisch has calculated that it must have had about 80,000 inhabitants (*Zeitschrift des deutschen Palästinavereins*, xxi, 32). Remains of splendid monuments are yet visible, colonnades, triumphal arches, baths, a theatre, temples, churches, etc. Bostra, being an important trade centre for caravans, was visited by Mahomet; it was there that Bahira, a Nestorian monk, acknowledged him as a prophet. The Crusaders tried vainly to take it. Its decline was the result of earthquakes, chiefly that of 1151, when the city was left in ruins. Under its present name of Bosra Eski-Sham (Bostra Old Damascus), it has hardly 1000 wretched inhabitants and a little Turkish garrison.

The Christian religion, which soon penetrated the neighbouring Arabia, was not long in reaching Bostra. As metropolis of the province of Arabia it had nineteen or twenty suffragan sees. Lequien (*Or. Chr.*, II, 853-860) enumerates a list of sixteen bishops at Bostra; among the most celebrated are Beryllus, who fell into a Christologic heresy and was reclaimed by Origen at a council held between A. D. 218 and 244 (Euseb., *H. E.*, vi, 33); Titus, who suffered much under Julian the Apostate, and who was an important writer, J. Sickenberger devoting a long essay to him (Titus von Bostra, Leipzig, 1901); St. Antipater, about 458; Stephen, at the beginning of the eighth century; and Arsenius, who lived in 1365 (Miklosich and Müller, *Acta patriarch. C. P.*, I, 465). The diocese existed till 1715 (Chrysanthus, *Synodicon*, 70). Subsequent to that it was suppressed by the Greeks, and its 6000 faithful are subjects of the Diocese of Damascus. The Catholic Greeks, or Melchites, however, have always maintained this see, under the title of Bostra and Hauran. Their metropolitan resides usually at Damascus and goes to Bostra only two or three times a year; his diocese contains about 8000 Catholics, 12 priests, and 12 parishes. The Crusaders by a mistake ranked Bostra under the authority of the Patriarchate of Jerusalem, instead of under that of Antioch.

**Bothrys**, a titular see situated in Phœnicia. Bothrys is the Greek name of a city founded by Ithobaal, King of Tyre and father of Jezabel (897-866 B. C.), on the seashore near Cape Lithoprosopon (Menander, in Josephus, "Ant. Jud.", VIII, 13, 2). It is mentioned by all the ancient geographers, Strabo, Pliny, Ptolemy, Stephanus Byzantius, Hierocles, etc. The city belonged to Phœnicia

Prima, and became a suffragan of Tyre in the Patriarchate of Antioch. In 551 it was destroyed by an earthquake, on which occasion the cape cracked in the very middle so that quite a large harbour was opened (Malalas, *Chronogr.*, XVIII, in P. G., XCVII, 704). Theophanes, relating the same event (ad an. 543), calls the city Bostrys, which form is also found elsewhere. Three Greek bishops are known: Porphyrius in 451; Elias about 512; and Stephen in 553 (Lequien, II, 827). According to a Greek "Notitia episcopatum", the see still existed in the tenth century and was then called Petrounion. Its present Arabic name is Batroun. There are 2,500 inhabitants (1,200 Maronites, 1,200 Greeks). It is the centre of a *caza* in the *mulessariflik* of Lebanon and the seat of a Maronite diocese suffragan to the Maronite patriarchate. There are 60,000 Catholics, 50 churches or chapels, 30 priests, 1 seminary, 64 elementary schools, and 12 monasteries of Baladites, Aleppines, and monks of St. Isaiah in this Diocese.

**Botticelli, SANDRO**, a famous Florentine painter, b. at Florence about 1447; d. in the same city, 1510. Botticelli's name is properly Alessandro di Mariano Filipepi, Mariano Filipepi being his father, but he is called after the Florentine painter and goldsmith, Botticelli, to whom he was first apprenticed. Later on he was a pupil of Fra Filippo Lippi and learned from this master to paint in the ideal manner of Fra Angelico. Through the influence of Verrocchio and the brothers Pollajuoli this idealism was combined with the naturalness of Masaccio. These qualities explain Botticelli's great influence over later painters. Botticelli's life was a retired one passed largely in very modest circumstances. We know, however, that he was in the employ of the Medici and other prominent Florentine families from about 1483 to 1500. Although never inclined to frivolity he was yet influenced by the worldly spirit of the age until Savonarola's powerful call to repentance aroused his moral nature and guided his powers, as it seems, into entirely new paths. He never knew how to take care of money and he died at last in need. Botticelli was too unassuming to sign and date his works in most instances, so that the order in time of his paintings has to be judged from the canvases themselves.

I. *Madonnas*.—Botticelli enjoys, above all, a well-earned fame as a painter of the Madonna. In these pictures the fascination lies more in the expression of the Mother and Child and in the look on the faces of the half-grown boy-angels than in the unaffected simplicity of the pose and composition. Two of these pictures, circular in form (called *tondo*, round) have become very famous. Both are in Florence: one is the "Magnificat", and in the other the Child is holding a pomegranate. A circular canvas at Berlin which depicts the Madonna enthroned and surrounded by angels carrying candles is characterized by deep religious feeling. A number of small pictures of the Madonna recall Fra Filippo; others more severe in tone seem to show the influence of Verrocchio. The Child's expression is always sweet and winning, yet thoughtful as well, and at times the look is one of intense earnestness. The Mother in holy awe restrains her tenderness and seems to have a presentiment of future sorrow. This feeling of melancholy foreboding is also expressed in the attendant angels and saints. A painting of this enthroned Madonna with the two Johns is at Berlin; two canvases at Florence depict the same Madonna surrounded by numerous saints. It is plain that the

look of melancholy on the face of the Mother of God had a strange attraction for the painter. His portrait of himself in the "Destruction of Core, Dathan, and Abiron" shows his natural inclination to intense earnestness, and in the "Outcasts" he has depicted the profoundest depths of grief.

II. *Biblical Subjects*.—In 1481 Sixtus IV summoned Botticelli, along with other painters, to Rome to decorate the new Sistine Chapel. According to the biographer, Vasari, he was even to superintend the entire work. In the chapel Botticelli painted three frescoes which represent events in the lives of Moses and Christ. No less than seven scenes are united in the "Life of the Youthful Moses", so that the composition lacks unity. Without doubt the artist laboured under a feeling of restraint. The composition is animated in parts and is intended to arouse the feelings. The "Destruction of Core, Dathan, and Abiron" is represented in three scenes. The figure of Moses appears here in all the majesty which God had granted him for the punishment of the rebels. There is an interesting connexion between this picture and Perugino's "Granting of the Keys to Peter" on the opposite wall. Moses in the fullness of his might is the counterpart of Peter to whom the Keys of Heaven are entrusted. Over against the fresco of the proving of the youthful Moses, Botticelli painted from the New Testament the "Temptation of Christ". The pope has this picture before him when, seated upon his throne, he is present at the celebration of the Mass. Strange to say, the foreground of the painting represents the purification of a leper before a company of ecclesiastics and secular dignitaries and contains besides an allusion to the pope. The explanation of the scene is as follows: Moses had to undergo trials before he could become the leader of his people, so also the Saviour had to suffer in order to heal mankind from the leprosy of sin, and so also the pope in order to carry out Christ's missions. As an allegorical indication of this a hospital built by Sixtus IV is shown in the picture. It must be acknowledged that the painter executed the difficult task assigned to him in the chapel with striking skill. Feeling the importance of this work Botticelli carried out his designs almost entirely himself; the smallest details show the infinite pains he took. In these frescoes he has given a large amount of space to Roman architecture, thereby setting a good working example to the painters coming after him. Of Botticelli's other Biblical pictures mention may be made of the "Birth of Christ", which was intended to be a memorial of Savonarola. While a chorus of angels sing the praises of God above the manger, in this picture, three angels below lead Dominican monks towards the Saviour, Christ, who had been proclaimed by Savonarola to be king of the city of Florence. We have also an "Adoration of the Magi" in four examples (Florence, London, and St. Petersburg). This canvas is full of figures and has a background composed of stately architecture and landscape. The copy at Florence is famous on account of the portraits of the Medici it contains, which were introduced in accordance with the custom of the time. About 1500 Botticelli produced the two examples of the "Lamentation of Christ" which are now at Munich and Milan. In this composition the expression of grief is deep but subdued.

III. *Portraits*.—Among the twenty-four portraits of popes in the Sistine chapel five are by Botticelli. In the church of the Ognissanti at Florence there is a celebrated picture of St. Augustine by Botticelli opposite to a St. Jerome by Ghirlandajo. There are two portraits of Giuliano de' Medici in existence and an excellent portrait of a woman at Frankfurt.

IV. *Other Subjects*.—In celebration of a wedding Botticelli painted in the villa of the Tornabuoni near

Fiesole an allegorical scene representing the Seven Arts and the Virtues paying their homage to the newly married pair. Among his mythological pictures may be mentioned the "Venus", who sails upon a shell towards the island which she has chosen for her habitation. Another mythological subject is "Venus and Mars". Botticelli contributed the enthroned "Fortitude" and "Spring" to the allegorical style of painting so popular in his day. The "Calumny of Apelles", which is realistic in execution, is essentially allegorical. Closely related to these works are the more than ninety illustrations to Dante's "Divine Comedy", that poem which, from Giotto to Michelangelo, has stimulated the imagination of so many painters. Four sheets executed in colour seem to indicate an intention to carry out the whole work in the same manner after the designs had once been made with pen and pencil. Many of the pictures are not more than outlined or sketched. There is, however, much that is admirable in these designs, which formed one of the chief occupations of the last years of the painter. The fidelity to nature in the drawing of the human figure, the contemplative expression of the faces, the dramatic animation of the action, and the skilful arrangement of the perspective make these designs a last triumph for Botticelli.

**Botulph** (or BOTOLF), SAINT, Abbot, date of birth unknown; died c. 680. St. Botulph, the saint whose name is perpetuated in that of the American city of Boston, Massachusetts, was certainly an historical personage, though the story of his life is very confused and unsatisfactory. What information we possess about him is mainly derived from a short biography by Folcard, monk of St. Bertin and Abbot of Thorney, who wrote in the eleventh century (Hardy, *Catalogue of Brit. Hist.*, I, 373). According to him Botulph was born of noble Saxon parents who were Christians, and was sent with his brother Adulph to the Continent for the purpose of study. Adulph remained abroad, where he is stated to have become Bishop of Utrecht, though his name does not occur in any of the ancient lists. Botulph, returning to England, found favour with a certain Ethelmund, "King of the southern Angles", whose sisters he had known in Germany, and was by him permitted to choose a tract of desolate land upon which to build a monastery. This place, surrounded by water and called Icanhoe (Ox-island), is commonly identified with the town of Boston in Lincolnshire, mainly on account of its name (Boston = Botulph's town). There is, however, something to suggest that the true spot may be the village of Iken in Suffolk which of old was almost encircled by the little river Alde, and in which the church is also dedicated to St. Botulph. In favour of Lincolnshire must be reckoned the fact that St. Botulph was much honoured in the North and in Scotland. Thus his feast was entered in the York calendar but not in that of Sarum. Moreover, even Folcard speaks of the Scots as Botulph's neighbours (*vicini*). In favour of Suffolk, on the other hand, may be quoted the tradition that St. Botulph, who is also called "bishop", was first buried at Grundisburgh, a village near Woodbridge, and afterwards translated to Bury St. Edmunds. This, however, may be another person, since he is always closely associated with a certain St. Jurmin (Arnold, *Memorials of Bury*, I, 352). That Botulph really did build a monastery at Icanhoe is attested by an entry in the Anglo-Saxon Chronicle under the year 654: *Botul' ongan that mynster timbrian at Yceanho*, i. e. Botulph began

to build the minster at Icanhoe. That the saint must have lived somewhere in the Eastern counties is proved by the indisputable evidence of the "Historia Abbatum" (Plummer's Bede, I, 389), where we learn that Ceolfred, Bede's beloved master at Wearmouth, "journeyed to the East Angles in order that he might see the foundation of Abbot Botolphus, whom fame had proclaimed far and wide to be a man of remarkable life and learning, full of the grace of the Holy Spirit", and the account goes on to say that Ceolfred "having been abundantly instructed, so far as was possible in a short time, returned home so well equipped that no one could be found more learned than he either in ecclesiastical or monastic traditions". Folcard represents St. Botolph as living and dying at Icanhoe in spite of the molestations of the evil spirits to which he was exposed at his first coming. Later accounts, e. g. the lessons of the Schleswig Breviary, suppose him to have changed his habitation more than once and to have built at one time a monastery upon the bank of the Thames in honour of St. Martin. His relics are said after the incursions of the Danes to have been recovered and divided by St. Æthelwold between Ely, Thorney Abbey, and King Edgar's private chapel. What is more certain is that St. Botolph was honoured by many dedications of churches, over fifty in all, especially in East Anglia and in the North. His name is perpetuated not only by the little town of Boston in Lincolnshire with its American homonym, but also by Bossall in Yorkshire, Botesdale in Suffolk, Botolph Bridge in Huntingdonshire, and Botolph in Sussex. In England his feast was kept on 17 June, in Scotland on 25 June.

HERBERT THURSTON.

**Boturini Benaducci, LORENZO**, a native of Milan in Lombardy who went to Mexico in 1736 by permission of the Spanish government and remained there eight years, familiarizing himself with the Nahuatl or Mexican language. He gathered a number of Indian pictographs on tissue paper, etc., the first collection of the kind of importance. His frequent intercourse with the aborigines excited suspicion, as he was a foreigner, and the authorities, ever on the watch for intrigues against Spanish rule by strangers, deprived him of all his material, including prints, while he himself was sent to Spain under surveillance. There he succeeded in clearing himself of the accusations, but never obtained restitution of the precious collection, which afterwards was neglected and partly lost. Notwithstanding these drawbacks, Boturini, from such notes as he had saved, composed a treatise with the title of: "Idéa y ensayo de una historia general de la América setentrional" (Madrid, 1746). The most valuable part of this book relates to his former library and to other literary material. His text, especially concerning migrations of Indian tribes, is of less importance. Besides the "Idéa", he is credited with the authorship of the following writings: "Oratio ad Divinam Sapientiam" (Valencia, 1750), and "Oratio de iure naturali septentrionalium Indorum" (Valencia, 1751). The date and place of his death are unknown.

CLAVIGERO, *Storia antica dell' Messico* (Cesena, 1780); BÉRISTAIN DE SOUZA, *Biblioteca hispano-americana setentrional* (Mexico, 1816).

AD. F. BANDELIER.

**Boucher, PIERRE**, b. at Lagny, a village near Mortagne in the Perche, France, 1622; d. at Boucherville, 1717. In 1634 he went to Canada with his father Gaspard Boucher, a simple joiner. At the

age of eighteen he entered the service of the Jesuit Fathers and went to their Huron missions at Georgian Bay. On his return to Quebec in 1641 he served as a soldier in the garrison of that city. In 1645 he was interpreter of Indian languages at Three Rivers and in 1648 commissary-general of the trading station at that place. Elected captain of the militia in 1651, while in command of the place during an interim in 1653 he repelled an Iroquois attack. Owing to his efficient defence he was placed in charge of the city, and retained the position until 1658. In 1661 he was sent to France to represent the needs of the colonies and plead the cause of the inhabitants. On his return to Canada, in 1662, he was reappointed Governor of Three Rivers, an office which he only resigned in 1667 when he withdrew from public affairs to found the seigniorial parish called after his name Boucherville, situated opposite Montreal. He was succeeded in the governorship of Three Rivers by his son-in-law, René Gauthier de Varennes, forbear of the discoverer of Western Canada.

In 1664 Pierre Boucher had printed at Paris by the press of Florentin Lambert "L'histoire véritable et naturelle des mœurs et productions du pays de la Nouvelle-France, vulgairement dite le Canada". This work was published in 1849 in "L'Album Canadien", in 1882 at Montreal, and in 1896 in the "Mémoires de la Société Royale du Canada". An English translation appeared in 1883. Pierre Boucher is considered the best type of a Canadian landed proprietor, filled with piety, rectitude, and honour. At his death he left a numerous posterity. The family is still in existence, and the highest stations are filled by members bearing the names Boucherville, Brûre, Niverville, Grosbois, and Montisambert. Pierre Boucher was the first Canadian colonist to be ennobled by King Louis XIV. His letters of nobility, dated 1661, were renewed in 1707.

*Registres des insinuations du Conseil supérieur de la Nouvelle-France*, III, D. 46; DANIEL, *Grandes familles canadiennes*; SULTZ, *Pierre Boucher et son livre in Royal Society of Canada, Transactions*, new series, II, 99-148; LALANDE, *La paroisse de Boucherville* (1890); ROY, *Histoire de la seigneurie de Louson*, I, II.

J. EDMOND ROY.

**Bougaud, LOUIS-VICTOR-EMILE**, Bishop of Laval in France, b. at Dijon, 28 February, 1823; d. at Laval, 7 November, 1888. He received his classical education at Autun, where his professor of rhetoric was the Abbé, afterwards Cardinal, Pitra. He studied theology at Dijon and Paris, was ordained priest by Monseigneur Affre in 1846, was professor of church history at the Seminary of Dijon (1846-51), and then chaplain of the Convent of the Visitation in the same city (1851-61). In 1861 he accepted the position of Vicar-General to Bishop Dupanloup at Orleans. In 1886 he was appointed Bishop of Laval.

Besides the sermons which he delivered in Paris and other cities, Bishop Bougaud wrote numerous works. While chaplain of the Visitation Convent, he wrote "Histoire de Saint Bénigne, premier évêque de Dijon" and "Histoire de Sainte Chantal". While Vicar-General of Orleans, he wrote "Histoire de Sainte Monique", "Histoire de la bienheureuse Marguerite-Marie", "Le Christianisme et les temps présents" (his great apologetical work, in 5 vols.); "Le grand péril de l'Eglise de France au XIX<sup>e</sup> siècle", and "Histoire de Saint Vincent de Paul" (2 vols.). A volume of his discourses was published by his brother.

He was a preacher and writer of great influence, in consequence of his appreciation of all noble thoughts and deeds, his deep compassion for human suffering, his great power of reflection, and his refined artistic taste. In his apologetics he evinces thorough sympathy with his own time and an unwavering hope for the triumph of the Church. His purpose was to adapt the explanations of the dogmas, precepts, and organization of the Church to the moral and intellectual

aspirations of his contemporaries without any sacrifice of Catholic doctrine.

LAGRANGE, *Notice historique sur Mgr. Bougaud in Diocèse de Mgr. Bougaud* (Paris, 1891); *Semaine Religieuse de Laval* (1888).

G. M. SAUVAGE.

**Bougeant, GUILLAUME-HYACINTHE**, b. at Quimper in Brittany, in 1690; d. at Paris, 1743. He entered the Society of Jesus in 1706, taught the classics in the College of Caen and Nevers and lived for a number of years in Paris until his death. His "Amusement philosophique sur le langage des bêtes", published in 1737, became a cause of considerable annoyance to him and of a short exile from Paris. It was translated into English, Italian, and German. His historical works, on the Thirty Years' War, and on the Treaty of Westphalia have been highly praised and are regarded as among the best historical books written by Jesuits. They were translated into German. He is also the author of a theological treatise on the form of consecration of the Eucharist, and of a Catechism divided into three parts, historical, dogmatic, and practical. This catechism, translated into Italian and German, went through many editions and is still in use. In his three celebrated Comedies, "La Femme Docteur", "Le Saint déniché", and "Les Quakers français" he satirizes the Jansenists. The first of the three went through twenty-five editions in a few months and was translated into Italian, Spanish, Polish, and Dutch. Between 1725 and 1737 he contributed many articles to the *Mémoires de Trévoux*.

B. GULDNER.

**Bouhours, DOMINIQUE**, French Jesuit author, b. at Paris, 15 May, 1632; d. 27 May, 1702. Entering the Society of Jesus at sixteen, he taught grammar and rhetoric at Paris, Tours, and Rouen. A number of works which he composed against the Jansenists, notably "Lettre à un Seigneur de la cour" and "Lettre à Messieurs de Port-Royal", had a large circulation, and gained him a prominent place among the critics and *littérateurs* of the seventeenth century. He also translated the New Testament into French, and his translation has often been reprinted. He is best known to English readers, however, by his "Vie de S. Ignace" (Paris, 1679) and "Vie de S. François-Xavier" (Paris, 1682). These two biographies were translated into English and published at London in 1686 and 1688 respectively. A new translation, by a clergyman of the Diocese of Philadelphia, was published at Philadelphia by E. Cumiskey in 1840, and for a number of years these two works of Bouhours' were the most widely circulated biographies of the two saints. The only other of the author's works done into English is "La manière de bien penser dans les œuvres d'esprit", which appeared in London in 1705 under the title, "The Art of Criticism".

**Bouillart, JACQUES**, a Benedictine monk of the Congregation of St.-Maur, b. in the Diocese of Chartres, 1669; professed at the Monastery of St. Faron de Meaux 1687, d. 11 December, 1726. He was the author of "Histoire de l'abbaye royale de Saint-Germain-des-Prés" (Paris, 1724). This valuable history of the celebrated Benedictine monastery contains biographies of the abbots that ruled over it since its foundation by Childeric I in 543 and many important historical events relative to the famous abbey. Bouillart also edited a martyrology of Usuard. In this publication he attempts to establish the genuineness and authenticity of the manuscript preserved

at Saint-Germain-des-Prés, against the Jesuit hagiographer Du Sollier, who in his revised edition of Usuard's martyrology had paid no attention to this manuscript.

B.* (Augsburg and Würzburg, 1754), IV, 558; HURTER, *Nomenclator* (Innsbruck, 1893), II, 1201; LE CHERF, *Bibl. hist. et crit. des auteurs de la c. de St. Maur* (The Hague 1726).

MICHAEL OTT.

**Bouillon, EMMANUEL THÉODORE DE LA TOUR D'AUVERGNE, CARDINAL DE**, French prelate and diplomat, b. 24 August, 1643, at Turenne; d. 2 March, 1715, at Rome. The son of Frederick Maurice, Prince of Sedan, he was of the family of the great Marshal Turenne. In 1658, he was appointed a canon of Liège; doctor of the Sorbonne in 1667; created a cardinal in 1669, at the early age of twenty-four, and, finally, provided with several rich benefices and made chief almoner to Louis XIV. But Louvois, the powerful minister of Louis XIV, inspired by enmity to the house of Turenne, successfully opposed certain of his demands on the king for the benefit of members of his family, and the cardinal's disappointment vented itself in a bitter satire on his royal master. This was used to effect Bouillon's downfall at court. The cardinal then put forth great efforts to obtain the vacant Prince-Bishopric of Liège, but could not overcome the opposition of Louvois, who secured the dignity for Clement Joseph of Bavaria. Bouillon eventually regained the royal favour and was sent as ambassador to Rome. There, contrary to the wishes of his king, he championed the cause of Fénelon against that of Bossuet and did all he could to prevent the condemnation of Fénelon's "Explication des maximes des Saints". He was recalled to France, but alleging as a reason his duties as Dean of the Sacred College, he refused to obey the royal order. His property in France was then seized, whereupon he submitted and returned, but, on his arrival in France, was exiled to his Abbey of Tournus. While in this retirement, and under the influence of bitter ennui, the cardinal caused to be composed by Baluze his "Histoire généalogique de la maison d'Auvergne" (1708, 2 vols. in fol.). From his place of retreat, also, on the breaking out of the War of the Spanish Succession, he entered into correspondence with the English Duke of Marlborough, the Earls of Orrery and Galway, and others; and in 1710, after long and vainly soliciting his recall to court, he fled to the Low Countries. A warrant for his arrest was issued by the Royal Parliament, and his possessions again confiscated. But after some years spent abroad, during which the cardinal sent to the king numerous memoirs, endeavouring to justify his conduct, he at last succeeded in obtaining the restitution of his revenues and permission to take up his residence at Rome, where he spent in peace his last days.

DE FELLER-PÉRENNES, *Biogr. Gener.* (Paris, 1834), II, 470.  
EDWARD A. GILLIGAN.

**Boux, MARIE DOMINIQUE**, one of the best known and most distinguished of modern French canonists, b. 15 May, 1808, at Bagnères-de-Bigorre, in the diocese of Tarbes; d. at Montech, France, 26 December, 1870. In 1825, on the completion of his college course in an institution of his native town, he entered the Society of Jesus at Avignon, with his brother Marcel, and later taught the classics and occupied chairs of philosophy and theology in houses of the order. In 1842, when he was on the eve of his solemn profession, the precarious condition of his health rendered a continuance of the religious life impossible, and he obtained permission to retire

from the Society. This necessary withdrawal was a great disappointment to Bouix, who to the end of his life maintained the most cordial relations with his former brethren in religion, and received from them many evidences of a reciprocal regard. Father Roothan, General of the Jesuits, created him Doctor of Theology in 1851, in virtue of a power delegated by the Holy See to Jesuit generals; and Bouix's work, "Du Concile Provincial", published in 1850, was dedicated to members of the order with whom he had previously been associated in scholastic work. The first two years of his life as a secular priest were spent in a curacy at the church of Saint Vincent de Paul, in Paris. Here he interested himself especially in the soldiers garrisoned at the capital, and founded in their behalf the Society of Saint Maurice, which later spread throughout France. In 1847 he was named to a chaplaincy, and became editor of the "Voix de la Vérité", to which he had already been a frequent contributor. In spite of the fact that all self-seeking was entirely foreign to his character, he now became a prominent figure in the political and ecclesiastical life of Paris and was a member of the educational commission with Montalembert and Monsignor Parisis. General Cavaignac, who aspired to the presidency of the republic, thought it wise to endeavour to enlist the sympathies of Bouix. It was at this time, in 1848, that his first book appeared, combating an heretical organization known as the *Œuvre de la Miséricorde*. In 1849 his zeal impelled him to abandon for a time all other pursuits to minister to the victims of the cholera, which was then epidemic in Paris. Up to this time he had stood high in the favour of the ecclesiastical authorities of the diocese, but now an event occurred which was destined to affect seriously his ecclesiastical status and to give a new direction to his life work. Monsignor Fornari, the Nuncio at Paris, desiring to further the restoration of provincial councils, held a conference with Bouix and the Bollandist Van Hecke, at which it was decided that the best means of influencing public opinion aright would be the preparation of a book explaining the law of the Church on provincial councils. Bouix was charged with this important work, and first published in the "Univers" four articles, setting forth the salient features of the question and preparing the public for the complete treatise, "Du Concile Provincial", which appeared in 1850. A fifth article in the "Univers", simply reaffirming the canon law on synods and combating therefore, in the judgment of some, the tendencies of Gallicanism, was followed immediately by the loss of his chaplaincy. This event determined him to devote his life to dispelling the prejudices and errors which he believed had largely infected the clergy of France in regard to matters of law and discipline. To equip himself for this work he turned his steps towards Rome, where, with no other means of support than the stipend of his daily Mass, he passed the next four years (1851-55) in study and in the preparation of the several works on canonical topics. In 1854, the degree of Doctor of Both Laws was conferred upon him by order of Pius IX. Returning to Paris in 1855, he continued his studies, and added to the series of treatises which established his fame as a canonist. To further the great purpose to which he had consecrated his life, he founded at Arras, in 1860, the "Revue des sciences ecclésiastiques", of which he was for one year the editor, and in which during the next nine years many important articles appeared from his pen. In 1864, just as his anti-Gallican opinions were about to subject him to new rigours at the hands of Monseigneur Darboy, Bouix was named Vicar-General of the Diocese of Versailles, a sufficient commentary on the division of opinion in the French episcopate as to the character of his

teaching. The next year, when the royal exequatur came up for discussion in the French Senate, and Archbishop Darboy advocated there the Gallican view, Bouix answered with a publication which contested the correctness of the archbishop's contentions. The wonderful activity of his pen continued until 1870. Then, when he was broken by labour and disease and was really too weak to undertake a long journey, he went to the Vatican Council as theologian of the Bishop of Montauban, and was able to witness what appeared to him a signal triumph of the principles to which his life had been devoted. He returned with difficulty to France, where with undaunted spirit he endeavoured to complete a work on the Church, which he had already planned. It was while engaged on this work that death overtook him at Montech, in a religious house of which his sister was superior. His life was a long battle with Gallicanism, but always remained singularly free from bitterness and discontent, in spite of the difficulties by which he was beset and the atmosphere of combat which his zeal forced him to breathe. As to his reputation as a canonist, while all must acknowledge his wonderful productivity and his high purpose, and while he has been justly called the restorer of the science of canon law in France, it must nevertheless be said that he falls short of being a great canonist; he is too often a compiler rather than a genuine author, and he too frequently betrays a lack of that juridical sense which comes more from practice than from theory, and which begets the ability to pronounce justly on the lawfulness and unlawfulness of existing practices. However, the value of his works cannot be questioned, and is proved by the general favour which they still enjoy. Besides many articles, contributed to newspapers and reviews, especially to the "Revue des sciences ecclésiastiques", we owe to the pen of Bouix the following works: "Du concile provincial" (published also in Latin translation, *De Concilio Provinciali*); "Tractatus de Principiis Juris Canonici"; "Tractatus de Capitulis"; "Tractatus de Jure Liturgico"; "Tractatus de Judiciis Ecclesiasticis", 2 vols.; "Tractatus de Parocho"; "Tractatus de Jure Regularium", 2 vols. (an abridged translation of which appeared in German); "Tractatus de Episcopo", 2 vols.; "Tractatus de Curia Romanâ"; "Tractatus de Papa", 3 vols.; "La vérité sur l'assemblée de 1682"; "Le prétendu droit d'exequatur"; "La vérité sur la faculté de théologie de Paris, de 1663 à 1682"; "L'Œuvre de la miséricorde"; "Méditations pour tous les jours de l'année", 4 vols.; "Le solitaire des rochers"; "Histoire des vingt-six martyrs de Japon", 2 vols. Several of his works were honoured with pontifical letters of commendation, and most of his canonical treatises have gone through three editions.

JOHN T. CREAGH.

MARCEL, author, editor, and translator, brother of Marie Dominique Bouix, was born at Bagnères-de-Bigorre, France, 25 June, 1806; d. at Paris, 28 December, 1889. He entered the Society of Jesus at the age of nineteen and taught in the colleges of the Society in Spain and Switzerland. He spent some years of his life in the exercise of the sacred ministry, but the work to which he devoted himself for nearly forty years was the translation, revision, and publication of new editions of the great spiritual writers. These he enriched with introductions, commentaries, and historical notes of great value. His various editions of the life and works of St. Teresa, to the study and translation of which he gave sixteen years of his life, from 1848 to 1864, caused a remarkable revival of interest in the

great Carmelite reformer. His "Vie de Sainte Thérèse, écrite par elle-même" (Paris, 1852), passed through twelve editions, and was translated into German and Dutch. His "Œuvres de Sainte Thérèse", in three volumes (Paris, 1852-54-56), reached a third edition in 1860. "Œuvres spirituelles du Saint Pierre d'Alcantara" (Paris, 1862), Father Caraffa's "School of Divine Love" (Lyons, 1863), and a new translation of "The Following of Christ" (Poitiers, 1864) are three of the eight works issued in two years. Revised editions of Father Mumford's "Purgatory" (Paris, 1863), of St. Francis de Sales' "Treatise on the Love of God" (Paris, 1864), and of "The Spiritual Works of St. Francis Borgia" (Paris, 1869) are valuable contributions to ascetic theology. "Saint Joseph d'après les saints et les maîtres de la vie spirituelle" (Paris, 1863) is Father Bouix's own original contribution to religious literature. One of his most valuable services was the publication, for the first time, of the "Memoriale" of Pierre Lefèvre, (Bl. Peter Faber) one of the first companions of St. Ignatius Loyola, in the original Latin and in a French translation (Paris, 1873). This work was translated into English by Father H. J. Coleridge, S.J. (London, 1873). Father Bouix translated into French the letters of St. Ignatius (Paris, 1870) and Father du Pont's "Life of Father Alvarez" (Paris, 1873). He published the "Œuvres spirituelles" of Father Jean-Joseph Surin in three volumes (Paris, 1879-82). The translation of Leonard Lessius's "Les noms divins" (Paris, 1882) was one of the last works from the pen of this indefatigable writer, whose many years of labour enriched the literature of France with popular spiritual books of sound Catholic theology.

PATRICK H. KELLY.

**Boulainvilliers, HENRI**, COUNT OF, b. at Saint-Saire (Seine-Inférieure) France, 11 October, 1658; d. at Paris, 23 January, 1722. He was one of the first French historians to write the history of the institutions or fundamental laws of the nation and, although systematic and decidedly partial, was none the less a pioneer in this particular line of work. Until the death of his father in 1697, he followed a military career, but some complications concerning an estate obliged him to make a close investigation of his family titles and this it was that led to his becoming an historian. Like Saint-Simon, Boulainvilliers was saturated with ultra-aristocratic notions and was also an ardent adherent of the old feudal system, his books being a long, violent tirade against the French monarchy which, according to him, was responsible for the gradual ruin of the privileges of the nobility and the annihilation of feudalism.

The Franks, according to his doctrine, established themselves in Gaul by right of conquest; they divided its land among themselves and they exercise public authority. They constitute the French nation; they are Frenchmen. Every Frenchman is free and independent, is supreme in his domain, in his fee, where he administers justice to his subjects. The king is merely a civil magistrate chosen to settle the disputes of private individuals; he has no special power over the life, property, or liberty of other Frenchmen who are in no wise his subordinates. Frenchmen who belong to the nobility are all on an equality: they are the peers of the king and of his relatives. Relationship with kings confers no rank even upon descendants in the male line. Such is the feudal system as claimed by Boulainvilliers to be the only one that is just, legitimate, and conformable to the reality of history.

Now, what caused Frenchmen or nobles to be dispossessed of their rights? First, the Crusades. To defray the expenses of these expeditions many noblemen either mortgaged or sold their fees and

wealthy plebeians, who were not noble, but, according to Boulainvilliers, "ignoble", thus became the owners of fees and, by introducing themselves into the nobility, corrupted it. Next came the ignorance of the lords or owners. The ignorance and negligence of the lords rendering them generally incompetent to discharge the functions that rightfully belonged to them, the principal of which was to dispense justice in their fees, they soon transferred all their judicial authority to clerks or jurists. Thanks to the dignity of their rôle, these clerks or jurists soon became as important as the lords and thus originated the *noblesse de la robe* (nobility of the long robe) which Boulainvilliers considers a monstrosity.

Finally came the policy of the Capetian Kings which Boulainvilliers regards as chiefly instrumental in ruining feudalism and therefore the French nation. This policy consisted in adding the great fees to the royal domain by reason of conquest, purchase, or marriage, with the result that the Kings of France assumed an importance theretofore unknown to them, and which soon became entirely disproportionate; while the lords, fascinated by the brilliancy of the royal courts, instead of remaining the peers of these kings, became their servants. The kings diminished the power of the French nobles still more by favouring the emancipation of the communes and raising to the ranks of the nobility plebeians whom they entrusted with high offices to which they had no right. Moreover, they admitted to seats in the States General, which should have been composed exclusively of representatives of the French, delegates from among the lower clergy and liberated serfs, and of course this arbitrary measure completed the overthrow of the nobility. Such then, is the teaching set forth in Boulainvilliers's three most important works: "Histoire de l'ancien gouvernement de France", "Lettres sur les Parlements ou Etats-Généraux", and "Essais sur la noblesse" which, taken as a whole, constitute an earnest plea for feudalism against monarchism. These works, written by Boulainvilliers for his grandchildren, did not appear until after his death. The "Histoire de l'ancien gouvernement de la France" with fourteen historical "Lettres sur les Parlements ou Etats-Généraux" were published in Amsterdam and the Hague in 1727, the "Essais sur la noblesse" (containing a dissertation by the late Count of Boulainvilliers on the origin and decline of the nobility) coming out in Amsterdam, 1732. It is only within the last twenty-five years that Boulainvilliers' works have been duly appreciated and their conclusions taken up by the historic school of which Fustel de Coulanges was the chief representative.

RENÉ DOUMIC.

**Boulanger, ANDRÉ DE (PETIT-PÈRE ANDRÉ)**, a French monk and preacher, b. at Paris in 1578; d. 27 September, 1657. He was the son of a President of the Parlement (High Court) of Paris. At an early age he entered the Augustinian Order and became a well-known preacher, being heard for over half a century in most of the great pulpits of France. Boulanger lived at a period when the jocular style of preaching, introduced by such men as Menot and Maillard, still lingered, and he made large use of the burlesque, notwithstanding its bad taste, in his own preaching. It is indeed this habit of jesting that has preserved his name. Boileau refers to Boulanger when, speaking of trivial plays on words and witticisms, he writes:

L'avocat au palais en hérisse son style,  
Et le docteur en chaire en sème l'Évangile.

—"The style of the advocate in court bristles with them and the doctor in the pulpit scatters them through the Gospel." Father André's style of preaching may be judged from the following example. In one of his passages he thus compared the four great

Doctors of the Latin Church to the kings of the four suits of cards: St. Augustine to the King of Hearts, because of his large-heartedness; St. Ambrose to the King of Clubs (*trèfle*, clover), on account of his flowery eloquence; St. Jerome to the King of Spades (*pique*, lance), because of his biting style; St. Gregory the Great to the King of Diamonds (*carreau*, in the sense of "foot-stool") on account of his lowliness of thought. However, this exaggeration of speech was but one side, and that the least important one, of Father André's eloquence. Tallemant des Réaux said: "He was a good member of his order and had a large following of all sorts of people; some came to laugh, others came because he moved them." The critic Guéret, who had heard the facetious monk, represents him, in a dialogue of the dead, as saying in his own defence against his accuser Cardinal du Perron: "Joker as you take him to be, he has not always made those laugh who heard him; he has said truths which have sent bishops back into their dioceses. He has found the art of stinging while laughing." The Regent Anne of Austria and the Prince of Condé enjoyed his sermons. Boulanger was several times provincial of his order and much occupied in other ways; consequently he was not able to attend to the printing of his works. The only one of his writings which has been published, "L'Oraison de Marie de Lorraine, abbesse de Chelles", is mediocre.

GUÉRET, *La guerre des auteurs anciens et modernes* (Paris, 1671), 152; JACQUINET, *Les prédicateurs du XVII<sup>e</sup> siècle avant Bossuet* (Paris, 1885).

A. FOURNET.

**Boulay** (BULEUS), CÉSAR-EGASSE DU, a French historian, b. in the beginning of the seventeenth century at Saint-Ellier (department of Mayenne); d. 16 October, 1678. After teaching humanities in the College of Navarre he occupied important positions in the University of Paris, especially those of rector and historian of the university. His main work is the "Historia Universitatis Parisiensis" covering the period from the supposed foundation of the university by Charlemagne (800) to 1600. The first three volumes published in 1665 were censured by the university. To justify himself the author wrote the "Notæ ad censuram . . ." (Paris, 1667). The censors appointed by the king found nothing blameworthy in the work, and the last three volumes were published in 1673. Du Boulay's history is very important on account of the many original documents which it reproduces, but its value is lessened by the insufficient judgment and criticism of the author. Other writings of Du Boulay refer to the same topic of the university, its foundation, patrons, administration, and privileges: "De patronis quatuor nationum universitatis" (1662); "Carlomagnolia . . ." (1662); "De decanatu nationis Gallicanæ . . ." (1662); "Remarques sur la dignité, rang . . . du recteur" (1668); "Remarques sur l'élection des officiers de l'Université" (1668); "Recueil des privilèges de l'Université . . ." (1674); "Fondation de l'Université par l'empereur Charlemagne . . ." (1675). In addition to these Du Boulay wrote "Speculum eloquentiæ" (1658) and "Trésor des antiquités romaines" (1651).

FÉRET, *La faculté de théologie de Paris et ses docteurs les plus célèbres, Époque moderne* (Paris, 1904), III, 435; HURTER, *Nomenclator* (2d ed., Innsbruck, 1893), II, 241; *Biographie universelle* (Paris, 1811-28), V, 326; DENIFLE, *Die Entstehung der Universitäten des Mittelalters bis 1400* (Berlin, 1885).

C. A. DUBRAY.

**Boulogne**, ETIENNE-ANTOINE, French bishop, b. at Avignon, 26 December, 1747; d. at Troyes, 13 March, 1825. He was the son of poor parents and obtained an education from the Christian Brothers of his native city. He exhibited talent and industry and was ordained in 1771. His oratorical gifts attracted general attention, and he soon became one of the most admired preachers in Paris. For a while the

Archbishop of Paris interdicted him from preaching; but was eventually induced to withdraw his opposition when a eulogy composed by the Abbé Boulogne on the late Dauphin, the father of Louis XVI, obtained a prize. The Abbé's reputation as a preacher now grew steadily. He preached the Lenten sermons *aux Quinze-Vingts* in 1786, and at the court of Versailles in 1787. In one of his sermons at court he clearly pointed out the fearful storm which was threatening society, brought on by the false philosophy and irreligion of the day. The storm advanced unchecked and broke over France sooner and with greater violence than had been foreseen, except by the keenest observers. Boulogne refused to take the oath of the civil constitution of the clergy demanded by the laws and was in consequence stripped of his titles and benefices. He also refused to leave his country in her need. He was arrested three times, but each time succeeded in recovering his liberty; condemned to deportation on another occasion for having defended Christianity against the attacks of Larevellière Lépiaux, he again evaded the unjust decree. The worst of the revolutionary storm had scarcely blown over when he reappeared, contending in the "Annales Catholiques", of which he had become the sole editor, with unbelievers and those of the clergy who had taken the oath of the civil constitution. In spite of incessant and fierce opposition he published this magazine under one title or another until the year 1807. He also resumed his labours as preacher with greater authority and success than ever. Napoleon, always in search of men of talent who were capable of furthering his ambitious designs, first appointed the Abbé Boulogne his chaplain, then Bishop of Troyes. The Abbé foresaw clearly that his position would be one of great difficulty; but already schooled to adversity, he did not shrink from the new trials which awaited him.

In 1811 Napoleon had the bishops of France and Northern Italy summoned to a council to be held at Paris. Bishop Boulogne preached the opening sermon in the church of Notre Dame. "Whatever vicissitudes", he said in conclusion, "the See of Peter may experience, whatever be the state and condition of his august successor, we shall firmly cling to him with bonds of filial respect and reverence; the See may be displaced, it cannot be destroyed; wherever that See may be, the others will take their stand around it; whithersoever that See moves, thither all Catholics will follow; for there alone is the last link of true succession; there the centre of the Church's government; there, the deposit of Apostolic tradition." It is easy to see how distasteful these courageous words, which produced a profound impression on the assembly, must have been to Napoleon who, at this very time, was holding Pius VII in captivity away from Rome and was using his wonted violence and deception to extort from the assembled prelates a decision that would enable him to do without ecclesiastical investiture for the bishops of his choice. Yet this displeasure did not prevent the assembled bishops from choosing the preacher as secretary of the council and member of the committee on the reply to the imperial message. When this committee reported that there was no authority in France that could supply, even provisionally and for a case of necessity, the absence of the pope's Bulls of episcopal investiture, Napoleon dissolved the council and that very night Bishop Boulogne was arrested and imprisoned. He was not restored to his flock before the events of 1814. During the first Bourbon Restoration, he was chosen to preach the funeral oration of Louis XVI, and, at the second, he preached, 6 January, 1816, his well-known sermon "La France veut son Dieu, la France veut son roi". Louis XVIII made him peer of France and Leo XII

granted him the title of archbishop bestowing on him the pallium. Up to the last he exercised the ministry of the word of God with remarkable zeal and talent. His writings, literary, historical, and apologetic, disclose unusual soundness and strength of mind. (*Œuvres de Mgr. Boulogne* (Paris, 1826); ROHRBACHER, *Histoire de l'église* (Paris, 1825), XXVIII, 130-132.)

CHARLES B. SCHRANTZ.

**Boulogne, DIOCESE OF.** See ARRAS, THE DIOCESE OF.

**Bouquet, MARTIN**, a learned Benedictine of the Congregation of St.-Maur, b. at Amiens, France, 6 August, 1685; d. at the monastery of Blancs-Manteaux, in Paris, 6 April, 1754. When a boy he resolved to enter the secular priesthood. Subsequently, however, not wishing to expose his soul to the dangers of the world, he determined to become a Benedictine. The Congregation of St.-Maur was then in its most flourishing condition. Bouquet joined this congregation and took vows at the monastery of St.-Faron, at Meaux, 16 August, 1706.

Shortly after his elevation to the priesthood his superiors appointed him librarian at the monastery of St.-Germain-des-Prés which at that time possessed a library of 60,000 books and 8,000 manuscripts. Being well versed in the Greek language, Bouquet was of great assistance to his confrère, Bernard de Montfaucon, in his edition of the works of St. Chrysostom. He himself was preparing a new edition of the Jewish historian, Flavius Josephus, and had already progressed far in his work when he heard that the Dutch writer, Siebert Haverkamp, was engaged on a new edition of the same author. He at once sent all the material he had collected to Haverkamp, who embodied it in his edition. Bouquet's greatest work, however, is his collection of the historians of Gaul and France, entitled: "*Rerum Gallicarum et Francicarum Scriptores*".

Attempts to collect the sources of French history had been made at various times. Thus Pierre Pithou (d. 1596) had collected some material, and André Duchesne (d. 1640) had begun a work entitled "*Historiæ Francorum Scriptores*", to be published in twenty-four volumes, but died before finishing the fifth volume. Colbert, the great French minister of finance, desired to have Duchesne's work continued at the expense of the State, but he died in 1683 without finding a suitable historian to complete what Duchesne had begun. In 1717, D'Aguesseau, who was then chancellor, entrusted to the Benedictine, Edmond Martène, the drawing up of a new plan for the work. The design was accepted and the Oratorian LeLong who had just finished his "*Bibliothèque historique de la France*" was entrusted with the task. He had scarcely begun when death put an end to his labours in 1721.

The Congregation of St.-Maur now undertook the publication of the work and Dionysius de Sainte-Marthe, who was then superior-general of the congregation, placed Bouquet in charge of the undertaking. Because Duchesne's five volumes had become rare, Bouquet began an entirely new work and had the first two volumes ready for print in 1729, but their publication was delayed. Some monks of the Congregation of St.-Maur refused to submit to the Bull "*Unigenitus*" which was directed against Quesnel. Bouquet submitted after some hesitation. When, however, Cardinal De Bissy required the monks of St.-Germain-des-Prés to sign a formula of submission drawn up by himself, Bouquet and seven others refused their signature because De Bissy, being merely Abbot in commendam of St.-Germain-des-Prés, had no spiritual jurisdiction over the monks. Bouquet was banished to the monastery of St.-Jean, at Leon, but in 1735, D'Aguesseau and a few other influential persons succeeded in having him recalled to Argenteuil, and afterwards to Blancs-Manteaux,

where he could more easily supervise the publication of his work. He brought out eight volumes between 1738 and 1752. The greater part of the material for the ninth volume was ready when Bouquet died (1754), after receiving the last rites of the Church.

The eight volumes published comprise the sources of the history of France from the earliest days of its existence to the year 987. The work was continued by other members of the Congregation of St.-Maur in the following order: vols. IX-X were published by the two brothers, John and Charles Haudiquier; vol. XI, by Housseau, Précieux, and Poirier; vols. XII-XIII, by Clément and Brial; vols. XIV-XVIII, by Brial. The remaining five volumes were published by the Académie des Inscriptions which completed the work in 1876. A new edition in twenty-five volumes, undertaken by Leopold Delisle, a member of the Académie des Inscriptions, has reached the twenty-fourth volume.

MICHAEL OTT.

**Bouquillon, THOMAS**, b. at Warneton, Belgium, 16 May, 1840; d. at Brussels, 5 November, 1902; a Belgian theologian, and at the time of his death professor of moral theology in the Catholic University of America. The second son among five children in a family of small landholders long established at Warneton near Ypres, he received his early education in local schools and in the College of St. Louis at Menin. His course in philosophy was made at Roulers; in theology, at the seminary of Bruges. Having entered the Gregorian University in Rome, in 1863, he was ordained priest in 1865 and made doctor of theology in 1867. After ten years in the Bruges seminary (1867-77) and eight years in the Catholic University of Lille, France, as professor of moral theology, Dr. Bouquillon retired to the Benedictine monastery at Maredsous and devoted his energies to the preparation of the second edition of his treatise on fundamental moral theology, a work which fixes him permanently among the great men in the history of that science. He accepted the chair of moral theology in the Catholic University at Washington in 1889, where he remained until his death in 1902. He was one of the most eminent theologians of his time, a man of prodigious erudition in theology, history of theology, church history, canon law, and bibliography. Though never in robust health, he was a tireless student, marked by quiet, simple habits, deep faith, broad sympathies, and great concentration. When he entered the field of moral theology he found the science enjoying no prestige, dwindled to mere compilations of conclusions to the neglect of principles. It was out of touch, consequently, with the closely related dogmatic and advancing social sciences, and the methods employed in teaching it were far from perfect. In his whole career as professor and author he aimed to rescue moral theology from that condition and to restore to it its proper scientific method and dogmatic dignity. He emphasized strongly the historical and sociological aspects of principles and problems in the science, neglecting no results of modern research which contributed to clearness and solidity in his exposition of them. To him is due much credit for the improved methods seen in the recent history of moral theology. Possibly few theologians of his day were more widely consulted in Europe and America than Dr. Bouquillon. He enjoyed and retained the intimate

confidence of Leo XIII and of many eminent churchmen, and showed throughout his life unyielding devotion to the ideals, teaching, and administration of the Church. His extraordinary grasp of current thought developed in him an openmindedness and a sympathy with real progress which, combining with his other traits, gave a peculiar fascination to his character. In 1891 he was induced to publish a pamphlet on education setting forth the abstract principles involved. His views met with considerable opposition. In all his published replies to critics he maintained his original positions without any modification whatever and ascribed the opposition to misunderstanding of his point of view and of his statement of principles. Dr. Bouquillon was active and influential in the organization of the Catholic Universities of Lille and Washington. In both he gained a name for great practical wisdom in questions of organization and law and for extraordinary power as a teacher.

He published: "*Theologia Moralis Fundamentalis*" (3d ed., Bruges, 1903), a masterpiece of erudition, analysis, and exposition; "*De Virtutibus Theologicis*" (2d ed., Bruges, 1890); "*De Virtute Religionis*" (2 vols., Bruges, 1880); "*Education*" (Baltimore, 1891); "*Education, a Rejoinder to Critics*" (Baltimore, 1892); "*Education, a Rejoinder to the 'Civiltà Cattolica'*" (Baltimore, 1892); the last three of which were translated into French. He published many critical studies in the "*Revue des sciences ecclésiastiques*", of which he was at one time editor, in the "*Nouvelle revue théologique*", the "*Revue Benedictine*", "*The American Catholic Quarterly*", and "*The Catholic University Bulletin*". He edited, with notes and comments, Stapleton, "*De Magnitudine Ecclesiæ Romanæ*" (Bruges, 1881); "*Leonis XIII Allocutiones, Epistolæ aliaque acta*" (2 vols., Bruges, 1887); Platelli, "*Synopsis cursus Theologiæ*" (Bruges); "*Catechismus ex decreto Concilii Tridentini*" (Tournai, 1890); "*Dies Sacerdotalis*" of Dirckinck (Tournai, 1888); Louis de Grenade, "*L'Excellence de la très sainte Eucharistie*" (Lille); Coret, "*L'Année sainte*" (1876) (Bruges, 1889).

WILLIAM J. KERBY.

**Bourassé, JEAN-JACQUES**, archaeologist and historian, b. at Ste.-Maure (Indre-et-Loire), France, 22 December, 1813; d. at Tours, 4 October, 1872. He made his preparatory studies for the priesthood in Paris. In 1835, he taught the natural sciences at the preparatory seminary of Tours, where he began a course of archaeology that soon attracted attention. The results achieved by him in a field of research, then comparatively new, were such as to entitle him to be considered a veritable pioneer in France, of the science of Christian archaeology. In 1884 he became professor at the *grand séminaire* and held the chair of dogmatic theology there for six years. He then discontinued teaching in order to devote himself entirely to the preparation of his various archaeological works. Among the productions published by him the best known are: "*Archéologie Chrétienne*" (1841); "*Les Cathédrales de France*" (1843); "*Les plus belles églises du monde*" (1857); "*Recherches hist. et archéol. sur les églises romaines en Touraine*" (1869).

**Bourbon, DIOCESE OF.** See SAINT-DENIS, DIOCESE OF.

**Bourchier, THOMAS**, b. 1406; d. 1486, Cardinal, was the third son of William Bourchier, Earl of Eu, and of Lady Anne Plantagenet, a daughter of Thomas

of Woodstock, Duke of Gloucester, youngest son of Edward III. At an early age he entered the University of Oxford, and in due course, embracing a clerical career, was collated to the living of Colwich, Staffordshire, in the Diocese of Coventry and Lichfield, on 24 May, 1424. His next promotion was to the Deanery of St. Martin-le-Grand in London, 1 December, 1427, and he was likewise inducted to the prebend of West Thurrock; it was not till 24 September, 1429, that he was ordained acolyte and subdeacon. This rapid promotion was doubtless due to his high birth, and though no evidence exists of any special attainments as a scholar, he was further appointed Chancellor of the University of Oxford in 1434, a post which he held for three years; in 1433, notwithstanding his youth, he was recommended for the then vacant See of Worcester. The pope had, however, already made another choice, but interest was exerted with the result that the previous nomination was cancelled, and Eugenius IV by a Bull dated 9 March, 1434 appointed Bouchier Bishop of Worcester, the temporalities of the see being restored to him on 15 April, and on 15 May he received episcopal consecration. Not long after, the Bishop of Ely died, and the Benedictine Cathedral Chapter desiring Bouchier for their pastor, sent to Rome to procure Bulls for his translation. These were expedited; but the King of England steadily refused to restore the temporalities to him, so Bouchier renounced the election. Ely was kept vacant till 1443, under the administration of Louis de Luxembourg, Archbishop of Rouen. This arrangement, sanctioned by the pope, had been made in order that Louis de Luxembourg might enjoy the revenues, a convenient form of reward employed by the English sovereigns at that time, since it proved no burden to the royal exchequer. On the death of the Archbishop of Rouen, Bouchier, this time nominated by the king, was at once elected by the Chapter of Ely, the Bulls for the translation, dated 20 December, 1443, procured, and after the usual confirmation he received the temporalities on 27 February, 1443-44, but it seems that he was not enthroned till another two years had elapsed. Both as Bishop of Worcester and of Ely he was frequently called to the royal councils. The Archbishopric of Canterbury fell vacant early in 1454, and Bouchier was recommended for the primatial see. To this he was translated on 22 April, and was enthroned in February, 1454-55. On 5 March following he was appointed Lord Chancellor and received the Seals from Henry VI during that monarch's temporary recovery from the insanity that was settling on him. The troubles between the rival factions of the Yorkists and Lancastrians were then fomenting, and it was hoped that Bouchier might possibly keep the balance even between them. When the Yorkists marched south, their leaders informed the chancellor that their objects were peaceable; but though Bouchier endeavoured to inform the king of their assurances, his communication never reached the sovereign, and the hostile forces met in battle at St. Albans, 22 May, 1455, when Henry VI was defeated and taken prisoner. This action marks the commencement of the Wars of the Roses. A Parliament was summoned for July, when the Duke of York received pardon. The meeting was then prorogued till November, but in the meanwhile Henry relapsed into imbecility, and the Duke of York was named Protector. Bouchier resigned the Great Seal in October, 1456, when Queen Margaret obtained possession of the king, and with him the chief power fell into her hands. Although the archbishop and Waynflete, as peace-makers, drew up terms of agreement between the parties, dissensions soon broke out again, and after hearing the Yorkists' grievances, Bouchier undertook to accompany them to the king, then at Northampton, with a view to securing a settlement.

The king refused them audience, and a battle was then fought at Northampton (July, 1460), when Henry found himself once more a prisoner. The Duke of York now claimed the throne, but a compromise was effected whereby he was to succeed Henry to the exclusion of the latter's son, Edward. Bourchier seems to have accepted this solution; and when Queen Margaret again opened hostilities, he threw in his lot definitely with the Yorkists, and was one of the lords who agreed to accept Edward (IV) as rightful king. As archbishop, he crowned Edward on 28 June, 1461, after Edward's marriage with Elizabeth Woodville, also crowned his consort (May, 1465). Edward besought Pope Paul II to bestow a cardinal's hat on Bourchier in 1465; but delays occurred, and it was not till 1473 that Sixtus IV finally conferred that honour upon him. In 1475 Bourchier was employed as one of the arbitrators on the differences pending between England and France. Growing feeble, in 1480 he appointed as his coadjutor William Westkarre who had been consecrated in 1458 Bishop of Sidon. In 1483, on the death of Edward IV, he formed one of the deputation who persuaded the queen-dowager, then in sanctuary with her family at Westminster, to deliver her second son Richard to his uncle Richard, Duke of Gloucester, to be with his brother the boy-king Edward V. Bourchier had pledged his honour to the distrustful queen for the lad's security; yet, three weeks later he was officiating at the coronation of the usurper, Richard III. He performed the like solemn office for Henry VII in 1485 after the death of Richard on the field of Bosworth; and, as a fitting close to the career of a man who was above all a peacemaker, he married Henry VII to Elizabeth of York on 18 January, 1485-86, thus uniting the factions of the Red and White Roses. He died on 6 April, 1486, at Knowle, a mansion he had purchased for his see, and was buried in Canterbury cathedral. It fell to his lot as archbishop to preside in 1457 at the trial of Reginald Peacock, Bishop of Chichester, charged with unorthodoxy. Though the incriminated bishop withdrew his works condemned as unsound, he was kept in custody by Bourchier till his death two years later, although he had been compelled to resign his see.

HENRY NORBERT BIRT.

**Bourdaloue, Louis**, b. at Bourges, 20 August, 1632; d. at Paris, 13 May, 1704, is often described as the "king of preachers and the preacher of kings". He entered the Society of Jesus at the age of fifteen years. His father, Etienne Bourdaloue, a distinguished legal official of Bourges, though opposing his choice for a time, in order to test its sincerity, willingly consented, having had similar aspirations himself in his youth. A genealogist of the seventeenth century named Hodeau has attempted to trace back the family to the time of the Crusades, but the learned and laborious Tausserat informs us that the first of the race was Macé Bourdaloue, an humble tanner of Vierzon, about 1450. During Bourdaloue's lifetime there were some titles of nobility in the family for military prowess, and although his father was conspicuous in his profession, yet they were by no means wealthy. One of his relatives married a shoemaker, and considerable difficulty was experienced in providing her with a modest dowry. Attempts have been made to discover some descendants of the Bourdaloues in our own times, but though the name is common enough, the family is extinct.

When young Bourdaloue entered the Society he immediately attracted attention by his quick and

penetrating intelligence, his tireless industry, and his strict observance of religious discipline. He was subsequently made professor of philosophy and moral theology, but certain sermons which he was called on to preach unexpectedly brought him into notice as an orator, and it was determined to devote him altogether to the work of preaching. He began in the Provinces in 1665, was transferred to Paris in 1669, and for thirty-four consecutive years preached with a success that reached its climax only at the end of his career. He was the contemporary and friend of Bossuet, and though quite unlike each other in their methods, their eloquence gave to the French pulpit a glory which has

LOUIS BOURDALOUE

perhaps never been equalled in modern times. They died within two months of each other, though Bossuet was famous long before Bourdaloue appeared. They followed different lines: Bossuet was distinguished for the sublimity and vast sweep of his conceptions, the marvellous conciseness, splendour, and grandeur of his language, as well as the magisterial and almost royal manner in which he grasped his subject and dominated his hearers. He often spoke with scant preparation, so that very few of his wonderful discourses were put on paper before being delivered. His glory as an orator is based mainly on his wonderful "Oraisons Funébres". Bourdaloue, on the contrary, was essentially a preacher. He wrote his discourses with extreme care, and although they are numerous enough to form editions of twelve and sixteen volumes, there is only one sermon that is incomplete. He had a pronounced dislike of the *Oraisons Funébres*; he even objected to the name, and called them *éloges*. In the entire collection of his discourses, we find but two of that character, both of them panegyrics of the Condés, Henri and Louis, and both undertaken to pay a debt of gratitude which the Jesuits owed to that family. The first was prompted also by the purpose of gaining an influence over the Great Condé, in order to lead him to a better life. This was realized, for when, only four years after the first discourse Condé's corpse was borne to the same church where he had listened to the panegyric of his father, Bourdaloue was again the orator, and startled his audience by saying: "God gave me a presentiment of the Prince's conversion. I had not only formed the wish, but, as it were, anticipated it by a prayer which seemed then to contain something of a prediction. Whether it was an inspiration or a feeling of zeal, I was transported beyond myself, O Lord, and I was assured by Thee, that Thou wouldst not leave this great man, whose heart was so true as I knew it to be, in the way of perdition and the corruption of the world. He heard my voice; he has heard Thine."

This apostolic motive never failed to reveal itself in all his utterances. Nevertheless, his funeral oration on Henri de Bourbon was considered at the time equal oratorically to any of Bossuet's. Mme. de Sévigné describes it as "the most beautiful that could be imagined. It is the finest and most Christian panegyric that has ever been pronounced."

Such indeed was the universal verdict at the time. Condé himself according to Chérot, let it be known that he considered "the oration to be so noble, so eloquent, and so solid, that it would be difficult enough to surpass it, or perhaps even to imitate it". He had Jouvency translate it immediately into Latin, and he himself supervised the work. Boileau, though somewhat of a Jansenist, says that Bourdaloue was *le plus grand orateur dont le siècle se vante*. This appreciation, however, does not agree with that of some later critics, and Villemain, while acknowledging "numerous beauties of a superior order", declared that Bourdaloue was not well fitted for funeral orations, "on account of the richness and fecundity of imagination which they require". On the other hand, Lord Brougham, himself an orator, says that "Bourdaloue displays a fertility of resources and an exuberance of topics whether for observation or argument, not equalled by any other orator, sacred or profane". He ranks him far beyond Bossuet, but for other reasons inferior to Massillon, about whom another writer remarks that whereas "Bourdaloue preached to the men of a vigorous age, Massillon addressed those of a period remarkable for its effeminacy. Bourdaloue raised himself to the level of the great truths of religion; Massillon conformed himself to the weakness of the men with whom he lived." Nisard, in his *Histoire de la littérature française*, says that "Bourdaloue's success was the most brilliant and sustained that human speech has ever obtained". Taine ranks him with Cicero, Livy, Bossuet, Burke, and Fox; Fénelon, however, is said to have depreciated him in the "Dialogues sur l'éloquence", but according to the "Revue Bourdaloue", the authenticity of the "Dialogues" is doubtful, and besides Bourdaloue is not named; the description is assigned to him only by conjecture.

As his object was exclusively the salvation of souls, Bourdaloue adapted himself to the audience which, in spite of its worldliness, frivolity, and vice, prided itself, and with reason, on its power of appreciating what was intellectual and scholarly, and although scandalously irreverential in the very temple of God, had an insatiable craving for religious discourses. To influence them, the preacher had to resort to reason; and consequently his discourses were constructed after a clearly defined and frankly enunciated plan, each part closely knit with, and evolved from, the preceding. The proposition is always distinctly stated; argument after argument is elaborated with irresistible logic; doctrines whose orthodoxy is without reproach are carefully and minutely explained, and moral principles are expounded, but never exaggerated or strained in the practical application which he never fails to make; sophistries are dispelled, objections answered, and errors refuted, the orator not fearing to return to a point for a greater clearness; mysteries are discussed, though he purposely avoided what is too profound, even if by doing so he incurred the reproach of avoiding the sublime, for he is aiming at a moral deduction; the whole delivered in a style which Fénelon says, "had, perhaps, arrived at the perfection of which our language is capable in that kind of eloquence", and with a lucidity and clearness that amazed and captivated his hearers, and evoked applause which he was powerless to prevent. There is never a diversion made merely to dazzle or delight, there is rarely an appeal to the emotions; but the vividness and splendour of the doctrine he was propounding, the startling truthfulness of the psychological picture he was placing before their eyes—even La Bruyère professed to be his disciple in this respect—entreated, or induced, or compelled his hearers to a reformation of life. He hurried on with an extraordinary rapidity of utterance, but with a

distinctness of enunciation and a marvellous sweetness and power of voice that filled every part of the edifice in which he was speaking, and kept his audience spellbound to the end of his discourse. Places were secured at daybreak; princes and prelates crowded to hear him, and on one memorable occasion, several of the most distinguished members of the hierarchy, among them Bossuet himself, withdrew in anger because the seats they claimed were not granted. Bossuet it is said, however, remained in a gallery apart to listen to the discourse.

Although covering such a vast field in every one of his sermons, Bourdaloue never exhausted his subject, and we find two and even three on the same theme, not only without any repetition, but each one improving on what preceded, so that Louis XIV said he would rather "hear Bourdaloue's repetitions than what was novel from any one else". He appeared at the court on ten different occasions for courses of sermons and each time his welcome was more enthusiastic than before. He was a court preacher but did not flatter, and one of his sermons is made use of by modern Socialists in support of their teaching. A few years ago considerable controversy was evoked by it, and Jules Lemaitre finds in it a condemnation of contemporary egoism. He was preaching on "Riches" and used the phrase of St. Jerome: "Every rich man is an unjust man or the heir of one." "If you go to the source of riches", he said, "even in houses and families who are proud of their origin, nay even those who are distinguished for their probity and religion, you will discover things which will make you tremble." In the twelve-volume edition there is one number containing sermons for Advent, three others of Lenten discourses, three more for Sundays of the year, two on the Mysteries, while the last two books contain sixteen panegyrics, six sermons for religious investitures, and the two funeral orations. Considerable ingenuity has been exercised by his editors in fixing the time when the various discourses were pronounced; they are all undated. When they were given is largely a matter of conjecture. The sermons of least merit are those on the Mysteries, but it is explained that he purposely avoided any sublime or profound considerations on those topics and restricted himself to what could be easily stated, so as to have the opportunity of deducing a moral lesson. "Everything was practical", says Joubert, "in the judicious Bourdaloue." Some one has said that "the Jesuits answered Pascal's attacks about their moral teaching by making Bourdaloue preach." As regards his literary style, Sainte-Beuve says: "He was a good orator, he is a good writer." He is free from the turgid, pedantic, and ridiculous phraseology which was rampant at that time in forensic as well as sacred eloquence—though there are some examples of it. His compliments to the exalted personages in the audience are not so much an evidence of bad literary taste as a mark of the servitude to which the court preachers of that day had to submit. About his correctness of language, however, the "Revue Bourdaloue" (1 April, 1904) admits that authentic manuscripts no longer exist, and that it is impossible to make out how much his editor, Bretonneau, has tampered with the text.

If not the originator, Bourdaloue is largely the model, of French pulpit oratory in the arrangement of sermons. The method he adopted is condemned by Fénelon as never having been used before, and as being poorly adapted to arouse the feelings of the audience. Its use by Bourdaloue is explained by the fact that he was combating Protestant Rationalism which was at that time making inroads upon Catholic thought, and also because the use of clever and convincing reasoning was the vogue of the day. A reaction had set in from the silly idealism of a

short time before. Bourdaloue took his hearers as he found them, and Voltaire, referring to this form of his discourses, says "he was the first one to make reason speak, and always eloquently". Possibly the inaptness of the instrument he employed only shows more clearly his greatness as an orator. Only such a man as he could use it. For most readers the printed text of his discourses is wearisome in spite of the wealth of instruction it contains. It needs the voice and action of the orator to give it power. The vogue which his method has obtained is sometimes considered a mistake, if not a misfortune, for French pulpit eloquence. It supposes a Bourdaloue, as well as conditions which have long since ceased. Chérot who has made an exhaustive study of Bourdaloue dismisses with contempt the story that the orator spoke with his eyes shut. For a court preacher who had to distribute compliments to the dignitaries present, and who angered them if he did not do it skilfully, or omitted anyone who expected it (as happened in the case of Mme. de Guise), it would have been a difficult or rather impossible task to perform that duty if he did not use his eyes. The picture that so represents him was taken after his death. Similarly, to suppose that he would dare to say to Louis XIV in the sermon on "Adultery": *tu es ille vir*, like Nathan to David, is to be ignorant of conditions that prevailed in that servile court. The alleged sermon, moreover, is nowhere to be found. It is said to have been burnt. More likely it was never written. Mme. de Sévigné speaks of a sermon on "Impurity" in which Bourdaloue was merciless, but had that reproach been addressed to the king, she, above all writers, would have told it. Besides, that sermon was preached in the Jesuit church, and there is no assurance that it was repeated at Versailles. Again, some of his biographers in speaking of his sermon on "The Magdalene", insinuate that it was directed at Mmes. de Montespan and de Fontanges, the king's mistresses who sat before him. It is not certain that "The Magdalene" sermon was ever preached before the court. Moreover, Bourdaloue was too prudent to irritate uselessly.

Considerable discussion has been raised with regard to his attitude in the quarrel between the pope and the king about the Four Gallican Articles. It is admitted that in the Panegyric of St. Louis, pronounced in presence of Louis XIV, the preacher referred to "the rights of the Crown" and "the new attempts of the Court of Rome", and also the manner in which St. Louis defended those rights. He added, however, that "while Louis in his quality of king recognized no superior on earth" (all of which has a Gallican tinge), yet the monarch should remember that he was, at the same time, the eldest son of the Church. His defenders maintain that we have no right to infer from this phrase that he was a Gallican or stood side by side with Bossuet. Another point which has called for inquiry is his "abstention" from the subject of the infallibility of the pope; he never spoke of it. Not only that, but when asked about it by Father Alleaume, he said that he had a sermon on the "Infallibility of the Church" which he had never preached. Beyond that, we have no means of knowing his theological view on the question of the pope. However, papal infallibility was not then a matter of discussion. His sermon on the "Infallibility of the Church" is not to be found, under that heading at least; but in the second sermon on the Feast of St. Peter, on "Obedience to the Church", he speaks explicitly of the Church's infallibility.

Bourdaloue seems to have written but very few letters. The collator, Monseigneur Blampignon, found only eighteen; five more have been discovered since—none of them letters of friendship. Some of them

are requests for interviews, which would suggest a preference for information by the medium of conversation. One of these letters is noteworthy as it is a congratulation to his intimate friend, the Duc de Noailles, on the appointment to the See of Paris of the duke's brother. Bourdaloue "thanks God for having inspired the king to appoint such a worthy and holy bishop". The prelate became afterwards very unfriendly to the Jesuits. In this communication he speaks of himself as one of the ancient servitors of the house of Noailles, a phrase which intimates who was at the back of Bourdaloue's mission to the Protestants of Languedoc after the Revocation of the Edict of Nantes. In the fulfilment of that mission Protestants and Catholics came in throngs to hear him, and his gentleness and prudence won all hearts. There is a very elaborate letter, or rather disquisition, in the collection, addressed to Mme. de Maintenon who was being alienated from the Jesuits. Bourdaloue was remarkable as a director of souls. While paying proper respect to the great, he was the devoted friend of the poor, and assiduous in the confessional. He was of a gentle and amiable disposition and exerted a wonderful power at the death-bed, especially of hardened sinners. Towards the end of his life he desired to quit Paris, and live in seclusion at La Flèche, and though he had received the permission of the general, the provincial thwarted the plan. It only increased his zeal and he continued to preach, hear confessions, and visit the poor till the end of his life. After a sickness of two days he died at the age of seventy-two.

T. J. CAMPBELL.

**Bourdeilles, HÉLIE DE**, Archbishop of Tours and Cardinal, b., probably, towards 1423, at the castle of Bourdeilles (Périgord); d. 5 July, 1484, at Artannes near Tours. He was the son of the Viscount Arnaud de Bourdeilles. Having entered the Franciscan Order at an early age, he was only twenty-four when, at the request of Charles VII, he was appointed to the See of Périgueux (1447). During the wars between France and England he was held prisoner for several years by the English, in consequence of his defence of ecclesiastical immunity. In 1468 he was appointed to the Archiepiscopal See of Tours, and in 1483 he was raised to the cardinalate by Sixtus IV. Bourdeilles continued, during his episcopate, to practise religious poverty and was an intimate friend of St. Francis of Paula. He is mentioned among the Blessed in the Franciscan Martyrology for the 5th day of July. A staunch defender of the rights of the Church against the encroachments of the State, Bourdeilles advocated the abolition of the Pragmatic Sanction of Bourges, as may be seen from his treatise, "Pro Pragmaticis Sanctionibus Abrogatione" (Rome, 1486). He also wrote "Libellus in Pragmaticam Sanctionem Gallorum" (Rome 1484); and a Latin defence of Jeanne d'Arc which is attached in manuscript to the process of her rehabilitation.

HURTER, *Nomenclator* (3d ed., Innsbruck, 1906), II, 1067-69. For full text of his treatise on Jeanne d'Arc see LANERY DE L'ARC in his documentary *Livre d'or de Jeanne d'Arc* (Paris, 1894).

**Bourdeilles, PIERRE DE**. See BRANTÔME.

**Bourdon, JEAN**, b. at Rouen, France, 1612; d. at Quebec, 1668. In 1634 he went to Canada and became the first engineer-in-chief and land-surveyor in the colony of New France, and the first attorney-general of the Conseil Supérieur, established in 1663.

It was Bourdon who surveyed and laid out all the domains and land grants assigned in this territory under the supervision of land companies. He laid out the first streets of Quebec, and drew up the plans and supervised the construction of the first château, Saint-Louis, at the order of Montmagny. He left a chart of the Beauport shore and vicinity (1641) and two plans of Quebec (1660-64). He also traced a map of the territory through which he travelled in 1646 when he was dispatched with Father Isaac Jogues, S.J., to Albany, to make a treaty of peace with the Iroquois; this, however, has been lost. Well-informed, reliable, and conscientious, Bourdon was the confidential agent of the governors, who employed him on several missions with success. In 1657 he embarked for Hudson's Bay, but driven back by the savages, and his way blocked by ice, he was forced to return to Quebec, after having reached 55 degrees N. lat. Jean Bourdon colonized the manorial estate of Pointe-aux-Trembles at a distance of twenty miles from the capital, and at a later date a fief, called after him Saint-Jean, still preserved in one of the principal suburbs of Quebec.

J. EDMOND ROY.

**Bourgade, FRANÇOIS**, a French missionary and philosopher, b. 7 July, 1806, at Gaujan, department of Gers; d. 21 May, 1866, at Paris. He pursued his theological studies at the seminary of Auch and was ordained priest in 1832. His immediate request to be authorized to work among the infidels of Africa was granted only in 1838. He proceeded to Algeria and, after ministering for some time in the hospitals of this colony, passed over to the regency of Tunis, where he founded a hospital and several schools. He was put in charge of the chapel which Louis Philippe (1830-48) had erected on the spot where St. Louis died, and he received several decorations, among them the Legion of Honour. The chief object of his literary productions was to spread the knowledge of Christianity among the Mohammedans. He published "*Soirées de Carthage*" (1847); "*La clef du Coran*" (1852); "*Passage du Coran à l'Evangile*" (1855); the important philological work, "*La toison d'or de la langue phénicienne*" (1852, 1856); a refutation of Renan's "*Life of Jesus*", under the title, "*Lettre à M. E. Renan*" (1864).

VAPPEAU, *Dict. univ. des contemporains*, s. v. in the first four editions; HURTER, *Nomenclator* (Innsbruck, 1895), III, 989, 990.

**Bourgade, PETER**. See SANTA FE, ARCHDIOCESE OF.

**Bourgeoys, MARGUERITE**. See NOTRE DAME, CONGREGATION OF.

**Bourges (BITURICÆ)**, ARCHDIOCESE OF, coextensive with the departments of Cher and Indre. After the Concordat of 1802 it became the metropolitan of the Sees of Clermont, Saint-Flour, and Limoges, and in 1822 received as new suffragans the Sees of Tulle and Le Puy. As Gregory of Tours assigns a date subsequent to the "mission of the twelve bishops", that is, to the year 250, for the foundation of the Church at Bourges; and as Leo, who occupied the See of Bourges in 453, was its twelfth bishop; Duchesne, after most careful calculation, places the episcopate of St. Ursinus, founder of the see, near the close of the third century. He explains that the legend which makes Ursinus one of the seventy-two disciples seems to be of later origin than that of St. Martial, being met with for the first time in an eleventh-century manuscript. Fifteen saints figured among Leo's successors up to the end of the ninth century: Sevitanus, Ætherius, Thecretus, Mar-

cellus (all prior to 337); Palladius (377-384); Simplicius (472-480); Desideratus (549-550); Probianus, Felix, Remedius, and the first Sulpicius (all in the second half of the sixth century); Austregisilus (612-624); the second Sulpicius (624-644), after whom the celebrated church of St.-Sulpice in Paris was named; David (793-802); and Agilulfus (c. 820-840). Among later bishops are: St. Guillaume de Donjeon (1200-09); the celebrated theologian, Ægidius a Columnis (1298-1316); and Jean Cœur (1447-83), son of the treasurer Jacques Cœur and during whose episcopate the University of Bourges was founded.

The claims of the See of Bourges to the primacy in Aquitaine are treated at length in the article on Bordeaux. Pope Clement V (1305-14) opposed these claims; nevertheless the See of Bourges always prided itself upon a sort of platonic supremacy, and when, in 1678, the Bishop of Albi became Archbishop, he recognized explicitly the claims of Bourges. Even to-day the Archbishop of Bourges retains the title of Primate of Aquitaine; in this way, the name of Aquitaine which, after the thirteenth century, disappeared from political geography (being replaced by that of Guyenne) has been perpetuated in the terminology of the Church. In 1107 Pascal II, and in 1163 Alexander III, visited the Diocese of Bourges. Many councils were held at Bourges, the principal among them being those of 1225 and 1226 which dealt with the Albigenes; that of 1438, after which Charles VII promulgated the Pragmatic Sanction whereby the decrees of Basle were ratified in France, and the organization of a Gallican Church was attempted; and the council of 1528 which combated the Protestant encroachments favoured at Bourges on the one side by the university in which Calvin and Theodore Beza studied, and on the other by the court of Margaret of Valois.

The following great abbeys were located within the diocese: the Benedictine Abbey of Déols near Châteauroux, founded in the tenth century, where St. Lusorius, son of the senator Leocadius, was interred; the Abbey of St.-Satur near Sancerre, founded in 463; and that of Chezal-Benoît founded in 1098 by Blessed André of Vallombrosa, and mother-house of the great Benedictine congregation which included the Parisian Abbey of St.-Germain-des-Prés and was later merged into the Congregation of St.-Maur. St. Leman, Archbishop of Seville, who fled the persecutions of Totila, suffered martyrdom at Vatan in the middle of the sixth century. Louis VII (1120-80) was crowned in the Cathedral of Bourges, and Louis XI (1423-83) and the great Condé (1621-86) were baptized at Bourges. Labbe, author of the "*Collection of Councils*" (1607-67) and Bourdaloue, the illustrious preacher (1632-1704), both Jesuits, were born at Bourges. The Cathedral of Bourges (thirteenth century) has beautiful windows and its sacristy (fifteenth century) was built at the expense of Jacques Cœur.

The places of pilgrimages in the diocese are: (1) Notre Dame of Déols near Châteauroux, a pilgrimage begun in the tenth century by Ebbo. The church was consecrated by Pascal II. Pope Alexander III when in exile lived there and received Henry II of England; Pope Honorius III visited it. (2) Notre Dame du Bien Mourir at Fontgombault. (3) The pilgrimage of Ste.-Solange, patron saint of the County of Berry. Ste.-Solange was born at Villemon, three leagues from Bourges, and suffered death to preserve her virginity. (4) Notre Dame du Sacré Cœur at Issoudun. (5) Notre Dame de Pellevoisin, famous for the visions that date back to 1876 and concerning which ecclesiastical authority is still silent.

In 1899, the following institutions were found in the archdiocese: 36 infant schools in Cher and 29 in Indre, conducted by sisters, 3 girls' orphanages in

Cher and 2 in Indre, 1 house of refuge for young women in Cher, 2 *patronages* for girls in Cher, 20 hospitals or hospices in Cher and 14 in Indre, 5 communities for the care of the sick in their homes in Cher and 4 in Indre, 1 insane asylum in Cher, 6 homes for the aged in Cher and 2 in Indre, 1 orphanage for deaf-mutes and blind girls in Indre, and 1 home for incurables in Indre, all conducted by nuns.

In 1900 the religious orders of men in the diocese were: Jesuits and Franciscans at Bourges; Trappists at Fontgombault. The societies peculiar to the diocese were: Men: Missionaries of the Sacred Heart, founded in 1854 with the mother-house at Issoudun. This house is the centre of the universal Archconfraternity of Our Lady of the Sacred Heart which has vicariates Apostolic in Oceania. Women: (1) Benedictines of the Holy Sacrament or of St. Laurence, a congregation said to date back to the time of Charlemagne. They are Sisters of the Perpetual Adoration and teachers. (2) Sisters of Charity and of the Holy Sacrament, called de Montoire, with the mother-house at Bourges. This congregation, founded in 1662 by Antoine Moreau, devotes itself to teaching and hospital nursing. It has 150 houses of which 106 are in the Diocese of Bourges. (3) Religious of the Immaculate Mary, hospital nurses and teachers, with the mother-house at Bourges. After the Revolution, the congregation took the place of the lay confraternity of the Immaculate Mary, and subsequent to 1857 had charge of the general hospital. (4) Daughters of the Sacred Heart of Issoudun with houses in Belgium and Australia. At the close of 1905 the Archdiocese of Bourges had 652,681 inhabitants, 65 pastorates, 430 succursal parishes (mission churches), and 28 curacies.

GEORGES GOYAU.

**Bourget, IGNACE**, first Bishop of Montreal, P. Q., Canada, and titular Archbishop of Martianopolis, b. at Point Lévis, Province of Quebec, 30 October, 1799; d. at Sault-au-Recollet, near Montreal, 8 June, 1885. Remarkable for his piety and learning, he played

throughout sixty years a potent part in the religious, and even in the civil, life of Canada. Monseigneur Bourget was the eleventh of thirteen children born to Pierre Bourget and Thérèse Paradis. Sixty-two years of his life were spent in the priesthood, almost fifty in the episcopate, and for nearly thirty-six years he administered the then extensive Diocese of Montreal. He received his elementary instruction at home and at the Point Lévis school and

secretary to Bishop Lartigue of Montreal. Thus, even before receiving Holy orders, Ignace Bourget was launched upon an active life. On 23 November, 1821, he was made deacon and on 30 November 1822, was ordained priest in the chapel of the Hôtel-Dieu where he said his first Mass. The young priest soon won the entire confidence of his bishop, who, in 1836, named him vicar-general of the diocese. On 10 March, 1837, Pope Gregory XVI appointed him coadjutor to Bishop Lartigue, and on 25 July of the same year he was consecrated titular Bishop of Telemessa in Lycia. He took possession, on 23 April, 1840, of the See of Montreal, made vacant some two weeks previously by the death of Bishop Lartigue.

Bishop Bourget inaugurated a retreat for the clergy of his diocese, 4 August, 1840; in the same year he carried out the desire of his predecessor by creating a chapter of canons, the installation taking place 31 January, 1841. In December, 1841, after his return from France and Rome, where he had visited many religious communities, he brought the Oblate Fathers to Montreal and in January, 1842, founded the Petit Séminaire de Sainte-Thérèse and canonically established the Temperance Society. The community of the Sisters of the Holy Names of Jesus and Mary, now flourishing in Canada and the United States, was founded under his patronage in 1843, and about the same time the Sisters of Providence. The Providence Asylum was established 29 March, 1844. On 11 July, 1844, Bishop Bourget installed the Sisters of the Good Shepherd from Angers. In a pastoral letter, June, 1845, he commended the work of the Jesuit Fathers whose first establishment he blessed 31 July, 1851. On his return from Rome in 1847, he introduced the Fathers of the Congregation of the Holy Cross, the Clerics of St. Viator, and the Sisters of the Holy Cross, and, a little later, placed the orphans under the care of the Dames de Charité. In 1848 he installed the Sisters of Miséricorde; and on 30 August, 1850, was begun an institute for deaf-mutes known as the Hospice of the Holy Child Jesus. In the same year he founded the teaching order of the Sisters of Sainte Anne who have now several missions in the United States, one even in Alaska. All these religious orders have since attained notable proportions.

After the fire of 1852 which destroyed the cathedral, the episcopal palace, and one of the most beautiful sections of Montreal, Bishop Bourget made his home in the Hospice Saint-Joseph until 31 August, 1855, when he removed to Mont Saint-Joseph, the episcopal residence. In 1854 he went to Rome on the invitation of the Holy Father to assist at the proclamation of the Dogma of the Immaculate Conception, and in 1857 he instituted the Forty Hours' Devotion in his diocese, and organized the Conférences Ecclésiastiques. He returned to Rome in 1862 to represent the Province of Quebec at the canonization of the Japanese martyrs and was made a Roman Count and Assistant at the Papal Throne. During the same year he established the Third Order of St. Francis, and on 15 October organized the confraternity for perpetual devotion to St. Joseph. In 1864 he entrusted the deaf-mutes to the care of the Sisters of Providence. Believing that the people would benefit by the division of the parish of Montreal, he began the change in 1866-67, and after a lapse of forty years the increase to more than forty new parishes shows the wisdom of the step. In 1869 Bishop Bourget went to Rome to attend the Vatican Council. In 1870 he laid the foundation-stone of the Montreal Cathedral and in 1872 celebrated his golden jubilee. He tendered his resignation as Bishop of Montreal in 1876, was named titular Archbishop of Martianopolis, and withdrew to the St. Janvier residence at Sault-au-Recollet. In

IGNACE BOURGET

afterwards took the regular course of studies at the Seminary of Quebec, where he was distinguished for his strength of character and brilliant intellect. Here, also, he studied theology for two years, subsequently entering Nicolle College, where he received the subdiaconate, 21 May, 1821, being chosen that same year by Archbishop Plessis of Quebec to act as

1579, at the age of eighty, he made his last journey to Rome; five years later he heroically set out upon a tour of his former diocese with a view to re-establishing its badly compromised finances.

The remains of Bishop Lartigue and those of Archbishop Bourget were interred together in a vault under one of the pillars (the south-west) that support the dome of the cathedral. After the services held at Notre Dame at which the Very Rev. Father Collin, Superior of St. Sulpice, delivered the funeral oration over the body of Archbishop Bourget, another service was conducted at the pro-cathedral for the two deceased prelates whose eulogy was pronounced by Archbishop Taché of St. Boniface. In June, 1903, a handsome monument was dedicated to the memory of Archbishop Bourget. This work of art, by the sculptor Hébert, stands in front of the cathedral. It was erected by both clergy and faithful, who contributed \$25,000, and is a testimony of affection to a great bishop who was at the same time a great citizen. The published works of Archbishop Bourget comprise eight volumes of pastoral letters.

PAUL BRUCHÉSI.

**Bourgoing, FRANÇOIS**, third Superior General of the Congregation of the Oratory in France and one of the ten early companions of Cardinal de Bérulle, the founder of the French Oratorians, b. at Paris, 1585; d. in 1662. Bourgoing came from a family of which many members had been magistrates. Before joining the Oratorians he was curé of Clichy and resigned this position in favour of St. Vincent de Paul, who was also a disciple and friend of de Bérulle. After entering the congregation he was soon occupied in founding and directing new houses of the Oratorians, being called in all directions by the bishops of France and Flanders. In 1631 he was made assistant to the Superior General, Père de Condren, and in 1641, upon the death of the latter, he was appointed to the vacant office. As superior general he toiled with unceasing zeal in organizing and developing the congregation. He was also an energetic opponent of the Jansenist heresy. After his death Bossuet delivered the funeral oration. Father Bourgoing was a writer of the first rank on asceticism, as Bossuet testifies. His principal work, "*Vérités et excellences de Jésus Christ notre Sauveur*", has been issued more than thirty times, including an edition in 1906, and has been translated into several languages. Equally remarkable is his work, "*Exercices de retraites*", of which he published four series.

**Bourne, FRANCIS**. See WESTMINSTER ARCHDIOCESE OF.

**Bourne, GILBERT**, last Catholic Bishop of Bath and Wells, England, son of Philip Bourne of Worcestershire, date of birth unknown; d. 10 Sept., 1569, at Silvertown in Devonshire. Entering Oxford University in 1524, he became Fellow of All Souls College in 1531, proceeded in Arts in 1532, and was admitted B. D. in 1543, having in 1541 been named prebendary of Worcester on the suppression of the old monastic chapter. Removing to London in 1545 he became a prebendary of St. Paul's, and in 1549 Archdeacon of Bedford with the living of High Ongar in Essex. At the time in question the holding of such preferments involved at least some acceptance of the religious changes effected under Henry VIII and his successor. However, like many others who then externally submitted, Bourne seems to

have always been a Catholic at heart, and the sincerity of his return to the old religion under Mary was proved later by his unalterable firmness under persecution. Soon after her accession, whilst preaching at St. Paul's Cross, he narrowly escaped a dagger which a fanatic hurled on hearing him allude to Bishop Bonner's recent sufferings under the late regime. On being appointed to the Bishopric of Bath and Wells, Bourne received absolution from Cardinal Pole, the papal legate, by letters dated Paris, 17 March, 1554, from all censures incurred in the time of schism, and on 1 April was consecrated with five others by Bishop Bonner, assisted by Bishops Gardiner and Tunstall. During his brief episcopate he laboured zealously for the restoration of the Catholic religion, although towards heretics, as even Godwin, a Protestant, admits, he always used kindness rather than severity, nor do any seem to have been executed in his diocese. Queen Mary showed her high esteem for him by naming him Lord President of the Council of Wales. Elizabeth, however, whilst expressing herself contented with his service, relieved him quickly of that office in pursuance of her policy to remove Catholics from such posts of trust.

At the beginning of Elizabeth's reign Bourne was kept away from London by illness and official duties, and he is only mentioned once as present in the Parliament. For this reason he was one of the last bishops to be deposed, and he was even named amongst those first commissioned to consecrate Parker, appointed primate of the queen's new hierarchy. On his refusal, and on his rejection of the Supremacy Oath, which four Somersetshire justices were commissioned on 18 October, 1559, to administer, his deprivation followed. For a little time he still was left in Somerset, apparently a prisoner on parole; but on 31 May, 1560, he received a summons to appear within twelve days before Parker and the Commissioners in London. He set out, as his reply to Parker shows, well knowing what to expect, and was committed on 18 June a close prisoner to the Tower, where already five of his brother prelates were immured. There in solitary confinement, for the most part, he remained three years, when an outbreak of the plague in September, 1563, caused him and his companions to be for a time transferred into the perhaps equally objectionable keeping of certain of their Protestant successors; Bourne himself being committed to that apparently of Bullingham of Lincoln.

Thus began that continual "tossing and shifting" of the deposed prelates "from one keeper to another, from one prison to another", which Cardinal Allen, who had every means of knowing, describes as one part of their "martyrdom". Accordingly we find the Council, in June, 1565, sending them all back to the Tower, although a little later, in a letter of Parker (January, 1566), Bullingham is mentioned as though again for a time Bishop Bourne's actual or intended keeper, whilst all the captive prelates continue during the next two years to be referred to as then in the public prisons. After nearly ten years of this suffering existence Bishop Bourne expired 10 September, 1569, at Silvertown in Devonshire, having been there committed (apparently not long) to the custody of Carew, Archdeacon of Exeter and Dean of Windsor. There he was buried in the church, though no monument marks the spot.

The oft repeated story of the kindly treatment shown by Elizabeth to the prelates she deposed proves to rest solely on Lord Burghley's interested statement (Execution of Justice, 1583) which his own acts and papers contradict, but which was eagerly adopted and enlarged by the prejudiced defenders of Elizabeth, Andrews (Tortura Torti, 1609), Camden (Annales, 1615),

Strype, and others. On the other hand, Cardinal Allen describes the bishops, in his reply to Burghley, as having been "vexed, spoiled, tormented, and slain; . . . whose martyrdom", he says, "is before God as glorious, as if they had by a speedy violent death been despatched". The same in fact is affirmed by the other Catholic writers of the time. In all the lists of sufferers, drawn up by these, Bishop Bourne is named amongst those dead for the Faith in prison, whilst Bridgewater says expressly that "he died in chains a martyr". Moreover, he is one of those "Eleven Bishops", a picture of whose prison was allowed by Gregory XIII to be erected in the English College church at Rome, amongst pictures of the English Saints and Martyrs, with an inscription declaring that they "died for their confession of the Roman See and Catholic faith, worn out by the miseries of their long imprisonment".

G. E. PHILLIPS.

**Bouvens, CHARLES DE**, French pulpit orator, b. at Bourg in 1750; d. in 1830. At an early age he embraced the ecclesiastical state and became vicar-general to his fellow-townsmen, Monseigneur de Conzié, Archbishop of Tours. When the Revolution broke out, he refused to take the required oaths, and followed his archbishop to Germany. The latter having died in the vicinity of Frankfurt, de Bouvens went to London, where the Bishop of Arras, brother of Archbishop Conzié was minister to the Comte d'Artois, later Charles X. Here he delivered, either in the church of St. Patrick or in the chapel built by the Sulpician Bourret in King Street, several funeral orations in the presence of Louis XVIII and the Comte d'Artois. The best known of these orations are: the one on Marie-Josephine-Louise of Savoy, wife of Louis XVIII; that on the Duc d'Enghien (1804), and the one on the Abbé Henry Allen Edgeworth de Firmont, confessor of Louis XVI. These eulogies were printed at Paris for the first time in 1814, being issued separately. A complete edition in one volume appeared at Paris in 1824 under the title: "Oraisons funébres". The volume contains, besides the addresses mentioned above, a funeral oration on Louis XVIII. At the time of the Restoration (1815), he returned to France and was named chaplain to Louis XVIII. In 1828 the infirmities of age forced him to resign, but he retained the title of Honorary Chaplain. The Revolution of 1830 drove him from Paris, and he died shortly afterwards.

A. FOURNET.

**Bouvet, JOACHIM**, Jesuit missionary, b. at Le Mans, France (date unknown); d. at Peking, China, 28 June, 1732. He was one of the first six Jesuits selected by Louis XIV for the mission in China. Before setting out for their destination, he and his associates were admitted to the Académie des Sciences and were commissioned by that learned body to carry on astronomical observations, to determine the geographical positions of the various places they were to visit, and to collect various scientific data. The little band, after being provided by order of the King with all necessary scientific instruments, sailed from Brest, 3 March, 1685, with Father Fontaney as Superior. After spending some time in Siam, they finally arrived in Peking, 7 February, 1688. They were favourably received by the

emperor the famous Khang-hi, who retained Father Bouvet, together with Father Gerbillon, near his person and made them his instructors in mathematics. While engaged in this work, the two fathers wrote several mathematical treatises in the Tartar language, which the emperor caused to be translated into Chinese, adding the prefaces himself. So far did they win his esteem and confidence that he gave them a site within the palace enclosure for a church and residence which were finally completed in 1702. In 1679 he sent Father Bouvet back to France to obtain new missionaries and made him the bearer of a gift of forty-nine volumes in Chinese for the king. These were deposited in the Royal Library, and Louis XIV, in turn, commissioned Father Bouvet to present to the emperor a magnificently bound collection of engravings.

In 1699 Father Bouvet arrived a second time in China, accompanied by ten missionaries, among them men of great ability, such as Fathers de Prémare, Régis, and Parrenin. Khang-hi honoured him further with the title of interpreter to his son, the heir-apparent. In 1700, with four of his fellow missionaries, he presented a memorial to the emperor, asking for a decision as to the meaning attached to the various ceremonies of the Chinese in honour of Confucius and their ancestors. The emperor, who had taken a keen interest in the controversy regarding the ceremonies, replied that they were simply civil usages, having no religious significance whatever. The memorial, together with the emperor's reply, was published in the "Gazette de Peking", but failed to allay the excitement then raging in Europe over the question. From 1708 to 1715 Father Bouvet was engaged in a survey of the empire and the preparation of maps of the various provinces. He was a man of great energy and ability, and of simple, unselfish piety. For nearly fifty years he shared all the labours of the missionaries and was engaged from time to time in various scientific works. During this long period, chiefly on account of his services to the emperor and the favour he enjoyed with him, he did much to advance the interests of Christianity and to facilitate the entrance and the labours of his fellow-missionaries. His Chinese name was Petain. Besides his works on mathematics, Father Bouvet was the author of "Etat présent de la Chine, en figures gravées par P. Giffart sur les dessins apportés au roi par le P. J. Bouvet" (Paris, 1697); "Portrait historique de l'empereur de la Chine" (Paris, 1697). The library at Le Mans contains a collection of his manuscripts including a Chinese dictionary.

HENRY M. BROCK.

**Bouvier, JEAN-BAPTISTE**, Bishop of Le Mans, theologian, b. at St. Charles-la-Forêt, Mayenne, 16 January, 1783; d. at Rome, 28 December, 1854. Having received merely an elementary education, he learned his father's trade of carpentry, but he gave his spare time to the study of the classics under the direction of the parish priest. In 1805 he entered the seminary of Angers, where he made rapid progress. He was ordained priest in 1808 and appointed professor of philosophy at the College of Château Gonthier. In 1811 he was transferred to the seminary of Le Mans, where he taught philosophy and moral theology. In 1819 he was made superior of that institution and vicar-general of the diocese, a position which he held until 1834, when he was raised to the episcopal see of Le Mans. The influence exerted by his "Institutiones Theologice" (in fifteen editions), which was in use in almost all the seminaries of France, as well as in the United States and Canada, gives Bishop Bouvier a unique and honourable position in the history of theology during the nineteenth century. His compendium had the distinction of

being the first manual, and for many years the only one well adapted to that period of transition (1830-70), marked on the one hand by the death struggles of Gallicanism and Jansenism, and on the other by the work of reform undertaken in all departments of ecclesiastical learning.

At first, Bishop Bouvier published separate theological treatises, which formed a collection of thirteen volumes (1818-33), reduced in 1834 to six, and published in that form until 1852. The author endeavoured to improve his work in the successive editions, but his failure to remove from it all traces of Gallicanism provoked criticism. A Gallican, through prejudices derived from his early training rather than from personal conviction, Bouvier readily consented to submit his work to the corrections of the theologians appointed by Pius IX. Their revision resulted in the eighth edition (1853). After the death of Bouvier, the professors of the seminary of Le Mans eliminated many imperfections which had been overlooked by the revisers of 1853. The manual was shortly afterwards adopted in more than sixty seminaries. Bouvier's treatment of moral theology is remarkable; he took a decided stand against Jansenism and adopted the doctrines of St. Alphonsus; though even this reaction against rigorism did not bring his work up to the standard of the manuals of theology of the present time.

Some critics condemned much of the information in the "Institutiones" as a crude and confused mass, irrelevant, and only indirectly connected with moral theology. It must be recalled, however, that Bishop Bouvier did not enjoy the advantages of the present day, when the various branches of clerical study are classified, and each given its proper place. Notwithstanding the incompleteness of preparatory studies eighty years ago, the scarcity of vocations, the urgent need of priests, and limited pecuniary resources made it necessary to limit the clerical course to three years and, at the same time, to include in the curriculum all the studies necessary for the exercise of the sacred ministry in parishes. Under such circumstances it was impossible to observe nice distinctions in the classification of ecclesiastical sciences. However, in spite of defects, the "Institutiones Theologicae" will stand as a signal achievement on the morrow of the Revolution. The bishop gradually brought the education of the clergy out of the errors and lethargy of the preceding chaotic age, and prepared for the reforms of the latter part of the nineteenth century. Like Cardinal Gousset he must be regarded as one of the foremost reformers of moral theology. Pius IX conceived the highest esteem for him and invited him to be present at the definition of the dogma of the Immaculate Conception.

P. DISSER.

**BOVA**, DIOCESE OF, situated in the civil province of Reggio, in Calabria, Italy, suffragan to the Archdiocese of Reggio. Luminosus, who attended the Lateran Council (649), under Pope Martin I, is believed by some to have been the first Bishop of Bova; in reality he was Bishop of Bologna. The city of Bova (and consequently the see) is of much later origin than the pontificate of Martin I; it was peopled about 1477 by Albanian refugees fleeing from the Turkish invasions that followed upon the death of Scanderbeg. In their new home these Albanians retained the Greek Rite, which remained in use until the reign of Pope Gregory XIII. One of the most distinguished Bishops of Bova was Achille Brancia (1549), a member of the Council of Trent. The diocese contains about 20,000 souls, 14 parishes,

34 churches and chapels, 34 secular priests, and 25 seminarians.

CAFFELLETTI, *Le chiese d'Italia* (Venice, 1844), XXI; BATTANDIER, *Ann. pont. cath.* (Paris, 1907).

U. BENIGNI.

**Bovino**, DIOCESE OF, in the province of Foggia, Italy, suffragan to the Archdiocese of Benevento. The city, built on a gentle slope, has a population of over 30,000. The first Bishop of Bovino known to history is a certain Johannes mentioned in a deed of Landulphus I, Archbishop of Beneventum, dated 971. Among other bishops are Ugo (1099), whose services and bounty to the Church are eulogised on two tablets, one preserved in the episcopal residence, the other in the cathedral; Giso (1100) commemorated on the facade of the church of San Pietro; Roberto (1190), who built the shrine of San Michele; Pietro, who erected a new cathedral to replace the ruinous old one; Bartolomeo della Porta (1404), a distinguished juriconsult; Cardinals Benedetto Accolti (1530) and Gabriele Marini (1535); Gian Domenico Annio, successor to his brother, Gian Ferdinando (1565), and the greatest canonist of his time; Paolo Tolosa (1601), founder of the seminary and later Archbishop of Chieti; Angelo Ceraso (1685), a man of great sanctity, who always made the visitation of his diocese on foot.

On account of political entanglements consequent upon difficulties which had arisen between the pope and the court of Naples, this see remained vacant from the death of Bishop Nicolò Molinari, in 1792, until 1818. There exists to the present day in this diocese a famous shrine of Our Lady (Santa Maria in Valverde) erected in 1244 by Bishop Giambattista. The little town of Castelluccio in this diocese is inhabited almost entirely by descendants of Greeks who took refuge in Italy in the fifteenth century. They have a clergy and a liturgy of their own rite. The diocese contains 32,710 Catholics, 10 parishes, 76 churches and chapels, 80 secular priests, and 13 seminarians.

U. BENIGNI.

**Bowyer**, SIR GEORGE, Baronet, an eminent English writer on jurisprudence, as well as a prominent defender of the Holy See and of Catholic interests in general, both by voice and pen, was born at Radley House, in Berkshire, 8 October, 1811; d. in London, 7 June, 1883. His family, traceable much farther back, settled, early in the seventeenth century, at Denham Court, Buckinghamshire, and in 1660 the head of the house was made a baronet. His grandfather was a naval officer of high distinction, who took part in Howe's famous victory off Ushant, 1 June, 1794. George Bowyer was at first intended for the army, and so for a while he was a cadet at Woolwich. His bent, however, was towards the law; accordingly, in 1836, he was admitted a student at the Middle Temple, his call to the English Bar regularly ensuing in 1839. Five days after his call to the Bar, partly, perhaps, because of two learned works published by him in the foregoing year, and partly, perhaps, by reason of his family's neighbourhood at Radley, the University of Oxford created him an honorary M. A. Mr. Bowyer forthwith began practice as an equity draughtsman and conveyancer, without ceasing to devote himself to congenial literary work. In 1841 he published "The English Constitution, a Popular Commentary on the Constitutional Laws of England", which in 1844 was followed by "Commentaries on the Civil Law". So valuable were these works that at midsummer of the latter year the University of Oxford bestowed on him the highest honour in its gift by creating him a D.C.L. In 1849 he endeavoured to get into Parliament as a representative of Reading Borough

in his native Berkshire, but his hour for parliamentary life was not yet.

Next year, 1850, there happened the gravest and most far-reaching event of Bowyer's career: his conversion from Anglican Protestantism to the Catholic religion. That same year Pope Pius IX set up in England a new Catholic episcopal hierarchy. At this proceeding, vulgarly styled "the Papal Aggression," English Protestantism went wild with rage and resentment for the space of several months. To Bowyer this popular mania offered a golden opportunity to stand forth boldly in the Holy Father's defence. His pamphlet, "The Cardinal Archbishop of Westminster and the New Hierarchy", ran through four editions, and was followed at intervals by several more publications on the same theme. From this beginning to the end of his days he was the foremost lay champion in England of the Catholic Church and her earthly head. His letters addressed to the newspapers, principally to the "Times", were many, vigorous, and unanswerable; and in those days he was practically the only competent Catholic whose controversial letters were admitted into the English Protestant press. At the same time he zealously prosecuted his legal studies and writings. His "Commentaries on Universal Public Law" came out in 1854 and is commonly considered his greatest literary achievement; "Introduction to the Study and Use of the Civil Law", his last publication, appeared in 1874.

To go back to 1850, the period of his conversion, Mr. Bowyer was that year appointed Reader in Law at the Middle Temple. In 1852 he at last found his desired seat in Parliament, as member for the Irish borough of Dundalk, whose representative he continued to be for the next sixteen years. During that stirring period there came the Italian Unity movement, and the despoiling of the Roman Pontiff of the greater part of his temporal dominions, to be followed some years later by the seizure of the remainder. Then it was that Sir George Bowyer (who, on the death of his father, in 1860 had succeeded to the baronetcy), in company with John Pope Hennessy, John Francis Maguire, and others, took every occasion to denounce in Parliament the Italian revolutionaries, especially for the robbery and virtual captivity of the Roman Pontiff, and the atrocities committed by King Victor Emmanuel's soldiery in the lately annexed Neapolitan realm. For all these misdeeds the Member for Dundalk continually called to account Lord Palmerston, Lord John (afterwards Earl) Russell, Mr. Gladstone, and other English governmental abettors of the Italian Revolution, who could answer only by parading principles at once subversive and immoral. In 1868 he lost his seat for Dundalk, and for the next six years remained out of Parliament, until 1874, when, as a Home Ruler, he was chosen a representative of the Irish County of Wexford, retaining that seat until 1880. Meanwhile, as his principles and attitude with regard to the Italian question, to say nothing of other matters, were in nowise to the taste of the British Liberal party, he was, in 1876, turned out of the London Reform Club.

On the 7th of June, 1883, Sir George Bowyer was found dead in bed at his London chambers, No. 13, King's Bench Walk, in the Temple. His obsequies took place in the Catholic church of St. John of Jerusalem, which, alongside of the Hospital of Sts. John and Elizabeth, in Great Ormond Street, he had built at his own cost. And here it may be remarked that in architecture Sir George Bowyer had a strong leaning for the Palladian, or Italian, style, as against the Gothic, especially for public buildings, and his principles he put into practice in the aforesaid church, which is a little Palladian gem. The church has now been removed bodily to St. John's

Wood, there to serve the transferred and new-built hospital. Sir George Bowyer was a Knight Commander of the order of Pius IX, and a Papal Chamberlain; Knight Grand Cross of the Order of St. Gregory the Great, Knight of Justice of the Sovereign Order of St. John of Jerusalem (or of Malta), etc. At home he was a Justice of the Peace and Deputy Lieutenant of Berkshire. He never married, and was succeeded in the baronetcy by his younger brother.

C. T. BOOTHMAN.

**Boy-Bishop.**—The custom of electing a boy-bishop on the feast of St. Nicholas dates from very early times, and was in vogue in most Catholic countries, but chiefly in England, where it prevailed certainly in all the larger monastic and scholastic establishments, and also in many country parishes besides, with the full approbation of authority, ecclesiastical and civil. The boy-bishop was chosen from among the children of the monastery school, the cathedral choir, or the pupils of the grammar-school. Elected on St. Nicholas's day (6 December), he was dressed in pontifical vestments and, followed by his companions in priest's robes, went in procession round the parish, blessing the people. He then took possession of the church, where he presided at all the ceremonies and offices until Holy Innocents day (28 December). At Salisbury he is said to have had the power of disposing of any benefices that fell vacant during his reign, and if he died in office the funeral honours of a bishop were granted him. A monument to such a boy-prelate still exists there, though its genuineness has been questioned, and at Lulworth Castle another is preserved, which came from Bindon Abbey. The custom was abolished by Henry VIII in 1542, restored by Queen Mary, and again abolished by Elizabeth, though here and there it lingered on for some time longer. On the Continent it was suppressed by the Council of Basle in 1431, but was revived in some places from time to time, even as late as the eighteenth century.

G. CYPRIAN ALSTON.

**Boyce, JOHN**, novelist, lecturer, and priest, well known under the assumed name of "Paul Peppergrass", b. in Donegal, Ireland, in 1810; d. in Worcester, Mass., 2 January, 1864. His father was a respectable and wealthy citizen, proprietor of the principal hotel in the town and a magistrate of the county. John early manifested a taste for literary pursuits, and with the desire of studying for the priesthood, entered the preparatory seminary at Navan, County Meath, and was graduated with the highest honours in rhetoric and philosophy. He completed his studies at the Royal College of Maynooth and was ordained priest in 1837. For eight years he laboured on the Irish mission, but in 1845 he resolved to share the lot of his countrymen in America. From Eastport, Maine, the scene of his first missionary labours, he was transferred, 14 November, 1847, to St. John's Church, Worcester, where he remained until his death. Father Boyce was an eloquent lecturer and gifted writer. His published works are: "Shandy Maguire, or Tricks upon Travellers" (New York, 1848), which was dramatized by "J. Pilgrim"; "The Spawife, or the Queen's Secret" (Baltimore, 1853); "Mary Lee, or the Yankee in Ireland" (1859), first published

cially in the "Metropolitan Magazine" of Baltimore. These novels do not reveal the varied gifts and ripe scholarship of the man, though they illustrate the strong powers of a keen observer, and the humour and pathos of a graceful and instructive writer. Besides these books he contributed to the editorial columns of the Boston "Pilot", wrote many sketches and criticisms which appeared in print, and a lecture on "The Satisfying Influence of Catholicity on the Intellect and Senses", delivered before the Catholic Institute in New York in 1851.

Biographical sketch by J. FAIRFAX McLAUGHLIN in later editions of *The Spanwifer: Golden Jubilee Souvenir of St. John's Parish* (Worcester); *Messenger* (Worcester, Mass.), 3 December, 1898; *Pilot* (Boston, Mass.) files 16 January, 1864.

EDWARD P. SPILLANE.

**Boyle Abbey**, a celebrated Cistercian house situated on the River Boyle, nine miles northwest of Elphin, in the present County of Roscommon, Ireland. It was founded by Maurice O'Duffy in the year 1161, and was in close connexion with Mellifont, the parent house of the Cistercian Order in Ireland. In the year 1218 (Annals of Ireland) the church of Boyle Abbey was solemnly consecrated. A great number of the Abbots of Boyle were appointed bishops in the Province of Connaught during the thirteenth and fourteenth centuries, and more especially in the Dioceses of Elphin and Achonry. In 1235 the English forces under the joint command of Maurice Fitzgerald and McWilliam forcibly took possession of the abbey, seized all the goods, vestments, and chalices belonging to the monastery and stripped the monks of their habits in their cloister. During the reign of Queen Elizabeth the abbey was suppressed and its lands and possessions handed over (1569) to Patrick Cusack of Gerrardston, County Meath. From the list of its lands then made it is clear that Boyle must have been one of the most richly endowed religious houses in Ireland. In 1589 a lease of the abbey was granted to William Ussher. During the reign of King James I several inquisitions were held in connexion with the lands of Boyle Abbey, and in 1603 a lease of it was granted to Sir John King.

Perhaps the most eminent of the Abbots of Boyle was Donchad O'Daly who died in 1250, and who was recognized as a poet of very special merit. He is spoken of as the Ovid of Ireland. Many of the princes of Connaught retired to Boyle before their death and more especially the princes of the family of McDermot of Moylurg. The Abbey of Boyle is now in ruins, but from the remains still to be seen near the present town of Boyle it was evidently a place of great importance and of some architectural pretensions.

**Bracken**, THOMAS, poet, journalist, politician, b. in Ireland 21 December, 1843; d. at Dunedin, New Zealand, 16 February, 1898. Having lost his parents he emigrated in his twelfth year to Victoria, Australia. He went to Otago, New Zealand, as a shearer in 1869, and published there a small volume of verse, "Flights among the Flax", which brought him into some notice. In Dunedin he was associated with the commercial staffs of "The New Zealand Tablet", "The Otago Guardian", and the "Morning Herald", and was founder and part proprietor of the "Saturday Advertiser", which was a literary and commercial success only so long as he directly controlled it. He was twice returned to Parliament

(in 1884 and 1886) for Dunedin in the Liberal interest. He died in the Dunedin hospital. He is best known in New Zealand and Australia for his verse. His poetic publications in book form, in addition to the one already mentioned, are: "Flowers of the Freeland"; "Behind the Tomb and Other Poems"; "The Land of the Maori and the Moa"; and "Musings in Maoriland" (Dunedin, 1890), his last and fullest collection. Bracken's themes are mostly local and colonial. He is not a world-poet, but takes honourable rank among the pioneers of Australian poetry. In his best verse, much true and tender poetic feeling finds skilled and picturesque expression.

HENRY W. CLEARY.

**Bracton**, HENRY DE, also called HENRY OF BRATSTONE, a famous English juridical writer, the Blackstone of the thirteenth century, b. probably in King John's reign and died about four years before the close of that of Henry III. His lifetime therefore comprised and almost coincided with the momentous period between the grant of Magna Charta and the defeat and death of Simon of Montfort, Earl of Leicester, at the battle of Evesham. By birth, property, and ecclesiastical preferment he appears to have been a man of Devon, in which shire there are two parishes of the name of Bratton, viz., Bratton-Clovely and Bratton-Fleming, one or the other of these parishes being almost certainly his birthplace, for the claim of Minehead parish in Somerset, may be dismissed as untenable. Hence it may be gathered that the correct form of this great jurist's name is hardly Bracton, but rather Bratton, by which appellation, as well as by the occasional variant of Bretton (most likely then sounded much like Bratton) he was almost invariably described in his own day, not to add that, in point of etymology, "Bradstone" (broad town) seems likelier than "Bractone" to have been the earlier form of the name. To come to his laborious and distinguished career, it is said that Bratton in his youth was a student at the University of Oxford, where he is further alleged to have taken the degree of doctor of civil and of canon law but this, though indeed possible, is altogether lacking of proof. Certain it is that he was taken into the service of King Henry III. By this time the king's curia had grown distinct from King's Council and a race of professional judges had sprung into existence. Of these professional judges Henry Bratton became one. It is in 1245 that we first find him acting in a judicial capacity, and from that year onward we continually meet with him either as a justice in Eyre (especially in his native Devon and other neighbouring counties) or as holding pleas before the king himself, until the end of the year 1267. Thus he was undoubtedly a regular permanent judge, though he never appears as holding *placito de banco*, in other words, as sitting on the Bench at Westminster. Meanwhile more than one special mark of royal favour towards him is upon record. Yet in the civil broils of his time he was neither side's partisan and was respected and trusted alike by king and barons. Of his great and epoch-making literary work, "De Legibus et Consuetudinibus Angliæ", Professor Paul Vinogradoff (the *Athenæum*, 19 July, 1884) writes that it is a treatise which "testifies to the influence of Roman jurisprudence and of its medieval exponents, but at the same time remains a statement of genuine English law, a statement so detailed and accurate that there is nothing to match it in the whole legal literature of the Middle Ages." The number of decided cases therein referred to (for Bratton's law is naturally case-law) amounts to four hundred and fifty. Like all or almost all of the professional

judges of his time, Bratton was an ecclesiastic. His known church preferments are Barnstaple archdeaconry, conferred upon him in 1264, but which the same year he quitted for the chancellorship of Exeter cathedral, retaining this latter dignity until his death in 1268. At his decease he enjoyed likewise a canonry and prebend as well in Exeter cathedral church as in the collegiate church of Bosham. All these benefices were of the Bishop of Exeter's gift. At the same time as the king's clerk engaged in the king's business, Bratton could seldom or never have kept residence. His body was buried in Exeter cathedral, before an altar at which he had founded a perpetual chantry for his soul. Of Bratton's great and comprehensive treatise "De Legibus", etc., written before 1259, the first printed edition was published in 1569 in folio, and reprinted in quarto in 1640. A recension and translation of the whole work in six volumes, by Sir Travers Twiss, was issued in London (Rolls publications) from 1878 to 1883.

Foss, *Biographical Dictionary of the Judges of England* (London, 1870); *Dict. of Nat. Biog.* (London, 1886), VI; MARRLAND, *Bratton's Note Book* (London, 1887), for biography see introd. pp. 13-25.

C. T. BOOTHMAN.

**Bradley, DENIS MARY**, first Bishop of Manchester, New Hampshire, U. S. A., b. 25 February, 1846, at Castle-Island, County Kerry, Ireland; d. at Manchester, 13 December, 1903. Shortly after his father's death his mother, with a family of five, emigrated to the United States and settled at Manchester. He was then eight years old. After attending the local schools, he was sent to Holy Cross College, Worcester, Massachusetts, in 1863, and closed his academic career there in June, 1867. He was then enrolled as an ecclesiastical student at St. Joseph's Seminary, Troy, New York, where he was ordained priest 3 June, 1871. Shortly after this he was located at Portland, Maine, under Bishop Bacon, and subsequently under Bishop Healy, by whom he was appointed rector of the cathedral and chancellor of the diocese. In June, 1881, he was made pastor of St. Joseph's, Manchester, which became his cathedral when he was consecrated first Bishop of the new See of Manchester, 11 June, 1884. He had the honour of being the first alumnus of St. Joseph's Seminary of Troy, New York, to be raised to the episcopacy.

In the rural sections of New Hampshire there were many scattered Catholics who up to that time had had few facilities for practising their faith, and his first and earnest efforts were directed towards providing for them, and with the most gratifying results. He held the first synod of the diocese 24 October, 1886, and under the energizing influence of his zeal and enthusiasm there was a general upbuilding of Catholicism throughout the State. The silver jubilee of his ordination was made the occasion of a striking demonstration of his great personal popularity, and this had another manifestation when every non-Catholic pulpit in Manchester bore sincere testimony to the loss his death had occasioned to the city and to the State.

*Catholic News* files (New York, December, 1903); *Catholic Directory* (Milwaukee, 1904); REUSE, *Biog. Encycl. of the Cath. Hierarchy* (Milwaukee, 1898); GABRIEL, *History of St. Joseph's Seminary, Troy* (New York, 1906).

THOMAS F. MEEHAN.

**Bradshaigh, EDWARD**, an English Carmelite friar known in religion as Elias à Jesu; b. in Lancashire, England, early in the seventeenth century; d. at Benfold, 25 September, 1652. He was the fourth son of Roger Bradshaigh, of Haigh Hall, near Wigan, England, a member of one of the oldest families in Lancashire; of his immediate family three of the brothers were Jesuits, and one brother was a secular priest. While yet young he was sent to the Cassinese Bene-

dictines to be educated. In 1619 he joined the Discalced Carmelites in Belgium. In 1626 he was sent to England, where he laboured zealously until he was arrested and brought before the Archbishop of Canterbury, charged with being a Catholic priest. He was thrown into prison and suffered great hardships, but at length, at the intercession of powerful friends, including the King of Spain, he was liberated, and banished to France. In Paris he filled the office of reader in the Carmelite monastery until 1632, when by order of his superior he returned to England and took up his residence with his family at Haigh Hall. There he visited the poor, performed his priestly duties, and made many converts. Towards the close of his life he devoted his time chiefly to the study of English antiquities. Bradshaigh was the author of two works on British antiquities, "De antiquis Monachis Insularum Britanniae, sub primitiva Ecclesiâ viventibus", and "Angliæ Sanctæ et Catholicæ", both of which were lost in MS. A volume of poems, entitled "Virginia, or Spiritual Sonnets in praise of the most glorious Virgin Marie", published in 1632, is attributed to him.

GILLOW, *Bibl. Dict. Eng. Cath.*, I, 286.

THOMAS GAFFNEY TAAFFE.

**Bradshaw, HENRY**, English Benedictine and poet, b. in the City of Chester, England, date unknown; d. 1513. From very early years his life was spent at St. Werburgh's monastery, with the exception of a period during which he was pursuing a course in theology at Gloucester College, Oxford. His writings are "De Antiquitate et magnificentia Urbis Cestrie", and "Chronicon and a Life of St. Werburgh". This second work, in English verse, includes the "Foundation of the City of Chester" and the "Chronicle of the Kings"; it fixes the year of Bradshaw's death by a poem addressed to him, was printed by Pinson in 1521, and re-edited by E. Hawkins for the Chetham Society, 1848. The poet followed mainly a Latin work then in the library of St. Werburgh, called "The True or Third Passionary", by an author whose name was unknown to Bradshaw. His work, written not for the learned, but for the ruder classes, has been variously appraised by critics.

HUNT in *Dict. Nat. Biog.*; WARTON, *History of English Poetry*.

J. VINCENT CROWNE.

**Bradwardine, THOMAS**. See THOMAS OF BRADWARDINE.

**Brady, JOHN**. See BOSTON, ARCHDIOCESE OF.

**Brady, WILLIAM MAZIERE**, ecclesiastical writer, b. in Dublin, 8 January, 1825; d. in Rome, 19 March, 1894. He was nephew of Sir Maziere Brady, Bart., Lord Chancellor of Ireland, and youngest son of Sir Nicholas W. Brady, who, whilst Lord Mayor of Dublin, was knighted by George IV during his visit to that city. William Maziere Brady entered Trinity College, Dublin, in 1842, received the Degree of B.A. in 1848, B.D. in 1858, and D.D. in 1863. In 1848 he was appointed Anglican curate of Maynooth and in 1849, curate of Kilkeedy, Limerick. In 1851 he became curate of St. Dolough's, Dublin, and in the same year Rector of Farrahy, County Cork. In this year, also, he married a lineal descendant, on the maternal side, of the famous Protestant divine, Jeremy Taylor, Bishop of Down and Connor. Dr. Brady acted as chaplain to several successive viceroys, and in 1861 became Vicar of Clonfert, County Cork. While here he published in three volumes the "Clerical and Parochial Records of Cork, Cloyne and Ross" (Dublin, 1863), which he compiled from diocesan and parish registries and manuscripts in the principal libraries and public offices of Oxford, Dublin, and London, and from private and family papers. These "Records" are mainly those of the Protestant Dioceses of Cork, Cloyne, and Ross, but will no doubt be

of great service to the future Catholic historians of these dioceses.

Dr. Brady published several works in favour of the disestablishment of the Irish Protestant Church, such as: "Remarks on the Irish Church Temporalities" (1865); "Facts or Fiction; The alleged Conversion of the Irish Bishops to the Reformed Religion at the Accession of Queen Elizabeth and the Assumed Descent of the Present Established Hierarchy from the Ancient Irish Church Disproved" (1866), which went through five editions; "State Papers concerning the Irish Church in the time of Queen Elizabeth" (1868); "Some Remarks on the Irish Church Bill" (1869); and "Essays on the English State Church in Ireland" (1869). On the Irish Church question he also contributed numerous letters to the newspaper press, and articles to "Fraser's" and "The Contemporary", many of which were subsequently reprinted in pamphlet or book form. Some interesting articles from his pen appeared in the "Catholic World" on "Ireland's Mission" (May, 1870); "The Ancient Irish Churches" (July, 1870), written while yet a Protestant, and "Pius IX and Mr. Gladstone's Misrepresentations" (May, 1875). His only work of a purely secular character is "The McGillicuddy Papers; a Selection from the Family Archives of the McGillicuddy of the Reeks, with an Introductory Memoir" (1867).

When the Church Disestablishment act was passed, Dr. Brady went to Rome, where he examined the Vatican archives for information touching the ecclesiastical affairs of England, Ireland, and Scotland. He shortly resigned his benefices as Vicar of Donoughpatrick, and Rector of Kilbery, Meath, to which he had been promoted from Cork, and in May, 1873, was received into the Catholic Church by Monsignor, afterwards Archbishop, Kirby, Rector of the Irish College at Rome. His Vatican researches led to the publication of two volumes on "Episcopal Succession in England, Scotland, and Ireland, A. D. 1400 to 1875, with Appointments to Monasteries, and Extracts from Manuscripts in Public and Private Libraries in Rome, Florence, Bologna, Vienna, and Paris" (Rome, 1876-77). He also brought out, "Annals of the Catholic Hierarchy in England and Scotland, A. D. 1585-1876, with a Dissertation on Anglican Orders" (Rome, 1877; London, 1883). During his stay in Rome, Dr. Brady acted for a long time as correspondent of the London "Tablet", and issued a pamphlet on "The Pope's Anti-Parnellite Circular" (London, 1883). The last of his works was the "Anglo-Roman Papers", published in 1890. He had a large share in the political controversies of the day and corresponded much with Gladstone and other eminent statesmen. He died of apoplexy and was buried in the Campo Verrano Cemetery in Rome. His grave is marked with an Irish Cross on white marble, bearing the inscription, "In memory of William Maziere Brady, Cavalier of the Order of Pius IX, and Private Chamberlain to his Holiness Pius IX and his Holiness Leo XIII. Born in Dublin, January 8, 1825, died in Rome, March 19, 1894".

EDWARD P. SPILLANE.

**Braga**, ARCHDIOCESE OF (BRACARA AUGUSTA, CIVITAS BRACARENsis), is situated in a flat fertile tract of land between the rivers Este and Cavado, in the province of Minho, in the Kingdom of Portugal. The name was derived from the costume worn by the ancient native inhabitants, which reached from the waist to the knee, unlike the tunics worn by the Romans; for this reason the latter called these *bragas* (*bracas*) a barbarous costume, and those

who wore them — Persians, Scythians, and the Celtic inhabitants of Gaul — barbarians. The city of Braga is very ancient as the etymology of the name implies. Some, like St. Isidore, believe it is derived from the Greek *Βραχύς*, short, others from *βράχος*, thorn-bush; others again, like Diodorus Siculus, say that it is of Celtic origin. In the fifth book of his "Historical Library", speaking of the Gauls he says, *quas bracas illi nominant*. Braga, the metropolis of Galicia, was one of the principal cities of Lusitania (Portugal), until the Emperor Augustus having brought his wars to a close, made a new division of the provinces and united it to Hispania Tarraconensis, giving it the name of Augusta, and making it one of the three judicial divisions into which the province of Galicia was divided. It was one of the first cities of Spain to receive the light of the Gospel. The tradition that St. Peter de Rates, a disciple of St. James, preached here, is handed down in the ancient Breviary of Braga (Breviarium Bracarense) and in that of Evora; but this, as the Bollandists tell us, is purely traditional. Paternus was certainly bishop of the see about 390.

Some have denied that Braga was a metropolitan see; others have attempted without sufficient evidence, however, to claim two metropolitan sees for Galicia before the sixth century. The real facts in the case are that after the destruction of Astorga (433) by the Visigoths Braga was elevated to the dignity of a metropolitan see in the time of St. Leo I (440-461). Balconius was then its bishop and Agrestius, Bishop of Lugo, was the metropolitan. At the latter's death the right of metropolitan rank was restored to the oldest bishop of the province, who was the Bishop of Braga. From this time, until the Mohammedans invaded Spain (711) he retained the supremacy over all the sees of the province. In 1110 Pope Paschal II restored Braga to its former metropolitan rank. When Portugal separated from Spain, Braga assumed even greater importance. It contested with Toledo the primacy over all the Spanish sees, but the popes decided in favour of the latter city. At present it has for suffragans the dioceses of Porto, Coimbra, Viseu, Bragança-Miranda, Aveiro, and Pinhel. There have been many very famous bishops and writers in this diocese. Among its earlier bishops, besides the traditional St. Peter already mentioned, the most famous is St. Martin of Braga who died in 580, noted for his wisdom and holiness. St. Gregory of Tours says of him (Hist. France, V, xxxvii) that he was born in Pannonia, visited the Holy Land, and became the foremost scholar of his time. St. Isidore of Seville ("De Viris illustribus", c. xxxv) tells us that he "was abbot of the monastery of Dumio near Braga, came to Galicia from the East, converted the Suevic inhabitants from the errors of Arianism, taught them Catholic doctrine and discipline, strengthened their ecclesiastical organization, and founded monasteries. He also left a number of letters in which he recommended a reform of manners, a life of faith and prayer, and giving of alms, the constant practice of all virtues and the love of God." For his writings see Bardenhewer, "Patrologie" (2nd ed., 1901), 579-581. Braga having been destroyed by the Saracens, and restored in 1071, a succession of illustrious bishops occupied the see. Among these were Mauricio Burdinho (1111-14), sent as legate to the Emperor Henry V (1118), and by him created antipope with the title of Gregory VIII; Pedro Juliano, Archdeacon of Lisbon, elected Bishop of Braga in 1274, created cardinal by Gregory X in 1276, and finally elected pope under the name of John XXI; Blessed Bartholomew a Martyribus (1559-67), a Dominican, who in 1566, together with Father Luis de Sotomayor, Francisco Foreiro, and others, assisted at the Council of Trent; Agustín de Castro, an Augus-

tinian (1589-1609), who consecrated the cathedral, 28 July, 1592. Alejo de Meneses, also an Augustinian, was transferred to Braga from the Archiepiscopal see of Goa. He had been an apostle to the Nestorians of the Malabar Coast in Farther India and had converted them to Catholicism with the help of missionaries of the various religious orders. Under him was held the Council of Diamper (1599), for the establishment of the Church on the Malabar Coast. He died at Madrid in 1617 in his fifty-eighth year in the odour of sanctity, being then President of the Council of Castile. Three other bishops of note were Roderico de Cunha (1627-35), historian of the Church in Portugal; Roderico de Moura (1704-28), who restored the cathedral, and Cayetano Brandão, who was reputed a saint among the faithful.

In its early period the Diocese of Braga produced the famous writer Paulus Orosius (fl. 418) also Avitus of Braga. At the beginning of the eighteenth century a contest was waged over the birthplace of Orosius, some claiming him for Braga and others for Tarragona. The Marquis of Mondejar, with all the evidence in his favour, supported the claim of Braga; Dalmas, the chronicler of Catalonia, that of Tarragona. Avitus of Braga, another writer of some importance, was a priest who went to the East to consult with St. Augustine at the same time that Orosius, who had been sent by St. Augustine, returned from consulting St. Jerome. It was through him that the priest, Lucian of Caphar Gamala near Jerusalem, made known to the West the discovery of the body of St. Stephen (December, 415). The Greek encyclical letter of Lucian was translated into Latin by Avitus and sent to Braga with another for the bishop, Balconius, his clergy, and people, together with a relic of St. Stephen. Avitus also attended the Council of Jerusalem against Pelagius (415). There were two others of the same name, men of note, who, however, wrought incalculable harm by introducing into these provinces the doctrines of Origen and Victorinus.

In 1390 Braga was divided to make the Archdiocese of Lisbon, and in 1540 its territory was again divided to create the Archdiocese of Evora. There are some fine edifices in the diocese, among them the Cathedral of the Assumption, very large and architecturally perfect; the archbishop's palace; the seminary, and the Institute of Charity. The sanctuary of *do Senhor Jesus do Monte* is the object of great devotion to which many pilgrimages are made every year.

*Councils of Braga.*—Many councils were held in this diocese, some of them important. The authenticity of the so-called council of 411 is very doubtful. It was probably invented by Father Bernardo Brito. In the council of 563 eight bishops took part, and twenty-two decrees were promulgated, among the others the following: that in the services of the church the same rite should be followed by all, and that on vigils and in solemn Masses the same lessons should be said by all; that bishops and priests should salute the people with *Dominus vobiscum*, as in the Book of Ruth, the response being *Et cum spiritu tuo*, as was the custom in the East, without the alterations introduced by the Priscillianists; that Mass should be said according to the *ordo* sent from Rome to Profuturus; that the form used for baptism in the Metropolitan See of Braga should not be altered; that bishops should take rank after the metropolitan according to the date of their conse-

cration; that bishops should not ordain candidates from other dioceses without dimissorial letters from their bishop; that nothing should be sung in the church but the Psalms and parts of the Old and New Testament; that all priests who abstained from eating meat should be obliged to eat vegetables cooked in meat, to avoid all suspicion of the taint of Priscillianism, and that if they refused they should be excommunicated; that suicides and catechumens should not be buried with great ceremony, nor should anyone be buried inside the church; that priests should be appointed for the blessing of the chrism.

The second council held in 572, presided over by the aforesaid St. Martin, was held to increase the number of bishops in Galicia. Twelve bishops assisted at this council, and ten decrees were promulgated: (1) that the bishops should in their visitations see in what manner the priests celebrated the Holy Sacrifice and administered baptism and the other sacraments, thanking God if they found everything as it should be, and instructing the priests if they were found wanting in knowledge, and obliging all catechumens to attend instructions for twenty days before baptism and to learn the creed; (2) that the bishop must not be tyrannical towards his priests; (3-4) that no fee must be accepted for Holy orders, and the holy chrism must be distributed free; (5-6) that the bishop must not ask a fee for consecrating a church, that no church should be consecrated without the bishop being sure of the endowment and the ministers, and that no church built on private property for the purpose of emolument should receive consecration; (8) that if a cleric should accuse any one of unchastity without the evidence of two or three witnesses he should be excommunicated; (9) that the metropolitan should announce the date of Easter, and have it made known to the people after Christmas, so that they might be prepared for the beginning of Lent, when litanies were to be recited for three days; on the third day the Lenten fast should be announced after the Mass; (10) that any one saying Mass without fasting, as many did, as a result of Priscillianist tendencies, should be deprived of his office. This council was attended by the bishops of the suffragan sees of Braga, and by those of the Diocese of Lugo, and Pope Innocent III removed all doubt as to its authenticity.

The Third Council of Braga was held in 675, during the primacy of Leodegarius, and in the reign of King Wamba. Eight decrees were promulgated at this council: (1) that no one should dare to offer in sacrifice milk and grapes, but bread and wine mixed with a drop of water in a chalice, nor should bread soaked in wine be used; (2) that laymen should be excommunicated, and ecclesiastics deprived of their office, if either put the sacred vessels to profane uses; (4) that no priest should have any women but his mother in his house; (5-6) that bishops, when carrying the relics of martyrs in procession, must walk to the church, and not be carried in a chair, or litter, by deacons clothed in white; that corporal punishment was not to be inflicted on youthful ecclesiastics, abbots, or priests, except for grievous faults; (7-8) that no fee must be accepted for Holy orders, and that the rectors of the churches must not require the members of their ecclesiastical households to do work on their private farms; if they did so they must recompense the church for the injury done thereby. There were other councils in 1278-80, 1301, 1328, 1436, 1488, 1537, besides various diocesan and provincial synods of lesser importance.

TIRSO LÓPEZ.

**Braganca-Miranda**, DIOCESE OF (Brigantiensis), is situated in the north-eastern part of the Kingdom of

Portugal, in the civil province of *Tras-os-Montes*, and lies between 2° and 3° 3' of longitude west of the meridian of Madrid, 41° 20' and 42° of north latitude. It is bounded on the north by the Dioceses of Astorga and Orense, on the east by those of Salamanca and Zamora, on the south by that of Lamego, and on the west by the Archdiocese of Braga. The civil province is bounded on the north and east by the frontier of Spain comprising portions of the Provinces of Salamanca, Zamora, Leon, and Orense. The greater part of the territory of this diocese is undulating and mountainous and is traversed by several rivers, which, rising in the Sierras de Sanabria and the Sierra Seca y Segundera, flow from north to south, emptying finally into the river Duero. The climate in general is cold especially in the mountainous region. The southern part and the banks of some rivers and the level tracts of land, such as the one in which Bragança is situated, are fertile, but the rest is unproductive of cereals, although there are broad tracts of land that pasture large herds of cattle which supply a great part of Portugal and Spain with meat.

This see is comparatively modern. It was erected by Pope Paul III in the town of Miranda bordering on Spain, its territory being taken from the Archdiocese of Braga, but Clement XIV in 1770 transferred it to Bragança, from which the name Bragança-Miranda is derived. The diocese is a suffragan of Braga. The city of Bragança, which is the capital of the province of *Tras-os-Montes*, is situated in a delightful valley near the confluence of the rivers Pervenza and Sabor. The cathedral, dedicated to the Annunciation, is one of the prominent buildings of the city. It has a very large chapter composed of the dean, nine canons, including the theologian, six beneficed clergy, eight chaplains, and six clerics. The episcopal household receives 1,166 florins from the Government for its support. The episcopal palace and the diocesan seminary for the education of students for the priesthood are large and spacious. Besides the cathedral there is another church which has collegiate rank, and throughout the diocese there are schools and classes for instruction in Christian doctrine. There is a hospital and a *Monte de piedad*, and before the secularization there were three religious communities, one of men and two of women. The city of Bragança is fortified, having a citadel or small fortress for its defence. The reigning house of Portugal is descended from the Dukes of Bragança and has occupied the throne of Portugal since the separation of Spain and Portugal in the time of Philip IV.

MORERI, *Le grand dict. hist.*

TIRSO LÓPEZ.

**Brahmin.** See BRAHMINISM.

**Brahminism.**—By Brahminism is meant the complex religious and social system which grew out of the polytheistic nature-worship of the ancient Aryan conquerors of Northern India, and came, with the spread of their dominion, to be extended over the whole country, maintaining itself, not without profound modifications, down to the present day. In its intricate modern phases it is generally known as Hinduism.

I. BRAHMIN TEXTS.—Our knowledge of Brahminism in its earlier stages is derived from its primitive sacred books, originally oral compositions, belonging to the period between 1500–400 B. C. First of all, there are the four Vedas (*veda* means wisdom) dating from 1500 to 800 B. C., and consisting (1) of a collection of ancient hymns (*ṛiks*), the so-called Rig-Veda, in praise of the many gods; (2) of the Sama-Veda, compiled from parts of the Rig-Veda as a song service for the soma-sacrifice; (3) of the Yajur-Veda, a liturgy composed partly of ancient hymns and

partly of other prayers and benedictions for use in the various forms of sacrifice; and (4) of the Atharva Veda, a collection of popular exorcisms and magic incantations largely inherited from primitive Aryan days.

Next in order are the Brahmanas (about 1000–600 B. C.). They are a series of verbose and miscellaneous explanations of the texts, rites, and customs found in each of the four Vedas, composed expressly for the use of the Brahmins, or priests. These are followed (800–500 B. C.) by the so-called Upanishads, concerned chiefly with pantheistic speculations on the nature of deity and the end of man; and lastly, by the Sutras (600–400 B. C.), which are compendious guides to the proper observance of rites and customs. The most important are the *Grihya-Sutras*, or house-guides, treating of domestic rites, and the *Dharma-Sutras*, or law-guides, which were manuals of religious and social customs. Being meant for layman as well as priest, they reflect the popular, practical side of Brahminism, whereas the Brahmanas and Upanishads show us the religion on its priestly, speculative side. Closely related to the law-guides is the justly famed metrical treatise, *Manava-Dharma-Śāstra*, known in English as the *Laws of Manu*. It belongs probably to the fifth century B. C. These, together with the two sacred epics of a later age, the "*Ramayana*" and the "*Mahabharata*," embrace what is most important in sacred Brahmin literature.

II. EARLY BRAHMINISM OR VEDISM.—The religion of the Vedic period proper was comparatively simple. It consisted in the worship of many deities, great and small, the personified forces of nature. Prominent among these were Varuna, the all-embracing heaven, maker and lord of all things and upholder of the moral law; the sun-god, variously known as Surya, the enemy of darkness and bringer of blessings, as Pushan the nourisher, as Mitra the omniscient friend of the good, and the avenger of deceit, as Savitar the enlivener, arousing men to daily activity, and as Vishnu, said to have measured the earth in three strides and to have given the rich pastures to mortals; the god of the air, Indra, like Mars, also, the mighty god of war, who set free from the cloud-serpent Ahi (or Vritra), the quickening rain; Rudra, later known as Shiva, the blessed one, the god of the destructive thunderstorm, an object of dread to evil-doers, but a friend to the good; Agni, the fire-god, the friend and benefactor of men, dwelling on their hearths and bearing to the gods their prayers and sacrificial offerings; Soma, the god of that mysterious plant whose inebriating juice was so dear to the gods and to man, warding off disease, imparting strength, and securing immortality.

There were no temples at this early period. On a small mound of earth or of stones the offering was made to the gods, often by the head of the family but in the more important and complicated sacrifices by the priest, or Brahmin, in union with the householder. The object of every sacrifice was to supply strengthening food to the gods and to secure blessings in return. Human victims, though rare, were not wholly unknown, but animal victims were at this period in daily use. First in importance was the horse, then the ox or cow, the sheep, and the goat. Offerings of clarified butter, rice, wheat, and other kinds of grain were also very common. But dearer to the gods than any of these gifts, and rivaling the horse-sacrifice in solemnity, was the offering of the inebriating juice of the Soma-plant, the so-called Soma-sacrifice. Hymns of praise and petitions, chiefly for the good things of life, children, health, wealth, and success in undertakings, accompanied these sacrificial offerings. But the higher needs of the soul were not forgotten. In the hymns to Varuna, Mitra, and other gods there are striking texts ex

pressing a sense of guilt and asking for forgiveness. At a time when the early Hebrew Scriptures were silent as to the rewards and punishments awaiting man in the future life, we find the ancient Rik-bards giving repeated expression to their belief in a heaven of endless bliss for the just, and in an abyss of darkness for the wicked.

Devotion to the *Pitris* (Fathers), or dead relatives, was also a prominent element in their religion. Though the *Pitris* mounted to the heavenly abode of bliss, their happiness was not altogether independent of the acts of devotion shown them by the living. It could be greatly increased by offerings of Soma, rice, and water; for like the gods they were thought to have bodies of air-like texture and to enjoy the subtle essence of food. Hence the surviving children felt it a sacred duty to make feast-offerings, called *Śraddhas*, at stated times to their departed *Pitris*. In return for these acts of filial piety, the grateful *Pitris* protected them from harm and promoted their welfare. Lower forms of nature-worship also obtained. The cow was held in reverence. Worship was given to trees and serpents. Formulae abounded for healing the diseased, driving off demons, and averting evil omens. Witchcraft was dreaded, and recourse to ordeals was common for the detection of guilt.

III. POPULAR BRAHMINISM.—In the period that saw the production of the *Brahmanas* and *Upanishads*, the Vedic religion underwent a twofold change. On its practical side there was an exuberant growth of religious rites and of social restrictions and duties, while on the theoretical side Vedic belief in the efficacy of personal deities was subordinated to a pantheistic scheme of salvation. Thus the earlier religion developed on the one hand into popular, exoteric Brahminism, and on the other into priestly, esoteric Brahminism. The former is reflected in the *Brahmanas* and *Sutras*; the latter in the *Upanishads*.

The transformation to popular Brahminism was largely due to the influence of the Brahmins, or priests. Owing to their excessive fondness for symbolic words and forms, the details of ritual became more and more intricate, some assuming so elaborate a character as to require the service of sixteen priests. The sacrifice partook of the nature of a sacramental rite, the due performance of which was sure to produce the desired end, and thus became the all-important centre around which the visible and invisible world revolved. Hence it merited liberal fees to the officiating priests. Still it was not a mere perfunctory rite, for if performed by an unworthy priest it was accounted as both useless and sacrilegious. In keeping with this complicated liturgy was the multiplicity of prayers and rites which entered into the daily life of both priest and layman. The daily recitation of parts of the *Vedas*, now venerated as Divine revelation, was of first importance, especially for the Brahmins. It was a sacred duty for every individual to recite, morning and evening, the *Savitri*, a short prayer in honour of the vivifying sun. A scrupulous regard for ceremonial purity, surpassing even that of the Jewish Pharisee, gave rise to an endless succession of purificatory rites, such as baths, sprinkling with water, smearing with ashes or cow-dung, sippings of water, suppressions of breath—all sacramental in character and efficacious for the remission of sin. There is reason to believe that the consciousness of guilt for sin committed was keen and vivid, and that in the performance of these rites, so liable to abuse, a penitential disposition of soul was largely cultivated.

In popular Brahminism of this period the idea of retribution for sin was made to embrace the most rigorous and far-reaching consequences, from which, save by timely penance, there was no escape. As

every good action was certain of future recompense, so every evil one was destined to bear its fruit of misery in time to come. This was the doctrine of *karma* (action), with which the new idea of rebirth was closely connected. While the lasting bliss of heaven was still held out to the just, different fates after death were reserved for the wicked, varying, according to the nature and amount of guilt, from long periods of torture in a graded series of hells, to a more or less extensive series of rebirths in the forms of plants, animals, and men. From the grade to which the culprit was condemned he had to pass by slow transition through the rest of the ascending scale till his rebirth as a man of honourable estate was attained.

This doctrine gave rise to restrictive rules of conduct that bordered on the absurd. Insects, however repulsive and noxious, might not be killed; water might not be drunk till it was first strained, lest minute forms of life be destroyed; carpentry, basket-making, working in leather, and other similar occupations were held in disrepute, because they could not be carried on without a certain loss of animal and plant life. Some zealots went so far as to question the blamelessness of tilling the ground on account of the unavoidable injury done to worms and insects. But on the other hand, the Brahmin ethical teaching in the legitimate sphere of right conduct is remarkably high. Truthfulness, obedience to parents and superiors, temperance, chastity, and almsgiving were strongly inculcated. Though allowing, like other religions of antiquity, polygamy, and divorce, it strongly forbade adultery and all forms of unchastity. It also reprobated suicide, abortion, perjury, slander, drunkenness, gambling, oppressive usury, and wanton cruelty to animals. Its Christianlike aim to soften the hard side of human nature is seen in its many lessons of mildness, charity towards the sick, feeble, and aged, and in its insistence on the duty of forgiving injuries and returning good for evil. Nor did this high standard of right conduct apply simply to external acts. The threefold division of good and bad acts into thoughts, words, and deeds finds frequent expression in Brahminic teaching.

Intimately bound up with the religious teaching of Brahminism was the division of society into rigidly defined castes. In the earlier, Vedic, period there had been class distinctions, according to which the warrior class (*Kshatriyas*, or *Rajanas*) stood first in dignity and importance, next the priestly class (*Brahmins*), then the farmer class (*Vaisyas*), and last of all, the servile class of conquered natives (*Sudras*). With the development of Brahminism, these four ancient divisions of society became stereotyped into exclusive castes, the highest place of dignity being usurped by the Brahmins. As teachers of the sacred *Vedas* and as priests of the all-important sacrifices, they professed to be the very representatives of the gods and the peerage of the human race. No honours were too great for them, and to lay hands on them was a sacrilege. One of the chief sources of their power and influence lay in their exclusive privilege to teach the youth of the three upper castes, for education then consisted largely in the acquisition of Vedic lore, which only priests could teach. Thus the three upper castes alone had the right to know the *Vedas* and to take part in the sacrifices, and Brahminism, far from being a religion open to all, was exclusively a privilege of birth, from which the despised caste of *Sudras* was excluded.

The rite of initiation into Brahminism was conferred on the male children only, when they began their studies under a Brahmin teacher, which took place generally in the eighth year for the Brahmin, and in the eleventh and twelfth for the *Kshatriya* and *Vaisya* respectively. It consisted in the invest-

titute of the sacred cord, a string of white cotton-yarn, tied together at the ends, and worn like a deacon's stole suspended on the left shoulder. This investiture was a sort of sacrament in virtue of which the youth was freed from guilt contracted from his parents, and became *Dri-ja*, twice-born, with the right to learn the sacred Vedic texts and to take part in the sacrifices. The period of studentship was not long for the members of the warrior and farmer castes, but for the young Brahmin, who had to learn all the Vedas by heart, it consumed nine years or more. During this period, the student was subjected to severe moral discipline. He had to rise before the sun, and was not allowed to recline till after sunset. He was denied rich and dainty foods, and what he ate at his two daily meals he had to beg. He was expected to observe the strictest chastity. He was bound to avoid music, dancing, gambling, falsehood, disrespect to superiors and to the aged, covetousness, anger, and injury to animals.

Marriage was held to be a religious duty for every twice-born. It was generally entered upon early in life, not long after the completion of the time of studentship. Like the initiation-rite, it was a solemn sacramental ceremony. It was an imperative law that the bride and groom should be of the same caste in the principal marriage; for, as polygamy was tolerated, a man might take one or more secondary wives from the lower castes. For certain grave reasons, the householder might repudiate his wife and marry another, but a wife on her part had no corresponding right of divorce. If her husband died, she was expected to remain for the rest of her life in chaste widowhood, if she would be honoured on earth and be happy with him in heaven. The later Hindu practice known as the *Suttee*, in which the bereaved wife threw herself on the funeral pyre of her husband, seems at this period to have been unknown. All knowledge of the Vedic texts was withheld from woman, but she had the right to participate with her husband in the sacrifices performed for him by some officiating priest. One important sacrifice remained in his own hands—the morning and evening offering of hot milk, butter, and grain to the fire on the hearth, which was sacred to *Agni* and was kept always burning.

A strong tendency to asceticism asserted itself in the Brahminism of this period. It found expression in the fasts preceding the great sacrifices, in the severe penances prescribed for various kinds of sin, in the austere life exacted of the student, in the conjugal abstinence to be observed for the first three days following marriage and on certain specified days of the month, but, above all, in the rigorous life of retirement and privation to which not a few devoted their declining years. An ever increasing number of householders, chiefly Brahmins, when their sons had grown to man's estate, abandoned their homes and spent the rest of their lives as ascetics, living apart from the villages in rude huts or under the shelter of trees, eating only the simplest kinds of food, which they obtained by begging, and subjecting themselves to extraordinary fasts and mortifications. They were known as *Sannyasis*, or *Yogis*, and their severity of life was not so much a penitential discipline for past offences as a means of acquiring abundant religious merits and superhuman powers. Coupled with these mortifications was the practice of *Yogi* (union). They would sit motionless with legs crossed and, fixing their gaze intently on an object before them, would concentrate their thought on some abstract subject till they lapsed into a trance. In this state they fancied they were united with the deity, and the fruit of these contemplations was the pantheistic view of religion which found expression in the Upanishads, and left a permanent impress on the Brahmin mind.

IV. PANTHEISTIC BRAHMINISM.—The marked monotheistic tendency discernible in the later Vedic hymns had made itself more and more keenly felt in the higher Brahmin circles till it gave rise to a new deity, a creation of Brahmin priests. This was *Prajapati*, lord of creatures, omnipotent and supreme, later known as *Brahmā*, the personal creator of all things. But in thus looking up to a supreme lord and creator they were far removed from Christian monotheism. The gods of the ancient pantheon were not repudiated, but were worshipped still as the various manifestations of *Brahmā*. It was an axiom then, as it has been ever since with the Hindu mind, that creation out of nothing is impossible. Another fundamental Brahmin principle is that every form of conscious individuality, whether human or Divine, implies a union of spirit and matter. And so, outside the smaller school of thinkers who held matter to be eternal, those who stood for the supreme personal god explained the world of visible things and invisible gods as the emanations of *Brahmā*. They arrived at a personal pantheism. But speculation did not end here. To the prevailing school of dreamy Brahmin ascetics, whose teachings are found in the Upanishads, the ultimate source of all things was not the personal *Brahmā*, but the formless, characterless, unconscious spirit known as *Atman* (self), or more commonly, *Brahmā*. (*Brahmā* is neuter, whereas *Brahmā*, personal god, is masculine.) The heavens and the earth, men and gods, even the personal deity, *Brahmā*, were but transitory emanations of *Brahmā*, destined in time to lose their individuality and be absorbed into the great, all-pervading, impersonal spirit. The manifold external world thus had no real existence. It was *Maya*, illusion. *Brahmā* alone existed. He alone was eternal, imperishable.

This impersonal pantheism of the Brahmin ascetics led to a new conception of the end of man and of the way of salvation. The old way was to escape rebirths and their attendant misery by storing up merits of good deeds so as to obtain an eternal life of conscious bliss in heaven. This was a mistake. For so long as man was ignorant of his identity with *Brahmā* and did not see that his true end consisted in being absorbed into the impersonal all-god from which he sprang; so long as he set his heart on a merely personal existence, no amount of good works would secure his freedom from rebirth. By virtue of his good deeds, he would, indeed, mount to heaven, perhaps win a place among the gods. But after a while his store of merits would give out like oil in a lamp, and he would have to return once more to life to taste in a new birth the bitterness of earthly existence. The only way to escape this misery was through the saving recognition of one's identity with *Brahmā*. As soon as one could say from conviction, "I am *Brahmā*", the bonds were broken that held him fast to the illusion of personal immortality and consequently to rebirth. Thus, cultivating, by a mortified life, freedom from all desires, man spent his years in peaceful contemplation till death put an end to the seeming duality and he was absorbed in *Brahmā* like a raindrop in the ocean.

V. EARLY HINDUISM.—The pantheistic scheme of salvation just described, generally known as the Vedanta teaching, found great favour with the Brahmins and has been maintained as orthodox Brahmin doctrine down to the present day. But it made little progress outside the Brahmin caste. The mass of the people had little interest in an impersonal *Brahmā* who was incapable of hearing their prayers, nor had they any relish for a final end which meant the loss forever of conscious existence. And so, while the priestly ascetic was chiefly concerned with meditation on his identity with *Brahmā*, and with the practice of mortification to secure freedom from

all desires, the popular mind was still bent on prayer, sacrifices, and other good works in honour of the Vedic deities. But at the same time their faith in the efficacy of these traditional gods could not but be weakened by the Brahmin teaching that freedom from rebirth was not to be obtained by acts of worship to personal deities who were powerless to secure even for themselves eternal conscious bliss. The result was the popular development of special cults to two of the old gods, now raised to the position of supreme deity, and credited with the power to secure a lasting life of happiness in heaven.

It was in the priestly conception of the supreme personal Brahman that the popular mind found the model for its new deities. Brahman was not a traditional god, and seems never to have been a favourite object of cult with the people. Even to-day, there are but two temples to Brahman in all India. His subordination to the great impersonal all-god did not help to recommend him to the popular mind. Instead, we find two of the traditional gods honoured with special cults, which seem to have taken rise independently in two different parts of the country and, after acquiring a local celebrity, to have spread in rivalry over the whole land. One of these gods was the ancient storm-god, Rudra, destructive in tempest and lightning, renewing life in the showers of rain, sweeping in lonely solitude over mountain and barren waste. As the destroyer, the reproducer, and the type of the lonely ascetic, this deity, rapidly rose in popular esteem under the name of Siva, the blessed. The other was Vishnu, originally one of the forms of the sun-god, a mild beneficent deity, whose genial rays brought gladness and growth to living creatures. His solar origin was lost sight of as he was raised to the position of supreme deity, but one of his symbols, the discus, points to his earlier character.

These two rival cults seem to have arisen in the fifth or fourth century B. C. As in the case of the personal god, Brahman, neither the worship of Siva nor of Vishnu did away with the honouring of the traditional gods and goddesses, spirits, heroes, sacred rivers and mountains and trees, serpents, earth, heaven, sun, moon, and stars. The pantheism in which the Hindu mind is inevitably cast saw in all these things emanations of the supreme deity, Siva or Vishnu. In worshipping any or all, he was but honouring his supreme god. Each deity was credited with a special heaven, where his devotees would find after death an unending life of conscious happiness. The rapid rise in popular esteem of these cults, tending more and more to thrust Brahminism proper into the background, was viewed by the priestly caste with no little concern. To quench these cults was out of the question; and so, in order to hold them in at least nominal allegiance to Brahminism, the supreme god Brahman was associated with Vishnu and Siva as a triad of equal and more or less interchangeable deities, in which Brahman held the office of creator, or rather evolver, Vishnu of preserver, and Siva of dissolver. This is the so-called Trimurti (tri-form), or trinity, altogether different from the Christian conception of three eternally distinct persons in one Godhead, and hence offering no legitimate ground for suggesting a Hindu origin for the Christian doctrine.

More remarkable was the intimate association of other new deities—the creations of the religious fancy of the common people—with the gods Siva and Vishnu. With Siva two popular gods came to be associated as sons. One was Ganesa, lord of troops and of mischievous imps, who has remained ever since a favourite object of worship and is invoked at the beginning of every undertaking to ensure success. The other was Scanda, who seems in great measure to have replaced Indra as the god of battle.

Beyond the doubtful derivation of the name Scanda from Alexander, there is nothing to indicate that either of these reputed sons of Siva had ever lived the life of men. Not so the gods that enlarged the sphere of Vishnu's influence. In keeping with Vishnu's position as god of the people, two of the legendary heroes of the remote past, Rama and Krishna, whom popular enthusiasm had raised to the rank of gods, came to be associated with him not as sons, but as his very incarnations. The incarnation of a god descending from heaven to assume a human or animal form as a sort of saviour, and to achieve some signal benefit for mankind, is known as an avatar. The idea antedates Buddhism and, while applied to Brahman and other gods, became above all a characteristic of Vishnu. Popular fancy loved to dwell on his avatar as a fish to save Manu from the devastating flood, as a tortoise to recover from the depths of the sea precious possessions for gods and men, as a boar to raise the submerged earth above the surface of the waters, but most of all, as the god-men Rama and Krishna, each of whom delivered the people from the yoke of a tyrant. So popular became the cults to Rama and Krishna that Vishnu himself was largely lost sight of. In time the Vishnuites became divided into two rival schisms: the Ramaites, who worshipped Rama as supreme deity, and the Krishnaites, who gave this honour rather to Krishna, a division that has persisted down to the present day.

The evidence of the early existence of these innovations on Brahmin belief is to be found in the two great epics known as the "Ramayana" and the "Mahabharata." Both are revered by Brahmins, Sivaites, and Vishnuites alike, particularly the latter poem, which is held to be directly revealed. In the "Ramayana," which belongs to the period 400-300 B. C., the legendary tales of the trials and triumphs of the hero Rama and his faithful wife Sita were worked into a highly artificial romantic poem, largely in the interests of Vishnu worship. The "Mahabharata," the work of many hands, was begun about the fifth century B. C. under Brahmin influence, and in the following centuries received additions and modifications, in the interests now of Vishnuism, now of Sivaism, till it assumed its final shape in the sixth century of the Christian Era. It is a huge conglomeration of stirring adventure, popular legend, myth, and religious speculation. The narrative centres chiefly around the many-sided struggle for supremacy between the evil tyrant of the land and the hero Arjuna, aided by his four brothers. The rôle that Krishna plays is not an integral part of the story and seems to have been interpolated after the substance of the epic had been written. He is the charioteer of Arjuna and at the same time acts as his religious adviser. Of his numerous religious instructions, the most important is the metrical treatise known as the "Bhagavad-gita," the Song of the Blessed One, a writing that has exercised a profound influence on religious thought in India. It dates from the second or third century of the Christian Era, being a poetic version of a late Upanishad with its pantheistic doctrine so modified as to pass for a personal revelation of Krishna. While embodying the noblest features of Brahmin ethics, and insisting on the faithful performance of caste-duties, it proclaims Krishna to be the supreme personal all-god, who, by the bestowal of special grace, helps on his votaries to the attainment of eternal bliss. As an important means to this end, it inculcates the virtue of *Bhakti*, that is a loving devotion to the deity, analogous to the Christian virtue of charity.

Unhappily for the later development of Vishnuism, the Krishna of the "Bhagavad-gita" was not the popular conception. Like most legendary heroes of folk-lore, his character was in keeping with the crude

morals of the primitive age that first sounded his praises. The narrative portions of the epic show him to have been sly and unscrupulous, guilty in word and deed of acts which the higher Brahmin conscience would reprove. But it is in the fuller legendary story of his life as given in the so-called "Hari-vansa", a later supplement to the epic, and also in some of the Puranas of the ninth and tenth centuries of our era, that the character of the popular Krishna appears in its true light. Here we learn that Krishna was one of eight sons of noble birth, whom a Herod-like tyrant was bent on destroying. The infant god was saved from the wicked designs of the king by being secretly substituted for a herdsman's babe. Krishna grew up among the simple country-people, performing prodigies of valour, and engaging in many amorous adventures with the Gopis, the wives and daughters of the herdsmen. Eight of these were his favourites, but one he loved best of all, Radha. Krishna finally succeeded in killing the king, and brought peace to the kingdom.

Between this deified Hindu Hercules and Our Divine Lord, there is no ground for comparison, one only for contrast. That the idea of incarnate deity should be found in pre-Christian Hindu thought is not so remarkable when we consider that it answers to the yearning of the human heart for union with God. But what is at first sight astonishing is to find in the religious writings subsequent to the "Mahabharata" legendary tales of Krishna that are almost identical with the stories of Christ in the canonical and apocryphal Gospels. From the birth of Krishna in a stable, and his adoration by shepherds and magi, the reader is led on through a series of events the exact counterparts of those related of Our Divine Lord. Writers hostile to Christianity seized on this chain of resemblances, too close to be mere coincidence, in order to convict the Gospel writers of plagiarism from Hindu originals. But the very opposite resulted. All Indianists of authority are agreed that these Krishna legends are not earlier than the seventh century of the Christian Era and must have been borrowed from Christian sources.

VI. LATER, OR SECTARIAN, HINDUISM.—The steady weakening of Brahmin influence, in consequence of the successive waves of foreign conquest, made it possible for the religious preferences of the huge, heterogeneous population of India to assert themselves more strongly. Both Śivaism and Vishnuism departed more and more from traditional Brahminism, and assumed a decidedly sectarian character towards the older religion and also towards each other. With this weakening of Brahmin influence they absorbed the grosser elements of low-grade popular worship, and became debased by the accretion of immoral rites and grovelling superstitions. While, on the one hand, the practice of asceticism was pushed to the utmost extremes of fanaticism, on the other, the doctrine of Bhakti was perverted into a system of gross sexual indulgence, for which the amours of Krishna and the Gopis served as the model and sanction. The Brahmin caste-distinctions were broken down, and an equality of all men and women was asserted, at least during the ceremonies of public worship. The Brahmin rites were in great measure replaced by others peculiar to each cult and held to be all-sufficient for salvation. Everywhere splendid temples arose to Śiva, Vishnu, and his two human avatars; idols and phallic symbols innumerable filled the land; and each rival cult lauded its own special deity as supreme, subordinating all others to it, and looking down with more or less contempt on forms of worship other than its own. One factor which contributed strongly to the degradation of these sectarian forms of religion was the veneration of the *Śakti*, or female side, of these deities. Popular

theology would not rest till each deity was supplemented with a wife, in whom the active nature of the god was personified. With Brahmā was associated an ancient river-goddess, Sarasvatī, honoured as the patroness of letters. Vishnu's Śakti was Śrī, or Lakshmi, patroness of good fortune. With Śiva the destroyer, was associated the terrible, blood-thirsty, magical goddess, Durga, or Kālī, formerly delighting in human victims, now appeased with sacrifices of goats and buffaloes. Rama had his consort, Sītā, and Krishna his favourite Gopī, Rādhā. The worship of these Śaktis, particularly Śiva's consort, Durga-Kālī, degenerated into shocking orgies of drunkenness and sexual immorality, which even to-day are the crying scandal of Hinduism.

Such were the sectarian developments of post-epic times. They found expression in the inferior, quasi-historical Puranas, of the seventh and following centuries, and in the Tantras, which are more modern still and teach the symbolic magic of Śakti-worship. Neither of these classes of writings is regarded by the orthodox Brahmin as canonical.

Of the two hundred million adherents of Hinduism to-day, only a few hundred thousand can be called orthodox Brahmin worshippers. Śivaism and Vishnuism have overshadowed the older religion like a rank growth of poisonous weeds. In their main outlines, these two great sects have retained the characteristics of the Purana period, but differences of view on minor points have led to a multiplication of schismatic divisions, especially among Vishnu-worshippers. Both sects, which to-day are fairly tolerant of each other, have a number of devotional and liturgical practices that are alike in kind, though marked by differences of sectarian belief. Both Śivaite and Vishnuite lay great stress on the frequent recital of the numerous names of their respective supreme gods, and, to facilitate this work of piety, each carries with him, often about his neck, a rosary, varying in material and the number of beads according as it is dedicated to Śiva or to Vishnu. Each sect has an initiation-rite, which is conferred on the young at the age of reason and in which the officiating guru puts a rosary around the neck of the applicant and whispers into his ear the *mantra*, or sacred motto, the recital of which serves as a profession of faith and is of daily obligation. Another rite common to both is that in which the presiding officer brands on the body of the worshipper with hot metal stamps the sacred symbols of his sect, the trident and *linga* of Śiva, or the discus and conch-shell (or lotus) of Vishnu.

But in their highest act of ceremonial worship the two sects differ radically. The Śivaite takes his white stone pebble, the conventional phallic emblem which he always carries with him, and while muttering his *mantra*, sprinkles it with water and applies to it cooling Bilva leaves. Owing to its simplicity and cheapness, this rite is much in vogue with the ignorant lower classes. The Vishnuite rite is less degrading but more childish. It consists in an elaborate and costly worship of the temple image of Vishnu, or more often, of Rama, or Krishna. The image is daily awakened, undressed, bathed, decked with rich robes, and adorned with necklaces, bracelets, crowns of gold and precious stones, fed with choice kinds of food, honoured with flowers, lights, and incense, and then entertained with vocal and instrumental music, and with dancing by the temple-girls of doubtful virtue, consecrated to this service. As Krishna is generally worshipped in the form of a child-image, his diversion consists largely in the swinging of his image, the spinning of tops, and other games dear to the heart of the child.

Śiva, too, has his temples, vying in magnificence with those of Vishnu, but in all these the holy place is the *linga*-shrine, and the temple worship consists

in the application of water and Bilva leaves to the stone symbol. The interior walls of these, and of Vishnu temples as well, are covered with shocking representations of sexual passion. And yet, strange to say, these forms of religion, while giving a sanction to the indulgence of the lowest passions, at the same time inspire other devotees to the practice of the severest asceticism. They wander about in lonely silence, naked and filthy, their hair matted from long neglect, their bodies reduced to mere skin and bones by dint of incredible fasts. They will stand motionless for hours under the blazing sun, with their emaciated arms uplifted towards heaven. Some go about with face ever turned upwards. Some are known to have kept their fists tightly clenched until their growing nails protruded through the backs of their hands.

VII. REFORM MOVEMENTS.—Enlightened Hindus of modern times have made attempts to institute a reform in Hinduism by rejecting all idolatrous and immoral rites, and by setting up a purely monotheistic form of worship. Of these the earliest and the most noted was the so-called Brahṃa Samaj (Congregation of Brahṃa), founded in Calcutta in 1828, by the learned Rammohun Roy. He tried to combine a Unitarian form of Christianity with the Brahmin conception of the supreme personal God. After his death, in 1833, differences of view as to the nature of God, the authority of the Vedas, and the obligation of caste-customs caused the society to split up into a number of small congregations. At present there are more than a hundred independent theistic congregations in India. Some, like the Arya Samaj, rest on the sole authority of the Vedas. Others are eclectic, even to the extent of choosing for devotional reading in their public services passages from the Avesta, Koran, and Bible. Few of them are altogether free from the taint of pantheism, and, being more like clubs for intellectual and moral improvement than for ritualistic forms of worship, they make but little progress in the way of conversion.

In short, Brahminism cannot succeed in reforming itself. Its earlier sacred books are steeped in the polytheism out of which it grew. And the pantheistic view of the world, to which it was afterwards committed, has been like a dead weight dragging it hopelessly into the stagnant pool of superstition, pessimism, and immorality. In virtue of its pantheistic attitude, there is no form of religion, high or low, that cannot be tolerated and incorporated into its capacious system. The indifference of Brahminism to the gross abuses of Hinduism is, after all, but a reflex of the indifference of its supreme god. Sin loses most of its hideousness when it can be traced ultimately to the great impersonal Brahṃa. There is but one form of religion which has any prospect of reforming the religious life of India, and that is the Roman Catholic. For the shadowy pantheistic deity it can set forth the One, Eternal, Personal Spirit and Creator; for the crude Tri-murti, the sublime Trinity; and for the coarse and degrading avatars of Vishnu, the Incarnation of the Son of God. It can replace the idolatrous and immoral Hindu rites with its own imposing liturgy, and substitute the Cross for the abominable linga.

Brahminism, being a national religion and a privilege of Hindu birth, has never made any concerted attempt at proselytizing in foreign lands. But some years ago steps were taken by a few individuals of England to foist upon English-speaking people a new religious system embodying the pantheistic belief and magical superstition of the Vedanta school of Brahminism. This new system, known as Theosophy, was to embrace within its fold members of every form of religion, reconciling all differences of creed in the pantheistic view that all deities, high and low, are but transitory emanations of the su-

preme, incomprehensible Reality, devotion to which was the highest religion. This quasi-cult, which also made pretensions to the exercise of magical powers, soon met the ridicule and obloquy it deserved. It is practically obsolete at the present day.

CHARLES F. AIKEN.

**Braille, Louis**, a French educator and inventor, b. 4 January, 1809, at Coupvray, Seine-et-Marne, France; d. 6 January, 1852. He became blind when three years of age, and at the age of thirteen was sent to the Institution for the Blind at Paris. There he showed a talent for intellectual studies and for music; and when his instruction had been completed he was appointed professor in that institution. It was then that he invented his system of writing in raised or relief points for the blind. Before him, Valentin Haüy, the founder of the Institution for the Blind, had invented the method of printing in raised letters which allowed the blind to read by touch; Charles Barbier had invented a sonographic point system as distinguished from Haüy's line or letter system, and had devised a simple instrument by which the blind could emboss the words or print them in relief. But this system of writing, based on the sounds of the French language, was too conventional and did not furnish the signs necessary for punctuation and ciphers. Braille, keeping to Barbier's point system and the principle of relief writing, found the means of representing, by the various combinations of six dots, not the sounds, but the alphabetical letters and all the signs of punctuation, and even of music. This invention, being alphabetic instead of sonographic, was a great advance in the education of the blind, and though it has been modified, at times, as to the combinations of dots (American, English, and English revised systems), the system is still, in most countries, the basis of methods for the education of the blind. The inventor set forth the principles of his system in his work: "Procédé pour écrire les paroles, la musique, et la plein-chant, à l'usage des aveugles", printed in raised letters in 1829. Though this system cannot be said to be the definitive method of education and writing for the blind, the name of Braille will always remain associated with one of the greatest and most beneficent devices ever invented.

**Bralion, Nicolas de**, a French Oratorian and ecclesiastical writer, b. at Chars-en-Vexin, France, c. 1600; d. at Paris, 11 May, 1672. He joined the Paris Oratory in 1619, and, in 1625, went to Rome, where he remained fifteen years at San Luigi dei Francesi, then an Oratorian establishment, devoting his time

to research and literary work. There he published an Italian translation of Cardinal de Bérulle's "Élévation" (1640) and of a portion of Ribadeniera's "Saintly Lives". He returned to Paris about 1640 and spent the rest of his life at the Church of St. Honoré. Among other works he published "Vie de St. Nicholas, archevêque de Myre" (1646); "Pallium Archiepiscopale" (1648—the first serious study published in France on the significance, tradition, and use of that vestment); "Histoire chrétienne" (1656); "La curiosité de l'une et l'autre Rome" (1655–59); "Cérémoniale Canonorum" (1657—a practical guide on Roman lines); "Histoire de la sainte chapelle de Lorette" (1665).

JOHN B. PETERSON.

**Bramante, DONATO** (also called D'AGNOLO after his father Angelo), Italian architect and painter, b. about 1444 at Monte Asdrualdo (hence, sometimes ASDRUALDINO); d. in Rome, 11 March, 1514. Nothing is known of his early youth. His early artistic development also, about which Vasari has made so many erroneous statements, is mostly a matter of conjecture. To-day, however, it seems fairly certain that Laurana, the architect of the ducal palace at Urbino, showed him the way to the impressive style of the High Renaissance. Bramante's artistic activity is divided into two periods of which the first was spent in Milan and the other in Rome. His work in Milan is characterized by a pronounced picturesque, decorative style. In Rome, on the other hand, we find a style which is more proper to the High Renaissance, exemplified in works that are, as far as possible, free from all external decoration, impressive by reason of their proportions, and recalling the antique by their grandeur and power. In 1476 Bramante became the court architect of Lodovico Sforza (Il Moro), having been in Milan, as has been abundantly shown, from 1474. At first he seems to have been engaged principally as a painter, following the vigorous manner of Mantegna and Melozzo da Forlì. It is true that only scanty remains of his work at this time have been found. Such are the recently discovered fresco fragments, transported from the Casa Prinetti to the Brera (single figures of warriors, philosophers, poets, and singers); the more poorly preserved decorative paintings of the Casa Fontana, and among panel pictures, undoubtedly the Scourging of Christ (Badia Chiaravalle near Milan). Bartolomeo Suardi, called Bramantino [cf. Suida in *Jahrbuch der Kunst-sammlungen des allerhöchsten Kaiserhauses* (1905), I sqq.], was his assistant and rather weak imitator in the field of painting, but not his teacher as was thought by Vasari (ed. Milanesi-Sansoni, IV, 175). If Bramante occasionally devoted himself to Gothic, as he unquestionably did in some designs for the Milan cathedral, he exhibits from the start an excellent style, which, as *Stile Bramantesco*, became typical for the Renaissance architecture of Lombardy. It is characterized by ambitious proportions, internal concentration, a greater organic relation of parts, and by rich and fresh decorative forms.

His first great achievement in this line is the choir of the church of Santa Maria presso S. Satiro, begun in 1476. The choir has a flat end and a false apse, rendered in relieved perspective. The adjoining sacristy, octagonal in plan and surmounted by a dome, is charming on account of the richness of the interior articulation and most effective space-development. Its two interior stories are separated by a splendid terra-cotta frieze overlaid with bronze. The church came to have the same significance in Northern Italy as the Pazzi Chapel or the Sacristy of Santo Spirito in Florence. Still richer in ornament are the transept and choir of Santa Maria

delle Grazie (1492–99), by which the superiority of the imposing new style over the Gothic can best be shown. In addition to these great churches, the Canonica, or canons' residence, of San Ambrogio (1492, only half completed) and the remodelled court of the Ospedale Maggiore are the only examples of Bramante's genius in Milan. A further development of this somewhat more decorative style to the larger, simpler proportions of the Roman period is suggested by the church of the Barnabites, Santa Maria di Capenuova in Pavia (1492), and also by the churches of Busto Arsizio and Santa Maria in Legnano. The magnificent articulation of the façade of Abbiategrosso shows in full development the powerful boldness of the Roman style whose growth, in Rome, was influenced not only by the antique, but also by the use of a more intractable material (travertine) which made small, detail treatment an impossibility. The date of this church is probably 1497 instead of 1477, as Geymüller read it. Other ecclesiastical structures of Lombardy upon which the influence or imitation of Bramante is perceptible, are the Cathedral of Como (south portal), the Pilgrimage Church at Crema, and the Inconornata at Lodi.

Even greater is the number of structures indirectly influenced by Bramante in Northern and Middle Italy after the downfall of the Sforzas in Milan (1499). Bramante at the end of the same year moved to Rome where he found in Alexander VI and still more in Julius II magnanimous patrons. Here, too, very little is known of his early work. It is still disputed whether or not the cloister of Santa Maria della Pace and the façade of the Church of the Anima can be ascribed to him. This is also true of the immense palace of Cardinal Raffaello Riario (the present Cancelleria) with the adjoining church of San Lorenzo in Damaso. On account of the inscribed dates (1489 and 1495) Gnoli ascribes them not to Bramante but to a Tuscan master, whereas Geymüller more correctly persists in ascribing them to Bramante, basing his view on considerations of style and on Bramante's relations with the Sforzas and the Riarios; this would also explain Bramante's working in Rome prior to 1492 [cf. Gnoli in *Arch. stor. dell' arte* (1892), IV, 176 sqq.; Riv. d'Italia (1898); and Geymüller in *Rassegna d'arte* (October and December, 1901), II]. The Palace Giraud Torlonia is a structure similar to the Cancelleria in its beautiful rhythmic articulation, its simplicity, and its monumental character. Undoubtedly Bramante is the designer of the pretty little circular temple in the court of San Pietro in Montorio (completed in 1502). It is planned quite after the manner of an antique temple and is the first structure consciously designed and executed in the classic spirit, embodying the purest and simplest forms and the most agreeable proportions. A peristyle, never carried out, was intended to complete the building. Other works of Bramante's first Roman period are the choir of Santa Maria del Popolo, the plan for the reconstruction of the Vatican, the extension of the Pelvedere court, etc. The most majestic creation, not only of Bramante and of the High Renaissance, but in fact of Christian art, is the new St. Peter's. According to Vasari, this was intended originally to enclose the magnificent tomb of Julius II, begun by Michaelangelo. But on account of the hopelessly ruinous condition of the old St. Peter's, its rebuilding became an immediate necessity and, indeed, was determined upon shortly after the accession of Julius II, probably in connexion with the reconstruction of the Vatican. As early as 18 April, 1506, the cornerstone of the pier of St. Helena was laid, and a year later those of the other three piers at the transept were in position. The ways and means employed by Bramante in dealing with the old building brought him many

**BRAMANTE'S CIRCULAR TEMPLE**

**IN THE COURTYARD OF S. PIETRO IN MONTORIO — ON THIS SPOT, TRADITION SAYS, ST. PETER WAS CRUCIFIED**

severe reproaches for his lack of sentiment and earned for him the nickname of *Ruinante*. Nevertheless, the incomparable significance of this creation must not be overlooked because of such romantic sentiments, nor must it be forgotten that the pope had Bramante's plan carried out in spite of all remonstrances and of the enormous cost.

The artistic aims of the structure, or more especially of the original plans, are revealed by the numerous drawings, executed partly by the master himself, and partly by his assistants. Their critical examination and æsthetic appreciation are among Geymüller's chief achievements. According to him this brilliant plan passed through three stages: in the first, only a small chapel for the tomb of Julius II was contemplated; in the second, the continuation of the erection of the new buildings undertaken during the reigns of Nicholas V and Paul II; only in the third stage was an entirely independent new building decided upon. For it Bramante had in view, from the first, a building of centralized plan, more particularly the plan of a Greek cross. In this he saw the architectonic ideal which combined the greatest harmony, the most serviceable space-relations, as well as a tendency to the monumentally sublime. It was only as an alternative, so far as can be judged from extant sketches, that the master seems to have reserved for himself the possibility of using the Latin cross, being evidently compelled to make concessions to the liturgical needs of the Church. According to the oldest drawings and a memorial medal of Caradosos, dated 1506, the original ground plan was a pure Greek cross, the termination of whose arms was apsidal on the interior, rectangular on the exterior. An immense dome was carried over the crossing. The predominant form of the interior was rotunda-like. For the four corners immense chapels were planned, which again repeated the Greek cross; they were crowned by smaller domes, and each was flanked on the exterior by a tower. Between the apses of the cross-arms and these corner-towers lay large vestibules for the chapels of the flanking domes. In a second design the cross-arms are rounded and enclosed by immense ambulatory halls. The main dome is encircled by an arcaded colonnade. The piers of the domes were enriched by niches emphasizing the dominant idea of the interior. In Milan, San Lorenzo, a church of centralized plan (see *BYZANTINE ARCHITECTURE*), evidently served as a model for this design. The principal ideas, however, were taken from the Pantheon and the Temple of Peace, which was the origin of the saying attributed to Bramante, that he would set the Pantheon on the Temple of Peace. The master was permitted to see only the initial steps towards the execution of his plan. He was able, nevertheless, to establish firmly its main lines for the architects who followed, inasmuch as the dome-supports with their arches, the southern transept, and the side domes were carried out under his direction. After his death in 1514 the continuation of the work was entrusted to the aged Fra Giocondo, and soon after (on a recommendation made by Bramante during his lifetime) to Raphael. Later on, San Gallo and Peruzzi were placed in charge. Bramante's plans suffered many changes and encroachments under the various directors until Michaelangelo returned to the fundamental ideas of the brilliant creator, and by the completion of the dome substantially carried the work to a conclusion. The curvature of the dome is not quite as bold and effective as that planned by Bramante; on the other hand it offers in its greater rise, a much more elegant and vigorous silhouette.

Under Julius II the influence of Bramante was predominant. Not only were the most daring works of architecture entrusted to him, but all other impor-

tant building operations, and, in general, all artistic undertakings depended on his initiative and approbation, as the painting of the ceiling of the Sistine Chapel and of the *loggie* and the *stanze*, or halls, of the Vatican. In this way Raphael, his younger townsman, received the greatest possible aid and favour, whilst Bramante's intrigues against Michaelangelo were positively spiteful according to Vasari. Through envy of Michaelangelo's mighty genius, he assigned to this great master only unsuitable and unpleasant commissions. Though these tragically strained relations between the two great artists at the court of the Rovere pope seem to be a psychological puzzle, the key is to be found in the hard and self-torturing character of the Florentine. Bramante, on the contrary, was a man who enjoyed life in a happy and liberal way, and who knew how to live up to the dignity of his prominent position. The manifold character of his interests and activities is yet visible in his poems which have come down to us. With Michaelangelo, Raphael, and Leonardo, he is one of the great intellects of the High Renaissance; he resembles them also in the fact that only a small part of his plans was completed.

JOSEPH SAUER.

**Brancaccio**, an ancient and illustrious Neapolitan family, from which the "Brancas" of France were descended. The family founded the celebrated Brancacciana Library at Naples, gave prominent officials to the State and from the fourteenth to the seventeenth century, seven cardinals to the Church. It is represented to-day by two branches, the "Principi di Ruffano" and the "Principi Brancaccio". The seven cardinals were as follows: (1) LANDOLFO, b. at Naples; d. at Avignon, 1312. He was created cardinal in 1294 by Celestine V, entrusted with difficult negotiations under Boniface VIII and Clement V, and attended the General Council of Vienne (1311-12). (2) LUIGI, a learned canonist, d. 1411. He was appointed by Innocent VII Nuncio to Naples, and made Archbishop of Taranto and cardinal (1408) by Gregory XII. (3) NICOLÒ, d. at Florence, 1412. He was made Archbishop of Cosenza in 1376; he sided with the antipopes Clement VII and Benedict XIII, and was created cardinal by the former in 1378. (4) RINALDO, d. at Rome, 1427. He was raised to the cardinalate by Urban VI in 1384, was present at the Council of Constance (1414-18), and filled several important missions. (5) TOMMASO, d. in Rome, 1427. He was created cardinal in 1411 by his uncle, John XXIII, and was present at the Council of Constance. His private life is said to have been far from exemplary. (6) FRANCESCO MARIA, b. about 1591; d. 1675. He became Bishop of Capaccio, Viterbo, and Porto, and was created cardinal in 1634 by Urban VIII. Among other writings, he has left a dissertation on the question whether chocolate breaks the fast or not. (7) STEFANO, nephew of Francesco Maria, b. at Naples, 1618; d. 1682. He was nuncio at Florence and Venice, Bishop of Viterbo in 1670, and cardinal in 1681.

VAST in *La grande encyc.*, VII, 965.

N. A. WEBER.

**Brancati**, FRANCESCO, b. in Sicily in 1607; he entered the Society of Jesus in 1624 and went to the Chinese Missions in 1637. For nearly thirty years he laboured with admirable zeal and success in the Province of Kiang-nan, building, it is said, more than ninety churches and forty-five chapels. In 1665 he was exiled from Peking to Canton, where he died in 1671 (according to Sommervogel, at Shanghai). He wrote and published numerous books in Chinese, most

of which, being of great merit, were reprinted by the Jesuit missionaries in the nineteenth century. Among these are a treatise on the Eucharist, instructions on the Decalogue and on the Commandments of the Church, a refutation of divinations, and particularly a Catechism, entitled in Chinese, "Conversations of the Angels". The Russian Archimandrite, who was at the head of the Orthodox mission at Peking, published in the second decade of the nineteenth century an extract from this Catechism, adapted to the Greek Rite, in which he omitted everything that disagreed with the Russian schismatic teaching. Brancati also composed in Chinese several volumes of sermons and homilies for the Sundays and feast-days of the ecclesiastical year. His work on the Chinese rites was published in two volumes at Paris in 1700. It bears the title "De Sinensium Ritus politicis Acta", etc.

B. GULDNER.

**Brancati di Lauria**, FRANCESCO LORENZO, Cardinal, Minor Conventual, and theologian, b. at Lauria in the then Kingdom of Naples, 10 April, 1612; d. in Rome, 30 November, 1693. Stricken at the age of seventeen with a dangerous illness, he made a vow that in the event of his recovery he would enter the order of Minor Conventuals. In July, 1630, he received the religious habit at Lecce in Apulia, and shortly after the completion of his novitiate was called to Rome. He subsequently visited several of the most noted convents of his order in Italy, in which he taught philosophy and theology with marked success. In 1647, he was again recalled to Rome and was shortly afterwards made guardian of the convent attached to the Conventual Church of the Twelve Apostles, where the minister general of the order resides. In 1653, he was appointed to the chair of dogmatic theology in the Roman University, and was later made Consultor of the Congregation of the Holy Office by Alexander VII who used to call him "The right arm of the Apostolic See". He was made chief librarian of the Vatican library by Clement X, and in recognition of his devoted services to the Church was raised to the cardinalatial dignity by Innocent XI in 1681. As cardinal he was actively connected with at least ten of the Roman Congregations. Brancati would in all probability have succeeded Innocent XI in the chair of St. Peter, had not the Spanish Government used its right of veto. As it was he received fifteen votes, the successful candidate being Cardinal Pietro Ottoboni who took the name of Alexander VIII. Brancati was a man of vast learning, singular piety, and unbounded liberality towards the poor. During the twelve years he was cardinal, he continued to keep faithfully to the observance of his obligations as a religious, remaining with his brethren in the Convent of the Twelve Apostles, the church of which he caused to be completed and adorned. He prepared himself for death in a most edifying manner, and had his tomb constructed with the inscription over it: "Ossa Fratris Laurentii Brancati de Lauria". He died in the eighty-first year of his age.

Brancati is the author of several important works on theology and asceticism. Perhaps the most noted of these is the commentary on the third and fourth books of the "Sentences" of Duns Scotus which appeared at Rome in eight folio volumes between the years 1653 and 1682. In this work he treats exhaustively wellnigh all the subjects that pertain to special dogmatic theology. In his "Opuscula tria de Deo", published at Rome in 1687, and at Rouen in 1705, he defends the gratuitousness of predestination which he endeavours

to show was taught by St. Augustine, though reliable authorities are not agreed as to whether St. Augustine was explicit on this point. Brancati's "Epitome Canonum", which went through two editions at Rome, four at Venice, and two at Cologne, contains a complete list of all the canons to be found in the general and provincial councils, in the Decretals of Gratian and of Gregory IX, and in the encyclical letters and constitutions of the Roman Pontiffs up to the time of Alexander VII. Among his ascetical works may be mentioned the "Opuscula octo de oratione Christiana", published at Rome in 1685, a work in which the author exhibits his profound knowledge of the spiritual life of which he became a master more perhaps by his own holy living than by the abstract study of asceticism. The life of Brancati, written in Italian by Gabriele Baba, was published in Rome in 1690.

**Branch Sunday**, one of the medieval English names for Palm Sunday. The difficulty of procuring palms for that day's ceremonies led to the substitution of boughs of yew, willow, or other native trees. The Sunday was often designated by the names of these trees, as "Yew Sunday" or by the general term "Branch Sunday". (See PALM SUNDAY.)

JOHN B. PETERSON.

**Brandenburg**, formerly an electoral principality (the Mark of Brandenburg), and a diocese in the heart of the present Kingdom of Prussia, now a Province of Prussia and in ecclesiastical order an Apostolic Delegation.

I. HISTORY.—The lands extending eastward from the Elbe to the Vistula, once inhabited by Germans, were invaded by Slavic tribes who, during the sixth century of the Christian era, pushed their way as far as the Elbe and the Saale in Thuringia. Charlemagne was the first to check their advance; later, Henry I attacked them, captured Brennabor, the stronghold of the Lusatians, and to safeguard his conquests established the North Mark. In 939 Otto I brought the country of the Hevelli under his power, placed the Slavic races as far as the Oder under tribute, and to further the work of their conversion founded the dioceses of Havelberg and Brandenburg (948), which in 968 were placed under the recently founded Archdiocese of Magdeburg. Nevertheless, Christianity made slow progress. The hate of the subdued for their German conquerors, far from abating, burst forth in a great uprising (983). The Slavs pressed on as far as the Elbe, conquered Brandenburg and Havelberg, and destroyed the seeds of Christian civilization that had been planted there. Emperors Henry II and Conrad II, it is true, again brought the Lusatians under the power of the German Empire, but the real evangelization of the country was not resumed until the time of Count Albert of Ballenstädt, founder of the Ascanian line, who had been made Margrave of the North Mark by Emperor Lothar II (1134). Albert entered into friendly relations with the Wendish prince, Pribislav, at that time the ruler of Brandenburg, was chosen by him as his heir, and in 1150 took possession of the land, assuming at the same time the title of Margrave of Brandenburg. He brought colonists from the Lower Rhine and Utrecht, who by the methods learned in their old homes reclaimed the swamp lands of the Mark for agricultural purposes; the cities were peopled anew; the Dioceses of Brandenburg and Havelberg re-established; churches and

monasteries erected; and the Wendish population soon won over to Christianity and the German Empire. The most active part in the conversion of the country was taken by the Premonstratensians and Cistercians. Even before the death of their founder, St. Norbert, Bishop of Magdeburg (1126-34), the Premonstratensians founded the monastery of Gottesgnaden (1131) and later that of Leitzkau, near Magdeburg (1149), as well as monasteries at Jerichow (1144), the city of Brandenburg (1165), Gramzow in the Uckermark (c. 1180), and elsewhere. The bishoprics of Brandenburg and Havelberg and the seats in their respective cathedral chapters were held by members of this order. The Premonstratensians were equalled in zeal, particularly during the thirteenth century, by the Cistercians, who had been introduced into the country by Albert's son and successor. Their foundations at Zinna (1170), Lehnin (1183), Chorin (1272), Jüterbog (1282), Himmelforte (c. 1290), etc., were centres for the work of colonization, which was conducted on a large scale.

When the Ascanian line had become extinct, Emperor Louis the Bavarian annexed the Mark to his own territories (1320), but as early as 1373 the House of Wittelsbach was forced to relinquish Brandenburg, which in 1356 had been raised to the rank of an electorate, to Emperor Charles IV, who made it a dependency of the Bohemian Crown. Charles restored discipline, put an end to the extortion of the nobles, established the cathedral chapter of Tangermünde, and raised the Mark to renewed prosperity. The Dioceses of Brandenburg and Havelberg, however, ceased to be direct fiefs of the empire. Charles's son, Sigismund, mortgaged the Mark (1388-1411) and in 1411 appointed as *Statthalter* (Governor) Burgrave Frederick of Nuremberg, who took possession in 1412, and, having overcome the opposition of the nobles, was solemnly invested with the Mark of Brandenburg as an elector of the German Empire (1417). In this way Brandenburg passed into the possession of the Hohenzollerns, who have since held it without interruption. While Frederick I occupied himself almost exclusively with matters connected with the empire, his son, Frederick II (1440-70), concentrated his attention on the government of his territory. Distinguished from his youth for great piety, he promoted the religious life of his subjects, worked for the reform of the clergy and monasteries, made the cathedral chapters of Brandenburg and Havelberg centres of religious and secular culture, founded the Order of the Swan for nobles, and received from Pope Nicholas V (1447) the right of appointment for the dioceses of the Mark. His grandson John, surnamed Cicero (1486-99), took the initiative in the establishment of the University of Frankfurt on the Oder, opened in 1506, and destined to be for a time a stronghold of Catholicism in the religious wars stirred up by Luther.

Dissensions between bishops and people had co-operated with other unfortunate circumstances in the Mark of Brandenburg, to create conditions amid which the new teachings took rapid root. Elector Joachim I (1499-1535), whose younger brother, Albert, was made Archbishop of Magdeburg and Bishop of Halberstadt in 1513, and in 1514 Archbishop and Elector of Mainz and Archchancellor of the German Empire, was extremely hostile towards the religious innovations, and endeavoured to have the edict formally condemning Luther passed by the Reichstag, at Worms. He forbade the circulation of Luther's translation of the Bible and the preaching of the new doctrines within his territory, and he prohibited his subjects from attending the University of Wittenberg.

Through the efforts of wandering preachers, nevertheless, Luther's teachings soon gained a large following, not only in various parts of the Mark,

but in the very family of the elector, counting among its adherents his cousin Albert, Grand Master of the German Order, his son-in-law, John of Anhalt, and even his wife, Elizabeth. Before his death, Joachim made his two sons, coheirs of his lands, solemnly promise fidelity to the Catholic Church. In spite of this, the younger, John of Kustrin, as early as 1538, became a Protestant and was followed by his subjects. The elder, Elector Joachim II (1535-70), influenced by his wife, daughter of the Polish king, Sigismund, at first held fast to the old Faith, though allowing Protestant clergymen to minister to several parishes in his territory; finally, at Spandau in 1539, he received the sacrament under both forms at the hands of Matthias von Jagow, Bishop of Brandenburg, likewise a partisan of the new doctrines. His defection was imitated by the majority of the cities in the Mark, Berlin at their head, and by the nobles almost as a body. The Bishops of Havelberg and Lebus alone offered steady resistance. In 1540 the electoral prince, by virtue of his authority as national bishop, issued a new church ordinance which was based on Luther's doctrine of justification, though preserving many Catholic institutions, such as the episcopal system of organization, and many Catholic ceremonies and customs, even to the Latin Mass, feasts of the Blessed Virgin, processions, etc., that the common people might not realize how the Catholic Faith was being gradually withdrawn from them. Between 1540 and 1542 an ecclesiastical visitation of the whole Mark was undertaken; the secular and regular clergy who had withstood the innovations of the elector were mercilessly expelled; the foundations of religious orders of men were suppressed; convents were converted into asylums for noble maidens; much church property and many endowment funds were confiscated and mortgaged to nobles or cities; and church plate and valuables were melted down. In 1543, the Consistory was constituted the highest spiritual authority. The elector took advantage of the rights obtained through the Religious Peace of Augsburg (1555) to complete the work of the Reformation in his principality. After the death of the last bishops who held fast to the Church—those of Lebus (1555) and Havelberg (1561)—he succeeded in having his eldest grandson, later Prince Elector Joachim Frederick, appointed bishop, thus preparing for the future secularization of the bishoprics. The administration of the Diocese of Brandenburg he confided to his son, John George. This gave the Reformation a complete victory; whatever savoured of Catholic teaching was gradually eliminated, and by the beginning of the seventeenth century, Catholic services were absolutely prohibited. Not until the establishment of the Kingdom of Prussia were Catholics again allowed to hold public worship. (For the later history of the Mark of Brandenburg, see PRUSSIA.)

The Diocese of Brandenburg, founded 1 October, 948, by Otto the Great, was bounded on the east by the Oder, on the west and south by the Elbe and the Black Elster, and on the north by the Uckermark. The first bishop was Thietmar or Dittmar (d. before 968); his successor, Dodilo, was murdered in 980. The succeeding bishops, after the heathen Wends again conquered Brandenburg (983), lived for the most part as coadjutors to other prelates in various places in Germany. Bishop Wigger, the fifteenth in line of succession (1138-60), was the first who was able to return to his diocese. Like his successors, as late as the middle of the fifteenth century, Bishop Wigger belonged to the Order of Premonstratensians, and formed his cathedral chapter from members of his order. Among the bishops of the fifteenth century, Stephan Bodeker (1421-59) distinguished himself by unusual activity along the lines of education and reform. Matthias von Jagow

(1527-44), the forty-fourth bishop, was one of the most zealous promoters of the so-called Reformation; although in 1528 he bound himself by oath to the pope and to Elector Joachim I to withstand the Lutheran innovations, he installed a Lutheran preacher in the city of Brandenburg in the same year, released his priests from their vow of celibacy (1535), and introduced the administration of Communion under both forms. After the resignation of his successor, Joachim, Duke of Münsterberg-Prince Elector John George was appointed administrator of the diocese, which by that very act was secularized. The cathedral chapter was preserved in name, and consists to the present day of one cathedral dean, one senior and seven cathedral capitulars; these positions are bestowed as sinecures on Prussian statesmen, generals, theologians, etc.

II. STATISTICS.—Ecclesiastically, the former Mark of Brandenburg, with the city of Berlin and the greater part of the province of Pomerania, forms the "Apostolic Delegation for the Mark Brandenburg and Pomerania", which is administered by the Prince-Bishop of Breslau as Apostolic Delegate, indirectly through the Dean of St. Hedwig's in Berlin as delegate of the prince-bishop. According to the census of 1 December, 1900, the number of Catholics was 314,287; in 1907 it had reached 443,100. For the work of the ministry, the delegation is divided into 7 archipresbyterates with 82 spiritual charges, 6 curateships, etc. Catholic churches and chapels number 128. The clergy of the delegation include (in addition to the delegate of the prince-bishop, the army bishop for the Prussian troops, and the secretary of the delegation) 160 priests, viz.: 72 priests having charges, 54 chaplains and curates, 19 priests having other appointments, 15 living in community. The following orders of men have foundations (1907): Dominicans 1, with 10 priests and 7 lay brothers; Alexians 1, with 22 brothers; Poor Brothers of St. Francis 1, with 17 brothers. Orders and congregations of women have 42 foundations, with 733 sisters: Ursulines 1, with 24 choir sisters, 1 choir novice, and 12 lay sisters; the Sisters of the Good Shepherd 2, with 135 sisters; Sisters of St. Charles Borromeo 6, with 132 sisters; Dominicans of St. Catherine of Sienna 11, with 152 sisters; the Grey Nuns of St. Elizabeth 17, with 219 sisters; the Sisters of Mary 4, with 58 sisters; the Sisters of St. Joseph 1, with 13 sisters. The orders of women devote themselves almost exclusively to the care of the sick and the poor, and the education of young girls.

The Catholics of the delegation have but one private high school for boys; there are 4 Catholic high schools for girls, one of which is conducted by the Ursulines. There are 30 Catholic primary schools in Berlin and outside of Berlin 52; elsewhere Catholic children are given religious instruction by clergy and secular teachers, in some places in non-Catholic schools (140), elsewhere in churches and chapels, or in private houses. Religious orders of women conduct 15 protectorates for small children, and 9 schools of domestic economy and manual training.

The Catholic charitable institutions of the delegation are almost exclusively under the control of religious congregations of women. There are 10 hospitals and sanatoria, 5 homes for convalescents and those in need of rest, 1 institution for the mentally deranged, 1 maternity home, 29 institutions for visiting nurses, 7 homes for invalids, 6 for the care of small children, 8 crèches and homes for children, 3 hospices for men, 9 refuges and boarding-houses for women, 8 homes for girls out of work, 15 institutions for the care of orphans and the instruction of first-communicants, and 4 homes for the shelter and reclamation of girls. It should be noted that in

many cases several of these institutions form one establishment and are under the same management.

The organization of Catholics in the delegation has reached a high stage of development. There are about 300 religious associations. Among the confraternities and rosary unions are: 30 societies of the Holy Family, 50 societies of St. Charles Borromeo, 35 associations of young men and societies of St. Aloysius, 25 congregations of Mary and societies of young women. Among charitable associations, mention may be made of the Society of St. Vincent de Paul, with about 40 conferences of men and women, and the Charitable Association (*Charitasverband*) for Berlin and other centres of charitable work. Among Catholic trade unions are Catholic labour unions, about 60; local societies of Christian workmen, 32; Catholic *Gesellenvereine*, 8; masters' unions, 3; apprentices' unions, 4; mercantile unions, 5; associations of teachers, 5; corporations of students, 10; national bureaux (*Volksbureaus*), 2, etc. Among political organizations are the National Union for Catholic Germany (*Volksverein für das katholische Deutschland*) and the Windthorst leagues. Catholic social organizations are numerous: societies of men, civic associations, choral unions and the like. (For politico-ecclesiastical relations see PRUSSIA.)

JOSEPH LINS.

**Branly, EDOUARD**, a French physicist and inventor of the coherer employed in wireless telegraphy, b. at Amiens, 23 October, 1846. After receiving his early education at the Lycée of St.-Quentin, his scientific studies were begun at the Lycée Henri IV at Paris, and in 1865 he entered the Ecole Normale Supérieure. In 1868 he became Licentiate in mathematics and physical science, and also *agrégé* in physical and natural science. After occupying a professor's chair at the Lycée of Bourges, he was appointed *chef des travaux* in 1869, and four years later he was made director of the Laboratory of Instruction in the department of physics at the Sorbonne. In the same year (1873) he won the doctorate in science with a thesis entitled "Electrostatic Phenomena in Voltaic Cells". In 1876 he resigned his post at the Sorbonne to become professor of physics at the Catholic University in Paris. He then took up the study of medicine, obtaining his degree in 1882, and thereafter divided his time between the practice of medicine, especially of physiotherapy and electrotherapy, and his researches in physics at the Catholic University.

Dr. Branly is best known by his researches concerning radio-conductors, and particularly by his so-called coherer. He began his studies in this field in 1890, being led to undertake them by observing the anomalous change in the resistance of thin metallic films when exposed to electric sparks. Platinum deposited upon glass was first employed. The effect was at first attributed to the influence of the ultra violet light of the spark. The variations in the resistance of metals in a finely divided state were even more striking, and they were shown by Dr. Branly

to be due to the action of the electrical, or Hertzian, waves of which the spark was the source. The phenomenon was investigated at great length, and further experiment led to the coherer, which is simply a glass or ebonite tube containing metallic filings which connect the two ends of a wire conductor entering the tube. When the tube is made part of a battery circuit, the filings ordinarily offer a very great resistance to the passage of a current. But if a spark be produced in the neighbourhood between the terminals of an induction coil, or by the discharge of a Leyden Jar, the resistance of the filings is diminished, being no longer measured in millions but in hundreds of ohms. Upon tapping the tube the filings regain their normal resistance. This simple device was employed by Lodge in his researches and formed an important part of Marconi's successful system of wireless telegraphy. In fact the coherer first made wireless telegraphy possible. It serves as a receiver, being placed in series with a relay actuating a Morse sounder.

When electrical waves, sent out at a distant station according to an established code, impinge upon it, its resistance diminishes sufficiently to enable the relay to act and this in turn reproduces the signals in the sounder. A tapper automatically restores the resistance of the filings. Dr. Branly has given the name of radio-conductors to bodies which, like filings, can be made conductors or non-conductors at will. A number of other forms have since been devised, and he himself has found that the tripod coherer, composed of a metal disk making contact with a polished steel plate by means of three steel legs, is more sensitive and uniform in its action than the tube coherer. He has also applied his radio-conductors to "telemechanics without wires", i. e. to the production of divers mechanical effects at a distance by means of electrical waves. Among Dr. Branly's other researches have been those relating to the effect of ultra violet light upon positively and negatively charged bodies (1890-93), electrical conductivity of gases (1894), etc. It may be noted that the germ of the "antennæ", employed particularly in long distance telegraphy, may be found in his papers published in 1891.

Dr. Branly became Commander of the Order of St. Gregory the Great in 1899 and was nominated Chevalier of the Legion of Honour in 1900 for "having discovered the principle of wireless telegraphy". He received the *grand prix* at the Paris Exposition, 1900, for his radio-conductors, and the *prix Osiris*, in 1903, from the Syndicate of the Press. He was also made a titular member of the Pontifical Academy dei *Nuovi Lincei*. Besides his papers published chiefly in the "Comptes Rendus", Dr. Branly is the author of a "Cours élémentaire de physique" (5th ed., 1905); and "Traité élémentaire de physique" (3d ed., 1906). For various types of coherer and other apparatus employed in wireless telegraphy, cf. Collins, "Wireless Telegraphy" (New York, 1905).

H. M. BROCK.

**BRANT, SEBASTIAN**, a German humanist and poet, b. at Strasburg in 1457 or 1458; d. at the same place, 1521. He attended the University of Basle where he at first studied philosophy, but soon after abandoned this for law, obtaining in 1489 the degree of Doctor of Canon and Civil Law. Prior to this, from 1484, Brant had begun to lecture at the university, practising his profession at the same time. He wrote a number of poems in Latin and German in which he set forth his religious and political ideals. The election of Maximilian as emperor had filled him and many other patriots with high hope. To see the emperor the supreme temporal ruler of Christian nations, and the Church the supreme spiritual ruler

on earth was his one great desire and henceforth coloured all his poems. Especially did he hope for the restoration of imperial power in Germany and the strengthening of the realm. But he was doomed to disappointment. In 1499 Basle was separated from the empire and became a member of the Swiss confederacy. Brant's position here now became untenable, and he decided to change his residence. In 1494 he had published his poem "The Ship of Fools", which had won him great popularity. Geiler von Kaisersberg, the famous Strasburg preacher, had made it the basis of a series of sermons, and he now recommended the appointment of Brant to the vacant position of city-syndic in Strasburg. The poet accepted the offer, and in 1501 he returned to his native city, where two years later he was appointed town-clerk and soon rose to considerable prominence. The remainder of his life was uneventful. Towards the great religious movement of his time, the Reformation, he maintained an attitude of passive indifference. Repeatedly he served his city in an official capacity, the last time in 1520, as spokesman of an embassy sent to the newly elected Emperor, Charles V, to obtain for Strasburg the usual confirmation of its ancient privileges.

The work to which Brant owes his fame is the "Narrenschiff" (Ship of Fools), a long didactic, allegorical poem, in which the follies and vices of the time are satirized. All the fools are loaded in a ship bound for Narragonia, the land of fools. But this plan is by no means carried out systematically, many descriptions being introduced which have no connexion with the main idea. The resulting lack of unity, however, has its advantage; for it enables the poet to discuss all kinds of social, political, and religious conditions. Not only follies in the usual sense of the word are satirized, but also crimes and vices, which are conceived of as follies in accordance with the medieval way of thinking. Hence among the fools appear such people as usurers, gamblers, and adulterers. A chapter is devoted to each kind of folly, and there are one hundred and twelve chapters in which one hundred and ten kinds of fools pass muster. As a work of art the poem does not rank high, though its tone is serious and earnest, especially where the poet pleads for his ideals, as in chapter xcix, entitled "Von abgang des glouben" (on the decline of faith). Knowledge of self is praised as the height of wisdom. The "Narrenschiff" enjoyed a tremendous popularity in Germany, which is attested by the numerous editions that appeared in rapid succession. But its fame was not confined to Germany. It was translated into Latin by Jacob Locher in 1497 (Stultifera Navis), into French by Paul Rivière in 1497, and by Jehan Droyn in 1498. An English verse translation by Alexander Barclay appeared in London in 1509, and again in 1570; one in prose by Henry Watson in London, 1509, and again in 1517. It was also rendered into Dutch and Low German.

Besides the "Narrenschiff" Brant wrote religious and political poems in Latin and German. He also edited and translated a number of legal and theological treatises. The most complete edition of the "Narrenschiff" is that of Father Zarncke (Leipzig 1854), which contains also selections from Brant's other works. Other editions are by Karl Goedeke (Leipzig, 1872) and F. Bobertag (in Kürschner's Deutsche National Litteratur, XVI). A modern German translation was made by Karl Simrock (Berlin, 1872). A new edition of the English translation of Barclay, by T. H. Jamieson, appeared at Edinburgh in 1874 in 2 vols.

For an essay on Brant see SCHMIDT, *Histoire littéraire de l'Alsace* (Paris, 1879), I, 189-333, and the introductions to the above-mentioned editions; see also JANSSEN, *History of the German People* (tr. London, 1896) I, 125.

ARTHUR F. J. REMY.

**Brantôme**, PIERRE DE BOURDEILLE, SEIGNEUR DE, one of the most famous of French writers of memoirs, b. in 1539, or a little later; d. 15 July, 1614. He was the son of a nobleman of Périgord and spent his childhood at the court of the Queen of Navarre. He studied at the College of France, at Paris, and at the University of Poitiers. When his education was completed he returned to court at a date not later than 1556, for he saw Mary Stuart "at the age of thirteen or fourteen, in the presence-chamber of the Louvre, publicly recite a Latin oration which she had composed, before King Henry, the queen, and all the court". In 1557 Bourdeille was granted the Abbey of Brantôme, the name of which he took.

Brantôme's life explains his writings, for it is the life of a traveller, a soldier, and a courtier. He himself in a few lines thus sums up its characteristics: "From the time when I began to outgrow subjection to father, and mother, and school, besides the journeys I made to the wars and the courts in France, I have made seven, when there was peace, outside of France to find adventure by war, or by seeing the world; I was in Italy, Scotland, England, Spain, Portugal—then in Italy again, at Malta for the siege, at La Goulette in Africa, in Greece, and other foreign places, which I have liked a hundred times better for sojourn than my own country, having the disposition of wandering musicians who love the houses of others better than their own." In 1558 he went for the first time to Italy. He returned to France only to leave it again in the suite of Mary Stuart who went to Scotland to take possession of her kingdom. Brantôme has left a touching account of this journey of the unfortunate queen. In 1562 he took part in the first civil war between the Catholics and Protestants of France and was present at the battle of Dreux, his first engagement. Then he began again to travel, going to Portugal, Spain, and to Malta; at this last place he spent three months and a half, the active and adventurous life of the Knights pleasing him so greatly that he thought for a moment of entering the order. On his return to France he took part in the second and third civil wars, was present at the battles of Meaux and St.-Denis, at the engagement at Jarnac, and the siege of La Rochelle. His military career came to an end in 1574 after the campaign in Périgord. The office of gentleman of the bed-chamber kept him near King Henry III, and his journeys now were merely to follow the court, where all that interested him seems to have been the love intrigues, the duels, the rivalries, and the assassinations.

Notwithstanding the services he had rendered, his bravery, and the amusement which his Gascon animation afforded the king, Brantôme never obtained an important post, but remained among "the minor attendants". This made him indignant and he contemplated going into the Spanish service when an accident—a fall from his horse—put an end to his active life. An invalid for four years, he retired to his château Richemond and resolved, in order to pass the time, to take up his pen and recount his past life. This was the occasion and the beginning of his career as a writer. But for this fortunate accident posterity would not have had the precious "Mémoires" of Brantôme and would have lost in them an unequalled source of instruction concerning the men and affairs of the sixteenth century. The works of Brantôme include: "*Vies des capitaines étrangers et français*"; "*Vies des dames illustres*"; "*Vies des dames galantes*". His manner of writing is between the style of a biography and that of a personal memoir. At times he himself appears in his recital and most often he relates what he has personally seen. He says: "I have seen", "I have known". He has the most important qualification for a writer of memoirs:

curiosity. Wherever he went, and he travelled in countries of all kinds, he observed, he listened, he asked questions, he informed himself. But he has no power of criticism; he is a doubtful witness. He has, moreover, no sense of morality, in the modern meaning of the word. He admires but one thing in men and that is bravery; that this courage may be of a criminal character is of little consequence to him. He is not the man to bear malice towards others under pretext that they have "some little trifle of murder" on their conscience. In like manner he has few scruples either as to a choice of means or as to the sources of profit and ways of making gain. He writes in one place: "Nothing is so delightful, so sweet and attractive as spoils of any kind, whether gained by land or by sea." And he is strongly suspected of having plundered his benefice. In truth, when he talks of "honesty" and "virtue" he means what the Italians of that age called *virtù*, that is, personal courage, force, and elegance. Above all other spots Brantôme enjoyed the chamber and antechamber of the queen. He was never perfectly happy except when surrounded by the ladies who formed the real ornament of the court. This court of Catherine de Medici and its "flying squadron" of three hundred ladies made his paradise on earth. "Never since the world was made has its equal been seen." He made himself the historiographer of these dames of the Renaissance, both of the famous and of the notorious. Among his numerous portraits mention should be made of those of his favourites, Marguerite of Navarre and Mary Stuart. Light and frivolous, Brantôme passes over without mention some of the occurrences of his time of the greatest importance and most fraught with consequences. But we owe to him all sorts of small details, fingerposts to uses of the times. This brilliant and corrupt society, stamped with the characteristics of the sixteenth century, lives again in his "Mémoires".

Brantôme is an uneven, incorrect, and rambling writer, but his works contain clever witticisms, imagination, and unexpected turns. He took more pains with his style than one would be apt to think, and sought renown as a man of letters. He directed his heirs to have the writings printed which he had made and composed "by his understanding and imagination, all very carefully corrected with much pains and time . . . I wish that the said impression be in beautiful and large type and in a stately volume in order to appear better. Otherwise I should lose my trouble and the glory that is due me." His desires, however, were not granted at once. His works did not appear for the first time until 1655 and then in a very imperfect and incorrect edition. It was not until the eighteenth century that his reputation, one of not very high order, was established. His writings are regarded, above all, as a collection of dubious anecdotes. From him the chroniclers of scandalous stories, the Tallemands des Réaux and the Bussy-Rabutins, are descended.

RENÉ DOUMIC.

**Brasses**, MEMORIAL.—Just when memorial brasses first came into use is not known; the earliest existing dated examples are of the thirteenth century. They apparently originated from a desire to produce memorials of greater durability than the incised stone and marble slabs then in use, and their lasting value has been proved by the fact that they are incomparably in better condition than contemporary incised slabs of the hardest stone. The material of which they were made was principally manu-

factured at Cologne, and thence exported to all parts of Christendom; it is called *laton*, an alloy of copper, zinc, lead, and tin, beaten into thick plates of various sizes. England was the largest consumer, and in spite of the rapacious plunderers of the Reformation,

SYMBOL OF ST. JOHN (Donatello)  
BASILICA OF ST. ANTHONY, PADUA

with very little attempt at shading, surrounded by architectural and heraldic accessories and inscriptions. In some cases the incisions were emphasized by black and red enamels, while in others the brasses were further embellished by the introduction of many-coloured Limoges enamels. These memorials attained their greatest artistic excellency in the fourteenth century, and then slowly deteriorated, becoming very much debased during the reigns

AND HIS WIFE  
(Time of Henry IV)

A. B. Waller covers the ground of English brasses, and that of W. F. Greeny (London, 1884), fully describes those on the Continent. Military brasses can be studied in the transactions of the Yorkshire Architectural Society for 1885, and a history of the destruction of all kinds of brasses during the

progress of the Reformation in Weever's "Ancient Funeral Monuments" (London, 1731).

CARYL COLEMAN.

**Brasseur de Bourbourg, CHARLES ETIENNE**, Abbé, b. at Bourbourg (Département du Nord), France, 1814; d. at Nice in January, 1874. He left France for Canada in 1845 and was for a short time professor of ecclesiastical history at Quebec. In 1846 he was at Boston as vicar-general of that diocese, and then returned to Europe where he spent two winters at Rome, searching archives for documents relative to Spanish America. In 1848 he went to Mexico and became chaplain of the French Legation at that city. In 1851 he returned to Paris until 1854, when he sailed for New York and from there to the Isthmus and Central America, visiting Nicaragua, San Salvador, and Guatemala. He arrived in the latter city 1 February, 1855, and was made ecclesiastical administrator of the district of Rabinal in Vera Paz which position he occupied for a year. In 1857 he was again in France. In the years 1859 and 1860 he visited the Isthmus of Tehuantepec and Chiapas, also parts of Guatemala. In 1864 he became attached to the French scientific mission to Mexico, but political events in that republic drove him back to Guatemala in 1865, whence he returned to Europe. Exhausted by his long, arduous, and often dangerous labours, he died at Nice at the age of sixty. While an ecclesiastic worthy of high respect, and a teacher who has left a good record in the short period he devoted himself to instruction, Brasseur de Bourbourg was, above all, an indefatigable student of the American Indian, of his past and present. Hence the many and protracted journeys in Mexico and Central America, his permanent stay among aboriginal tribes, and his frequent visits to Europe were often made for the purpose of delving into archives for ethnographic, linguistic, and historic material from the past. He collected a large number of manuscripts and prints dating from early times in Central America, and improved his apostolic labours among the Indians for ethnographic purposes. His publications embrace the period from 1857 to 1871, and the value of these publications, if not unimpeachable, is still great. His defects were, at the outset, too great an enthusiasm and too vivid a fancy, and his intercourse with Prescott, whom he personally knew, was not calculated to lessen these failings. Later on, he was led to tread a very dangerous field, that of tracing relationships between American peoples and Eastern civilization and, as he advanced in years, the connection between the Old World and the New in pre-Columbian times, while not impossible, assumed in his mind the form of a fact absolutely certain. His main works are: "Histoire des Nations civilisées du Mexique et de l'Amérique centrale" (Paris, 1857-59, 4 vols.); "Voyage sur l'Isthme de Tehuantepec dans l'état de Chiapas et la République de Guatemala, 1859 et 1860" (Paris, 1861); "Popol Vuh, le Livre sacré des Quichés, &c." (Paris, 1861); "Grammaire Quiché et le drame de Rabinal Achí" (Paris, 1862); "Quatre Lettres sur le Mexique" (Paris, 1868); "Cartas para servir de Introducción á la Historia primitiva de las Naciones civilizadas de la América setentrional" (Mexico, 1851); "Relación des choses du Yucatan" (Paris, 1864). In this work, which is a translation of the manuscript by Bishop Landa, the so-called Maya characters are given. Their value and significance are not yet fully established; "Monuments anciens du Mexique" (Palenque, etc., Paris, 1866); "Manuscrit Troiano" (Paris, 1869-70); "Bibliothèque mexico-guatémaliennne" (Paris, 1871).

With exception of short notices in some encyclopedias, there exists, apparently, no printed record of the life of Brasseur

de Bourbourg. His own works, chiefly the Introduction to the *Histoire des nations civilisées etc. de Mexique etc.*, furnished the chief data for the above sketch.

AD. F. BANDELIER.

**Brassicanus**, JOHANN ALEXANDER, a German humanist, b. probably at Cannstatt, 1500; d. at Vienna, 25 November, 1539. He was a member of an ancient family of Constance, named Köl or Köll, latinized, *Brassicanus*, his father being Johannes Brassicanus, the Württemberg humanist who taught in the Latin school at Urach up to 1508, and later in the *pædagogium* at Tübingen, but was chiefly known as a leader in the movement for the promotion of the humanities and as the author of a grammar then widely used, "*Institutiones grammaticæ*", thirteen editions of which were issued between 1508 and 1519. From his father, who died at Wildaad in 1514, Johann Alexander received an excellent education, which brought his intellectual powers to an early maturity, enabling him to matriculate at the University of Tübingen 13 January, 1514, and take his degree as Master of Arts in 1517. About this time he first gave evidence of his fertile poetic powers, and in 1518 he received the title of *Poeta et orator laureatus*. His coronation as poet must have taken place early in 1518, Emperor Maximilian at the same time granting him a coat of arms. The greatest humanists of the time kept in correspondence with Brassicanus, and are loud in praise of his intellectual powers. He lectured for a short time before the Faculty of Arts on the Latin poets; he also edited the eclogues of Calpurnius and Nemesianus which he had discovered. When, after Bebel's death (1516), a reaction once more set in against humanism, he availed himself of the first opportunity to absent himself temporarily from the scene of his former labours. In 1519 he attached himself to the suite of the royal orator Maximilian von Bergen, who was sent on various diplomatic missions by the king. After a sojourn in the Netherlands (1520) Brassicanus returned to Tübingen (1521) to pursue his study of law in connexion with his work as a teacher. In this way he was brought into intimate relations with Cantiancula, the jurist of Basle. Removing to Ingolstadt, he received there the degree of Doctor of Laws, also succeeding Reuchlin in the important chair of philology (1522). His position in this stronghold of Catholicity, however, soon became untenable, as he, like so many orthodox minds of the time who openly sympathized with the reforming activities of Luther, was suspected of being a confirmed Lutheran. At this juncture he found friends ready to assist him, in Johann Faber and Johann Camers, who worked zealously for his appointment to the University of Vienna, and whose influence helped to give a more orthodox tone to his opinions on religious questions. In 1524 he was called to the University of Vienna as professor of rhetoric, next receiving the professorship of the laws of the Empire, and not till 1528 the coveted chair of Greek literature, in addition to which he still retained that of jurisprudence. His disapproval of the Lutheran movement was now most pronounced, partially as a result of a more profound study of the Church Fathers; he was particularly exercised over the disastrous influence of Lutheranism on educational activities. On the appearance of the Turks before Vienna (1529) he fled to his native city, where he remained for a considerable period of time. The succeeding years are marked by his editions of the Fathers and the classics. Often in poor health, he died at the prime of life, leaving only a very extensive library, as his material resources had at all times been meagre. His writings give no clear conception of his intellectual importance which his contemporaries found so noteworthy. Among his works of independent authorship are: "*Oratio ad principes post obitum Maximiliani*"

(1519); "*Cæsar*" (1519); "*In divum Carolum electum Romanorum regem*" (1519); and other occasional poems and addresses. These do not rise above the average level of the occasional literature of humanism. No subtler meaning and no original or striking thoughts are concealed under the mediocre forms of expression. For the history of the University of Vienna, on the contrary, Brassicanus is of great importance, being numbered among the most vigorous representatives of the humanist movement.

Among the editions issued by Brassicanus, the following are particularly well known: "*Luciani Samosatensis Tragediæ*" (1527); Salviani, "*De vero judicio et providentiâ*" (Basle, 1530); Gennadius, "*De sinceritate christianæ fidei dialogus seu de viâ salutis humanæ*" (Vienna, 1530); "*Enchiridion de christianarum rerum memoriâ sive epitome historiæ ecclesiasticæ per Eusebium descriptæ auctore Haymone*" (Hagenau, 1531); "*Salonii Dialogi duo*" (ibid., 1532); Pothonis, "*De statu domus Dei*" and "*De magnâ domo sapientiæ*" (ibid., 1532).

JOHANN LUDWIG BRASSICANUS, younger brother of Johann Alexander (b. at Tübingen, 1509; d. at Vienna, 3 June, 1549) went to Vienna with his brother in 1524 and likewise won distinction both as a philologist and jurist. He spent some time in the service of Sigmund von Herberstein and Nicolaus Olah, and obtained the title of court historiographer of the Roman King, after which he studied law at Heidelberg (after 1532). Having been professor of Greek in Vienna for a short time (1534) and likewise in Padua, where in 1536 he was made *doctor iuris*, he was appointed professor of the Institutes at Vienna in 1537, and later professor of canon law. King Ferdinand summoned him to his council, at the same time granting him letters patent of nobility and a coat of arms. He was twice rector of the university and four times dean. In 1544 he was made provincial superintendent, achieving considerable reputation as a public official. He seldom wrote anything for publication, and left only a few addresses and treatises on legal subjects.

The best source of information for Johann Alexander Brassicanus is his letters, most of which are still unpublished (Imperial Library of Vienna, cod. 9705 and 9737), likewise a volume of collected letters in the Munich Library; extracts from both by HORAWITZ in *Sitzungsberichte der Wiener Akademie, phil.-hist. Klasse*, LXXXVI, 274 sqq., LXXXIX, 188 sqq., XCIII, 425 sqq. Cf. ASCHBACH, *Gesch. der Wiener Univ.*, III, 126-135; KINK, *Gesch. der kaiserlichen Univ. Wien* (Vienna, 1854), I, Pt. II, 139; DÖLLINGER, *Die Reformation*, I, 525; HEFEL in *Kirchenlex.*, II, 1206 sqq.; HURTER, *Nomenclator* (3d ed., Innsbruck, 1906), II, 1275 sqq.; HARTL and SCHRAUF, *Nachträge* [supplements] zum 3. JOSEPH SAUER.

**Braulio**, SAINT, Bishop of Saragossa, date of birth unknown; d. at Saragossa c. 651. In 631 he succeeded his brother John, whose archdeacon he had been, in the episcopal See of Saragossa. His influence extended not only to the bishops, but also to the Kings of Spain. In one of his letters (no. xxxvii) he urged King Chindaswinth to appoint a co-regent in the person of his son Receswinth. To his insistence with his friend Isidore of Seville, is due the inception and completion of the latter's "*Libri Etymologiarum*". Braulio was present at the synods held in Toledo in 633, 636, and 638. The members of the last-mentioned council selected him to write an answer to Pope Honorius I, who had reproached the Spanish bishops with negligence in the performance of their pastoral duties. Braulio in his letter (no. xxi) cleverly and fearlessly defended the conduct of the Spanish episcopate. Towards the end of his life, he complained bitterly of the loss of his eyesight. He was buried in the church of Nuestra Señora Merced del Pilar, where his tomb was discovered in 1290. His feast is celebrated in Spain

on 18 March, while the Roman Martyrology has it on the 26th.

Bräulio is the author (1) of a life of St. Emilian (Emilianus Cucullatus, or San Millan de la Cogolla), a priest of the Diocese of Turiasso, now Tarazona, and the writer of a hymn in honour of the same saint. (2) A collection of forty-four letters, of which there is no mention in antiquity, was discovered in the eighteenth century in the Spanish city of Leon. They form a valuable addition to our knowledge of the history of Spain under the Visigoths and were first published in the "España Sagrada" of Florez (XXX, 1775). (3) The division and titles of the "Etymologiarum Libri 20" of St. Isidore and a eulogistic notice of the latter's life, together with an enumeration of his writings, are also Bräulio's work. This notice and catalogue he added to the "De Viris Illustribus" of Isidore. It is found printed in Migne, P. L. (LXXI, 15-17). (4) Bräulio's authorship of the "Acts of the Martyrs of Saragossa" is usually admitted. He may also have written the "Passio S. Leocadii". His works are accessible in P. L., LXXX, 639-720.

GAMES, *Kirchengesch. von Spanien* (Ratisbon, 1862-79), I, 320-329, 344; II, ii, 145-149, 224-227; VENABLES in *Dict. Christ. Biog.*, s. v.; CHEVALIER, *Rép. bio-bib.* (Paris, 1905), I, 692; *Anal. Boll.* (1905), XXIV, 153.

N. A. WEBER.

Braun, PLACIDUS, a Bavarian historian, b. at Peiting near Schongau in Upper Bavaria, 11 February, 1756; d. at Augsburg, 23 October, 1829. At thirteen he went as a choir-boy of the Benedictine Abbey of Saints Ulrich and Afra in Augsburg, and was a pupil for six years in the Jesuit gymnasium of the same city. He entered the Abbey of Saints Ulrich and Afra as a novice, 13 May, 1775, and was ordained priest, 18 September, 1779. In 1785 he was made head librarian of the abbey. He arranged and catalogued the library and made known to scholars the rarities it contained through the fine descriptions he gave of its early printed books and manuscripts in two works which he published while librarian. These publications were: "Notitia historico-litteraria de libris ab artis typographicae inventionem usque ad annum 1479 impressis, in bibliotheca monasterii ad SS. Udalricum et Afram Augustae extantibus. Pars I: Aug. Vindel. 1788. Pars II: Notitia . . . libros complectens ab anno 1480 usque ad annum 1500 inclusive impressos. Ibidem, 1789" and "Notitia historico-litteraria de codicibus manuscriptis in bibliotheca liberi ac imperialis monasterii O. S. Benedicti ad SS. Udalricum et Afram extantibus. Aug. Vindel., 6 partes, 1791-1796". After the abbey was dissolved, and its building converted into a barrack in 1806, Braun lived with a number of fellow-members of the order in a house near the church of St. Ulrich.

In these new surroundings he endeavoured to observe the rules of the order as far as possible, gave assistance in pastoral work, and devoted himself to the study of the history of the Diocese of Augsburg and its suppressed monastic foundations. He was made a foreign member of the Academy of Sciences of Munich, 3 August, 1808, which honour he accepted, but he declined to settle in Munich. Among his historical writings the following are still valuable: "Geschichte der Bischöfe von Augsburg, chronologisch und diplomatisch verfasst" (4 vols., Augsburg, 1813-15); "Codex diplomaticus monasterii S. Udalrici et Afrae notis illustratus", issued as volumes XXII and XXIII of the "Monumenta Boica", (Munich 1814-15); "Geschichte der Kirche und des Stiftes der hll. Ulrich und Afra in Augsburg" (Augsburg, 1817); "Historisch-topographische Beschreibung der Diocese Augsburg", 2 vols. (Augsburg, 1823); "Die Domkirche zu Augsburg und der höhere und niedere Klerus an derselben" (Augsburg, 1829). Braun bequeathed his manuscripts, which were concerned chiefly with the history of the re-

ligious foundations and monastic houses of the Diocese of Augsburg, to the diocesan archives.

LINDNER, *Die Schriftsteller u.s.w. des Benediktiner-Ordens im heutigen Königreich Bayern*, II, 124-131 (Ratisbon, 1880); BEALIER in the *Revue Benedictine* (1899).

JOSEPH LINS.

Bravo, FRANCISCO, as far as known, author of the first book on medicine printed in America. His "Opera Medicinalia etc. (Authore Francisco Brauo Orsunensi doctore Mexicano medico)" was published at Mexico, 1570. Three years before, Dr. Pedrarias de Benavides had published his "Secretos de Chirurgia", at Valladolid in Spain, and while the latter work is invaluable for the knowledge of Indian medicinal practices, and is the earliest book on these topics known to have been published, the work of Dr. Bravo has the merit of being the first medical treatise printed in America. The first regular physician who came to Mexico appears to have been a Dr. Olivarez, although surgeon-barbers and other "healers and curers" are mentioned as having already practised with Cortez. Strict medical regulations were established by the municipal council of the city of Mexico in 1527, and extended to the apothecaries in 1529. Although the faculty of medicine at the University of Mexico was not founded until 1578, two "Doctors in Medicine" were received at that institution as early as 1553. Dr. Benavides was a native of Toro in Spain and came to Honduras about the year 1550. Thence he went to Mexico and returned to Spain, after having directed for eight years the hospital "del Amor de Dios" in the city of Mexico. Of Dr. Bravo it is only known that he was a native of Ossuna, and began to practice at Sevilla in 1553. He came to Mexico between that year and 1570. The date and place of his death are not known.

MENDOZA, *Historia del gran Reyno de China* (Antwerp, 1596), *Itinerario del Nuevo Mundo* in; GONZÁLEZ DÁVILA, *Treinta eclesiásticas, etc.* (Mexico, 1649); YCAZBALCETA, *Bibliografía mexicana* (Mexico, 1886); MENDIETA, *Historia eclesiástica Indiana*, (1599, and published at Mexico, 1870); TORQUEMADA, *Monarquía Indiana* (2d. ed., Madrid, 1723). The latter contains incidental references to the early physicians of Mexico.

AD. F. BANDELIER.

**Brazil, THE UNITED STATES OF.**—A vast republic of central South America covering an area larger than that of the United States of America (if Alaska and the Philippines are not included). It extends from 5° N. to 33° 41' S. latitude, and from 35° to 73° W. longitude. Its greatest length is 2,500 miles, its greatest breadth 2,600 miles, and it has an area of 3,218,130 square miles. It borders every other country on the continent of South America except Chile, being bounded on the north by Venezuela, British, Dutch, and French Guiana, and the Atlantic Ocean, on the east by the Atlantic Ocean, on the south by Uruguay and the Argentine Republic, and on the west by Paraguay, Bolivia, Peru, and Ecuador.

Brazil lies entirely east of the Andean mountain system. The basin of the Amazon occupies the northern and western portion of the country, and nearly the whole of this section is a vast plain, called the *Selvas*, which is, for the most part, less than 500 feet above sea level, and never exceeds 1,000 feet. The southern and eastern parts are plateaux, rising to heights of from 2,000 to 4,000 feet. Upon these plateaux are situated many mountain ranges. (This is said to be geologically the oldest part of the continent.) The mountain ranges of Brazil may be grouped into three systems, the most important of which is the Serra do Mar, which begins immediately north of the bay of Rio Janeiro, where the Organ mountains rise to 7,500 feet. This forms the south-eastern slope of the plateau to the narrow strip of coast along the Atlantic. In this system, to the west of Rio de Janeiro, is the highest peak in Brazil, Itatiaia, which has a height of nearly 10,000 feet.

Connecting with this range near Rio de Janeiro, and stretching northward, is the Serra Central, while a third system stretches northwestwards, separating the headwaters of the São Francisco and Tocantins Rivers from those of the Paraná.

The Atlantic coast line of the republic is about 4,000 miles long. North of Cape St. Roque it is low, and the slope towards the sea is gradual, but to the south of this cape the coast line is more elevated, the slope to the sea is steeper, and in the extreme south it becomes abrupt. The northern coast is but little broken, thus having few good harbours and not many islands, but along the southern coast there are many fine harbours. The system of rivers is perhaps unequalled for their number and the length of their courses in any part of the world. They are especially important in the north of Brazil, where they constitute the chief means of travel through a region rich in natural resources. Owing to the copious rainfall, most Brazilian rivers are navigable throughout the year. The principal ones are the Amazon, which is 2500 miles long and is navigable throughout almost its whole length, the Tocantins, and the São Francisco.

**CLIMATE.**—Covering so large an extent of territory, Brazil naturally has variations of climate. In the lowlands of the north, which are within the tropics, there is great heat, and the year is divided between the rainy and dry seasons of tropical regions. The rainy season begins in December or January and lasts until May or June. The rest of the year is generally dry. However, dry periods frequently occur during the rainy season, and rainy periods during the dry season. In the highlands of the central and southern portions there are four fairly well marked seasons. The vast Amazon basin is remarkable for its small seasonal variation of temperature; the thermometer rarely rises above 90° or falls below 75°. In the two southernmost States, Rio Grande do Sul and São Paulo, the temperature at times goes to the freezing point, especially in the highlands. The prevailing winds are the trade winds from the east. These are the strongest in the valley of the Amazon from July to November, and thus the heat of the dry season is somewhat mitigated. The country is generally healthful, with the exception of the marshy banks of some of the rivers, the swamps, and regions where drainage is poor; in these places intermittent fevers are very common. Yellow fever has appeared at times, but has always been confined to the coast.

**AGRICULTURE.**—Brazil has extensive tracts of fertile land, especially along the Amazon and in the south-eastern portion; but the greater part of the plateaux is fit only for grazing. By far the most important product is coffee, of which Brazil produces more than any other country in the world. The principal coffee regions are São Paulo, Minas Geraes, Espírito Santo, and Rio de Janeiro. Sugar, the next product in importance, is extensively produced in Pernambuco, Bahia, and Ceará, tobacco in Bahia, and cocoa in the lower Amazon. Maize, beans, rice, and tropical fruits and vegetables are grown, but more for home consumption than for export.

**MINERAL RESOURCES.**—In mineral resources Brazil is probably the richest country in the world, but scarcity of population and capital have retarded its progress. It is rich in gold and diamonds, especially the State of Minas Geraes, which is to Brazil more than California and Pennsylvania together are to the United States. Gold-mining is carried on to a limited extent in Minas Geraes and Bahia, chiefly with British capital. These same two states were at one time the world's chief producers of diamonds, but the discovery of the South African mines has greatly depreciated the Brazilian product, which amounts to about 40,000 carats per year, and it is estimated that since the discovery of diamonds in

Brazil (1723) the total yield has been 12,000,000 carats, valued at \$100,000,000. Besides gold and diamonds, Brazil is rich in iron, lead, copper, zinc, manganese, and quicksilver, but the mining of these is impeded by the lack of cheap fuel and labour.

**MANUFACTURES.**—These are generally on a comparatively small scale. The most important is the production of cotton goods, especially in the northern cities. In 1899 there were 134 cotton factories within the republic. Boots, shoes, cord, twine, hempen cloths for coffee sacks, furniture, saddles, and hats are also manufactured.

**RAILROADS AND TRANSPORTATION.**—Railway enterprise has made some little progress. In 1899 there were 8723 miles of railroad in operation, 4992 miles in course of construction, and 8440 miles projected. The most complete railroad systems are in the coffee regions of São Paulo, Minas Geraes, and Rio de Janeiro. A considerable proportion of these roads was built with a government guarantee of interest on the outlay. The rivers have steam navigation through many miles of their courses, and there are several Brazilian lines of coasting steamers.

**COMMERCE.**—The foreign commerce of Brazil is quite large and is increasing yearly. Coffee is the staple article of commerce, constituting about sixty per cent of the total exports. Most of it finds a market in the United States. Sugar is second in importance, and then come rubber, cotton, hides, tobacco, dye and cabinet woods, gold, and diamonds. The imports consist of all kinds of manufactured goods, cotton and woollen clothing, machinery, ironware, coal, petroleum, and foodstuffs. Great Britain controls about forty per cent of the import trade, Germany and France are next in importance, and the United States next.

**POPULATION.**—The population of Brazil, according to the official returns of 1890, was 14,333,915. A later census, taken in 1900, was rejected by the legislature as inaccurate. The population in 1903 according to an unofficial estimate was 19,500,000. According to the official figures of 1890, there were 14,179,615 Catholics; 143,743 Protestants; 3300 of other creeds; and 7257 who professed no religion. It will thus be seen that the country is overwhelmingly Catholic. The population is composed of: (1) people of pure Portuguese blood, who form a large percentage of the total; (2) full negroes; (3) native Indians; (4) people of mixed race (the most numerous of all); and (5) a few European immigrants. The Portuguese portion of the population, as they constitute the wealthy and educated class, have made Portuguese the national language. Most of the semi-civilized Indians, particularly in the eastern States, speak the *lingua geral*, a language adapted by the Jesuit missionaries from the original language of the Tupinambaras, one of the largest of the eastern tribes. There are many different tribes, among which the chief are the Tupi, the Guarany, and the Amagua.

**GOVERNMENT.**—Brazil is a federal republic of twenty States, with a Federal District. The constitution is modelled upon that of the United States. The legislative power is vested in the president of the republic and a national congress consisting of a Senate and a House of Representatives. The Senate consists of 63 members, three from each State and the Federal District, elected directly by the people for a period of nine years. The House of Representatives consists of a number of members elected by the people for a term of three years, one representative for each 70,000 inhabitants, but with a minimum membership of four for any State. All who are legally citizens of the republic exercise the right to vote, except beggars, illiterates, soldiers receiving pay, and those who for any reason may have lost their rights as citizens. The executive authority is exercised by the president, or in his absence or

BRAZIL  
LAW SCHOOL, SÃO PAULO  
HOSPITAL OF MERCY, RIO DE JANEIRO

disability, a vice-president. The president is elected by popular vote for a term of four years, and he cannot serve for two successive terms. He is assisted by a cabinet, the members of which he appoints or removes at will. The cabinet ministers preside over the following six departments: (1) finance; (2) war; (3) industry, railways, and public works; (4) interior and justice; (5) Navy; (6) foreign affairs. The president, by virtue of his office, is in supreme command of the Army and Navy. He possesses the veto power over legislation, but his veto may be overruled by a two-thirds vote of both Houses. The judicial power is vested in a federal supreme court consisting of fifteen members who are appointed for life by the president with the approval of the Senate. The States enjoy a greater measure of autonomy than those of the United States of North America. They are governed by their own legislatures and governors and have their own judicial systems. Each State is divided into municipalities; each municipality controlled by a council and a prefect.

**RELIGION.**—Under the Empire the Catholic was the only recognized Church, and it was supported by the States. Other religions were tolerated, but the Catholic was the official church. After the revolution of 1889, however, the separation of Church and State was decreed. The Provisional Government issued, 7 January, 1890, a decree proclaiming the separation of Church and State, guaranteeing freedom of worship, and declaring that no church thereafter should be subsidized by the government, nor in any way receive support either from the federal government or from those of the individual States. By the terms of this decree public officers were forbidden to interfere in any way with the formation of religious societies, and it was declared to

CHURCH OF THE CANDELARIA (PURIFICATION), RIO DE JANEIRO

be unlawful to stir up religious dissension among the people. Every religious body was at liberty to worship according to its own rites, while each individual could live according to his belief, and unite in societies with others, and build churches if he chose. The salaries of those in the service of the Church were ordered to be discontinued at the expiration of a year. The existing churchyards were secularized, and the question of the establishment of new cemeteries was left in the hands of individual communities. Religious bodies, however, could choose separate burial places, though always subject to the laws. The existing religious holidays, except Sunday, were abolished by another decree, and nine new ones established commemorating secular events. Later, a civil marriage law was passed, somewhat resembling those of the United States and France, and also a divorce law. This latter, however, bore the stamp of the religious

training of the people, for by its terms, neither party was permitted to marry again during the life of the other.

The conversion of Brazil, beginning about the middle of the sixteenth century, was brought about by the Jesuits, after whom came the Franciscans, and these were followed by the Benedictines. The country to-day is almost entirely Catholic. Of the nineteen and a half millions, over eighteen millions are of the Catholic faith. There are 5127 churches and chapels, 2067 secular and 559 regular clergy; 2083 nuns engaged in hospitals and educational institutions; 524 schools, 12 large and 17 small seminaries.

**ECCLESIASTICAL ORGANIZATION.**—The entire republic is divided into the two ecclesiastical provinces of São Salvador da Bahia and São Sebastião (Rio de Janeiro). Each province containing nine suffragan dioceses, as follows: *Province of São Salvador da*

CHURCH OF BOMFIM, BAHIA

*Bahia* (diocese created 1552, archdiocese 1676); suffragan dioceses of Olinda (1676); São Luis do Maranhão (1676); Belem do Pará (1719); Goyaz (1826); Fortaleza, or Ceará (1854); Manaoz (1893); Parahyba, (1893); Alagoas (1901); Piahy (1902). *Province of São Sebastião* (diocese created 1675, archdiocese 1893); suffragan dioceses of Cuyabá (1745); Marianna (1745); São Paulo (1745); São Pedro do Rio Grande do Sul (1848); Diamantina (1854); Curitiba do Paraná (1893); Petropolis (1893); Espírito Santo (1896); Porto Alegre (1900). Brazil has received a great honour at the hands of the present pope, that of having the first South American cardinal ever nominated chosen among its clergy.

**EDUCATION.**—During the three centuries of colonial rule, Brazil made very little progress in the education of its people. There were few schools except the Jesuit colleges, and whatever libraries there were belonged to private individuals. The wealthy classes sent their children to Portugal to study, while those who could not bear this expense remained ignorant. After the declaration of independence, in 1822, conditions were somewhat improved, but the educational system was so crude that little progress was made until 1854, when the whole school system was reorganized. Since then there has been good progress in education, literature, and science, especially in the large cities. In the interior education is in a backward state, owing to the isolation of the inhabitants, and to lack of facilities of communication. For this reason the percentage of illiteracy for the entire country remains high (above 84%). At the present

time Brazil has a system of elementary, secondary, and higher education. Congress has the sole power to create institutions of higher instruction and secondary, or high-school, education throughout the country, as well as of primary education in the Federal District. The Constitution provides that instruction given in public institutions shall be secular, and that primary education be free and at the expense of the States and municipalities. In most of the States primary education is compulsory. The schools are generally well equipped with libraries, laboratories, and appliances and furniture of different kinds. The primary schools are divided into first- and second-grade schools. Secondary education is also organized on a good basis. At the head of these secondary schools stands the *Gymnasio Nacional* at Rio de Janeiro, which was formerly Pedro II College. The national institutions devoted to the higher, or university, education are: two law schools at Pernambuco and São Paulo; two medical schools at Rio de Janeiro and Bahia; a polytechnic school at Rio de Janeiro; a mining school at Ouro Preto, in the State of Minas Geraes; a school of fine arts at Rio de Janeiro. There are some excellent public libraries throughout the country, the largest being the National Library at Rio de Janeiro, which contains 235,000 printed volumes, 182,000 manuscripts, and 100,000 iconographical pieces. This institution was begun with the historical library which King John VI brought from Portugal and presented to Brazil, and it was greatly augmented by the collection of the great Portuguese writer Barbosa Machado.

**HISTORY.**—Brazil was discovered on the 26th of January, 1500, by Vicente Yanez Pinzón, a Spaniard who had been a companion of Columbus. Two months later Dom Manoel, King of Portugal, fitted out a squadron for a voyage around the southern end of Africa to the East Indies under command of Pedro Alvares de Cabral. Contrary winds, however, drove him far out of his course, and after drifting about for some time he came upon an unknown land. He cast anchor in a haven which he called Porto Seguro, on Good Friday, 24 April, 1500. On Easter Sunday an altar was erected, Mass was celebrated, and Cabral formally took possession of the country in the name of Portugal. He then continued on his way to India, but first dispatching one of his ships to Portugal to report his discovery. Cabral named the newly discovered land *Vera Cruz* (the land of the True Cross), but the king in notifying the sovereigns called it *Santa Cruz* (Holy Cross). Very shortly thereafter it began to be called *Brazil*, from the name of a wood which grew in that region, and the name has been retained ever since.

Although the country had been discovered by a Spaniard, Spain could make no claim. According to the Bull of Alexander VI (4 May, 1493) the dividing line between Spanish and Portuguese possessions had been fixed at a meridian 100 leagues west of Cape Verde. All discoveries east of this line were to belong to Portugal; those west of it to Spain. But

in the year following, by the Treaty of Tordesillas, the dividing line was extended to 370 leagues west of the Cape Verde Islands, and Spain was thus barred from the eastern portion of South America. In order to encourage colonization, grants, or "captaincies", were given to prominent Portuguese who were willing to settle in the country. The grants comprised not less than fifty leagues of sea coast, with feudal powers and the privilege of extending their possessions as far inland as the grantees desired. Thus nearly the entire Brazilian coast was before long dotted with Portuguese settlements more or less skilfully administered. The first of these was established in 1532, at S. Vicente, within the present State of S. Paulo, by Martinho Affonso de Sousa, and the others at intervals thereafter. Cattle and sugarcane were imported from Madeira, and the systematic cultivation of the latter began.

But these early settlers had great troubles—with the Spaniards, who sought to gain a foothold east of the line of demarcation; with the French, who were trying to establish themselves on the coast; with the natives who were antagonistic to all Europeans. So that, for their common protection, it was deemed expedient that the "captains" should forego some of their prerogatives, and concentrate all the Portuguese power into the hands of a Governor General appointed by the Crown. The first Governor General was Thomé de Sousa, who came over in 1547 and placed his capital at Bahia. The College of São Paulo was established in Piratininga soon after the arrival of the first Bishop of Brazil, in 1552, and of a number of the Jesuits in 1553.

These first missionaries became friendly with the natives, and their college soon became a centre of influence.

PUBLIC BUILDINGS, SÃO PAULO

In 1555 Nicolas Durand de Villegaignon, aided by Coligny, the French Huguenot leader, settled with a few Frenchmen on a little island in the bay of Rio de Janeiro. But these French settlers were driven away by the Portuguese in 1560, and France was ever after unable to gain a foothold in Brazil. The settlement, however, was made permanent by the Portuguese who gave it the name of São Sebastião, and to this day Rio de Janeiro is officially called São Sebastião do Rio de Janeiro.

From 1580 to 1640, Brazil, as a dependency of Portugal, was in the hands of Spain, and during the latter part of this period Holland, being at war with Spain, seized a good portion of the country. A long struggle between Portugal and Holland for the possession of the country followed later, lasting until 1654, when the Dutch surrendered the places they held, and the Portuguese were rid of all European rivals. In 1763 the capital was changed to Rio de Janeiro, and the Governor was given the title of Viceroy of Portugal.

In 1807 Napoleon's troops invaded Portugal, with the intention of seizing the royal family. The prince regent, Dom João, fled, with the royal family, and under an English escort set sail for Brazil, where he was enthusiastically received. Here Dom João in-

stituted several reforms, notable among which were the opening of all Brazilian ports to the commerce of the world and the decree of 16 January, 1815, declaring Brazil to be no longer a colony, but an integral part of the Kingdom of Portugal. Soon after this, the prince regent succeeded to the throne as Dom João VI. Revolutionary troubles in Portugal, in 1820, making it necessary for Dom João to return thither, he appointed his son Dom Pedro, a young man of twenty-three, "Lieutenant to the King" and set sail for Portugal in 1821. From that time the Portuguese Cortes began to regard Brazil with anxiety; Dom Pedro was considered as more Brazilian than Portuguese. Revolutionary disturbances, moreover, had broken out in several of the provinces, notably in Pernambuco and Bahia. To check the growing power of Brazil, measures were passed detrimental to her interests, and tending to a revival of colonial conditions. As the Brazilian members of the Cortes were greatly in the minority, their resistance could not be effective. Matters came to a crisis when the Cortes finally ordered Dom Pedro to return to Portugal. The Brazilians rallied and besought him to ignore the order. Realizing his opportunity, Dom Pedro struck the first blow for independence, his decision being received with the greatest enthusiasm. The few Portuguese troops stationed in the country made but a half-hearted resistance, and on the 12th of October, 1822, Dom Pedro was proclaimed Emperor and Perpetual Defender of Brazil.

A popular assembly was convened in May, 1823, and a message from the emperor was read proposing many liberal ideas to be embodied in the forthcoming constitution. But discontented spirits raised such bitter opposition in the assembly that the emperor dissolved it. He later appointed a committee of ten to draft the constitution, and it was finally adopted 24 March, 1825. Dom Pedro's popularity, however, soon began to wane. He produced the impression of not being truly Brazilian at heart, by his employment of a foreign force, by his continual interference in the affairs of Portugal, and especially by his appointment of Portuguese to the highest offices, to the exclusion of natives. The Brazilians became disgusted at seeing their government conducted by foreigners, and soon they were in open rebellion. After vain attempts to suppress the revolution, the emperor abdicated (7 April, 1831) in favour of his six-year-old son, Dom Pedro de Alcantara, and sailed away to Portugal.

The government was now placed in the hands of a regency, consisting at first of three members and later of a single individual. In 1840, when the young emperor had reached the age of fifteen, it was proposed by those who had become disgusted at the abuses of the regency, that the minority of Dom Pedro II be declared expired, in spite of the fact that the constitution had fixed the minority of the emperor at eighteen years. After a heated and acrimonious debate, the regency was abolished, and the young emperor placed in full possession of the throne (23 July, 1840). The new government had trouble at intervals with the Republican party, notably in 1848; but these risings were easily suppressed. In 1851 Brazil took an active part in thwarting the designs of the Argentine dictator, Rosas, who sought to seize Uruguay and Paraguay. Rosas was driven from the country and had to take refuge in England. In 1853 a decree was issued forbidding the importation of slaves. Yellow fever, until then unknown in Brazil, had made its appearance a short time before, and it was thought that the disease had been brought into the country by the slaves. In 1855 a fleet was sent to settle a dispute with Paraguay, concerning Brazil's right of way upon the Paraná River, the claim of Brazil being based upon the fact that the river has its origin within her

boundaries. The expedition was unsuccessful, and for ten years thereafter Brazil was hampered by many restrictions. In 1864 an outrage against Brazil on the part of Señor Lopez, the dictator of Paraguay, precipitated a conflict between Brazil, Argentina, and Uruguay on one side and Paraguay on the other. A bitter struggle now ensued, Paraguay offering a stubborn resistance which ended only with the death of Lopez in battle in 1870. Brazil, bearing the brunt of the war on her side, lost many thousands of men and a vast amount of money.

In 1871 the death-blow was given to slavery in Brazil by a decree providing that every child thereafter born of slave parents should be free. Slavery had been greatly checked since the decree of 1853 prohibiting the importation of slaves, so that, with this new law in force, it was not long before slavery came to an end in the country. On 1 May, 1886, the Princess Isabelle, regent of Brazil while the emperor was in Europe, proclaimed the abolition of slavery.

The fact that Dom Pedro reigned for nearly fifty years would indicate that he was liberal-minded, progressive, and enlightened, and that he was well liked by the people. But the work of freemasonry and the loss the planters suffered by the emancipation of their slaves created a spirit of disaffection. The outcome was that, after a bloodless revolution (15 November, 1889), Dom Pedro was deposed, and a Republic was proclaimed, with General Deodoro da Fonseca as head of the provisional government. A decree was issued continuing the imperial civil list and granting Dom Pedro a subsidy of \$2,500,000, both of which offers were refused by him. On the following day (16 November) Dom Pedro and his family set sail for Portugal. The new Constitution, modelled upon that of the United States, was promulgated 23 June, 1890, and in February of the following year General Fonseca was elected president of the new republic. But before the end of that year his arbitrary methods precipitated a revolutionary movement in Rio de Janeiro, and he was compelled to resign. He was succeeded by the vice-president, General Peixoto. In 1893, a revolt, headed by Admirals Da Gama and Mello, was started; but it was of short duration. Rio de Janeiro was blockaded by the rebels, but the revolution collapsed soon after. In 1894 Peixoto was succeeded by Dr. Prudente de Moraes, who was called upon to face still another uprising, in 1897, under the leadership of Antonio Conselheiro. After a few months this trouble also was crushed. In 1898 Dr. Campos Salles, who had been active in republican politics, succeeded to the presidential chair; Dr. Francisco Rodrigues Alves succeeded him 15 November, 1902, and Affonso Penna assumed office 15 November, 1906.

VENTURA FUENTES.

**Bread, LITURGICAL USE OF.**—In the Christian liturgy bread is used principally as one of the elements of the Eucharistic sacrifice. Our Divine Lord consecrated bread and wine at the Last Supper, and commanded His disciples to do the same in commemoration of Him, and thus ever since bread made of wheaten flour has been offered at the altar for the officiating priest to consecrate into the Body of the Lord. It is a debated question whether Christ used leavened or unleavened bread at the institution of

the Holy Eucharist, since different conclusions may be drawn, on the one hand, from the Gospel of St. John and from the synoptic Gospels on the other. History does not establish conclusively what the practice of the Apostles and their early successors was, but it may be asserted with some probability that they made use of whatever bread was at hand, whether azymous or fermented. Different customs gradually began to grow up in different localities, and then became traditional and fixed. The Eastern Churches for the most part made use of leavened bread, as they still do, while the Western Churches declared their preference for unleavened bread. At the time of the schism this difference of practice gave rise to much discussion of the value of their respective claims in following the example of Christ, and fomented bitter controversy even in recent years. Either kind of bread is, of course, valid matter for the sacrifice, so the difference of usage should be of little dogmatic importance. (See *ÆTRES*).

In the primitive Church the bread and wine for the sacrifice were brought to the altar by the faithful, each contributing his share. A relic of this practice may now be seen in the rite of consecration of a bishop, for at the Offertory the newly consecrated bishop presents to the consecrator, among other gifts, two loaves of bread, one of which is gilded, the other silvered, and both ornamented with the coat of arms of the consecrator and of the bishop elect. A similar usage is found in the ceremony of the solemn canonization of saints, where at the Offertory, one of the cardinal-priests makes an offering to the pope of two loaves of bread, one gilded and the other silvered. Although in the beginning bread which served for common use was offered at the altar, still, growing reverence for the Holy Eucharist soon effected a change, so that the altar-breads were specially prepared, assuming a round form of moderate thickness, and were stamped with a cross or some other significant religious emblem having special reference to Our Lord in the Eucharist. These hosts became smaller and thinner in the Western Church until they assumed the light, wafer-like form now so common.

In the Holy Eucharist, bread thus serves for the offering of the sacrifice, and after the Consecration for the Communion of the celebrant, the clergy, and the laity, as well as for reservation in order that Communion may be brought to the absent, or that the Blessed Sacrament may be adored in the tabernacle or in the monstrance. In Rome at one time it was the custom of the pope to send a part of the consecrated bread to the priests in the titular churches that all might be united in offering the same sacrifice, so that this *fermentum*, as it was called, might in a spiritual sense leaven the whole mass of the faithful, and make them one with the pope in faith and worship. Bishops also were once accustomed to send the Eucharistic Bread to their priests for the same purpose, and also to each other to signify that they admitted one another into ecclesiastical communion. To prevent abuses and profanation to the Sacrament, this custom was early prohibited and soon disappeared. The usage then began of sending blessed bread instead of the Holy Eucharist to those who did not communicate at the Mass, and to those who might wish to receive this gift as a pledge of communion of faith. Those who did not communicate received bread offered at the Offertory of the Mass but not consecrated. It appears to have received no other blessing than that of the Offertory prayer, and was considered blessed because it formed part of the oblation. This bread is called *eulogia*, because it is blessed and because a blessing accompanies its use; it is also called *antidoron*, because it is a substitute for the *doron*, the real gift, which is the Holy Eucharist. The *eulogia* is prescribed in the liturgies of St. Basil and St. John Chrysostom, but now it is distributed to all,

both communicants and non-communicants. It existed also in the West, and is mentioned by St. Gregory of Tours, the Council of Nantes, and Leo IV, in terms which would make it appear a somewhat universal custom.

The little loaves or cakes of bread which received a special benediction and were then sent by bishops and priests to others, as gifts in sign of fraternal affection and ecclesiastical communion, were also called *eulogia*. Persons to whom the *eulogia* was refused were considered outside the communion of the faithful, and thus bishops sometimes sent it to an excommunicated person to indicate that the censure had been removed. Later, when the faithful no longer furnished the altar-bread, a custom arose of bringing bread to the church for the special purpose of having it blessed and distributed among those present as a token of mutual love and union, and this custom still exists in the Western Church, especially in France. This blessed bread was called *panis benedictus*, *panis lustratus*, *panis lustralis*, and is now known in France as *pain bénit*. It differs from the *eulogia* mentioned above, because it is not a part of the oblation from which the particle to be consecrated in the Mass is selected, but rather is common bread which receives a special benediction. In many places it is the custom for each family in turn to present the bread on Sundays and feast days, while in other places only the wealthier families furnish it. Generally the bread is presented with some solemnity at the Offertory of the parochial Mass, and the priest blesses it before the Oblation of the Host and Chalice, but different customs exist in different dioceses. The prayer ordinarily used for the blessing is the first or second *benedictio panis* printed in the Roman missal and ritual. The faithful were exhorted to partake of it in the church, but frequently it was carried home. This blessed bread is a sacramental, which should excite Christians to practise especially the virtues of charity and unity of spirit, and which brings blessings to those who partake of it with due devotion. The Church, when blessing it, prays that those who eat it may receive health both of soul and body: "ut omnes ex eo gustantes inde corporis et animæ percipiant sanitatem"; "ut sit omnibus sumentibus salus mentis et corporis". In some instances the *pain bénit* was used not only with superstitious intent, and its virtues exaggerated beyond measure, but also for profane purposes. This usage was brought from France to Canada, and was practised chiefly in the province of Quebec. There the *pain bénit* was blessed immediately after the Asperges, and then distributed to those who assisted at high Mass. The parishioners furnished it in turn, and vied with one another in presenting as rich and fine a *pain bénit* as possible, until finally the bishops, seeing that it entailed too much expense upon those in poorer circumstances, prohibited it. Within the last twenty-five or thirty years the custom has almost entirely disappeared.

In the present Roman ritual there are six blessings for bread. Two of these are entitled simply *benedictio panis*, and, as mentioned above, are often used for blessing the *pain bénit*. The third, entitled *benedictio panis et placentarum* (blessing of bread and cakes), is found in the appendix among the blessings which are not reserved. The other three are approved for particular localities, and are special blessings given under the invocation of certain saints, usually on their feast days, in order to gain special favours through their intercession. The first, approved for the Archdiocese of Cologne, is a blessing of bread, water, and salt given under the invocation of St. Hubert; the second, approved for the Diocese of Bois-le-Duc, is a blessing of bread and water under the invocation of St. Machutus; and the third, for the Diocese of Urgel, is a blessing of bread, wine, water, and fruit to be used on the feast of St. Blasius. Some other places have local customs

of blessing bread on certain feast days, as for instance on the feasts of St. Genevieve, of St. Nicholas of Tolentino, and others.

Bread is also used in the rite of ordination of priests, as a Host is placed upon the paten which the candidates touch, in order to signify that power is given to them to consecrate bread into the Body of Christ. It is also sometimes prescribed in the rubrics that the bishop, after using the Holy Oils, as for example at confirmation and ordination, shall cleanse his fingers with crumbs of bread. Such, in the Christian liturgy, are the more important and general uses of bread, which, it will be seen, are confined principally to the Holy Eucharist. With the exception of some few blessings of bread for special purposes, most of these customs are closely connected with the Eucharistic sacrifice, and generally derive their origin from ceremonies practised with the Eucharistic bread. (See ANTIDORON, AZYMES, EUCHARIST, EULOGIA.)

**Breast, STRIKING OF THE**, as a liturgical act is prescribed in the Holy Sacrifice of the Mass during the Confiteor at the phrase "Through my fault," (three times), at the Nobis Quoque Peccatoribus (once), at the Agnus Dei (three times), and at the Domine, Non Sum Dignus (three times). With bowed head, except at the Nobis Quoque Peccatoribus, moderately and without noise, the celebrant strikes his breast with the right hand, the fingers being held closely together and curved or fully extended, as the rubrics are silent on this point; after the consecration, however, with the last three fingers only, since the thumb and index finger, which are joined, must not come in contact with the chasuble. At the Agnus Dei in requiem Masses the striking of the breast is omitted, to show that the celebrant is thinking of the departed more than of himself. The faithful are accustomed to this practice as well as the priest.

The early Christians were familiar with the practice, as St. Augustine and St. Jerome testify. "No sooner have you heard the word 'Confiteor,'" says the former, "than you strike your breast. What does this mean except that you wish to bring to light what is concealed in the breast, and by this act to cleanse your hidden sins?" (*Sermo de verbis Domini*, 13). "We strike our breasts," declares St. Jerome, "because the breast is the seat of evil thoughts: we wish to dispel these thoughts, we wish to purify our hearts" (*In Ezechiel*, c. xviii). A warrant for these statements is found in the Psalmist: A contrite and humbled heart, O God, Thou wilt not despise (*Ps.*, I, 19). The petitioner at the Throne of Mercy would chasten his heart and offer it as a sacrifice to God, who healeth the broken of heart and bindeth up their wounds (*Ps. cxlvi*, 3). The ancient Christians were accustomed to strike the breast when they heard mention made of sensual sins; at the "Forgive us our trespasses" of the Pater Noster; and in detestation of the crime of the Jews, at the words of the Gospel, "Thou hast a devil", applied to Christ.

**Brébeuf, JEAN DE**, Jesuit missionary, b. at Condé-sur-Vire in Normandy, 25 March, 1593; d. in Canada, near Georgian Bay, 16 March, 1649. His desire was to become a lay brother, but he finally entered the Society of Jesus as a scholastic, 8 November, 1617. According to Ragueneau it was 5 October.

Though of unusual physical strength, his health gave way completely when he was twenty-eight, which interfered with his studies and permitted only what was strictly necessary, so that he never acquired any extensive theological knowledge. On 19 June, 1625, he arrived in Quebec, with the

Recollect, Joseph de la Roche d'Aillon, and in spite of the threat which the Calvinist captain of the ship made to carry him back to France, he remained in the colony. He overcame the dislike of the colonists for Jesuits and secured a site for a residence on the St. Charles, the exact location of a former landing of Jacques Cartier. He immediately took up his abode in the Indian wigwams, and

JEAN DE BRÉBEUF, S.J.

has left us an account of his five months' experience there in the dead of winter. In the spring he set out with the Indians on a journey to Lake Huron in a canoe, during the course of which his life was in constant danger. With him was Father de Noûe, and they established their first mission near Georgian Bay, at Ihonatiria, but after a short time his companion was recalled, and he was left alone.

Brébeuf met with no success. He was summoned to Quebec because of the danger of extinction to which the entire colony was then exposed, and arrived there after an absence of two years, 17 July, 1628. On 19 July, 1629, Champlain surrendered to the English, and the missionaries returned to France. Four years afterwards the colony was restored to France, and on 23 March, 1633, Brébeuf again set out for Canada. While in France he had pronounced his solemn vows as spiritual coadjutor. As soon as he arrived, viz., May, 1633, he attempted to return to Lake Huron. The Indians refused to take him, but during the following year he succeeded in reaching his old mission along with Father Daniel. It meant a journey of thirty days and constant danger of death. The next sixteen years of uninterrupted labours among these savages were a continual series of privations and sufferings which he used to say were only roses in comparison with what the end was to be. The details may be found in the "Jesuit Relations".

In 1640 he set out with Father Chaumonot to evangelize the Neutres, a tribe that lived north of Lake Erie, but after a winter of incredible hardship the missionaries returned unsuccessful. In 1642 he was sent down to Quebec, where he was given the care of the Indians in the Reservation at Sillery. About the time the war was at its height between the Hurons and the Iroquois, Jogues and Bressani had been captured in an effort to reach the Huron country, and Brébeuf was appointed to make a third attempt. He succeeded. With him on this journey were Chabanel and Garreau, both of whom were afterwards murdered. They reached St. Mary's on the Wye, which was the central station of the Huron Mission. By 1647 the Iroquois had made peace with the French, but kept up their war with the Hurons, and in 1648 fresh disasters befell the work of the missionaries—their establishments were burned and the missionaries slaughtered. On 16 March, 1649, the enemy attacked St. Louis and seized Brébeuf and Lallemant,

who could have escaped but rejected the offer made to them and remained with their flock. The two priests were dragged to St. Ignace, which the Iroquois had already captured.

On entering the village, they were met with a shower of stones, cruelly beaten with clubs, and then tied to posts to be burned to death. Brébeuf is said to have kissed the stake to which he was bound. The fire was lighted under them, and their bodies slashed with knives. Brébeuf had scalding water poured on his head in mockery of baptism, a collar of red-hot tomahawk-heads placed around his neck, a red-hot iron thrust down his throat, and when he expired his heart was cut out and eaten. Through all the torture he never uttered a groan. The Iroquois withdrew when they had finished their work. The remains of the victims were gathered up subsequently, and the head of Brébeuf is still kept as a relic at the Hôtel-Dieu, Quebec. His memory is cherished in Canada more than that of all the other early missionaries. Although their names appear with his in letters of gold on the grand staircase of the public buildings, there is a vacant niche on the façade, with his name under it, awaiting his statue. His heroic virtues, manifested in such a remarkable degree at every stage of his missionary career, his almost incomprehensible endurance of privations and suffering, and the conviction that the reason of his death was not his association with the Hurons, but hatred of Christianity, has set on foot a movement for his canonization as a saint and martyr. An ecclesiastical court sat in 1904 for an entire year to examine his life and virtues and the cause of his death, and the result of the inquiry was forwarded to Rome.

**Breda (BREDANA)**, DIOCESE OF, situated in the Dutch province of Brabant and suffragan of Utrecht. The city was founded in the twelfth century and with the surrounding territory formed the Barony of Breda, an imperial fief hereditary in the house of Nassau to which Queen Wilhelmina belongs. This barony was formerly within the ecclesiastical jurisdiction of the See of Liège, but became subject to Antwerp when Pius IV made that city (1561) the seat of a new diocese. Breda suffered much during the political disorders of the sixteenth and seventeenth centuries, in consequence of which the free exercise of the Catholic religion was more or less restricted. The iconoclasts in their outbreak of 22 August, 1566, left some sad traces yet visible at Breda. In the years immediately following, the city and its district were alternately held by Spanish troops and by those of the States-General, though the latter were destined to be its eventual masters. It passed finally into their hands 10 October, 1637, when it surrendered to the *Stadtholder*, Prince Frederick Henry.

Thenceforth, as was their custom, the Dutch Protestants prohibited strictly the exercise of the Catholic religion. At the Peace of Westphalia in 1648 the Barony of Breda was made directly subject to the States-General and lost thereby the last remnants of its ancient liberty. The "reformed" religion was alone allowed, and rigorous measures were used to prevent the exercise of the Catholic religion. However, as elsewhere in the Dutch provinces it was kept alive secretly by good priests whose exemplary zeal was imitated by their flocks, in whom the love of the ancient Faith was purified and intensified by persecution. This unhappy situation lasted until the beginning of the nineteenth century. A

little earlier the Batavian Republic had proclaimed (1796) liberty of religious worship, and in this Catholics saw a presage of better days. The constitution of the new Kingdom of the Netherlands (1815) guaranteed this boon more effectively.

When the Diocese of Antwerp was abolished by the Concordat of 15 July, 1801, Pius VII created by his Brief of 22 March, 1803, the Vicariate Apostolic of Breda and allotted to it the northern part of the former Diocese of Antwerp, then within the limits of the Batavian Republic. He also added thereto a part of the former Diocese of Ghent, situated in the province of Zeeland and known as Staats Vlaanderen. The Right Rev. Adriaan van Dongen (1803-26) was the first vicar Apostolic, and he established the diocesan (theological) seminary at Hoeven. By the terms of the Concordat, signed 17 August, 1827, between the Holy See and King William I, the Vicariate Apostolic of Breda was incorporated with the new See of Bois-le-Duc, whereby the ecclesiastical independence of the former was seriously threatened. Indeed, this arrangement was already becoming effective when the Belgian Revolution of 1830 broke out. The final separation of Belgium from Holland (1831) now made it impossible to execute the Concordat of 1827. The ecclesiastical situation, therefore, remained unchanged, except that the vicar Apostolic of Breda was made temporarily administrator Apostolic. When Pius IX re-established the hierarchy in Holland by his Brief, "Ex quâ die" (4 March, 1853), the Vicariate Apostolic of Breda was made one of the four suffragans of the new Archdiocese of Utrecht.

The first bishop of the new See of Breda was its vicar Apostolic, the Right Rev. Jan van Hooydonk, Apostolic administrator since 1826, and titular Bishop of Dardania since 1842. He died in 1867 and was succeeded first by the Right Rev. Jan van Genk who held two diocesan synods (1868, 1869) and died in 1874; later by the Right Rev. Hendrik van Beek, a celebrated Hellenist, who died in 1884; and then by the Right Rev. Peter Leyten. Besides the above-mentioned theological seminary at Hoeven there is a preparatory ecclesiastical seminary at Oudenbosch, known as De Ypelaaar and founded in 1839. The new cathedral (1875) is dedicated to St. Barbara and is a masterpiece of the famous Dutch architect Cuypers. The finest of the churches of Breda is the superb Gothic edifice of Notre Dame, built in the fifteenth century. It has long been held by the Protestant community. In it may still be seen several sepulchral monuments of the house of Orange-Nassau. According to the most recent statistics there are in the Diocese of Breda 198,000 Catholics, 100 parishes, 245 priests in actual service, 23 charitable institutions, and 59 free (Catholic) schools.

**Bréhal, JEAN**, a French Dominican theologian of the convent of Evreux; died c. 1479. He was made Doctor of Theology at the University of Caen, 1443; Prior of St.-Jacques, Paris, 1455; and Inquisitor General of France, 1452, which office he held until 1474. At the instance of Charles VII, he was delegated to revise the acts and proceedings of the trial of Joan of Arc, and on 7 July, 1466, he solemnly declared her condemnation to have been iniquitous and unjust. His review of the case and his investigations, which are exhaustive, are given at length by the Dominican Fathers Belon and Balme in "Jean Bréhal, Grand Inquisiteur de France et la réhabilitation de Jeanne d'Arc" (Paris, 1893), and

by the Jesuit Father Ayroles in "La vraie Jeanne d'Arc" (1790). Bréhal resigned his office in 1474 and retired to his convent of Evreux, where he spent the rest of his days in study, a model of conventual observance and discipline. He wrote: "De liberâ auctoritate audiendi confessiones religiosis mendicantibus concessâ", first edition, date and place of publication not given; later, 1479; and Paris, 1507.

JOHN R. VOLZ.

**Brehon Laws, THE.**—Brehon law is the usual term for Irish native law, as administered in Ireland down to almost the middle of the seventeenth century, and in fact amongst the native Irish until the final consummation of the English conquest. It derives its name from the Irish word *Breitheamh* (genitive *Breitheamhan*, pronounced Brehoon or Brehon) which means a judge. That we have ample means for becoming acquainted with some of the principal provisions of the Brehon code is entirely owing to the labours of two men, O'Curry and O'Donovan, who were the first Irish scholars since the death of the great hereditary Irish antiquarian, Duaid Mac Fírbis (murdered by an English settler in 1670), to penetrate and understand the difficult and highly technical language of the ancient law tracts. After much laborious work in the libraries of Trinity College Dublin, in the Royal Irish Academy, in the British Museum, and in the Bodleian Library at Oxford, O'Curry transcribed eight volumes full of the so-called Brehon Laws containing 2,906 pages, and O'Donovan nine more volumes containing 2,491 pages. Nor was their labour by any means exhaustive. There are many more valuable Brehon documents still untranscribed in the library of Trinity College, in the British Museum, and in the Bodleian, and possibly some fragments in the Royal Irish Academy and other repositories. From the labours of O'Donovan and O'Curry the Government published in the Master of the Rolls series five great tomes and a sixth containing a glossary. But these five large volumes do not by any means contain the whole of Irish law literature, which, in its widest sense, that is, including such pieces as the "Book of Rights", would probably fill at least ten such volumes.

**CONTENTS OF THE BREHON LAW BOOKS.**—The first two volumes of the Brehon Law, as published, contain the *Seanchus Mór* (Shanahus More) or "Great Immemorial Custom" which includes a preface to the text, in which we are told the occasion of its being first put together and "purified", and the Law of Distress, a process which always had much influence in Irish legislation. The second volume contains the Law of Hostage Sureties, also a very important item in ancient Irish life, the law of fosterage, of tenure of stock, and of social connexions. The third volume contains the important document known as the "Book of Acaill", which is chiefly taken up with the law of torts and injuries. This book professes to be a compilation of the various dicta and judgments of King Cormac Mac Airt who lived in the third century, and of Cennfaeladh, a famous warrior who fought in the Battle of Moyrath (c. 634), and afterwards became a renowned jurist, who lived in the seventh. The fourth and fifth volumes consist of isolated law tracts, on taking possession, on tenancy, right of water, divisions of land, social ranks, the laws relating to poets and their verse, the laws relating to the Church, chiefs, husbandmen, pledges, renewals of covenants, etc.

Although all these tracts go commonly under the generic name of the Brehon Laws, they are not really codes of law at all, or at least not essentially so. They are rather the digests or compilations of generations

of learned lawyers. The text of the *Seanchus Mór*, for instance, which is contained in the first two volumes, is comparatively brief. That part of it relating to the law of immediate seizure must, according to M. d'Arbois de Jubainville, have been written before the year 600, but not before the introduction of Christianity into Ireland, which probably took place in the third century. The rest of the *Seanchus* is not so old. The year 438 is that given by the Irish annalists themselves for the redaction of the *Seanchus Mór* which according to its own commentary was the joint effort of three kings, of two clerics, of Ross a doctor of the *Bérta Féine* or legal dialect, of Dubhthach a doctor of literature, of Fergus a doctor of poetry, and of St. Patrick himself, who struck out of it all that "clashed with the law of God". It is impossible to say how far certain parts of the law may have reached back into antiquity and become stereotyped by usage before they became stereotyped in writing. The text of the *Seanchus Mór* itself is not extensive. It is the great amount of commentaries written by generations of lawyers upon the text, and then the additional annotations written upon these commentaries by other lawyers, which swells the whole to such a size.

**IRISH SOCIAL ORGANIZATION.**—We are able to gather fairly well from these books the remains only of what must once have been an immense law literature, the social organization of a pure Aryan people, closely cognate with the ancestors of the modern Gauls, Spaniards, and Britons; and from what we learn of the ancestors of the present Irish people we may deduce a good deal that is probably no less applicable to the other Aryan Celts. Broadly speaking, the country was governed by a ruling class called "Kings", of different grades, the highest being the King of Ireland, and next to these were the nobles or princes called in Irish *Flaith* (pronounced like *flah* or *floih*). In all there were, including kings and *flaiths*, nominally at least, seven different kinds of *aires* (arras), or nobles, and provision was carefully made that a wealthy farmer, or peasant grown rich through cattle, could, if he possessed twice the wealth of the lowest of the seven, and had held it for certain generations, become an *aire*, or noble, of the seventh, or lowest degree. Thus wealth and descent were carefully balanced over against each other. "He is an inferior chief whose father is not a chief", says the law. But it took care at the same time not to close to anyone the avenues to chieftainship. Under ancient Irish law the land did not belong to the king or the chief or the landlord, but to the tribe, and the lowest of the free-tribesmen had as much an inalienable right to his share as had the chief himself. In process of time parts of the tribal territory appear to have become alienated to sub-tribes or families, and the chief, who always exercised certain administrative duties with respect to the land, appears to have had certain specific portions of the tribal land allotted to himself for his own use, and for the maintenance of his household and relatives. He was in no sense, however, what is now known as a landlord, although the whole tendency of later times was to increase his power at the expense of his tribe and vassals.

**FREE-TRIBESMEN.**—The great bulk of the ancient Irish cultivators were the *Féine* (Faina) or free-tribesmen from whom the Brehon law is called in Irish *Féineachas*, or the "Law of the Free-tribesmen". In process of time many of these in hours of distress naturally found themselves involved in something like pecuniary transactions with their head-chiefs, and, owing to poverty, or for some other reason, were driven to borrow or accept cattle from them, either for milk or tillage. These tribesmen then became the chieftain's *céiles* (kailas) or vassals. They were known as *Saer-stock* and *Daer-stock Céiles*. The *saer-*

**stock tenant**—*saer* means free in the Irish language—accepted only a limited amount of stock; and retained his tribal rights, always most carefully guarded by the Brehon law, in their integrity. But the *Daer-stock*—*daer* means unfree—tenant, who took stock from his chief, became liable for heavier but still carefully defined duties. For instance for every three heifers deposited with him by his chief, he became liable to pay his chief the "proportionate stock of a calf of the value of a sack with its accompaniments" and refectations for three persons in the summer, and work for three days. The tribesman, it will be observed, by accepting stock from his chief parted to some extent with his freedom, but his interests were carefully looked after by law, and it was provided that after food-rent and service had been rendered for seven years, if the chief should die, the tenant should become entitled to the stock deposited with him. If, on the other hand, the tenant died, his heirs were partly relieved from their obligation. It will be observed that while this to some extent resembles the well-known Metayer system, so common on the continent of Europe, where the landlord supplies the stock and the land, and the tenant the labour and the skill, it differs from it in this, namely that in Ireland the *saer*- and *daer-stock* farmer did not supply the land, which was theirs by right of their free tribesmanship. In this way, namely, by accepting stock from their over-lords, a rent-paying class grew up in Ireland, to which undoubtedly in time a large proportion of the ancient Irish came to belong, but the rent was paid not for the land but for the chief's property deposited with the tenant.

But outside of the Free-tribesman (the *Féine* and *Céile*) there grew up gradually a class of tenants who were not free, who in fact must have been in something very like a state of servitude. These were known by the name of *fuidirs* or *bothachs*, i. e. cottiers. They appear to have been principally composed of broken men, outcasts from foreign tribes, fugitives from justice, and the like, who, driven out of or forsaking their own tribes, sought refuge under some other chief. These men must have been natural objects of suspicion if not of detestation to the free tribesmen, and, being themselves absolutely helpless, and having no tribal rights of their own, they became entirely dependent upon their chief, who settled them down upon the outlying or waste lands of the tribe, or possibly at times upon his own separate land which as chief he held in severalty, and imposed upon them far heavier tolls or rents than the law permitted to be exacted from any other members of the tribe. As Ireland became more troubled by Northmen, Normans, and English, this class of tenant increased in numbers, so many tribes were broken or destroyed, and the survivors dispersed to find refuge in other tribes and under other chiefs. In this way there grew up gradually, even under Irish law, a body of tenants to whom their chiefs must have stood in the light of something like English landlords.

**THE IRISH FAMILY OR FINE.**—A curious Irish social unit was the *fine* (*finna*), consisting of one group of five persons and three groups of four, all males. The head of the family, called the *ceann-fine* (*Kan-finna*), and four members made up the first group, called *geil-fine*, the other three groups of four each were called *deirbh-fine*, or true family, *iar-fine*, or after family, and *inn-fine*, or end family. On the birth of a new male member in the *geil-fine* the eldest member of the group was moved up into the next four (the *deirbh-fine*), and one out of that four into the next four, and one out of the last four was moved out of the *fine* altogether, into the clan, or sept, this last male thereby ceasing to be a member of the family, or fine. The sept, to use the English term, sprang from the family, or the family after some generations grew into the sept and then into the clan, contracting

a greater share of artificiality in proportion to its enlargement. Because, while all the members of the sept could actually point to a common descent, the descent from a single ancestor in the case of the whole tribe was more or less founded upon fiction. The portion of territory ruled over by a sub-king was called *tuath* (*too-a*) and contained within it, at all events in later times, members of different descents. The chief, both of the *tuath* and the sept, was elected by the tribe or clansmen. The law of primogeniture did not obtain in Ireland, and the selection was made of the man who being of the chieftain's near blood could best defend the tribe and lead it in both war and peace. "The head of every tribe", says the Brehon Law tract the *Cain Aigillne*, "should be the man of the tribe who is the most experienced, the most notable, the most wealthy, the most learned, the most truly popular, the most powerful to oppose, the most steadfast to sue for profits and to be sued for losses." As early as the third century, in a well-known piece of Irish literature, *Cairbre*, afterwards King of Ireland, is depicted as asking his father *Cormac Mac Airt* the question: "For what qualifications is a king elected over countries and tribes of people?" And *Cormac* in his answer embodied the views of practically every clan in Ireland down to the beginning of the seventeenth century. "He is chosen", said the king, "from the goodness of his shape and family, from his experience and wisdom, from his prudence and magnanimity, from his eloquence and bravery in battle, and from the number of his friends." He was, however, always chosen from the near kindred of the reigning chieftain.

**IRISH CRIMINAL LAW.**—There seems to have been no hard and fast line drawn between civil and criminal offences in the Brehon law. They were both sued for in the same way before a Brehon, who heard the case argued, and either acquitted or else found guilty and assessed the fine. In the case of a crime committed by an individual all the sept were liable. If the offence were one against the person, and the criminal happened to die, then the liability of the sept was wiped out, for, according to the maxim, "the crime dies with the criminal". If, however, the offence had been one causing damage to property or causing material loss, then the sept remained still liable for it, even after the death of the criminal. This regulation resulted in every member of the sept having a direct interest in suppressing crime. There was always a fine inflicted for manslaughter, even unpremeditated, which was called an *eric*. If the manslaughter was premeditated, or what we would call murder, the *eric* was doubled, and it was distributed to the relatives of the slain in the proportion to which they were entitled to inherit his property. If the *eric* were not paid, then the injured person or family had a right to put the criminal to death. This acceptance of a blood-fine or *eric* for murder was a great source of scandal to the English, but, as Keating points out in the preface to his history of Ireland written in Irish, it was really a beneficent and logical institution, made necessary by the number of tribes into which Ireland was divided. Nor was the punishment, though short of the capital one, by any means light, and it at least insured compensation to the murdered man's relatives, a compensation amounting to the entire "honour-price" of the murderer. For every man, from king to *fuidir* (the lowest class of tenant), had what was in Irish law termed his *eineachlan*, or honour-price, and this was forfeited in part or in whole, according to well-defined rules, for various crimes. It was always forfeited for taking human life. Clergy we find more heavily punished than laymen. A man of high rank was always fined more than one of low rank for the same misdemeanour. An assault on a person of rank was more severely punished than one on an ordinary man. Fines

for crimes against the person were particularly heavy; two cows, for instance, was the fine for a blow which raised a lump but did not draw the blood. The punishments awarded by the Brehons were of a most humane character. There is no trace of torture or of ordeal in ancient Irish law.

From the earliest times in which the English invaders made the acquaintance of the Brehon law system they denounced it with the most unsparing invective. But all the Norman chiefs who ruled over Irish tribal lands governed their territories by it in preference to English law, and in Elizabeth's reign the great Shane O'Neill pointed out with bitter irony that if his Irish laws were so barbarous as the queen's ministers alleged, it was passing strange that three hundred families had migrated from the English pale and the beneficent operations of English law to take refuge in his dominions. As early as 1367 an English Statute of Kilkenny denounced Brehon law as "wicked and damnable", "Lewd" and "unreasonable" are the epithets applied to it by Sir John Davies. "In many things repugning quite both to God's law and man's" is how the poet Edmund Spenser characterized it.

The student, however, who views these laws dispassionately to-day, and merely from a juridical point of view, will find in them, to use the words of the great English jurist Sir Henry Maine, "a very remarkable body of archaic law unusually pure from its origin". It is, in fact, a body of law that reflects for us early Aryan custom in its purity, almost perfectly untainted or uninfluenced by that Roman law which overran so much of the rest of Europe. It is true that Brehon law does bear certain resemblances to Roman law, but they are of the slightest, and not even so strong as its resemblance to the Hindoo codes. It has in truth certain relations to all known bodies of Aryan law from the Tiber to the Ganges, some to the Roman laws of earliest times, some to the Scandinavian, some to the Slavonic, and some particularly strong ones to the Hindoo laws, and quite enough to old Germanic law of all kinds "to render valueless", to use the words of Sir Henry Maine, "the comparison which the English observers so constantly institute with the laws of England". "Much of it", says Maine, "is (now) worthless save for historical purposes, but on some points it really does come close to the most advanced legal doctrines of our day". "There is a singularly close approach", he remarks in another place, "to modern doctrines on the subject of contributory negligence, and I have found it possible to extract from the quaint texts of the 'Book of Acaill' some extremely sensible rulings on the difficult subject of the measure of damages, for which it would be in vain to study the writings of Lord Coke though these last are relatively of much later date". But he points out how heavily the Brehon Law pays in other respects for this striking anticipation of the modern legal spirit by its too frequent air of fancifulness and unreality and indulgence of imagination. In the "Book of Acaill", for instance, which, as mentioned before, is chiefly concerned with the law of torts, we find four long pages concerned solely with the injuries received from dogs in dog-fights—Ireland was famous for its hounds, and dog-fights figure more than once in old Irish literature—setting forth in the most elaborate way all the qualifications of the governing rule required in the case of owners, in the case of spectators, in the case of the "impartial interposer", in the case of the "half-interposer", that is the man who tries to separate the dogs with a bias in favour of one of them, in the case of an accidental onlooker, in the case of a youth under age, and in the case of an idiot. The Brehons, in fact, appear to have never hesitated about inventing or imagining facts upon which to base their theoretical judgments. They endeavour

to deal with all cases and all varieties of circumstances, and they have special rules for almost every relation of life and every detail of the social economy. A great number of the cases which come under discussion in the law books appear to be rather problematical than real, cases propounded by a teacher to his pupils to be argued on according to general principles, rather than actual subject for legal discussion.

ORIGIN AND GRADUAL GROWTH.—Ancient Irish law was not produced by a process resembling legislation, but grew up gradually round the dicta and judgments of the most famous Brehons. These Brehons may very well have been in old times the Irish equivalents of the Gaulish Druids. There were only four periods in the entire history of Ireland when special laws were said to have been enacted by legislative authority: first during the reign of that Cormac Mac Airt already mentioned, in the third century; second, when St. Patrick came; third, by Cormac mac Culinan, the King-Bishop of Cashel, who died in 908; and lastly by Brian Boru, about a century later. But the great mass of the Brehon code appears to have been traditional or to have grown with the slow growth of custom. The very first paragraph of the Law of Distress takes us back to a case which happened in the reign of Conn of the Hundred Battles in the second century, and this passage was already so antique at the close of the ninth century that it required a gloss, for Cormac mac Culinan (who died in 908) alludes in his glossary to the gloss upon this passage. There are many allusions in this glossary to the *Seanchus Mór*, always referring to the glossed text, which must consequently have been in existence before the year 900. The text of the *Seanchus Mór* relies upon the judgments of famous Brehons such as Sencha in the first century, but there is no allusion in its text to any books or treatises. The gloss, however, is full of such allusions. Fourteen different books of civil law are alluded to in it. Cormac in his glossary alludes to five. Only one of the five alluded to by Cormac is among the fourteen mentioned in the *Seanchus Mór*. This shows that the number of books upon law must in old times have been legion. They perished, with so much of the rest of Irish literature, under the horrors of the English invasion and the penal laws, when an Irish MS. was a source of danger to the possessor.

The essential idea of modern law is entirely absent from the Brehons, if by law is meant a command, given by some one possessing authority, to do or to forbear doing a certain thing under pains and penalties. There is no sanction laid down in the Brehon laws against those who violated them, nor did the State provide any such sanction. This was the great inherent weakness of Irish jurisprudence, that it lacked the controlling hand of a strong central government to enforce its decisions. It is a weakness inseparable from a tribal organization in which the idea of the State, which had begun to emerge under the early Irish kings, had been repressed. When a Brehon had heard a case and delivered his judgment, there was no machinery of law set in motion to force the litigant to accept it. The only executive authority in ancient Ireland which lay behind the decision of the judge was the traditional obedience and good sense of the people, and it does not appear that this was ever found wanting. The Brehons never appear to have had any trouble in getting their decisions accepted by the common people. The public appear to have seen to it that the Brehon's decision was always carried out. This was indeed the very essence of democratic government, with no executive authority behind it but the will of the people. There can be no doubt whatever that the system trained an intelligent and law-abiding public. Even Sir John Davies, the Elizabethan jurist, confesses "there

is no nation or people under the Sunne that doth love equal and indifferent justice better than the Irish; or will rest better satisfied with the execution thereof although it be against themselves, so that they may have the protection and benefit of the law when upon just cause they do desire it".

**INFLUENCE OF THE CATHOLIC CHURCH UPON BREHON LAW.**—With regard to the influence of the Catholic Church upon Irish law as administered by the Brehons it is difficult to say much that is positive. Its influence was probably greatest in a negative direction. We have seen that the Brehons claimed the sanction of St. Patrick for the laws contained in the *Seanchus Mór*. We may also take it for granted that it was owing to the introduction of Christianity that Irish law began to be written down. The Gauls, as Cæsar tells us, had a superstition about committing their sacred things, which of course included their law, to writing, and if the Irish had the same, as is very probable, it did not survive the introduction of the Christian religion. Then the eric-fine for homicide, although it probably did not owe its origin to Christianity, yet supported itself "as a middle course between forgiveness and retaliation" by the case of one Nuada who had murdered St. Patrick's charioteer, being put to death for his crime and Patrick obtaining heaven for him. "At this day", says the text, "we keep between forgiveness and retaliation, for as at present no one has the power of bestowing heaven, as Patrick had at that day, so no one is put to death for his intentional crimes so long as eric-fine is obtained, and whenever eric-fine is not obtained he is put to death for his intentional crimes, and exposed on the sea for his unintentional crimes." Sir Henry Maine seems to think that the conception of a Will was grafted upon the Brehon Law by the Church, but if this were so, one would have expected that the law terms relating to it would have been derived from Latin sources; this, however, is not so, the terms being of purely native origin. In another most important matter, however, the Law of Contract, the Church may have exercised a greater influence; the sacredness of bequests and of promises being equally important to it as the donee of pious gifts. It is also likely that much of the law relating to the alienation of land, all the land belonging originally to the tribe, was influenced by the Church, and indeed the Church seems to have been the grantee primarily contemplated in these regulations. There is a great mass of jurisdiction relating to its territorial rights, and no doubt this must have affected the outside body of law as well. But all bodies of law are exceedingly unmaleable, and tend to resist the absorption of foreign elements; and Sir Henry Maine's conclusion is that "there has certainly been nothing like an intimate interpenetration of ancient Irish law by Christian principle". Still the effect of Christian principles must certainly have been great, but they were probably powerful as a negative rather than as a positive factor.

**EXTINGUISHED BY THE ENGLISH.**—The Brehon law code was ultimately extinguished by the English in every part of Ireland. So soon as they conquered a territory they stamped it out, banished or slew the Brehons, and governed the land by English law. It would have been a very inconvenient doctrine for them that the tribe owned the land or that the people had rights as apart from the chief. Whenever a chief made his submission he was recognized as owner and landlord of the territory of the tribe, and the territory was adjudged to descend by primogeniture to his eldest son. In this way the hereditary rights of the mass of the people of Ireland were taken from them, and they were reduced to the rank of ordinary tenants, and, the native nobility being soon exterminated, they mostly fell into the hands of English landlords, and were finally subjected to those rack rents which

have made the name of Irish tenant an object of commiseration for so many generations. The Brehon laws remained in force in every part of Ireland where the Irish held sway until the final conquest of the country. It has been shown that the system of land-tenure which the Fitzgeralds found obtaining in Munster in 1170 was left unchanged by them, and the land burdened with no additional charges until their subjugation in 1586. Duaid Mac Fírbis, the celebrated antiquary, who died in 1670, mentions that even in his own day he had known Irish chieftains who governed their clans according to "the words of Fíthal and the Royal Precepts", that is according to the books of the Brehon Law. Amongst the many bitter injustices inflicted upon Ireland and the Irish by the English conquest none has had more cruel or more far-reaching effects than the abrogation of the Brehon law relating to land-tenure and division of property.

DOUGLAS HYDE.

**Bremen**, formerly the seat of an archdiocese situated in the north-western part of the present German Empire. After Charlemagne's conquest of the Saxons, Christianity was preached in the region about the lower Elbe and the lower Weser by St. Willehad; in 787 Willehad was consecrated bishop, and that part of Saxony and Friesland about the mouth of the Weser assigned him for his diocese. He chose as his see the city of Bremen, which is mentioned for the first time in documents of 782, and built there a cathedral, praised for its beauty by St. Anschar; it was dedicated in 789. The Diocese of Bremen, however, was erected only under St. Willehad's successor, St. Willerich (804 or 805-838). After the death of the third bishop, Leuderich (d. 845), by an act of a synod of Mainz (848), Bremen was united with the Archdiocese of Hamburg, which, since its foundation, in 831, had been under St. Anschar, who was appointed first archbishop of the new archdiocese (848-865). Hamburg had been destroyed by the Vikings in 845, and in 1072, after a second destruction of the city, the archiepiscopal see was definitely transferred to Bremen, though the title was not formally transferred until 1223. Until the secularization of 1803 Hamburg had its own cathedral chapter. Before it was united with Hamburg, the Diocese of Bremen had belonged to the Province of Cologne. Despite the protests of the Archbishop of Cologne against the separation of Bremen, Pope Nicholas I, in 864, confirmed the new foundation, which fell heir to the task of evangelizing the pagan North.

Rembert (865-888), the successor of St. Anschar, summoned the Benedictines from Corvei and became a member of the order; his companion and successor, St. Adalgar (888-909), was likewise a Benedictine. Both performed great services in the conversion of the North to Christianity. When the Archbishop of Cologne renewed his claims to Bremen, Pope Formosus, in 892, gave the decision that the Archbishop of Bremen was to be independent of the Metropolitan of Cologne, but should take part in the diocesan synods of Cologne. Under St. Hoyer (909-916), a Benedictine of Corvei, and Reginward (917-

918), the Hungarians laid waste the diocese and even burned the city of Bremen. The ninth bishop, St. Unni, died at Birka (936), while on a missionary journey to Scandinavia. Through the efforts of Archbishop Adalag (937-988) Bremen received the privileges of a market town, and in 967 the same archbishop obtained the jurisdiction of a count over the city, as well as various crown-lands from Otto I, thus laying the foundation for the temporal possessions of the archbishops of Bremen. At the instance of Adalag three dioceses were erected in Danish territory and in Schleswig, and made suffragans of Bremen. There was a considerable accession of territory to the archdiocese under Archbishop Unwan (1013-29). The foundation, however, of the later highly developed temporal power of Bremen was laid by Adalbert, the guardian and influential counsellor of Henry IV; during his long episcopate (1043-72) he brought nearly all the countships (*Grafschaften*) within the limits of the archdiocese under the jurisdiction of the Church of Bremen. His dream of raising the archdiocese to the dignity of a northern patriarchate, however, was never realized. During his episcopate the Obotrites were converted to Christianity, and three dioceses, Oldenburg, Mecklenburg, and Ratzeburg, were erected as suffragans of Bremen. The Northern churches, however, were separated from Bremen, and later placed under the Bishop of Lund, who was raised to the rank of a metropolitan in 1103. Like Adalbert, his immediate successors took the side of the emperors against the popes. At the Council of the Lateran the nominal metropolitan jurisdiction over the churches of Scandinavia was restored to Adalbert II (1123-48), but in reality they remained independent of Bremen. During the episcopate of Adalbert Vizelin succeeded in his task of evangelizing the Slavs of Holstein and Mecklenburg. Hartwich I (1148-68), Count of Stade, brought the countship of Stade under the jurisdiction of the Church of Bremen. His struggle with Henry the Lion, Duke of Saxony, entailed great suffering to the archdiocese; in 1155 the city of Bremen was captured and plundered, and the countship of Stade seized and held by Henry. After the fall of Henry, Archbishop Siegfried (1178-84) was the first to regain possession of the countship. Hartwich II (1184-1207) founded several monasteries and promoted the civilization of his people; his administration of temporal affairs, however, was unfortunate and involved the archdiocese in serious difficulties with Emperor Henry VI, resulting in revolt on the part of the bishop's subjects.

Dissensions over the choice of an archbishop and the claims of Palatine Count Henry, son-in-law of Henry the Lion, to the countship of Stade, left the Church of Bremen in sore straits at the beginning of the thirteenth century. After lengthy struggles, Archbishop Gerhard II (1219-57) finally received the undisputed possession of the countship, by which the territorial extent of the archdiocese was substantially fixed, covering, at that time, the land between the lower Weser and the lower Elbe, including also a part of the territory to the right of the mouth of the Elbe. Repeated difficulties over the choice of an archbishop, the growth of the city of Bremen, the continual disposal of diocesan privileges by archbishops under stress of financial embarrassment, misrule on the part of some archbishops, and other circumstances as well, contributed towards the decline of the power and splendour of the archdiocese which took place in the course of the fourteenth century. Among the more capable bishops of this period were: Johann Grant (1307-27), previously Archbishop of Lund, Burchard Grelle (1327-44), who held a synod in 1328 and redeemed several castles of the archdiocese, which had been given as security; Johann II Slamstorff (1406-21); Boldewin von

Wenden (1435-41), who was also Abbot of St. Michael in Lüneburg; Gerhard III (1441-63), and others. Less fortunate was the episcopate of Heinrich von Schwarzburg (1463-96), who also became Bishop of Münster in 1466; the city of Bremen took advantage of the almost uninterrupted absence of the last-named archbishop to shake off the episcopal authority almost entirely. Several estates or castles were given in pledge or fell in ruins, and the dissatisfaction of the people under the ecclesiastical rule increased, preparing the soil for the Reformation.

The successor of Heinrich von Schwarzburg, Johann III Rohde (1497-1511), cleared the archdiocese of debt, and introduced many reforms. In spite of the fact that he came of the middle class, he sought to increase his prestige in the diocese by taking as coadjutor Prince Christopher of Brunswick (1500). The latter succeeded in 1511, but being at the same time Bishop of Verden, resided chiefly in Verden, and so was unable to devote the necessary attention to his Diocese of Bremen. The Reformation won its first victory in the city of Bremen; the Catholic clergy who opposed the new teaching were expelled, monasteries suppressed, the cathedral chapter banished from the city in 1533, and allowed to return only under the condition that no Mass be said or choir service held. From the city as a centre the new teaching spread through the surrounding territory and though the archbishop himself and some monasteries for a long time offered vigorous opposition, by the help of the Smalkaldic League, which Bremen had joined, the Reformation was introduced throughout the archdiocese, in some cases by force. After the death of Christopher (1558), the cathedral chapter, which was almost entirely Protestant by this time, chose as his successor his brother George (1558-86), who was already Bishop of Verden and Minden; during his episcopate, the archdiocese, with the exception of the cathedral and some country parishes, accepted the teaching of Calvin. George was succeeded by four Protestant archbishops, the last (1634) being Frederick, Prince of Denmark, later King of Denmark under the name of Frederick III. During the Thirty Years War, by the edict of restitution of Emperor Ferdinand II (1625), the archdiocese was restored to the Catholics, Catholic worship re-established, monasteries given back to the monks, and a college at Stade placed in charge of the Jesuits (1629-32). When, however, in 1632, the imperial troops were forced to evacuate the territory before the Swedes, Catholicism was once more rooted out. In 1644 the archdiocese was captured by the Swedes, and in 1648 secularized by the Peace of Westphalia, and ceded as a duchy to Sweden, and the cathedral chapter at Bremen suppressed. In 1712 the territory became a possession of Denmark, and in 1715 was purchased by the electoral Prince George of Hanover. The city of Bremen with the surrounding territory was in 1731 recognized as a free city of the empire, and in 1803 received an increase of territory; in 1815 it entered the German Confederation, in 1866 the North German Confederation, and in 1871 the German Empire. The greater part of the present duchy was ceded to Prussia with the Kingdom of Hanover (1866). Ecclesiastically, the territory of the former Archdiocese of Bremen is divided among several dioceses: the city of Bremen and the vicinity, with about 13,000 Catholics, is subject to the Vicariate Apostolic of the Northern Missions, the remaining territory to the Dioceses of Hildesheim, Osnabrück, and Münster.

JOSEPH LINS.

**Brenach**, SAINT, an Irish missionary in Wales, a contemporary of St. Patrick, and among the earliest of the Irish saints who laboured among the Celts of that country. About the year 418 he travelled to Rome and Brittany, and thence to Milford Haven. He erected various oratories near the rivers Cleddau, Gwain, and Caman, and at the foot of Carn Engyli, or "Mountain of the Angels", which was his most famous foundation. Among his converts was Breacan (an Irish chief), the ruler of South Wales, about the year 425, and this Breacan is reckoned by the "Triads" as a saint, who founded numerous churches in Brecknockshire, Carmarthenshire, Pembrokeshire, Denbighshire, and Anglesey. From the Welsh "Lives" we learn that St. Brenach died 7 April, on which day his feast is celebrated. His church, overhanging the Severn, is a lasting memorial of the Irish pilgrim who was the instrument under God for the conversion of a great part of Wales.

**Brenan**, MICHAEL JOHN, ecclesiastical historian, b. in Kilkenny, Ireland, in 1780; d. at Dublin, February, 1847. He was the son of a stonemason and after his ordination to the priesthood, speedily obtained reputation as a preacher, but, owing to his vanity and pride, came into collision with his bishop, and was suspended. He then left the Church, became a Protestant, and was taken up by the Priests' Protection Society under whose auspices he was announced to preach in St. George's Church, Dublin. In the meantime he reconsidered his position and repented of his folly. He resolved to make public reparation for his fault, and on the Sunday in 1809, when he was announced to commence his campaign against the Church, he ascended the pulpit of St. George's, began by blessing himself most reverently, and then to the relief of his audience took up the Bible, and said "This is the Word of God". After a brief pause, he added deliberately and earnestly, "And I swear by its contents that every word I have uttered against the Catholic Church is a lie", and at once left the building. He went to a neighbouring Capuchin friary, explained what had happened, and begged to be admitted into the order. After some time, his prayers were granted, and he became a Franciscan at Wexford where in later years he wrote (as a penance, it is said) his valuable "Ecclesiastical History of Ireland" (2 vols., Dublin, 1840, revised ed., 1864).

D. J. O'DONOGHUE.

**Brendan**, SAINT, of Ardfert and Clonfert, known also as Brendan the Voyager, b. in Ciarráighe Luachra, near the present city of Tralee, County Kerry, Ireland, in 484; d. at Enachduin, now Annaghdown, in 577. He was baptized at Tubrid, near Ardfert, by Bishop Erc. For five years he was educated under St. Ita, "the Brigid of Munster", and he completed his studies under St. Erc, who ordained him priest in 512. Between the years 512 and 530 St. Brendan built monastic cells at Ardfert, and at Shan-

akeel or Ballynevinooch, at the foot of Brandon Hill. It was from here that he set out on his famous voyage for the Land of Delight. The old Irish Calendars assigned a special feast for the "Egressio familiæ S. Brendani", on 22 March; and St. Aengus the Culdee, in his Litany, at the close of the eighth century, invokes "the sixty who accompanied St. Brendan in his quest of the Land of Promise". Naturally, the story of the seven years' voyage was carried about, and, soon, crowds of pilgrims and students flocked to Ardfert. Thus, in a few years, many religious houses were formed at Gallerus, Kilmalchedor, Brandon Hill, and the Blasquet Islands, in order to meet the wants of those who came for spiritual guidance to St. Brendan.

Having established the See of Ardfert, St. Brendan proceeded to Thomond, and founded a monastery at Inis-da-druim (now Coney Island, County Clare), in the present parish of Killadysert, about the year 550. He then journeyed to Wales, and thence to Iona, and left traces of his apostolic zeal at Kilbrandon (near Oban) and Kilbrennan Sound. After a three years' mission in Britain he returned to Ireland, and did much good work in various parts of Leinster, especially at Dysart (Co. Kilkenny), Killiney (Tubberboe), and Brandon Hill. He founded the Sees of Ardfert, and of Annaghdown, and established churches at Inchiquin, County Galway, and at Inishglora, County Mayo. His most celebrated foundation was Clonfert, in 557, over which he appointed St. Moinenn as Prior and Head Master. St. Brendan was interred in Clonfert, and his feast is kept on 16 May.

W. H. GRATTAN FLOOD.

**VOYAGE OF SAINT BRENDAN.**—Saint Brendan belongs to that glorious period in the history of Ireland when the island in the first glow of its conversion to Christianity sent forth its earliest messengers of the Faith to the continent and to the regions of the sea. It is, therefore, perhaps possible that the legends, current in the ninth and committed to writing in the eleventh century, have for foundation an actual sea-voyage the destination of which cannot however be determined. These adventures were called the "Navigatio Brendani", the Voyage or Wandering of St. Brendan, but there is no historical proof of this journey. Brendan is said to have sailed in search of a fabled Paradise with a company of monks, the number of which is variously stated as from 18 to 150. After a long voyage of seven years they reached the "Terra Repromissionis", or Paradise, a most beautiful land with luxuriant vegetation. The narrative offers a wide range for the interpretation of the geographical position of this land and with it of the scene of the legend of St. Brendan. On the Catalanian chart (1375) it is placed not very far west of the southern part of Ireland. On other charts, however, it is identified with the "Fortunate Isles" of the ancients and is placed towards the south. Thus it is put among the Canary Islands on the Herford chart of the world (beginning of the fourteenth century); it is substituted for the island of Madeira on the chart of the Pizzigani (1367), on the Weimar chart (1424), and on the chart of Beccario (1435). As the increase in knowledge of this region proved the former belief to be false the island was pushed further out into the ocean. It is found 60° west of the first meridian and very near the equator on Martin Behaim's globe. The inhabitants of Ferro, Gomera, Madeira, and the Azores positively declared to Columbus that they had often seen the island and continued to make the assertion up to a far later period. At the end of the sixteenth century the failure to find the island led the cartographers Apianus and Ortelius to place it once more in the ocean west of Ireland; finally, in the early part of the nineteenth

century belief in the existence of the island was completely abandoned. But soon a new theory arose, maintained by those scholars who claim for the Irish the glory of discovering America, namely, MacCarthy, Rafn, Beamish, O'Hanlon, Beauvois, Gaffarel, etc. They rest this claim on the account of the Northmen who found a region south of Vinland and the Chesapeake Bay called "Hvitramamaland" (Land of the White Men) or "Írland ed mikla" (Greater Ireland), and on the tradition of the Shawano (Shawnee) Indians that in earlier times Florida was inhabited by a white tribe which had iron implements. In regard to Brendan himself the point is made that he could only have gained a knowledge of foreign animals and plants, such as are described in the legend, by visiting the western continent. On the other hand, doubt was very early expressed as to the value of the narrative for the history of discovery. Honorius of Augsburg declared that the island had vanished; Vincent of Beauvais denied the authenticity of the entire pilgrimage, and the Bollandists do not recognize it. Among the geographers, Alexander von Humboldt, Peschel, Ruge, and Kretschmer, place the story among geographical legends, which are of interest for the history of civilization but which can lay no claim to serious consideration from the point of view of geography. The oldest account of the legend is in Latin, "Navigatio Sancti Brendani", and belongs to the tenth or eleventh century; the first French translation dates from 1125; since the thirteenth century the legend has appeared in the literatures of the Netherlands, Germany, and England. A list of the numerous manuscripts is given by Hardy, "Descriptive Catalogue of Materials Relating to the History of Great Britain and Ireland" (London, 1862), I, 159 sqq. Editions have been issued by: Jubinal, "La Légende latine de S. Brandaines avec une traduction inédite en prose et en poésie romanes" (Paris, 1836); Wright, "St. Brendan, a Medieval Legend of the Sea, in English Verse, and Prose" (London, 1844); C. Schröder, "Sanct Brandan, ein latinischer und drei deutsche Texte" (Erlangen, 1871); Brill, "Van Sinte Brandane" (Groningen, 1871); Francisque Michel, "Les Voyages merveilleux de Saint Brandan à la recherche du paradis terrestre" (Paris, 1878); Fr. Novati, "La Navigatio Sancti Brandani in antico Veneziano" (Bergamo, 1892); E. OTTO HARTIG.

**Brentano, KLEMENS MARIA**, a German poet, one of the most prominent members of the Romantic School. He was born at Thal-Ehrenbreitstein 8 September, 1778; d. 28 July, 1842. After a futile attempt to become a merchant, he entered the University of Jena in 1797, where he remained with occasional interruptions until 1803. Here he made the acquaintance of the brothers August Wilhelm and Friedrich Schlegel and of Ludwig Tieck, the

founders and leaders of the Romantic School, to which Brentano also attached himself. In 1803 he married Sophie Mereau, the divorced wife of Professor Mereau, and the following year moved to Heidelberg, where with Achim von Arnim, who later became his brother-in-law, and Joseph Görres he was soon the leading spirit of the so-called younger Romantic School. It was during this period that he published jointly with Arnim the famous collection of old folksongs known as "Des Knaben Wunderhorn", which appeared in three volumes between the years 1805 and 1808. This collection established once for all the position of the *Volklied* in German literature and had a powerful effect on the lyric poetry not only of Germany, but also of other nations. Longfellow testifies that it had "the most wild and magic influence" on his imagination. It was of course not to be expected that the text of these poems should be philologically accurate, but this in no way diminishes the importance of the service which the editors rendered to German literature. In 1806 Brentano's wife died and he then led a wild, unsettled life, drifting to various places, Halle, Weimar, Kassel, Vienna, and Berlin. A second matrimonial venture proved disastrous; his wife was a woman of unbridled temper and habits, and he soon separated from her. Finally he drifted to Berlin restless and discontented. There he met the accomplished Luise Hensel, who later on achieved fame as a poetess. His ardent love for her was unrequited. Luise Hensel declined all offers of marriage. A great change now came over the poet. His previous indifference to the Catholic Faith, in which he had been born, was changed to the most fervid devotion. He left Berlin and in 1818 went to the secluded Westphalian town of Dülmen, attracted by the fame of the stigmatic nun, Katharina Emmerich. For six years he remained near her, making a record of her visions and revelations. The publication of this record occupied the greater part of the remaining years of his life. After her death in 1824 he again wandered, settling at last in 1833 in Munich, where with Görres he was the centre of a circle of distinguished Catholic scholars and men of letters. He died in 1842 while visiting his brother Christian in Aschaffenburg.

Brentano is chiefly known as the editor of "Des Knaben Wunderhorn", but he also has written a great deal of original matter. Among his earlier writings "Godwi" deserves notice, as a wild, formless romance in which some fine lyrics are interspersed, including the song of the "Lore Lay", later incorporated in the "Wunderhorn". This song inspired Heine's famous ballad on the same subject. "Die Romanzen vom Rosenkranz" (Romances of the Rosary) is an unfinished narrative allegorical poem containing a fanciful mixture of biographical, historical, and legendary traits, which was published in 1852 after the author's death. Especially noteworthy are the stories, or *Märchen*, such as the "Geschichte vom braven Kasperl und dem schönen Annerl" (1817), a tragic story of village life; and "Gockel, Hinkel und Gackeleia" (1838). A fantastic, whimsical humour pervades nearly all of Bren-

KLEMENS MARIA BRENTANO

tano's work; his style is marred by frequent and disagreeable eccentricities. When he wishes to be naïve, he often becomes merely childish. His poetic gifts, however, are undeniably of a high order; some of his lyric poems (e. g. "Lied der Spinnerin", "An eine Kranke") are among the best of their kind. But he lacked self-control and dissipated his great literary talents. His collected writings, edited by his brother Christian, appeared at Frankfurt in nine volumes (1851-55).

Selections with biographical and critical introduction edited by MAX KOCH in KÜRSCHNER, *Deutsche National Literatur*, vol. CXLVI, and by DIEL (Freiburg im Br., 1873, 2 vols.); GUIDO GÖRRES (ed.), *Märchen* (2 vols., Stuttgart and Tübingen, 1846); DIEL, *Clemens Brentano, Ein Lebensbild*, suppl. and ed. by KREITEN (2 vols. Freiburg im Br., 1877); JOHNSON in *The Catholic World Magazine* (New York, 1899) L, 61-71.

ARTHUR F. J. REMY.

**Brescia, DIOCESE OF**, takes its name from the principal city in the province of the same name in Lombardy, between the Mella and the Naviglio. The city of Brescia contains 60,000 inhabitants and is of great commercial importance. It was founded by the Gauls, and in 197 B. C. was captured by the Romans, who called it Brixia. When, in 312, Constantine advanced against Maxentius, an engagement took place at Brescia in which the enemy was forced to retreat as far as Verona. During the invasion of the Huns under Attila, the city was besieged. In 774 Charlemagne captured it from the Lombards.

The Bishops of Brescia received the title of Count from Louis II, and in consequence became civil rulers of the city and the countship. Many struggles followed, however, in particular after Arduin Lord Marcher of Ivrea, who had proclaimed himself King of Italy (1002), had slain the bishop of this city for holding allegiance to Emperor Henry II. Henry, to ensure the fidelity of the citizens of Brescia, was obliged to confirm the civil liberty granted them by Arduin, which is the origin of the commune of Brescia. In the successive struggles between the Lombard cities and the emperors, Brescia was implicated in some of the leagues and in all of the uprisings against them. Memorable in the history of these conflicts is the siege laid to Brescia by Frederick II in 1238 on account of the part taken by this city in the battle of Cortenova (27 November, 1237). Brescia came through this assault victorious. After the fall of the imperial house of Swabia republican institutions declined at Brescia, as well as in the other free cities and the leadership was contested between several powerful families, chief among them the Maggi and the Brusati, the latter of the Ghibelline party. In 1311 Henry VII laid siege to Brescia for six months, losing three-fourths of his army. Later the Scaligeri of Verona, aided by the exiled Ghibellines, sought to place Brescia under subjection. The citizens of Brescia then had recourse to John of Luxemburg; Mastino II della Scala, however, expelled the governor appointed by him. His mastery, in turn, was soon contested by the Visconti of Milan, but not even their rule was undisputed, as Pandolfo Malatesta in 1406 took possession of the city, but in 1416 bartered it to Filippo Visconti, who in 1426 sold it to the Venetians. The Milanese nobles, however, forced Filippo to resume hostilities against the Venetians, and thus to attempt the recovery of this city, but he was defeated in the battle of Maclodio (1427), near Brescia. In 1439 Brescia was once more besieged by Francesco Sforza, captain of the Venetians, who conquered Piccinino, Filippo's condottiere. Thenceforward Brescia acknowledged the authority of Venice, with the exception of the years between 1512 and 1520, when it was occupied by the French armies. From 1796 it shared the fortunes of the republic.

The Bishop of Brescia is suffragan to the Archbishop of Milan. Legend traces the beginnings of Christianity in Brescia to St. Barnabas, who is said to have made St. Anatolus bishop. However, Milan also claims Anatolus as its first bishop, consecrated by St. Barnabas. In any case, the Faith was probably brought to Brescia by way of Milan. During the reign of Hadrian, Brescia was the scene of the martyrdom of Sts. Faustinus and Jovita (cf. Acta SS., 15 February). From the time of the persecutions tradition mentions the names of several bishops, but nothing authentic is known concerning them. In the fourth century there was the celebrated St. Philastrius, a most zealous champion of orthodoxy against heresy, of whom it is related that he converted many pagans. He was succeeded by St. Gaudentius, consecrated by St. Ambrose (c. 387), who erected outside the city walls the church *Ad Concilia Sanctorum*, in which the holy matron Silvia was buried later. A great number of the bishops who ruled this diocese from the fourth to the seventh centuries are inscribed on the rolls of the saints, e. g. St. Paul, St. Theophilus, St. Silvinius, St. Gaudiosus, St. Ottapianus, St. Vigilius, St. Herculanus, St. Paterius, St. Anastasius (610), who built the church of San Pietro, and made it the cathedral, and St. Dominic (613), who with the many gifts he received from Queen Theodolinda, erected the church called the Rotonda. Bishop Ramperto brought to Brescia the Benedictines, who constructed a church to which they transferred the relics of Sts. Faustinus and Jovita; he also took part in the Council of Mantua of 827. Notingus (844) was the first bishop who bore the title of Count. Landolfo II (1007) built the church of Santa Eufemia outside the walls.

During the episcopate of Manfredo Lucciaga (1133), Arnold of Brescia disseminated his teachings, with the result that the governors of the city all but confiscated the property of the churches of Brescia. Alberto Rezzato (1213) had the Paterines to contend against; he also brought many relics from the Holy Land. Blessed Guala Ronio (1229), of the Friars Preachers, was distinguished for his virtue. Berardo Maggi (1275), a Guelph, was made Duke and Count of the city, and constructed among other works two canals diverting the waters of the Rivers Chiese and Mella, in order to furnish the motive force for many factories. Tommaso Visconti (1388) did much for the maintenance of discipline among the clergy. Under Bishop Francesco de' Mareri (1418), the preaching of St. Bernardino of Siena wrought a great moral reform in the city of Brescia. Pietro dal Monte (1442) adorned the episcopal palace, erected a hospital, and wrote various works. Paolo Zane (1481) built the shrine of Santa Maria delle Grazie and established the hospital for incurables. In the sixteenth century three cardinals succeeded each other: Francesco Cornaro (1532), Andrea Cornaro (1543), and Durante de' Duranti (1551). Domenico Bollani (1559) convened a diocesan synod (1574) in conformity with the decree of the Council of Trent, and founded the seminary. Giovanni Dolfin (1579) seconded St. Charles Borromeo in his work of reform, and that saint by his own desire celebrated the obsequies of Bishop Dolfin. Bishop Pietro Ottoboni (1654) was later elevated to the chair of St. Peter under the name of Alexander VIII. Cardinal Alb. Badoaro (1706) was a very zealous pastor, combating in an especial manner the Quietism which had infected his diocese. Cardinal Angelo M. Quirini (1727) was a man of great learning; he founded the library of the commune, which took its name from him, and did much towards the restoration of the cathedral. During the episcopate of Giovanni Nani (1773) the French invasion took place, with the attendant pillaging of churches and convents.

The most important churches of the city have

been mentioned in connexion with the bishops. There is still to be noted that of San Francesco, Romanesque in style, with a beautiful façade. Noteworthy, also, is the cemetery of Brescia, dating from the beginning of the nineteenth century, containing a large watch tower.

The diocese contains 79 rural deaneries, 389 parishes, 774 churches, chapels, and oratories, 997 secular priests, 77 regular clergy, 398 seminarists, 283 members of female religious orders, 4 schools for boys, and 8 for girls, and a population of 527,475.

#### U. BENIGNI.

**Breslau, THE PRINCE-BISHOPRIC OF**, is seated at Breslau, on the River Oder in the Prussian Province of Silesia.

**HISTORY.**—Christianity was first introduced into Silesia by missionaries from Moravia and Bohemia. After the conversion of the Polish Duke Misiko (later Miecyslaus) the work of bringing the people to the new faith went on more rapidly. Up to about the year 1000 Silesia had no bishop of its own, but was united to neighbouring dioceses. In this way arose the first connexion of Silesia with Germany. The upper part of the River Oder formed the boundary of the Kingdom of Poland; all the territory which is now Silesia lying on the right-hand bank of the Oder belonged, therefore, to the Diocese of Posen, which was suffragan to the Metropolitan See of Magdeburg. This part of Silesia was thus under the jurisdiction of that Jordan who was, in 968, appointed first Bishop of Posen. The part of Silesia lying on the left bank of the Oder belonged to the territory then included in Bohemia, and was consequently within the diocesan jurisdiction of Prague. The See of Prague, founded probably in 973, was suffragan to the Archdiocese of Mainz. The Polish ruler, Boleslaw Chrobry, the son of Misiko, obtained the Bohemian part of Silesia during his wars of conquest, and a change in the ecclesiastical dependence of the province followed. By a patent of Otto III, in 995, Silesia was attached to the See of Meissen, which, like Posen, was suffragan to the Archdiocese of Magdeburg. Soon after this the Emperor Otto III and Duke Boleslaw Chrobry, who was then the ruler of the whole of Silesia, founded the Diocese of Breslau, and Breslau, together with the Dioceses of Cracow and Colberg, was placed under the Archdiocese of Gnesen, which was founded by Otto in the year 1000. The first Bishop of Breslau is said to have been named Johannes, but nothing more than this is known of him, nor is there extant any official document giving the boundaries of the diocese at the time of its erection. However, they are defined in the Bulls of approval and protection issued by Pope Adrian IV, 23 April, 1155, and by Pope Innocent IV, 9 August, 1245.

The powerful Polish ruler, Boleslaw Chrobry, was succeeded by his son Misiko II, who had but a short reign. After his death a revolt against Christianity and the reigning family broke out, the new Church organization of Poland disappeared from view, and the names of the Bishops of Breslau for the next half century are unknown. Casimir, the son of Misiko, and his mother were driven out of the country, but through German aid they returned, and the affairs of the Church were brought into better order. A Bishop of Breslau from probably 1051 to 1062 was Hieronymus, said by later tradition to have been a Roman nobleman. He was followed by Johannes I (1062-72), who was succeeded by Petrus I (1071-1111). During the episcopate of Petrus, Count Peter Wlast entered upon that work of founding churches and monasteries which has preserved his name. Petrus was followed by: Zyroslaus I (1112-20); Heimo (1120-26), who welcomed St. Otto of Bam-

berg to Breslau in May, 1124, when the saint was on his missionary journey to Pomerania; Robert I (1127-42), who was Bishop of Cracow; Robert II (1142-46); and Johannes II (1146-49), who became Archbishop of Gnesen. With the episcopate of Bishop Walter (1149-69) the history of the Diocese of Breslau begins to grow clearer. At Walter's request Pope Adrian IV, in 1155, took the bishopric under his protection and confirmed to it the territorial possessions of which a list had been submitted to him. Among the rights which the pope then confirmed was that of jurisdiction over the lands belonging to the castle of Ottmachau which had been regarded as the patrimony of the diocese from its foundation. During Walter's episcopate the Polish Duke Ladislaus and his family were driven from home and took refuge in Germany; in 1163 the sons of Ladislaus returned and, through the intervention of Frederick

THE CATHEDRAL OF BRESLAU

Barbarossa, received as an independent duchy the part of Silesia which was included at that date in the See of Breslau. Bishop Walter built a new, massively constructed cathedral, in which he was buried. Zyroslaus II (1170-98) encouraged the founding of the Cistercian monastery of Leubus by Duke Boleslaw the Long. In 1180 Zyroslaus took part in the national assembly at Lenczyc at which laws for the protection of the Church and its property were promulgated. Jaroslaus (1198-1201), the oldest son of Duke Boleslaw, and Duke of Oppeln, was the first prince to become Bishop of Breslau. Cyprian (1201-7) was originally Abbot of the Premonstratensian monastery of St. Vincent near Breslau, then Bishop of Lebus, and afterwards Bishop of Breslau. During Cyprian's episcopate Duke Heinrich I and his wife, St. Hedwig, founded the Cistercian convent at Trebnitz. The episcopate of Bishop Lorenz (1207-32) was marked by his efforts to bring colonies of Germans into the church territories, to effect the cultivation of waste lands. This introduction of German settlers by the bishop was in accordance with the example set by Heinrich I and St. Hedwig. The monasteries of the Augustinian Canons, Premonstratensians, and Cistercians took an active part in carrying out the schemes of the rulers by placing great numbers of Germans, especially Thuringians and Franconians, on the large estates that had been granted them.

One of the most noted bishops of the diocese was Thomas I (1232-68); he continued the work of German colonization with so much energy that even the marauding incursions of the Mongols (1241) made but a temporary break in the process. His defence of the rights of the Church involved him in bitter conflicts with Duke Boleslaw of Liegnitz. Thomas began the construction of the present cathedral, the chancel being the first part erected. St. Hedwig died during his episcopate; and he lived until the process of her canonization was completed, but died before the final solemnity of her elevation to the altars of the Catholic Church. After Thomas I,

Ladislav, a grandson of St. Hedwig, and Archbishop of Salzburg, was Administrator of the Diocese of Breslau until his death in 1270. He was followed by Thomas II (1270-92), who was involved for years in a violent dispute with Duke Henry IV as to the prerogatives of the Church in Silesia. In 1287 a reconciliation was effected between them at Ratisbon, and in 1288 the duke founded the collegiate church of the Holy Cross at Breslau. Before his death, on the Eve of St. John in 1290, the duke confirmed the rights of the Church to sovereignty over the territories of Neisse and Ottmachau. Thomas II consecrated the high altar of the cathedral; he was present at the Ecumenical Council of Lyons (1274) and in 1279 held a diocesan synod. Johann III, Romka (1292-1301), belonged to the Polish party in the cathedral chapter. His maintenance of the prerogatives of the Church brought him, also, into conflict with the temporal rulers of Silesia; in 1296 he called a synod for the defence of these rights. In the election of Heinrich I, of Würben (1302-19), the German party in the cathedral chapter won, but this victory cost the new bishop the enmity of the opposing faction. He was made guardian of the youthful Dukes of Breslau, and this appointment, together with the factional disputes, led to the bringing of grave accusations against him. The researches of more recent times have proved the groundlessness of these attacks. He was kept in Avignon a number of years by a suit before the Curia which was finally settled in his favour. Notwithstanding the troubles of his life he was energetic in the performance of his duties. He carried on the construction of the cathedral, and in 1305 and 1316 held diocesan synods. The office of Auxiliary Bishop of Breslau dates from his episcopate. After his death a divided vote led to a vacancy of the see. The two candidates, Weit and Lutold, elected by the opposing factions, finally resigned, and Pope John XXII transferred Nanker, Bishop of Cracow, to Breslau (1326-41).

The constant division and subdivision of Silesian territory into small principalities for the members of the ruling families resulted in a condition of weakness that necessitated dependence on a stronger neighbour, and Silesia thus came, from the year 1327, under the control of Bohemia. A quarrel broke out between Bishop Nanker and the suzerain of Silesia, King John of Bohemia, when the king seized the castle of Militsch which belonged to the cathedral chapter. The bishop excommunicated the king and those members of the Council of Breslau who sided with him. On account of this he was obliged to flee from Breslau and take refuge in Neisse, where he died. Preczlaus of Pogarell (1341-1376) was elected bishop while pursuing his studies at Bologna, and was consecrated bishop at Avignon. Through his friendship with Carl, the son of King John, he was soon able to settle the discord that had arisen under his predecessor. The diocese prospered greatly under his rule. He bought the Duchy of Grottkau from Duke Boleslaw of Brieg and added it to the episcopal territory of Neisse. The Bishops of Breslau had, therefore, after this the titles of Prince of Neisse and Duke of Grottkau, and took precedence of the other Silesian rulers who held principalities in fief. Carl IV, the emperor at this date, wished to separate Breslau from the Archdiocese of Gnesen and to make it a suffragan of the newly erected Archbishopric of Prague, but the plan failed, owing to the opposition of the Archbishop of Gnesen. Preczlaus added to the cathedral the beautiful Lady Chapel, in which he was buried and where his tomb still exists. Dietrich, dean of the cathedral, who was elected as successor to Preczlaus, could not obtain the papal confirmation, and the Bishop of Olmütz, who was chosen in his place, soon died. After a long contest with the Bohemian King and German Emperor Wenzel,

Bishop Wenzel of Lebus, Duke of Liegnitz, was transferred to Breslau (1382-1417). The new bishop devoted himself to repairing the damage inflicted on the Church in Silesia by the despotic procedure of the Emperor Wenzel. He held two synods, in 1410 and 1415, with the object of securing a higher standard of ecclesiastical discipline; and he settled the right of inheritance in the territory under his dominion by promulgating the church decree called "Wenzel's law". Resigning his bishopric in 1417, Wenzel died in 1419. The episcopate of Conrad, Duke of Oels, the next bishop (1417-47), fell in the trying time for Silesia of the Hussite wars. Conrad was placed at the head of the Silesian confederation which was formed to defend the country against hostile incursions. In 1435 the bishop issued a decree of which the chief intent was to close the prebends in the Diocese of Breslau to foreigners, and thus prevent the Poles from obtaining these offices. The effort to shut out the Polish element and to loosen the connexion with Gnesen was not a momentary one; it continued, and led gradually to a virtual separation from the Polish archdiocese some time before the formal separation took place. The troubles of the times brought the bishop and the diocese into serious pecuniary difficulties, and in 1444 Conrad resigned, but his resignation was not accepted, and he resumed his office. In 1446 he held a diocesan synod and died in the following year. Conrad's successor was the provost of the cathedral of Breslau, Peter Novak (1447-56). By wise economy Bishop Peter succeeded in bringing the diocesan finances into a better condition and was able to redeem the greater part of the church lands which his predecessor had been obliged to mortgage. At the diocesan synod of 1454 he endeavoured to suppress the abuses that had arisen in the diocese.

Jodokus of Rosenberg (1456-67) was a Bohemian nobleman and Grand Prior of the Knights of St. John. His love of peace made his position a very difficult one during the fierce ecclesiastico-political contention that raged between the Hussite King of Bohemia, George of Podiebrad, and the people of Breslau, who had taken sides with the German party. Jodokus was followed by a bishop from the region of the Rhine, Rudolf von Rudesheim (1468-82). As papal legate, Rudolf had become popular in Breslau through his energetic opposition to George of Podiebrad; for this reason the cathedral chapter requested his transfer from the small Diocese of Lavant in Carinthia, after he had confirmed their privileges. From this time these privileges were called "the Rudolfian statutes". Under his leadership the party opposed to Podiebrad obtained the victory, and Rudolf proceeded at once to repair the damage which had been occasioned to the Church during this strife; mortgaged church lands were redeemed; in 1473 and 1475 diocesan synods were held, at which the bishop took active measures in regard to church discipline. As coadjutor, he had selected a Swabian, Johann IV, Roth, Bishop of Lavant, a man of humanistic training. Urged by King Matthias of Hungary, to whom Silesia was then subject, the cathedral chapter, somewhat unwillingly, chose the coadjutor as bishop (1482-1506). His episcopate was marked by violent quarrels with the cathedral chapter. But at the same time he was a promoter of art and learning, and strict in his conception of church rights and duties. He endeavoured to improve the spiritual life of the diocese by holding a number of synods. Before he died the famous worker in bronze, Peter Vischer of Nuremberg, cast his monument, the most beautiful bishop's tomb in Silesia. His coadjutor with right of succession was Johann V (1506-20), a member of the noble Hungarian family of Turzo. Johann V took an active part in the intellectual life of the time and sought at the diocesan synods to promote learning

and church discipline, and to improve the schools. On the ruins of the old stronghold of Fauernig he built the castle called Johannisberg, now the summer residence of the Prince-Bishop of Breslau.

The religious disturbances of the sixteenth century began to be conspicuously apparent during this episcopate, and soon after Johann's death Protestantism began to spread in Silesia, which country had, since 1526, belonged to Austria. Princes, nobles, and town councils were zealous promoters of the new belief; even in the episcopal principality of Neisse-Grottkau Protestant doctrines found approval and acceptance. The successors of Johann V were partly responsible for this condition of affairs. Jacob von Salza (1520-39) was personally a staunch adherent of the Church, yet the gentleness of his disposition caused him to shrink from carrying on a war against the powerful religious movement that had arisen. To an even greater degree than Jacob von Salza his successor, Balthasar von Promnitz (1539-63), avoided coming into conflict with Protestantism. He was more friendly in his attitude to the new doctrine than any other Bishop of Breslau. Caspar von Logau (1562-74) showed at first greater energy than his predecessor in endeavouring to compose the troubles of his distracted diocese, but later in his episcopate his attitude towards Lutheranism and his slackness in defending church rights gave great offence to those who had remained true to the Faith. These circumstances make the advance of Protestantism easy to understand. At the same time it must be remembered that the bishops, although also secular rulers, had a difficult position in regard to spiritual matters. At the assemblies of the nobles, and at the meetings of the diet, the bishops and the deputies of the cathedral chapter were, as a rule, the only Catholics against a large and powerful majority on the side of Protestantism. The Austrian suzerains, who lived far from Silesia, and who were constantly preoccupied by the danger of a Turkish invasion, were not in a position to enforce the edicts which they issued for the protection of the Church.

The Silesian clergy had in great measure lost their high concept of the priestly office, although there were honourable exceptions. Among those faithful were the majority of the canons of the cathedral of Breslau; they distinguished themselves not only by their learning, but also by their religious zeal. It was in the main due to them that the diocese did not fall into spiritual ruin. The chapter was the willing assistant of the bishops in the reform of the diocese. Martin von Gerstmann (1574-85) began the renovation of the diocese, and the special means by which he hoped to attain the desired end were: the founding of a seminary for clerics, visitations of the diocese, diocesan synods, and the introduction of the Jesuits. His successor, Andreas von Jerin (1585-96), a Swabian who had been educated at the German College at Rome, followed in his footsteps. At the diocesan synod of 1592 he endeavoured to improve church discipline. Besides his zeal in elevating the life of the Church, he was also a promoter of the arts and learning. The silver altar with which he adorned his cathedral still exists, and he brought the schools in the principality of Neisse into a flourishing condition. The bishop also rendered important services to the emperor, as legate, at various times. Bonaventura Hahn, elected in 1596, as the successor of Andreas von Jerin, was not recognized by the emperor and was obliged to resign his position. The candidate of the emperor, Paul Albert (1599-1600), occupied the see only one year. Johann VI (1600-8), a member of a noble family of Silesia named von Sitsch, took more severe measures than his predecessors against Protestantism, in the hope of checking it, especially in the episcopal principality of Neisse-Grottkau.

Bishop Carl (1608-24), Archduke of Austria, had greater success than his predecessor after the first period of the Thirty Years War had taken a turn favourable to Austria and the Catholic party. The battle of the White Mountain (1620) broke not only the revolt in Bohemia, but also the opposition of the allied Protestants of Silesia. Bishop Carl began the restoration of the principality of Neisse to the Catholic Faith. The work was completed by his successor, Carl Ferdinand, Prince of Poland (1625-55). Carl Ferdinand spent most of his time in his own country, but appointed excellent administrators for the diocese, such as the Coadjutor-Bishop Liesch von Hornau, and Archdeacon Gebauer. Imperial commissioners gave back to the Catholic Church those church buildings in the chief places of the principalities which had become the property of the sovereign through the extinction of fiefs. According to the terms of the Treaty of Westphalia, the remaining churches, 693 in number, of such territories were secularized in the years 1653, 1654, and 1668. This led to a complete reorganization of the diocese. The person who effected it was Sebastian of Rostock, a man of humble birth who was vicar-general and administrator of the diocese under the bishops Archduke Leopold Wilhelm (1656-62) and Archduke Carl Joseph (1663-64), neither of whom lived in the territory of Breslau. After Sebastian of Rostock became bishop (1664-71) he carried on the work of reorganization with still greater success than before. Friedrich, Landgrave of Hesse, Cardinal, and Grand Prior of the Order of St. John, was the next Bishop of Breslau (1671-82). The new bishop was of Protestant origin and had become a Catholic at Rome. Under his administration the rehabilitation of the diocese went on. He beautified the cathedral and elaborated its services. For the red cap and violet almutium of the canons he substituted the red mozetta. He was buried in a beautiful chapel which he had added to the cathedral in honour of his ancestress, St. Elizabeth of Thuringia. After his death the chapter presented Carl von Liechtenstein, Bishop of Olmütz, for confirmation. Their choice was opposed by the emperor, whose candidate was the Count Palatine Wolfgang of the ruling family of Pfalz-Neuburg. Count Wolfgang died, and his brother Franz Ludwig (1683-1732) was made bishop. The new ruler of the diocese was at the same time Bishop of Worms, Grand Master of the German Knights, Provost of Ellwangen, and Elector of Trier, and later, he was made Elector of Mainz. He separated the ecclesiastical administration and that of the civil tribunals, and obtained the definition, in the Pragmatic Sanction of 1699, of the extent of the jurisdiction of the vicariate-general and the consistory. In 1675, upon the death of the last reigning duke, the Silesian Duchy of Liegnitz-Brieg-Wohlau lapsed to the emperor, and a new secularization of the churches was begun. But when Charles XII of Sweden secured for the Protestants the right to their former possessions in these territories, by the treaty of Altranstädt, in 1707, the secularization came to an end, and the churches had to be returned. The Emperor Joseph I endeavoured to repair the loss of these buildings to the Catholic Faith by founding the so-called Josephine vicarships.

The next bishop, Philip, Count von Sinzendorf, Cardinal and Bishop of Raab (1732-47), owed his elevation to the favour of the emperor. During his episcopate the greater part of the diocese was added to the territory of Prussia. King Frederick II of Prussia (Frederick the Great) desired to erect a "Catholic Vicariate" at Berlin, which should be the highest spiritual authority for the Catholics of Prussia. This would have been in reality a separation from Rome, and the project failed through the op-

position of the Holy See. Bishop Sinzendorf had neither the acuteness to perceive the inimical intent of the king's scheme, nor sufficient decision of character to withstand it. The king desired to secure a successor to Sinzendorf who would be under royal influence. In utter disregard of the principles of the Church, and heedless of the protests of the cathedral chapter, he presented Count Philip Gotthard von Schaffgotsch as coadjutor-bishop. After the death of Cardinal Sinzendorf the king succeeded in overcoming the scruples of the Holy Father, and Schaffgotsch became Bishop of Breslau (1748-95). Although the method of his elevation caused the new bishop to be regarded with suspicion by many strict Catholics, yet he was zealous in the fulfilment of his duties. During the Seven Years War he fell into discredit with Frederick on account of his firm maintenance of the rights of the Church, and the return of peace did not fully restore him to favour. In 1766 he fled to the Austrian part of his diocese in order to avoid the confinement in Oppeln which the king had decreed against him. After this Frederick made it impossible for him to rule the Prussian part of his diocese, and until the death of the bishop this territory was ruled by vicars Apostolic.

The former coadjutor of von Schaffgotsch, Joseph Christian, Prince von Hohenlohe-Waldenburg-Bartenstein (1795-1817), succeeded him as bishop. During this episcopate the temporal power of the Bishops of Breslau came to an end through the secularization, in 1810, of the church estates in Silesia. Only the estates in Austria remained to the see. The cathedral foundation, eight collegiate foundations, and over eighty monasteries were suppressed, and their property confiscated. Only those monastic institutions which were occupied with teaching or nursing were allowed to exist. Bishop Joseph Christian was succeeded by his coadjutor, Emmanuel von Schimonosky. The affairs of the Church in Prussia had been brought into order by the Bull "De salute animarum", issued in 1821. Under its provisions the cathedral chapter elected Schimonosky, who had been administrator of the diocese, as the first Exempt Bishop of Breslau (1824-32). The bishop received for himself and his successors the title of prince as partial compensation for the loss of the secularized principality of Neisse. He combated the rationalistic tendencies which were rife among his clergy in regard to celibacy and the use of Latin in the church services and ceremonies. During the episcopate of his predecessor the Government had promulgated a law which was a source of much trouble to Schimonosky and his immediate successors; this was that in those places where Catholics were few in number, the parish should be declared extinct, and the church buildings given to the Protestants. In spite of the protests of the episcopal authorities, over one hundred church buildings were lost in this way. King Frederick William put an end to this injustice, and sought to make good the injuries inflicted. For several years after Schimonosky's death the see remained vacant. It was eventually filled by the election, through Government influence, of Count Leopold von Sedlnitzki (1836-40). Bishop von Sedlnitzki was neither clear nor firm in his maintenance of the doctrines of the Church; on the question of mixed marriages, which had become one of great importance, he took an undecided position. At last, upon the demand of Pope Gregory XVI, he resigned his see. He went afterwards to Berlin, where he was made a privy-councillor, and where he later became a Protestant. The dean of the cathedral, Dr. Ritter, administered the diocese for several years until the election of the Grand Dean of the countship of Glatz, Joseph Knauer (1843-44). The new bishop, who was seventy-nine years old, lived only a year after his appointment.

His successor was Melchior, Freiherr von Diepenbrock (1845-53). This episcopate was the beginning of a new religious and ecclesiastical life in the diocese. During the revolutionary period the bishop not only maintained order in his see, which was in a state of ferment, but was also a supporter of the Government. He received unusual honours from the king and was made a cardinal by the pope. He died 20 January, 1853, at the castle of Johannisberg and was buried in the cathedral. His successor, Heinrich Förster (1853-81) carried on his work and completed it. Bishop Förster gave generous aid to the founding of churches, monastic institutions, and schools. The strife that arose between the Church and the State brought his labours in the Prussian part of his diocese to an end. He was deposed by the State and was obliged to leave Breslau and retire to the castle of Johannisberg. Here he died, 20 October, 1881. He was buried in the cathedral at Breslau. Leo XIII appointed as his successor in the disordered diocese Robert Herzog (1882-86), who had been delegate of the prince-bishop and provost of St. Hedwig's at Berlin. Bishop Herzog made every endeavour to bring order out of the confusion into which the quarrel with the State during the immediately preceding years had thrown the affairs of the diocese. Unfortunately, his episcopate was of but short duration; he died after a long illness, 26 December, 1886. The Holy See appointed as his successor a man who had done much to allay the strife between Church and State, the Bishop of Fulda, Georg Kopp. Bishop Kopp was born, 25 July, 1837, at Duderstadt in the Diocese of Hildesheim; he was ordained to the priesthood, 29 August, 1862; consecrated and installed Bishop of Fulda, 27 December, 1881; transferred to Breslau, 9 August, 1887, installed 20 October, 1887; created a cardinal, 16 January, 1893.

**EXTENT AND STATISTICS OF THE DIOCESE.**—The Diocese of Breslau includes the whole Prussian Province of Silesia with the exception of a part of the districts of Ratibor and Leobschütz, which belong to the Archdiocese of Olmütz, and the Countship (*Grafschaft*) of Glatz, also in Prussian Silesia, which is subject to the Archbishop of Prague. In Austrian Silesia the Diocese of Breslau includes the Principality of Teschen and the Austrian part of the Principality of Neisse. In the Province of Brandenburg the diocese still includes the districts of Schwiebus-Züllichau and Krossen, as well as the part formerly called Nieder-Lausitz. With the exception of the districts of Bütow and Lauenburg, the rest of Brandenburg and the Province of Pomerania have, since 1821, been supervised by delegation from the Prince-Bishop of Breslau. (See BERLIN, BRANDENBURG.)

Including the district governed by delegation the diocese contains, according to the last census (1 December, 1905), 3,342,221 Catholics; 8,737,746 Protestants; and 204,749 Jews. There are actively employed in the diocese 1,632 secular, and 121 regular, priests. The cathedral chapter includes the two offices of provost and dean, and has 10 regular, and 6 honorary, canons. The prince-bishopric is divided into 11 commissariates and 99 archpresbyterates, in which there are 992 cures of various kinds (parishes, curacies, and stations), with 935 parish churches and 633 dependent and mother-churches. Besides the theological faculty of the University of Breslau, the diocese possesses, as episcopal institutions for the training of the clergy, 5 preparatory seminaries for boys, 1 home (recently much enlarged) for theological students attending the university, and 1 seminary for priests. The statistics of the houses of the religious orders in the diocese are as follows: Benedictines, 1 house; Dominicans, 1; Franciscans, 8; Jesuits, 3; Piarists, 1; Brothers of

Mercy, 8; Order of St. Camillus of Lellis, 1; Redemptorists, 1; Congregation of the Society of the Divine Word, 1; Alexian Brothers, 1; Poor Brothers of St. Francis, 2; Sisters of St. Elizabeth, 6; Magdalen Sisters, 1; Ursulines, 6; Sisters of the Good Shepherd, 4; Sisters of St. Charles Borromeo, (a) from the mother-house at Trebnitz, 181, (b) from the mother-house at Trier, 5; Servants of the Sacred Heart of Jesus, 2; Sisters of Poor Handmaids of Christ, 3; Sister-Servants of Mary, 27; German Dominican Sisters of St. Catharine of Siena, 11; Sisters of St. Francis, 9; Grey Sisters of St. Elizabeth, 169; Sisters of St. Hedwig, 9; Sisters of Mary, 27; Poor School-Sisters of Notre Dame, 15; Vincentian Sisters, 7; Sisters of the Holy Cross, 1; Sisters of St. Joseph, 1. In the above-mentioned monastic houses for men there are 512 religious; in those for women, 5,208 religious.

by King Ladislaus of Hungary, to which Silesia then belonged, when the University of Cracow, fearing competition, succeeded in bringing the scheme to naught. The efforts made in 1527 by the Protestants to found a Silesian University at Liegnitz and in 1616 at Beuthen also failed. The Catholics sought to establish a theological school for the education of the diocesan clergy, and the endeavour led to the founding at Breslau, in 1565, of a theological seminary which was transferred in 1575 to Neisse. In 1623 the Bishop of Breslau, Archduke Carl of Austria, founded at Neisse a Jesuit college to which he gave a large endowment. The bishop intended to unite with this college a university having departments of jurisprudence and medicine, but his death soon after the founding of the school prevented the carrying out of these plans.

A school founded by the Jesuits at Breslau in 1659 was more fortunate in its development. The Society conducted in the imperial citadel a gym-

UNIVERSITY OF BRESLAU.—The founding of a university at Breslau was first debated in 1409, when the Czechs made it impossible for the Germans to continue their studies at the University of Prague and virtually drove them from it. But Leipzig and not Breslau obtained the new seat of learning. About a century later, under the quickening impulse of Humanism, the project was again taken up by the city of Breslau in conjunction with the bishop, Johann Roth, and his coadjutor, Johann Turzo, and a "generale literarum gymnasium" to contain all four faculties was planned. The charter of this institution had been signed at Ofen, 20 July, 1505,

the higher classes of which corresponded to those in the philosophical department of a university. Theological studies were introduced in 1666. These two courses were carried on as in a university, but the school had no power to confer degrees. In order to obtain the charter necessary for the conferring of degrees and for the development of the institution, the Jesuit Father Wolf sought, from 1694 on, to obtain the consent of Emperor Leopold I to the erection of the school into a university. Father Wolf was also active in the negotiations between the courts of Berlin and Vienna concerning the concession of the title of King to the Elector Frederick III of Brandenburg. The plans Father Wolf sought to carry out were far-reaching. He held it a misfortune that Silesians were obliged to go to universities outside of Silesia, where Catholics often had no opportunity for the exercise of their religion. His scheme was a national Silesian university, endowed with all the academic privileges, which should be open to students irrespective of their religious beliefs. This project encountered the opposition of

Protestant prejudice against the Jesuits, and the town council of Breslau prevented the imperial confirmation of the plan for eight years. However, Leopold I signed at Vienna, 21 October, 1702, the charter raising the school to the rank of a university and obtained the papal confirmation for the decree.

The new university, called after the emperor, Leopoldina, was opened 15 November, 1702, but the change in status did not alter the internal organization. The buildings of the old citadel had long been too cramped for the needs of the institution, and it was resolved to erect a large new edifice, the cornerstone of which was laid 6 April, 1728. On account of the war with Frederick the Great of Prussia, and his conquest of Silesia, the plans for the new structure could not be carried out in their entirety. Although efforts were made to open departments of law and medicine, nothing more was attained than unofficial lectures by instructors in these branches. The number of scholars during the first decade of the life of the university continually increased. In 1740, 1,300 students attended the university and gymnasium; the number declined during the first Silesian war then rose again, until the Seven Years War once more reduced the attendance at lectures. During this latter conflict the building was used as a hospital and prison, and professors and students were obliged to go elsewhere. Only after the Peace of 1763 was the building restored to its original use. The attendance increased rapidly during the next ten years, but fell off greatly after the suppression of the Society of Jesus. In 1803, when the Leopoldina was made a secular institution, the number of students was about 500.

After the suppression of the Jesuits the king established a Catholic-Schools Institute which included the Jesuits living in Silesia, and in which the candidates for the secular priesthood were to receive their training. The former independence disappeared and the institute and university were made dependent on the Silesian minister. The new institution maintained with difficulty what was already in existence; it was ruled by a spirit of narrow conservatism, and made no attempt to develop its courses or to enter new fields. Besides this, the teaching force was not well kept up even in the usual branches of learning. During the last decade of its existence the Leopoldina was carried on under the royal ordinance issued 26 July, 1800, in regard to the University of Breslau and the gymnasia connected with it. The Catholic school system, especially the gymnasia, underwent a reform at this epoch which led to the separation of the gymnasium from the university and the reorganization of the philosophical faculty. These two changes were carried out in 1811.

The founding of the University of Berlin in 1810 made uncertain the future existence of the Protestant university at Frankfort on the Oder, not far from Berlin. There was also a strong desire in Silesia for a university embracing all faculties, and King Frederick William III gave his consent, 3 August, 1811, to a "plan for uniting the University of Frankfort with the University of Breslau". The two universities were to be made one institution in regard to constitution, teaching staff, endowments, property, and income; the philosophical faculties were to form one body. "To satisfy the wishes of Catholic subjects" two professors of philosophy proper were appointed, one Protestant and one Catholic. The promise of the erection of a Catholic professorship of history was not carried out until 1855, in the reign of Frederick William IV. Outside of these positions religious belief was not to be taken into consideration in appointments to the faculties of philosophy, law, and medicine. Instruction from both Catholic and

Protestant professors of theology in the same university was until then unheard of. The plan of union ordained by the king decreed "that the theological department of the combined university should be divided into two faculties, a Protestant theological faculty and a Catholic theological one. These two faculties, of equal rank in other respects, were to alternate in precedence from year to year in the matter of lecture-announcements, on academic occasions, and in affixing signatures. The public opening of the new university took place 19 October, 1811, the lectures began 21 October. In the second year of the new school patriotism led the great majority of the students to take part in the war against Napoleon called "the War of Liberation", and many of them died for their country. After peace was concluded the usual life of the university was resumed. In August, 1861, the semi-centennial of the university was celebrated with much pomp. The schools of learning shared in the great development of Germany after the wars of 1866 and 1870, 1871, and the University of Breslau received, through the increase of prosperity, many improvements in equipment. The departments of medicine and natural science deserve special mention.

The increase in the number of students has kept pace with the increase in the number of instructors. When the university was opened, in 1811, there were 35 regular professors, 4 assistant professors, 4 *docents*, and 8 lecturers and technical teachers; in 1861, at the time of the semi-centennial celebration, there were 41 regular professors, 11 assistant professors, 33 *docents*, and 12 lecturers and technical teachers; in 1906 there were 73 regular professors, 31 assistant professors, 66 *docents*, and 15 lecturers and technical teachers. In the first year of the institution there were 298 students; in the fiftieth, 775; and in 1906 the number reached 1,961. Of this last number, 241 attended the lectures of the Catholic theological faculty; 61 the lectures of the Protestant theological faculty; 565 attended the law course; 271, the medical course; 807, the philosophical course. The German students numbered 1,884; foreign students, 77. Besides matriculated students, permission to attend the lectures was granted to 285 other persons of whom 179 were women.

JOSEPH JUNGNTZ.

**Bressani, FRANCESCO GIUSEPPE**, an Indian missionary, b. in Rome, 6 May, 1612; d. at Florence, 9 September, 1672. He entered the novitiate of the Society of Jesus, 15 August, 1626 and studied at Rome and Clermont, teaching before his ordination at Sezza, Tivoli, and Paris. On his arrival in America he was assigned to the spiritual care of the French at Quebec, but in the following year was sent to the Algonquins at Three Rivers. In April, 1644, on the way to the Huron Mission he was captured by the Iroquois and cruelly tortured by them, at intervals, for over two months. He was at length ransomed by the Dutch at Fort Orange, and sent to France, where he arrived in November, 1644. In the following year he was again in Canada and laboured zealously on the Huron Mission until its destruction by the Iroquois four years later. He continued, however, to minister to the scattered and fugitive Hurons. He was also stationed for a time at Quebec, where he occasionally officiated at the church. In November, 1650, Bressani's failing health and the meagre resources of the mission obliged him to return to Italy, where he spent many years as a preacher and missionary, dying at Florence. Bressani wrote the "Breve Relatione d'alcune Missioni . . . nella Nuova

Francia" (Macerata, 1653), which was translated into French by Father Martin, S. J. (Montreal, 1852).

**Brethren of the Lord, THE.**—A group of persons closely connected with the Saviour appears repeatedly in the New Testament under the designation "his brethren", or "the brethren of the Lord" (Matt., xii, 46; xiii, 55; Mark, iii, 31, 32; vi, 3; Luke, viii, 19, 20; John, ii, 12; vii, 3, 5; Acts, i, 14; I Cor., ix, 5). Four such "brethren" are mentioned by name in the parallel texts of Matt., xiii, 55, and Mark, vi, 3 (where "sisters" are also referred to), namely, James (also mentioned Gal., i, 19), Joseph, or Jesus, Simon, and Jude; the incidental manner in which these names are given, shows, however, that the list lays no claim to completeness. Two questions in connexion with these "brethren" of the Lord have long been, and are now more than ever, the subject of controversy: (1) The identity of James, Jude, and Simon; (2) The exact nature of the relationship between the Saviour and his "brethren".

(1) James is without doubt the Bishop of Jerusalem (Acts, xii, 17; xv, 13; xxi, 18; Gal., i, 19; ii, 9, 12) and the author of the first Catholic Epistle. His identity with James the Less (Mark, xv, 40) and the Apostle James, the son of Alphaeus (Matt., x, 3; Mark, iii, 18), although contested by many Protestant critics, may also be considered as certain. There is no reasonable doubt that in Gal., i, 19: "But other of the apostles [besides Cephas] I saw none, saving James the brother of the Lord", St. Paul represents James as a member of the Apostolic college. The purpose for which the statement is made, makes it clear that "apostles" is to be taken strictly to designate the Twelve, and its truthfulness demands that the clause "saving James" be understood to mean, that in addition to Cephas, St. Paul saw another Apostle, "James the brother of the Lord" (cf. Acts, ix, 27). Besides, the prominence and authority of James among the Apostles (Acts, xv, 13; Gal., ii, 9; in the latter text he is even named before Cephas) could have belonged only to one of their number. Now there were only two Apostles named James: James the son of Zebedee, and James the son of Alphaeus (Matt., x, 3; Mark, iii, 18; Luke, vi, 16; Acts, i, 13). The former is out of the question, since he was dead at the time of the events to which Acts, xv, 6 sqq., and Gal., ii, 9, 12, refer (cf. Acts, xii, 2). James "the brother of the Lord" is therefore one with James the son of Alphaeus, and consequently with James the Less, the identity of these two being generally conceded. Again, on comparing John, xix, 25, with Matt., xxvii, 56, and Mark, xv, 40 (cf. Mark, xv, 47; xvi, 1), we find that Mary of Cleophas, or more correctly Clopas (Κλωπᾶς), the sister of Mary the Mother of Christ, is the same as Mary the mother of James the Less and of Joseph, or Jesus. As married women are not distinguished by the addition of their father's name, Mary of Clopas must be the wife of Clopas, and not his daughter, as has been main-

tained. Moreover, the names of her sons and the order in which they are given, no doubt the order of seniority, warrant us in identifying these sons with James and Joseph, or Jesus, the "brethren" of the Lord. The existence among the early followers of Christ of two sets of brothers having the same names in the order of age, is not likely, and cannot be assumed without proof. Once this identity is conceded, the conclusion cannot well be avoided that Clopas and Alphaeus are one person, even if the two names are quite distinct. It is, however, highly probable, and commonly admitted, that Clopas and Alphaeus are merely different transcriptions of the same Aramaic word Halphai. James and Joseph the "brethren" of the Lord are thus the sons of Alphaeus.

Of Joseph nothing further is known. Jude is the writer of the last of the Catholic Epistles (Jude, i). He is with good reason identified by Catholic commentators with the "Judas Jacobi" ("Jude the brother of James" in the D. V.) of Luke, vi, 16, and Acts, i, 13, otherwise known as Thaddeus (Matt., x, 3; Mark, iii, 18). It is quite in accordance with Greek custom for a man to be distinguished by the addition of his brother's name instead of his father's, when the brother was better known. That such was the case with Jude is inferred from the title "the brother of James", by which he designates himself in his Epistle. About Simon nothing certain can be stated. He is identified by most commentators with the Symeon, or Simon, who, according to Hegesippus, was a son of Clopas, and succeeded James as Bishop of Jerusalem. Some identify him with the Apostle Simon the Cananean (Matt., x, 4; Mark, iii, 18), or the Zealot (Luke, vi, 15; Acts, i, 13). The grouping together of James, Jude or Thaddeus, and Simon, after the other Apostles, Judas Iscariot excepted, in the lists of the Apostles (Matt., x, 4, 5; Mark, iii, 18; Luke, vi, 16; Acts, i, 13) lends some probability to this view, as it seems to indicate some sort of connexion between the three. Be this as it may, it is certain that at least two of the "brethren" of Christ were among the Apostles. This is clearly implied in I Cor., ix, 5: "Have we not the power to carry about a woman, a sister, as well as the rest of the apostles, and the brethren of the Lord, and Cephas?" The mention of Cephas at the end indicates that St. Paul, after speaking of the Apostles in general, calls special attention to the more prominent ones, the "brethren" of the Lord and Cephas. The objection that no "brethren" of the Lord could have been members of the Apostolic college, because six months before Christ's death they did not believe in Him (John, vii, 3, 5), rests on a misunderstanding of the text. His "brethren" believed in his miraculous power, and urged him to manifest it to the world. Their unbelief was therefore relative. It was not a want of belief in His Messiahship, but a false conception of it. They had not yet rid themselves of the Jewish idea of a Messiah who would be a temporal ruler. We meet with this idea among the Apostles as late as the day of the Ascension (Acts, i, 6). In any case the expression "his brethren" does not necessarily include each and every "brother", wherever it occurs. This last remark also sufficiently answers the difficulty in Acts, i, 13, 14, where, it is said, a clear distinction is made between the Apostles and the "brethren" of the Lord.

(2) The texts cited at the beginning of this article show beyond a doubt that there existed a real and near kinship between Jesus and His "brethren". But as "brethren" (or "brother") is applied to step-brothers as well as to brothers by blood, and in Scriptural, and Semitic usage generally, is often loosely extended to all near, or even distant, relatives (Gen., xiii, 8; xiv, 14, 16; Lev., x, 4; I Par., xv, 5-10; xxiii, 21, 22), the word furnishes no certain indication of the exact nature of the relationship. Some ancient

heretics, like Helvidius and the Antidicomarianites, maintained that the "brethren" of Jesus were His uterine brothers the sons of Joseph and Mary. This opinion has been revived in modern times, and is now adopted by most of the Protestant exegetes. On the orthodox side two views have long been current. The majority of the Greek Fathers and Greek writers, influenced, it seems, by the legendary tales of apocryphal gospels, considered the "brethren" of the Lord as sons of St. Joseph by a first marriage. The Latins, on the contrary, with few exceptions (St. Ambrose, St. Hilary, and St. Gregory of Tours among the Fathers), hold that they were the Lord's cousins. That they were not the sons of Joseph and Mary is proved by the following reasons, leaving out of consideration the great antiquity of the belief in the perpetual virginity of Mary. It is highly significant that throughout the New Testament Mary appears as the Mother of Jesus and of Jesus alone. This is the more remarkable as she is repeatedly mentioned in connexion with her supposed sons, and, in some cases at least, it would have been quite natural to call them her sons (cf. Matt., xii, 46; Mark, iii, 31; Luke, viii, 19; Acts, i, 14). Again, Mary's annual pilgrimage to Jerusalem (Luke, ii, 41) is quite incredible, except on the supposition that she bore no other children besides Jesus. Is it likely that she could have made the journey regularly, at a time when the burden of child-bearing and the care of an increasing number of small children (she would be the mother of at least four other sons and of several daughters, cf. Matt., xiii, 56) would be pressing heavily upon her? A further proof is the fact that at His death Jesus recommended His mother to St. John. Is not His solicitude for her in His dying hour a sign that she would be left with no one whose duty it would be to care for her? And why recommend her to an outsider if she had other sons? Since there was no estrangement between Him and His "brethren", or between them and Mary, no plausible motive for such an action can be imagined. This argument is confirmed by the words with which He recommends her: *ὅτι ὁ υἱός σου*, with the article before *υἱός* (son); had there been other sons, *οἱ υἱοί σου*, without the article, would have been the proper expression.

The decisive proof, however, is that the father and mother of at least two of these "brethren" are known to us. James and Joseph, or Josés, are, as we have seen, the sons of Alpheus, or Clopas, and of Mary, the sister of Mary the Mother of Jesus, and all agree that if these are not brothers of the Saviour, the others are not. This last argument disposes also of the theory that the "brethren" of the Lord were the sons of St. Joseph by a former marriage. They are then neither the brothers nor the step-brothers of the Lord. James, Joseph, and Jude are undoubtedly His cousins. If Simon is the same as the Symeon of Hegesippus, he also is a cousin, since this writer expressly states that he was the son of Clopas the uncle of the Lord, and the latter's cousin. But whether they were cousins on their father's or mother's side, whether cousins by blood or merely by marriage, cannot be determined with certainty. Mary of Clopas is indeed called the "sister" of the Blessed Virgin, (John, xix, 25), but it is uncertain whether "sister" here means a true sister or a sister-in-law. Hegesippus calls Clopas the brother of St. Joseph. This would favour the view that Mary of Clopas was only the sister-in-law of the Blessed Virgin, unless it be true, as stated in MSS. of the Peshittá version, that Joseph and Clopas married sisters. The relationship of the other "brethren" may have been more distant than that of the above named four.

The chief objection against the Catholic position is taken from Matt., i, 25: "He [Joseph] knew her not till she brought forth her firstborn son"; and from Luke,

ii, 7: "And she brought forth her firstborn son". Hence, it is argued, Mary must have borne other children. "Firstborn" (*πρωτότοκος*), however, does not necessarily connote that other children were born afterwards. This is evident from Luke, ii, 23, and Ex., xiii, 2, 12 (cf. Greek text) to which Luke refers. "Opening the womb" is there given as the equivalent of "firstborn" (*πρωτότοκος*). An only child was thus no less "firstborn" than the first of many. Neither do the words "he knew her not till she brought forth" imply, as St. Jerome proves conclusively against Helvidius from parallel examples, that he knew her afterwards. The meaning of both expressions becomes clear, if they are considered in connexion with the virginal birth related by the two Evangelists.

For the Cousin Theory: ST. JEROME, *Adv. Helvid.* in P. L., XXIII; MILL, *Pantheistic Principles*, 220-316; VIGOUROUX, *Les Livres saints et la critique*, V, 397-420; CORLUT, *Les frères de N. S. J. C. in Etudes* (1878), I, 5, 145; MEINERTZ, *Der Jacobusbrief und sein Verfasser* (Freiburg im Br., 1905), 6-64; CORNELI, *Introductio* (Paris, 1897), III, 592 sqq.; SCHEGG, *Jacobus der Bruder des Herrn* (Munich, 1883); LAGRANGE in *Rev. Bibl.* (1906), 504, 505.

For the Step-Brother Theory: LIGHTFOOT, *Comm. on Gal.*, 252-291.

For the Helvidian View: HASTINGS, *Dict. Bib.*, I, 320; ZAHN, *Forschungen*, VI, *Brüder und Vettern Jesu* (Leipzig, 1900). F. BECHTEL.

**Breton**, RAYMOND, a noted French missionary among the Caribbean Indians, b. at Baune, 3 September, 1609; d. at Caen, 8 January, 1679. He entered the Order of St. Dominic at the age of seventeen and was sent (1627) to the famous priory of St. Jacques, at Paris, to finish his classical education and make his course of philosophy and theology. Having obtained his degree in theology, he sailed with three other Dominicans for the French West Indies (1635). Nearly twenty years were devoted to the Antilles missions. During twelve of these he was on the Island of San Domingo, practically alone with the Indians. The other eight years he spent going from island to island, teaching and evangelizing the natives in their own tongue, becoming an adept in the various Carib languages. Returning to France in 1654, he devoted much of his time to preparing young priests for the West Indian missions. To this end he wrote: A Catechism of the Christian Doctrine in Carib (Auxerre, 1664); a French-Carib and Carib-French Dictionary, with copious notes, historical and explanatory, on the Carib language (ibid., 1665); a Carib grammar (ibid., 1667). At the request of the general of the order, he also wrote a valued history of the first years of the French Dominicans' missionary labours among the Caribbean Indians: "Relatio Gestorum a primis Prædicatorum missionariis in insulis Americanis ditionis gallicæ præsertim apud Indos indigenas quos Caribes vulgo dicunt ab anno 1634 ad annum 1643" (MSS). This is considered of great historical importance, and has been used by several writers.

**Breviary.**—This subject may be divided, for convenience of treatment, as follows: I. DEFINITION; II. CONTENTS; III. THE HOURS; IV. COMPONENT PARTS OF THE OFFICE; V. HISTORY OF THE BREVIARY; VI. REFORMA.

I. DEFINITION.—The word *breviary* (Lat. *hren*

arium), signifies in its primary acceptation an abridgment, or a compendium. It is often employed in this sense by Christian authors, e. g. *Breviarium fidei*, *Breviarium in psalmos*, *Breviarium canonum*, *Breviarium regularum*. In liturgical language *Breviary* has a special meaning, indicating a book furnishing the regulations for the celebration of Mass or the canonical Office, and may be met with under the titles *Breviarium Ecclesiastici Ordinis*, or *Breviarium Ecclesiæ Romanæ (Romanæ)*. In the ninth century Alcuin uses the word to designate an office abridged or simplified for the use of the laity. Prudentius of Troyes, about the same period, composed a *Breviarium Psalterii* (v. inf. V. HISTORY). In an ancient inventory occurs *Breviarium Antiphonarii*, meaning "Extracts from the Antiphonary". In the "Vita Aldrici" occurs "sicut in plenariis et brevariis Ecclesiæ ejusdem continentur". Again, in the inventories in the catalogues, such notes as these may be met with: "Sunt et duo cursarii et tres benedictionales Libri; ex his unus habet obsequium mortuorum et unus Breviarius", or, "Præter Breviarium quoddam quod usque ad festivitatem S. Joannis Baptistæ retinebunt", etc. Monte Cassino about A. D. 1100 obtained a book entitled "Incipit Breviarium sive Ordo Officiorum per totam anni decursumem".

From such references, and from others of a like nature, Quesnel gathers that by the word *Breviarium* was at first designated a book furnishing the rubrics, a sort of *Ordo*. The title *Breviary*, as we employ it—that is, a book containing the entire canonical Office—appears to date from the eleventh century.

St. Gregory VII having, indeed, abridged the order of prayers, and having simplified the Liturgy as performed at the Roman Court, this abridgment received the name of *Breviary*, which was suitable, since, according to the etymology of the word, it was an abridgment. The name has been extended to books which contain in one volume, or at least in one work, liturgical books of different kinds, such as the Psalter, the Antiphonary, the Responsoriary, the Lectionary, etc. In this connexion it may be pointed out that in this sense the word, as it is used nowadays, is illogical; it should be named a *Plenarium* rather than a *Breviarium*, since, liturgically speaking, the word *Plenarium* exactly designates such books as contain several different compilations united under one cover. This is pointed out, however, simply to make still clearer the meaning and origin of the word; and section V will furnish a more detailed explanation of the formation of the Breviary.

II. CONTENTS.—The Roman Breviary, which with rare exceptions (certain religious orders, the Ambrosian and Mozarabic Rites, etc.) is used at this day throughout the Latin Church, is divided into four parts according to the seasons of the year: Winter, Spring, Summer, and Autumn. It is constructed of the following elements: (a) the Psalter; (b) the Proper of the Season; (c) Proper of the Saints; (d) the Common; (e) certain special Offices.

(a) *The Psalter*.—The Psalter is the most ancient and the most venerable portion of the Breviary. It consists of 150 psalms, divided in a particular way, to be described later. These psalms formed the groundwork of the Liturgy of the Jews for twelve centuries before Christ, and He certainly made use of these formularies for His prayers, and quoted them on several occasions. The Apostles followed His example, and handed down to the Christian Churches the inheritance of the Psalter as the chief form of Christian prayer. The Church has carefully preserved them during the lapse of centuries and has never sought to replace them by any other formularies. Attempts have been made from time to time to compose Christian psalms, such as the *Gloria in*

*excelsis*, the *Te Deum*, the *Lumen Hilare*, the *Te Decet Laus*, and a few others; but those which the Church has retained and adopted are singularly few in number. The rhythmic hymns date from a period later than the fourth and fifth centuries, and at best hold a purely secondary place in the scheme of the Office. Thus the Book of Psalms forms the groundwork of Catholic prayer; the lessons which fill so important a place in this prayer are not, after all, prayer properly so called; and the antiphons, responsories, versicles, etc., are but psalms utilized in a particular manner.

In the Breviary, however, the Psalter is divided according to a special plan. In the earliest period the use of the Book of Psalms in the Office was doubtless exactly similar to that which prevailed amongst the Jews. The president of the choir chose a particular psalm at his own will. Some psalms, such as xxi, seem specially appropriate to the Passion. Another was adapted to the Resurrection, a third suited the Ascension, while others again are specially referable to the Office of the Dead. Some psalms provide morning prayers, others those for night. But the choice was left in the hands of the bishop or president of the choir. Later, probably from the fourth century, certain psalms began to be grouped together, to respond to the divers requirements of the Liturgy.

Another cause led to these groupings and arrangements of the Psalter. Some monks were in the habit of reciting daily the whole of the 150 psalms. But this form of devotion, apart from lessons and other formularies, occupied so much time that they began to spread the recitation of the entire Psalter over a whole week. By this method each day was divided into hours, and each hour had its own portion of the Psalter. From this arrangement arose the idea of dividing the Psalter according to specially devised rules. St. Benedict was one of the earliest to set himself to this task, in the sixth century. In his Rule he gives minute directions how, at that period, the psalms were to be distributed at the disposition of the abbot; and he himself drew up such an arrangement. Certain psalms were set apart for the night offices, others for Lauds, others for Prime, Terce, Sext, and None, others for Vespers and Compline.

It is a subject of discussion amongst liturgists whether this Benedictine division of the psalms is anterior or posterior to the Roman Psalter. Although it may not be possible to prove the point definitely, still it would seem that the Roman arrangement is the older of the two, because that drawn up by St. Benedict shows more skill, and would thus seem to be in the nature of a reform of the Roman division. In any case, the Roman arrangement of the Psalter reaches back to a hoary antiquity, at least to the seventh or eighth century, since when it has not undergone any alteration. The following is its disposition. Psalms i-cviii are recited at Matins, twelve a day; but Sunday Matins have six more psalms divided between the three nocturns. Thus:—

Sunday—Psalms i, ii, iii, vi-xiv; xv, xvi, xvii; xviii, xix, xx.

Monday—Psalms xxvi-xxxvii.

Tuesday—Psalms xxxviii-xli, xliii-xlix, li.

Wednesday—Psalms lii, liv-lxi, lxiii, lxv, lxvii.

Thursday—Psalms lxviii-lxxix.

Friday—Psalms lxxx-lxxxviii, xciii, xciv, xcvi.

Saturday—Psalms xcvi-cviii.

The psalms omitted in this series, namely, iv, v, xxi-xxv, xlii, l, liii, lxii, lxiv, lxvi, lxxxix-xcii, and xciv, are, on account of their special aptitude, reserved for Lauds, Prime, and Compline.

The series, from Ps. cix to Ps. cxlvii inclusively, are used at Vespers, five each day, except Psalms cxvii, cxviii, and cxlii, reserved for other hours

The last three, cxlviii, cxlix, and cl, which are specially called the psalms of praise (*Laudes*), because of the word *Laudate* which forms their leitmotiv, are always used in the morning Office, which thus gets its name of *Lauds*.

A glance at the above tables will show that, broadly speaking, the Roman Church did not attempt to make any skilful selection of the psalms for daily recitation. She took them in order as they came, except a very few set apart for *Lauds*, *Prime*, and *Compline*, and selected Ps. cxviii for the day hours. Other Liturgies, as the Ambrosian, the Mozarabic, and the Benedictine, or monastic, have Psalters drawn up on wholly different lines; but the respective merits of these systems need not be here discussed. The order of the ferial Psalter is not followed for the festivals of the year or for the feasts of saints; but the psalms are selected according to their suitability for the various occasions.

The history of the text of this Psalter is interesting. The most ancient Psalter used in Rome and in Italy was the "*Psalterium Vetus*", of the Itala version, which seems to have been introduced into the Liturgy by Pope St. Damasus (d. 384). He it was who first ordered the revision of the Itala by St. Jerome, in A. D. 383. On this account it has been called the "*Psalterium Romanum*", and it was used in Italy and elsewhere till the ninth century and later. It is still in use in St. Peter's at Rome, and many of the texts of our Breviary and Missal still show some variants (*Invitatory* and Ps. xciv, the antiphons of the Psalter and the responsories of the Proper of the Season, *Introits*, *Graduals*, *Offertories*, and *Communions*). The Roman Psalter also influences the Mozarabic Liturgy, and was used in England in the eighth century. But in Gaul and in other countries north of the Alps, another recension entered into competition with the "*Psalterium Romanum*" under the somewhat misleading title of the "*Psalterium Gallicanum*"; for this text contained nothing distinctively Gallican, being simply a later correction of the Psalter made by St. Jerome in Palestine, in A. D. 392. This recension diverged more completely than the earlier one from the Itala; and in preparing it St. Jerome had laid Origen's *Hexapla* under contribution. It would seem that St. Gregory of Tours, in the sixth century, introduced this translation into Gaul, or at any rate he was specially instrumental in spreading its use; for it was this Psalter that was employed in the Divine psalmody celebrated at the much honoured and frequented tomb of St. Martin of Tours. From that time this text commenced its "triumphal march across Europe". Walafrid Strabo states that the churches of Germany were using it in the eighth century:—"Galli et Germanorum aliqui secundum emendationem quam Hieronymus pater de LXX composuit Psalterium cantant". About the same time England gave up the "*Psalterium Romanum*" for the "*Gallicanum*". The Anglo-Saxon Psalter already referred to was corrected and altered in the ninth and tenth century, to make it accord with the "*Gallicanum*". Ireland seems to have followed the Gallican version since the seventh century, as may be gathered from the famous Antiphony of Bangor. It even penetrated into Italy after the ninth century, thanks to the Frankish influence, and there enjoyed a considerable vogue. After the Council of Trent, St. Pius V extended the use of the "*Psalterium Gallicanum*" to the whole Church, St. Peter's in Rome alone still keeping to the ancient Roman Psalter. The Ambrosian Church of Milan has also its own recension of the Psalter, a version founded, in the middle of the fourth century, on the Greek.

(b) *The Proper of the Season*.—This portion of the Breviary contains the Office of the different liturgical seasons. As is well known, these periods are now thus

arranged: Advent, Christmastide, Septuagesima, Lent, Holy Week, paschal time, and the time after Pentecost. But only by slow degrees did this division of the liturgical year develop its present form. It must be traced through its various stages. It may indeed be said that originally there was no such thing as a liturgical year. Sunday, the day above all of the Eucharistic celebration, is at once the commemoration of the Passion, Death, and Resurrection of Jesus Christ; men spoke of the "*Pasch of the Crucifixion*", of the "*Pasch of the Resurrection*"—*πάσχα σταυρώσεως; πάσχα ἀναστάσεως*; every Sunday was a renewal of the paschal festival. It was only natural that on the actual anniversary the feast should be kept with peculiar solemnity, for it was the foremost Christian feast, and the centre of the liturgical year. Easter drew in its train Pentecost, which was fixed as the fiftieth day after the Resurrection; it was the festival commemorating the Descent of the Holy Ghost on the Apostles. These fifty days made up an unbroken festival, a Jubilee, a time of joy during which there was no fasting and when penitential exercises were suspended. These two feasts thus linked together are mentioned by ecclesiastical writers from the second century onwards.

Just as Easter was followed by fifty days of rejoicing, so it had its period of preparation by prayer and fasting, from which arose the season of Lent, which, after various changes, commenced finally forty days before Easter, whence its name of *Quadragesima*. The other rallying-point of the liturgical year is the feast of Christmas, the earliest observance of which is of very remote antiquity (the third century at least). Like Easter, Christmas had its time of preparation, called Advent, lasting nowadays four weeks. The remainder of the year had to fit in between these two feasts. From Christmas to Lent two currents may be observed: into one fell the feasts of the Epiphany and the Purification, and six Sundays after the Epiphany, constituting Christmastide. The remaining weeks after these Sundays fall under the influence of Lent and, under the name of *Septuagesima*, create a sort of introduction to it, since these three weeks, Septuagesima, Sexagesima, and Quinquagesima, really belong to Lent by reason of their character of preparation and penance.

The long period between Pentecost and Advent, from May to December, still remains to be dealt with. A certain number of Sundays cluster round special great festivals, as those of St. John the Baptist (24 June), the Holy Apostles Peter and Paul (29 June), St. Lawrence (10 August), and St. Michael (29 September). At a later date these days, which did not fit very conveniently into the general scheme, tended to disappear, and were absorbed into the common time after Pentecost, made up of twenty-four Sundays, thereby uniting Pentecost with Advent; and thus the cycle of the liturgical year is completed.

The Proper of the Season contains, therefore, the Office of all the Sundays and festivals belonging to it, with special lessons, extracts from the Gospels, and frequently also proper antiphons, responsories, and psalms, adapted to the peculiar character of these different periods. It is in the composition of this Liturgy that the Roman Church has displayed her gifts of critical judgment, liturgical taste, and theological acumen. The difference in the character of these periods may be studied in such works as Dom Guéranger's "*Liturgical Year*".

(c) *Proper of the Saints*.—Following on the Proper of the Season comes in the Breviary the Proper of the Saints, that is to say, that part which contains the lessons, psalms, antiphons, and other liturgical formularies for the feasts of the saints. In reality this Proper commemorates a very large number of saints who find mention in the ecclesiastical Calendar; this, however, need not be given here, as it can easily be

consulted. But it may be noted that the greater number of the days of the year—at least nine-tenths—are appropriated to special feasts; and the question has therefore been seriously debated, every time a movement for the reform of the Breviary has arisen, as to how to save the Divine Office from being overwhelmed by these feasts, and as to how to restore to the ferial Office its rightful ascendancy. This is not the place for the discussion of such a problem; but it may be said that this invasion of the Proper of the Season has reached such proportions imperceptibly. It was not always thus; in the beginning, up to the seventh, and even up to the ninth, century, the feasts of saints observed in the Breviary were not numerous, as may be proved by comparing modern Calendars with such ancient ones as may be seen in "An Ancient Syrian Martyrology", "Le calendrier de Philocalus", "Martyrologium Hieronymianum", "Kalendarium Carthaginense". These Calendars contain little more than the following list, beyond the great festivals of the Church:—

Exaltation of Holy Cross—14 September.  
Presentation of Jesus, or Purification of B. V. M.—2 or 15 February.  
Dormitio, or Assumption, B. V. M.—15 August.  
St. Michael, Archangel—29 September.  
Sts. Macchabees—1 August.  
St. John Baptist—24 June.  
St. Stephen, Protomartyr—26 December.  
Sts. Peter and Paul—29 June.  
Chair of St. Peter (at Antioch)—22 February.  
St. Andrew, Ap.—30 November.  
Sts. James the Greater and John, App.—27 or 28 December.  
Sts. Philip and James the Less, App.—1 May.  
Holy Innocents—23 or 28 December.  
St. Sixtus II, Pope—1 or 16 August.  
Sts. Perpetua and Felicitas, MM.—7 March.  
St. Flavian or Fabian—15 May.  
St. Lawrence, M.—10 August.  
St. Hippolytus, M.—13 August.  
St. Cyprian, M.—14 September.  
St. Sebastian, M.—20 January.  
St. Agnes, V. & M.—23 January.  
St. Timothy, M.—22 August.  
St. Vincent, M.—22 February.  
St. Felicitas, M.—23 November.  
St. Ignatius, M.—17 October, or 20 December, or 29 January, or 1 February.  
St. Polycarp, M.—26 February.  
Seven Holy Sleepers—variable.  
St. Pantaleon—variable.

(d) *The Common*.—Under this designation come all the lessons, Gospels, antiphons, responsories, and versicles which are not reserved to a special occasion, but may be employed for a whole group of saints. These Commons are those of Apostles, Evangelists, Martyrs, Confessors Pontiffs, Confessors non-Pontiffs, Abbots, Virgins, and Holy Women. To these may be added the Offices of the Dedication of Churches, and of the Blessed Virgin. The Office of the Dead occupies a place apart. It is most difficult to fix the origin of these Offices. The most ancient seem to belong to the ninth, the eighth, and even the seventh century, and through special formularies may even date still further back. To give one example, the antiphons of the Common of Martyrs in paschal time, "Sancti tui, Domine, flore-bunt sicut lilium, et sicut odor balsami erunt ante te", "Lux perpetua lucebit sanctis tuis, Domine, et eternitas temporum", are taken from the Fourth Book of Esdras (apocryphal), which was rejected almost everywhere about the end of the fourth century; these verses, therefore, must probably have been borrowed at a period anterior to that date. Probably, also, in the very beginning, the most ancient of these Common Offices were Proper Offices,

and in some of them special features supporting this supposition may be noticed. Thus, the Common of Apostles is apparently referable to the Office of Sts. Peter and Paul and must have been adapted later for all the Apostles. Such versicles as the following in the Common of Martyrs: "Volo, Pater, ut ubi ego sum, illic sit et minister meus", "Si quis mihi ministraverit, honorificabit illum Pater meus", seem to point to a martyr-deacon (*διάκονος*, minister), and may perhaps specially refer to St. Lawrence, on account of the allusion to the words of his Acts: "Quo, sacerdos sancte, sine ministro properas?" Also, the numerous allusions to a crown or a palm in these same antiphons refer without doubt to the holy martyrs, Stephen, Lawrence, and Vincent, whose names are synonyms for the crown and laurel of victory. The details necessary for the proof of this hypothesis could only be given in a fuller treatise than this; suffice it to say that from the literary standpoint, as from that of archaeology or liturgy, these Offices of the Common contain gems of great artistic beauty, and are of very great interest.

(e) *Special Offices*.—The Office of the Blessed Virgin, also very ancient in some of its parts, is of great dogmatic importance; but students of this subject are referred to the Rev. E. L. Taunton's "The Little Office of Our Lady".

The Office of the Dead is, without a shadow of doubt, one of the most venerable and ancient portions of the Breviary, and deserves a lengthy study to itself. The Breviaries also contain Offices proper to each diocese, and certain special Offices of modern origin, which, consequently, need not here detain us.

III. *THE HOURS*.—The prayer of the Breviary is meant to be used daily; each day has its own Office; in fact it would be correct to say that each hour of the day has its own office, for, liturgically, the day is divided into hours founded on the ancient Roman divisions of the day, of three hours apiece—Prime, Terce, Sext, None, and Vespers, and the night Vigils. In conformity with this arrangement, the Office is portioned out into the prayers of the night vigils, that is to say Matins and Lauds. Matins itself is subdivided into three nocturns, to correspond with the three watches of the night: nine o'clock at night, midnight, and three o'clock in the morning. The office of Lauds was supposed to be recited at dawn. The day offices corresponded more or less to the following hours: Prime to 6 A. M., Terce to 9 A. M., Sext to midday, None to 3 P. M., Vespers to 6 P. M.—It is necessary to note the words *more or less*, for these hours were regulated by the solar system, and therefore the length of the periods varied with the seasons.—The office of Compline, which falls somewhat outside the above division, and whose origin dates later than the general arrangement, was recited at nightfall. Nor does this division of the hours go back to the first Christian period. So far as can be ascertained, there was no other public or official prayer in the earliest days, outside the Eucharistic service, except the night watches, or vigils, which consisted of the chanting of psalms and of readings from Holy Scripture, the Law, and the Prophets, the Gospels and Epistles, and a homily. The offices of Matins and Lauds thus represent, most probably, these watches. It would seem that beyond this there was nothing but private prayer; and at the dawn of Christianity the prayers were said in the Temple, as we read in the Acts of the Apostles. The hours equivalent to Terce, Sext, None, and Vespers were already known to the Jews as times of prayer and were merely adopted by the Christians. At first meant for private prayer, they became in time the hours of public prayer, especially when the Church was enriched with ascetics, virgins, and monks, by their vocation consecrated to prayer. From that time, i. e. from the end of the third cen-

tury, the monastic idea exercised a preponderant influence on the arrangement and formation of the canonical Office. It is possible to give a fairly exact account of the establishment of these Offices in the second half of the fourth century by means of a document of surpassing importance for the history we are now considering: the "Peregrinatio ad Loca Sancta", written about A. D. 388, by Etheria, a Spanish abbess. This narrative is specifically a description of the Liturgy followed in the Church of Jerusalem at that date.

The Offices of Prime and Compline were devised later, Prime at the end of the fourth century, while Compline is usually attributed to St. Benedict in the sixth century; but it must be acknowledged that, although he may have given it its special form for the West, there existed before his time a prayer for the close of the day corresponding to it.

IV. COMPONENT PARTS OF THE OFFICE.—Each of the hours of the Office in the Roman Liturgy is composed of the same elements: psalms (and now and then canticles), antiphons, responsories, hymns, lessons, versicles, little chapters, and collects (prayers).

A few words must be said about each of these elements from the particular point of view of the Breviary.

(a) *Psalms and Canticles*.—Nothing need here be added to what has already been said in section II concerning the psalms, except that they are used in the Breviary sometimes in order of sequence, as in the ferial Offices of Matins and Vespers, sometimes by special selection, independently of the order of the Psalter, as in Lauds, Prime, Compline, and, in general, in the Offices of the Saints and other feasts. Another point to notice in the composition of the Roman Office is that it allows of the inclusion of a certain number of canticles, or songs, drawn from other portions of Holy Writ than the Psalter, but put on the same footing as the psalms. These are: the Cantic of Moses after the passage of the Red Sea (Exodus, xv); the Cantic of Moses before his death (Deut., xxxii); the Prayer of Anne the mother of Samuel (I Kings, ii); the Prayer of Jonas (Jon., ii); the Cantic of Habacuc (Habacuc, iii); the Cantic of Ezechias (Is., xxxviii); the Cantic of the Three Children (Dan., iii, 26); The Benedicite (Dan., iii, iii); lastly, the three canticles drawn from the New Testament: the Magnificat, the Benedictus, and the Nunc dimittis.

This list of canticles coincides more or less with those used in the Greek Church. St. Benedict admits these canticles into his Psalter, specifically stating that he borrows them from the Church of Rome, and thus providing a further argument for the priority of the Roman Office over the monastic.

(b) *Antiphons*.—The antiphons which are read nowadays in the Breviary are abridged formularies which almost always serve to introduce a psalm or cantic. They consist sometimes of a verse taken from a psalm, sometimes of a sentence selected from the Gospels or Holy Scripture, e. g. "Euge, serve bone, in modico fidelis, intra in gaudium Domini tui"; occasionally they consist of phrases not culled from the Bible, but modelled on its style, i. e. they are the invention of a liturgical author, for example: "Veni, Sponsa Christi, accipe coronam, quam tibi Dominus præparavit in æternum". Originally, the meaning of the word, and the function fulfilled by the antiphon, was not what it is now. Although it is difficult to determine precisely the origin and purport of the term, it seems that it is derived from *antiphona* (*ἀντιφωνία*) or from the adjective *antiphonos*, and that it signified a chant by alternate choirs. The singers or the faithful were divided into two choirs; the first choir intoned the first verse of a psalm, the second continued with the second verse, the first followed with the third verse, and so on to the end of the

psalm. The *antiphoned* chant is thus recitation by two choirs alternately. This term has given rise to technical discussions which cannot here be entered into.

(c) *Responsory*, whose composition is almost the same as that of the antiphon—verse of a psalm, sentence out of Holy Scripture or of ecclesiastical authorship—nevertheless differs from it entirely as to the nature of its use in recitation or chant. The precentor sang or recited a psalm; the choir or the faithful replied, or repeated either one of the verses or simply the last words of the precentor. This form, like the antiphon, had already been in use amongst the Jews, and appears even in the construction of certain psalms, as in cxxxv, "Laudate Dominum quoniam bonus", where the refrain, "Quoniam in æternum misericordia ejus", which recurs in each verse, certainly corresponds to a responsory.

(d) *Hymns*.—The term *hymn* has a less definite meaning than those of *antiphon* or *responsory*, and in the primitive liturgies its use is somewhat uncertain. In the Roman Breviary, at each hour either of the day or of the night there is a little poem in verses of different measures, usually very short. This is the hymn. These compositions were originally very numerous. Traces of hymns may be discerned in the New Testament, e. g., in St. Paul's Epistles. In the fourth and fifth centuries hymnology received a great impetus. Prudentius, Synesius, St. Gregory of Nazianzus, St. Hilary, and St. Ambrose composed a great many. But it was above all in the Middle Ages that this style of composition most developed, and collections of them were made, filling several volumes. The Roman Breviary contains but a moderate number of hymns, forming a real anthology. Some of them are masterpieces of art. It was at a comparatively late date (about the twelfth century) that the Roman Liturgy admitted hymns into its Breviary. In its primitive austerity it had hitherto rejected them, without, however, condemning their employment in other liturgies.

(e) *Lessons*.—By this term is meant the choice of readings or of extracts in the Breviary, taken either from Holy Writ or from the Acts of the Saints, or from the Fathers of the Church. Their use is in accordance with the ancient Jewish custom, which, in the services of the Synagogues, enjoined that after the chanting of psalms, the Law and the Prophets should be read. The primitive Church partly adopted this service of the Synagogue, and thus brought into being the service of the night watches. But the course of readings was altered; after a lesson from the Old Testament, the Epistles of the Apostles or their Acts or the Gospels were read. Some Churches somewhat extended this usage; for it is certain that the letters of St. Clement of Rome, of St. Ignatius, and of Barnabas, and the "Pastor" of Hermas were read. Some Churches, indeed, less well instructed, allowed books not wholly orthodox, like the Gospel of Peter, to be read. In time lists were made out to fix what books might be read. Muratori's "Canon" and, still better, the "Decrees of Gelasius" may be studied from this point of view with profit. Later on men were not content to confine themselves to the reading of the holy books; certain Churches wished to read the Acts of the Martyrs. The Church of Africa, which possessed Acts of great value, signalized itself in this respect. Others followed its example. When the Divine Office was more developed, probably under monastic influence, it became customary to read, after Holy Writ, the commentaries of the Fathers and of other ecclesiastical writers on the passage of the Bible just previously heard. This innovation, which probably began in the sixth, or even in the fifth, century, brought into the Divine Office the works of St. Augustine, St. Hilary, St. Athanasius, Origen, and others. To these

Dom Bäumer, in his "Histoire du bréviaire", repeatedly points out that it is impossible to separate the history of the Liturgy from the occurrences that make up the general history of the Church, and that the phases through which the general history takes us are reflected in the evolution of the Liturgy. It is not surprising, therefore, that the sojourn of the popes at Avignon and the Great Schism have exerted their baneful influence on the history of the Liturgy. And the reaction is still being felt. Raoul de Tongres, who died early in the fifteenth

Another attempt at reform, much better known, and having results of far-reaching importance, was that of Quignonez, Cardinal of Santa Croce in Gerusalemme, who was entrusted by Clement VII with the task of completing the work begun by Ferreri. He was a Franciscan, and had been successfully employed on various commissions. His revision was the most original that has ever been attempted, and liturgical experts, like Guéranger, Edmund Bishop, and Bäumer, have studied his labours in detail. Only the principal points of his scheme can be mentioned here. Considered theoretically, it cannot be denied that his Breviary is drawn up on easy, convenient, and logical lines, and, on the whole,

is felicitously arranged. But in the light of tradition and of liturgical principles the only possible verdict is that Quignonez' Breviary, being constructed on a priori principles, violating most of the liturgical rules, must be condemned. The author starts with the theory, contrary to all tradition, that an essential difference exists between the public celebration of the Office and its private recitation. For private recitation, therefore, all such portions as antiphons, responsories, versicles, little chapters, even hymns may be eliminated, as, according to Quignonez, these are meant solely for choir use. According to his arrangement, the entire Psalter was to be recited once a week—an excellent idea, in consonance with primitive practice; but it was applied too rigidly and narrowly, for no attention was paid to the suitability of certain psalms to special feasts. Feasts were never to change the order of the psalms, which were to be recited successively from i to cl.

Every hour had three psalms; and in consequence of this severe regularity, there disappeared the deep and historical motive which gave to each hour its own characteristics. The legends of the saints and the hymns underwent drastic, but designed, revision. Another principle, which would be deserving of all praise had it not been applied too rigorously, was that the entire Scriptures should be read through every year. Quignonez' Breviary, as might be expected, met both with enthusiastic approval and with determined opposition. Its success may be judged from the number of editions through which it passed. The Sorbonne criticized it severely, and other experts declared against Quignonez and attacked his work mercilessly. In the end, opposition proved the stronger, and even popes rejected it. Moreover, it was supplanted by other revisions made on more orthodox liturgical lines, less ambitious in scope, and more in accordance with tradition. The newly founded Congregation of Theatines applied itself to this task with energy and enthusiasm. Caraffa, one of its founders, took a share in the work, and when he became pope under the name of Paul IV (1555-59), he continued his labours, but died before seeing their completion, and it was thus reserved to others to bring them to a successful issue.

The Council of Trent, which effected reforms in so many directions, also took up the idea of revising the Breviary; a commission was appointed concerning whose deliberations we have not much information, but it began to make definite inquiries about the subject entrusted to it. The council separated before these preliminaries could be concluded; so it was decided to leave the task of editing a new Breviary in the pope's own hands. The commission appointed by the council was not dissolved, and continued its investigations. St. Pius V, at the beginning of his pontificate (1566), appointed new members to it and otherwise stimulated its activity, with the result that a Breviary appeared in 1568, prefaced by the famous Bull, "Quod a nobis". The commission had adopted wise and reasonable principles: not to invent a new Breviary and a new Liturgy; to stand by tradition; to keep all that was worth keeping, but at the same time to correct the multitude of errors which had crept into the Breviaries and to weigh just demands and complaints. Following these lines, they corrected the lessons, or legends, of the saints and revised the Calendar; and while respecting ancient liturgical formularies such as the collects, they introduced needful changes in certain details. More intimate accounts of this revision should be studied at length in the approved authorities on the history of the Breviary. Here it will be enough to give a short sketch of the chief points affecting this Breviary, as it is substantially the same as that used at this date. The celebrated Bull of approval, "Quod a nobis" (9 July, 1568), which prefaced it, explains

the reasons which had weighed with Rome in putting forth an official text of public prayer, and gives an account of the labours which had been undertaken to ensure its correction; it withdrew the papal approbation from all Breviaries which could not show a prescriptive right of at least two centuries of existence. Any Church which had not such an ancient Breviary was bound to adopt that of Rome. The new Calendar was freed from a large number of feasts, so that the ferial Office was once more accorded a chance of occupying a less obscure position than of late it had. At the same time the real foundation of the Breviary—the Psalter—was respected, the principal alterations made being in the lessons. The legends of the saints were carefully revised, as also the homilies. The work was one not only of critical revision, but also of discriminating conservatism, and was received with general approval. The greater number of the Churches of Italy, France, Spain, Germany, England, and, generally, all the Catholic States, accepted this Breviary, saving only certain districts, as Milan and Toledo, where ancient Rites were retained.

This Pian Breviary (Breviarium Pianum), while still remaining the official prayer book of the Universal Church, has undergone certain slight alterations in the course of time, and these must here be noted, but without reference to the new feasts of saints which have been added to the Calendar century by century, even though they occupy a not inconsiderable space in the ecclesiastical disposition of the year. The chiefest and most important changes were made under Sixtus V. At first the text of the versions of the Bible used in the Liturgy was altered. As soon as the revision of the Vulgate undertaken during this pontificate was completed, the new text replaced the old one in all official books, particularly in the Breviary and the Missal. Sixtus V instituted a new Congregation—that of Rites—in 1588, charging it with a study of the reforms contemplated in the Pian Breviary, which had then been in use more than twenty years. To him is due the honour of this revision of the Breviary, although till lately it had been ascribed to Clement VII (1592-1605). Although the first suggestion came from Sixtus V, nevertheless it was only under Clement VII that the work was really vigorously pushed forward and brought to a conclusion. The revising committee had as its members such men as Baronius, Bellarmine, and Gavanti. The first-named especially played a most important part in this revision, and the report which he drew up has recently been published. The emendations bore especially on the rubrics: to the Common of Saints was added that of Holy Women not Virgins; the rite of certain feasts was altered; and some new feasts were added. The Bull of Clement VII, "Cum in Ecclesiâ", enjoining the observance of these alterations, is dated 10 May, 1602.

Further changes were made by Urban VIII (1623-44). The commission appointed by him was content to correct the lessons and some of the homilies, in the sense of making the text correspond more closely with the oldest manuscripts. There would therefore be no call to treat of this revision under Urban VIII at greater length but for the fact that, outside the work of this commission, he effected a still more important reform, over which even now discussion has not ceased to make itself heard. It affected the hymns. Urban VIII, being himself a Humanist, and no mean poet, as witness the hymns of St. Martin and of St. Elizabeth of Portugal, which are of his own composition, desired that the Breviary hymns which it must be admitted are sometimes trivial in style and irregular in their prosody, should be corrected according to grammatical rules and put into true metre. To this end he called in the aid of certain Jesuits of distinguished literary attainments. The

corrections made by these purists were so numerous—952 in all—as to make a profound alteration in the character of some of the hymns. Although some of them without doubt gained in literary style, nevertheless, to the regret of many, they also lost something of their old charm of simplicity and fervour. At the present date, this revision is condemned, out of respect for ancient texts; and surprise may be expressed at the temerity that dared to meddle with the Latinity of a Prudentius, a Sedulius, a Sidonius Apollinaris, a Venantius Fortunatus, an Ambrose, a Paulinus of Aquileia, which, though perhaps lacking the purity of the Golden Age, has, nevertheless, its own peculiar charm. Even the more barbarous Latinity of a Rhabanus Maurus is not without its archaic interest and value. Moreover, the revisers were ill-advised inasmuch as they adopted a *via media*; they stopped half-way. If, as it is freely admitted, the Roman Breviary contains many hymns of inferior poetic worth, and whose sentiment is perhaps commonplace, then there is no reason why they should not be eliminated altogether, and replaced by new ones. Many of the older ones, however, were worthy of being preserved just as they stood; and, in the light of the progress made in philology, it is certain that some of the corrections in prosody made under Urban VIII convict their authors of ignorance of certain rhythmic rules, whose existence, it is only right to say, came to be known later. However it may be, these corrections have been retained till the present time. A comparison of the older with the modern text of the hymns may be consulted in Daniel, "Thesaurus Hymnologicus", (Halle, 1841).

Nothing further was done under the successors of Urban VIII, except that new Offices were added from time to time, and that thus the ferial Office began again to lose ground. We must come down to the pontificate of Benedict XIV, in the second half of the eighteenth century, to meet with another attempt at reform; but before doing so, reference must be made to efforts inaugurated in France during the seventeenth and eighteenth centuries, whose history has been learnedly elucidated in detail by Dom Guéranger in vol. II of his "Institutions liturgiques", devoted in great part to an account of this struggle. The Roman Breviary, revised by Pius IV, had been received in France without opposition. Under Louis XIV, however, attempts at revision were made, inspired by a spirit of resistance and antagonism to the Roman Court. They took form amongst the two parties which made open profession of Gallicanism and Jansenism. The supporters of this reform, several of whom were men of learning and culture, were aided by the historical and critical works which at that time were being poured forth in France, so that in these projects for the reform of the Breviary, side by side with rash suggestions, there were many which were both useful and well judged. One of the first schemes was that of the Paris Breviary, mooted in 1670 and pursued under the patronage of Archbishops Hardouin de Péréfixe and de Harlay. The Breviary called after de Harlay appeared in 1680. The corrections it embodied affected in particular the legends of the saints and the homilies, but numerous other parts were also touched. The details and the examination of them may best be studied in Dom Guéranger's pages. Although it might have seemed that the Breviary had by then been sufficiently emended, in the following century another Archbishop of Paris, Monseigneur de Vintimille, had another Breviary drawn up, which was published in 1736, and remained in use till the middle of last century. It partly embodied what is called the "liturgical Utopia of Quignonez". Its source, however, was not above suspicion, for some of those who had laboured at its production were Jansenists.

This reform, while not wanting in sound ideals, was carried out, however, regardless of liturgical traditions.

What had been going on in Paris had its counterpart in other dioceses of France, where new Breviaries were introduced, for the most part inspired by the ideas which had dominated those of de Harlay and of Vintimille. A reaction against these broke out in France between 1830 and 1840, having for its leader a Benedictine monk, Dom Guéranger, Abbot of Solesmes and an eminent liturgist, who, in his "Institutions liturgiques", arraigned the new Breviaries, exposed the mistakes underlying their construction, and proved that their authors had acted without warrant. His onslaught met with immediate success for in twenty years the greater number of the dioceses gave up their Gallican Breviaries and adopted once more the Roman Liturgy. The exact figures are as follows: in 1791 eighty dioceses had rejected the Roman Liturgy and had fashioned special liturgies for themselves; in 1875 Orléans, the last French diocese which had retained its own liturgy, re-entered Roman liturgical unity.

While France, during the seventeenth and eighteenth centuries, was letting herself be carried away in the reform of her Breviaries by Gallican and Jansenist leanings, other countries were following in her wake. In Italy, Scipio Ricci, Bishop of Pistoia, an ardent Jansenist, drew up a new Breviary, and certain districts of Germany adopted the same course, with the result that Breviaries modelled on those of France appeared at Trier, Cologne, Aachen, Münster, and Mainz; and it was long before Germany returned to liturgical unity.

While the Jansenists and Gallicans were creating a new Liturgy, Prosper Lambertini, one of the most learned men in Rome, who became pope under the name of Benedict XIV, determined to copy the example of some of his predecessors, and to carry out a further reform of the Breviary. A congregation was instituted for the special purpose; its papers, for long unedited, have of late years been gone through by MM. Roskovány and Chaillot, each of whom has published considerable portions of them. The first meeting of the congregation was in 1741, and the discussions which took place then and later are of interest from the liturgist's point of view, but need not detain us. Although this project of reform came to nothing, nevertheless the work accomplished by the congregation was of real value and reflects credit on its members, some of whom, like Giorgi, were eminent liturgists. Future workers in this department of learning will have to take account of their collections. After the death of Benedict XIV (4 May, 1758) the labours of this congregation were suspended and were never again seriously resumed. Since Benedict XIV's time changes in the Breviary have been very few, and of minor importance, and can be outlined in a few words. Under Pius VI the question of a reform of the Breviary was brought up once more. By that pontiff's orders a scheme was drawn up and presented to the Congregation of Rites, but it was found impossible to overcome the difficulties which surrounded an undertaking of this kind. In 1856 Pius IX appointed a commission to examine the question: Is the reform of the Breviary opportune? But again only preliminary matters engaged their attention. Amongst the Acts of the Vatican Council a series of propositions are to be found, whose object was the simplification or correction of the Breviary, but the inquiry never got beyond that stage. Finally, under Leo XIII, a commission was appointed, at the close of 1902, whose duties were a study of historico-liturgical questions. Its province is a wider one, comprising not only the Breviary, but also the Missal, the Pontifical, and the Ritual. It has, further, to supervise future

liturgical editions, and thus to see that they conform as closely as possible with historical data. This commission, though attached to the Congregation of Rites, is nevertheless autonomous. It consisted at first of five members under the presidency of Monsignor Duchesne, namely: Mgr. Wilpert, Father Ehrle, S. J., Father Roberti, Mgr. Umberto Benigni, Mgr. Mercati, and a few consultants. What the results of their labours may be is not yet known.

This sketch of the reforms of the Breviary proves, however, the desire of the Church to eliminate the blemishes which disfigure this book. All these efforts have not been sterile; some of these revisions mark real progress; and it may be hoped that the present commission will effect certain improvements which the progress of historical studies and criticism have made the more needful.

FERNAND CABROL.

**Breviary, ABERDEEN, THE.**—This breviary may be described as the Sarum Office in a Scottish form. The use of the ancient Church of Salisbury was generally adopted in Scotland and Ireland during the Middle Ages, both for the Liturgy (or Mass) and for the canonical hours. Its introduction into Scotland has been sometimes incorrectly attributed to Edward I, King of England, and assigned to the year 1292; but there is evidence to show that the date of its introduction was considerably earlier. For example, Herbert, Bishop of Glasgow from 1147 to 1164, certainly adopted the Sarum Use for his church, and received the papal sanction for so doing. Father

Innes, who died in Paris in 1744, asserts that "all the Scots missals or breviaries I ever saw are *secundum usum Sarum*, local saints being written in". According to the "Registrum Moraviense", the bishop, dean, and chapter of Moray received and duly approved the *Ordo* of the Church of Salisbury in the year 1242. The Diocese of Moray was contiguous with that of Aberdeen. The preference shown by the Scots for the Sarum Rite was evidently the outcome of the strong feeling, of which we find constant evidence in the history of the Scottish Church, against anything which seemed like admitting the claim to jurisdiction over her so often put forward by the Church of York. There might, it was no doubt thought, have been some apparent justification for this claim, had the Scottish Church adopted and maintained the Use of York in her liturgy and office.

The Breviary of Aberdeen was mainly the work of the learned and pious William Elphinstone, Bishop of Aberdeen from 1483 to his death in 1514. Not only did he bring together the materials, but in some instances, notably in that of the Scottish saints, he himself composed the lessons. A peculiar feature of this breviary, and one in which it differs from nearly every other, is that in some of the festivals of saints the whole of the nine lessons at Matins are concerned with their lives. These legends of the saints of Scotland are of singular interest and considerable historical value, and they have been extensively drawn upon by the Bollandists and the later Scottish martyrologists. The accuracy of the quotations and references occurring in the book have been tested and admitted by many modern historians. Although the breviary is in its structure and essentials entirely in uniformity with that of Sarum, it is nevertheless exclusively proper to Scotland, and it was, as we know, intended to supersede all service-books issued in connexion with the famous Church of Salisbury. This fact is quite clear from the royal mandate dated 15 September, 1501, wherein the Aberdeen book is set forth as the "Breviary for general use within the realm of Scotland".

The work was produced from the printing-press which Walter Chapman and Andrew Myllar had set up in Edinburgh, in the year 1507. Four copies of the original breviary (in black-letter) are known to exist; one in Edinburgh University library; a second in the Library of the Faculty of Advocates, Edinburgh; a third in the private library of the Earl of Strathmore; and a fourth (an imperfect copy) in the library of King's College, Aberdeen. The reprinting of the volume was undertaken in 1854, under the supervision of the Rev. William Blew, M.A., and it was subsequently published by Mr. G. J. Toovey, for private circulation among the members of the Bannatyne Club. The originally printed copies are of small octavo size, and bear the dates of 1509 and 1510. As a printed Office-book its actual use was but of short duration, only about half a century elapsing between its issue and the overthrow of the ancient Church of Scotland (1560). There is no positive proof that it was ever generally adopted throughout the dioceses of Scotland; indeed the probabilities are against its ever having become anything like universal at the time of the Reformation. It must be remembered, in connexion with this, that the injunction for its adoption was civil rather than ecclesiastical, and there is some reason to suppose that on this account it was not considered strictly binding by the church authorities of the kingdom. It is interesting to note that in the new Scottish *Proprium*, which in 1903 was formally sanctioned and adopted for use in the Scottish dioceses forming the Province of St. Andrews (the *cultus* of the ancient Scottish saints having been approved by the Holy See several years previously), many collects, antiphons, etc.

are found which have been borrowed from the offices in the Aberdeen Breviary.

D. O. HUNTER-BLAIR.

**Brewer, HEINRICH**, a German historian, b. at Puffendorf in Germany, 6 September, 1640; d. at the same place about 1713. He was educated at the *Gymnasium Tricoronatum* in Cologne and was ordained priest in 1664. After this he was for a time a private tutor at Cologne, then curate of the cathedral at Bonn. He continued his studies while filling these positions and in 1667 was made lecturer on theology at the University of Cologne. From 1669 to 1682 he was rector of a convent of nuns at Cologne, a position which gave him the leisure to carry on his historical studies. In 1682 he became parish priest of the church of St. Jacob at Aachen. After twenty-nine years of fruitful labour he resigned his pastorate in 1712 and returned to his quiet native town. During his residence at Bonn he published, in 1668, a poem of slight poetic value entitled: "Crinium poli Sidus". His most important work is: "Historia rerum notabiliorum ubique pæne terrarum gestarum enarratio; breviter et succincte pro historiae universalis Brachelio-Thuldenanae continuatione adornata", (Cologne, 1672-75, two volumes). Shortly after this he published a revised edition of the "Historia Universalis Brachelio-Thuldenana" in eight volumes. Brewer now received the title of Imperial Historiographer. The honour was fitly bestowed, for Brewer was one of the few historians who seek out original sources and make full use of them. He added to each volume copies of important official documents, besides making skilful use of pictures and maps. A much discussed question of the time was the identity of the author of the "Imitation of Christ". Brewer made an independent investigation and tried to prove that Thomas à Kempis was the author in a work entitled: "Thomæ à Kempis biographia" (Cologne, 1681). Even from the modern point of view this work is a very creditable one. A publication of less importance and one which is at times strongly marked by local feeling is that entitled: "Der in der Reliquienverehrung rechtschaffen catholisch und wahrhaftig grosser Kayser Karl bey gewöhnlicher Eröffnung der Aachischen Schatzkammer Heylthums" (Aachen, 1685).

**Brian Boroimhe (BORU)**. See IRELAND.

**Briand, JOSEPH OLIVIER**, seventh Bishop of Quebec, b. in 1715 at Plérin, Brittany; d. 25 June, 1794. He studied at the Seminary of St. Brieuc, and was ordained in 1739, but left home secretly to follow Bishop Pontbriand to Canada. Briand was a strenuous worker, self-possessed, tactful, and devoted. During the siege of Quebec (1759), he, as vicar-general, directed the diocesan affairs in the absence of the bishop. He ministered to the dying at the battle of St. Foy (1760), and after the bishop's death was appointed administrator of the diocese which then included Acadia, Louisiana, and Illinois. During the crisis in New France, when many colonists abandoned the country, Briand foresaw that a change of allegiance was inevitable, and realized the benefit which would accrue to the people of Canada.

When the Treaty of Paris (1763) was signed he ordered a Te Deum for the cessation of the Seven Years' War and praised General Murray for his humanity towards the conquered. In the midst of the fanaticism which attempted to violate the treaty

and hamper religious freedom, Briand appealed to London to maintain the rights of the Church. The British Crown finally gave ear to his demand, and he was consecrated in Paris (1766).

Hailed as the second founder of the Church in Canada, Briand was joyfully received by the people and the British governor. The pope also expressed his pleasure and approved Bishop Briand's past attitude, thereby removing the charges that he had acted with timidity towards Murray and Dorchester (see Brasseur and Failon). Despite his poverty, he declined a gift of the clergy and a plan for his support, and took up his residence at the Seminary of Quebec. Briand's purpose in reconciling the claims of Rome and London was to insure the permanence of the episcopacy. He demanded two bishops simultaneously, so that the survivor, Rome permitting, might consecrate his successor. This request was finally granted. Through his influence and tact, further plans for perverting the faithful were thwarted. The Test Oath was modified so as to be acceptable to the Holy See, and the passage of the Quebec Act (1774), admitting Catholics to public functions and confirming religious freedom, and of the Habeas Corpus Act, granting Catholics the rights and privileges of British subjects, was also partly due to Briand's efforts.

After the expulsion of the Jesuits from Louisiana and Illinois, Bishop Briand appointed Father Meurin vicar-general in the latter section of the country. When the forces of the Continental army invaded Canada in 1775, he issued a pastoral letter in which he enjoined fidelity to the king. The Continental Congress in an address to the king and people of England had protested against the Quebec Act, while in its appeal to the Canadians there were no features which were objectionable to Catholics. Briand denounced this duplicity and drew attention to the actions of the Colonists twenty years previous both in their cruelty towards the Acadians and their laws against missionaries. Upon Montgomery's defeat he ordered a Te Deum, and in 1776 he issued another energetic letter in which he urged to repentance those Canadians who had aided the invading troops, whom he characterized as enemies of the Faith. This, together with the drastic measure of refusing the sacraments to all Canadian sympathizers with the Colonial cause, preserved Canada to the British Crown. Later, Briand, who was invited by Cardinal Castelli, the Prefect of the Propaganda, to administer confirmation in Pennsylvania and Maryland, abandoned the plan upon the protest of Father Ferdinand Steinmeyer, S. J. (popularly known as Father Farmer), who drew attention to the anti-Catholic feeling which was then prevalent in the Colonies.

In 1765 Briand published a "Catechism", the first book printed in Canada. He resigned his see in 1784, and was the consecrator of his two successors: the Rt. Rev. Louis Philippe Marichand d'Esclis, 29 Nov., 1784, who died 4 June, 1788; and the Rt. Rev. Jean François Hubert, 19 Nov., 1786. Briand died after fifty-five years in the priesthood and twenty-eight in the episcopate.

LIONEL LINDSAY.

**Bribery**, the payment or the promise of money or other lucrative consideration to induce another, while under the obligation of acting without any view to private emolument, to act as the briber shall prescribe. Only the moral aspect of bribery will be touched upon here; the historical aspect of the question will be dealt with in the articles on the nations and countries.

The word is ordinarily used with reference to payments or other lucrative consideration illicitly made in

favour of persons whose duty to the commonwealth binds them to act for the common good. Thus judges are bound, as servants of the commonwealth, to administer justice without fear or favour, and they are forbidden to take bribes from litigants or others. Similarly, regard for the public good should be the motive which influences those who appoint to public offices, or who have the placing of contracts for public works or institutions, or who are entrusted with the execution of the laws, or who elect representatives to seats in the legislature. They should appoint only worthy candidates who will serve the public well. If they neglect the common good, and seek private advantage from the exercise of the trust committed to them, they violate their duty to the commonwealth, and they make themselves accomplices in all the evil which results from the incompetence or the roguery of those whom they elect. The general principle is obvious enough, but in the matter of details difficulties are encountered which cannot all be solved in the same way. An elector may say that as a rule there is very little to choose between the candidates for some public position or office, and that even if there were a difference in their moral character and capacity to serve the public, it is difficult for the ordinary voter to detect it. Why should he not make a little money by promising to vote for the candidate who is ready to pay the highest price?

It may be that in this hypothesis no injustice is done by taking a bribe and that there is no obligation incurred of making restitution. Still the action is immoral, and rightly forbidden by law. A person who has a vote in the appointment to offices or in the election of representatives is under a serious responsibility to use his power to the best of his ability. If he takes a bribe he renders himself practically incapable of exercising a discriminating judgment. He is bound to do what he can to make sure that the person for whom he votes is worthy of the post; but if he takes a bribe this blinds him, blunts his judgment, and makes him incapable of doing his duty. Besides, in questions of this kind, we must look at the general result of the action whose moral quality we are studying; the general result of the willingness of voters to sell their vote for money is that power and office are put in the hands of that portion of the moneyed class which is least worthy and most selfish.

Those who hold public offices to which patronage or power of any sort is attached are specially bound to use their power for the common good. They accepted office under the express or tacit condition that they would use their influence for the public benefit, not merely for their private emolument. If they sell the posts, offices, or favours of any kind, in their gift, for money or any lucrative consideration, they violate the express or tacit pledge which they gave on their assumption of office. There is more malice in such actions than in that of the venal elector who sells his vote for money. They also produce more direct and more immediate evils in the commonwealth. A man who has bought an office, or a post, or a contract for money will as a rule try to recoup himself at the expense of the public. It is not likely that he will be an honourable or even an honest servant, and the disastrous consequences of his appointment begin to show themselves at once. The evils are perhaps less, but they do not cease, if offices or favours are bestowed in consideration of money contributed to the funds of the political party. Power, influence, and even an external respectability are sometimes given to unscrupulous men whose only recommendation is the possession of wealth.

Moralists have devoted special attention to the question of bribery in connexion with the administration of justice. The judge on his assumption of office undertakes to administer justice to all who come

before him, and in most countries binds himself by a special oath to do his duty. He receives a salary for his services. If he accepts bribes from suitors or criminals he makes himself practically incapable of exercising an unbiased judgment, fails in the execution of his duty, and violates his oath. If he takes money for giving a sentence which is just, he commits a sin against justice and is bound to restore the bribe to him who gave it. For the judge is bound in justice to pronounce a just sentence apart from the bribe, and his action affords him no title to take payment for what is due in justice without payment. If he takes a bribe for giving a sentence which is unjust, he will of course sin against justice on account of the sentence, and will be bound to make reparation to the injured party for the wrong that he has suffered. Some moralists, however, refuse to impose on him the obligation of restoring the bribe, on the ground that something was given for it which indeed the judge had no right to give, but which, for all that, was worth the money to him who paid the bribe. The same principles are applicable to jurymen, arbitrators, and referees, who have obligations similar to those of judges. Bribery under all the above aspects is in most countries forbidden by positive law and punished by severe penalties.

T. SLATER.

**Briçonnet**, (1) GUILLAUME, a French Cardinal, b. at Tours, date of birth unknown; d. at Narbonne, 14 December, 1514. He was a younger son of Jean Briçonnet, Lord of Varennes, in Touraine, Secretary to the king and Collector-general of Customs. Appointed Superintendent of Finances for the Province of Languedoc under Louis XI, Guillaume Briçonnet discharged the duties of his office with such integrity and efficiency, and showed himself so devoted to the interests of Louis that that monarch recommended him to his successor. Charles VIII made him Secretary of the Treasury, raised him to the first place in the Council of State, and, according to the historian Guicciardini, would undertake nothing in the government of his kingdom without the advice of Briçonnet. Ludovico Sforza, called the Moor, wishing to dispossess his nephew of the Duchy of Milan, and finding himself opposed by Ferdinand, King of Naples, sent an embassy under the Count of Belgiojoso to Charles to induce the French king to assert his claims to the Kingdom of Naples as heir to the house of Anjou. Sforza promised to place all his troops at the king's service. Briçonnet having shortly before this lost his wife, Raoulette de Beaune, by whom he had three sons, had entered the ecclesiastical state and been named Bishop of St.-Malo. To flatter his ambition the Milanese ambassadors assured him that the king's influence would raise him to the cardinalate. Briçonnet, thus won over to the Sforza interest, adroitly encouraged the warlike dispositions of his sovereign, triumphed over the opposition of the royal council of the Duke of Bourbon, and of Anne of France, the Duke's wife, influenced Charles to sign a secret treaty with Sforza, and assured the king of his ability to raise the funds necessary to carry on the war both on land and sea.

Pope Alexander VI, alarmed at the apparent danger threatening Italy, promised the cardinal's hat to Briçonnet if he could prevail upon Charles to abandon his enterprise; but Briçonnet, realizing that he could not govern without flattering the king's passion for conquest, urged him on, and, notwithstanding the dilapidated state of the treasury, succeeded in meeting the expenses of the war. Accompanying Charles on his expedition, he provoked a mutiny in the French army, by his treachery in

sacrificing the Pisans, allies of France, to their enemies, the Florentines, and had he not hidden himself from the fury of the soldiers they would have taken his life. Upon this occasion, as upon others, Briçonnet's ambition led him into conduct at variance with his motto: *Dilat servata fides*. Charles had entered Rome as a conqueror, greatly irritated against Alexander VI who had stirred up opposition against him; but the adroit Briçonnet reconciled his royal master with the pope, and for reward received the cardinal's hat. This honour was conferred in a special consistory held in the king's presence, 16 January, 1495, the new cardinal taking the title of Cardinal of St.-Malo, from his episcopal see.

Briçonnet soon had cause to repent the advice he had given to invade Italy. A formidable league was formed for the purpose of cutting off the French retreat, and neither the diplomacy nor the entreaties of the French cardinal had any effect on the hostile generals. The prowess of Charles and the invincible valour of his troops alone saved the French from a humiliating defeat. With 8,000 men the king defeated, at Tornovo, an army of 40,000, and opened a road to France. Soon after this Briçonnet, induced by a tempting promise of preferment for one of his sons, tried to persuade Charles to break off the peace negotiations and support with an army the Duke of Orléans' claims to the Duchy of Milan. Charles, however, preferred the counsels of Philippe de Comines and sacrificed the interests of the duke, and the king's premature death put an end to the influence of Briçonnet, Louis XII giving his confidence to the Cardinal d'Amboise. But whilst serving his king and the State, the Cardinal of St.-Malo had not overlooked his own interests; he had obtained from Alexander VI the Bishopric of Nîmes. His title being disputed by the nominee of the chapter, there arose a litigation which lasted until the year 1507, when Briçonnet was awarded the title. In 1497 he had received in *commendam* the Bishopric of Toulon, and in the same year succeeded his brother in the archiepiscopal See of Reims. On the 27th of May, 1498, he crowned Louis XII in his cathedral and followed the king to Paris. As a peer of France, he assisted at the session of the Council of State at which the marriage of Louis with Jeanne, the daughter of Louis XI, was annulled.

When he had ceased to be a minister of State, Briçonnet retired to Rome for two years. Louis then made use of his talents to check what he called the arrogance of the warrior pope, Julius II. By his king's direction Briçonnet took steps to assemble at Pisa a council of cardinals opposed to the policy of Julius, and bent on the reformation of the head and hierarchy of the Church. He left Rome suddenly and secretly with a group of cardinals whom he had won over, and opened his council at Pisa, but soon transferred it to Milan, and thence to Lyons. He was, however, summoned to appear before the pope, was deprived of the Roman purple and excommunicated. Louis, on his side, bestowed upon him in *commendam* the rich Abbey of St.-Germain-des-Prés and the government of Languedoc. At the death of Julius II Briçonnet was absolved from all censures and excommunication, and restored by Leo X to the Sacred College. He then retired to end his days at Narbonne, for which see he had exchanged Reims. He was buried in a superb mausoleum which he had built for himself in the church of Our Lady.

Whilst in power, Briçonnet showed himself a patron of men of letters; they dedicated their works to him and became his panegyrists. He was called *oraculum regis et regni columna*. His life was in fact swayed by ambition and occupied by intrigues. He composed a manual of Latin prayers, dedicated to Charles VIII. At Saint-Malo he issued several synodal instructions.

(2) GUILLAUME, Bishop of Meaux, France, b. at Tours in 1472; d. at the château of Esmant near Montereau, 24 January, 1534. He was a son of Cardinal Briçonnet (see above), and before entering the ecclesiastical state was known as the Count de Montbrun. In 1489 he was named Bishop of Lodève. Distinguished by remarkable judgment, great learning, and a love of study, he received from Louis XII several preferments, and was named as chaplain to the Queen. In 1507 he succeeded his father as Abbot of St.-Germain-des-Prés. The king entrusted him with delicate and difficult missions, and sent him, in the same year that Guillaume became abbot, to Rome as extraordinary ambassador for the purpose of justifying the conduct of his prince against the accusations of the Emperor Maximilian. In an eloquent Latin speech pronounced in the presence of the pope and of the Sacred College, the bishop fully vindicated Louis. Guillaume enjoyed equally the confidence of Francis I, who transferred him to the See of Meaux, and sent him as ambassador to Leo X to Rome, where he resided for two years. As Abbot of St.-Germain, he displayed a great zeal for the reform of abuses, put an end to disorders, and revived monastic regularity, spirit, and fervour. As Bishop of Meaux, he held a number of synods, and made wise regulations against the depravity of morals and the relaxation of ecclesiastical discipline, and promoted among his clergy a taste for learning, to bring back to the Catholic Faith the disciples of the new doctrine, who were already numerous in his diocese. He was no less zealous in opposing the encroachments of the religious and in directing them back to the spirit of their state. The Cordeliers, a branch of the Franciscan Order, accused the bishop of heresy, basing their accusation on the protection given by him to the partisans of Humanism. The bishop defended himself and was declared innocent. His love of letters caused him to increase considerably the library of the Abbey of St.-Germain. He translated into French the "*Contemplationes Idiotæ de amore divino*".

(3) ROBERT, Archbishop of Reims, France, fifth son of Jean Briçonnet, an elder brother of the Cardinal [see (1)]. Date of birth uncertain; d. at Moulins, 3 June, 1497. He owed to the credit which Guillaume had with Charles VIII his rapid elevation to public offices and dignities. He was named Canon of St.-Aignan at Orléans, Abbot of the rich Abbey of St.-Vaast at Arras, and in 1493 he was raised to the archiepiscopal See of Reims, four years before the Cardinal was appointed to that see. Charles appointed him President of the Superior Tribunal of Finances, and Chancellor of France. He enjoyed this new dignity for only twenty-two months before his death. He showed himself, as did his brothers and nephews, a patron of men of letters.

F. M. L. DUMONT.

**Bridaine, JACQUES**, preacher, b. at Chusclan, France, 21 March, 1701; d. at Roquemaure, 22 December, 1767. Having completed his studies at the Jesuit college of Avignon he entered the Seminary of the Royal Missions of St. Charles of the Cross. His oratorical ability announced itself before his ordination to the priesthood by the remarkable talent he brought into play in awakening interest and exciting emotion even in the catechetical instructions which he was deputed to give. When only in minor orders, he was assigned as Lenten preacher in the Church of Aigues-Mortes. It was there he first made use of his peculiar methods. His extreme youth provoked the derision of the people and when Ash Wednesday arrived, the church was empty

Undismayed, he put on his surplice and went out in the principal streets, ringing a bell, and inviting the people to hear him. He succeeded in bringing an immense multitude to the church who came out of curiosity, but when he began in a most unusual fashion by singing a canticle about death the con-

JACQUES BRIDAINE

gregation burst out in loud laughter; whereupon he opened upon them with such fierceness of denunciation that silence and amazement took possession of all. He was characteristically sensational. He wrote little and gave way to the inspiration of the moment and as a consequence his utterances present at times an incoherent jumble of incongruous figures and ideas, which

clash with each other and are often even grotesque. It was Cardinal Maury who called attention to his exordium in the sermon on Eternity which was said to be improvised. Father Cahour, S.J., inserts it in his "*Chefs-d'Œuvre d'éloquence*", and Maury who wrote it from memory declares that it was not unworthy of Bossuet or Demosthenes. It was pronounced at St.-Sulpice, before an audience in which there were many bishops, a vast crowd of ecclesiastics and men of distinction in civil and military life. Bridaine assures them that in spite of their worldly greatness he is not abashed by their presence, and in the most impassioned language denounces them as sinners, and bids them, haughty and disdainful as they are, to tremble before him. "Today I hold your condemnation in my hand." Opinions are divided about its excellence as an example of oratory; some finding a self-consciousness in it which is unapostolic.

His voice was so sonorous and penetrating that he could easily be heard by an audience of ten thousand people. To his natural oratorical gifts he added, in order to produce the impression he was aiming at, all the effect that could be obtained by the most gorgeous and elaborate church ceremonial, as well as whatever excitement could be produced by singing, by splendid processions, by unusual prayers, and by novel situations which were all skilfully arranged so as to captivate the eye or ear, or to fix or startle the imagination. A supreme instance of these "methods" as he called them, and which he always insisted upon being carried out, is narrated by Madame Necker in the "*Nouveaux Mélanges*" (I, 138). He had just delivered a stirring discourse when addressing himself to the great procession which had followed him he said: "I am now going to bring you home" and he led them to the grave-yard. Sensational as he was he wrought many astounding conversions. In the course of his life he preached two hundred and fifty-six missions, travelling to almost every town of France in the performance of his work. Pope Benedict XIV gave him permission to preach anywhere in Christendom. Medals were struck in his honour, and the most distinguished prelates showed him the greatest reverence and affection. He was of a sweet, modest, simple disposition, of lively faith and deep piety. His "*Cantiques Spirituels*" passed through forty-seven editions. He has also left five volumes of sermons. The Protes-

tants of France are said to have been particularly friendly to him, because of the many good offices he performed in their regard. For fourteen years he followed the spiritual guidance of a missionary like himself named Mahistre. In 1742 Cardinal Fleury proposed to establish a missionary congregation for all France under the direction of Bridaine, but the death of the cardinal caused the project to fall through.

France was wild with excitement about him. His appeals were so powerful that in a mission which he preached at Chalon-sur-Saône in 1745 there were restitutions to the amount of 100,000 francs. His reputation as an orator was so great that even Massillon was unwilling to preach in his presence. In the course of his missions he established what he called "peace tribunals", courts composed of some of his associate missionaries, a number of irreproachable laymen, and the parish priest. To these courts all disputes were submitted and the decisions were accepted as final. His life was written by the Abbé Carron. The book was frequently translated into English, but the last edition was published as far back as 1831.

T. J. CAMPBELL.

**Bridal Ring.** See RING.

**Bridge-Building Brotherhood, THE.**—During the twelfth and thirteenth centuries, we hear of the existence of various religious associations founded for the purpose of building bridges. This work, which tended greatly to the relief of travellers and particularly of pilgrims, was regarded as a work of piety quite as much as of public utility. Even where no religious organization was formed it was customary for the bishops to grant indulgences to those who, by money or labour, contributed to the construction of a bridge. Of this the register of Archbishop Grey of York, for instance, in the thirteenth century, affords many examples. But in the South of France, regular associations were commonly formed for the purpose, and these it has been the custom to regard as religious orders living under vows. Upon more accurate investigation, however, this idea has proved to be erroneous. The brotherhoods in question seem rather to have been of the nature of guilds or confraternities, or, at most, to have been organized in something the same way as a "third Order", wearing a habit with a distinctive badge, but not being bound by perpetual vows.

In many cases, these associations were constituted of three branches: knights, who contributed most of the funds and were sometimes called *donati*; clergy who might be in the strict sense monks, and artisans who performed the actual work of building. We also hear sometimes of "sisters" belonging to the same association. Besides the construction of bridges, the lodging and entertainment of travellers, as well as the *quête*, or collection of alms commonly entered into the scope of the brotherhoods. The origin of these institutions is wrapped in much obscurity. The brotherhood known in particular as the *Fratres Pontifices* (*Ponti-fices*=bridge-builders) or *Frères Pontifes*, is commonly said to have been founded by St. Bénézet (a Provençal variant of the name Benedict), a youth who, according to the legend, was Divinely inspired to build the bridge across the Rhone at Avignon. Although the Bull supposed to have been addressed to the *Fratres Pontifices*, in 1191, by Clement III may not be authentic, it is certain that a number of bridges were built about this time in that part of France; also that the old bridge at Avignon, some arches of which still remain, dates from the end of the twelfth century, and it is certain that St. Bénézet was a historical personage. The *Fratres Pontifices* were

certainly very active, and if they did not construct the Avignon bridge they built others at Bonpas, Lourmarin, Mallemort, Mirabeau, etc. On the other hand, the famous bridge over the Rhone at Saint-Esprit was certainly constructed by a separate association. Many of the official documents connected with it are still preserved.

HERBERT THURSTON.

**Bridget of Sweden** (also BIRGITTA), SAINT, the most celebrated saint of the Northern kingdoms, born c. about 1303; d. 23 July, 1373. She was the daughter of Birger Persson, governor and provincial judge (*Lagman*) of Uppland, and of Ingeborg Bengtsdotter. Her father was one of the wealthiest landholders of the country, and, like her mother, distinguished by deep piety. St. Ingrid, whose death had occurred about twenty years before Bridget's birth, was a near relative of the family. Birger's daughter received a careful religious training, and from her seventh year showed signs of extraordinary religious impressions and illuminations. To her education, and particularly to the influence of an aunt who took the place of Bridget's mother after the latter's death (c. 1315), she owed that unswerving strength of will which later distinguished her. In 1316, at the age of thirteen, she was united in marriage to Ulf Gudmars-son, who was then eighteen. She acquired great influence over her noble and pious husband, and the happy marriage was blessed with eight children, among them St. Catherine of Sweden. The saintly life and the great charity of Bridget soon made her name known far and wide. She enjoyed intercourse with several learned and pious theologians, among them Nicolaus Hermann, later Bishop of Linköping, Matthias, canon of Linköping, her confessor, Peter, Prior of Alvastrå, and Peter Magister, her confessor after Matthias. She was later at the court of King Magnus Eriksson, over whom she gradually acquired great influence. Early in the forties (1341-43) in company with her husband she made a pilgrimage to Santiago de Compostella. On the return journey her husband was stricken with an attack of illness, but recovered sufficiently to finish the journey. Shortly afterwards, however, he died (1344) in the Cistercian monastery of Alvastrå in East Gothland. Bridget now devoted herself entirely to practices of religion and asceticism, and to religious undertakings. The visions which she believed herself to have had from her early childhood now became more frequent and definite. She believed that Christ Himself appeared to her, and she wrote down the revelations she then received, which were in great repute during the Middle Ages. They were translated into Latin by Matthias Magister and Prior Peter. St. Bridget now founded a new religious congregation, the Brigittines, or Order of St. Saviour, whose chief monastery, at Vadstena, was richly endowed by King Magnus and his queen (1346). To obtain confirmation for her institute, and at the same time to seek a larger sphere of activity for her mission, which was the moral uplifting of the period, she journeyed to Rome in 1349, and remained there until her death, except while absent on several pilgrimages, among them one to the Holy Land in 1373. In August, 1370, Pope Urban V confirmed the Rule of her congregation. Bridget made earnest representations to Pope Urban, urging the removal of the Holy See from Avignon back to Rome. She accomplished the greatest good in Rome,

however, by her pious and charitable life, and her earnest admonitions to others to adopt a better life, following out the excellent precedents she had set in her native land. The year following her death her remains were conveyed to the monastery at Vadstena. She was canonized, 7 October, 1391, by Boniface IX.

J. P. KIRSCH.

**Bridgett, THOMAS EDWARD**, priest and author, b. at Derby, England, 20 January, 1829, of Protestant parents; d. at St. Mary's Clapham, 17 February, 1899. His father was a silk manufacturer, and sent his son first to Mill Hill, a Congregationalist College near London, then to Ton-

bridge, a Church of England public school, where he was baptized at the age of sixteen, and finally, in October, 1847, to St. John's College, Cambridge, the home of Blessed John Fisher whose life Father Bridgett afterwards wrote. In 1850, while an undergraduate, he left the university, being unable to accept the oath of Royal Supremacy which was then required before taking a degree. Shortly afterwards, having attended Dr. Newman's lectures on "Anglican Difficulties" at the London Oratory, he was received into the Catholic Church by the Oratorian, Father Stanton, 12 June, 1850, and on 15 October of the next year made his religious profession in the Redemptorist novitiate of St. Trond, Belgium. He pursued his theological studies at Witten in Holland and was ordained priest in August, 1856. After being five years minister and consultor to the viceprovincial in Clapham, the London house of his Congregation, he went to Limerick for nine years, where as rector he founded, in 1868, the celebrated Confraternity of the Holy Family for men. This soon consisted of over 5,000 active members, the largest association of its kind in any one locality, in the Church. In 1871, he returned to Clapham as rector, where he spent the greater part of his remaining years.

Father Bridgett was a missionary like all the members of his Congregation, but with advancing years he devoted himself to giving retreats, particularly to the clergy. It was not till 1867 that he turned his thoughts to writing—a sermon on ritual developing into his first book, "In Spirit and in Truth". This work was called in later editions "The Ritual of the New Testament". It was followed in 1875 by "Our

THOMAS EDWARD BRIDGETT

*Lady's Dowry*", showing by many illustrations from history and literature the devotion of medieval England to the Mother of God. In this and in "The History of the Holy Eucharist in Great Britain", a work on the same plan published in 1881, the author shows a learning which is truly encyclopedic. The "Life of Blessed John Fisher", which led to a correspondence with Mr. Gladstone, followed in 1888; "The True Story of the Catholic Hierarchy deposed by Queen Elizabeth", a work written in conjunction with Father Knox of the Oratory, came out in 1889; "Blunders and Forgeries", a very fine piece of cross-examination, in 1890; and the "Life of Blessed Thomas More", his most popular work, in 1891. Father Bridgett also published devotional verse of considerable merit, both in a collection which he edited called "Lyra Hieratica", and in "Sonnets and Epigrams", an entirely original work. He died after a long and painful illness and was buried in the Catholic cemetery at Mortlake, near London.

HAROLD CASTLE.

**Bridgewater, JOHN**, known also as AQUAPON-TANUS, historian of the Catholic Confessors under Queen Elizabeth, b. in Yorkshire about 1532; d. probably at Trier, about 1596. He proceeded M. A. at Oxford in 1556, was ordained priest, and in 1563 became Rector of Lincoln College in that university. He also held several other important preferments, all of which he resigned in 1574, when with several of his students he crossed over to Douai, preferring "the old form of religion" to the novelties of those whom he styled "Calvinopapists and Puritans". He probably never returned to England, but lived at various places on the Continent (Reims, Paris, Rome, Trier); in 1588 and 1594 he resided at Trier. Ribadaneira, followed by Father Southwell and Brother Foley, accounts him a member of the Society of Jesus, though there is no proof of the fact (Records of English Catholics, I, 408). He refuted (Trier, 1589) a Protestant work on the pope as Antichrist and wrote also an "Account of the Six Articles usually Proposed to the Missioners that Suffered in England", and against which he voted in 1562.

Bridgewater is best known as the earliest martyrologist of Catholic England. His work, conceived in the spirit of Eusebius as a triumphant apology for Catholicism, is entitled "Concertatio Ecclesie Catholicæ in Angliâ adversus Calvinopapistas et Puritanos sub Elizabethâ Reginâ quorundam hominum doctrinâ et sanctitate illustrium renovata et recognita, etc." i. e. The Battle of the Catholic Faith in England under Queen Elizabeth, renewed in the lives of certain men illustrious for learning and sanctity, among them more than one hundred martyrs, and a very great number of others distinguished for their (religious) deeds and sufferings; confirmed also by the retractions of apostates, by new edicts of the persecutors, and by the writings of very learned Catholics against the Anglican, or rather female, pontificate, and in defence of the authority of the Roman pontiff over Christian princes (Trier, 1588, about 850 pp. in 8vo). Another edition was brought out (ibid.) by Cardinal Allen in 1594; it served thenceforth as an original record of English Catholic sufferings for the Faith and Dodd, Challoner, and Lingard used extensively its reliable biographical and historical data. Its rather miscellaneous contents are described in the Chetham Society's Remains (XLVIII, 47-50).

THOMAS J. SHAHAN.

**Bridgewater Treatises.**—These publications derive their origin and their title from the Rev. Francis Henry Egerton, eighth and last Earl of Bridgewater who, dying in the year 1829, directed certain trustees named in his will to invest in the public funds the sum of £8,000, which sum with the accruing dividends was to be held at the disposal of the president, for the time being, of the Royal Society of London, to be paid to the person or persons nominated by him. It was further directed that those so selected should be appointed to write, print, and publish one thousand copies of a work: "On the Power, Wisdom, and Goodness of God as manifested in the Creation, illustrating such work by all reasonable arguments, as, for instance, the variety and formation of God's creatures, in the animal, vegetable and mineral kingdoms; the effect of digestion and thereby of conversion; the construction of the hand of man and an infinite variety of other arguments; as also by discoveries ancient and modern in arts, sciences, and the whole extent of modern literature".

The President of the Royal Society was then Davies Gilbert, who with the advice of the Archbishop of Canterbury, the Bishop of London, and a nobleman who had been intimate with the testator, determined that the money should be assigned to eight several persons for as many distinct treatises. The works produced in consequence were the following: (1) "The Adaptation of External Nature to the Moral and Intellectual Constitution of Man", by Thomas Chalmers (1833); (2) "Chemistry, Meteorology, and Digestion", by William Prout, M. D. (1834); (3) "History, Habits, and Instincts of Animals", by William Kirby (1835); (4) "The Hand, as Evincing Design", by Sir Charles Bell (1837); (5) "Geology and Mineralogy", by Dean Buckland, (1837); (6) "The Adaptation of External Nature to the Physical Condition of Man", by J. Kidd, M. D. (1837); (7) "Astronomy and General Physics", by Dr. William Whewell (1839); (8) "Animal and Vegetable Physiology", by P. M. Roget, M. D. (1840). The nature of the Treatises is clearly indicated by Lord Bridgewater's instructions, and by their several titles.

The selection of writers was somewhat severely criticized at the time, and the treatises are undoubtedly of unequal merit, but several of them took a high rank in apologetic literature, the best known being probably those by Buckland, Bell, and Whewell. At the present day, however, they are wellnigh forgotten and their value for the purpose they were designed to serve is very small. This is partly because the marvellous advances of recent years have made much of their science antiquated and out of date, but still more because of the almost total abandonment of the point of view on which their authors founded arguments to demonstrate the existence of design in nature. It is now generally felt to be an unsatisfactory, or, at least, less satisfactory, method, to argue from particular examples in which analogy can be traced between the mechanism found in nature and that contrived by man, as, for instance, to take one specially mentioned by Darwin, in the hinge of a bivalve shell, as though it were in such cases alone that the operation of Mind manifested itself. The best modern apologists insist rather on the note of law and order stamped everywhere upon the universe, inorganic no less than organic, upon the reality and ubiquity of which the validity of all scientific methods wholly depends, while the progress of scientific discovery does but immensely enhance the weight of the argument based upon it. At the same time, it cannot be admitted that the old-fashioned natural theology of the Treatises is so devoid of value as many modern critics pretend. The marvellous contrivances which we meet everywhere in organic nature remain wholly inexplicable

by natural selection or other non-intelligent agents in which purpose is not included, and to the ordinary unsophisticated mind they bring home, as what may be deemed more philosophical arguments cannot, the truth that here we have direct evidence of a Supreme Artificer.

JOHN GERARD.

**Brief.** See BULLS AND BRIEFS.

**Brieuc** (BRIOCUS, BRIOC, or BRU), SAINT, a Celtic saint of Brittany who received his education in Ireland and then studied under St. Germanus, said to be the famous St. Germanus of Auxerre. Much of what we read concerning his early years must be received with caution; indeed, Ussher asserts that he was of Irish birth, but it is tolerably certain that he returned to France early in 431, bringing with him St. Iltud. Even before his ordination to the priesthood, St. Brieuc worked several miracles, duly chronicled in his "Acts" (edited by F. Godefrid Herschenn), and after a short period spent with his parents, he entered on his missionary career. In 480, he settled in Armorica, and founded a monastery at Landebaeron. Thence he proceeded to Upper Brittany where he established an oratory at a place ever since known as St. Brieuc-des-Vaux, between St. Malo and Land Triguier, and of which he was named first bishop. Numerous miracles are cited in the "Acts", especially his cure of Count Riguel, who gave the saint his own palace of Champ-du-Rouvre, as also the whole manorial estates. Authorities differ as to date of St. Brieuc's death, but it was probably in 502, or in the early years of the sixth century. He died in his own monastery at St. Brieuc-des-Vaux, and was interred in his cathedral church, dedicated to St. Stephen. Baring-Gould says that St. Brieuc is represented as "treading on a dragon" or else "with a column of fire" as seen at his ordination. His relics were translated to the Church of SS. Sergius and Bacchus of Angers, in 865, and again, in a more solemn manner, on 31 July, 1166. However, in 1210, a portion of the relics was restored to St. Brieuc Cathedral, where the saint's ring is also preserved. The festival of St. Brieuc is celebrated on 1st May, but, since 1804, the feast is transferred to the second Sunday after Easter. Churches in England, Ireland, and Scotland are dedicated to this early Celtic saint.

W. H. GRATTAN FLOOD.

**Brigid**, SAINT, of Ireland (incorrectly known as BRIDGET), b. in 451 or 452 of princely ancestors at Faughart, near Dundalk, County Louth; d. 1 February, 525, at Kildare. Refusing many good offers of marriage, she became a nun and received the veil from St. Macaille. With seven other virgins she settled for a time at the foot of Croghan Hill, but removed thence to Druin Criadh, in the plains of Magh Life, where under a large oak tree she erected her subsequently famous Convent of *Cill-Dara* that is, "the church of the oak" (now Kildare), in the present county of that name. It is exceedingly difficult to reconcile the statements of St. Brigid's biographers, but the Third, Fourth, and Fifth Lives of the saint are at one in assigning her a slave mother in the court of her father Dubhthach, an Irish chieftain of Leinster. Probably the most ancient life of St. Brigid is that by St. Broccan Cloen, who is said to have died 17 September, 650. It is metrical, as may be seen from the following specimen:—

Ni bu Sanct Brigit suanach

Ni bu húarach im sheire Dé,

Sech ni chuiur ni cossena

Ina noeb dibad bethath che.

Saint Brigid was not given to sleep,

Nor was she intermittent about God's love;

Not merely that she did not buy, she did not seek for

The wealth of this world below, the holy one.

Cogitosus, a monk of Kildare in the eighth century, expounded the metrical life of St. Brigid, and versified it in good Latin. This is what is known as the "Second Life", and is an excellent example of Irish scholarship in the mid-eighth century. Perhaps the most interesting feature of Cogitosus's work is the description of the Cathedral of Kildare in his day: "Solo spatioso et in altum minaci proceritate porruta ac decorata pictis tabulis, tria intrinsecus habens oratoria ampla, et divisa parietibus tabulatis". The rood-screen was formed of wooden boards, lavishly decorated, and with beautifully embroidered curtains. Probably the famous Round Tower of Kildare dates from the sixth century. Although St. Brigid was "veiled", or received, by St. Macaille, at Croghan, yet, it is tolerably certain

THE ROUND TOWER OF KILDARE

that she was professed by St. Mel of Ardagh, who also conferred on her abbatial powers. From Ardagh St. Macaille and St. Brigid followed St. Mel into the country of Teffia in Meath, including portions of Westmeath and Longford. This occurred about the year 468. St. Brigid's small oratory at *Cill-Dara* became the centre of religion and learning, and developed into a cathedral city. She founded two monastic institutions, one for men, and the other for women, and appointed St. Conleth as spiritual pastor of them. It has been frequently stated that she gave canonical jurisdiction to St. Conleth, Bishop of Kildare, but, as Archbishop Healy points out, she simply "selected the person to whom the Church gave this jurisdiction", and her biographer tells us distinctly that she chose St. Conleth "to govern the church along with herself". Thus, for centuries, Kildare was ruled by a double line of abbot-bishops and of abbesses, the Abbess of Kildare being regarded as superioress general of the convents in Ireland.

Not alone was St. Brigid a patroness of students, but she also founded a school of art, including metal work and illumination, over which St. Conleth presided. From the Kildare scriptorium came the wondrous book of the Gospels, which elicited unbounded praise from Giraldus Cambrensis, but which has disappeared since the Reformation. According to this twelfth-century Welsh ecclesiastic, nothing that he had ever seen was at all comparable to the "Book of Kildare", every page of which was gorgeously illuminated, and he concludes a most

laudatory notice by saying that the interlaced work and the harmony of the colours left the impression that "all this is the work of angelic, and not human skill". Small wonder that Gerald Barry assumed the book to have been written night after night as St. Brigid prayed, "an angel furnishing the designs, the scribe copying". Even allowing for the exaggerated stories told of St. Brigid by her numerous biographers, it is certain that she ranks as one of the most remarkable Irishwomen of the fifth century and as the Patroness of Ireland. She is lovingly called the "Queen of the South: the Mary of the Gael" by a writer in the "Leabhar Breac". St. Brigid died leaving a cathedral city and school that became famous all over Europe. In her honour St. Ultan wrote a hymn commencing:—

Christus in nostrâ insulâ  
Que vocatur Hibernia  
Ostensus est hominibus  
Maximis mirabilibus  
Que perfecit per felicem  
Celestis vite virginem  
Precellentem pro merito  
Magno in mundi circulo.

(In our island of Hibernia Christ was made known to man by the very great miracles which he performed through the happy virgin of celestial life, famous for her merits through the whole world.)

The sixth Life of the saint printed by Colgan is attributed to Coelan, an Irish monk of the eighth century, and it derives a peculiar importance from the fact that it is prefaced by a foreword from the pen of St. Donatus, also an Irish monk, who became Bishop of Fiesole in 824. St. Donatus refers to previous lives by St. Ultan and St. Aileran. When dying, St. Brigid was attended by St. Ninnidh, who was ever afterwards known as "Ninnidh of the Clean Hand" because he had his right hand encased with a metal covering to prevent its ever being defiled, after being the medium of administering the viaticum to Ireland's Patroness. She was interred at the right of the high altar of Kildare Cathedral, and a costly tomb was erected over her. In after years her shrine was an object of veneration for pilgrims, especially on her feast day, 1 February, as Cogitosus relates. About the year 878, owing to the Scandinavian raids, the relics of St. Brigid were taken to Downpatrick, where they were interred in the tomb of St. Patrick and St. Columba. The relics of the three saints were discovered in 1185, and on 9 June of the following year were solemnly translated to a suitable resting place in Downpatrick Cathedral, in presence of Cardinal Vivian, fifteen bishops, and numerous abbots and ecclesiastics. Various Continental breviaries of the pre-Reformation period commemorate St. Brigid, and her name is included in a litany in the Stowe Missal. In Ireland to-day, after 1500 years, the memory of "the Mary of the Gael" is as dear as ever to the Irish heart, and, as is well known, Brigid preponderates as a female Christian name. Moreover, hundreds of place-names in her honour are to be found all over the country, e. g. Kilbride, Brideswell, Tubberbride, Templebride, etc. The hand of St. Brigid is preserved at Lumiar near Lisbon, Portugal, since 1587, and another relic is at St. Martin's, Cologne.

Viewing the biography of St. Brigid from a critical standpoint we must allow a large margin for the vivid Celtic imagination and the glosses of medieval writers, but still the personality of the founder of Kildare stands out clearly, and we can with tolerable accuracy trace the leading events in her life, by a careful study of the old "Lives" as found in Colgan. It seems certain that Faughart, associated with memories of Queen Meave (Medhbh), was the scene of her birth; and Faughart Church was founded by St. Morienna in honour of St. Brigid. The old well of St. Brigid's

adjoining the ruined church is of the most venerable antiquity, and still attracts pilgrims; in the immediate vicinity is the ancient mote of Faughart. As to St. Brigid's stay in Connacht, especially in the County Roscommon, there is ample evidence in the "Trias Thaumaturga", as also in the many churches founded by her in the Diocese of Elphin. Her friend-

ST. BRIGID'S WELL

ship with St. Patrick is attested by the following paragraph from the "Book of Armagh", a precious manuscript of the eighth century, the authenticity of which is beyond question: "Inter sanctum Patricium Brigitamque Hibernensium columpnas amicitia caritatis inerat tanta, ut unum cor consiliumque haberent unum. Christus per illum illamque virtutes multas peregit". (Between St. Patrick and St. Brigid, the columns of the Irish, there was so great a friendship of charity that they had but one heart and one mind. Through him and through her Christ performed many miracles.) At Armagh there was a "Templum Brigitis"; namely, the little abbey church known as "Regles Brigid", which contained some relics of the saint, destroyed in 1179, by William Fitz Aldelm. It may be added that the original manuscript of Cogitosus's "Life of Brigid", or the "Second Life", dating from the closing years of the eighth century, is now in the Dominican friary at Eichstätt in Bavaria.

W. H. GRATT N FLOOD.

**Brigittines.**—The Brigittine Order (also, ORDER OF ST. SAVIOUR) was founded in 1346 by St. Brigit, or Bridget, of Sweden at Vadstena in the Diocese of Linköping. The saint, who was canonized twenty years after her death, was a Swedish princess renowned for her piety from her childhood; she was given in marriage to Ulf, Prince of Mercia, by whom she had a large family. Ulf died in 1344, and two years later tradition relates that St. Bridget had revealed to her the rule of the new order she was to found at Vadstena. Here with the help of King Magnus she established on her own estate the first monastery for men and women, of which Katharine, her daughter, became the first abbess soon after her death in 1375. At this time double monasteries were not unusual; the monks and nuns used the same chapel, but lived in separate wings of the monastery, the confessor alone having access to the nuns. In

Brigittine monasteries the nuns, who were strictly enclosed, attended to the cooking, washing, and making and mending of clothes for the monks as well as for themselves, but everything was passed through a turnstile from one wing to the other. This arrangement, unsuitable to modern times, has long ceased.

In the new order the abbess, who was called the "Sovereign", was supreme in all things temporal for both houses; all deeds were in her name, all charters were addressed to her; but in spiritual things the abbess was not allowed to interfere with the monks who were priests, and the nuns were under the direction of the superior of the monks who was appointed confessor-general. The order was founded principally for women, and for this reason the supreme government was vested in the abbess; the monks were founded to give the nuns the spiritual help they needed. The special interior devotion of the order is to the Passion of Our Lord and to His Blessed Mother.

**RULE OF ST. BRIDGET.**—The Rule enacts "that the number of choir nuns shall not exceed sixty, with four lay sisters; the priests shall be thirteen, according to the number of the thirteen Apostles, of whom Paul the thirteenth was not the least in toil; then there must be four deacons, who also may be priests if they will, and they are the figure of the four principal Doctors, Ambrose, Augustine, Gregory, and Jerome, then eight lay brothers, who with their labours shall minister necessities to the clerics, therefore counting three-score sisters, thirteen priests, four deacons, and the eight servitors, the number of persons will be the same as the thirteen Apostles and the seventy-two disciples". (The Rule of St. Bridget.) The nuns were not to be professed before they were eighteen and the monks not before they were twenty-five years of age. The counsel of holy poverty is strictly enjoined by the Rule on all the members of the order, who are forbidden to possess anything, though at the same time they may expect the abbess to supply them with all necessities; one luxury is allowed them, they may have as many books as they like for study. All the cast-off clothing and the surplus of their yearly income, after all has been provided for, are to be given to the poor, and the Rule strictly forbids the abbess to make larger buildings than are necessary.

The Constitutions were first approved by Pope Urban V, afterwards by Urban VI, and finally by Martin V. In 1603 Pope Clement VIII made certain changes for double monasteries in Flanders, and in 1622 Gregory XV changed certain articles in the Constitutions which refer only to double convents for the Monastery of Ste. Marie de Foi, in the Diocese of Ypres. These new Constitutions ordained that manual work should be done during certain hours of the day by the members of the order, that a red cross should be worn on the mantle, that the nuns might be professed at the age of sixteen, and that the monks should say the Divine Office according to the Roman Breviary. Those who followed these Constitutions took the name of Brigittines Novissimi of the Order of St. Saviour, to distinguish them from those who lived in double convents.

**FOUNDATIONS.**—The order spread into France, Italy, Germany, Bavaria, Poland, Norway, Denmark, Finland, Holland, Belgium, Spain, Portugal, and Russia. Four foundations were made in France, at Lille, Valenciennes, Arras, and Douai, but all were destroyed in the Revolution. In Belgium several houses were founded, but except that of Dendermonde they did not last very long, and all have now disappeared. The first Italian house was founded in 1394, when the Monastery of Paradiso was opened at the gates of Florence, and about this time some of the monks of the order took up their abode in Rome, in the house in which St. Bridget died. In 1426 a monastery was opened at Genoa, and that same year

the order was introduced into Bavaria, where several foundations were made, one of which still remains. This is the celebrated old Benedictine Monastery of Mary—Altomünster, between Munich and Augsburg, of which the Brigittines took possession in 1497 establishing a double convent there. This monastery was twice plundered and partially destroyed by fire, and the monks and nuns who were dispersed at the Reformation twice returned to it. In 1803 it was suppressed, and it is only since 1844 that a community of Brigittine nuns again lives there. The monastery of Revel in Russia was burnt by schismatics in 1575, but in Poland most of the monasteries were preserved till the middle of the sixteenth century, and three new foundations were made. Holland still possesses two Brigittine houses, both of which now take pupils.

At the Reformation most of the double monasteries had to be given up, and the rule as to numbers could no longer be observed, while many of the houses were suppressed altogether. The nuns at Vadstena endured much persecution at this time; the Protestants threatened to tear them to pieces and expelled them from their monastery, but in 1588, King John III became their protector, and restored their monastery to them. In England the Brigittine Order is the only pre-Reformation order in existence. The celebrated Brigittine Monastery of Syon House was founded in 1415, when Henry V himself laid the foundation-stone on part of the royal manor of Isleworth on the Thames. It is supposed that the cause of the extension of the order in England was due to the fact that Henry's sister Philippa was the wife of Eric XIII, King of Sweden. King Henry endowed the monastery richly and transferred the property of certain houses dependent on French monasteries to Syon. At the dissolution of monasteries under Henry VIII, who in the earlier years of his reign had himself been a benefactor of the abbey, the nuns were dispersed and took refuge in a convent of their order at Dendermonde in Flanders. Here they were visited by Cardinal Pole, and through his influence were re-established at Syon under Queen Mary, but they were driven into exile again when Elizabeth came to the throne, and returned to Dendermonde. After several attempts to settle in different parts of Belgium, they went to Rouen where they remained fourteen years, and finally in 1594, they moved to Lisbon where they remained for 267 years. In 1809 an attempt was made to return to England, but it was not till 1861 that the nuns found a home at Spettisbury in Dorsetshire, whence they moved to Chudleigh in Devonshire in 1887, where they are still living.

**BRIGITTINES OF THE RECOLLECTION.**—The Brigittines of the Recollection were founded at Valladolid in the seventeenth century by Venerable Marina de Escobar, formerly a Carmelite nun, who modified the Rule to suit the Spanish nation and the age in which she lived. The Constitutions were approved by Pope Urban VIII. Like St. Bridget she neither took the habit herself nor did she live to see the first monastery of the order erected. This congregation which has five houses was founded for nuns only; the habit and the office differ slightly from those of the Brigittines.

In all houses of the Brigittine Order prayers are constantly offered for the restoration of the Monastery of Vadstena. This was formerly the great centre and stronghold of Catholicism in Sweden, a place where kings and queens frequently visited, sometimes took refuge, and were occasionally imprisoned, but which was suppressed and the religious dispersed under Gustavus Vasa. Nine Brigittine monasteries are now in existence: Syon Abbey, Chudleigh in Devonshire, Altomünster in Bavaria, Uden and Weert in Holland; and the five Spanish

houses of the Brigittines of the Recollection: Valladolid founded in 1651, Vittoria founded in 1653, Lasarte and Parades de Nava in 1671, and Ascoytia in 1690.

FRANCESCA M. STEELE.

**Brignon, JOHN**, b. at Saint Malo in 1629; d. at Paris, 12 June, 1712. He was a member of the Society of Jesus and occupied during the sixty-five years of his religious life chiefly in the translation of works of piety into French. Among these are the works of De Ponte and Nieremberg, the "Spiritual Combat", the "Imitation of Christ", and the short treatises of Bellarmine. All these translations have passed through a number of editions. He also edited and revised "The Devout Life" of St. Francis De Sales and the "Fondements" of Père Surin, S.J. The only English works he translated into French are the "Decem Rationes" of Blessed Edmund Campion and the "Tractatus de Misericordiâ fidelibus defunctis exhibendâ" by Father Mumford, S.J.

S. H. FRISBEE.

**Bril, PAULUS**, a brilliant Flemish painter and engraver, b. at Antwerp, 1556; d. in Rome, 7 October, 1626. He first studied with Damiaen Oortelmans, a member of the guild of St. Luke in his native city. Fired by the news of the success of his brother Matthys, in Rome, he left his parents secretly and started for that city. He was detained at Lyons by lack of funds, and worked there in order to be able to continue his journey. At Rome he studied with his brother, but found his best inspiration later in the copies he made of the landscapes of Titian. With these as a basis he developed a vigorous and individual style of his own, the manifestations of which are said to have led greatly to the development of landscape art by their influence on Rubens, Annibale Carracci, and Claude Lorraine. He assisted his brother in his works at the Vatican, and on the death of the latter (b. about 1548, d. 1584) he continued his labours. Pope Gregory XIII gave him his brother's pension, and confided to him the work which they had jointly undertaken.

Bril's principal production in the Vatican is a landscape in fresco sixty-eight feet long, ordered by Pope Clement VIII for the Sala Clementina, in which appears St. Clement, with an anchor fastened to his neck, being cast into the sea. Bril worked in the Sistine Chapel, in Santa Maria Maggiore, and in the chapel of the Scala Santa in St. John Lateran. He introduced figures in his landscapes with much success, but in some of them appear compositions of Annibale Carracci. His "Duck Hunt", "Diana and Nymphs", "Fishermen", "Pan and Syrinx", "St. Jerome in Prayer", and three other landscapes are in the Louvre. His "Prodigal Son" is in the Antwerp Museum, and his "St. Paul in the Desert", "Boar Hunt", and "Triumph of Psyche" in the Uffizi at Florence. His works appear in number in all the principal European galleries.

LÜCKE, *History of Art* (tr. New York, 1881).

AUGUSTUS VAN CLEEF.

**Brillmacher, PETER MICHAEL**, b. at Cologne in 1542; d. at Mainz, 25 August, 1595. He entered the Society of Jesus in 1558, and studied under Maldonatus, in Paris. Later he returned to Cologne, where, by his diplomatic skill, he rendered invaluable aid to the German princes in affairs of state. His eloquence attracted multitudes, thwarted the efforts of the so-called reformers, and made such deep inroads in their

ranks that they determined upon his death. Inviting him to a banquet on pretence of debating disputed doctrines, they mingled poison with his food thus accomplishing his end.

Brillmacher took an active part in the controversies so frequent in his day and was fearless in his attacks upon heresy. An instance of his alertness in the detection of heresy is that of the curé of Notre Dame of Cologne, Stephen Isaac, a converted Jew, who, in 1589, preaching on the Holy Eucharist, advanced arguments which tended to compromise rather than substantiate the doctrine. Brillmacher immediately published his "Controversiarum de Eucharistiâ Dialogi", in which he advanced all the arguments which had been brought for and against the Real Presence, Transubstantiation, etc. In the third of these dialogues he so clearly exposed the duplicity of Isaac that the latter was forced openly to avow his apostasy to Calvinism. In a public letter to John of Münster, Isaac vilified the Jesuit and called forth the latter's second work, "Detectio Erroris Joannis a Münster", followed shortly by another "Exceptio Prodomi Calviniana" (1592, in Latin and German) and still later (1593) by "Epistola ad Amicum". The widespread publication and popularity of these overwhelmed his adversaries and won back to the Faith many who had been deceived by the specious arguments of the heretics. Brillmacher's "Catechismus" first published in 1586, ran through various editions (Latin, German, and Flemish), and was the foundation of many similar works. He also wrote: "Serta Honoris" (various editions in Latin and German, 1565 to 1713) and two early publications "De Communionem sub alterâ Specie" and "Commentarium in Aristotelis Logica".

T. J. YOUNG.

**Brindholm** (or BRYNDEHOLME), EDMUND, VENERABLE, martyr and parish priest of Our Lady's Church at Calais, accused of being concerned in a plot to betray Calais to the French. It was said that Sir Gregory Botolf, chaplain to Lord Lisle, Governor of Calais, had been to Rome on this business, and had requested the pope to grant a living in the English Hospital of St. Thomas to Brindholm, who was about to go to Rome when he was arrested. There seems, however, no evidence that he was really concerned in any plot. He was examined 11 April, 1540, and was attainted in the Parliament of that year, together with "Clement Philpott late of Calais, gentleman, who have adhered to the King's enemy, the Bishop of Rome, and assisted Raynold Poole [Cardinal Pole], an abominable and arrogant traitor, compassing the surprise of the town of Calais". He suffered, together with Philpott, the Blessed William Horne, a Carthusian lay brother, and others, at Tyburn, 4 August, 1540.

BEDE CAMM.

**Brindisi, DIOCESE OF.**—Brindisi, called by the Romans *Brundisium* or *Brundisium*, by the Greeks *Βρονθισιον*, is a city in the province of Lecce, in Apulia, on a rocky peninsula which extends into the Adriatic. In ancient times it was very important as a seaport, being accessible in all winds. In 245 B. C. the Romans captured Brindisi without striking a blow and established a Roman colony there. This city was one terminal of the Via Appia. In the civil wars between Cæsar and Pompey Brindisi was the base of naval operations. Brindisi was the birthplace of the poet Pacuvius; here also Virgil died in 19 B. C., on his return from Greece. During the invasions of the barbarians it was taken and destroyed several times, but was always rebuilt within a short space of time, so that as late as the twelfth century it had a population of 60,000, which has since dwined.

dled to about 20,000. The harbour gradually filled up, which hindered navigation. The Italian Government made great attempts to remedy this, but on account of an error of judgment the beneficial results anticipated were not permanent.

According to a local legend, the first Bishop of Brindisi was St. Leucius, about 165, who later underwent martyrdom. However, taking into consideration the geographical position of this city, the beginnings of Christianity in Brindisi must date back to the first century. There is no historical proof for this except the account given by Arnobius of the fall of Simon Magus, who according to him withdrew to Brindisi and cast himself from a high rock into the sea. The Diocese of Brindisi at first embraced the territory comprised within the present Diocese of Oria. In the tenth century, after Brindisi had been destroyed by the Saracens, the bishops took up their abode at Oria, on account of its greater security. In 1591, after the death of Bishop Bernardino di Figueroa, Oria was made the seat of a new diocese. In the reorganization of the dioceses of the Kingdom of Naples in 1818 Brindisi was combined with the Diocese of Ostuni, formerly its suffragan. Brindisi has been an archiepiscopal see since the tenth century. The ancient cathedral was located outside the city, but in 1140 Roger II, King of Sicily and Naples, built the present cathedral in the centre of the city.

The bishops of Brindisi worthy of mention are: St. Proculus (Proculus), who died in 352 at Ardea, when returning from Rome, and was buried at Anzio; St. Cyprian, who died in 364; Andrea, murdered by the Saracens in 979; Eustachio (1060), the first to bear the title of archbishop; Guglielmo (1173), author of a life of St. Leucius; Girolamo Aleandro (1524), a learned humanist, and papal nuncio in Germany in connexion with Luther's Reformation, and later Cardinal; Pietro Caraffa, Bishop of Chieti, and afterwards Pope Paul IV, for some time the Apostolic administrator of this diocese; Francesco Aleandro (1542); G. Bovio, from Bologna, who translated the works of St. Gregory of Nyssa, and was prominent in the Council of Trent; Paolo de Vilanaperlas (1716), founder of the seminary; Andrea Maddalena (1724), who restored the cathedral after it had been damaged by the earthquake of 1743.

In this diocese is the shrine of Mater Domini, near Mesagne. A beautiful church was erected there in 1605 to replace the ancient rustic chapel. The diocese has a population of 119,907, with 23 parishes, 89 churches and chapels, 181 secular and 15 regular clergy, and 64 seminarians.

U. BENIGNI.

**Brindle, ROBERT.** See NOTTINGHAM, DIOCESE OF.

**Brinkley, STEPHEN,** Confessor of the Faith, imprisoned and tortured as manager of a secret press for the publication of devotional and controversial works in the reign of Queen Elizabeth; b. about 1550, and lost to view after 1585. He was a member of a Catholic association of unmarried gentlemen of property, organized by George Gilbert, and solemnly blessed by Gregory XIII, 1580. Their purpose was to raise funds for the support of priests, to prepare Protestants for the Faith, and, at a time when priests travelled in disguise, without papers of identification, to arrange for introductions which would guard both priests and laity against betrayal. The members undertook to content themselves with the bare necessities of their state of life, to spend the remainder of their goods in the cause of the Church, and to devote themselves wholly to the salvation of souls and the conversion of heretics. At this time the Jesuit Fathers Robert Parsons and (Blessed) Edmund Campion

were preparing for a vigorous propaganda through the press. With the assistance of several of the old Marian priests and of one Brooks, Parsons procured from the elder Brooks, owner of a large house called Greenstreet, at East Ham in Essex, five miles from London, permission for certain gentlemen to lodge there. To this house, chiefly with the assistance of Brinkley, Parsons conveyed a printing press and materials. Brinkley's seven workmen appeared in public with fine clothes and horses, to avert suspicion. The parson and churchwardens urged the newly arrived gentlemen to attend services; an incautious purchase of paper almost gave a clue to the discovery of the press, and a servant of Brinkley's was caught and racked.

Their first book, however, which was very probably a work of devotion or of encouragement to Catholics, was successfully issued. Brinkley then moved the press to Henley Park, to the house of Francis Browne, brother of Viscount Montague. Parsons issued, 1581, "A brief Censure upon two Books written in answer to M. Edmund Campion's Offer of Disputation." Campion's challenge was then circulating in manuscript. Extreme caution was required in the management of Brinkley's press. Government experts, like Norton, reported that the Brinkley books, in spite of the Douai imprint, had been produced in England; the landlord Brooks was suspicious; information as to the press was also asked of Father Briant upon the rack. After a second removal, Brinkley printed, at a lodge belonging to Dame Cecilia Stonor's house, near Henley, Campion's "Decem Rationes". At Oxford, on Commemoration Day, 27 June, 1581, the benches of St. Mary's Church were found strewn with copies of this ringing challenge to the universities. The capture of Campion near Oxford Sunday evening, 16 July, was followed in a few weeks by that of Brinkley and his printers. Brinkley, though tortured in the Tower, escaped the fate of his fellow prisoner, William Carter, a Catholic printer, who was executed at Tyburn. Brinkley was discharged in June, 1583. He accompanied Father Parsons first to Rome, where we find his name in the Pilgrim Book of the English College in the following September, and thence in the following year to Rouen. Here, with George Flinton, Brinkley printed a second edition of a work which Flinton had brought out in 1581, "The Christian Directory". After Flinton's death about 1585, Brinkley continued to issue Catholic books. The date of his death is unknown. Gillow mentions a work translated from the Italian (Paris, 1579), entitled "The Exercise of a Christian Life . . . newly perused and corrected by the translator" (James Sancer). Sancer, or Sanker, is known to have been the pseudonym of Brinkley. This work, perhaps, is one of the early issues of Brinkley's own press.

J. VINCENT CROWNE.

**Brisacier, JACQUES-CHARLES DE,** orator and ecclesiastical writer, b. at Bourges in 1641; d. at Paris, 23 March, 1736. At the age of twenty-five he entered the Society of the Foreign Missions at Paris, and devoted seventy years of his life to this great work. The scion of a rich and distinguished family, son of the collector-general for the Province of Berry, endowed with a remarkable talent for preaching, chaplain in ordinary to Queen Marie-Thérèse, wife of Louis XIV, he might have aspired to high ecclesiastical honours. Many bishoprics were offered to him. He refused them all, however, in order to remain in the Society of the Foreign Missions of which he was elected superior in 1681. He filled this office for eight terms, but as the rule

of the Society is that no one shall be elected superior for more than three consecutive years, he filled this charge alternately with Louis Tiberge. He was also one of eight of its members who in 1698 composed the rules for its government which are still in force.

Madame de Maintenon asked him to become the associate of Bourdaloue and Fénelon, in compiling the regulations for the school of Saint Cyr, which she had just founded. So pleased was she with his wisdom and judgment that she asked him again, in connexion with Bourdaloue and M. Fronson, superior of Saint Sulpice, to give his opinion on the books of Madame Guyon and upon Quietism. On this point, however, the director of the Society of the Foreign Missions did not agree with the views of Fénelon. He took a very prominent part in the discussion on Chinese ceremonies. After having asked the advice of Fénelon and Bossuet on this question, Brisacier did not hesitate to declare himself of an opinion different from that of the Jesuits. The Bishop of Meaux wrote him three letters on this subject (30 August, 1701; 8 and 12 September, 1701). Brisacier, however, did not wait for these letters to declare himself. On 20 April, 1700, he published a pamphlet entitled "Lettre de MM. des Missions étrangères au Pape, sur les idolatries et les superstitions chinoises, avec une addition à la dite lettre, par MM. Louis Tiberge and Jacques Charles de Brisacier". Brisacier pronounced the funeral orations of the Duchesse d'Aiguillon and also of Mlle de Bouillon, both benefactresses of the Foreign Missions.

A. FOURNET.

**Brisacier, JEAN DE**, controversialist, b. at Blois, France, 9 June, 1592; entered the Society of Jesus in 1619; d. at Blois, 10 September, 1668. On the completion of his studies, he gave himself to preaching for many years, with great zeal and success. Afterwards he was in turn Rector of the colleges of Aix, Blois, and Rouen, Visitor to the province of Portugal, Procurator of the Society for Foreign Missions and Superior of the Professed House in Paris. His love for missionary work was such that shortly before his death, he remarked that he counted as nothing all the years he had not spent in it. Brisacier was an ardent opponent of Jansenism, and never lost an opportunity of attacking it. In a sermon preached at Blois, in 1651, he denounced the deceit practised by the Jansenists, particularly in the district around his native town, where the curé of Cour-Cheverny, M. L'Abbé Callaghan, was very active in promoting the heresy. This gave rise to a spirited controversy, in which Brisacier displayed activity and courage. In reply to the Jansenists' answer to his sermon, he repeated his indictment, and offered proof of it, in a publication entitled "Le jansénisme confondu dans l'advocat du sieur Callaghan, par le P. Brisacier, avec la defense de son sermon fait à Blois, le 29 Mars, 1651, contre la response du Port Royal". This work was quickly condemned by Jean François de Gondi, Archbishop of Paris, because of its personal attacks directed especially against the Jansenistic religious of Port Royal. After this censure the dispute continued for some time, and called forth a long series of pamphlets. As late as 1862, the controversy was kept up by Abbé Pletteau and G. Bordillon.

R. H. TYRNEY.

**Brisbane, ARCHDIOCESE OF**, comprises that part of the State of Queensland, Australia, which lies south of the 24th parallel of south latitude. The area is about 200,000 square miles. Brisbane, the cathedral city, is the capital of Queensland. The population

at the census of 1901 (metropolitan area) was 119,907.

**HISTORY.**—Queensland (known till 1859 as the Moreton Bay District of New South Wales) was first settled in 1825 as a convict station, was visited by Father Therry and abandoned after three years.

Permanent colonization began when it was thrown open to free settlers in 1842. In 1843, four Passionist Fathers established a mission for aborigines on Stradbroke Island, but abandoned it for lack of provisions and other causes in 1846. The work of evangelizing the Queensland blacks was afterwards carried on by other missionaries,

the most successful of whom were Father Luckie and the later and still more noted apostle of the aborigines, Father Duncan McNab. Missionary work among the blacks was, however, hampered to an almost hopeless degree by the bad example, the brutalities, and the communicated vices and diseases of degraded whites. In 1843, a rude shanty, hastily constructed during Dr. Polding's visit to Brisbane in that year, was the only building in the Moreton Bay District that stood for a church. There was no school, and the white population of the whole District was only 2,257 souls. Fathers McGinnety and Hanly arrived there in December, 1843. They were, says Cardinal Moran, "the first priests stationed for ordinary missionary work in the Moreton Bay territory". In 1859, the year in which the Moreton Bay District became a separate colony under the name of Queensland, it was erected into the Diocese of Brisbane. Its first bishop was the Right Rev. James O'Quinn, who was consecrated in Dublin on the 29th of June, 1859. In 1860 there were only two priests, two churches, two small schools, and 7,676 Catholics, out of a total population of 28,056, in his vast diocese of 668,497 square miles. He arrived in Brisbane, with five priests and six sisters, in 1861, and launched forth with into the work of organization, carrying on for years long and exhausting visitations, in which the bare earth was often his only bed, and sardines and "damper" his principal food. With the sanction of the Government, he organized the Queensland Immigration Society, which brought settlers (chiefly Irish Catholics) to the colony. Considerable numbers of these were placed on land granted for the purpose by the Government. Racial and sectarian passions took alarm. A clamour arose that the colony was being inundated with Irish Catholics, and that it would soon deserve to be called, not "Queensland", but "Quinn's Land". The Immigration Society bent before the storm and dissolved in 1865, after having enriched Queensland with ten shiploads of picked colonists.

Dr. O'Quinn was a man of ripe intellectual culture and of much foresight and administrative wisdom. He established a Catholic paper, "The Australian", founded two orphanages and an industrial school, wrought strenuously in the matter of church- and

BRISBANE FROM THE OBSERVATORY GARDENS

school-extension, erected the handsome cathedral of St. Stephen, and created and conserved rich educational and other endowments. State aid was finally withdrawn from all denominational schools with the close of the year 1880; but at his death, 18th August, 1881, there were 52 Catholic primary schools in the

ALL-HALLOW'S CONVENT SCHOOL,  
BRISBANE

diocese, attended by 6,510 children. The Provicariate of North Queensland was formed out of the Diocese of Brisbane in 1876, and that of Rockhampton in 1882. On the 18th of June, 1882, the Right Reverend Robert Dunne was consecrated Bishop of Brisbane in succession to Dr. O'Quinn. By his solid scholarship and his ability as a writer Dr. Dunne rendered important services as secretary to the Plenary Council of Australasia held in Sydney in 1885. At the request of that council, Queensland was in 1887 created a separate ecclesiastical province, with Brisbane as its metropolitan see; and the Provicariate of North Queensland was erected into the Vicariate-Apostolic of Cooktown. The present stately archiepiscopal residence in Brisbane was built during Dr. Dunne's visit *ad limina* in 1890, and presented to him on his return. His episcopate has been fruitful in church- and school-extension, and general progress.

*Religious Statistics* (1907).—Parochial districts, 31; churches, 91; secular clergy, 56; religious brothers, 25; nuns, 186; lay teachers in Catholic schools, 126; seminary 1; boarding schools for girls, 12; for boys, 4; high schools, 6; primary schools, 41; children in Catholic schools, 6,713; industrial school for boys (with printing office), 1; for girls, 1; orphanage, 1; Magdalen asylum, 1; servants' home, 1; total population, about 240,000; Catholic population, about 60,000.

HENRY W. CLEARY.

**Brischar, JOHANN NEPOMUCENE**, church historian, b. at Horb in Würtemberg in 1819, studied theology at the University of Tübingen, was appointed parish priest of Bühl near Rottenburg in 1853, where he died in 1897. His principal work is the continuation of Count Leopold Stolberg's "History of the Religion of Jesus Christ" of which he wrote volumes forty-five to fifty-four. His share of the work does not reach the high standard of his great predecessor. He is also the author of a work in two volumes on the controversies between Paolo Sarpi and Pallavicini, and of a monograph on Pope Innocent III. His "Catholic Pulpit Orators of Germany" in five volumes was published in Schaffhausen, in the years 1866-71. He contributed many articles to Herder's "Kirchenlexicon".

*Kathol. Literaturkalender* (Ratisbon, 1897), s. v.; HERDER, *Conversationslex.*, II, s. v.

B. GULDNER.

**Bristol** (BRISTOLIA, BRISTOLIENSIS), ANCIENT DIOCESE OF.—This English diocese, which takes its very origin from measures directed against the

Church, has a very brief Catholic history, for it only had one bishop acknowledged by the Holy See. It was one of the six bishoprics which Henry VIII, acting as head of the Church, attempted to found by Act of Parliament out of the spoils of the suppressed monasteries. This was in 1542, the bishoprics in question being those of Bristol, Oxford, Westminster, Gloucester, Peterborough, and Chester. The fact that the city was then one of the leading towns in England and the chief seaport, explains why it was selected as one of the new sees. Like the others, it possessed an important religious house, the buildings of which might serve the new purposes. As it was, the new diocese nearly lost its cathedral, for the abbey church of the Augustinian Canons, which had been plundered at the time of the suppression of that house in 1539, was already in process of demolition, when the king's order came arresting the devastation. This house of Augustinians had been founded four hundred years before its dissolution by one Robert Fitzharding, who began to build "the abbeye at Bristowe, that of Saint Austin is" in 1133. The abbey church, destined to serve hereafter as a cathedral, was of different dates: the old Norman nave built by Fitzharding seems to have stood till the suppression, but the chancel, which still exists, was early fourteenth century, and the transepts late fifteenth. The building as a whole was well worthy to serve as a cathedral. Yet at first Bristol does not seem to have been thought of as a bishopric, for it is not included in the list of projected sees now among the Cottonian MSS. in the British Museum.

It has been suggested that its ultimate selection for this honour was due to Cranmer, who visited Bristol shortly before his election as Archbishop of Canterbury, and busied himself in ecclesiastical affairs there. The first bishop to be appointed when the king's charter of 1542 founded the new see, was Paul Bush, formerly master of the Ponsshommes at Edyngton in Wiltshire, who, it is needless to say, neither sought nor obtained recognition by the pope. Himself an Augustinian and a man of some repute both as scholar and poet, he held fast to many of the old doctrines, and opposed Cranmer with regard to transubstantiation and Masses for the dead. Yet he followed the new opinions so far as the marriage of the clergy was concerned, and took as a wife one Edith Ashley. This fact caused him to be proceeded against as a married cleric in Queen Mary's reign. In 1554 a commission passed sentence of deprivation against him, which he anticipated by a voluntary resignation. This was the opportunity for placing the irregularly constituted diocese on a proper canonical footing, and Pope Paul IV empowered Cardinal Pole to re-found the See of Bristol. The first and, as it proved, the only Catholic bishop was John Holyman, a Benedictine monk of great reputation for learning and sanctity, who had been the friend and subject of the martyred Abbot of Reading, Blessed Hugh Cook.

As bishop, Dr. Holyman gave general satisfaction, and, though he took part in the trial of Hooper, and served on a commission to try Ridley and Latimer, he took no active part in the proceedings on the score of heresy. He died in the summer or autumn of 1558, and was thus spared the troublous times that began with the accession of Elizabeth in the following November. He was succeeded in the bishopric by the Anglican, Dr. Richard Cheney (1562-79), who, though a schismatic, was yet suspected of Catholic leanings, and was the early friend of Blessed Edmund Campion. But the history of Bristol as a Catholic see ends with the death of Bishop Holyman. The diocese was formed by taking the county and archdeaconry of Dorset from Salisbury, and several parishes from the Diocese

of Gloucester and Worcester, with three churches in Bristol, which had belonged to Bath and Wells. The arms of the see were sable, three ducal crowns in pale or. The dedication was changed at the dissolution from St. Augustine to the Holy Trinity.

EDWIN BURTON.

**Bristow, RICHARD**, b. at Worcester, 1538, d. at Harrow-on-the-Hill, 1581. He went to the University of Oxford in 1555, probably as a member of Exeter College, though Wood doubts this. In 1559 he took his Bachelor's degree and proceeded to the degree of Master of Arts as a member of Christ Church, in 1562. He was exceptionally brilliant and eloquent and so esteemed as an orator that, with the celebrated Edmund Campion, he was chosen to hold a public disputation before Queen Elizabeth in 1566. Shortly afterwards, having applied himself to theology and acquired a wide reputation for his learning, he was made a Fellow of Exeter College (1567) by the interest of Sir William Petre, who had founded several fellowships there. His great ability would probably have won further promotion for him had not his religious opinions undergone a change, an indication of which was given in his argument with the Regius Professor of Divinity, whom he confuted. Two years after his appointment to the fellowship he left Oxford and proceeded to Louvain, where he met William (afterwards Cardinal) Allen. Recognizing his marked talent Allen secured him for his new college at Douai and appointed him its first prefect of studies. He was Allen's "right hand upon all occasions", acting as rector when he was absent and when the college was transferred (1578) to Reims.

Bristow is best known, however, as an earnest student, a powerful controversial writer, and, with Allen, as one of the revisers of the Douay Bible. His intense labours, while they earned for him the lasting gratitude of Catholics, told upon a constitution naturally weak, and he was obliged to relinquish his work in 1581. In May of the same year he went to Spa, but having obtained no advantage there he was advised, after two months, to return to England. This he did in September, staying until his death (18 October) with Mr. Jerome Bellamy, a Catholic of means, at Harrow-on-the-Hill. By his death the Catholic cause lost a zealous champion and a learned advocate. The Douai records speak of him in the highest terms as rivalling Allen in prudence, Stapleton in acumen, Campion in eloquence, Wright in theology, and Martin in languages. He wrote: (1) "A Briefe Treatise of diuerse and sure wayes to finde out the truthe in this doubtful and dangerous time of Heresie: conteynyng sundry worthy Motives vnto the Catholike faith, or considerations to moue a man to beleue the Catholikes and not the Heretikes" (Third edition entitled "Motives inducing to the Catholike Faith"); (2) "Tabula in Summam Theologicam S. Thomæ Aquinatis"; (3) "A Reply to Will. Fulke"; (4) "Demandes to be proponed of Catholikes to the Heretikes"; (5) "A Defence of the Bull of Pope Pius V"; (6) "Annotations on the Rheims translation of the New Testament"; (7) "Carmina Diversa"; (8) "Motiva Omnibus Catholicæ Doctrinæ Orthodoxis Cultoribus per-necessaria", the last two being in manuscript.

FRANCIS AVELING.

**British Columbia** is the westernmost province of the Dominion of Canada. Territorially, it is also the

largest, being 357,600 square miles in extent. It is composed of the mainland and islands. Prominent among the latter are Vancouver and Queen Charlotte Islands. The mainland is bounded on the south by the States of Washington and Idaho, on the east by the summits of the Rocky Mountain as far as a point where they meet the line of 120th degree of longitude, thence by that line to the 60th degree of latitude, the northern limit of the province. On the west it extends as far as the Pacific Ocean, except north of Portland Canal, where a narrow strip of coast land and a group of important islands form a part of Alaska.

**PHYSICAL CHARACTERISTICS.**—British Columbia has been called a sea of mountains, and this designation is fairly accurate, save perhaps for some forty miles on either side of the Chilcotin River, where are to be found rolling or tolerably level plateaux at least 3,000 feet above the sea and covered with excellent bunch grass. They are more or less open and the remainder of the province might be described as a continuous forest of conifers, interspersed here and there with deciduous trees and dotted at long intervals with natural prairies. The mountains are too numerous for enumeration. The principal ranges are the Lillooet mountains in the south-west, the Cariboo and the Babine mountains in the north-eastern and north-western interiors respectively, north of which numberless sierras connect the Rockies with the Cascade or Coast range, a chain of steep and rugged mounts that run parallel to the former. Between these many evidences of ancient physical upheavals lie either fertile valleys or deep, long, and narrow lakes. The latter are to be found especially in the northern interior. Prominent among them are lakes Babine, which covers an area of some 196,000 acres; Tatla, 152,000; Morice, 148,000; Stuart, 142,000; French, 140,000; Chilco, 109,760, and many others almost as large. In the south are lakes Kootenay, with an estimated area of 141,120 acres, Okanagan, 86,240, and Harrison, 78,400. Most of these sheets of water give rise to, or are drained by, rivers which in the spring assume generally the nature of torrents. The chief watercourses of the province are the Fraser River, with the Nechaco, the Quesnel, and the Thompson as tributaries; the Skeena, the Nass, and the Stickine in the north-west; the Finlay and its continuation, the Peace, with their tributary, the Parsnip, in the north-east, while the south-eastern corner is drained by the upper Columbia.

**Resources.**—These streams, especially the Fraser and Skeena, are yearly ascended by immense shoals of salmon of the genus *oncorhynchus*, which are a great source of revenue, while the vast forests of the coast and southern interior, composed mostly of red cedar (*thuya gigantea*), fir (*pseudotsuga Douglassii*) and various species of spruce, are likewise the objects of remunerative industries. The country's most valuable treasures are, however, under ground, being found in the shape of minerals of which the following represents the production for 1906: copper, \$8,288,565; gold, \$5,579,039; lead, \$2,667,578; silver, \$1,897,320; other materials, \$1,000,000. For the same period of time Vancouver Island and parts of the mainland yielded coal and coke to the value of \$5,548,044, though it is well known that vast deposits of the same exist on the mainland, which only awaits capital to become productive. As to agriculture, it takes a rather secondary place in British Columbia; yet it is by no means neglected. In the valley of the lower Fraser and in the districts of Okanagan, Kamloops, Lillooet, etc., fruit-raising is considered more remunerative. Apples and pears of all kinds, peaches, tomatoes, and smaller fruit grow to perfection. From a climatological standpoint, extremes are to be found within the broad limits of the province. The coast enjoys an almost constantly mild, though wet,

climate, and roses are grown in the open throughout the winter in Vancouver and Victoria. Beyond the Cascades is the dry belt, where irrigation becomes a necessity, while north of the 52d parallel the winters become more and more severe in proportion to the latitude and the altitude.

**POPULATION.**—The latest official census (1901) gave the population of the province as 178,657, of whom 33,081 were Catholic. The entire population cannot now be less than 260,000 with perhaps 48,000 Catholics. The capital is Victoria, in the southern extremity of Vancouver Island; population in 1901, 20,816, estimated now at 30,000 including 6,000 Orientals. The commercial metropolis is Vancouver, at the terminus of the Canadian Pacific Railway on Burrard Inlet. Founded, practically, in 1886, it had already 26,103 inhabitants in 1901. At the present time it claims a population of 71,150, some 4,500 of whom are Chinese and 1,800 Japanese. Next in importance are, on the mainland, New Westminster (about 10,000 inhabitants), Nelson (8,000), Rossland (7,150), and, on Vancouver Island, Nanaimo, a famous coal centre (6,230).

The figures for the total population of the province include 25,593 Indians divided into six very distinct stocks: (1) the Kootenays in the south-eastern corner; (2) the Salish, who are the aborigines of the southern portion of the mainland and the south-eastern coast of Vancouver Island; (3) the Kwakwuiutl or Wakashans immediately north of the latter on the coast of the mainland and the northern and western parts of Vancouver Island; (4) the Haidas on Queen Charlotte Islands; (5) the Tsimpsians along the lower course of the Skeena and on the littoral of the mainland as far north as Alaska, and (6) the Dénés who range over the entire extent of the northern half of the province east of the Kwakwuiutl and the Tsimpsians. The Kootenays number but 587, all Catholics, as well as the 2,500 Dénés of the north, but the Salish are fully 12,000, of whom about one-tenth are Protestants, the remainder Catholics. The Tsimpsians are partly heathen and partly Protestants, while the Wakashans and the Haidas, the former especially, have mostly retained their aboriginal faith in shamanistic practices, to the exclusion of any of the sects.

**SECULAR HISTORY.**—Navigators of various nationalities were the first representatives of our civilization to come in contact with these aborigines. In 1774 it was the Spanish Juan Perez; in 1778 the English Captain Cook; the French Lapérouse came in 1785; Captain Meares in 1787; Marchand, a Frenchman, in 1791; the American Gray in 1789, and the famous George Vancouver in 1792. But no settlement resulted from the visits of these mariners, who confined their operations to geographical work and fur trading with the natives. In 1793 Alexander Mackenzie crossed the Rocky Mountains from the east and reached the Pacific overland. The first white settlements were established in the northern interior by members of the Northwest Fur Trading Company: Fort McLeod in 1805; Forts St. James and Fraser in 1806, and Fort George, at the confluence of the Nechaco with the Great River the following year. The latter stream was explored to its mouth in 1808 by Simon Fraser, and is now known under his name. Shortly afterwards, other posts were founded and a brisk trade carried on in the northern interior, which was long called New Caledonia, and comprised at one time the basin of the Thompson, discovered in 1808 by the astronomer-geographer David Thompson.

The headquarters for the Pacific of the corporation (the Hudson's Bay Company since its absorption of the Northwest Company in 1821) which operated throughout the land were at Fort Vancouver, on the lower Columbia. When it became evident that this would be found to be in American territory, the

authorities established (1843) another general dépôt at the southern end of Vancouver Island, which was at first called Fort Camosun, and then Victoria. Later on, the rich deposits of gold on the Fraser, and throughout the district of Cariboo, brought in large numbers of miners to the new post, round which a city of tents and shacks grew (1858) as if by magic. James Douglas (afterwards Sir), a prominent fur trader, was named governor of Vancouver Island as early as 1851. The gold mines and consequent influx of immigrants made it a necessity to erect the mainland into another colony, with him at its head (1858). A year later a capital for the new territory was chosen at a point on the mainland facing the apex of the Fraser delta, resulting in the founding of what is now New Westminster. Finally, after various vicissitudes, chief among which was the Chilcotin massacre of 1864, the colonies of British Columbia and Vancouver Island, already united in 1866 under one government at Victoria, were admitted into the Canadian Confederation on the 20th of July, 1871. Under the new regime, the province is governed by a lieutenant governor appointed and paid (\$9,000 per annum) by Ottawa, with the help of responsible ministers and a Legislative Assembly composed of thirty-four members elected by the people.

**RELIGIOUS HISTORY.**—From a religious standpoint, the visits of the early navigators made little impression on the native mind. Some missionaries have wrongly supposed that the mantles worn on ceremonial occasions by the coast Indians originated in the copes of the priests that accompanied the Spanish and other ships. These are aboriginal with the natives. However, it is on record that, immediately prior to the advent of the white settlers, the old people among the Kwakwuiutl tribe had a clear recollection of strangers "clad in black and having a crown of hair round the head, who had come to see the Indians" (Rapp, *Sur les Missions de Québec*, March, 1855, p. 113). The very first resident of what is now British Columbia (Lamalice, at Fort McLeod) was a Catholic, and so were the great explorer Simon Fraser, J. M. Quesnel, one of his two lieutenants, and all his French Canadian companions. These and the numerous servants of the trading posts, who were also Canadians, gave the aborigines their first ideas of Christianity. Later on, Father de Smet, S.J., visited the Kootenays, and in 1843 Father J. B. Z. Bolduc accompanied Douglas to Vancouver Island, where he ministered to crowds of wondering Indians. In 1842 Father M. Demers had made an extended trip through the inland tribes, visiting in turn the Okanagans, the Shushwaps (both of the Salish stock) and the Carriers, a Déné tribe in the north. Four years later, a Jesuit priest, Father Nobili, walked in his footsteps and even went as far as Fort Babine, on the lake of the same name, instead of retracing his steps at Fort St. James, as his predecessors had done. The year thereafter (1847), Father Demers became the first bishop of the newly founded see of Vancouver Island, now the Archbishopric of Victoria. One of his first cares was to call for the help of the Oblates of Mary Immaculate already working in Oregon, one of whom, Father L. J. D'Herbomez, was consecrated Bishop of Miletopolis (9 October, 1864) and appointed to the Vicariate Apostolic of British Columbia, which on 2 September, 1890, became the Diocese of New Westminster, on the mainland.

**CATHOLIC STATUS.**—The chief Catholic institutions of Victoria are a hospital at the capital, together with an academy for girls, a college for boys, and a kindergarten, all, except the college, in charge of the Sisters of St. Ann. A protectory which was started at the same place is now at Quamichan; Nanaimo possesses, in addition to the Catholic school, an orphanage which originated in Victoria. There are schools for

Indian boys and girls at Kuper Island and among the Songhees of Victoria, and the Benedictine Fathers and Sisters conduct Indian schools on the west coast of the Island. On the mainland, identical institutions are to be found at St. Mary's Mission, North Vancouver, Sechelt, Kamloops, William's Lake, and Kootenay. These schools for the natives are supported, not always adequately, by the Federal Government of Canada. New Westminster, Vancouver, Cranbrook, and Greenwood each boast of a well-equipped hospital; New Westminster is the seat of St. Louis College, and Vancouver, in addition to a flourishing academy conducted by the Sisters of St. Ann, has a House of Refuge under the care of the Sisters of the Good Shepherd.

The public schools are on the American model and aiding religious institutions through grants or general exemption from taxes is prohibited. By virtue of an Act passed by Parliament after a signal public service rendered by the Sisters of St. Ann, the latter's Academy at Victoria enjoys freedom from such an encumbrance, and Church property may also be more or less favoured in this respect by special legislation on the part of the city councils. The clergy cannot be drafted into a jury or coerced into military service, though they may be allowed to serve if they so wish. Attending the provincial penitentiary and asylum for the insane, there are Catholic and Protestant chaplains paid by the federal authorities. Churches can be incorporated, and are then recognized as eligible for bequests and to acquire and possess property. While divorce in Canada is generally granted only by the Dominion Senate, the Supreme Court of British Columbia has jurisdiction over that issue, because at the time this province entered the Confederation, it was left free to enjoy the privileges it then possessed.

**Britius**, FRANCIS, Orientalist, a monk of Rennes, in Brittany, date of birth and death unknown. He entered the Capuchin Order and spent the earlier years of his religious life in missionary work in the Levant, where he devoted himself with special zeal to the study of Oriental languages. His proficiency in these tongues soon came to the notice of his superiors, and, being summoned to Rome, he was employed by the Congregation of the Propaganda in the translation of several important works into Arabic. The first great fruit of his labours in this field was the translation of "L'Abbrégé des annales ecclésiastiques de Baronius", continued by Sponde to the year 1646. The work was published at Rome in three volumes quarto, the first of which appeared in 1653, the second in 1655, and the third in 1671. Britius had also much to do with a translation of the Bible into Arabic, giving the Vulgate text in parallel columns, which was published by Mazari, at Rome, in 1671 (3 vols. fol.).

The works of Britius are now exceedingly rare, as practically the entire edition of both translations was sent to the East for use in the work of the missions. *Biogr. Univ.*, V, 629.

J. J. GEOGHAN.

**Brittain**, THOMAS LEWIS, b. near Chester, England, 1744; d. at Hartpury Court, 1827. His parents were Protestants, but at the age of sixteen Thomas became a Catholic. Shortly after his conversion he went to Picardy to pursue his studies, and later joined the Dominicans at Bornheim, where he made his profession 22 October, 1767. His studies were

continued at Louvain, and subsequently he taught with marked success at Bornheim, where he was made regent of studies. In 1790 the doctor's cap, with title of Master of Sacred Theology, was conferred on him. The same year he was transferred to Brussels, where he became director of the exiled English Dominican nuns, an office he held for thirty-seven years. In 1794, when the French army was expected at Brussels, Father Brittain conducted the sisters to Bornheim, whence, joined by eighteen Dominican fathers, they were conducted by an American captain to England. Father Brittain secured a foundation for the sisters at Hartpury Court near Gloucester. On 3 May, 1814, he was elected provincial of the Dominicans, and during his four years of office gained the respect and confidence of his brethren. He is the author of the following works: "Rudiments of English Grammar" (London, 1790), considered authoritative in its day, and highly commended by Walker, the lexicographer; "Principles of the Christian Religion and Catholic Faith Investigated" (London, 1790); "Collection of Poems Occasionally Written" (Cheltenham, 1822); "The Divinity of Jesus Christ and Beauties of His Gospels" (London, 1822); some unpublished MSS. are in the archives of the English province.

JOHN T. McNICHOLAS.

**Britton** (or BRETTON), JOHN, VENERABLE, layman and martyr, of an ancient family of Bretton near Barnsley in Yorkshire. An ardent Catholic, he was often separated from his wife and family, owing to constant persecution which he suffered for his faith. When advanced in years, he was maliciously and falsely accused of traitorous speeches against the queen and condemned to death. Refusing to renounce his faith he was executed at York, as in cases of high treason, 1 April, 1598. He was probably the father of Dr. Matthew Britton, prefect and professor at Douai in 1599.

BEDE CAMM.

**Brixen**, DIOCESE OF, a Prince-Bishopric of Austria, suffragan of Salzburg, embracing the greater part of Northern Tyrol (with the exception of the part east of the Zillerbach, which belongs to Salzburg), as well as all Vorarlberg, and containing c. 6,705 square miles, and over 440,000 inhabitants.

I. HISTORY.—The Diocese of Brixen is the continuation of that of Säben (Sabiona), which, according to legend, was founded by St. Cassian. As early as the third century Christianity penetrated Sabiona, at that time a Roman custom station of considerable commercial importance. The first Bishop of Säben vouched for by history is Ingenuin, mentioned about 580, who appears as suffragan of the Patriarch of Aquileia. The tribes who pushed into the territory of the present Diocese of Brixen, during the great migratory movements, especially the Bajuvari and Langobardi, accepted Christianity at an early date; only the Slavs of the Puster valley (Pustertal) persisted in paganism until the eighth century. In the second half of the tenth century Bishop Rihpert (appointed 967) or Bishop Albuin I (967–1005) had the seat of the diocese, which since 798 has been under the Metropolitan of Salzburg, transferred to Brixen. Bishop Hartwig (1020–39) raised Brixen to the rank of a city, and surrounded it with fortifications. The diocese received many grants from the German emperors: thus from Conrad II in 1027 the Norital, from Henry IV in 1091 the Pustertal. In 1179 Frederick I conferred on the bishop the title and dignity of a prince of the German Empire. This

accounts for the fact that during the difficulties between the papacy and the empire, the Bishops of Brixen generally took the part of the emperors; particularly notorious is the case of Altwin, during whose episcopate (1049-91) the ill-famed pseudo-synod of 1080 was held in Brixen, at which thirty bishops, partisans of the emperor, declared Pope Gregory VII deposed, and set up as antipope the Bishop of Ravenna.

The temporal power of the diocese soon suffered a marked diminution through the action of the bishops themselves who bestowed large sections of their territory in fief on temporal lords, as for example, in the eleventh century countships in the Inntal and the Eisackthal granted to the Counts of Tyrol, and in 1165 territory in the Inntal and the Pustertal to the Counts of Andechs-Meran. The Counts of Tyrol, in particular, who had fallen heir in large part to the territories of the Count of Meran, constantly grew in power; Bishop Bruno (1249-88) had difficulty in asserting his authority over a section of his territory against the claims of Count Meinhard of Tyrol. Likewise Duke Frederick IV, who was called the Penniless, compelled the Bishops of Brixen to acknowledge his authority. The dissensions between Cardinal Nicholas of Cusa (1450-64), appointed by Pope Nicholas V Bishop of Brixen, and Archduke Sigmund were also unfortunate; the cardinal was made a prisoner, and although the pope placed the diocese under an interdict, Sigmund came out victor in the struggle.

The Reformation was proclaimed in the Diocese of Brixen during the episcopate of Christoph I von Schrofenstein (1509-21) by German emissaries, like Strauss, Urban Regius, and others. In 1525, under Bishop Georg III of Austria (1525-39), a peasants' uprising broke out in the vicinity of Brixen, and several monasteries and strongholds were destroyed. The promise of King Ferdinand I, civil ruler of Tyrol, to redress the grievances of the peasants restored tranquillity, and at a diet held at Innsbruck, the most important demands of the peasants were acceded to. Although in 1532 these promises were withdrawn, peace remained undisturbed. Ferdinand I and his son Archduke Ferdinand II, in particular, as civil rulers took active measures against the adherents of the new teachings, chiefly the Anabaptists, who had been secretly propagating their sect; thus they preserved religious unity in the district of Tyrol and the Diocese of Brixen. At this time important services were rendered in safeguarding the Catholic Faith by the Jesuits, Capuchins, Franciscans, and Servites. Chief among the bishops of the period were: Cardinal Andreas of Austria (1591-1600), and Christoph IV von Spaur (1601-13), who in 1607 founded a seminary for theological students, enlarged the cathedral school, and distinguished himself as a great benefactor of the poor and sick. The seventeenth and eighteenth centuries saw a great reawakening of religious life in the Diocese of Brixen; many monasteries were founded, new missions for the cure of souls established, and the religious instruction of the people greatly promoted; in 1677 the University of Innsbruck was founded. The most prominent bishops of this period were: Kaspar Ignaz, Count von Künigl (1702-47), who founded many benefices for the care of souls, made diocesan visitations, kept a strict watch over the discipline and moral purity of his clergy, introduced missions under Jesuit Fathers, etc.; Leopold, Count von Spaur (1747-78), who rebuilt the seminary, completed and consecrated the cathedral, and enjoyed the high esteem of Empress Maria Theresa; Joseph Philipp, Count von Spaur (1780-91), a friend of learning, who, however, in his ecclesiastical policy, leaned towards Josephinism. The Government of Emperor Joseph dealt roughly with church interests; about twenty monas-

teries of the diocese were suppressed, a general seminary was opened at Innsbruck, and pilgrimages and processions were forbidden.

It was Bishop Franz Karl, Count von Lodron (1791-1828), who was to see the collapse of the temporal power of the diocese. In 1803 the principality was secularized, and annexed to Austria, and the cathedral chapter dissolved. During the brief rule of Bavaria the greatest despotism was exercised towards the Church; the restoration of Austrian supremacy (1814) improved conditions for the diocese. By the papal Bull "Ex imposito" (2 May, 1818) a new circumscription was given to the diocese which in this way received a considerable increase in territory; Vorarlberg, in particular, which had previously been divided among the three dioceses of Chur, Constance, and Augsburg, was added to the Diocese of Brixen. Vorarlberg was, as a matter of fact, to form a separate diocese, with Feldkirch as see, but this plan has never been put into execution; Vorarlberg is now administered by a vicar-general residing at Feldkirch, who, as a rule, is the auxiliary bishop of Brixen. In 1825 the cathedral chapter was re-established. All during the nineteenth century the episcopal see was occupied by distinguished men who safeguarded the unity of the Faith in the diocese, as is instanced in the enforced removal in 1830 of the Protestant families of the Zillertal, who actively championed the rights and privileges of the Church, and by missions and diocesan visitations, and by the introduction of religious orders endeavoured, with success, to raise the religious life of their diocese to a higher level. Karl Franz was succeeded by Bernhard Galura (1828-56), Vincenz Gasser (1856-79), Johann IX von Leiss, Laimburg (1879-84), Simon Aichner (1884-1904), who resigned 5 March, 1904, and Joseph Altenweisel (1904).

II. STATISTICS.—According to the figures for 1907 the Diocese of Brixen includes at the present time 438,448 Catholics in 501 spiritual charges. There are 28 deaneries, 6 in Vorarlberg, 380 parishes, 75 stations (*Exposituren*), 215 benefices and chaplaincies, and 725 primary schools with 1,333 classes. The cure of souls is exercised by 879 secular priests, and 580 regulars, 14 members of religious orders being at present outside the diocese. The cathedral chapter consists of 3 dignities (1 mitred provost, 1 dean, and 1 scholasticus), 4 capitular and 6 honorary canons. The prince-bishop as well as the members of the chapter, with the exception of the provost, are appointed by the emperor. In addition to the cathedral chapter there is a collegiate chapter of six canons at Innichen, a provost at Ehrenburg, and one at St. Gerold. Of the spiritual charges, 180 are subject to the free collation of the bishop, in 97 the municipality has the right of patronage, in 47 the right of patronage belongs to private individuals, in 87 to the Government or exchequer, in 15 to the religious fund, in 76 to religious corporations and monasteries. For the training of theologians there is a theological faculty at the University of Innsbruck with 17 professors, members of the Society of Jesus, and 352 theological students (many of them from the United States). There is a diocesan theological school in Brixen, with 8 professors; a seminary at Brixen, with 113 candidates for Holy orders (30 of them from other dioceses); the Seminarium Vincetinum (a diocesan preparatory seminary and gymnasium) with 21 professors; and the Cassianum, with 3 professors and 51 students. Moreover, there are religious professors in the civil Higher Gymnasium at Brixen, and six other intermediate schools for boys conducted by the State.

Religious congregations of men possess 44 houses, and in 1907 numbered about 1,213 members, including 594 priests, 185 clerics, 348 lay brothers, 86 novices. There are two houses of Augustinian canons

(at Neustift and Wilton), with 97 Fathers, 8 clerics, 3 lay brothers, and 4 novices; 2 Cistercian foundations (at Stams and Mehreran), with 84 Fathers, 9 clerics, 25 lay brothers, and 16 novices; 3 Benedictine foundations (at Fiecht, Marienberg, and Bregenz), with 48 Fathers, 5 clerics, 25 lay brothers, and 5 novices; 1 Benedictine priory (at Innsbruck), with 3 branch houses, 8 Fathers, 7 clerics, 61 lay brothers, and 19 novices; 3 Jesuit colleges (at Innsbruck, Feldkirch, and Tisis), with 100 priests, 59 clerics, 66 lay brothers, and 17 novices; 2 Redemptorist colleges, with 19 Fathers, 13 brothers, and 1 novice; 3 Servite monasteries, with 18 Fathers, 16 clerics, 10 brothers, and 4 novices; 8 Franciscan monasteries, with 100 Fathers, 23 clerics, 69 brothers, and 3 novices; 13 Capuchin monasteries with 100 Fathers and 59 brothers; 1 foundation of the Society of the Divine Word (Salvatorians), with 9 priests and 8 brothers; 1 mission house of St. Joseph at Brixen (with a branch at Mill Hill), with 6 priests and 11 clerics; 1 house of the Congregation of the Sons of the Most Holy Heart of Jesus, with 5 Fathers, 13 clerics, 9 lay brothers, and 17 novices; 1 foundation of the School Brothers, with 11 clerics. Besides the houses of theological studies for the members of the different orders, among the orders already mentioned, the Benedictines conduct in Fiecht a *Konvikt* (house of studies) for boys, and a school, the Cistercians in Mehreran a *Konvikt* for boys, the Jesuits a boarding school and gymnasium at Feldkirch (the celebrated institution known as the Stella Matutina), the School Brothers a seminary for teachers and a trade school, the Salvatorians a college, the Sons of the Most Holy Heart of Jesus an Apostolic school, and the Franciscans a Higher Gymnasium at Halle.

*Religious congregations of women* have established 234 religious houses with branches, about 2,644 sisters being within the limits of the diocese; these include 490 choir sisters, 1,884 lay sisters, and 270 novices. The various houses are divided as follows: the Poor Clares, 2 with 65 sisters; the Dominicans, 4 with 173 sisters; the Dominicans of the Third Order, 2 with 38 sisters; the Redemptorist sisters, 1 with 18 members; the Ursulines, 2 with 136 sisters; the Carmelites, 1 with 18 sisters; the Salesian Sisters, 1 with 54 members; the Cistercians, 1 with 39 members; the Sisters of Divine Adoration, 1 with 51 members; the English Ladies, 1 institute with 79 members; the Tertiary Sisters, 6 houses and 13 branches, with 158 sisters; the Ladies of the Most Sacred Heart of Jesus, 1 with 99 sisters; the Poor-School Sisters of Notre Dame, 2 with 27 members; the Benedictines, 1 monastery with 5 sisters; the Sisters of the High German Order, 1 house with 3 sisters. The Sisters of Mercy have a mother-house in Innsbruck with 92 branch houses and 931 sisters, and one at Zams with 72 branches and 608 sisters. The Sisters of Mercy of the Holy Cross have 1 provincial house at Innsbruck with 26 branches and 131 sisters. The orders and congregations of women are engaged almost exclusively in the training of girls, and the care of the sick, children, and the aged, etc. The above-named congregations have charge of 8 educational institutions, 1 lyceum for girls, 12 industrial schools, 82 schools for girls, 41 schools for boys and girls, 46 crèches, 3 hospitals, 7 orphan asylums, 23 asylums, 3 sanatoria, 56 homes for the poor, 2 public insane asylums, 2 houses for lepers, 1 institution for the deaf and dumb, 4 homes for servants, 1 asylum for priests in ill health, and about 25 other charitable institutions.

The cathedral of the Diocese of Brixen dates, in its present form, from the eighteenth century, having been built between 1745 and 1758. The only remains of the earlier Gothic building is the cloister, which contains frescoes and monuments dating from

the thirteenth to the fifteenth century. *Other prominent ecclesiastical buildings of the diocese are:* the Court or Franciscan church at *Innsbruck*, which is the celebrated monument to *Kaiser Maximilian I.*; the Jesuit church at *Innsbruck*, built between 1620 and 1640 in baroque style; the *Augustine* cathedral at Feldkirch, built in 1478; the *Cistercian* church at Mehreran; the fifteenth-century *parish* church of Schwaz, built in Gothic style, and *others*. Among the places of pilgrimage are: *Almas*, St. Georgenberg near Feubach, *Maria Waldraut* near Deutsch-Matrei, the pilgrimage church on the Frauenberg near Rankweil, that on the *Gebirgsberg* near Bregenz, and others.

JOSEPH LINN.

**Broad Church Party.** See ANGLICANISM.

**Brogan, SAINT**, flourished in the sixth or seventh century. Several persons in repute for holiness seem to have borne this name, which is variously written *Brogan*, *Broccan*, *Bracan*, and even *Bearchan* and *Bearchanus*. Of these, two are commemorated in the Irish Martyrology of Aengus, the early date of which (c. 800) is now generally admitted. There, under 8 July, we read: "Broccan, the scribe, gained a noble triumph without any fall"; and under 17 September: "Broccan of Ross Tuirc thou shouldst declare". Colgan (*Trias Thaum.*, p. 518) speaks as if he were inclined to identify both these persons with the author of an early Irish hymn upon St. Brigid. The glosses upon Aengus and the Martyrology of Gorman, while seemingly treating them as distinct, prove that the matter admits of no certainty. Some modern hagiographers incline to regard the St. Brogan of 8 July as the amanuensis and possibly the nephew of St. Patrick. They style him bishop and locate him at Maethail-Brogain, now Mothil in Waterford; but this is admittedly quite doubtful. St. Brogan of Rosstuire, on the other hand, is identified with the author of the hymn to St. Brigid, and is believed to be the Abbot Brochanus referred to in the Life of St. Abban, preserved in the "Codex Salmanticensis". Rosstuire is generally assigned to the Diocese of Ossory, and may be Rosmore in Queen's County.

Other Brochans are mentioned in the Martyrology of Gorman under 1 January, 9 April, 27 June, and 25 August.

HERBERT THURSTON.

**Broglie, AUGUSTE-THÉODORE-PAUL DE**, abbé, professor of apologetics at the Institut Catholique at Paris, and writer on apologetic subjects, b. at Auteuil, 18 May, 1834; d. 11 May, 1895. He was the son of Achille-Victor, Duc de Broglie, and his wife, Albertine de Staël, a Protestant and the daughter of Madame de Staël. After the death of the mother, who died young, he was brought up by the Baroness Auguste de Staël, née Vernet; this aunt, although also a Protestant, exerted herself "to make a large-minded Christian of him in the Church to which she did not belong" (Monsieur d'Hulst in "Le Correspondant", 25 May, 1895). Entering the Navy young, Broglie was appointed Ensign in 1857 and

soon after Lieutenant. While thus occupied he felt himself called to the ecclesiastical state. After taking the preparatory studies he was ordained priest, 18 October, 1870. In his numerous publications the Abbé de Broglie was always a faithful defender of Catholic dogma. At the time of his death, which resulted from the violence of an insane person, he was preparing a book on the agreement of reason and faith. His most important work is "L'histoire des religions". Of his other writings, some of which were pamphlets and some articles in reviews, the following may be mentioned: "Le positivisme et la science expérimentale"; "Religion de Zoroastre et religion védique"; "Le bouddhisme"; "Religions néobrahmaniques de l'Inde"; "L'islamisme"; "La vraie définition de la religion"; "La transcendance du christianisme"; "L'histoire religieuse d'Israël"; "Les prophètes et les prophéties, d'après les travaux de Kuenen"; "L'idée de Dieu dans l'Ancien et le Nouveau Testament"; "Le présent et l'avenir du catholicisme en France". Two posthumous publications, "Questions bibliques" and "Religion et critique", were edited by the Abbé Piat.

PIAT, *L'apologétique de l'abbé de Broglie* (Paris, 1896).

CLODIUS PIAT.

**Broglie, JACQUES-VICTOR-ALBERT, DUC DE**, French statesman and historian, b. at Paris, 13 June, 1821; d. there 19 January, 1901. After a brief diplomatic career he resigned his post to devote himself to literature. His work, "L'Eglise et l'Empire romain au IV<sup>e</sup> siècle" (6 vols., 1856), won for him Lacordaire's seat in the French Academy (1862). In 1871 he was appointed ambassador to England, but was recalled in 1872 and, taking his seat in the Assembly, soon became the leading spirit of the opposition to the Republic and M. Thiers. Twice President of the Council (1873 and 1877), the Duke de Broglie was finally defeated in his own district and withdrew from public life.

Besides editing the "souvenirs" of his father (1886), the "Mémoires" of Talleyrand (1871), and the letters of the Duchesse Albertine de Broglie, he published a series of works on the diplomacy of Louis XV, which placed their author in the first rank of historians.

HANOTAUX, *Contemporary France*, tr. TARNER (New York, 1903-05); art. in *Dublin Review* (1874), Vol. XXIII; MEAUX, *Souvenirs politiques in Le Correspondant* (1903), 211; E. DAUDET, *Souvenirs de la présidence du Maréchal de MacMahon* (Paris, 1880).

JEAN LE BARS.

**Broglie, MAURICE-JEAN DE**, b. in Paris, 5 September, 1766; d. there, 20 June, 1821. He was the son of the Field-Marshal, Victor-François, Duc de Broglie, created, by Emperor Francis I, Prince of the Holy Roman Empire, a title which was to be hereditary in the family. Called to the ecclesiastical state, Maurice pursued his studies at St.-Sulpice. During the Reign of Terror, when persecution drove both his father and him out of France, they went to Berlin. King Frederick William received the duke with marked distinction and granted to the young prince a provostship in the cathedral chapter of Posen. Maurice returned to France in 1803, and the steps he took to recover some family property not yet sold, brought him to the attention of Napoleon, who invited him to his court and named him his almoner. Recognizing in the emperor the restorer and support of order and religion, de Broglie became a devoted follower of the monarch and eulogized him in a pastoral letter issued on the occasion of the victory of Austerlitz. In 1805 Napoleon nominated him to the See of Acqui, Italy, and in 1807 to Ghent, Belgium. When it became evident, however, to de Broglie that the pope and clergy were to be mere tools of the despot, and religion the instrument of his ambitious designs, he showed determined opposition to Napoleon. In 1809 the minister of worship wrote in a letter that the sovereign was highly displeased with the bishop because of his lack of devotion to the royal person; in

1810 the bishop refused the Cross of the Legion of Honour, sent to him by the emperor, judging that he could not accept such a distinction at the time when the Papal States had been seized, and he explained his refusal in a memoir, a model of moderation, sent to the minister.

By order of Napoleon, a council was assembled in Paris, 17 June, 1811, under the presidency of Cardinal Fesch, uncle of the emperor and Archbishop of Lyons. The object of Napoleon was to oblige the pope to grant the Bulls of institution to the priests nominated by him to bishoprics; this Pius VII had firmly refused. Napoleon wished, furthermore, to make an arrangement that would force the pope in the future to issue the Bulls within six months, and should His Holiness fail to do so in that time, the metropolitan or the oldest bishop of the ecclesiastical province would then confirm the nominee, the sovereign pontiff's silence being considered as assent. The fathers of the council solemnly assembled in the metropolitan church, there being present six cardinals, nine archbishops, and eighty bishops; this was the first and the last general session. After six preliminary particular sessions, a decree in compliance with the will of Napoleon was proposed to the bishops. At first only two, d'Aviau, Archbishop of Bordeaux, and de Broglie, Bishop of Ghent, rejected it; but subsequently, only four members were for the pure and simple acceptance of the decree. The pope had privately declared that such encroachments on his spiritual power were contrary to the laws of the Church and ecclesiastical discipline, destructive of the authority of the Holy See and of the principles on which depended the lawful mission of bishops.

The anger of Napoleon, provoked by such firm and general opposition, led him to prorogue the council and visit with severe punishments the bishops who had been most prominent in their opposition. Arrested on 12 July, 1811, de Broglie was cast into the dungeon at Vincennes and kept in close confinement for more than four months, without outside communication, and without books or writing materials. He was next sent as an exile to Beaune. On the mere suspicion that he had intercourse with his clergy, he was deported to the island of Ste.-Marguerite on the coast of Provence. De Broglie, while in prison signed, under compulsion, his resignation as Bishop of Ghent. Although it was not accepted by the pope and was consequently null, Napoleon named a successor to the see. As the great majority, however, of the clergy and people refused to acknowledge him, they were subjected to vexations and persecution. The fall of Napoleon restored peace, and de Broglie, returning to his diocese, was received amid the rejoicings of his clergy and flock.

The bishop was not to enjoy a long rest. The allied sovereigns of Europe after the overthrow of Napoleon had formed Holland and Belgium, or the Low Countries, into a kingdom and appointed William of Nassau to rule over them. The plenipotentiaries of the powers, assembled in London, 1814, made the Dutch Constitution the fundamental law of Belgium, with a proviso that it should be modified according to circumstances. The generality of Belgians are Catholics. On 18 July, 1815, William proposed the Dutch Constitution to the Belgians, and the representatives summoned to vote upon it rejected it by 796 to 527. (See BELGIUM.) The king, disregarding the vote, imposed upon the Belgians a constitution that deprived the Catholics of all their rights. Joseph II by his petty persecutions had lost the Netherlands for Austria; Napoleon, following in the footsteps of the "emperor sexton", lost them for France; William, his imitator, brought about the secession of Belgium from Holland and its independ-

ence in 1830. De Broglie with the Bishops of Namur and Tournai, and the Vicars-General of Mechlin and Liège took up the defence of the Catholic cause, and issued a pastoral instruction and, later on, a doctrinal judgment on the required oath to the Constitution.

De Broglie also appealed to Pius VII, and the pontiff, on 16 May, 1816, sent an official note to the minister of the Low Countries residing in Rome, stating that the Belgian Constitution contained statements contrary to the Catholic Faith, that the opposition of the bishops could not in justice be reproved, and that no oath opposed to conscience should be imposed. New difficulties then arose, first when the bishop refused to offer public prayers for the king, and again when at the erection of new universities, de Broglie addressed a representation to the king in which he pointed out the introduction of dangerous books into public institutions, and strongly expressed his fears for the fate of the episcopal seminaries. Cited before the tribunal, he took refuge in France, and the court of Brussels by a judgment, 8 November, 1817, condemned him to deportation. The sentence was posted by the public executioner between the sentences of two public malefactors. The bishop's health broke down under the weight of so many severe trials; succumbing to a short illness, he died in Paris, venerated by all for his sterling qualities and austerity of life. In 1819, de Broglie printed a protest concerning the state of Religious affairs in Belgium, which was addressed to the Emperors of Austria and Russia and to the King of Prussia.

F. M. L. DUMONT.

**Brogny, JEAN-ALLARMET** (OF JEAN-ALOUZIER) DE, a French Cardinal, b. in 1342 at Brogny, in Savoy; d. at Rome, 1426. Biographers are not agreed as to his parentage and real name. According to some, he belonged to a peasant family of Brogny, called Allarmet; others say he was descended from the d'Alouzier, a noble house in Comtat-Venaissin. It is certain, however, that the future cardinal was a swineherd. When two monks, struck by his open disposition and thoughtful answers, took him with them to Geneva, and procured for him an education which was completed at the University of Avignon. Despite the friendship and the inducement of Marcossay, Bishop of Geneva, young Allarmet retired to the Chartreuse of Dijon, where his merits soon became widely known. When Robert of Geneva was elected pope by the faction hostile to Urban VI, Allarmet joined him at Avignon, either having been sent by the Duke of Burgundy or called by Robert himself.

At Avignon favours were bestowed upon him in quick succession by the so-called Clement VII; the Bishopric of Viviers, in 1380, the dignity of Cardinal, in 1385, and shortly after, the exalted office of Chancellor of the Holy See. Robert's successor, Peter of Luna, who called himself Benedict XIII, sanctioned all these preferments and even promoted Allarmet from Viviers to Ostia-Velletri, one of the suburbicane dioceses. There is no doubt that at that time Cardinal de Brogny, like St. Peter of Luxembourg and St. Vincent Ferrer, considered the French obedience as legitimate. However, his thorough orthodoxy soon caused him to change his views. As early as 1398 he had left Avignon as a silent protest against the unapostolic spirit of that court. The elusive tactics of Gregory XII and Benedict XIII were met by him with more than a silent protest. He inaugurated the neutral party and brought about the Council of Pisa which resulted in the election of Alexander V (1409).

The new pope confirmed de Brogny in his double dignity of Bishop of Ostia and Chancellor of the Church. In the latter capacity he presided over Alexander's funeral and also over the conclave which elected John XXIII (1410). John held de Brogny in the highest esteem. The Metropolitan See of Arles having become vacant, he disregarded the candidate elected by the Arlesian chapter and appointed Cardinal de Brogny perpetual administrator of that see. This appointment was intended as a means of recovering the rights of the Church of Arles usurped by the Counts of Provence during the confusion consequent on the schism. The new metropolitan did not disappoint his patron. With the might of right he fought the usurpers till the last claim of the venerable see was secured. Cardinal de Brogny then left his diocese in care of the two Fabri and proceeded on a still more delicate mission. Owing to the obstinacy of the contestants, the Council of Pisa had really left the Church with three popes instead of one. Moreover, to the evils of schism John Hus was adding that of heresy. The Council of Constance was convened to meet this double difficulty, and after the withdrawal of John XXIII, de Brogny, in virtue of his title of Chancellor, presided over the sessions of the Council and evinced sterling qualities.

In behalf of unity, he did not hesitate to vote for the deposition of the three popes, two of whom had been his personal friends. No doubt he could have secured the election for himself, had he so desired; but he threw the weight of his influence in favour of Colonna, who took the name of Martin V. If John Hus remained contumacious and was condemned, it was not de Brogny's fault. The Protestant Senebier writes in his "Histoire littéraire de Genève":—"In the letters of John Hus we find a conversation with the prelate [de Brogny] who endeavoured to conquer him by such arguments as compassion, meekness, and Christian charity suggested".

In his old age de Brogny asked to be translated from Ostia to Geneva, but only his remains reached the beloved place of his youth; they were laid to rest in the chapel of the Machabees which had been added to the old cathedral by the cardinal himself. De Brogny is variously known in history as Cardinal of Viviers, Cardinal of Ostia, sometimes Cardinal of Arles, and Cardinal de Saluces. He founded the Dominican convents of Tivoli and Annecy; the *maladrerie* or lepers' hospital, of Brogny; part of the Celestines' monastery of Avignon; and, above all, the College of St. Nicholas, affiliated to the University of Avignon, and endowed with twenty scholarships for destitute students. Soulavie, president of St. Nicholas College, published (Paris, 1774) a "Histoire de Jean d'Alouzier de Brogny" of which only fifty copies were printed.

FISQUET, *La France pontificale, métropole d'Aix* (Paris, 1867); MIGNÉ, *Dict. des cardinaux* (Paris, 1857).

J. F. SOLLIER.

**Bromyard, JOHN**, theologian, d. about 1390. He takes his name from his birthplace in Herefordshire, England. He entered the Dominican order and was sent to Oxford where he distinguished himself in theology and jurisprudence. It is probable that he lectured on theology at Oxford while it is certain that he laboured in the same Faculty at Cambridge. He was one of the most pronounced opponents of the doctrines of Wyclif. Though his name is not mentioned in the acts of the London Synod of 1382 held by William de Courtenay, Archbishop of Canterbury, where the doctrines of Wyclif were condemned as heretical, it is admitted by all that he took a leading part in drawing up the decree of condemnation. He was also a much-prized writer as the many editions of his "Summa Prædicantium" attest. Excerpts were made from this work and

published separately as brochures and widely circulated among the people. In his "Opus Trivium" he arranges for the convenience of preachers various topics drawn from theology, civil and canon laws. This work was later on edited by Philip Bromyard, and hence some maintain, but without reason, that he was the real author.

THOS. M. SCHWERTNER.

**Brondel, JOHN BAPTIST**, first Bishop of Helena, Montana, U. S. A., b. at Bruges, Belgium, 23 February, 1842; d. at Helena, 3 November, 1903. He was educated at the American College of the University of Louvain and ordained priest at Mechlin, Belgium, by Cardinal Engelbert Stercks (17 December, 1864). Two years later he volunteered for the missions in the United States and was made rector of the church at Heilacoon, Washington Territory, early in 1867. Here he remained for nearly ten years and was then transferred to Walla Walla, but returned to his old charge the following year.

On 14 December, 1879, he was consecrated at Victoria, as third Bishop of Vancouver, British Columbia, in succession to Bishop Seghers, who had been made coadjutor to the Archbishop of Oregon City. Bishop Brondel retained this charge until by a Bull of 7 April, 1883, he was appointed Administrator of the Vicariate of Montana. When the Diocese of Helena was formed he was transferred to that see, 7 March, 1884, as its first bishop. During all his long and active career in this north-west section, he was particularly successful in his dealings with the many Indians under his charge. They looked up to him as a father and protector, and his great popularity among the various tribes was not only of benefit to the Church, but was utilized on numerous occasions by the United States Government to further the political, material, and moral welfare of the Indians. His death was regarded as a great loss to the work of the evangelization and civilization of the Indians. He was buried 7 November, 1903, in a vault under the cathedral in Helena.

THOMAS F. MEEHAN.

**Brookby (or BRORBEY), ANTHONY**, Friar Minor and English martyr; d. 19 July, 1537. Brookby was lecturer in divinity in Magdalen College, Oxford, was well versed in Greek and Hebrew, and enjoyed the reputation of being an eloquent preacher. At the command of King Henry VIII, who took offence at a sermon of Brookby's in which he attacked the king's actions and mode of living, he was apprehended, put to the rack, and tortured in the most cruel manner in order to make him retract what he had said; but all to no purpose. Having been rendered wellnigh helpless as a result of his tortures, Brookby was charitably cared for by a pious woman for a fortnight until, by the command of the king, an executioner strangled him to death with the Franciscan cord which he wore around his waist.

STEPHEN M. DONOVAN.

**Brookes, JAMES**, last Catholic Bishop of Gloucester, England, b. May, 1512, in Hampshire; d. 1560. Proceeding to Oxford in 1528, he became Fellow of Corpus Christi in 1531, Doctor of Divinity, 1546, and Master of Balliol, 1547. Brookes was widely known as an eloquent preacher, and, on the depo-

sition of Bishop Hooper, was elevated by Queen Mary to the See of Gloucester. He was consecrated 1 April, 1554. In 1555 he was one of the papal sub-delegates in the royal commission for the trial of Cranmer, Latimer, and Ridley. He refused to degrade Ridley, probably on the ground that Ridley's consecration (1547) had been according to the invalid form which was established by law very soon after that date. If, as Foxe asserts, he refused to degrade Latimer, his position may have been based upon the fact that Latimer had lived for several years as a simple clergyman. It is hardly possible that Brookes, a man of learning and integrity, would have been actuated in this trial by the selfish considerations hinted at by some Protestant historians. After the accession of Elizabeth he refused to take the oath of supremacy, and died in prison. He was buried in Gloucester Cathedral. Two of his orations in the Cranmer case are given in Foxe, "Acts and Monuments". One of his sermons was printed by Robert Coly, or Caly, in 1553 and 1554.

J. VINCENT CROWNE.

**Brooklyn, DIOCESE OF**, comprises the counties of Kings, Queens, Nassau, and Suffolk, or all of Long Island, in the State of New York, U. S. A., an area of 1,007 square miles. The population of Long Island is about 2,000,000, according to the State census of 1905, and of this, 600,000 are Catholics. The Catholics are mostly of Irish, German, and Italian birth or race, but as a matter of fact, in this island see there is now every week a perpetual Pentecost, for the Gospel is preached to the faithful in twelve languages. Polish, French, Italian, German, Slav, Syrian, Greek, Hungarian, Lithuanian, Scandinavian, Bohemian, as well as English-speaking Catholics, have special ministrations for their respective nationalities.

Long Island was known to the early Spanish explorer Gomez and to Gordillo, a lieutenant of Vasquez de Ayllón, who in 1524-25 reached this latitude and on the 29th of June noted this island, which they named "Isla de los Apóstoles" (Island of the Apostles) in honour of the feast day of the Apostles Peter and Paul. It is so styled in the Spanish maps of Ribero, made in 1529. Settled later under the auspices of the Dutch West India Company (1636), there is scarcely a trace of Catholicism to be found during the period of the sway of that corporation. It would be strange indeed were Catholics attracted to a community that refused to enclose their cemeteries because such were "relics of superstitious observances", or to erect tombstones because in doing so they might give the "appearance of according to the ceremonies and requirements of

PETER TURNER, ORGANIZER OF THE FIRST CATHOLIC CONGREGATION IN BROOKLYN

of according to the ceremonies and requirements of

#### BROOKLYN

1. ST. FRANCIS-IN-THE-FIELD (FIRST GERMAN CHURCH IN BROOKLYN)
2. ST. JAMES'S PRO-CATHEDRAL      3. HOLY TRINITY CHURCH
4. OLD ST. JAMES'S (FIRST CATHOLIC CHURCH ERECTED ON LONG ISLAND)

Prelacy and Papacy". In April, 1657, there is record made of the fining of one "Nicholas the Frenchman" in the sum of twelve guilders, or \$4.80, because, as the sheriff's report has it, on the "frivolous excuse" that he was a Catholic, Nicholas refused to pay his share of the tax levied for the salary of the Dutch Reformed minister who preached for the colony then located within the present limits of the Borough of Brooklyn. In addition to the Dutch there were a number of Walloons and Huguenots settled in this locality. Some of the unfortunate Acadian exiles were scattered through Long Island during 1756; and on the muster-rolls of the militia from the same section serving in the army of Sir William Johnson, in 1775, we find such names as Reilly, Shea, Burke, Power, Welsh, Dooly, Barry, Sullivan, Cassidy, Lynch, Ryan, Larkin, McInerney, Fagan, Blake, Donnelly, Shields, Kinsella, and Downey. There are no records

to show what became of them or their children. But an occasional curiously twisted patronymic among the old non-Catholic families of the interior districts of the island gives a clue to the reason of this. We have no positive evidence that any considerable body of Catholics became a component part of Brooklyn's local life till after the dawn of the nineteenth century and especially after the location there of the Navy Yard in 1801.

This government station at once gave employment to many mechanics in the various trades connected with the ship-building industry, and soon a number of Irish immigrants, mostly from the Catholic sections of the North, especially from Derry and Donegal, sturdy confessors of the faith in their native land, settled in Brooklyn. Among these were the parents of the first American cardinal, John McCloskey, Archbishop of New York, and of his namesake, the first Rector of the American College at Rome, William George McCloskey, afterwards Bishop of Louisville, Kentucky. Until 1822 these Catholics had to cross the East River to New York to hear Mass and attend to their spiritual necessities, as the scarcity of priests and their own poverty brought about this inconvenient situation. Occasionally a priest would go over from New York to say Mass and preach in private houses, or wherever suitable accommodation could be obtained. The pioneer in this was the Augustinian missionary Father Philip Larissy, who said the first Mass in the house of William Purcell, at the north-east corner of York and Gold Streets, on a date now unknown. The little colony, constantly growing in numbers and influence, desired

a church of its own, and hence a meeting was held on the 7th of January, 1822, at the house of William Purcell, at which a committee of five was named to wait on Bishop Connolly of New York and ask his advice and consent for the organization of a congregation. It is notable that in the circular calling this meeting the reasons stated are: "In the first place we want our children instructed in the principles of our holy religion; we want more convenience of hearing the word of God ourselves. In fact, we want a church, a pastor, and a place for interment." Those prominent in the pioneer work of the congregation were Peter Turner, George S. Wise, then a purser in the United States navy, William Purcell, John Kenney, Nicholas Stafford, Denis Cosgrove, Jeremiah Mahoney, James Rose, George McCloskey, James and Patrick Freel, Dr. Andrew B. Cook, also of the United States navy, James Furey, Thomas Young,

Hugh and James McLaughlin, Andrew Parmentier, James Harper, Quintin M. Sullivan, and Daniel Dempsey.

As a result of this meeting eight lots were purchased on Jay Street, and St. James's, the first Catholic church on Long Island, was built and dedicated to Divine worship by Bishop Connolly, 28 August, 1823. The lots about the church were used as a graveyard until 1849, when Holy Cross Cemetery, Flatbush, was opened. The original church building stood until 1903, when its walls were enclosed in a new structure built on the same site for a pro-cathedral. The Reverend Dr. John Power of St. Peter's, New York, was the early and stanch friend of the new congregation. He used to cross the river frequently to minister to them. Other priests of the

OLD CATHEDRAL RECTORY AND FIRST ORPHAN ASYLUM

pioneer days were the Reverends Patrick Bulger, James McKenna, and James Doherty; the last two died in the service of the parish, and were buried in front of the church. The first regular pastor was the Reverend John Farnan, who was appointed in April, 1825. The second church in Brooklyn, St. Paul's, dedicated 21 January, 1838, was built on land given by Cornelius Heeney. He first offered the site for a seminary, but could not agree with Bishop Dubois as to the manner in which the title should be held, the old and troublesome idea of lay trusteeship proving an obstacle. It is notable that although the organization of the first congregation in Brooklyn was due mainly to lay effort there was never any of the subsequent difficulty over trustee authority and rights that made so much scandal elsewhere during this era. The Reverend Nicholas O'Donnell, O.S.A. (1840-47), was the second pastor of St. Paul's, and after him

the Reverend Joseph Schneller, until his death in 1860, had charge there. Father Schneller was one of the most active priests in the New York controversies of the early years of the nineteenth century. His name, with those of the Reverend Dr. Power, Fathers Felix Varela and Thomas C. Levins, is to be found in most of the bitter public contests waged with non-Catholic assailants of the Church. He helped to found and edited for some time the "New York Weekly Register and Catholic Diary", established in 1833. Cornelius Heeney did not limit his generosity to the site for St. Paul's Church and the Girls' Industrial School that adjoins it. During his life his income was mainly devoted to charity, and 10 May, 1845, three years before his death, he had his estate legally incorporated as the Brooklyn Benevolent Society, and its officials directed to expend its yearly income for the benefit of the poor and orphans. This amounts now to about \$25,000 annually, and the total expended by this charity since Mr. Heeney's death is more than a million dollars.

In 1841 another famous priest, the Very Reverend John Raffener, a native of the Austrian Tyrol, bought with his own money property on which was erected the church of the Most Holy Trinity and began there to minister to a colony of German Catholics. His efforts in this direction were extended to similar congregations in New York, Boston, and New Jersey. He laboured thus for more than twenty years and held the office of vicar-general when he died, in 1861. St. Charles Borromeo's parish was founded in 1849 by the Reverend Dr. Charles Constantine Pise, also one of the strong writers and publicists of that time. Before going to Brooklyn he had been stationed at St. Peter's, New York, and previous to that, in 1832, while officiating in Washington, he was, on motion of Senator Henry Clay, appointed Chaplain to the Congress of the United States and served during a session, the only instance on record of such an honour being given to a Catholic. Other priests whose earnest work in its formative period contributed to the building up of the Church in Long Island were the Reverends John Walsh, James McDougough, Richard Waters, James O'Donnell, David W. Bacon, afterwards the first Bishop of Portland, Maine, the Reverends Michael Curran, William Keegan, for many years Vicar-General of the diocese, and his associate in that office, the Right Reverend Mgr. Michael May, the Reverends Nicholas Balleis, O.S.B., Eugene Cassidy, Sylvester Malone, Peter McLoughlin, John Shanahan, Edward Corcoran, Hugh McGuire, Jeremiah Crowley, James McEnroe, Joseph Fransioli, Martin Carroll, T. O'Farrell, Anthony Arnold, John McCarthy, James O'Beirne, Joseph Brunneman, Anthony Farley, John McKenna, Patrick O'Neil, and James H. Mitchell. Father Mitchell was much interested in the work of societies for young men, and his administration as head of the national organization was specially successful.

When, in July, 1841, Father Raffener began the great German parish of the Most Holy Trinity on a part of the farm of the old Dutch Meserole family, this was known as the Bushwick section of the then town of Williamsburg, which was subsequently annexed to Brooklyn. The first German Catholic Church in the city of Brooklyn was the quaint little St. Francis-in-the-Fields, which Father Raffener opened in 1850, at Putnam and Bedford avenues. Its title indicates its rural environment, and Father Maurus Ramsauer, a Benedictine just arrived from Germany, was made its first pastor. In 1855, under Father Bonaventure Keller, the original design of Father Raffener was carried out, and a sort of preparatory seminary for German ecclesiastical students was begun and lasted there for two years. When

Father Raffener died, in 1861, he left St. Francis', which was still surrounded by a garden, for the benefit of the orphans of the Holy Trinity parish. The little church was then closed, owing to changes in the neighbourhood, and was not reopened until 1866, when the Rev. Nicholas Balleis, a Benedictine, took charge and remained there until his death, 13 December, 1891. The old building was again closed and remained so until the property was purchased by the Sisters of the Precious Blood in 1892, when the structure was torn down, and the convent of that order built on the site.

Peter Turner (d. 31 December, 1863), who was the leader in organizing Brooklyn's pioneer parish, lived to see his son John ordained a priest, pastor of St. James's Church and first Vicar-General of the Diocese of Brooklyn. In 1895 the Brooklyn Catholic Historical Society, regarding Peter Turner as the typical layman of the pioneer period, erected a handsome bronze portrait bust as a memorial to him in St. James's churchyard. The inscription on the pedestal says: "To the memory of Peter Turner, who on January 1, 1822, organized his seventy fellow Catholics for the purchase of this ground on which the first Catholic Church of Long Island was erected. Thousands of Catholic children have helped to erect this monument as a grateful tribute to the man who made Catholic education the first reason for the establishment of a church in Brooklyn." Cardinal McCloskey's early years were spent in Brooklyn, where he attended his first school, which was taught by a retired English actress, Mrs. Charlotte Melmoth, a convert, who was a popular stage favourite in London and New York during the last years of the eighteenth century. Cornelius Heeney was also his patron and guardian after the family moved across the river to New York in 1820. Mr. Heeney's fortune was amassed as a fur-dealer, and for some time he was a partner in this business with John Jacob Astor.

**BISHOPS OF THE SEE.**—(1) The Right Reverend John Loughlin, consecrated 30 October, 1853. He was born in the County Down, Ireland, 20 December, 1817. As a boy of six he emigrated with his parents to the United States and settled in Albany, New York. His early school days were spent with the distinguished classical scholar, Dr. Peter Bullions, at the Albany Academy, and when fourteen he was sent to the college at Chambly, near Montreal, Canada, where he remained three years. He then entered Mount St. Mary's Seminary at Emmitsburg, Maryland, and after the usual theological course was ordained for the Diocese of New York, 18 October, 1840. His first assignment was on the mission at Utica and from there he was called to be an assistant to Bishop Hughes at St. Patrick's Cathedral, New York City. In 1850 the bishop made him his vicar-general and when the new Diocese of Brooklyn was formed he was consecrated its first bishop, 30 October, 1853, the officiating prelate being Archbishop Cajetan Bedini, a pro-nuncio on his way back to

RIGHT REV. JOHN LOUGHLIN

Rome from a diplomatic mission to Brazil. There were then but twelve churches on all Long Island and about 15,000 Catholics. During the thirty-eight years Bishop Loughlin ruled the see he built 125 churches and chapels, 93 schools, 2 colleges, 19 select schools and academies, 10 orphan asylums, 5 hospitals, 2 homes for the aged, a home for destitute boys, and the diocesan seminary. In the same time the Catholic population increased to nearly 400,000. Bishop Loughlin led a life of unostentatious routine, entirely devoted to his ecclesiastical duties. The only time he is recorded as having identified himself with any civic movement was in April, 1861, when he wrote a letter of sympathy and approval to the great mass-meeting of citizens that committed Brooklyn to the cause of the Union. In October, 1890, the golden jubilee of his ordination was celebrated by a three days' festival in which the whole city joined. He assisted at each of the Plenary Councils of Baltimore and visited Rome four times, once to be present at the Oecumenical Council of the Vatican. He was then made an assistant at the Papal throne. He died at his residence in Brooklyn, 29 December, 1891. That one man should have founded a diocese and in the course of his administration brought it to a position of such pronounced influence and efficiency, is one of the most remarkable facts in the history of the Church's progress in the United States.

The Sisters of Charity were the first religious to establish themselves in Brooklyn (1834), and they were followed by the Christian Brothers in 1851 and the Sisters of St. Dominic in 1852. To these Bishop Loughlin added the Sisters of the Visitation and the Sisters of Mercy in 1855; the Sisters of St. Joseph, 1856; the Franciscan Brothers, 1858; the Sisters of the Poor of St. Francis, 1866; the Congregation of the Mission, and the Sisters of the Good Shepherd, 1868; the Little Sisters of the Poor—their first foundation in the United States—1869; the Fathers of Mercy, 1871; the Sisters of the Sacred Heart of Mary, 1877; the Fathers of the Pious Society of Missions, 1884; and the Sisters of the Precious Blood, 1889.

Bishop Loughlin began the construction of a new cathedral of large dimensions in 1868, the work on which he carried on up to the first story and then stopped to give his attention to the promotion of the charitable institutions of the diocese. The chapel of St. John, at one end of the proposed Cathedral of the Immaculate Conception, was all that was ever finished and used; the extensive foundation walls of the main building remain in their incomplete state. The Catholic Benevolent Legion, a fraternal insurance association, was organized during Bishop Loughlin's life, September, 1881, and he was its first spiritual director. The St. Vincent de Paul Society received from him special encouragement (1855), and the formation of the third Particular Council in the United States was a result.

(2) The Right Reverend Charles Edward McDonnell, consecrated 25 April, 1892. Born in New York City, 1 February, 1854, his early education was received in the parochial schools and the De La Salle Academy. In 1868 he entered St. Francis Xavier's College, where he remained until he left, in 1872, to study for the priesthood at the American College, Rome. He was ordained in Rome, 19 May, 1878, and subsequently received the degree of Doctor of Divinity. Returning to New York, he was, after five years spent in parish work, made Secretary to Cardinal McCloskey. After the cardinal's death, Archbishop Corrigan left him in this position and appointed him chancellor as well. He was also made a private chamberlain by the pope, and was serving in these offices when Bishop Loughlin died. Named by the pope to succeed him, Mgr. McDonnell was consecrated the second Bishop of Brooklyn in St.

Patrick's Cathedral, New York, 25 April, 1892, and took possession of his see on the 2d of May. The new bishop, finding the material interests of the diocese so well administered by his predecessor, continued the good work thus begun and developed it also along its spiritual lines. The increase in population and the changes in the country districts necessitated the starting of many new parishes and the inception of new means and methods of meeting the polyglot needs of the representatives of the various nationalities that had settled in the diocese. For this Bishop McDonnell adopted the policy of securing members of some order for each of the races and languages in his jurisdiction. At his invitation foundations were made by the Redemptorists in 1892; the Benedictines, 1896; the Franciscans (Minor Conventuals), 1896; the Capuchins, 1897; the Fathers of the Congregation of Mary, 1903; the Franciscans (Italian), 1906; the Jesuits, 1907; the Sisters of the Holy Family of Nazareth, 1892; the Missionary Sisters of the Sacred Heart, 1892; the Daughters of Wisdom, 1904; the Sisters of the Infant Jesus (nursing Sisters of the Sick Poor), 1906. Up to 1907 Bishop McDonnell had started and dedicated fifty new parishes and churches. He presided over the Third Diocesan Synod in December, 1894, at which the full number of canonical diocesan officials were for the first time selected; and over the Fourth Synod, held in 1898. A unique spiritual event was a simultaneous mission under his inspiration held throughout the diocese to mark the close of the nineteenth century. He led three diocesan pilgrimages to Rome, the first for the General Jubilee of 1900; the second for the Silver Jubilee of Pope Leo XIII in 1902; and the third for the Jubilee of the Immaculate Conception in 1904. To the institutions of the diocese Bishop McDonnell added two hospitals and largely increased the capacity of one of those already established; the Ozanam Home for Friendless Women; the new St. Vincent's Home for Friendless Boys; two seaside recreation places for children and a trade school farm for orphans.

**NOTABLE BENEFACTORS AND WORKERS.**—Some of those distinguished for their zeal for religion and generosity to the Church in addition to those already mentioned have been: Judge Alexander McCue, Charles A. Hoyt, E. Louis Lowe (formerly Governor of Maryland), Hugh McLaughlin, Patrick C. Keeley (architect of many Catholic churches in various parts of the country, who began his career here), James A. McMaster, for many years editor of "The Freeman's Journal", Patrick Vincent Hickey, editor of the "Catholic Review", Laurence Kehoe, Manager of the Catholic Publication Society, John George Gottsberger, John Campbell, Andrew Dougherty, Kieran Egan, John O'Mahony, John D. Kieley, Jr., Jacob Zimmer, William W. Swayne, James Rorke, Edward Rorke, William H. Murtha, Anton Shimmel, Thomas Carroll, Joseph W. Carroll, John Loughran, Dr. Dominick G. Bodkin, John Good, Peter McGoldrick, M. F. McGoldrick, Thomas W. Hynes, William R. Grace, William Bourke Cockran, Morgan J. O'Brien, Mrs. Grace Masury, Mrs. A. E. Walsh, Charles O'Connor Sloane, James McMahon, Bernard Earl, Michael Hennessy, Joseph Eppig, Edward Feeney, and Dr. John Byrne.

**STATISTICS.**—Diocesan priests 308; priests of religious orders 54; total 362. Churches with resident priests 162, missions 10, stations 11, chapels 13; seminary 1, with 60 students; colleges 3, with 570 students; academies and select schools for young women 15, with 1017 pupils; parishes with schools 68, pupils enrolled 41,750; orphan asylums 11, inmates 3691; infant asylums 4, inmates 455; industrial school 1, pupils 143; young people under Catholic care 40,040; hospitals 6, treating more than 18,000

patients yearly; homes for aged 3, inmates 540. Catholic population estimated 600,000.

**Brooks, FERDINAND.** See GREEN, HUGH.

**Brosse, JEAN-BAPTISTE DE LA**, a Jesuit missionary, b. 1724 at Magnac, Angoumois, France; d. 1782. He studied classics at the Jesuit College of St. Louis at Angoulême, and entered the novitiate of the society at Bordeaux, in 1740. After a full course of philosophy and theology in the latter city, he was ordained in 1753 and sent to Canada the following year. He first laboured on the Abenaki mission, held different positions in the College of Quebec, and finally succeeded, in the Montagnais mission, Father Coquart, who died in 1765 at Chicoutimi. De la Brosse was the twenty-first of his order to fill that post. Fixing his headquarters at Tadoussac, at the mouth of the Saguenay, a rendezvous for the Montagnais and for the traders of the lower St. Lawrence, his apostolate radiated from that point along the Labrador coast, to the French settlements on the south shore of the great river, to the Micmacs of Restigouche, and as far east as Isle Saint-Jean (Prince Edward Island). Besides Christian doctrine, he taught the Montagnais reading, writing, and plain-song, creating and developing in their souls the taste for elementary instruction which is to be found to this day in each family of the tribe. The zealous and practical missionary had 3000 copies of the Montagnais alphabet, and 2000 copies of a catechism and prayer book in the same tongue printed at Quebec in 1767.

The latter is one of the first books issued from the press in Canada. It bears the author's name in Montagnais (Tshitstiishigan), which signifies a broom or brush, in allusion to his family name. He also compiled a dictionary in the same language, being moreover familiar with the Abenaki and Micmac dialects. His inland mission-field embraced all the region watered by the Saguenay and Lake St. John. He braved the stubborn ferocity of the Naskapi Indians, who had so far resisted every attempt to convert them. A forest fire, whose ravages he is said to have miraculously stopped, was the occasion of their consenting to hear the Gospel. Father de la Brosse left a reputation of holiness which still endures. His remains lie in the old mission-chapel of Tadoussac.

**Brothers Hospitalers of St. John of God.**—St. John of God, the founder of this religious institution, was born 8 March, 1495, at Montemor Novo, in Portugal. In his fortieth year he was drawn strongly to God's service and began a wonderful life of prayer, penance, and charity towards his neighbour. Pressed by the love of God, and of Christ's suffering members, he founded his first hospital at Granada in Spain, where he tenderly served the sick and afflicted. It is related in his life that one day the Lord appeared to him and told him that He was much pleased with his work, and for that reason He wished him to be called John of God. After ten years spent in the exercise of heroic charity, he died 8 March,

1550. He was canonized by Pope Alexander VIII, in 1690; and was declared heavenly patron of the dying and of all the hospitals by Pope Leo XIII, in 1898.

The charity of St. John of God was destined to be perpetuated among his brethren, whom he had formed by his lessons and example. His first companion Antoni Martin was chosen to succeed him as superior of the order. Thanks to the generosity of King Philip II, a hospital was founded at Madrid, another at Cordova, and several others in various Spanish towns. St. Pius V approved the Order of the Brothers Hospitalers in 1572 under the rule of St. Augustine. The order spread rapidly into the other countries of Europe, and even into the distant colonies. In 1584 Pope Gregory XIII called some of the Brothers to Rome and gave them the Hospital of St. John Calybity, which then became the mother-house of the whole order: Brother Pietro Soriano was appointed first superior. Brother Sebastiano Arias founded the hospital of Our Lady at Naples and the famous hospital of Milan. At that time a holy servant of God and of the poor joined the brotherhood and shed great lustre upon the order by his burning charity and profound humility: Blessed John Grande, who was beatified by Pius IX in 1852.

The first hospital of the order in France was founded in Paris, in 1601, by Queen Marie de' Medici. In the stormy days of the French Revolution the Brothers were expelled from the forty hospitals where they were caring for 4125 patients. But since then some large new hospitals have been established. The order is governed by a prior general, who resides in Rome; it is now divided into eleven provinces, with 102 hospitals, 1536 Brothers, and 12,978 beds, distributed as in the following table:—

Province	Number of Hospitals	Locations	Number of Beds	Number of Religious
Rome	13	Rome, Perugia, Velletri, Corneto, Florence, Rieti, Tivoli, Jesi, Narni, Amelia, Frascati.	1,100	132
Milan	8	Milan, Brescia, Venice, Padua, Marano.	996	60
Naples	3	Naples, Taranto, Foggia.	318	9
France	11	Paris, Lyons, Marseilles, Dinan, Lille, Cannes, Croisic.	3,540	250
Austria	15	Feldsberg, Vienna, Prague, Göriz, Tehen, Prossnitz, Kukus, Brünn, Lettowitz, Huseeldorf, Lintz, Wisowitz, Zebrsldowitz, Cracow, Neustadt.	1,070	221
Styria	5	Gras, Algersdorf, St. Vitus, St. Remo.	458	81
Hungary	13	Pressburg, Erlau, Szepe, Temesvar, Papa, Einsenstadt, Grosswarden, Waes, Pécs, Szakolez, Agram, Buda, Szathmar.	1,152	197
Bavaria	13	Neuburg, Straubing, Kaisheim, Schweinspeint, Heilbronn, Alagasing, Burglengensfeld, Attel.	1,645	213
Prussia	7	Breslau, Neustadt, Pilchowitz, Frankenstein, Stemen, Bugutschuetz.	699	125
Spain	14	Madrid, Seville, Manila, Barcelona, and other places.	2,000	248
	102		12,978	1536

In addition to these a hospice of the order has been established at Nazareth. In 1882 a home for demented patients (male) was founded at Stillorgan near Dublin, Ireland. The house at Scorton, near

Darlington, Yorkshire, was founded in 1880 for the reception of male patients suffering from chronic infirmities, paralysis, or old age. It is supported by charitable contributions and payments for inmates. It is pleasantly situated in a very healthy country district.

The Brothers undergo a special course of training in order to fit them for carrying out their various works of charity, to which they devote their life. In some provinces some of them are even graduates in medicine, surgery, and chemistry. The members are not in Holy orders, but priests wishing to devote their sacred ministry to the Brothers and patients are received. After the example of their founder, they seek their own sanctification and their patients' spiritual and corporal welfare. To the three solemn vows of religion they add a fourth, of serving the sick for life in their hospitals. They also perform the usual duties and pious exercises of the religious life. They assist daily at Holy Mass, meditation, the recital in choir of the office of Our Lady, and spiritual reading. Young men of good disposition, sound health and possessing aptitude for the order, and resolved to serve God generously in the religious life are received from the age of fifteen to thirty-five. The religious habit is usually given to postulants after three months. The time of novitiate is two years, after which the novice pronounces the vows which, although simple, are perpetual. Three years later, he can be admitted to solemn profession.

**Broughton, RICHARD** (*alias* ROUSE), b. about 1558 at Great Stukeley, Huntingdonshire; d. according to a Wood, 15 Kal. Feb. (i. e. 18 January, 1634); Catholic priest and antiquary, claiming descent from the Broughtons of Lancashire. He was ordained at Reims, 4 May, 1593, and soon after returned to England. John Pitts, a contemporary, says that he "gathered a most abundant harvest of souls into the granary of Christ" and eulogizes his attainments in being "no less familiar with literature than learned in Greek and Hebrew". Broughton became an assistant to the archpriest, a canon of the chapter, and vicar-general to Bishop Smith of Chalcodon. He also claims recognition for his influence on the study of antiquity; having earned, partly by his positive work and partly through controversy, the right to honourable mention with Spelman, Reyner, Dugdale, and other well-known antiquarians.

Broughton's chief works are: (1) "An Apological Epistle, serving as preface to . . . a Resolution of Religion", signed R. B. (Antwerp, 1601); (2) "The first part of the Resolution of Religion By R. B." (Antwerp, 1603), often mistaken for Persons' "Resolution"; (3) "A New Manuall of old Christian Catholick Meditations" (1617), dedicated to Anne of

Denmark; (4) "The Judgment of the Apostles" (Douai, 1632), dedicated to Queen Henrietta Maria and directed against Rogers on the Thirty-nine Articles; (5) "Ecclesiastical Historie of Great Britaine" (Douai, 1633), dedicated to the Duchess of Buckingham and the Countess of Rutland; (6) "A True Memorial" (London, 1650), published by G. S. Priest after Broughton's death. The 1654 edition is entitled "Monasticon Britannicum". (7) Broughton also wrote on the antiquity of the word *Sterlingorum* (Hearne, II, 318, 381); (8) on the alleged conversion (1621) of John King, Bishop of London; and (9) "A Relation of the Martyrdom of Nicholas Garlick".

PATRICK RYAN.

**Brouwer (BROWERUS), CHRISTOPH**, a historian, b. 12 March, 1559, at Arnheim, Holland; d. in 1617, at Trier, Germany. In 1580 he entered the Society of Jesus, and after a thorough humanistic training, devoted himself especially to the study of church history. His attainments in other branches of learning are shown by his appointment as professor of philosophy at Trier; later he was appointed rector first at Fulda, and then at Trier. His chief work is entitled: "Antiquitates et annales Trevirenses et episcoporum Trevirensis ecclesiæ suffraganorum". The work extends to the year 1600 and was prepared at the request of two archbishops, Johann VII of Schönenberg and Lothar of Metternich, with the intent to disprove the partisan publication of Hermann (Kyriander), Syndic of Trier. Hermann's work was published in 1576 and was written to support the claims of the city against the rights of the archbishop. Brouwer devoted the greater part of his life to the preparation of his book and, according to the testimony of the historian, Hontheim, he is deserving of undying honour for his contributions to the history of the Archbishopric of Trier. Unfortunately, he did not live to complete his task. Brouwer's unflinching love of the truth and his true historical method were not agreeable to the councillors of the archbishop; so, although the publication of his work had been sanctioned by the authorities of his order, it could not be issued. It was not until 1626 that the work of printing his manuscript at Cologne could be undertaken, and then only after important alterations had been made in the text. New difficulties arose when the eighteenth book was in press. The completion of the printing was forbidden and all the sheets already struck off were suppressed as far as possible, so that only a few copies have come down to us.

Brouwer's labours were continued from 1600 to 1652 by Father Jacob Masenius, S.J., who issued the whole work in revised form in 1670 in two folio volumes at Liège. Brouwer was unable to complete his other great work, which was entitled: "Metropolis Ecclesiæ Trevericæ". It was intended to contain a description of all the cities, churches, and cloisters of the Archdiocese of Trier. This work did not appear until 1855-56 when it was issued at Coblenz in two volumes by Christian von Stramberg. The edition does not meet fully the demands of our time, nevertheless it contains much that is useful. Brouwer's history of the Diocese of Fulda is also worthy of praise. It is entitled: "Fuldensium antiquitatum libri 4" (Antwerp, 1612). Of less importance is the work issued at Mainz in 1616, entitled: "Sidera illustrum et sanctorum virorum, qui Germaniam ornarunt". Among the results of his humanistic studies is the edition of the works of Bishop Venantius Fortunatus, which was issued at Mainz in 1603, together with a life of St. Martin. A second edition

appeared in 1617 augmented by the annotated poems of Archbishop Rhabanus Maurus.

REIFFENBERG, *Historia Societatis Jesu* (Cologne, 1764), 534; *Metropolis Ecclesie Treverice*, ed. von STRAMBERG, PATRICIUS SCHLAGER.

**Brown, WILLIAM**, a naval officer of the Republic of Argentina, b. 1777, in the County Mayo, Ireland; d. 3 May, 1857, in Buenos Aires. His family emigrating to America in 1786, Brown shipped as a cabin boy on a vessel sailing from Philadelphia. During the war between France and England his ship, an English merchantman, was captured by a French privateer and he was made prisoner of war. He escaped to England, where, in 1809, he married a lady of good family and education. He re-entered the ocean trade with a ship of his own, which was wrecked on the coast of South America. Here he established the first regular packet service between Buenos Aires and Montevideo. In the revolt of Buenos Aires against Spain the insurgents appointed Brown, February, 1814, to the command of a squadron of seven ships. With these he achieved wonders. On St. Patrick's Day he captured the fort of Martin Garcia, called "The Gibraltar of the La Plata", compelling nine Spanish men-of-war under Admiral Romerate to retire. Later, at Montevideo, which capitulated 20 June, he captured several Spanish men-of-war. These he took to Buenos Aires, and received the rank of admiral. In 1816 Admiral Brown sailed round the Horn to succour the new republics on the western coast, but his expedition was only partly successful. Ten years later, when war ensued between the new republic and Brazil, Admiral Brown greatly distinguished himself against tremendous odds in the blockade of Buenos Aires, which he succeeded in breaking. Taking the offensive he scoured the coast as far as Rio de Janeiro. His most brilliant victory was the battle of Juncal, 24 February, 1827, when, with seven ships and eight one-gun launches, he destroyed a fleet of seventeen war-vessels under Admiral Pereira. He acted as Argentine Commissioner when, at the close of the war, the liberty of Buenos Aires was guaranteed by the treaty of Montevideo 4 October, 1827.

After a visit to his native land, Admiral Brown spent his last years in the republic in the founding of which he had been such a powerful factor. He died in Buenos Aires 3 May, 1857, and in the Recoleta cemetery a lofty column marks his resting-place. MULHALL, *The English in South America* (Buenos Aires, 1878).

P. G. SMYTH.

**Browne, CHARLES FARRAR (ARTEMUS WARD)**, humorist, b. at Waterford, Oxford County, Maine, U. S. A., 26 April, 1834; d. in Southampton, England, 6 March, 1867. He went to school in his native town and at the age of fourteen was apprenticed in the printing office of "The Skowhegan Clarion". A year later he was employed in a like capacity on "The Carpet-Bag" of Boston, edited by B. P. Shillaber (Mrs. Partington), and to which Charles G. Halpine (Miles O'Reilly) and John G. Saxe were at that time contributors. In this journal appeared his first humorous article, a burlesque description of a Fourth of July celebration in Skowhegan. After

his Boston experience, Browne travelled the Eastern States as a journeyman printer, sojourning for a while in the town of Tiffin, Ohio, where as reporter and compositor he received in wages four dollars a week. Going thence to Toledo, he contributed to the columns of "The Commercial" of that city. Already his reputation was gaining ground. Though vigorously assailed in a series of articles in "The Toledo Blade", he treated his opponents with unflinching courtesy and humour.

In 1858, at the age of twenty-four, his reputation first assumed a national character as a reporter of "The Cleveland Plaindealer" under the sobriquet of "Artemus Ward". His best work at this period consisted in burlesque descriptions of prize-fights, races, spiritualistic séances, and political meetings. Towards the close of 1860, he accepted an engagement in New York with "Vanity Fair", a comic paper edited after the manner of the London "Punch", and ere long succeeded the editor Charles G. Leland (Hans Breitmann) as editor. In this paper some of his best contributions were given to the public. It was, however, as a lecturer that "Artemus Ward" acquired both fame and fortune. His first appearance on the lecture platform in New York was in a travesty called "Babes in the Woods". His next hit was in a lecture on "Sixty Minutes in Africa", given in Music Fund Hall, Philadelphia. In 1866 he sailed for England where success far beyond his expectations awaited him. His stay in London is spoken of as "an ovation to the genius of American wit". He became at once a great favourite with the "Literary Club" of London and his letters in "Punch" recalled the days of "Yellowplush". But sickness brought his brilliant career to an unexpected close in the seventh week of his engagement at Egyptian Hall in London, and his death occurred a few months later. When he felt the end was near, he asked his friend Arthur Sketchly to procure him the ministrations of a priest. "So Sketchly", Clement Scott informs us, "took steps to carry out his friend's instructions." His remains were brought to his native land and laid to rest beside his father and brother in the little cemetery at Waterford, Maine.

Artemus Ward was a consummate humorist and represented a type distinctively American. His fun was a fountain that always bubbled, ministering naturally to the happiness of himself and others. In leading up to the joke whatever art was employed was carefully concealed, and the joke itself when it came was always a surprise but never an awkward or unwholesome one. The depth and strength of his character are revealed as well in the interest excited by his lectures and sayings as in the friendships he formed and retained to the end.

KNIGHT, *Artemus Ward and his Humor* with SWINBURNE'S poem, *Putnam's Monthly*, February, 1907; LONDON (Eli Perkins), *The Complete Works of Artemus Ward, with a Biographical Sketch* (New York, 1898); CLEMENT SCOTT, *The Drama of Yesterday and To-day* (New York, 1899), I, 325.
